In Summary, I believe the crematorium is not a conducive use for a historic cemetery on open spaced-zoned property. A crematorium would be better suited to be operated on a commercial or industrial area. Additionally, **this is planned to be an active business with hazardous gases directly adjacent to a housing development, walking trail, historical area, and nature preserve.**

This crematorium development was rejected by the City in 2002. It was a good rejection then and is good now.

Below are more details about the concerns.

1. This is a for-profit private commercial business. The crematorium will require significant infrastructure and will have consistent and growing usage. It is better suited in a commercial or industrial zoned area. (As noted in the presentation for the Zoning code changes, consistency is a key to why the Zoning code is used)
 - a. Based on wording in the request, cremations would potentially occur at a rate of 4 per day, 5 days per week, 52 weeks per year.
 - b. This would be an increase of over 2000 more car trips of employees, customers and deliveries per year.

- c. Also required are the consistent and numerous propane deliveries for this enterprise. Given the outline of the process and the forecasted demand, large quantities of propane will be needed.

This is a huge business, a factory, impacting an open space-zoned property that is next to other low impact and nature areas.

2. In Section 17.52.550* see below, crematoriums are not a listed use. It is at item #8 that you will determine if a crematorium is similar and compatible. Using the list in this section, other than being in a Cemetery, a crematorium is neither similar nor compatible. This business would be a consistent, daily, private commercial business using sophisticated equipment, stored propane, and very high temperatures. That **does not align** with the rest of the list that is much lower in activity and sophistication.
3. By allowing this crematorium to be moved to a commercial or industrial site, it will also move the increase in traffic so as to not impact the Historic District, as this is another issue of concern to the District.
4. Based on the Scope of Work document that was submitted, there is no sewer capability planned and there is no bathroom in the design document. Building this crematorium in the manner presented would be a significant development for an open spaced-zoned property. This project would continue to have a large developing impact on the property and the historic district.
5. The applicant notes in the “Our Proposition” portion of the Scope of work that it is a “...strategic placement. It is removed from any residences, parks, or schools.” This statement is incorrect. It is surrounded on two sides by park or open space. It is in an open space-zoned property and is next to a housing development. **Their Proposition is not correct** at a minimum and incredulous to most.
6. By allowing this to be built at a **commercial or industrial property**, the utilities for propane gas, electrical, and sewer are installed and are consistent in capability to that setting.
7. The Historic District is unique in our city as there is a mix of residential and business. At its basic level, that requires a mix of quality-of-life considerations of the residents and commerce for the businesses. With all of the impacting issues noted above for our district, it is much more important to **weigh the quality-of-life issues** of the residents given this proposal is so out of character for an open space area.
8. This issue was brought before the City 18 years ago and received a non-approval from the City Staff. PN02-258 is the City’s report for it. It was then withdrawn by the applicant.

Thank you for your consideration of this request.

Regards,
Paul Keast
Resident, Mormon Street, Folsom

* **17.52.550** Open space/public primary area special use and design standards.

A. Permitted Uses. When proposed by a public entity, the following uses are permitted; submittal to the historic district commission for courtesy review and comment is requested. When proposed by a private entity, a conditional use permit is required. If, in the opinion of the planning, inspections and permitting director, public or private status of the proposing entity is not clear, the historic district commission shall make a finding on the need for a conditional use permit.

1. Natural open space, including management activities necessary for conservation and safety.
2. Improved open space, including active and passive park and trail uses.
3. Transportation corridors.
4. Cemeteries.
5. Public schools, including administrative facilities.
6. Small-scale public utility structures.
7. Residential uses accessory to a public use.
8. Other public uses which are, in the opinion of the historic district commission, similar to permitted uses and compatible with surrounding uses.

In summary, please reject the Lakeside Cemetery Crematorium conditional use permit, FILE# 19-182.

Folsom, CA 95630

SUBJECT: PENDING DEVELOPMENT APPLICATION FOR LAKESIDE MEMORIAL LAWN CREMATORIUM

Dear Kelly -

I'm writing to express my concern for the Lakeside Memorial Lawn Crematorium project, **I strongly object to approval and ask the Planning Commission to stop this project at first opportunity.**

I have read the [Initial Study/Mitigated Negative Declaration](#) and have also conducted my own research regarding Crematorium facilities sited adjacent to residential communities.

This project is a bad idea for the city and for residents in the immediate affected area, such as the *"The closest existing sensitive receptors to the project site are multiple single-family residences adjacent to the cemetery to the north, between 450 and 750 feet from the proposed crematory location"* – page 22.

My main concerns are:

1. Potential Toxic Air Contaminants (page 21 of the study)
2. Sensitive Receptors (page 22 of the study)
3. My research also highlighted problems in communities across the US similar to this proposed residential setting, citing objectionable odors and harmful effects from toxic air contaminants for susceptible adults, children and the elderly.

I have a technical background and understand how "ideal" operating specifications are developed and advertised by equipment manufacturers, such as the Hartwick Combustion HCT Apex-250 crematory. These "specifications" rely on ongoing optimal operating and maintenance calibration procedures. Maintenance lapses, operator error, and prevailing weather issues like unhealthy air days, for instance, provide unwelcome downstream impacts.

I love our Folsom community and cherish our "Distinctive by Nature" motto. Placing a Crematorium within 450 feet from the "The Preserve" residential neighborhood and adjacent the parklands and Lake Natoma is a very bad idea.

Sincerely,

Peter Lucyga

City of Folsom Historic District Commission

RE: Lakeside Memorial Crematorium Project

1201 Forrest Street / 070-0260-001-0000

Planning No: PN-19-182

Commissioners,

I write to you as a concerned user of the Forrest Street neighborhood recreational opportunities and as an avid amateur historian. As you are aware, the Forrest Street and adjoining Folsom Blvd area is replete with valuable historical sites. These include the historical Chinese Cemetery preserved by the California State Park system, the Southern Pacific Superintendent's home on Oakdale St and adjacent future railroad museum, the Murer House and Education Center on Joe Murer Ct, the historic rock tailing piles located adjacent to the project location, a historic cemetery on Natomas Street, and the route of the historic Lincoln Highway along Folsom Blvd. In addition, the project abuts the Nimbus Flat State Recreation Area which includes miles of trails and recreation opportunities.

The Lakeside Memorial Crematorium Project presents several concerns:

- The location of an industrial crematorium in the Forrest Street neighborhood would be a non-conforming use under the City of Folsom zoning of Open Space/Public Primary Area and the underlying zoning of Open Space and Conservation.
- The location of an industrial crematorium in the Forrest Street neighborhood would be a non-conforming use under the Folsom City General Plan of Open Space.
- The placement of an industrial crematorium in the Forrest Street / Folsom Blvd area would be in conflict with the residential, recreational, and historic uses of the surrounding area.

- The CEQA Mitigated Negative Declaration filed for this project is deficient with regard to the air quality data. The Declaration relies on weather data from the Sacramento Executive Airport which is located over 15 miles away. The Executive Airport lies in a separate climatic zone from the City of Folsom and is affected by Delta breezes and different wind patterns. The City of Folsom is located against the base of the Sierra Foothills and suffers stagnant air patterns particularly during the summer months. These stagnant air patterns will cause the industrial pollutants to linger in the project area affecting the adjoining residential, recreational, and historical sites.

I am asking the Commission to deny the Lakeside Memorial Crematorium Project as a non-conforming use in an area of abundant historical and recreational sites.

Thank you for your attention to this matter,

Randolph Peshon
Placerville Ca

Hello,

I live in the Lake Natoma Shores neighborhood where there is talk of a proposed Crematorium at The Lakeside Memorial Cemetery.

Our neighborhood is quite unique in many ways. A lot of families live here, it's the only housing community on this side of Folsom Boulevard, and also the only community that is on Lake Natoma. Our housing development is located in the canyon across from the bluffs of Lake Natoma.

The Kikkoman plant is located a mile away. A couple times a week we can smell the soy beans roasting. If we drive by the plant we don't see any smoke. Even though there isn't any smoke, the smell lingers in our neighborhood getting trapped by The Schultz Eddy phenomenon. This **causes the wind pattern to shift southward, blowing air pollutants back into the SVAB (Sacramento Valley Air Basin)**. This phenomenon exacerbates the concentration of air pollutant emissions in the air basin and contributes to violations of the ambient air quality standards. Living in the canyon under the bluff keeps the air stagnant.

The Caring Services Group (Miller Funeral Home) says there won't be any smoke and only heat waves from their industrial furnace. However, who's to say the smell and carcinogens from the furnace won't stagnate in the air from the bluffs just like the Kikkoman smell. The smell of roasting soybeans and the smell of burning flesh are two different things. This would also effect kayakers, paddle boarders, bicyclists, walkers, and birdwatchers in the State Park area which butts right up against the crematorium. How's that for trying to enjoy nature? I thought we were "Distinctive by Nature".

During the 1/11/22 city council meeting there was much concern for the preservation of the oak trees with the south of Hwy 50 development. I hope the Commission gives the Historic District, open space, and residents of The Preserves/Lake Natoma Shores community as much time, concern, and thoughtfulness as the oak trees received.

If one wanted to be environmentally conscience we would be considering Aquamation to cremation. If the population and need for after death services continues to grow we should be installing eco-friendly alternatives. We shouldn't be considering an old shed to save money. If Aquamation is good enough for Bishop Desmond Tutu, it's good for

us!

This crematorium has to be stopped in its tracks. I'm truly concerned for my family, neighbors, and Folsom residents.

Thanks,

Sean Gates

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello,

I am reaching out because I am extremely concerned about the proposal to build a crematorium at the Lakeside Cemetery...

My wife Nicole and I belong to the Historic Folsom Residents Association, and the area we live in means a lot to us.

We have two children (ages 9 and 7), and in researching online the impact of crematorium use, large amounts of mercury get released into the air, along with various other particulate matter.

I can't have my family living next to this type of threat to our health, and there are several other families who live in our area, along with those who are a bit older and more susceptible to health issues.

It doesn't make any sense to me that a crematorium would be located in a residential area that is experiencing and will continue to experience an increase in population density. Crematorium use also appears to be on the rise recently as well.

Can we please instead have this crematorium located in a more industrial area, that is not located in such a densely populated location?

-Sean Gates

Subject: Lakeside Memorial Lawn Crematorium / MND / 2022010039

Dear Mr. Banks:

The Sacramento Municipal Utility District (SMUD) appreciates the opportunity to provide comments on the Mitigated Negative Declaration (MND) for the Lakeside Memorial Lawn Crematorium (Project, SCH 202010039). SMUD is the primary energy provider for Sacramento County and a portion of the proposed Project area. SMUD's vision is to empower our customers with solutions and options that increase energy efficiency, protect the environment, reduce global warming, and lower the cost to serve our region. As a Responsible Agency, SMUD aims to ensure that the proposed Project limits the potential for significant environmental effects on SMUD facilities, employees, and customers.

We have no comments to offer at this time but would appreciate if the City of Folsom would continue to keep SMUD facilities in mind as environmental review of the Project moves forward. Please reroute the Project analysis for SMUD's review if there are any changes to the scope of the Project.

If you have any questions regarding this letter, please do not hesitate to contact me at 916.732.7466, or by email at Ammon.Rice@smud.org.

Sincerely,

City of Folsom Historic District Commission.

RE: opposition to the proposed Lakeside Memorial Cemetery crematorium.

Dear Planning Commissioners;

I am a resident living next to the Lakeside Memorial Cemetery where the owner wants to add a crematorium.

I am writing to ask you, as Planning Commission, to act to protect residents from a business requesting to change the business from burial to cremation and in doing so will add a new revenue stream and increase profits. The business has spent an amount of money considered significant to any one resident to write up a proposal that supports the business' desire to add to their revenue and profits.

The Planning Commission needs to act in a way to level the playing field and to stand up for our Residents, young and old. The residents do not have the financial resources available to the business, to defend our position with lawyers and agencies to write counter-proposals. We have our voices and have done our best to communicate our positions.

A crematorium should not be allowed to be added to a residential neighborhood. It should only be allowed to be added to a industrial or business area, such as a warehouse or non-retail area.

I personally do not understand how creating a new revenue stream for a business could outweigh the request for residents to maintain our existing lifestyle without pollutants (mercury for one), or odors, or smoke, added to the air we breathe every day of our lives. The residents should not have to be exposed to the odor, smoke, or pollutants, from a crematorium just so this business owner can increase his profits. Dead bodies come with implants and joint replacements, along with personal items the family wants burned with the bodies. All these along with the body and the box will create odors and pollutants regardless of what the owner may have paid for to be written up in his proposal.

Please do the right thing and use common sense. If all you can do is act according to reports created by private consultants then I do not understand what purpose you, the Commission, serve other than to give a stamp of approval to businesses to do whatever they want regardless of the effect on nearby residents.

Please decline this business owner his request for a conditional permit. Please deny his request so that we can live in peace in our neighborhood without fear of having the little cemetery next door to start emitting odor, smoke, and pollutants from burning hundreds of cremations each month.

As you may or may not be aware, cremations account for about 50% of all deaths currently and it is expected to increase to 75%-80% in the next 10 years. This business owner wants in on that revenue. He should happily do it in another location and not in a residential neighborhood but in a business or warehouse area where he could easily make money. He is only proposing it in the little shack at Lakeside Memorial Cemetery because he will have larger profits using a cheap existing structure. There are many options to place a crematorium elsewhere, not adjacent to a residential neighborhood, and still make good profits. Please deny the business owner the ability to cremate at this location.

Thank you for reading my beliefs.

Hello Daniel West, Kevin Duewel, and Daron Bracht (Historic District Commissioners);

I am writing you to register my protest to the Lakeside Cemetery requesting to put in a crematorium in the city of folsom - specifically the Lakeside cemetery along the Preserve neighborhood and State Parks open space recreation area also adjacent to Forrest Street.

I am writing you three as I believe Daniel and Kevin are on the Planning Commission and Daron on the Historic Preservation. Should I have sent it to all 7 on the Historic District Commission? I don't know how these things work but hope I can get this to the right people representing the city residents.

I don't believe or trust that a crematorium can be operated without putting pollutants into the air and affecting residents and the recreation area nearby. I don't care what the specifications are the Lakeside Cemetery provides you. The air emitted from burning a human being, clothing, chemicals injected into the dead body, and cardboard box will contain smoke, odor, and chemicals. From what I understand the USA does not require a crematorium to have filters that would remove all this. Additionally, if Lakeside says they would put them in voluntarily, I still don't trust the cemetery to do it because they are not "required" to put them in and therefore at the last minute can omit them.

Please join me in siding with the residents of Folsom and rejecting this request from the Lakeside Cemetery to put in a crematorium. And again, I would suggest you don't approve a crematorium any where in our city limits. A crematorium should be located in an area far from residents and is more suited for a warehouse area (like Rancho Cordova south of 50) than an area next to homes and recreation.

Thank you for reading my request.

Steve Wetzel

 Folsom, CA 95630

RE: Lakeside Memorial Lawn Crematorium Proposal (PN-19-182)
 Hearing Date: February 16, 2022

Dear Commissioners:

The same crematorium proposal herein under consideration was advanced by Lakeside nearly 19 years ago as PN02-258 and scheduled for hearing before this Commission on January 15, 2003. However that hearing was canceled and did not go forward when applicant Lakeside withdrew the proposal, apparently in light of a Staff Report prepared by the City recommending the denial of a Conditional Use Permit (CUP) to operate a crematorium on the property. A copy of that Staff Report (with voluminous attachments) is attached as Exhibit "A."

The findings advanced in the Staff Report as the basis for its recommendation of denial can be summarized as follows:

- a. The use applied for is detrimental to the health, safety or general welfare of persons residing or working in the neighborhood, and detrimental or injurious to property and improvements in the neighborhood and the general welfare of the City because the introduction of this use will impact the historical character of the existing cemetery and historical use of the area.
- b. The conglomeration of historic cemeteries, combined with the California State Dredger Tailings dating back to the 1850's, create a rare combination of unique cultural resources that will be impacted by this proposal.
- c. The use of the proposed project is not consistent with Goal 2 of the City's Historic District Design and Development Guidelines in that it does not maintain the historic use of the site and, in addition, does not further Design and Development Guideline Policies 2.1, 2.2, and 2.3 in that:
 1. The Sacramento County Historic Cemetery Commission has identified this site as locally significant and intends to present the Lakeside Cemetery to the Board of Supervisors for designation as a historic pioneer cemetery;
 2. Approval of a CUP for a contemporary use that will jeopardize the eligibility status of the site would work to discourage, rather than encourage, national register nomination; and
 3. According to the Sacramento County Historic Cemetery Commission, a crematorium is not a consistent use with a historic cemetery.

In summary, the CUP sought by the applicant in this instance is identical to the CUP sought back in early 2003, and the applicant has presented no facts to the contrary. The proposal for the issuance of a

CUP allowing the construction and operation of a crematorium in the historic area in question was a bad idea back in 2003 and remains a bad idea today. The factual basis and logic behind the 2003 Staff Report remain valid, and the current request for approval of a CUP for the proposed crematory should be denied for the reasons expressed therein. Such a resolution of this matter would be simple and straightforward and consistent with the City's advertised goal of promoting historic preservation.

In closing, one is left to wonder why the City fails to mention anywhere in its papers submitted on this matter the applicant's prior efforts nearly 19 years ago to obtain a CUP for a crematorium on the Lakeside property and the City's opposition thereto. Seemingly, full disclosure by the City of those facts should have been forthcoming. The citizenry of Folsom deserve no less.

Very truly yours,

Terry L. Sorensen

 HDC Mtg. 1-15-03

Withdrawn

HISTORIC DISTRICT COMMISSION STAFF REPORT

PROJECT TITLE:	Lakeside Cemetery Crematorium
PROPOSAL:	Request for approval of a Conditional Use Permit to allow for the operation of crematorium
RECOMMENDATION:	Denial
APPLICANT AND OWNER:	Lorin Claney
LOCATION:	1201 Forrest Street
ASSESSOR'S PARCEL NO.:	070-0082-014, 070-0130-002, 070-0130-004
ATTACHED REFERENCE MATERIAL:	<ol style="list-style-type: none"> 1. Vicinity Map 2. Site Plan, dated 12/19/97 3. Project Description and Crematorium Illustrations 4. Documentation from the Sacramento County Historic Cemetery Commission 5. Lakeside Cemetery Research Paper written by Sue Silver 6. Letters from the Public 7. Site Photographs
PROJECT PLANNER:	Jane Talbot, Assistant Planner

BACKGROUND

The Planning Commission approved a Use Permit and Variance for Mausoleums at Lakeside Memorial Lawn in 1991 (PC91-042). An amendment to the approval was granted in 1995 (PC95-033). That approval allowed for the construction of twelve mausoleums. To date, one mausoleum has been built and one additional mausoleum is under construction. An existing maintenance building, approximately 975 square feet in area, is located along the south border of the cemetery. The front of the project site is mostly level with a slight to moderate downward slope towards the rear of the site. Lakeside Cemetery has a variety of mature deciduous and evergreen trees. The front of the cemetery, along Forrest Street, is bounded by a brick wall capped with wrought iron fencing.

The project site consists of three parcels totaling 10 acres within the Open Space/Public Primary Area of the Historic District. It is located on the west side of Folsom Boulevard at 1201 Forrest Street. The property is bounded by the Chung Wah Cemetery and the American River Recreation Area to the west, single-family residences to the north, Forrest Street to the east, and mine tailings to the south. Across Forrest Street are single-family residences.

PROJECT DESCRIPTION

The applicant is requesting approval of a Conditional Use Permit to install and operate a crematorium at the existing Lakeside Cemetery at 1201 Forrest Street. The applicant proposes to install the cremation equipment inside an existing maintenance building as indicated on the attached site plan. The maintenance building is made of corrugated metal and currently is used for the storage of grounds maintenance equipment. The applicant proposes to install a 10-foot by 30-foot "Tuff Shed" adjacent to the existing maintenance building to store the displaced maintenance equipment. No new utilities are proposed to be connected to the shed.

GENERAL PLAN/ZONING CONFORMANCE

The General Plan land use designation for the project site is OS (Open Space). The zoning designation for the project site is OS/PB (Open Space/Public Primary Area of the Historic District). The zoning district is consistent with the General Plan designation. Cemeteries are a permitted use within the OS/PB zoning upon approval of a Conditional Use Permit. The subject cemetery has been in operation since the 1800's and is a permitted use. Crematoriums are not specifically addressed in the Folsom Municipal Code. Such uses that are not specifically addressed within the Folsom Municipal Code require the approval of a Conditional Use Permit.

LAND USE COMPATIBILITY/CONDITIONAL USE PERMIT

When approving a Conditional Use Permit, the Historic District Commission must make a finding that a project's impact on health, safety and welfare will not be detrimental to the health, safety, peace, morals, comfort and general welfare of a proposed use. Some of the comments received suggest that the proposed project may impact health, safety, and welfare. Without additional environmental studies, staff cannot support or refute any of these assertions (FMC 17.60). As staff is recommending denial, based upon the appropriateness of the land use, these necessary additional environmental studies have not been prepared. Should it be the Historic District Commission's desire to proceed with this application, staff will commence with the additional environmental studies.

Historical Significance

Information provided to staff illustrates that Lakeside Cemetery is actually a conglomeration of several cemeteries that have merged over the years. This conglomeration includes the Citizen's, Jewish, Masonic, Negro Bar, Cook's/American Legion, and Odd Fellows cemeteries that date back to around 1850. Adjacent to this site is the Chung Wah Chinese Cemetery. These cemetery sites, along with the neighboring California State Dredger Tailings Preserve, create a combination of rare cultural resources grouped into one small area. This combination, in itself, is an extremely unique resource according to Commissioners with the Sacramento County Historic Cemetery Commission.

Goal 2 of the Design and Development Guidelines defines the City's objective for the Preservation of Historic Sites as:

'To maintain, restore, and reconstruct sites which represent the history of the Folsom area.'

The supporting policies indicate how the City can accomplish this goal. Policy 2.1 states that locally significant structures and sites should be identified and documented to facilitate their preservation or restoration. To date, Commissioners from Sacramento County Historic Cemetery Commission have identified this site as locally significant, and the Commissioners intend to present Lakeside Cemetery to the Sacramento Board of Supervisors for designation as an historic cemetery.

Policy 2.2 advocates that the City should encourage National Register nomination of historic buildings, as well as other historical designations by state or local agencies. Approval of a Conditional Use Permit for a contemporary land use (i.e., the crematorium) may jeopardize the eligibility status of the site and might work to discourage rather than to encourage National Register nomination.

Policy 2.3 explains the priorities with which the City should evaluate proposed projects. The preference should be given to authentic restoration of historical buildings and sites. Based on the information provided to staff by the Sacramento County Historic Cemetery Commission, a crematorium is not a consistent, or authentic, use with a historic cemetery. Therefore, staff has determined that the proposed project is not consistent with Policies 2.1, 2.2, 2.3, and Goal 2 of the Design and Development Guidelines.

PUBLIC INPUT

The applicant held a community meeting to inform the public about this project on November 19, 2002. There was much public opposition to the project at that meeting. At the meeting, issues related to property values, air quality, traffic, and cultural resources were raised. During the public comment period, staff received comments from numerous individuals and organizations. (The written comments received are attached to this report.) The information received indicates that a crematorium is not a use that is consistent in historic cemeteries.

ENVIRONMENTAL ANALYSIS

An Initial Study and Mitigated Negative Declaration were originally published on August 29, 2002. Staff received feedback regarding the Initial Study. A number of issues relating to the proposed use were raised including land use and planning, noise, air quality, hazardous materials, and cultural resources. As stated previously, staff has determined that the proposal is not compatible with the existing historical character of the cemetery, and staff is recommending denial of the request. According to the California Environmental Quality Act, "CEQA does not apply to projects which a public agency rejects or disapproves." Should the Historic District Commission conclude that the proposal is compatible with the existing historic cemetery use, the Commission will need to direct staff to conduct further research on the issues raised on this project and return to the Commission with the appropriate environmental document.

STAFF RECOMMENDATION

Staff recommends denial of a Conditional Use Permit to operate a crematorium at an existing cemetery at 1201 Forrest Street in the Historic District, based on the following findings.

HISTORIC DISTRICT COMMISSION ACTION

MOVE TO DENY THE CONDITIONAL USE PERMIT TO OPERATE A CREMATORIUM AT AN EXISTING CEMETERY AT 1201 FORREST STREET IN THE HISTORIC DISTRICT.

FINDINGS FOR DENIAL

- A. NOTICE HAS BEEN GIVEN AT THE TIME AND IN THE MANNER REQUIRED BY STATE LAW AND CITY CODE.
- B. THE USE APPLIED FOR IS DETRIMENTAL TO THE HEALTH, SAFETY, OR GENERAL WELFARE OF PERSONS RESIDING OR WORKING IN THE NEIGHBORHOOD, AND DETRIMENTAL OR INJURIOUS TO PROPERTY AND IMPROVEMENTS IN THE NEIGHBORHOOD AND THE GENERAL WELFARE OF THE CITY BECAUSE THE INTRODUCTION OF THIS USE WILL IMPACT THE HISTORICAL CHARACTER OF THE EXISTING CEMETERY AND HISTORICAL USE OF THE AREA.
- C. THE CONGLOMERATION OF HISTORIC CEMETERIES, COMBINED WITH THE CALIFORNIA STATE DREDGER TAILINGS DATING BACK TO THE 1850'S, CREATE A RARE COMBINATION OF UNIQUE CULTURAL RESOURCES THAT WILL BE IMPACTED BY THIS PROPOSAL.
- D. THE USE OF THE PROPOSED PROJECT IS NOT CONSISTENT WITH GOAL 2 OF THE DESIGN AND DEVELOPMENT GUIDELINES IN THAT IT DOES NOT MAINTAIN THE HISTORIC USE OF THE SITE. IN ADDITION, THE PROJECT DOES NOT FURTHER DESIGN AND DEVELOPMENT GUIDELINE POLICIES 2.1, 2.2, AND 2.3 IN THAT:
 1. COMMISSIONERS FROM SACRAMENTO COUNTY HISTORIC CEMETERY COMMISSION HAVE IDENTIFIED THIS SITE AS LOCALLY SIGNIFICANT, AND COMMISSIONERS INTEND TO PRESENT LAKESIDE CEMETERY TO THE SACRAMENTO BOARD OF SUPERVISORS FOR DESIGNATION AS AN HISTORIC CEMETERY.
 2. APPROVAL OF A CONDITIONAL USE PERMIT FOR A CONTEMPORARY USE THAT WILL JEOPARDIZE THE ELIGIBILITY STATUS OF THE SITE WOULD WORK TO DISCOURAGE, RATHER THAN TO ENCOURAGE, NATIONAL REGISTER NOMINATION.
 3. BASED ON A LETTER FROM JAMES A. PURCELL, CHAIRMAN OF THE SACRAMENTO COUNTY HISTORIC CEMETERY COMMISSION DATED JANUARY 2, 2003, A CREMATORIUM IS NOT A CONSISTENT USE WITH A HISTORIC CEMETERY.

Attachment 3
Project Description and Crematorium Illustrations

Form G101- General Information**1. Equipment Location Drawing:**

Attached

2. Description of Equipment:

Manufacturer: Industrial Equipment & Engineering Co. dba All Crematory

Model: 2500 Elite (identical to IEE Power-Pak II)

Description: Multiple chamber, gas fired, 100 lb/hr burn rate cremator

3. Description of Process:

The All Model 2500 Elite is designed to complete a typical cremation case in 2 hours. This time does not include the preheat of the secondary chamber, which is typically 1/2 hour or the cool-down period before the removal of the remains (1/2 hour). The cremator has a nominal burn rate of 100 lb/hr of remains and the associated containers, based on the entire cremation period. The cremator is a multiple chamber design and is fired with natural or LP gas as an auxiliary fuel. It is designed to be manually loaded in batches.

Typically, the remains are loaded in the primary chamber and then the secondary chamber is preheated by the secondary burner for 30 minutes or until the required minimum temperature is reached. The primary burner is then ignited to begin the cremation cycle. A cool-down period of 30 minutes or more is recommended at the end of the cremation cycle before removing the cremated remains and loading the next batch of remains.

The secondary chamber has a volume of 70 ft³. It has one secondary burner that is adjusted to a maximum high fire setting of 1.4 MM Btu/hr.

The secondary chamber temperature is monitored by a digital controller which adjusts the gas flow to the secondary burner to maintain the desired temperature. The cremator performs best and is most fuel efficient with a secondary chamber temperature of 1400 to 1600 °F.

The primary chamber volume has a volume of 69 ft³. It has one primary burner that is adjusted to a maximum of 0.6 MM Btu/hr. The chamber temperature ranges from 500 °F at the beginning of the first cremation of the day to 1600 °F or more during successive cremations.

The opacity alarm monitor system automatically takes action to eliminate visible emissions. If the opacity of the flue gases exceeds number 1 on the Ringelmann scale the controls will make sure the secondary air supply (throat air) is on and also turn off the primary burner to slow down the burning rate.

The All Crematory Model 2500 Elite is identical to the IEE Power-Pak II. A Power-Pak II unit was installed at North Sacramento Funeral Home in 1995.

4. Facility Description:

Funeral home.

5. Operating Schedule:

Up to 10 hours per day; up to 7 days per week; 52 weeks per year. Maximum usage expected to be less than 2000 hours per year (800 cremations).

6. Process Weight:

The nominal burn rate is 100 lb/hr.

7. Fuels and Burners Used:

Fuel is natural gas. Usage is 2000 scf/hr max.

**Documentation from the
Sacramento County Historic Cemetery Commission**

Sacramento County Cemetery Advisory Commission
4800 Broadway, Suite 100
Sacramento CA 95820

City of Folsom Historic District Commission
50 Natoma Street
Folsom, CA 95630

Attn: Jane Talbot

Dear Ms Talbot::

The Sacramento County Cemetery Advisory Commission is in receipt of your Notice of Public Hearing regarding PN 02-258 Conditional Use Permit and Mitigated Negative Declaration 1201 Forrest Street.

The commission is charged with the duty to encourage the preservation and designation of historical cemeteries. We are currently preparing a list of those cemeteries in Sacramento County, which should be considered historic. It is my opinion that Lakeview Cemetery will be one of the cemeteries in Sacramento County that will be on the list that is to be presented to the Board of Supervisors for designation as an historic cemetery.

While no official action has yet been taken by either The Cemetery Advisory Commission or The Board of Supervisors regarding Lakeview Cemetery we ask that you consider the above mentioned conditional use permit in the context of Lakeview's historic significance and endeavor to preserve its historic elements.

Sincerely,

James A. Purcell, Chairman
Cemetery Advisory Commission

Chair, James A. Purcell

Vice Chair, Dr. Robert La Perriere

Sacramento County Cemetery Advisory Commission

Sacramento CA 95820

January 2, 2003

Ms. Jane Talbot
City of Folsom Planning, Inspections and Permitting Department
50 Natoma Street
Folsom, CA 95630

Dear Ms Talbot:

The Sacramento County Board of Supervisors on June 12, 2001 approved Ordinance No. SCC-1193, which established The Sacramento County Cemetery Advisory Commission (The Commission).

The purpose of the advisory commission is:

1. To advise the Sacramento County Board of Supervisors on citizen's concerns and issues related to cemeteries;
2. To provide recommendations to preserve, protect, and maintain cemeteries;
3. To make recommendations to the Board of Supervisors regarding mechanisms for funding the preservation, protection and maintenance of cemeteries and the appropriation of funds so raised; and
4. To encourage the preservation and designation of historical cemeteries.

With regard to number 4, above, and in reference to your request for comments on the proposal for a crematorium at Lakeside Cemetery, The Commission would like to submit the following:

The area incorporating Lakeside Cemetery, the Chung Wah Historic Cemetery, and the California State Dredging Tailings Park is possibly the only site in the State of California that combines these important aspects of our heritage in one small area. Lakeside Cemetery, in fact, may be a grouping of 19th century cemeteries, which would most likely fit the criteria currently being developed to define a historic cemetery. It is the opinion of The Commission that the addition of a crematorium on that site would have a negative impact on the historical significance of the area. It is believed that a crematorium could be placed in an industrial area within Folsom to avoid the impact on the history of our countywide community.

Chair, James A. Purcell

Vice Chair, Dr. Robert La Perriere

Ms. Jane Talbot
January 2, 2003
Page 2

Area residents have notified our Commission that they oppose the placement of the crematorium on the site.

Research that has been provided to our Commission indicates that there have been instances in which monuments, and copings have been moved or destroyed, plot maps of burial locations are misplaced and that legal questions exist regarding the ownership of portions of Lakeside Cemetery. Further degradation of the historic value of the cemetery by the addition of a crematorium would only serve to lessen its cultural importance to the City of Folsom and Sacramento County.

Please contact us if we can provide any other information or support.

Sincerely,

James A. Purcell, Chairman
Sacramento County Cemetery Advisory Commission

Planning, Inspections and Permitting Department

City of Folsom

50 Natoma Street

Folsom CA 95630

Dear Jane:

In reference to your request for comments on the proposal for a crematorium at Lakeside Cemetery, I am happy to submit the following as an individual. I have been involved in cemetery preservation for almost 20 years.

I have great concern about the plans for a crematorium at Lakeside for the following reasons.

1) The area incorporating Lakeside Cemetery, the Historic Chung Wah Chinese Cemetery, and the California State Dredger Tailings Preserve is probably the only site in our State that combines these aspects of our heritage in one small area. To add a crematorium, with such limited acreage, it would not only be very close to all three of these sites, but would have an extremely negative impact on the setting, continuity, aesthetics, and historical significance of this area. . The idea that State Parks may someday develop an instructional trail by or through the tailings preserve is a distinct reality. The view of activities at the presently proposed crematorium location would be clearly evident to visitors on the trail. A crematorium could be placed in many other areas, such as an industrial area, without the impact it would have on both these

historic sites and the residential neighborhood adjoining.

2) There are also non historic concerns. Because of the many recent reports of problems at crematories, more and more families are requesting to view the cremation process. The planned location, in a rather crude metal building, is certainly not a respectful or comforting setting for this.

3) I also have concern regarding the operation of a crematorium in a cemetery that has apparently been plagued by multiple and unfortunate problems over many decades. A local newspaper article about five decades ago stated there was no further space for burials in Folsom, yet burials have continued in Lakeside. There are many stories of copings, and possibly monuments, having been moved or destroyed, a lack of adequate plat maps in some areas, and even questions regarding the ownership of certain areas of Lakeside. The fact that SCI turned the cemetery back to its current owners might suggest that they encountered such concerns.

Lakeside Cemetery, as I am sure you are aware, is really a grouping of primarily 19th century cemeteries (Citizen's, Jewish, Masonic and Odd Fellows, dates as early as 1850), all of which I consider historic. It would be extremely unfortunate if additional negative factors, such as the installation of a crematorium, further impacted these historic cemeteries...the final resting place of so many of our pioneers and early settlers who were responsible for creating the great region that we all live in and enjoy today.

Please contact me if I can provide any other information or support.

Sincerely,

Dr. Bob LaPerriere

Sue Silver
(First Draft published: June 27, 1999)
Updated: December 8, 2002

WRITER'S PREFACE

This was not an easy study for me nor was there any joy in locating the information about those who were buried in the cemetery and can never be found again. I have lived through nightmares of the worst kind and have spent hours contemplating how I might help make what has happened to this cemetery understandable.

I have learned to live with the knowledge that I cannot correct the years of abuse this cemetery has suffered. I knew I could not live without telling its true story.

The research performed for this study was begun in late 1994 and was continued until December of 1997, and is not yet considered completed. In researching, I found that many years of death notices and obituaries will need to be located utilizing the Sacramento papers as many editions are not available from the local Folsom Telegraph during those early years. For the most part, I have supplemented the very earliest years, those which encompass information written at the time of the Negro Bar mining camp (1850 - 1856) through those first pivotal years of the birth of the Town of Folsom (1856 - 1868). It was mainly these years which so very much information was lacking.

The compiled listing which accompanies this study report, shows there are **over 262 documented burials within this cemetery which cannot be located today**. There are 18 burials of unknown persons which are located in unmarked and unknown grave sites. There are **approximately 290 other probable unmarked and unknown graves located somewhere** in the cemetery in areas which today appear to be virgin, vacant ground. Where any of these missing, unmarked and unknown graves are is anybody's guess. Lakeside Cemetery has no historic records of burials, per their own admission.

The study report and the compiled listing paint a portrait of an historic cemetery which has been raped, mutilated and desecrated by the very authority licensed by the State of California to operate and protect it. Part of the responsibility for what has occurred at Lakeside Cemetery also rests on the shoulders of the Board of Supervisors of Sacramento County, and the Folsom City Council. Each of these two civil authorities have, at different times, been the legal authority for the Citizen's Cemetery, in all its progressive configurations.

The private, licensed operators of Lakeside Cemetery do not have any legal title to the old Citizen's Cemetery, nor do they likely have a legal title to what is known as the Cook's/American Legion Cemetery. Lee Miller knew this and when he sold Lakeside Cemetery to Robert Claney in 1963, he sold only the New Masonic Cemetery and the Jewish Cemetery, believing he had legal title to that religious ground. The subsequent acquisitions of portions of the original Negro Bar (aka: Citizen's) Cemetery, the Cook's/American Legion Cemetery, and the 1904 addition (Lots 1 through 3 of Block 44) to the Citizen's Cemetery, were not legal transactions.

Further, under the ownership of Robert Claney, much of the cemetery ornamentation which has disappeared was wilfully and maliciously removed by he and his staff. Whatever the motivation or intent of doing so, it apparently was not enough that, under his ownership, Claney had all the lone, historic tombstones laid flat in the ground to crumble away over time, but he obviously was desperate for additional burial space, so that in removing family plot coping he was able to gain access to what he thought were "unused" grave plots.

The fact that the Department of Consumer Affairs, which investigated charges against the cemetery operators in 1996-97, was unable to obtain sufficient, hard evidence (according to our weak and ineffectual cemetery laws) to make felony arrests, does not preclude that felonies were committed at this cemetery. Not just once, but time and time again. And no one - not one resident of the city of Folsom, not one city official, not one law enforcement official - made any effort to stop the desecration which he wrought upon this historic burial ground.

What once may have been one of the most unique, historic, gold rush-era, pioneer cemeteries to be found in the lower foothills of the Mother Lode, is now just a lawn full of destroyed and decaying historic tombstones and monuments to the early residents of Negro Bar and the Town of Folsom and vicinity. The evidence of this is contained in the compiled listing with it's source references, and with the photographic evidence, taken over various years, which show a long-ago cemetery that bears no resemblance to the "nice, memorial lawn" disastrously created by Robert Claney and Lakeside Cemetery.

If the State of California will not act to help this pioneer-era burying ground, who may the people trust in another hundred years with the remains of their loved ones or themselves?

I think about that a great deal. Perhaps so should you.

INTRODUCTION

The City of Folsom, in Sacramento County, was incorporated in 1947. Prior to that, this historic California town was first the site of the Negro Bar mining camp from as early as 1849, later becoming the Town of Folsom, as surveyed and platted for Capt. Joseph L. Folsom by Theodore T. Judah in 1855.

In February 1856, the town of Folsom became the terminus of the Sacramento Valley Railroad, the first railroad in the west. Negro Bar, for the most part still in place until the purchase of the town lots and blocks, was located between the American River and what is now Block 12 of the official plat of the town.¹

At all early mining communities, the one sure thing that faced the men who flocked to the gold fields of California, was that death was a part of life. Gold rush-era cemeteries dot the roadways and byways of California's Mother Lode. Some are well known, but some have become lost to the past. The mining camp at Negro Bar, with its surrounding camps of Texas Hill, Alder Creek, Rebel Hill, Ashland, Mississippi Bar and others, would be no exception in the need to find a place to bury the dead.

Studies conducted by the El Dorado County Pioneer Cemeteries Commission, at pioneer-era cemeteries throughout the Mother Lode, reveal that, wherever possible, the miner's cemeteries were established on small hills or knolls. Out of the reach of the miners' pans and sluice boxes along the river banks, these early citizens of the state felt certain they were laying their dead to rest in peace.

Some communities succeeded to that end. Some did not. In 1855 the cemetery at Mormon Island, east of Folsom, was in danger of being sluiced away by three mining companies. It was written that some bodies had already been washed away. In March of 1856, the editor of *The Granite Journal*, the first newspaper in Folsom, advised friends and loved ones that they had best see to the removal of their deceased before they were mined away.

In other instances, special Acts of the California State Legislature were passed to approve the relocation of cemeteries. This is known to have occurred at the Bidwell's Bar Cemetery, the Cold Springs Cemetery in El Dorado County, and to a Catholic cemetery in Stockton.

California does, indeed, have an appalling history of its treatment of the resting places of the dead. In that no records of burials were kept at most, those cemeteries still in use today, which date to the state's earliest times, are known to contain the unmarked remains of the state's pioneers, the graves of which are being impacted by current burials.

At the original Negro Bar Cemetery, now considered a part of Lakeside Cemetery, there is but one tombstone dated 1850. Yet the camp was said to have been populated by up to 700 miners between 1849 and 1851. In the Fall of 1850, Sacramento City experienced a terrible Cholera epidemic

¹ A copy of the townsite map may be found at the Folsom History Museum, the Sacramento County Recorder's Office, and the Sacramento Archives and Museum Collection Center (SAMCC).

which began in October and did not abate until sometime in December². Over 800 deaths occurred in the city alone, and thousands fled to outlying areas. The tombstone dating to the Negro Bar Cemetery is that of one Cholera victim whom the 1850 U.S. Census enumerated as a miner at Negro Bar in September of that year. He was Henry Probasco and he died on October 29, 1850. His tombstone identifies his enemy - "Died of Cholera".

How many human remains of other early pioneers of this vicinity who died and were buried in this cemetery, may never be known for certain. Reviewing studies of other cemeteries of similar size and era³, reveals that there are many more marked graves of the earliest era within those cemeteries than there are remaining at Lakeside Cemetery today. Empirical evidence of this type is an indicator that there must be a large number of unmarked and unknown graves within Lakeside Cemetery which may now be being impacted by current burials. Based upon this correlation between towns of similar size and population, the lack of historic tombstones at Lakeside is, at best, unnerving.

BACKGROUND

While researching the history of Folsom, it became necessary to visit the cemeteries located in the city. Historic cemeteries are generally filled with old marble and granite tombstones inscribed with various dates and sayings, and they stand prominently within the grounds. At Lakeside Cemetery, the majority of the remaining historic tombstones were found to have been laid flat in the ground where they are disintegrating and being destroyed not only from natural elements, but from the abuse of being driven over by lawn mowers and tractors.

Additionally, in 1994, historic tombstones, and remnants of historic tombstones and granite bases, were found hidden in Oleander bushes by the cemetery's storage sheds. This discovery eventually led to the study of the cemetery from which this document resulted.

During the summer of 1995, there appeared to be an increased number of burials occurring at the cemetery. A check of Disposition Permits filed with the County Office of Vital Statistics⁴, proved

² MEMORIES, MEN AND MEDICINE, A History of Medicine in Sacramento, California with Biographies of the Founders of the Sacramento Society for Medical Improvement and a few Contemporaries; J. Roy Jones, M.D.; The Sacramento Society for Medical Improvement, 1950; Premier Publications, Ltd., Sacramento, California

³ For example, a study of the 3.19 acre El Dorado Cemetery, in the town of El Dorado in El Dorado County, indicates the probability of over 500 unmarked graves, yet still it bears many more early markers than Lakeside.

⁴ A permit must be obtained for the interment and "disposition" of all human remains in the State of California. These permits, required by State law, are only required to be kept on file in the county's offices for a period of 12 months. Thereafter, they may be disposed. Sacramento County throws these documents away, and so it is impossible, without the name and date of death of the deceased, to verify interments in any cemetery.

that Lakeside Cemetery, through Miller Funeral Home, had not obtained as many disposition permits as the number of graves they had opened and closed in the ground that summer.

This discovery led to the theory that they were perhaps "prospecting" to find vacant ground. And that theory led to the realization that if they were seeking open ground and found historic remains, would they dare to remove those remains to cleanse the grave hole for future use? As ugly as this seems, it has happened all over California cemeteries and elsewhere.

A citizen complaint was filed with the State Cemetery Board in August of 1995. That Board, which disbanded in disgrace some thirty days after inspecting the cemetery in September, ruled that no improprieties had occurred at Lakeside. Sixty days after the Cemetery Board's duties were relinquished to the Division of Investigation of the Department of Consumer Affairs (DCA), the Board's director was under investigation of alleged misuse of trust funds from the Arlington/Bellview Cemetery in Sacramento County.

In late January of 1996, after the news of the investigation of the Board's director, a request was made to the director of the Department of Consumer Affairs that the department re-open the complaint and re-investigate the allegations made therein. In March 1996, a meeting was held with the new investigator for DCA which reviewed the facts and allegations of the complaint.

In late October and early November of 1996, the California Department of Consumer Affairs (DCA), in cooperation with the California Department of Parks and Recreation (DPR), excavated and removed approximately thirty family plot coping pieces from State park land adjacent to the cemetery⁵. It is believed they were removed by the cemetery operator between 1993 and 1995. Only one name was inscribed on any of the pieces of ornamentation found - **KNIGHT**⁶. None of the other ornamentation or tombstone bases found were inscribed to enable us to identify from which dismantled family plot it had been removed.

During the course of the excavation many citizens came forward to say they had had suspicions about what was going on at the cemetery. No one wanted to be identified and no one gave much

Early El Dorado County "Burial Permits" were retrieved and saved from 1910 through 1995 (1994 is the only exception) and these documents have been a tremendous help in the study of that county's pioneer cemeteries and burials. In Sacramento County, one would have to review all the death certificate microfilm rolls at the County Recorders Office in order to obtain much of the information obtained from the burial permits in El Dorado.

⁵ Color copies of photographs taken at the time of the excavation accompany this report. Video tape of some of the excavation is also available at the Folsom History Museum upon special request.

⁶ This piece of cut granite is believed to have been removed from the family plot of Henry T. Knight, an early trustee of the Natoma Water & Mining Company, and later the superintendent of the Folsom Water Power Company. His grave is located within the "Cook's/American Legion Cemetery" near the graves of many of the people with whom he was inter-related. The grave of his brother, Nathaniel Knight, is believed to be located near Henry's and is without marker today, unless his name may be found on the underside of Henry's marker which has now been laid flat in the ground.

detail by way of particulars. Except, that is, the former caretaker of the cemetery, who spoke with one of the investigators while in his car in the parking lot. It is not known if the investigator included in his reports what he was told by the former caretaker that day, but it is known that DCA never followed up in discussions with him throughout the remainder of the investigation. What he had to say was pivotal to the investigation and would have enabled DCA to file criminal charges against the operators.

To the date of this report, no charges have been filed by either DCA for this illegal removal of these items from the cemetery, or by DPR for the dumping of them onto state lands. The owner/operator of the cemetery sold the cemetery and his mortuary to a large corporation within 8 months of this investigative excavation. The cemetery continues to be used with present interments occurring within the most historic sectors of the graveyard - those representing the burial grounds dating to 1850, 1860 and 1870. In all likelihood, historic graves are either being buried over or, very likely, those human remains were removed by the former operator.

This document is being published so that sometime, somewhere in the future, there will be a record of what has occurred at this cemetery. Those in search of their family histories, those who plan to inter their deceased loved ones at this cemetery in the future, need to know that this cemetery, as of this date, is estimated to contain 575 unmarked and unknown grave sites. In more specific terms, this number of graves represents 12,075 square feet of ground if buried side-by-side and end-to-end. It totals roughly 1/4 of an acre of land or more if they were all buried in the same location.

What appears as "open space" within the lawn section of this cemetery, does not mean that there are no graves in the ground. Photographs taken in 1889, 1908 and in the 1940's and 1960's bear this out⁷, showing wooden headboards and other markers in areas now visible as vacant areas. Fires, which are documented to have swept through the cemetery, also took their toll on the wooden markers. The family plots containing the graves of members of numerous families which have been documented to be buried here, can no longer be found. Some of the markers which have been laid flat in the ground are believed to contain additional names of deceased on the unexposed sides of the monuments.

HISTORY OF CEMETERY SECTIONS

Lakeside Cemetery, is a combination of five historic burial grounds (Masonic, Odd Fellows, Jewish, Negro Bar [aka: Citizens'] and Cook's, and New Masonic), and has been actively used from as early as 1849 with the emergence of the mining camp called Negro Bar.

⁷ Early photographs may be found at the Folsom History Museum and at the Sacramento Archive and Museum Collection Center (SAMCC) in the Hepting Collection (photos by Thomas Betz and Len Kidder, 1940's).

Negro Bar Cemetery

Of the various and separate sections, the Negro Bar Cemetery⁸ was the first location to be used. It was comprised of Lots 4 through 8 of Block 44 (Figure 1.). These lots were sold at the auction of the town lots and blocks in Sacramento City in 1856⁹. According to church records and the newspaper obituaries, these lots would later be referred to as the Folsom cemetery, the City Cemetery, and the Citizen's Cemetery, from as early as 1861 until at least 1942¹⁰.

According to California law, the "Citizen's Cemetery" was a public cemetery. That is to say, that in 1872, under Political Code section 3105, title to this cemetery vested to the County of Sacramento by benefit of the provisions of the statute, which stated title to a cemetery, then in continuous use by the community for a period of five years, vested to the community. If not located within an incorporated city, authority for the cemetery would fall to the county in which the cemetery was situated¹¹.

Section 3105 further provided that once used as a public cemetery those lands could never be used for any other purpose whatsoever. Therefore, Lakeside Cemetery's claim of ownership of these lots is invalid, since title vested to Sacramento County in 1872, and they could never be used as anything but a public cemetery. Lakeside Cemetery is a licensed, private cemetery, operating an historic public cemetery outside the provisions of State law.

Lots 1 through 3 of Block 44 were owned by Joseph McDonald and his wife, Mary, during the 1860's. McDonald was killed in a railroad accident in December of 1867. According to his probate records, his property adjacent to the public cemetery, was never sold from the estate. This was probably because the "Citizen's Cemetery" had already encroached onto the lots owned by McDonald, and they were, therefore, not an attractive purchase for any buyer.

Graves within Lots 1 through 3, formerly belonging to McDonald, are known to have occurred as early as the 1920's. According to the County Tax Assessor's records, these lots were transferred to

⁸ The Negro Bar Cemetery was originally located on Lots 4 through 8 of Block 44. It was later referred to as the Citizen's Cemetery contained within only those lots. It appears that sometime after 1880, what is now called "Cook's" or "American Legion" Cemetery (Lots 14 through 16 of Block 44), was also referred to as the Citizen's Cemetery. Sometime after the turn of the century, and well into the 1940's, Lots 1 through 3 of Block 44, also became a known as a part of the Citizen's Cemetery.

⁹ No evidence has been found that the original purchaser ever transferred his title to the lots at anytime thereafter.

¹⁰ The Trinity Church records list a burial in the "Folsom Cemetery" in 1861. This would have been previous to the purchase of the Jewish cemetery lots in late 1861, and a year earlier than the purchase of the Odd Fellows and Masonic cemeteries in 1862. The Folsom Telegraph first advises of a burial in the "Citizen's cemetery" in 1887, and it continued to use that name as late as 1942. Previous to 1887, the paper referred to it only as "the grave yard."

¹¹ This per Political Code section 3109 of the California statutes enacted in 1872.

the State of California in 1935, presumably for back property taxes. Lakeside Cemetery supposedly purchased these (already) used burial parcels from the Sacramento County Tax Collector in 1976. Yet, according to the former caretaker of Lakeside Cemetery in a 1992 audiotaped, tour given to members of the Folsom Historical Society, Lee Miller supposedly "opened" this area up for interments in the mid-1960's.

The sale of these lots by the County Tax Collector was not lawful in that the grounds had been used by the public as a public cemetery from at least the 1920's. Again, according to State law, once it had been used as a cemetery by the public, it became a public cemetery never to be used for any other purpose whatever. How this property came to be sold for taxes when cemeteries have been exempted from property taxation since 1859, is not known. What is known, upon review of the state's laws, is that these lots are public property which are being unlawfully operated as private cemetery grounds.

Cook's/American Legion Cemetery

Cook's Cemetery (Lots 14-16, Block 44) (Figure 2.) has been historically known by several references. It is believed it was first called Murray's Cemetery for William Murray who died in 1870. It was later called Meredith's Cemetery for James S. Meredith whose daughter Laura Belle was supposed to have been interred in the Masonic Cemetery and whose grave somehow was placed in Murray's Cemetery. Later it was referred to as the Blower Cemetery for David Blower, the husband of Maggie Cook Blower and brother-in-law of Frank Cook, for whom it was later called Cook's Cemetery. Shortly after World War I, Frank Cook (purportedly) deeded the cemetery over to the Lewis J. Blodgett American Legion Post, and it became known as the American Legion Cemetery.¹²

Similar to the Citizen's Cemetery, this too is a public cemetery under the law. When William Murray died in 1870 and was buried in his "own cemetery," the ground began to be actively used by the community. No transfer of Murray's title has been located to date, though the county tax assessor does list James S. Meredith as owning an undivided 1/2 interest in the lots in 1873, one year after the enactment of the law which vested title to the public. It is likely the assessor listed Meredith since Meredith's daughter's grave is located within Lot 14. And, despite the Cook's claim of title to this cemetery, no deed has been located to prove the Cook family ever held legal title to the lots.

SPECIAL NOTE: Regarding Cook's, Citizen's, "City" and "Folsom" Cemetery References

¹² FN dated 2/22/1999: The following newspaper article was located after the original writing of this report:

"Lewis J. Blodgett Post wishes to announce the transfer of Cook's Cemetery to the Post. The cemetery will now be known as Lewis J. Blodgett Memorial Cemetery and any person owning plots wishing to make changes, please consult Anthony Castro, service officer of the Post."
(Folsom Telegraph, 5/26/1939, 1-3.)

This research has revealed that Lots 14 to 16 of Block 44, commonly referred to as Cook's/American Legion Cemetery, was also referred to as the Citizen's Cemetery, City Cemetery and Folsom Cemetery based upon the finding of tombstones of deceased of whom these various cemeteries were noted in obituary references.

This will create a great deal of confusion in determining the location of unmarked graves for they could all be anywhere within Lots 1 to 8 and 14 to 16 of Block 44. Because of these references, it is suspected that the residents of the area used Lots 14 to 16 of Block 44 at will, just as they did the Citizen's Cemetery. There was never any advertisement for plot sales found in the newspapers which would indicate that Murray, Meredith, Blower, or Cook ever really administered this cemetery. It is suspected that the community viewed it, and used it, as a **public cemetery**, just as they did with Citizen's Cemetery.

Citizen's Cemetery has been found to be referenced alternately over time as Citizen's, City or Folsom Cemetery. Because this was the **public cemetery**, during various points in time, the residents referred to it by the name used within that specific period of time.

The use of the term "City Cemetery" is especially confusing because the Sacramento City Cemetery is so heavily identified within the county. Almost always, in researching cemeteries located within townsites, this term arises periodically. This has been found in places such as Diamond Springs and Placerville in El Dorado County. The people who lived in the towns (versus an incorporated city) still referred to their locales as a "city" and their cemeteries were, naturally, "City" cemeteries.

Jewish Cemetery

The Jewish Cemetery, originally lots 13 through 16 of Block 43 (Figure 3.), was purchased by Jewish merchant, Joseph Fiel, in late 1861. Title to the property was later held in the name of E.R. Levy, and finally rested in the hands of Simon Cohn. The title to these lots was never transferred from Cohn's estate, and his estate documents officially established it as the "Folsom Jewish Cemetery" and not as the "Cohn Family Jewish Cemetery" as it would have to have been called if the grounds belonged to the family personally.

Title to the Jewish Cemetery was held in these individual's names probably because the Hebrew Benevolent Society, established at Folsom in 1857, had formally disbanded by the time the property was purchased. Fiel was a cousin through marriage of E.R. Levy, and it would have been understandable for Levy to take title in trust for the Jewish residents of Folsom after Fiel's death. Cohn was one of the most prominent Jewish men in Folsom, and it would also be understandable for him to assume title in trust after Levy.¹³

¹³ A chain of title to locate the transfer of this property has not been performed. This information has been taken from the County Tax Assessor's map book information. It is not yet known if the deed formally passed from Fiel to Levy, or from Levy to Cohn.

In spite of the fact that title to the Folsom Jewish Cemetery never legally passed from Simon Cohn's estate to any individual or group of individuals, the descendants of Cohn quit claimed Lots 13 and 14 to Lakeside Cemetery in the 1960's, when Lakeside was then under the ownership of Lee Miller¹⁴. That (illegal) quit claim deed, however, conditioned the transaction to the maintenance of a fence and road to segregate the Jewish cemetery ground from the cemeteries of the gentiles. The fence and roadway have both been removed since the execution of that deed.

Odd Fellows and Masonic Cemeteries

The Granite Lodge No. 62 of the Independent Order of Odd Fellows (IOOF) and the Natoma Lodge No. 64 of the Free and Accepted Masons (Masons), co-jointly purchased lots 9 through 13 of Block 44 in 1862. The property was divided so that the Odd Fellows would use lots 9 through 11 for their cemetery and the Masons would use lots 12 and 13 for their organization's cemetery. The IOOF and the Masons each sold their cemeteries to Lakeside Cemetery in 1969 and 1970, respectively.

Interestingly, since Lots 4 through 8 of Block 44 had been identified to be a "Public Cemetery" by the County Tax Assessor as early as 1873, by 1911 or 1912, the assessor's records reflected that these lots belonged to the Odd Fellows. When or how the Odd Fellows may have laid claim to the public cemetery is not known. Nevertheless, when they sold their burial grounds to Lakeside Cemetery in 1969, these four previously identified public cemetery lots were included in the deed.¹⁵

HISTORY OF FUNERAL HOME OPERATORS

In order to understand who was handling the burials within the cemetery throughout time, a review of the undertakers of Folsom is necessary. In the first few years of the Negro Bar mining camp, of course, we can assume that the miners took care of the burial of their associates and friends.

Generally speaking, this would entail wrapping the body in a blanket and depositing it into the ground. Lumber was scarce, there were few sawmills in operation in the beginning, and the cost of wood for a coffin was prohibitive. They would have much rather spent money on lumber for building sluice boxes and long toms to aid in their mining operations. Later, of course, as the cost of wood and lumber came down, the dead were buried in common pine boxes. The more affluent

¹⁴ Lakeside at that time was comprised of only the New Masonic Cemetery located on what was supposed to be Lots 15 and 16 of Block 43, but which, in reality, was located within the 66 feet of Sacramento Street with only 44 feet of Block 16 being taken for actual use. It would appear that the residents, the Masons, and the Cohn Family (P.C. and Alice Cohn and Rosa (nee Cohn) and Nathan Kohn), forgot that the cemetery parcels were laid out on the original lots and blocks, containing streets and alleys separating them, at the time the Masons obtained the ground for the New Masonic Cemetery from the Cohn heirs.

¹⁵ Since title to Lots 4 through 8 of Block 44 vested to Sacramento County with the enactment of Political Code section 3105 of the California statutes, the transfer of this public cemetery to private ownership was unlawful. The Odd Fellows, having no true title to them, could not have legally sold them to Lakeside Cemetery.

the deceased was the more likelihood his coffin would have metal handles. The less influential person's coffin probably had rope handles.

As communities developed over time, it is seen by advertisements in the newspapers that undertaking was only a side business to one that brought a regular clientele. In Folsom, William Murray appears to be the first merchant to supply coffins and undertaking services. His furniture house advertisement found in the Folsom Telegraph of October 2, 1862, was dated August 1861. The advertisement, however, touted his furniture business, and said nothing of the furnishing of coffins or undertaking services.

In May of 1869, Murray sold his business to Jacob Miller of Sacramento. Miller's first advertisement included, "(P.S. Undertaker and hearse furnished at reasonable rates.)" Miller's "Furniture House" was first located in the building on Sutter Street which was built by Murray and which still stands on the south side of Sutter Street between Riley and Wool streets bearing the name "MURRAY" on its edifice.

Thereafter, Jacob Miller attended the needs of the dead, providing both coffins and caskets and funeral services as well. He often served as the coroner for the eastern boundary of the county and was responsible for the burial of the unknown or indigent deceased in the vicinity. By the turn of the century, Miller's son Oscar, had gone to undertaking school (a trade his father is not known to have formally studied) and was active in the family business. Jacob died in 1905, leaving the business to his son, Oscar.

Oscar Miller continued the business until sometime in the early 1940's, at which time his son, Leland (Lee), also trained in the field of undertaking and embalming, had already joined the family enterprise. By this time, the only business being conducted by the Miller family was the funeral home. Oscar died in 1946, leaving the business to his son Lee and his wife, Elizabeth. Elizabeth died in 1954, leaving the business to Lee.

Approximately two years later, Lee saw the future in owning his own cemetery. Folsom Dam and Lake had recently been completed and the future of Folsom probably seemed brighter than it had in years. A recreational lake near the City of Folsom would draw new "settlers" to the area. Aerojet General was in operation and brought many new residents to the town. The cemeteries of the town were less than well kept, and Lee could see that it would need to be regularly attended and maintained.

This is when he obtained the New Masonic Lawn from the Natoma Lodge No. 64, which was struggling under financial constraints to maintain both its new and old cemetery sections. The transfer of ownership was made and Lee Miller formed Lakeside Memorial Lawn. Shortly thereafter, through his long association with Folsom Prison and his contract to undertake the deceased convicts, Lee persuaded a close associate and relative of the Cohn family to relinquish the Jewish Cemetery so that he could "better maintain it."

After much discussion, the family relented and quit claimed what they may have thought was their interest in the two lots comprising the Folsom Jewish Cemetery to Lee Miller. Miller, in turn,

incorporated the two lots into Lakeside Memorial Lawn, removed plot coping and ornamentation, and began to inter gentiles in the previously sacred, Jewish burial ground.

Miller sold Lakeside and the funeral home to Robert Claney, a long-time employee, in 1963. Thereafter, Claney proceeded to "upgrade" the cemetery to bring it more into conformance with the concept of the modern, "memorial lawn burial park." He bought the historic Odd Fellows Cemetery (unlawfully including Lots 4 through 8 of the public Citizen's Cemetery), and followed this purchase with obtaining the old, historic Masonic Cemetery.¹⁶

As part of Claney's program to enhance the cemetery grounds, he began to lay the historic tombstone and monuments in the ground, supposedly for ease of maintenance. Later, this appears not to have been enough to modernize the grounds, and he appears to have removed tons of granite, placerite and formed concrete coping pieces from inalienable family plots. In doing so, he was able to remove the original boundary lines of family burying space and was then able to utilize whatever "open" space seemed available. According to the former caretaker of 22 years employment, he removed for Claney all of the oldest and most unsightly plot outlinings and coping¹⁷, as well as tombstone bases and other ornamentation.¹⁸

Robert Claney transferred ownership of the funeral home and cemetery to his son, Loren, and his daughter in early to mid-1995. It was under the ownership of his offspring that the Department of Consumer Affairs investigation began, and which continued until both the cemetery and funeral home were sold in mid-1997 to SCI, Inc., a conglomerate corporation specializing in the funeral and cemetery industries.

For the first time since 1869, Miller Funeral Home is no longer run as a family enterprise. Since taking ownership of Lakeside Cemetery, SCI has increased the number of interments within the

¹⁶ The Masons built a new hall for their organization around 1870. It soon, thereafter, was a victim of fire and was burned to the ground. All of the association's records and documents were lost, including the record of deaths and burials at their cemetery. The first documented burial in the Masonic Cemetery was that of Capt. A.M. Hammond who was murdered at Smith's Flat, El Dorado County, and was brought to Folsom and buried by the Natoma Lodge of Masons.[Mountain Democrat, April 13, 1861, pg. 3, col. 1; Sacramento Daily Union, April 12, 1861, pg. 3, col. 2]. Therefore, the Masons had used their cemetery even before the formal purchase in 1862. By 1871, with the loss of the records by fire, any number of interments could have been made in the cemetery. There appears to have been no attempt by the Lodge to recreate their records in those early years:

¹⁷ Photographs on file at the Folsom History Museum show many "unsightly" grave sites situated at the rear (north) of the cemetery. One photo is believed to have been taken viewing east from the Jewish Cemetery and shows crude brick outlined plots and wooden markers.

¹⁸ Most of what the caretaker removed is located in an old ravine situated at approximately the north end of what was Sacramento Street (New Masonic Cemetery section) and extends easterly behind the Negro Bar (aka: Citizen's) Cemetery section. Since mid-1995, Lakeside maintenance workers have been filling in this ravine to conceal the materials hidden there. (Also found in this ravine in January of 1995, were pieces of granite coping.)

historic sections of the cemetery grounds, even though the records of interments which they received from the Claney family is known not to be accurate or anywhere near complete.

INTERMENT AND IDENTIFICATION LISTING (not included in 12/6/2002 update)

The attached listing was compiled using tombstone inventory lists previously published such as a 1935 Daughters of the American Revolution (DAR) list and Rest in Peace (1981, Bayless, et al.). Death notices, obituaries and articles about deaths taken from the Folsom Telegraph (1865 - 1943), Mountain Democrat (1855-1905, 1911-1913) and Sacramento Daily Union (1852-1868¹⁹) newspapers were abstracted from microfilm copies on file at the State Library.

The records of St. John the Baptist Catholic Church and Trinity Church were reviewed, as were El Dorado County Burial Permits. Abstracts of death certificates from Sacramento County deaths²⁰, a record of the Deaths and Interments In and From the City of Sacramento (provided by the Sacramento City Cemetery Archives), the New Masonic Cemetery²¹ Plot Sales records, and other miscellaneous documents derived from various other sources, have also been reviewed for this research.

Where necessary to identify familial relationships, the U.S. Census indexes and records for 1860, 1870 and 1880 have been referenced. A more complete record of families from census information would provide additional information for this study, as would the creation of genealogical family group records.

METHOD OF COMPILATION

The 1935 and 1981 tombstone inventory lists were first been combined alphabetically and, when obituary information has been available about these persons, it has been referenced and added. Newspaper source reference citations provide the newspaper title, the issue date, and the page and column numbers of where the reference was found.

Where the names from obituaries did not appear in the previously published listings, the information contained in the abstracted obituaries have been added to the list as separate entries. Some of these entries cite specific locations of interment as stated in the obituary notice, such as

¹⁹ As research continues, additional abstracts may be taken from later issues of the Sacramento Union.

²⁰ As abstracted by Dennis McCargar (1996-1998), Librarian at the California State Prison, Sacramento, for his study of the historic Folsom Prison Cemetery.

²¹ The New Masonic Cemetery purchased in 1916, but was not platted until 1924. A copy of the plat map was filed with the Sacramento County Recorder. A copy of the map, with some of the names associated with the grave plots is available through the Lodge Historian. The plot sales register is archived at the Folsom History Museum.

Citizen's, Cook's, Masonic, etc. The names provided by the obituary information that cite the location of burial and which cannot today be located at Lakeside, are indicative of the number of **known and unmarked graves** which exist at Lakeside Cemetery today.

Other entries represent those who died at or near Folsom and surrounding communities. These names have been added and are considered probable burials within one of the cemeteries at Folsom, other than St. John the Baptist Catholic Cemetery. Tombstone inventories for all known cemeteries of the area, have been referenced in order to eliminate the possibility of these burials having occurred elsewhere. The remains of the persons identified from these references, should be considered to **probably be in unmarked and unknown graves**.

The earliest marker (remaining) at Lakeside is dated 1850. Folsom Telegraph obituary information is not available on Folsom burials previous to 1865 as there are no copies available for referencing. Additionally, a total of 327 issues of the Telegraph are missing between the years 1865 and 1888. There is a great deal of information about Folsom burials which may never be known. From 1850 to 1865, and including the 327 missing issues, a total of 21 years of obituary information has not been recorded.

To supplement some of the missing Telegraph information, the Sacramento Transcript and the Sacramento Daily Union were referenced for the period of 1850 to 1868²². Still, it would be an intelligent presumption to believe that there are far more unmarked graves located within these historic cemetery sections than is reflected in this listing.

The previously unrecorded names on the list do not include names determined to have been buried at the Catholic, Eagles, Knights of Pythias, Mormon Island or Matthew Kilgore cemeteries, all of which are the closest burials places to Folsom. All names which may have had the appearance of being Irish, or closely related to other known Catholic recognized surnames (such as French, Portuguese, German, etc.), have not been included on this listing. However, it is recognized that not all Irish surnames are representative of the Catholic religion, though it would be difficult to differentiate between Irish Catholics and Irish Protestant names. There are a vast number of deaths of persons with Irish surnames which have been recorded in my previous research, but which have not been included in this study.²³

It is important to note that there were no "Unknown" graves recorded in either the 1935 or 1981 listings, nor were there estimates given of the number of unknown graves visible at those times. There are also no wooden headboards or common stone markers such as are found in nearly all pioneer cemeteries in surrounding communities. More telling is the lack of temporary metal

²² While it is entirely possible that additional editions of the Sacramento newspapers will yield further death and obituary information not found in the Folsom Telegraph editions, they have not at this time been referenced or abstracted.

²³ Refer to the report and study for the Historic St. John the Baptist Catholic Cemetery for abstracted deaths associated with suspected Catholic parishioners. It is possible that some of those included on St. John's listing were not Catholics and were buried at what is now Lakeside.

markers anywhere within the grounds. This is highly unusual, for many other pioneer cemeteries contain these temporary markers even though the name and death information has long since disappeared from the face plate.

It should be noted that addendum listings have been produced from the main listing for names of deceased known to be interred in a specific cemetery (by reference), so that there is a separate listing for unmarked/unknown graves within Citizen's Cemetery, Cook's Cemetery, Old Masonic, and Odd Fellows cemeteries. No attempt has been made to identify interments within the New Masonic Cemetery, with the exception of including the Masonic Association's plot sales records.

LISTING LEGEND:

A first listing which was compiled in 1995, and included color coding with a legend that identified what each colored entry represented in terms of possible interments, previously recorded tombstones no longer found in the cemetery, interments from obituaries which cited specific locations but for which no tombstones were located, tombstones dated 1900 and prior, tombstones located and found on previous inventories, etc. This was found to be too confusing to follow in a listing of this size. (The original listing and all updated listings have been archived for back referencing.)

The new legend has been designed for simplicity.

Bolded entries now represent known interments based on the recordation from previous tombstone listings or from obituary information found in newspaper accounts which cite an actual location of burial (ie. Citizen's, Cook's, etc.)

Underlined entries now represent probable or possible interments. In cemetery studies conducted in El Dorado County over the last 20 months (from the date of this printing), it has been found that where one died and there was a cemetery, one was buried in that local cemetery. If one was taken to another community for burial, the newspaper would almost always provide that information. Transporting the deceased to another locale was an unusual occurrence, especially in the earliest years, and we must therefore presume that those who died in and near Folsom were probably buried in the Folsom cemeteries.

THE UNKNOWN, UNMARKED AND MISSING GRAVES

In reviewing the compiled listing, it is clear to see that many of the burials which occurred at the Folsom cemeteries are now either unknown, unmarked or missing when compared with the previous tombstone listings and references cited. Of those who cannot be located within the grounds today are many family groups, as well as individuals who died and were buried here.

Only one grave representing Folsom's African American residents is marked in the cemetery and that is the grave of James H. "Honey" Cook. All of the other graves of African Americans noted to

be buried or suspected of being buried at this cemetery, are unmarked. Odd that at a cemetery which was first used by the "Negro" Bar mining camp, that none of the pioneer citizens of that race are able to be located in this cemetery.

It is estimated that between 20 and 30 family plots of coping materials were removed in 1996 from the State park land adjacent to the cemetery. With the "dismantling" of the family plots and the plot coping, a cemetery operator may seek to take advantage of "unused" plots within legally inalienable plot space. The motivation for removal of the early family plots may also have been to "re-use" grave sites for current burials, since in digging the new graves, only the equipment operator would know whether an old grave pre-existed.

Regardless of the motivation, one fact remains - there are a great number of old, historic graves which are unmarked within the cemetery which have already been, or are in jeopardy of being, buried over through current burials. This is not only illegal, but immoral. A society, upon discovering such activity, which would allow such activity to continue, evidences itself as having the most frayed of moral fabric. If we cannot protect the dead, those who lie in sacred peace, who can?

The following 61 family plots or grave sites have been identified as either missing, significantly altered by dismantling, or as being in jeopardy:

Adolph Alexander Family Plot

1 unmarked

The brother-in-law of Simon Cohn, Alexander's tombstone stands to the northwest of the Simon Cohn grave site in the Jewish Cemetery. In February of 1867, Alexander's daughter, Esther, died at the age of 18 months. Her grave cannot be located today. It is not known whether Mrs. Bertha Alexander, Adolph's wife, was buried here.

David Bennett Plot

2 unmarked

Update, 5/1/1998: According to Karen Rader (see Tyler J. Hill Plot), David Bennett was the second husband of Mrs. Lucy Ann Saunders, Marion Caroline Saunders Hill's mother. Both were buried in the Folsom Masonic cemetery. David Bennett was a pioneer of El Dorado County and was an early vintner of the area just east of Marble Valley in the vicinity of present day Cameron Park. During his ownership of that ranch, Bennett would have been a contemporary of Benjamin N. Bugbey of the Natoma Vineyard near Mormon Island east of Folsom. Bugbey also had vineyard land near Bennett's vineyard off of present day Durock [sic Duroc] Road in Cameron Park.

Charles Bishop Family Plot

3 unmarked

Two of the children of Charles and Sarah C. Bishop were buried in Folsom. According to Trinity Church records, daughter Edith, who died in January of 1868, and son Freddie, who died in September of 1868, were buried in the Odd Fellows Cemetery. Charles Bishop died in July 1876

and was brought to Folsom for burial. His interment would have been made with the graves of his deceased children in the Odd Fellows Cemetery.

Peter Bush Family Plot

1 unmarked

Located within what is now called the Cook's/American Legion Cemetery section, is a granite coped plot with the name "BUSH" chiseled into the front facing of the step which leads into the plot. Interred within this plot are members of the Fleckenstein family, who arrived in Folsom much later than Peter Bush, who died in February of 1889. According to the 1880 U.S. Census index, Bush, a 50 year old native of Germany, had a wife and five children. Only Peter's death notice has been located. His grave is unmarked at the cemetery today and his plot has been alienated²⁴ by the interment of the Fleckenstein family members.

Campbell Family Plot

4 unmarked

There is no evidence of the graves of the four members of this early African American family who are known to have been interred at this cemetery. The first of the family to die was Amelia Campbell, the 16 year old daughter of Squire Campbell, who died in August of 1895. The next member was Toy Campbell, the daughter of Squire Campbell, and the sister of "Sandford" Campbell, who died in February of 1904 and was buried in the "Citizen's Cemetery".²⁵

In March of 1907 came the death of little Sanford Edward Campbell, the seven month old son of Mr. and Mrs. Squire Campbell, who died March 11, 1907, his "interment being in the Citizen's Cemetery."²⁶ Sanford Campbell, the 33 year old son of Squire Campbell of Placerville, died at Sacramento in June of 1911, and the obituary stated the "funeral takes place in Citizen's Cemetery."²⁷ He was the brother of Toy Campbell.

None of the Campbell family member's graves are marked in the cemetery today. Whether, being African Americans, they may not have any grave markers originally, is not known. Squire Campbell died in El Dorado County and was buried in the Placerville City Cemetery.

Michael Carr Family Plot

No graves are believed to be unmarked or missing from this plot, if the plot is, indeed, where the marker is found today. However, the three names of the Carr family members, father Michael (died

²⁴ California Health and Safety Codes clearly state that family burial plots purchased and used by at least one member of the family are inalienable and may not be used or sold by any other parties.

²⁵ Folsom Telegraph, March 3, 1900, page 3, column 1.

²⁶ Folsom Telegraph, March 16, 1907, page 3, column 1.

²⁷ Folsom Telegraph, June 23, 1911, page 1, column 7.

1863), mother Ursula (died 1858), and daughter Mary Jane (died 1857), are all inscribed on the same marble tombstone. That tombstone sits adjacent to a tree and is thoroughly surrounded by more recent markers, many of which may be cremains burials. Regardless of the type of the more recent burials, the family plot became inalienable under California law. Whether the Carr graves are situated in this location is not really known as the marker could have been relocated from somewhere else in the cemetery. It must be noted, however, that in 1857 when Mary Jane died, there was but one cemetery, besides the Catholic cemetery, in use by the residents of Folsom and vicinity - the Negro Bar (aka: Citizen's) Cemetery. The tombstone is within what was called the Citizen's Cemetery.

Simon Cohn Family Plot

1 unmarked

The descendants of Simon Cohn, upon transferring the Jewish Cemetery to Lee Miller for use as Lakeside Cemetery ground, reluctantly granted Miller permission to remove the coping and ornamentation from the family plot²⁸. Miller had stated it would be easier to maintain the grounds if these items were removed. Since that time, the grave marker for Henrietta Cohn can no longer be found. (According to Henrietta Cohn Whelan, daughter of Philip C. Cohn, the family is curious as to what happened to this tombstone.) Included in the Cohn family plot is the grave of Senator Philip C. Cohn, the only Folsom resident in the 20th century to serve the state in that capacity.

James M. Cook Family Plot

1 unmarked

This man, one of Folsom's African American residents, also known as "Honey Cook", is buried in the southerly end of Lot 1 of Block 44, under a concrete topped grave with a military marker which has been laid flat and embedded in the concrete. This research revealed that Cook was hospitalized at the Veteran's Hospital in Boise, Idaho in 1942. It has not been identified when his death occurred. Cook's wife, Julia, who he once attempted to kill while living in Folsom, died in Folsom in 1936. Her grave is unmarked and is believed to be next to or near that of her husband²⁹.

William Cook Family Plot

2 unmarked

A large granite monument stands prominent within the William Cook family plot located in what is known as the Cook's/American Legion Cemetery section. The only name which appears on the monument is that of Ellen Cook, wife of William, who died in January of 1875. Of that family, William, the father and William E., the son, both died and were buried at Folsom. The senior Mr. Cook's obituary from June of 1905, states that he was buried in Cook's Cemetery³⁰. Son, William

²⁸ See description of the Cohn plot ornamentation and coping under Simon Cohn in the listing.

²⁹ This is not the only missing grave of an African American resident buried at Lakeside Cemetery.

³⁰ It should be noted that William and Ellen Cook's daughter, Maggie, married David Blower. Blower's name appears on the County Tax Assessor's maps as being the owner of Lots 14 through 16 of Block 44 sometime in the 1890's. Maggie's brother, Frank W. Cook, is the man from which the name "Cook's" cemetery originated.

E., was killed trying to board a moving train in Stockton in September of 1901. Both men are believed to be in unmarked graves within the William Cook family plot.

B.W. Cornell Family Plot

1-2 unmarked

The name "Brob. W. Cornell" is found on the 1935 DAR tombstone listing. Research which located the 1906 obituary of Mrs. A.M. Cornell revealed that she was the wife of B.W. Cornell, they having come to California in 1854. The couple is listed in the 1860 U.S. Census. There were no children living with them at the time. Mrs. Cornell's grave is not marked today. It has not yet been ascertained whether Mr. Cornell's grave remains marked as it was in 1935. [SS note, 5/11/2002: on Peter Kroff's 1999 inventory.]

Jesse Couch Family Plot

3 unmarked

Only the tombstone of little Margaret Jane Couch, who died in April of 1861, at the age of 9 months, can be located at Lakeside today. Couch's wife, Margaret, and two other children also died while he lived in the area³¹. The graves of wife Margaret, son B.S. Love, and daughter, Jessie Jane, are not found. The area surrounding baby Margaret Jane's grave has been extensively used in later times. Jesse Couch once served as the county supervisor of the district in which Granite Township was located.

Crawford/Tuck/Rightmeyer Family Plot

1 unmarked

As featured in the book *Folsom Fables ~ Pieces of the Past* (Sue Silver, 1995), in the story titled "A Widowed Woman," the graves of the first two husbands of Mary Tuck Rightmeyer Crawford, are located in the Odd Fellows cemetery, just east of the Little Family plot. Samuel Tuck, Mary's first husband, died in March of 1867 and she provided him with a beautiful marble tombstone in the Odd Fellows Cemetery. In October of 1889, Mary buried her second husband, Henry Rightmeyer, a woodchopper for the railroad company. She had Henry's name and dates inscribed into the same tombstone as Samuel's, and the two men now lay side by side in the cemetery. Mary died in February of 1898. Her obituary states that she was buried in the Odd Fellows Cemetery, though there is no marker there today. She is believed to be buried next to her first two husbands. A date of death or burial location for her third husband, Alphonse Crawford, is unknown.

E.L. Currier Family Plot

3 unmarked

Located toward the rear of the Cook's/American Legion Cemetery section, is the tombstone of Addie S. Currier, who died in May of 1880. The tombstone has been laid flat in the ground and is in the shape of an upright obelisk. A photograph taken of the Windmill Family plot around 1889, shows this tombstone standing erect, behind and to the northwest of the Windmill plot. The

³¹ Jesse Couch was one of Folsom's earliest pioneer residents. For a time, however, he did live at Latrobe, El Dorado County, after the extension of the railroad to that town. In his life in the area, Couch once served as a Supervisor for Sacramento County.

grave plot is surrounded by picket fencing and is estimated to have been approximately 10 feet by 20 feet in size.

E.L. Currier, the patriarch of the family, is known to have been a produce grower who was quite admired in Folsom. He is believed to have died between February 1887 and February of 1892. The last mention of him in the newspaper appeared in the former month and year and the latter occurred at the time his wife, Arvilla, died a widow in 1892. Their son, Ralph Currier, sometimes referred to as "Pet" in newspaper references, died in May of 1936 and his "interment was in the family plot in Cook's Cemetery here."³² Ralph served as the Agricultural Commissioner for the Granite Township district of Sacramento County in the early 20th century.

Today there are markers for many people who are unrelated to this family on every side of Addie's tombstone. It is not known if these later graves were buried over the missing Currier family members³³, or if these later markers were simply moved to this location. Since many are dated during the remainder of Ralph's lifetime, it is certain that no burials occurred in the family plot while he lived.

George Custer Family Plot

2 unmarked

The graves of George and Annie Custer cannot be located at Lakeside Cemetery. George died in 1895, a native of Pennsylvania and a 40 year resident of the area. Wife, Annie, died in 1896 and was buried in the "Folsom City Cemetery."³⁴ Understanding the history of the cemeteries now included in what is Lakeside, this could be either the Negro Bar (aka: Citizen's) Cemetery or what is now called the Cook's/American Legion Cemetery.

H.M. and B.J. Dains Family Plots

9 missing and unmarked

The elder patriarch of these two pioneer families was Henry M. Dains, an early pioneer of Georgetown in El Dorado County. His son, Benjamin J. Dains, and his family were also buried at this cemetery. There is no trace whatever of any member of the Dains family graves at Lakeside today.

Among the known interred of the two families are: Benjamin Dains (died 1929) buried in the "Masonic" cemetery at Folsom; Clarence G. Dains (died 1913), son of B.J. Dains, who was buried at "Cook's Cemetery"; Elton Dains (died 1902), son of Benjamin Dains, who was buried in the Odd Fellows cemetery; Elwood Dains (died 1908), son of B.J. Dains, who was buried in the Odd Fellows cemetery; Henry Montgomery Dains (died 1900), husband of Susan and father of B.J. Dains, who was buried in the Odd Fellows cemetery; Maggie (nee Robson) Dains (died 1903), wife

³² Folsom Telegraph, May 22, 1936, page 2, column 3.

³³ Since Ralph died in 1936, it is difficult to believe that the family plot could have been dismantled before the time of his death, since he was fully aware of his own family's burials.

³⁴ Folsom Telegraph, October 3, 1896, page 3, column 2.

of B.J. Dains, who was buried in the Odd Fellows cemetery; Susan Dains (died 1907), wife of H.M. Dains, whose "remains were brought to Folsom for interment at the Odd Fellows cemetery"³⁵; and Almira Dains (died 1897), the sister of H.M. Dains, whose obituary did not state which section of the cemetery she was interred.

In the mid-1880s, H.M. Dains served as the undertaker for the people of Georgetown. As part of his endeavors he also became the first monument dealer in that county to offer Zinc grave monuments. The Zinc monuments were introduced and highly touted as lasting longer than many other materials used for such purposes. Unfortunately for Dains, this new product does not appear to have been very successful.

SS Note, 5/11/2002: Also among the missing is Sabria or Sabrina Dains Johnson, sister of H.M. Dains, who died in 1897.

Michael Doll Family Plot

1 unmarked

The tombstone of Michael Doll (died 1886) also bears the name Phillip Henneman (died 1879) and is located in the Odd Fellows Cemetery section. The grave of Michael's widow, Emma Louise Doll (died 1920; formerly Henneman), is unmarked today, and there are many recent interments which have been made all around the Doll/Henneman monument. Phillip Henneman was Emma's first husband with whom she bore their daughter, Elizabeth (Lizzie).

Dresser Family Plot

4 unmarked

This missing and unmarked plot contains the graves of William W. Dresser and his family, and the grave of his brother, Jesse Dresser. Early pioneer citizens of Folsom and vicinity (including Prairie City), none of the known Dresser graves can be located today. Among the family who died and were, or are believed to be, buried in the cemetery are: Edmond R. Dresser (died 1867), son of William W. and Mary J. Dresser; Jesse Dresser (died 1874), brother of William Dresser, who the Trinity Church records state was buried in the Masonic Cemetery; Sherman Dresser (died 1906), the son of William and Mary Dresser, who died at Auburn, Placer County, and was "buried in the family plot in the Masonic Cemetery" at Folsom³⁶; William W. Dresser (died 1870), father of Sherman; Edmond, brother of Jesse, who died in Folsom at the age of 52 years; and Rebecca, aged 16 months and 13 days, the daughter of W.W. Dresser, who died at Folsom on December 16, 1869³⁷

³⁵ Folsom Telegraph, February 16, 1907, page 3, column 4.

³⁶ Folsom Telegraph June 20, 1906, page 3, column 4.

³⁷ Sacramento Union, 12/20/1869; page 2, column 4. 1870 U.S. Census Mortality Schedule for Granite Township, Sacramento County.

Daniel Eisner Family Plot

1 unmarked

This family plot is located in the Jewish Cemetery just behind the Jacob Hyman family plot. Today only the tombstone of little Sophia Eisner (died 1862), daughter of Daniel and M. Eisner, is found. The tombstone of her brother, Jacob (aged 12 years in 1860, date of death unknown), was vandalized in August of 1891 when it was overturned and broken. It is no longer in the cemetery in any condition. Next to Sophia's tombstone is an empty space which may represent Jacob's grave. More recent burials have occurred all around Sophia's stone. The 1860 U.S. Census lists the Eisner family as being parents Daniel and "M." with five sons - Jacob, David, Charles, Marcus, and Milton. No trace of the family was found in the U.S. Census for Sacramento County in either 1870 or 1880. This may indicate that son, Jacob, died previous to 1870. It is not known if any of the other Eisner sons may have died and been buried in the Jewish Cemetery with their sister and brother. (Daniel Eisner's eldest son went on to become one of the first regents of the University of California at Berkeley.)

W.H. Farmer Family Plot

2* unmarked

Located next to a tree, behind the Thad McFarland family plot in the Masonic Cemetery, is the tombstone of Margaret F. Farmer (died 1869), the wife of William H. Farmer. William Farmer died in 1884 at Oakland and his "remains were brought to Folsom" on the evening of November 28, 1884, for interment. He was buried in the Masonic Cemetery³⁸. William's grave cannot be located today.

* Between the U.S. Census of 1870 and the U.S. Census of 1880, baby Margaret Farmer (11 months old in 1870) seems to have become absent from the family. It may be that she also died and was buried in the Masonic Cemetery next to her mother, or possibly in the same grave with her mother.

Joseph Fiel Family Plot

5 missing and unmarked

Originally located near the Levy family plot in the Jewish Cemetery, the entire Fiel family plot is missing today. Known to be interred in the plot were: Jewish pioneer and family patriarch, Joseph Fiel (died 1876); his wife, Rosa (nee Kirsky) Fiel (died 1901); son, Israel³⁹ (died 1867); son, Isaac (died 1916), who was buried in the Jewish Cemetery; Isaac's wife, Gertrude (nee Sartain) Fiel, who died in December of 1899 of injuries sustained in a fall from a two story window in Oakland and was brought to Folsom and buried in the Jewish Cemetery.

According to Professor Austin Wahrhaftig, the son of Irma Levy Wahrhaftig, his mother used to tend the graves of her relatives, the Fiel family, when he was a child. His recollection was that the Fiel plot was near the Levy plot toward the outside edge of the cemetery. His aunt, Lotta Levy,

³⁸ Folsom Telegraph, November 29, 1884, page 3, column 5, and December 6, 1884, page 3, column 4.

³⁹ Israel has also been referred to as "Irwin" in some history accounts of Folsom. According to his death notice, however, his name was Israel, not Irwin.

later had her gardener tend to the graves in this plot. Professor Wahrhaftig only remembers wooden markers on these graves. (Whether the "outside edge" of the Jewish cemetery means to the west, south or north, was not ascertained.)

In the vandalism which occurred at the Jewish and Odd Fellows cemeteries in 1891, two tombstones of the Fiel family were broken off, indicating that at that time, both burials to that time had been marked with permanent markers. Whether the markers were totally destroyed and never replaced, is not known. The surviving family, though, is known to have been financially capable of paying for their replacement.

David Finch Family Plot

3 unmarked

There are two David Finch family plots. One is located near the rear of the Negro Bar (aka: Citizen's) Cemetery and contains the grave of David's first wife, Cyrilla, and that of his mother, Frances A. Finch, which is not marked today. David's father(?) William (died 1882), and Willie E. Finch (died 1877), possibly the son of David and Cyrilla, are also located in this section.

The second family plot, located on the western end and to the front of the Odd Fellows Cemetery, has had it's surname marker and coping removed. Today all that remains of the plot are markers bearing the given names of the deceased and vital statistics dates. Without study or prior knowledge of this family, one would be unable to determine their last name.

Of the known deceased Finch family members, the following graves cannot be located today: Daisy Belle (died 1896), the 20-year old daughter of David Finch and Lucille Finch (died 1900), the infant daughter of David Finch, who was "laid to rest (yesterday) in the Odd Fellows Cemetery."⁴⁰ The tombstone of Henry Finch (died 1889), son of David Finch, over whose grave J.L. House erected a "pretty little tombstone....in the Odd Fellows Cemetery"⁴¹ in November of 1889, is now located near the rear of the Negro Bar (aka: Citizen's) Cemetery.

David Finch was the Superintendent of the Natoma Company Vineyard before retiring to Verona, California. Because of his stature in the community, his family plot would have been handsomely arrayed.

J.W. Gains Family Plot

1 unmarked

Located in the Masonic Cemetery, only the tombstone of John William Gains (died 1885) remains in place. His wife, Mary Ann (nee Scurlock) Gains (died 1895) is noted as having a tombstone by the 1935 DAR tombstone listing. DAR noted that the marker was inscribed with "Neylaid South Wales." Mary Ann's name may be inscribed on the underside of the stone which now bears John's name only. The Gains' had two daughters who survived childhood. One became Mrs. Minor Miller and is interred at the Mormon Island Relocated Cemetery in El Dorado Hills. The other,

⁴⁰ Folsom Telegraph, April 21, 1900, page 3, column 1.

⁴¹ Folsom Telegraph, November 30, 1889, page 3, column 3.

Elizabeth Beatrice, died sometime around 1914 and may be buried with her parents or may be one of the "Unknown" graves relocated to the Mormon Island Relocated Cemetery by the U.S. Army Corp of Engineers in 1954 for the construction of Folsom Dam and Lake.

R.H. Gegax Family Plot

1 unmarked

The children of Folsom building contractor Richard H. Gegax were buried in this cemetery. The concrete markers for Charlie, Emma and two unnamed infant sons, are located in the Odd Fellows Cemetery. Absent is a marker for Anna Elizabeth (died 1891), who died of diphtheria in April of that year. Records from the O'Keefe Funeral Home in Placerville, indicate the death and burial of Arthur F. Gegax, the son of R.H. Gegax in August of 1893. Those records indicate that Arthur was buried in "Johnson's Cemetery" in El Dorado County. Johnson's Cemetery is located off North Canyon and Cleese roads below Camino. With other of his children buried at Folsom, is it likely he would have had Arthur buried in such an out of the way cemetery?

Edward Hicks Family Plot

5 unmarked

There is not one tombstone or marker for any of the members of this pioneer African American family known to have been buried at this cemetery. While patriarch, Edward Hicks, is known to have been buried in the National Cemetery at the Presidio in San Francisco, the graves of the members of his family who were buried at the Folsom cemetery cannot be located today.

Among them are: Alice Hicks (died 1915), daughter of Mrs. George Hicks, granddaughter of Edward Hicks; Garfield Hicks (died 1935), son of Mr. and Mrs. Edward Hicks, who grew up in Folsom; George Hicks (died 1940), the son of Mr. and Mrs. Edward Hicks, who was interred in the "Citizen's Cemetery"⁴²; Mrs. E. (Eliza) Hicks (died 1901), wife of Edward Hicks, and Mrs. Isabel Hicks (died 1933), the wife of George B. Hicks, and daughter-in-law of Edward Hicks, mother of the late Alice Hicks, was a "member of a former Folsom colored family"⁴³, and buried in the Citizen's Cemetery.

Tyler J. Hill Family Plot

3 missing and unmarked

Pioneer Folsom blacksmith and hotel keeper, Tyler Joseph Hill (died 1875), was a member of the Masonic fraternity and is believed to have been buried in the Masonic Cemetery. His daughter, Ada Marian (died 1874) was buried in the Masonic Cemetery according to Trinity Church records. The tombstones of T.J. Hill, Ada Marian Hill, and Mrs. Marion Caroline Hill (died 1922), Tyler's wife, were recorded by the 1935 DAR tombstone inventory. All three graves are unmarked and their location unknown today. T.J. Hill served as the Constable for the town of Folsom and later served as a Deputy Sheriff of Sacramento County.

⁴² Folsom Telegraph, March 1, 1940, page 1, column 6.

⁴³ Folsom Telegraph, April 14, 1933, page 1, column 7.

Update, 5/1/1998: Met with Karen Rader, a family descendant, who has visited the graves since she was a young girl. She has not been back for several years, since about the time she got married in 1975. In addition to the three Hill family members mentioned above, the son of Tyler and Marion, Charles Hill, and his wife, Augusta, were also buried at Lakeside.

A second meeting with Karen, accompanied by her mother, Marion Rader, was held at the cemetery. Mrs. Rader was unable to locate the Tyler Hill plot and stated that the last time she visited the plot with her mother (who has since deceased) in the mid-1960's, the wooden markers which had always been in place at the graves, were still at the cemetery. Despite the many drastic changes to the cemetery, including the removal of the fencing along the present driveway/parking area, Mrs. Rader was able to show me the location of where the Hill graves should be.

J.L. Holmes Family Plot

3 unmarked

John L. Holmes was a painter when he lived in Folsom around the turn of the century. The grave of his wife, Cora, who died in Folsom at the age of 23 (probably of complications of childbirth) and was buried in the Citizen's Cemetery, is unmarked today. The couple's infant daughter, Lizzie, died in June 1905 at the age of 2 months 9 days old. According to the records of the Sacramento City Cemetery Archives, Lizzie was buried in Folsom. John died in Sacramento in 1910 and is believed to have been brought to Folsom and buried next to his wife. Mrs. Holmes assisted Constable Donnelly by identifying that some of the convicts who violently escaped Folsom Prison in July of 1903 had passed by her home on the way to Sacramento. Her observation led to the capture of two of the convicts in that city just a few days later.

John Holmes may have been an African American citizen or possibly a mulatto.

William Jarvis Family Plot

No one is believed to be missing or unmarked in the William Jarvis plot. However, the removal of the ornate iron fencing and granite coping which once outlined this plot is nearly as criminal as would be the loss of their graves. Jarvis and his wife, Rebecca Russell Vanlandingham, were early pioneers of both El Dorado and Sacramento County. In the mid-1850s they were the owners and proprietors of the Natoma Valley House, a road house on the Sacramento to Coloma Road, just west of the El Dorado and Sacramento county line. They also owned what was called the Valley Home, another property located on the Sacramento Road in El Dorado county, approximately one mile east of the Natoma Valley House. The Valley Home appears to have been the Jarvis' residence at the time.

A trustee of the Natoma Water and Mining Company from its very earliest years, Jarvis alternated residency between Natoma, Folsom and Sacramento. He is also believed to have lived in San Francisco, probably after the Company's headquarters were moved to that city. The photograph of the Windmiller family plot shows the Jarvis plot behind and diagonally to the right of that family plot. Today the joint headstone of William and Rebecca Vanlandingham Russell Jarvis, his wife, has been laid flat in the ground, its layered granite bases are nowhere to be found.

W.D. Johnson Family Plot

3 unmarked

Only the grave of Charles Edward Johnson (died 1885), the son of W.D. and Philenia Johnson, is marked in the cemetery today. His monument, presumably located in the Odd Fellows Cemetery, was vandalized in 1891 and was "smashed to pieces."⁴⁴ [SS Note, 5/11/2002: Peter Kroff's inventory **does not list** Charles Edward Johnson.] Another son of William and Philenia, Emmett Oliver, committed suicide in 1917 and was buried at the Odd Fellows Cemetery. He was a six year Army veteran who had enlisted in Portland, Oregon. William D. Johnson (died 1920), aged 64 years and a native of California, was also buried in the Odd Fellows Cemetery, his grave bearing no marker today. Mrs. Philenia Johnson died at Sacramento in 1925 at age 66 years, and was buried in the Odd Fellows Cemetery at Folsom. Her grave is also unmarked.

Zachariah Jones Family Plot

3 unmarked

Three of the members of this family, patriarch Zachariah, and his twin infant children, are buried in unmarked graves at this cemetery. The twins, who were born and died on October 18, 1867, were the infants of "Z. and H.A." Jones. The 1870 U.S. Census lists a Harriet Jones as head of her household in Granite Township. According to the records of Trinity Church, Zachariah Jones (died 1868), was buried in the Citizen's Cemetery on December 4, 1868.

H.T. Knight Family Plot

While the grave of Henry T. Knight supposedly remains marked by his tombstone, there is evidence from the investigative excavation that his granite coped plot was dismantled and the ornamentation dumped onto the adjacent State park land. Nathaniel Knight, the father of Henry T., John (buried Mormon Island Relocated Cemetery), and Thomas Knight (buried El Dorado Cemetery, El Dorado county), died at Folsom in 1871. He was a native of Vermont, as were Henry, John and Thomas.

The location of Henry T. Knight's tombstone to others known to have had a familial relationship with the Knight family, brings to question whether their graves were also enclosed in the "Knight Family Plot." There were pieces of coping ranging up to 20 feet in length that were removed during the 1996 excavation. This may have been long enough to have also enclosed the grave sites of F.A. Blanchard and family, Elvira Bradner, and W.H. Comstock and family, who were all inter-related by marriage to the Knight's.

Knight/Shumway Family Plot

Located at the western edge near the front of the Odd Fellows Cemetery, the Knight/Shumway family plot represents the burials of members of the Knight family who inter-married with the Shumway family. While no missing graves have been noted, the military tombstone of K. Loren Knight has been laid flat in the ground. Because of this, it is slowly being destroyed by the equipment which runs over it during maintenance activities.

⁴⁴ Folsom Telegraph, August 22, 1891, "A Ghoul's Work", page 3, column 3, in which the Jewish and Odd Fellows cemeteries were vandalized.

Samuel Kyburz Family Plot

2 unmarked

The graves of Samuel Kyburz (died 1898) and his wife, Rebecca (died 1903), are unmarked in the Old Masonic cemetery today. Each of their obituaries stated they were buried in the Masonic cemetery, though no markers can be found. Some of their children and grandchildren's graves are found in the New Masonic Cemetery.

Samuel and Rebecca were early California pioneers, and are known to have operated a hotel at Sutter's Fort at the advent of the gold rush. Samuel was one of the men to first discover the Coloma Valley where James Marshall and Capt. John Sutter built their sawmill, where shortly after Marshall discovered gold in the mill's tailrace.

Edward R. Levy Family Plot

1 unmarked

Only one Levy grave is believed to have been unmarked in the Jewish Cemetery. This was the grave of the infant son of Edward Levy and wife, who died in July 1870, three days after his birth. He was the only son born to the couple. The remainder of the family plot has been significantly altered by the removal of coping (material unknown) and the replacement of placerite tombstones with more modern flat markers. The headstones, originally facing east, have been turned so that they face the drive straight on. The graves would have been east facing at an angle to the present day markers. There are many, many more recent burials which have occurred all around this two-row family plot and a likelihood that some of the Levy graves have been disturbed by the more recent interments.

O.C. Lewis Family Plot

There are no burials believed unmarked or missing from this plot. However, there are scratches to the marble obelisk monument which bears the names of the four Lewis family members buried here. It is believed the granite base which once adorned this monument was removed (hence the scratches on the marble obelisk), and dumped into the State park lands. Surrounding these graves which date from 1879 to 1954, are more recent burials and markers.

George Little Family Plot

3 unmarked

The Little family plot is located near the east edge and at the southern front of the Odd Fellows Cemetery. It is coped and concrete capped, and bears the name "Little" on the face of the step. In the mid to late-1970's, the operators of Lakeside Cemetery erected three cremains niches around west, north and east sides of this plot. During his 1992 tour of the grounds with members of the Folsom Historical Society, the former caretaker stated that there were no burials in the Little plot. Evidence bears otherwise.

Ashland pioneer George Little raised his family on his ranch across the river from Folsom. His wife, Elizabeth (died 1895), was a native of Scotland and a resident of the Folsom vicinity from as early as 1851. George Little's obituary information (died 1908) placed him in San Francisco in 1851, and at Negro Bar in 1852. He was a member of the Granite Lodge No. 62 IOOF. One of the

couples' sons, William (died 1930), died there at the age of 77 years, having lived at Ashland since 1853. He was buried in the Odd Fellows Cemetery. It is not known what may have happened to the other son, John Little, William's younger brother.

The placement of the cremains niches around this family plot is at best rude, since people visiting the cremated remains of their loved ones there, are now walking on top of the Little family member's graves. Under Californian law, the plot purchased by George Little garnered him interment rights and rights to erect an appropriate monument on the surface of the graves. The erection of the cremains niches, under California law, would therefore violate the contract between Little and the Odd Fellows. Every cremated remains niche sold atop the Little plot is tantamount to double selling (or more) the interment rights for that space in the cemetery.

Walter Lovelady Family Plot

According to Dorothy Rollins of Stockton, the granddaughter of Walter Lovelady, this plot was once concrete capped and bore a black granite marker with four names inscribed. Three of the names represent actual burials; the fourth name being for memorial purposes only. In 1980, Mrs. Rollins visited the cemetery and was unable to locate her family's graves. When she contacted the cemetery operator she was told that the concrete was removed because it had become cracked and dangerous and that the marker was placed directly onto the ground and was stolen from the cemetery sometime thereafter. Granite weighs 175 pounds per cubic foot. Mrs. Rollins estimated the marker to have been approximately 2 feet high by 4 feet wide - a rather large marker. The weight of such a marker would prohibit its having been taken from the cemetery without benefit of equipment such as a tractor or backhoe. The grave site, according to the cemetery operator, is registered in their interment book. [SS Note, 5/11/2002: Peter Kroff's inventory lists Regina Lovelady b. 5/3/1962, d. 5/19/1962; don't know if related.]

Isaac Maltby Family Plot

1 unmarked

Located near the rear of Lot 14 in Block 44 (Cook's/American Legion Cemetery), the family plot of Isaac Maltby (died 1887) was originally used for the burial of little Elizabeth Maltby, the couple's infant daughter who died in 1859. (In 1859, this portion of the cemetery, Lots 14-16 of Block 44, was owned by William Murray.) After Isaac Maltby committed suicide in 1887, his probate case file in El Dorado County indicates that the family purchased a "grave yard lot" for \$25.00 as shown on the bill from Jacob Miller, undertaker. The price for a grave at most other cemeteries studied during that time ranged from \$2.00 per grave to \$75.00 per lot, depending on the lot size. A "grave yard lot" for \$25.00 in 1887, therefore, might represent a six person burial lot.

In a photograph taken by Mary Bowen, and printed in the Folsom Telegraph in the mid-1960's, the tombstone of little Elizabeth is shown upright and to the east of a larger, three-tiered monument. To the right of Elizabeth's marker is what appears to be concrete plot lining. Today the large monument is no where to be found, and to Elizabeth's right, is a marble obelisk monument bearing only Isaac's name. Eveline Maltby, Isaac's wife, died in 1899 and was buried next to her husband and child. There is no grave stone for Eveline at the cemetery today and it is believed that the large monument shown in Bowen's photograph represented both Eveline and Isaac, and that the obelisk

marker now bearing only Isaac's name probably bears Eveline's name on one of the unexposed sides. More recent burials are encroaching on this "grave yard lot" which has so obviously been dismantled.

SS Update, July 1998: On a recent visit to the Chung Wah Cemetery, adjacent to Lakeside, I visited several of the tombstones I believed bear additional names than those which are presently showing. Using a piece of twig, I scraped the mud pack on the sides of a few, one of which was the Isaac Maltby marker. On the west side of the marker, I found the letters "BY" could be found. This is where Eveline's name is going to be found.

J.K. McComber Family Plot

This plot is located at the rear of the Masonic Cemetery and contains the graves of seven and possibly eight of the John McComber family. One unknown grave, that of little Marion McComber (died 1907), the infant daughter of Fred McComber, may exist within the plot. It appears that the plot coping has been removed based on the lack of dressed granite corner pieces on the western edge of the adjacent coped plot. Ordinarily, corner pieces of stand-alone plots which are coped, bear finished or dressed corner pieces with smooth surfaces which provide a nice visual effect. The present corner pieces on the plot to the immediate east of the McComber plot shows evidence that other pieces of granite originally abutted it. Further, the upright marble obelisk bearing the names of John and his wife, Mattie, has been removed from its granite base and placed directly on the ground. More recent burials appear to have encroached within this inalienable plot and may have impacted the older graves.

Dugand McMillan Family Plot

3 missing and unmarked

Little historically is known of this family. The first death recorded is that of George McMillan (died 1900), the 15 year old son of "Mr. and Mrs. Dougall McMillan", whose "remains were interred in the City Cemetery near Folsom."⁴⁵ Daughter Emma (died 1901), whose death resulted from a pine nut lodged in her throat, was "buried at Folsom." The family patriarch, Dugand McMillan (died 1912), a native of Scotland and 65 years old at the time of his death, was interred in "Cook's Cemetery"⁴⁶. Mr. McMillan left a wife and several children. None of the graves of this family can be located today.

J.E. Moon Family Plot

2 unmarked

In 1935, the DAR tombstone listing recorded the markers of infant Edna Lorraine Moon (died 1916) and her brother, infant Kack Moon, the children of J.E. and Hazel Moon. The 1981 listing produced in Rest In Peace also picked up the marker of Edna Lorraine, but not that of Kack. Neither of these markers was located in 1995, when a brief inventory was taken at the onset of this

⁴⁵ Folsom Telegraph, January 13, 1900, page 3, column 1.

⁴⁶ Folsom Telegraph, February 23, 1912, page 1, column 7.

research. No location of the parents graves was noted and they will have to be relocated upon additional inventorying.

SS Note, 5/11/2002: Peter Kroff's 1999 inventory lists Edna Lorraine Moon (d. 1916), Hazel M. Moon (d. 1958), J. Edward Moon (d. 1958) and "Jack" Moon (d. 1911).

Peter Morris Family Plot

2 unmarked

The British born Morris family came to California in 1849, landing in San Francisco. By the time of the Cholera epidemic of 1850, at least one of the sons was living in Sacramento. They eventually settled near Alder Creek and Mississippi Bar and remained there for the rest of their lives. Only their daughter, Louisa, who married Don Juan M. Winder and died at Lima, Peru in 1868, left the family fold.

Patriarch, Peter Morris (died 1882), had been married to wife, Eliza, for 55 years at the time of his death. Eliza (died 1888), was 81 years old at the time of her death. Their sons, Richard and Robert, both died in 1894, Richard being the first of the two to de cease in March of that year. He was "buried near his father, mother and sister"⁴⁷, which would have been near the rear of Lot 16 in Block 44 (Cook's Cemetery), where the headstones of Peter and Eliza are found today. Robert Morris, died in November of that year and was interred in the Masonic Cemetery⁴⁸. Neither Richard nor Robert's graves are marked today.

It is uncertain whether sister, Louisa Winder, was returned to California from Peru for burial. At the time, embalming compounds utilized arsenic, which arrested decomposition and allowed for long distance transport of human remains. Certainly, if the body had been returned for interment at Folsom, one of the local newspapers would have found space to mention it. This becomes a question of whether Richard's obituary, which stated he was buried near his father, mother, and sister, was speaking of Louisa or another sister, possibly unknown to us.

Only one article has been noted linking any other female offspring to the Morris family and that mention stated that Mrs. Morris had come to town with her daughter, Mrs. Lewis. The only Mrs. Lewis this researcher is aware of living in Folsom and vicinity was Mrs. Margaret Lewis. She, however, was a native of New York, while all the other Morris family members were natives of England.

Musso Family Plot

Two graves of Musso family members exist at the cemetery and are located within the Odd Fellows section. The grave of mother, Annie M. Musso (died 1862), wife of Laurence Musso, is marked with a large marble tombstone which has been laid flat in the ground. The grave of her son, Frank (Francis) H. Musso (died 1870), who was 12 years old at the time of his death, is located within the

⁴⁷ Folsom Telegraph, March 10, 1894, page 2, column 4.

⁴⁸ Folsom Telegraph November 10, 1894, page 2, column 1.

Peter Imhof family plot, some two grave sites west of that of his mother. According to the records of Trinity Church, Francis Musso was interred in the Odd Fellows Cemetery. It is puzzling that Frank's tombstone is not located next to his mother's and that no familial relationship has been located linking the Imhof(f)'s and the Musso's. It is far more likely that Frank's tombstone has been removed from its original location and deliberately placed inside the coped Imhof plot. [SS Note, 5/11/2002: Peter Kroff's inventory does not appear to have included the Imhof plot, and he does not list Frank H. Musso.]

William H. Nichols Family Plot

There are no known missing or unmarked graves within this plot. However, according to family descendants, this concrete topped plot was once adorned with granite coping and iron railing and chain all around it. That ornamentation is missing today revealing that portions of this plot have been dismantled and without permission from the family.

William Nutter Family Plot

The marker of the grave of Elsie Olive Nutter (died 1928) was inventoried for the first time in 1995. A death notice for her husband, William Nutter (died 1936), was found in the pages of the Folsom Telegraph. The 1995 inventory did not note a marker for William, but it is uncertain if one does not exist or if, because the inventory only sought to identify markers through 1930, his was deliberately not noted. The obituary stated that he was laid to rest beside his late wife in the Citizen's Cemetery. [SS Note, 5/11/2002: Peter Kroff's 1999 inventory **does not include** William Nutter.]

John Odell Family Plot

This concrete capped plot is located in the Masonic Cemetery. The tombstone which bore the names of John Sr. (died 1881), John Jr. (died 1901) and wife and mother, Mrs. R.S. (nee Berry) Odell Freese, was found in the Oleander bushes behind the maintenance sheds in 1994. The front of the plot is marked "ODELL" and there are two small marble plates bearing the initials R.S. and J.A. embedded in the concrete topping, presumably marking the location of the graves of John Sr. and his wife. A concrete monument base is also embedded in the topping and remains in place.

After complaint about the tombstones being found in the bushes, the Odell monument was moved back into the cemetery but was placed near the tombstones of Rosalie and Camille Lamblett, behind the Benjamin F. Bates plot under the Cedar of Lebanon trees.⁴⁹

Thomas Orr Sr. Family Plot

2 unmarked

California pioneer Thomas Orr and his family, travelled to the new state with a contingent of Mormon immigrants in 1848. The family initially settled in the Salmon Falls area of El Dorado

⁴⁹ At the same time, the monument of John Woods was also placed in this location.

County, but was well known in Folsom and its surrounding communities. The grave of Catherine Orr (died 1879), the wife of Thomas, is located near the front of Lot 15 of Block 44 (Cook's Cemetery). This large, once ornate marble tombstone has been removed from its granite base⁵⁰ and laid flat in the ground. In July of 1891, the Orr's son, James, died at Rolling Hill (near present day El Dorado Hills at Salmon Falls Road) and was buried in the "Folsom Cemetery"⁵¹. Presumably he would have been buried near his mother's grave.

Family patriarch and one of the "oldest pioneer inhabitants of the county"⁵² (El Dorado), Thomas Orr died at Shingle Springs in 1893 at an advanced age and was buried at Folsom⁵³. There is no marker at the cemetery today to indicate that Thomas' remains were interred next to those of his wife. Current interments are coming dangerously close to this location which is believed to contain the two unmarked, east facing graves of James and Thomas Orr.

Hiram Parker Family Plot

A resident near the Fifteen Mile House on the old Placerville Road, Hiram Parker (died 1885), a thirty year resident of the vicinity, and was buried "in the Odd Fellows plot in the Citizen's Cemetery at this place"⁵⁴. Parker's wife, Marie, who remarried after his death and became Marie Hall (died 1901), was buried beside "her first husband in the Odd Fellows Cemetery"⁵⁵.

The blue and gray veined marble obelisk monument (supposedly) marking Parker's grave bears chain marks and scratches, and is located near the front of the Odd Fellows Cemetery (no where near what could be considered within the "Citizen's Cemetery"), next to the coped "Patterson" plot. It appears to have been moved in toward the abutted corner of that plot and the one directly behind the Patterson plot.

A video tape of this plot taken in 1990 by historian Armand Kimball (now deceased), shows a small pine tree growing in the location of where the Parker monument is now found. There is no sign of the Parker monument behind the pine tree or anywhere near the location where it is today. It is highly questionable whether the Parker graves are where the monument is today or whether the monument has been moved from another location in the cemetery.

⁵⁰ Reference photograph taken by Mary Bowen (circa 1965) which appeared in the Folsom Telegraph. This photo is on file at the Folsom History Museum.

⁵¹ Folsom Telegraph, July 25, 1891, page 3, column 4.

⁵² Mountain Democrat, November 18, 1893, page 1, column 3.

⁵³ This per the journal of El Dorado County pioneer, James S. Russell, who, ironically, was the grave digger for the communities of Rescue and Green Valley from as early as 1861 until the turn of the century. Russell's son, Frank, and his grandson, are buried in the coped Russell plot at Lakeside Cemetery.

⁵⁴ Folsom Telegraph, August 29, 1885, page 3, column 3.

⁵⁵ Folsom Telegraph, May 4, 1901, page 3, column 1.

Franklin Riggins Family Plot

3 unmarked

Three members of this family were interred at Folsom. Son Owen (died 1911), was twelve years old at the time of his death and was buried at "Citizen's Cemetery." His father, Franklin B. Riggins (died 1912), a fifteen year resident of the vicinity, and the husband of Emily (nee Saul) Riggins, was buried at the "Citizen's Cemetery". Emily Riggins (died 1932), the sister of Ed Saul and the daughter of Charles Saul, was buried in the "Citizen's Cemetery." None of these graves are marked in the cemetery today. There is a Saul Family plot located in the Cook's/American Legion Cemetery, and it should be reviewed to determine if the Riggins graves may be located within it. [SS Note, 12/6/2002: Peter Kroff did not record grave markers for the Riggins family in 1998.]

Caroline Rose Family Plot

2 unmarked

Caroline (nee Riley) Rose (died 1887) was the wife of Milton Rose, one of Folsom's African American pioneers. Her death resulted from burns received when the Rose's home burned to the ground. The funeral services for Mrs. Rose were held at the Episcopal Church (Trinity) and she was later buried "by the side of her son, in the Citizen's Cemetery.⁵⁶" No death notice has been found to indicate the name of the son next to whom she was buried, or how old the child may have been at the time of his death.

Her husband, Milton, who is featured in the book, *Folsom Fables ~ Pieces of the Past*, in the story titled, "Three Gentlemen of Color," died in Sacramento in 1890 and was buried at New Helvetia Cemetery⁵⁷ where he was likely removed and re-interred in the mass grave now located at East Lawn Cemetery. Mr. Rose's name appears on very early county tax assessor maps as owning property in Folsom.

Frank Russell Family Plot

2 unmarked

The son of El Dorado County pioneer James S. Russell, Frank Russell was killed in a dredge accident in September of 1912. His infant son (name unknown) died in February of that same year. The coped Russell family plot is located in Lot 8 of Block 44 (Negro Bar [aka: Citizen's] Cemetery), but the two markers once located here can no longer be found⁵⁸. Only the military marker of Lawrence P. Paulsen, Frank's brother-in-law, is in place in the plot. According to the Folsom Telegraph obituary for Frank Russell, he was buried in the "Citizen's Cemetery."

J.P. Schaffer Family Plot

2 unmarked

⁵⁶ Folsom Telegraph, September 10, 1887, page 3, column 2.

⁵⁷ This per the records on file at the Sacramento City Cemetery archives.

⁵⁸ Per Russell descendant Linda (nee McBeath) Van Gundy, daughter of Elmer McBeath, there were two markers for Frank and his son at one time.

Historical background on Mr. and Mrs. Schaffer has not been recorded in this research. Caroline M. Schaffer (died 1891) was a Folsom resident at the time of her death. J.P. Schaffer, died in Sacramento in 1900 and his "remains brought to Folsom and interred beside those of his wife who preceded him to the grave..."⁵⁹. The location of the graves is not given in either obituary, nor were markers recorded in previous tombstone inventories.

Melchoir Schlittler Family Plot

1-2 missing and unmarked

Another review of the cemetery grounds may be in order before it can be factually determined that this observation is accurate. In 1994, while wandering the cemetery in search of the grave stones of people identified in earlier research, the marker of Melchoir Schlittler was noted. The 1935 DAR inventory listed both Melchoir and Mary Schlittler, but the marker for Mary was not noted in 1994, nor was it found in 1995.

Melchoir Schlittler (died 1890), a native of Switzerland, is buried in the Odd Fellows Cemetery section. His son, Melchoir Jr. (died 1905), a native of Folsom, was buried in the Odd Fellows Cemetery⁶⁰, though no marker has been found to identify his grave. Melchoir Sr.'s wife, Mary F. (died 1914), a native of Germany, was interred in the "family plot in the Odd Fellows Cemetery"⁶¹, though no marker is noted as having been found. Therefore, the "family plot" is not evident and the graves of Mrs. Schlittler and son, Melchoir, probably located next to Mr. Schlittler, are unmarked today. [SS Note, 5/11/2002: Peter Kroff's inventory lists Melchoir Schlittler b. 1827, d. 1890 AND Mary E. Schlittler (no dates). Mary's marker was not next to Melchoir's marker in 1995!]

Crozier Slayback Family Plot

2 unmarked

Born October 13, 1819, Crozier Slayback, who resided at 501 Figueroa Street, died at Folsom on October 13, 1889, his 70th birthday. His wife, Minerva, died in Sacramento in 1903 and was "buried in the Folsom cemetery"⁶². (This should be interpreted to mean the Citizen's Cemetery, though Crozier's tombstone is located next to the coped Lawson plot in the Cook's/American Legion Cemetery.) There is no tombstone for Minerva at the cemetery today, but it is believed that if Crozier's stone which has been laid flat in the ground, were excavated, Minerva's name will be found on one of the unexposed sides.

The Slayback's son, Dr. Charles M. Slayback, who once owned the home at 606 Figueroa Street and practiced medicine in Folsom, died in San Francisco in 1910. "His remains were brought to

⁵⁹ Folsom Telegraph, December 15, 1900, page 3, column 2.

⁶⁰ Folsom Telegraph, April 29, 1905, page 3, column 4.

⁶¹ Folsom Telegraph, January 30, 1914, page 1, column 6.

⁶² Folsom Telegraph, November 7, 1903, page 3, column 1.

Folsom...⁶³". There is no tombstone or grave marker for Dr. Slayback in the cemetery. A married man, no information has been found about the death or demise of Mrs. Ella Slayback, his wife. Many recent burials have begun to encroach toward the location of Crozier Slayback's tombstone and there is a fear that the unmarked graves of Minerva and Charles will be eventually be impacted.

Ira Sowles Family Plot

2 unmarked

Located toward the rear of Cook's/American Legion Cemetery (within Lot 16 of Block 44), close to the tombstones of the Jarvis and Morris families, is the marker for the "Infant son of Ira & Ella Sowles" who died in 1887. Ella Sowles, wife of Ira and mother of the infant, died in 1889, though no location within the cemetery was mentioned in her obituary. Ira Sowles died in Sacramento in 1909 and was interred in "Cook's Cemetery"⁶⁴." He was survived by three children - Etta, Chester and Bert. Etta Sowles died at San Francisco in 1918, but there is no indication that she was brought to Folsom for burial. At the time of her death, she was survived by both her brothers.

It should be noted that the tombstone for the Sowles' infant son is now surrounded by other, non-family related tombstones. It is not known whether these stones represent burials (unlikely) or if the markers there now were removed from other locations in the cemetery.

SS Note, 5/11/2002: Another review of the cemetery might be warranted. While cleaning the Chung Wah Chinese Cemetery in April, I took a walk around Lakeside. I believe I noted a Sowles grave marker at the rear of the Citizen's cemetery along the line of bushes. A re-check is recommended.

Edward Stockton Family Plot

5 unmarked

In 1935, the DAR tombstone inventory listed "Stockton, Edward No dates visible.", and "Stockton, wife No dates visible." There are no markers with the name Stockton located at the cemetery today. Research, however, has revealed that there were likely five members of the Stockton family interred at the cemetery.

Edward Stockton, famous as the industrious man who built the Stockton flour mill on the American River above Folsom, and his wife, Emily, lost two children in December of 1856. A son, Edward Coover⁶⁵, died December 13, 1856, and a daughter, Emily, died December 22, 1856. The couple lost another son, John Thornton, in March of 1862.

⁶³ Folsom Telegraph, April 15, 1910, page 1, column 4.

⁶⁴ Folsom Telegraph, February 19, 1909, page 1, column 2.

⁶⁵ Coover was the surname of Stockton's partner in his flour mill.

Emily Stockton died at Folsom in November of 1867. Her funeral was held November 11, from Trinity Church and she was buried in the Odd Fellows Cemetery⁶⁶. Edward Stockton, having lost his mill in a lawsuit involving his partner, died at Truckee in June of 1868, where he was working for the railroad. His remains were shipped to Sacramento from Reno and forwarded to Folsom where he was buried by the Committee of the Sacramento Pioneers "by the side of his wife in the Mason's plot."⁶⁷

Having found the death notice for John Thornton Stockton in the Sacramento Daily Union of 1862, a review of the 1935 DAR tombstone inventory has revealed that DAR also picked up the name "THORNTON." The 1935 list includes: Edward Thornton, Mrs. Emily Thornton, Emily Thornton, and John Thornton, with the notation "No dates visible on marker." There is too close a similarity between these given names and the given names of the Stockton family members to ignore. It is believed that the "Thornton" family recorded by DAR was, in actuality, the Stockton family members. Still, no markers with the name Stockton or Thornton are found at the cemetery today.

James H. Sturges Family Plot

5 missing and unmarked

James H. Sturges, a pioneer of Folsom and vicinity and jewelry merchant on Sutter Street, was buried in the Masonic Cemetery in 1904⁶⁸. His wife, Henrietta (died 1902), who preceded him in death and was also buried in the Masonic Cemetery. Sturges also became the first weather recorder for Granite Township under the original U.S. Signal Corps.

According to the 1870 U.S. Census, the couple had three children - Charles, Mary L., and James. The first of these children to de cease was Mary Louetta (nee Sturges) Martine. The 1935 DAR tombstone inventory lists Mary Louetta Martine, age 24 years, died July 30, 1888. No tombstone for Mary was located in 1995 and a 1997 telephone inquiry to the cemetery operator was unsuccessful in finding the location of the grave.

The second of the couple's offspring to die was Charles H. Sturges who died at Folsom on August 30, 1900. He was buried in the Citizen's Cemetery⁶⁹. At the time of his death, Charles left a wife and five small children. The son of Charles H. and Margaret Sturges, Hugh Charles, the grandson of James H. Sturges, died in Folsom December 23, 1892, though the obituary did not indicate his place of burial.

⁶⁶ As per the records of Trinity Church as transcribed by Lois A. Dove, docent of Sacramento City Cemetery Committee.

⁶⁷ Sacramento Daily Union, July 13, 1868, page 3, column 2.

⁶⁸ Folsom Telegraph October 22, 1904, page 3, column 2.

⁶⁹ Folsom Telegraph, September 1, 1900, page 3, column 4.

In October of 1940, Mr. and Mrs. Edgar Martine of Nevada City, California, visited the graves of his grandparents, Judge and Mrs. J.H. Sturges and his mother, Mrs. Martine⁷⁰. Today there are no marked graves bearing the name Sturges or Martine in either the Masonic cemetery or the Citizen's Cemetery.

⁷⁰ Folsom Telegraph, October 25, 1940, page 1, column 4.

John White Family Plot

5 unmarked

Between 1856 and 1862, four of the children of John White died at Folsom and were attended by the minister of Trinity Church. They were: Anna Belle (died 1862), Charles Alexander (died 1856), Charles Henry (died 1862) and Clara Louisa (died 1861). The 1860 U.S. Census lists John White (age 30 yrs), Ann White (age 26 yrs), John White (age 9 yrs), Clara White (age 3 yrs) and Emma White (age 9 mos.).

John White, listed on the transcribed records of Trinity Church as John "Waite", died June 3, 1861 and was buried in the Citizen's Cemetery. His estate was probated in Sacramento County⁷¹, with one of the estate appraisers being W.W. Dresser. There are no grave markers for John White or any of his children at the cemetery today.

Carl Windmiller Family Plot

5 unmarked

Photographs of the Windmiller family plot were taken circa 1889 and 1908. The earlier photograph shows the graves of Rosa (died 1889) and Charles Martin (no date available but shown in photo), each mounded in the ground. The 1908 photograph shows the family plot as it was when it was coped with granite with the name "Windmiller" inscribed into the face of the top step into the plot. Today the coping has been removed and there are no markers in the plot to identify the names of those buried there.

Charles Martin Windmiller, the son of Carl and Wilhelmina Windmiller, was the first to be buried in the plot, since his grave existed at the time Rosa Windmiller was buried in 1889. According to family records, Aurora Anne Windmiller, another daughter of Carl and Wilhelmina, is also buried in the family plot, though no record of her death has been located in this research. She would have had to have died after Rosa's death in 1889 as there are only two graves visible in the plot in that year.

Carl Windmiller died in 1897 and was buried in the "Folsom City Cemetery"⁷², although the remaining face plate from the top step of the coped plot has been left in the ground within the Cook's/American Legion Cemetery, just east of the J.B. Schmidt coped plot. Wilhelmina Windmiller died in 1908 (the year the granite coped plot was captured on film) and was buried at "Cook's Cemetery."⁷³ This would be consistent with the present location of the name plate and is also an example of how the section known as "Cook's Cemetery" had previously been referred to as the "Citizen's Cemetery" or "Folsom City" and "City" Cemetery.

This family plot has been severely desecrated with its dismantling. With five unmarked burials within the (unknown) boundaries of the plot, current burials which are presently encroaching within

⁷¹ Sacramento Daily Union, June 25, 1861, page 3, column 1: Ann White appointed administrator.

⁷² Folsom Telegraph, November 20, 1897, page 3, column 4.

⁷³ Folsom Telegraph, November 14, 1908, page 1, column 6.

this area and are of great concern. Portions of the granite coping can be identified as those taken from the State park lands during the 1996 investigative excavation.

SS Update, July 1998: Ric Windmiller, a descendant family member, obtained a Ground Penetrating Radar survey through NorCal Geophysical Consultants. According to Ric Windmiller, and Jerry Nelson, NorCal's consultant, the mapping of this survey clearly shows where overburials have occurred at or near the Windmiller plot. In viewing a copy of the mapping, one of the overburials may be of a Slayback family member.

John G. Woods Family Plot

1 unmarked

Located at about the half-way mark of Lot 15/16 of Block 44 (Cook's/American Legion Cemetery) is the marker of Mary Woods, the wife of John G. Woods, who died in 1888. In February of 1889, Folsom monument dealer, J.L. House, put up granite coping around the Woods grave in the Citizen's Cemetery. In April of that year, House erected "one of the finest monuments in our cemetery..." at the grave of the wife of J.G. Woods.⁷⁴

Mary's marble tombstone has been laid flat in the ground at its present location. The large, ornate marble marker bearing the name J.G. Woods, was found in the Oleander bushes behind the maintenance shed in 1994.⁷⁵ With the information provided by the Telegraph, we know that the plot was coped with granite and that a "handsome" monument was erected over Mary's grave in 1889.

John Woods died in Placerville in May of 1923. He was buried in "Cook's Cemetery."⁷⁶ He was over 80 years old at the time of his death and was survived by his daughter, Mrs. Roy Celio of Oakland, California.

Today, in the grave to the east of Mary Woods, is a 1974 burial. It is not known to which side of Mary's grave John was interred. If he was buried to the east of her present marker, he has now been buried over by the more current burial. If he was buried to the west of Mary's marker, he is in danger of being buried over by a future interment. In either case, the granite coped and enclosed Woods plot, has been desecrated.

SS Update, 12/5/2002: From the GPR map provided during the Windmiller family plot survey, it appears that the grave of John Woods has been impacted.

⁷⁴ Folsom Telegraph, February 16, 1889, page 3, column 1, and April 13, 1889, page 3, column 1.

⁷⁵ Like the Odell tombstone, John Woods marker was moved back into the cemetery and placed in the Lamblett family plot behind the Benjamin Bates family plot in the Masonic Cemetery.

⁷⁶ Folsom Telegraph, March 9, 1923, page 1, column 4.

Peter Yager Family Plot

8 unmarked

The first burial believed to have occurred in the Peter Yager family plot in the "Citizen's Cemetery," was that of William Hudson Thomas, the grandson of Peter Yager. According to the transcribed records of Trinity Church, this two year old was interred in the "Folsom Cemetery" (read Citizen's Cemetery) in February of 1870. He was the son of Thomas and Elizabeth Thomas. This burial was followed by the burial of little Mabel Thomas in July of 1881. The infant daughter of Mr. and Mrs. David (nee Emma Yager) Thomas, and the granddaughter of Peter Yager, little Mabel died at Oakland and her remains brought to Folsom by train.⁷⁷

Peter Yager's wife, Elizabeth (nee Ruman of the Ruman family of Michigan Bar, Sacramento County) was the next to be buried in the family plot in 1885. She was buried in the Citizen's Cemetery near a nephew and two grandchildren.⁷⁸ Yager's step-son, John O. Brown, the son of Peter's second wife, Sarah (nee King) Brown Yager, died in 1897 and was "interred in the family plot in the City Cemetery."⁷⁹

Peter Yager, the renowned brewer who moved to Folsom around 1871, and whose building remains on Sutter Street, died December 31, 1898 at Folsom. He was buried in the "Blower Cemetery near Folsom."⁸⁰ He was survived by his wife, Sarah, and son, L.T. (Louis) Yager.

Elizabeth (nee Emma Yager) Thomas, wife of Thomas Thomas and daughter of Peter and Elizabeth Yager, died in 1904 and may also be buried in the family plot. Her husband, Thomas, died in Los Angeles in 1894, though the only notice of his death came from Elizabeth's obituary.

Louis T. Yager, son of Peter and first wife, Elizabeth Yager, died in 1907 in a Sacramento hospital. "His remains were brought to Folsom where he was buried."⁸¹

Of the eight unmarked graves noted as being part of the Peter Yager family plot, only Elizabeth and Thomas Thomas' graves are questionable as to city of interment. The remainder of the family, Yager's and Thomas', were either buried in the same plot or very near each other. None of the graves are marked today.

⁷⁷ Folsom Telegraph, July 23, 1881, page 3, column 1.

⁷⁸ Folsom Telegraph, March 14, 1885, page 3, column 7.

⁷⁹ Folsom Telegraph, November 20, 1897, page 3, column 3.

⁸⁰ Note that in the discussion of the Cook's/American Legion Cemetery, Maggie Cook, daughter of William Cook and sister of Frank Cook, had married David Blower. There was a time on the assessor's records that David Blower was listed as owning these lots or a portion of them.

⁸¹ Folsom Telegraph, January 4, 1908, page 1, column 5.

Charles Zimmerman Family Plot

2 unmarked

The only marked Zimmerman grave in the cemetery today is that of Bertha Zimmerman who died in August of 1897. She was interred in the "City Cemetery..." "the remains consigned to their last resting place in the family plot."⁸²

Previous to Bertha's death, however, her sister, Ethel Zimmerman, died in 1893 at the family home in Clarksville, El Dorado County. Charles Zimmerman was the proprietor of the Western Hotel at the corner of Riley and Sutter Street, the building of which remains today. There is no record of Ethel being buried at Clarksville, and with the business being in Folsom, it is believed she was buried in the Citizen's Cemetery, where the tombstone of her sister is located today.

Charles Zimmerman's sister-in-law, Mary Anderson, died at Sacramento in 1911, and was buried in the "Folsom City Cemetery."⁸³ There are no markers in the cemetery for Ethel Zimmerman or her aunt, Mary Anderson.

KNOWN DISINTERMENTS AND RELOCATED REMAINS

Of all the research performed for this study, only two instances of disinterments were encountered. The first occurred in February of 1924, when the granddaughter of Folsom railroad pioneer, John Kinney (died 1864), and the daughter of lifelong Folsom station master, Joseph Kinney, had the remains of her grandfather, father and mother disinterred and relocated to a cemetery in San Diego. Her brother, Ned Kinney, lived there and they wished the graves to be closer to family.

The second occasion of disinterment came after the death of Katherine Blanchard, wife of Folsom's beloved school professor, J.E. Blanchard. Mrs. Blanchard was interred at East Lawn Cemetery in Sacramento and the surviving family apparently had the remains of Professor Blanchard (died 1914) and their son, Leland (died 1903), removed from the cemetery at Folsom and transferred to East Lawn for re-interment.

CONDITION OF THE CEMETERIES

At the end of the compiled listing may be found accounts of the condition of the cemeteries as found in the newspaper throughout the years. The first article noted occurred in March of 1870 when a thief or thieves desecrated the graves in the Masonic Cemetery by removing plants, flowers and shrubs. A \$25 reward was put up by the Masonic Lodge.

With the exception of the vandalism and desecration which occurred in the Jewish and Odd Fellows cemeteries in 1891, no other instance of deliberate damage to grave markers has been

⁸² Folsom Telegraph, August 7, 1897, page 3, column 1.

⁸³ Folsom Telegraph, May 11, 1911, page 3, column 4.

found. In June of 1890, "A Destructive Fire" occurred within the cemetery which spread over the Masonic and Citizen's cemeteries. "A great deal of damage was done to the fences enclosing the graves and nearly all the tombstones were blackened or badly cracked up."

The dismal condition of the cemetery was remarked on in June of 1891. The grounds needed mowing and there was fear another fire would spread through the grave yard as had occurred the previous year. "The remains of a great many people who have no relative here repose in the cemetery, and only a wooden board marks their last resting places. A fire acquiring any headway at all would burn them up and no way to determine the burial would remain.", the paper wrote.

Another fire occurred in 1904, this time at the Jewish Cemetery. It was reported to have done a great deal of damage to the fences.

For many years, committees comprised of members of the Odd Fellows and Masonic lodges attended to the needs of those cemeteries and the Citizen's Cemetery. Later, County Road Crews would undertake to provide clean-up of the grounds. In April of 1939, the paper headlined an article about one such clean-up, "Oldest Tombstone Marks Cholera Victim's Grave." The article informed that the tombstone of Henry Probasco had been found during the clean-up by the county road crews. It related that Mrs. O.J. Miller recalled her father telling of hearing his uncle say that a colony of Germans who located near Folsom in early days, suffered an epidemic of Cholera. "It seems likely that Henry Probasco (sic) may have been a victim of that epidemic.", the paper wrote, having drawn its conclusion on erroneous historic information.

In 1942, in preparation for the "Annual Road Day" during which the cemeteries would again be cleaned, the paper noted that "an additional piece of ground" had been taken up and added to the Citizen's Cemetery. This was likely Lots 1 through 3 of Block 44 (which was later sold to Lakeside Cemetery by the County Tax Collector in 1976).

POSTSCRIPT

This report contains many facts which are difficult to fathom or believe. It is incomprehensible to most of us that such activity can and does occur. What we all must reconcile ourselves to is that those who participate in the "death industry" are in it strictly for one thing - profit. When a cemetery fills to capacity and beyond, there is little profit to be gained in the future.

When those interred in a cemetery have no one to visit them, no one to watch over them, the cemetery operators know this. They can track visitations by the flowers left at the graves. They are also aware, on filling out death certificates for families or friends, if there is anyone left in a given family who will be around in 10 or 20 years.

Funeral directors and employees all act as if they feel your pain on losing a loved one. They become a close confidant because they can perform the "ugly" business you cannot. You become dependent upon their expertise and knowledge and you feel comforted by their caring attitudes. Do not be fooled. They teach all this in undertaking classes.

The best reference regarding the modern funeral home and cemetery industry was written by Jessica Mittford in the mid-1960's. "The American Way of Death" is an excellent resource from which to educate and understand how this most necessary of all industries has evolved over time. How they have a built in business that is never going to go away, how you are dependent on their services and that, in the numbness of loss and grief, you and your pocketbook are vulnerable.

The cemetery industry in California is an extremely corrupt and dirty business. In 1995 alone two cemeteries in southern California were closed by the State and taken into receivership. One, Lincoln Memorial Park in Carson, California, was found to have utilized the same grave and coffin for up to eight burials a day, discarding the remains in a mass grave at the rear of their grounds. They had removed grave markers and utilized them for street curbing. Distraught families who broke into mausoleum crypts thinking they would find the coffins of their loved ones, found empty space instead.

Other cemeteries are presently under investigation for similar practices. The unfortunate part about these matters is that, after years of being under the control of those employed in the cemetery industry, State laws enacted to regulate the industry have been diluted to the point that there is no enforcement or punishment capability. A law may say "Don't do this.", but it gives no one a way to stop a corrupt operator from committing the act.

As it stands now, the Department of Consumer Affairs seems to be actively pursuing those cemetery operators who have raided their "endowment" accounts - stolen from the monies intended to be there when a cemetery could no longer be actively used. DCA's focus does not seem to be geared toward correcting abuses of older graves or the re-selling of pre-owned plots. And until laws are enacted which provide enforcement and punishment, these unlawful activities will continue to occur.

At Lakeside Cemetery, it continued to occur even while the operators were being investigated. One of the comments made by Robert Claney to the DCA inspector, Ron DeMaderios, was that in the early years the graves were much deeper and over time the coffins and remains have collapsed and condensed to a thickness of approximately 4 to 6 inches. To paraphrase Mr. Claney based on what Mr. DeMaderios told me, "We don't bury that deep any longer. If we bury over an older grave, who cares?"

Bury your loved ones here, if you like. But keep in mind, **it would be nice to know whose grave you will be re-using or atop which pioneer citizen of Folsom your loved one will be interred.**

ADDENDUM, December 6, 2002:

A new pattern of illicit behavior has begun to be discovered by the State Cemetery and Funeral Bureau in California. For many years crematory operators went unregulated. Although the State has recently enacted legislation which occurred in reaction to the Georgia incident in which a crematorium operator left hundreds of corpses lying about his property, crematories in California have also been discovered to have their problems.

As one example, in 1998 the Rogers Family Funeral Home operated the crematorium at the Pacheco Cemetery in Contra Costa County. The principal players in that scenario were Christopher and Laurel Rogers, husband and wife. The state discovered that Rogers had left corpses and cremated remains unattended and improperly handled. Though the couple was prosecuted, the Cemetery and Funeral Bureau instead settled the case out of court by revoking their licenses to operate and attaching a condition that if the couple ever again attempted to obtain licensure in California the State would require them to reimburse the \$32,000 in investigation costs it had incurred.

Some penalty.

Attachment 6
Letters from the Public

Dr. Terry G. Murphy

September 11, 2002

Dear Commissioners of Folsom Historic District:

The crematorium proposal for Lakeside Cemetery must not be approved!

Aside from the obvious zoning violation of putting industry in a residential area, there are compelling health concerns that should absolutely prevent this proposal from further consideration.

As a physician and resident of the Preserve, I have researched the health related impact a crematorium would have on the people who live here. I am appalled by the deleterious effects I and my neighbors would suffer by living next to such a toxic polluter.

Inhaled mercury vapors can cause chemical pneumonitis and may result even in pulmonary edema (swelling of the lungs). Mouth sores extending down the gastrointestinal tract may occur. Chronic exposure is even worse as the central and peripheral nervous systems are affected with brain and nerve damage which may be irreversible. Effects on children are more pronounced as their smaller bodies can't handle as much poison. Mercury is a well-known teratogen which leads to miscarriages and birth defects.

The smoke, ash, and odor, even without the mercury, pose a pulmonary risk in acute and chronic exposure to basically, anyone with lungs. This risk is greater for those who are medically fragile or have pre-existing lung conditions such as asthma or emphysema.

Once these particles find their way into swimming pools, and our treasured Lake Natoma, more health hazards abound, and they are nearly impossible to clean up. Our health, lives, and futures depend on each of you voting your conscious, and your intellect. Given the facts, you can't approve such a harmful proposal.

Sincerely,

Terry G. Murphy

Terry G. Murphy MD, MS, FACEP

& Friends & Neighbors of the Preserve

**A. LAURENT COMPLAINT
CREMATORIUM C.U.P APPLICATION**

I reviewed the Folsom application PN 02-258, (published August 2002, for September 18, 2002 hearing) on August 26, 2002. I documented that the Application File at the Folsom Planning Dept. did NOT have the required documents. August 26, 2002, Public Records Request for copies attached. (The city refused to fulfill my 8/26 request.) There was NO Initial Study, no copies of NOI, NOP, NOD; no Proofs of Posting. Arbitrarily, the public hearing was continued to October. Perhaps because we objected to the city council.

PN 02-258: application for conditional use permit to construct and operate a crematorium in Lakeside Cemetery, despite the following:

1. Crematorium is NOT a permitted use in any Folsom zoning district. (FMC Title 17)
2. The cemetery contains many old trees, and is part of the forest at Lake Natoma -- the same forest that is in a State Park on the American River.
3. The proposed site for a crematorium abuts single family homes on two sides.
4. The proposed site abuts Federal Waters and Federal land operated at a State Park on two sides.
5. The land is zoned "Open Space Conservation." (FMC Title 17)
6. The property lacks adequate access for fire and emergency protection. There is no access to the State Park, should a crematorium fire accident occur!
7. The application file is incomplete: no title.
8. There are multiple CEQA violations: Notices not filed. NO Initial Study in file 8/26/02. Owner said he did not do one.
9. The file contains absolutely no input from oversight Trustee agencies, because proper, legally mandated, Notices were never filed with the State and County agencies.
10. The cemetery ownership has a checkered history, which includes multiple selling of the same plots, disappearance of graves and markers, marijuana cultivation, burial outside boundaries.

In an ordinary city, such facts would prevent such a proposal from being put forward. I spoke with the cemetery owner August 26, 2002. I informed him of the CEQA deficiencies in his application. I also informed him it is necessary to attach a copy of the title to the property because he sold it recently and rebought it last year. The purchaser contacted me after discovering the reselling of plots, grave removals, pot garden, encroachments, and more.

I request your office investigate this case. This is not the only bogus rezoning/use request facing me. The city Rezone Committee recommended rezoning a State-regulated toxic site for Affordable Housing high density zoning. Planning Staff allowed an application to make a public presentation before the Historic District Commission without making an application, without giving any notices, and without paying required fees. This is typical Folsom operation.

*Jeff Ferreira-Pro, Chairman
Historic District Commissioners
Planning Inspection & Permitting Dept.
Folsom City Hall
50 Natoma Street
Folsom, Ca., 95630*

This letter is being written to protest the Lakeside Memorial Cemetery and Mausoleum Crematorium's impact on the National and California Registered Landmark Chung Wah Memorial Cemetery and State Historical Point of Interest Young Wo Memorial Cemetery in order to maintain preservation of the circa Chinese Gold Rush cultural, religious and archaeological special features.

These circa Chinese Gold Rush cemeteries for their descendants today continue to be held in solemn spiritual reverence and profound sacred esteem for those interned eternally.

The existing metal onsite maintenance building at Lakeside Cemetery and Mausoleum has 2 garage rollup doors. Because of cremated ashes in the air – either from the crematorium chimney; when ashes are put/poured into a container; through clean-up of ash residue waste disposal or cleaning up of interior crematorium – the potential impact over time would be significant to both Chung Wah Memorial Cemetery and Young Wo Memorial Cemetery. Remnants ashes that are at the crematorium will be in the air and with winds will have to land someplace such as the Chinese burial mounds.

If the crematorium conditional use permit is approved, the most responsible conditions should be mandated to whomever owns, operates, cleans and removes the crematorium ashes. It is requested that this letter be included in tonight's minutes of the Historic District Commission Meeting.

Respectfully,

JUNE C. CHAN

PETITION TO PROTEST BUILDING A CREMATORIUM

We protest the Lakeside Memorial Cemetery and Mausoleum building an crematorium at Natoma Street and Forrest Street. We feel that this crematorium would impact the Historic District and have an devastating/bad effect on air, environment, health, humans, animals, life, cultural, and archeological landmarks, residents etc. We request that both an Environmental Study and Environmental Impact Report be done.

RE: Comments on the Initial Study/Draft Mitigated Negative Declaration for
Lakeside Cemetery Conditional Use Permit, 1201 Forrest Street (PN02-258)

Dear Mr. Storer:

I have reviewed the above-referenced CEQA documents and I have the following
comments:

Description of Project

The project description does not provide adequate information to assess the potential
environmental impacts. While this section does describe where the crematorium will be
installed, it does not include information on the crematorium structure itself. CEQA
Guidelines state that the description should include "the whole action involved" to help
the public understand the whole project. In addition, I believe that the following
information should be provided:

1. What are the proposed hours of operation of the project?
2. How long will this proposed project be allowed to operate under a conditional
use permit? Is there a time limit, i.e. 2 years, 20 years?

Environmental Factors Potentially Affected

It states that the proposed project is consistent with the General Plan and with applicable
zoning. According to Section 17.39.020 of the City Municipal Code, permitted uses in
Open Space and Conservation Districts do not include crematoriums.

In addition, the City is relying on a 14-year old Environmental Impact Report (EIR) and
General Plan for assessing potential significant effects for this project. As many changes
and much growth have occurred in the City since 1988, I believe that information in these
documents is too outdated to be relied upon for this proposed project.

I. Land Use and Planning

As stated above, this proposed project is not consistent with existing zoning and the
General Plan, so "b", should be checked either "potentially or "less that with mitigation"
rather than "no impact."

Under the discussion section, it states that this proposed project is consistent with the
General Plan Designation of Open Space, based on the assumption that a conditional use
permit is required for a cemetery. This analysis is confusing and misleading.

As the proposed project is located in the Historic District, reference to any conflict with the Historic District Specific Plan should be discussed. Also, according to the City's Municipal Code Section 17.52.360, Conditional Use Permit review, it states that the Historic District Commission has the final authority relating to the issuance of conditional use permits for projects located in the Historic District. This information should be included in the discussion and the analysis of potential impacts.

VII. Noise

As the hours of operation for this proposed project are not included in this initial study, I do not believe that a determination on whether this proposed project complies with the City's Noise Ordinance is possible.

Also, the discussion section states that a "standard condition regarding hours of operation will be included with the conditions of approval of this project." It is difficult for the public to assess possible noise impacts without having a description of these conditions. As such, I believe that "potentially significant" is more appropriate.

IX. Air Quality

This section does not adequately assess potential environmental impacts from this proposed project. This section includes a comprehensive discussion of the Sacramento Metropolitan Air Quality Management District standards, but it does not include specific information on potential air quality impacts from this proposed project. For example:

1. What are the pollutants from the crematorium?
2. What will the levels of pollutants be for the crematorium?
3. What are the prevailing winds for the area? What is the projected trajectory for air pollutants?
4. What will the odor levels be?
5. What about air emissions from metals such as mercury, lead, etc?

As there is no specific information and analysis on potential air pollutants from this proposed project, an analysis and determination of potential impacts cannot be completed. As such, I believe that "potentially significant" should be checked instead.

XII. Hazards and Hazardous Materials

The discussion section states that no health hazards are associated with crematory use. Other than Sacramento County, has the City researched or consulted with other health and research entities to make this determination? Has the County conducted health and risk assessments on crematoriums to be able to make this statement? If not, it appears to me that this statement is not appropriate unless substantiated by experts. What about potential health risks from mercury?

In addition, how will residual cremation remains be disposed of?

XV. Cultural Resources

As the proposed project is adjacent to an historical landmark (Chung Wah Chinese Cemetery), and is located within a cemetery with historical significance of its own, I don't believe that there will be "no impact" on a historic resource. The Lakeside Cemetery contains many graves of California Pioneers.

XVIII. Earlier Analyses

As stated previously, relying upon an out-dated 1988 EIR for the General Plan is not adequate, and thus the impacts are not adequately addressed. Further, mitigation measures incorporated into the proposed project are also inadequately analyzed, and site-specific information is not provided.

While earlier analysis may be used, CEQA requires that mitigation measures be described which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

Other Comments

Mitigation Monitoring or Reporting Plan

What mitigation monitoring or reporting program will the City establish for this mitigated negative declaration? CEQA requires that the City adopt a program of monitoring or reporting to insure that mitigation measures are complied with (Public Resources Code, Section 21081.6).

Approval of Other Public Agencies

The CEQA Environmental Checklist Form included in the CEQA Guidelines includes a question on other public agency approvals. Doesn't the Historic District Commission have to approve this project, and the State Cemetery and Funeral Board approve the license? Also, the Sacramento Metropolitan Air Quality Management District should be included.

Public Noticing and Comment Period

The public comment period was not provided on the CEQA package signed August 29, 2002. Also, when and what media was the public notice made for these CEQA documents?

Environmental Impact Report

Due to the reliance on an out-dated EIR, and due to potentially significant impacts, I believe an EIR is more appropriate than a mitigated negative declaration for this proposed project. In addition, as I believe that this is a controversial project it warrants an EIR.

Sincerely,

Nancy Carroll

Request for official notice: 1200 block of Mormon Street, public street in the city of Folsom

Dear HDC Members:

With the assistance of Folsom staff, I was able to obtain records for property which is the subject of a Conditional Use Permit by owners, Messrs. Claney. Pursuant to FMC 17.52.360 the Historic District Committee has jurisdiction.

Using legal records, it was possible to identify Mormon Street as a dedicated Folsom street and Right of Way existing for over 100 years. City staff were kind enough to show me that Mormon Street southwest of Forrest Street is the dedicated city street providing access to APN 070 0130 002 000, commonly known as 1221 Mormon Street, Folsom CA,

ILLEGAL TO CREATE A LAND-LOCKED PARCEL: City staff reminded me that under California law, Mormon Street COULD NOT be abandoned because it is ILLEGAL to create a legal parcel that has no public access. 1221 Mormon is accessed/served by Mormon Street.

RECORDS SEARCH: a search of records indicated that Mormon Street southwest of Forrest Street WAS NOT ABANDONED by the city.

STREET SIGNAGE: The 1200 block of Mormon Street southwest of Forrest Street is posted with an official Folsom street sign.

ATTACHMENTS: Metroscan APN records from Sacramento County Clerk Recorders' Office:

1. 1201 Forrest Street, Lakeside Memorial Lawn
2. 1221 Mormon Street, Chung Wah

ACTION REQUEST: I am requesting the Members of HDC take official notice of fact that Mormon Street southwest of Forrest Street is a dedicated Folsom street and Public Right of Way, which has existed continuously since Theodore Judah drew the city subdivision in the nineteenth century; and that 1221 Mormon Street is a Lot/parcel of Record in Sacramento County,

Sincerely,

Laurette J. Laurent

Re: DEED Required in Application for Conditional Use Permit 1201 Forrest Street

Dear HDC Members:

In reviewing this application file, I noted that if the property has changed hands within the year prior to the initial application, the owners are required to submit a copy of the deed. This requirement is stated on the city of Folsom Application, It is my understanding that the Application must be complete in order to proceed to a Public Hearing and Finding of Fact Hearing.

I believe Lakeside Memorial Lawn was purchased by Messrs. Claney from a large corporation during 2002, I believe this because several weeks ago Mr. Loren Claney told me this personally. He stated he repurchased Lakeside Memorial from the corporation to which it was sold the previous year,

Since the property in question changed ownership with one year, the new owners are required to file a copy of the Deed with the Application for Conditional Use.

If I were a member of the HDC I would desire to know the facts and circumstances surrounding the sale and quick repurchase of Lakeside Memorial by Messrs. Claney, because they pertinent,

When the Deed is obtained, I request to be informed so that I may obtain a copy of the ~~complete~~ Condition Use Application File.

Thank you for your attention to this matter.

Sincerely,

Laurette J. Laurent

Re: STANDARDS for granting Conditional Use Permits

Dear HDC Members:

I would like to obtain a copy of the STANDARDS utilized when evaluating a conditional use permit pursuant to Folsom Municipal Code Section 17.52.360.

What I am seeking is the set of rules, guidelines, formal criteria, which the Historic District Commission is required to use when evaluating an application received for a CUP, as well as any supporting material contained in FMC and enabling legislation.

I have an immediate need for this information. Please ask your city support staff to forward this information to me.

Thank you for your attention to this matter.

Sincerely,

Laurette J. Laurent

05/10/2022 Item No. 18.

Eric Dutton, Chief, Fire Department
City of Folsom
50 Natoma Street
Folsom, CA 95630

Re: LAKESIDE CREMATORIUM PROPOSAL

Dear Chief Dutton:

In decades of practice, I have always had an excellent rapport with fire professionals and regulators. I am a March 2002 Regional Water Quality Control Board Designated Party. At this moment I am smelling the smoke from the wildfires up the hill that started in slash after inches of rain. The fires underscore serious problems with this application. I spoke with owner Loren Claney, who said he was unable to afford experts because of his financial condition since he had to repurchase Lakeside.

HIGH TEMPERATURE FURNACE IN A FOREST??

I am seeking Fire Marshall's expertise on this application for what is a **gigantic furnace, in what is in fact a forest**. I attach documents and photos. Did Planning Department, Michael Johnson, or anyone seek your input when this proposal came in last summer? I believe not, because it was brought to the Historic District Commission by staff without discussion of fire danger, emergency access, and misuse of public land. There is no legislation even allowing consideration of this usage, let alone in a forest.

- FACTS:**
1. A crematorium is NOT a use eligible for a Conditional Use Permit within the Historic District, nor any zoning district in Folsom. The site is zoned Open Space Conservation.
 2. The proposed tin shed to house the furnace abuts Federal lands operated as a State Park.
 3. Lakeside Memorial Lawn cemetery is a wooded site within the larger Park forest.
 4. There is absolutely no fire or emergency access to the rear of this site.
 5. The owners have a checkered legal compliance history and were forced to repurchase it.
 6. The owners make a commercial profit by utilizing city land. The Encroachments are numerous, and harm the public and adjacent property owners.
 7. One encroachment is the obstruction of Mormon Street pavement and Right of Way with burial sites. This is a very serious issue.
 8. The Mormon and other city street encroachments have a direct impact on fire & emergency access to other properties.
 9. The Mormon Street encroachment restricts the use and access to abutting Chinese Cemetery property which contains official California Historical Sites of Interest.
 10. The owners block and lock public street at times.
 11. There are brand new preconditions imposed by the Governor upon operators of crematories (which resulted from unscrupulous acts by operators). Mr. Claney has not shown he meets all the newly legislated requirements for crematory owners/operators.
 12. Lakeside owners have cut down large historic oak and pine trees and left the materials which are tinder-dry fire hazards. Attached is a photograph of such an instance of cut trees dumped over the ravine at the edge of the public forest.

I request a violation notice be issued to the owner, and fire hazards be immediately abated. I request the city enforce the NPDES Permit, Tree Ordinance, Subdivision Code, and Health & Safety Codes.

13. For unknown reasons, a full Environmental Impact Report has not been done, despite the huge implications for Lake Natoma/American River and Federal Lands, State Park. (PIP staff apparently have been directed to rely upon verbiage in the 1988 General Plan to justify Negative Declarations. However, the California Attorney General has declared the General Plan INVALID.)

Given the facts, and the attached information about pollution issues, it is apparent a full investigation of the application was not performed. Issues for Fire Marshall include:

1. Illegal encroachments on fire access streets and rights of way,
2. Potential desecration of graves during legal Fire Department access to 1221 Mormon Street for fire protection or other emergency,
3. Cutting of protected trees, then dumping and leaving them as fire hazards,
4. Impact of encroachments and obstruction of public streets on cooperative agreements under which Folsom Fire Department provides emergency assistance to other agencies,
5. Impact of encroachments on FFD ability to serve Young Wo Circle properties,
6. Permitting a gas furnace in Open Space Conservation zone,
7. Permitting a gas furnace in forested unimproved location (State Park) habitat for many forest creatures and protected species,
8. (Faulty) process, by which this application reached the Public Hearing stage without formal Findings of Fact by Folsom Fire Department regarding safety issues,
9. Preparation of a full CUP Application, including ALL required documents, and payment of all fees necessary to cover the costs of FFD investigating the application,
10. Instituting changes necessary to ensure Folsom Fire Department reviews ALL applications for development, improvement, encroachment impacting fire and safety access. Checklist.

This last point is very important. My home is located within a few hundred feet of the proposed furnace. A wild fire could destroy abutting homes as a result of the misuse of public lands and willful obstruction of public streets and ROWs. I have documented moving of markers, and grading changes in public ROWs in the cemetery, which make me suspect they might bury more bodies in dedicated street ROWs. ("Baby Land" is in Mormon St.") Note in the attached Cella Barr Plat the "Encroachments" is blacked out. The original document must be produced. I would like to see a copy of the original.

Why is the city not protecting public streets and rights of way for FFD access? Why is the city not enforcing against the tree destruction and dumping of them to create fire hazards? Why is the city not enforcing the State Codes governing proper use of land and protection of the health, safety, and welfare?? Why doesn't the city require full street improvements to Code? Why is public land allowed to be used for private gain? Why is this property owner permitted to endanger us and hinder our Fire Fighters from doing their job?

Because of the gravity of the situation, I am copying this letter to impacted entities. I am sure you will address these serious questions in order to protect us. I request a copy of your report. If you have questions, please contact me at 985-4488.

Sincerely,

Laurette J. Laurent

December 6, 2002

To: Interested Party, Organization, Agency

LAKESIDE CREMATORY IN THE FOREST

As you know, November 27, 2002, I wrote a detailed letter to Folsom Fire Chief Eric Dutton. I hand-carried it to Fire Marshall Ron Phillips and had a good discussion with him and two others. December 2, 2002, I had a telephone conversation with Chief Dutton. I called him because I did not receive the return call promised to me the 27th. He told me that everything is "great" in Folsom and he saw all development and improvement proposals. I reminded him that he never saw the incinerator in a forest proposal made August 2002, until I brought the records to him on Nov. 27th. I informed him of another huge local development proposal that has never been submitted to him even though it was discussed at Public Hearing.

I realize that the development interests micro-manage the entire city of Folsom, but it is outrageous to endanger the health and safety of a city for the sake of aiding private interests. In this case, I refer specifically to the potential for a 2000 degree inferno machine in a forest where there is NO ACCESS!! There is no access to the garage where the Claney's want to put an incinerator. He expects to have natural gas or PROPANE in a location unreachable in an emergency. I documented the forest nature of the location, the lack of access for emergency vehicles. I documented the misuse of dedicated public streets, and inappropriate re-grading.

I appealed to Chief Dutton's sense of decency in protecting the lives of his fire-fighters who are called upon to lay their lives on the line for these property owners. I gave him color photos of the trees illegally chopped down and dumped on the cemetery and adjacent lands - creating fuel for an inferno. I gave him the news article detailing the health objections of a physician. I told him I learned that a gas explosion could blow a fire engine 300 feet away. I told him I learned a gas fire could spread through the entire forest along the American River, and destroy our homes easily. I described the smell of the Plum wildfire taking place as I wrote my 27th letter. I told him he may think the city is OK, but I don't want innocent people endangered.

UPDATE: There is none from Fire Chief Dutton. He asked me when the application was filed, and when it goes to the Historic District (Plan) Commission for a Conditional Use Permit hearing. Rumor has it, that date is 12/18/02. Who knows around here?

CALL TO ORDER HISTORIC DISTRICT COMMISSION: Chair Jeff Ferreira-Pro; Vice-Chair Dan McNeil;
Commissioners: Jerry Fry, Candy Miller, Mark Roberts; Commissioner-Elect Susan Mehring

CITIZEN COMMUNICATION: The Historic District Commission welcomes and encourages participation in City Historic District Commission meetings, and will allow up to 5 minutes for expression on a non-agenda item. Matters under the jurisdiction of the Commission, and not on the posted agenda, may be addressed by the general public; however, California law prohibits the Commission from taking action on any matter which is not on the posted agenda unless it is determined to be an emergency by the Commission.

OATH OF OFFICE – FOLSOM HISTORIC DISTRICT COMMISSION

1. Susan Mehring

MINUTES: Minutes of December 18, 2002 stand approved unless there are corrections.

NEW BUSINESS:

1. PN 02-258, 1201 Forrest Street, Conditional Use Permit to Operate a Crematorium

Lorin Claney
% Miller Funeral Home
507 Scott Street
Folsom, CA 95630

A Public Hearing to consider a request from Lakeside Cemetery for a Conditional Use Permit to operate a Crematorium located at Lakeside Cemetery at an existing cemetery at 1201 Forrest Street. The site is designated Open Space (OS) in the General Plan and zoned Open Space Conservation District (OSC) and is located within the Open Space/Public Primary Area of the Historic Commercial Primary Area of the Historic District. (Project Planner: Assistant Planner Jane Talbot)

Committee/Commissions:

Historic District Commission:

Director:

The next Historic District Commission meeting will be held on January 15, 2003. Additional non-public hearing items may be added to the agenda; any such additions will be posted on the bulletin board in the foyer at City Hall at least 72 hours prior to the meeting. Persons having questions on any of these items can visit the Planning, Inspections, & Permitting Department during normal business hours (8:00 a.m. to 5:00 p.m.) at City Hall, 2nd Floor, 50 Natoma Street, Folsom, California, prior to the meeting. The phone number is 355-7222 and FAX number is 355-7274.

NOTICE REGARDING CHALLENGES TO DECISIONS

The appeal period for Historic District Commission Action: Pursuant to all applicable laws and regulations, including without limitation, California Government Code, Section 65009 and/or California Public Resources Code, Section 21177, if you wish to challenge in court any of the above decisions (regarding planning, zoning, and/or environmental decisions), you may be limited to raising only those issues you or someone else raised at the public hearing(s) described in this notice/agenda, or in written correspondence delivered to the City at, or prior to, this public hearing. Any appeal of a Historic District Commission action must be filed, in writing with the City Clerk's Office no later than ten (10) days from the date of the action. A fee of \$150 shall accompany any appeal, payable at such time the appeal is filed.

RE: Lakeside Memorial Lawn Crematorium Proposal
 Hearing Date September 15, 2021

Dear Commissioners:

The same crematorium proposal herein under consideration was advanced by Lakeside nearly 19 years ago as PN02-258 and scheduled for hearing before this Commission on January 15, 2003. However, that hearing was canceled and did not go forward when applicant Lakeside withdrew the proposal, apparently in light of the Staff Report prepared by the City recommending the denial of a Conditional Use Permit (CUP) to operate a crematorium on the property. Copies of that Staff Report (minus voluminous attachments) and the "canceled" meeting notification are attached as Exhibits "A" and "B," respectively.

The reasons advanced in the Staff Report as the basis for its recommendation of denial can be summarized as follows:

- a. The use applied for was detrimental to the health, safety, or general welfare of the community in that the use would impact the historical character of the existing cemetery and the historical use of the surrounding area;
- b. The conglomeration of historic cemeteries in the area combined with the California State Dredger Tailings Preserve dating back to the 1850s creates a rare combination of unique cultural resources that will be impacted negatively by the proposal; and
- c. The use of the proposed project is not consistent with Goal 2 of the City's Historic District Design and Development Guidelines in that it did not maintain the historic use of the site and, in addition, did not further Design and Development Guideline Policies 2.1, 2.2, and 2.3 (as detailed at the bottom of page 4. of Exhibit "A," attached).

In conclusion, the CUP sought by the applicant in this instance is identical to the CUP sought back in early 2003, and the applicant has presented no facts to the contrary. The proposal for the issuance of a CUP allowing the construction and operation of a crematorium in the historic area in question was a bad idea back in 2003 and remains a bad idea today. The factual basis and logic behind the 2003 staff Report remains valid, and the current request for approval of a CUP for the proposed crematory should be denied for the reasons expressed therein.

Very Truly Yours,

 Terry L. Sorensen

HISTORIC DISTRICT COMMISSION STAFF REPORT

PROJECT TITLE: Lakeside Cemetery Crematorium

PROPOSAL: Request for approval of a Conditional Use Permit to allow for the operation of crematorium

RECOMMENDATION: Denial

APPLICANT AND OWNER: Lorin Claney

LOCATION: 1201 Forrest Street

ASSESSOR'S PARCEL NO.: 070-0082-014, 070-0130-002, 070-0130-004

ATTACHED REFERENCE MATERIAL:

1. Vicinity Map
2. Site Plan, dated 12/19/97
3. Project Description and Crematorium Illustrations
4. Documentation from the Sacramento County Historic Cemetery Commission
5. Lakeside Cemetery Research Paper written by Sue Silver
6. Letters from the Public
7. Site Photographs

PROJECT PLANNER: Jane Talbot, Assistant Planner

BACKGROUND

The Planning Commission approved a Use Permit and Variance for Mausoleums at Lakeside Memorial Lawn in 1991 (PC91-042). An amendment to the approval was granted in 1995 (PC95-033). That approval allowed for the construction of twelve mausoleums. To date, one mausoleum has been built and one additional mausoleum is under construction. An existing maintenance building, approximately 975 square feet in area, is located along the south border of the cemetery. The front of the project site is mostly level with a slight to moderate downward slope towards the rear of the site. Lakeside Cemetery has a variety of mature deciduous and evergreen trees. The front of the cemetery, along Forrest Street, is bounded by a brick wall capped with wrought iron fencing.

The project site consists of three parcels totaling 10 acres within the Open Space Public Primary Area of the Historic District. It is located on the west side of Folsom Boulevard at 1201 Forrest Street. The property is bounded by the Chung Wah Cemetery and the American River Recreation Area to the west, single-family residences to the north, Forrest Street to the east, and single-family residences to the south. Across Forrest Street are single-family residences.

PROJECT DESCRIPTION

The applicant is requesting approval of a Conditional Use Permit to install and operate a crematorium at the existing Lakeside Cemetery at 1201 Forrest Street. The applicant proposes to install the cremation equipment inside an existing maintenance building as indicated on the attached site plan. The maintenance building is made of corrugated metal and currently is used for the storage of grounds maintenance equipment. The applicant proposes to install a 10-foot by 30-foot "Tuff Shed" adjacent to the existing maintenance building to store the displaced maintenance equipment. No new utilities are proposed to be connected to the shed.

GENERAL PLAN/ZONING CONFORMANCE

The General Plan land use designation for the project site is OS (Open Space). The zoning designation for the project site is OS/PB (Open Space/Public Primary Area of the Historic District). The zoning district is consistent with the General Plan designation. Cemeteries are a permitted use within the OS/PB zoning upon approval of a Conditional Use Permit. The subject cemetery has been in operation since the 1800's and is a permitted use. Crematoriums are not specifically addressed in the Folsom Municipal Code. Such uses that are not specifically addressed within the Folsom Municipal Code require the approval of a Conditional Use Permit.

LAND USE COMPATIBILITY/CONDITIONAL USE PERMIT

When approving a Conditional Use Permit, the Historic District Commission must make a finding that a project's impact on health, safety, and welfare will not be detrimental to the health, safety, peace, morals, comfort and general welfare of a proposed use. Some of the comments received suggest that the proposed project may impact health, safety, and welfare. Without additional environmental studies, staff cannot support or refute any of these assertions (FMC 17.09). As staff is recommending denial, based upon the appropriateness of the land use, these necessary additional environmental studies have not been prepared. Should it be the Historic District Commission's desire to proceed with this application, staff will commence with the additional environmental studies.

Historical Significance

Information provided to staff illustrates that Lakeside Cemetery is actually a conglomeration of several cemeteries that have merged over the years. This conglomeration includes the Citizen's, Jewish, Masonic, Negro Bar, Cook's/American Legion, and Odd Fellows cemeteries that date back to around 1850. Adjacent to this site is the Chung Wah Chinese Cemetery. These cemetery sites, along with the neighboring California State Dredger Tailings Preserve, create a combination of rare cultural resources grouped into one small area. This combination, in itself, is an extremely unique resource according to Commissioners with the Sacramento County Historic Cemetery Commission.

Goal 2 of the Design and Development Guidelines defines the City's objective for the Preservation of Historic Sites as:

'To maintain, restore, and reconstruct sites which represent the history of the Folsom area.'

The supporting policies indicate how the City can accomplish this goal. Policy 2.1 states that locally significant structures and sites should be identified and documented to facilitate their preservation or restoration. To date, Commissioners from Sacramento County Historic Cemetery Commission have identified this site as locally significant, and the Commissioners intend to present Lakeside Cemetery to the Sacramento Board of Supervisors for designation as an historic cemetery.

Policy 2.2 advocates that the City should encourage National Register nomination of historic buildings, as well as other historical designations by state or local agencies. Approval of a Conditional Use Permit for a contemporary land use (i.e., the crematorium) may jeopardize the eligibility status of the site and might work to discourage rather than to encourage National Register nomination.

Policy 2.3 explains the priorities with which the City should evaluate proposed projects. The preference should be given to authentic restoration of historical buildings and sites. Based on the information provided to staff by the Sacramento County Historic Cemetery Commission, a crematorium is not a consistent or authentic use with a historic cemetery. Therefore, staff has determined that the proposed project is not consistent with Policies 2.1, 2.2, 2.3, and Goal 2 of the Design and Development Guidelines.

PUBLIC INPUT

The applicant held a community meeting to inform the public about this project on December 19, 2002. There was much public opposition to the project at that meeting. At the meeting, issues related to property values, air quality, traffic, and cultural resources were raised. During the public comment period, staff received comments from numerous individuals and organizations. (The written comments received are attached to this report.) The information received indicates that a crematorium is not a use that is consistent in historic cemeteries.

ENVIRONMENTAL ANALYSIS

An Initial Study and Mitigated Negative Declaration were originally published on August 29, 2002. Staff received feedback regarding the Initial Study. A number of issues relating to the proposed use were raised including land use and planning, noise, air quality, hazardous materials, and cultural resources. As stated previously, staff has determined that the proposal is not compatible with the existing historical character of the cemetery, and staff is recommending denial of the request. According to the California Environmental Quality Act, "CEQA does not apply to projects which a public agency rejects or disapproves." Should the Historic District Commission conclude that the proposal is compatible with the existing historic cemetery use, the Commission will need to direct staff to conduct further research on the issues raised on this project and return the Commission with the appropriate environmental document.

~~Staff~~ ~~comments~~ ~~on~~ ~~the~~ ~~Conditional~~ ~~Use~~ ~~Permit~~ to operate a crematorium at an existing cemetery at 1201 Forrest Street in the Historic District, based on the following findings.

HISTORIC DISTRICT COMMISSION ACTION
MOVE TO DENY THE CONDITIONAL USE PERMIT TO OPERATE A CREMATORIUM AT AN EXISTING CEMETERY AT 1201 FORREST STREET IN THE HISTORIC DISTRICT.

FINDINGS FOR DENIAL

- A. NOTICE HAS BEEN GIVEN AT THE TIME AND IN THE MANNER REQUIRED BY STATE LAW AND CITY CODE.
- B. ~~THE USE APPLIED FOR IS DETRIMENTAL TO THE HEALTH, SAFETY, OR GENERAL WELFARE OF PERSONS RESIDING OR WORKING IN THE NEIGHBORHOOD, AND DETRIMENTAL OR INJURIOUS TO PROPERTY AND IMPROVEMENTS IN THE NEIGHBORHOOD AND THE GENERAL WELFARE OF THE CITY BECAUSE THE INTRODUCTION OF THIS USE WILL IMPACT THE HISTORICAL CHARACTER OF THE EXISTING CEMETERY AND HISTORICAL USE OF THE AREA.~~
- C. ~~THE CONGLOMERATION OF HISTORIC CEMETERIES, COMBINED WITH THE CALIFORNIA STATE DREDGER TAILINGS DATING BACK TO THE 1800S, CREATE A RARE COMBINATION OF UNIQUE CULTURAL RESOURCES THAT WILL BE IMPACTED BY THIS PROPOSAL.~~
- D. THE USE OF THE PROPOSED PROJECT IS NOT CONSISTENT WITH GOAL 2 OF THE DESIGN AND DEVELOPMENT GUIDELINES IN THAT IT DOES NOT MAINTAIN THE HISTORIC USE OF THE SITE. IN ADDITION, THE PROJECT DOES NOT FURTHER DESIGN AND DEVELOPMENT GUIDELINE POLICIES 2.1, 2.2, AND 2.3 IN THAT:
 1. ~~COMMISSIONERS FROM SACRAMENTO COUNTY HISTORIC CEMETERY COMMISSION HAVE IDENTIFIED THIS SITE AS LOCALLY SIGNIFICANT AND COMMISSIONERS INTEND TO PRESENT LAKESIDE CEMETERY TO THE SACRAMENTO BOARD OF SUPERVISORS FOR DESIGNATION AS AN HISTORIC CEMETERY.~~
 2. ~~APPROVAL OF A CONDITIONAL USE PERMIT FOR A CONTEMPORARY USE THAT WILL JEOPARDIZE THE ELIGIBILITY STATUS OF THE SITE WOULD WORK TO DISCOURAGE, RATHER THAN TO ENCOURAGE, NATIONAL REGISTER NOMINATION.~~
 3. ~~BASED ON A LETTER FROM JAMES A. PURCELL, CHAIRMAN OF THE SACRAMENTO COUNTY HISTORIC CEMETERY COMMISSION DATED JANUARY 2, 2003, A CREMATORIUM IS NOT A CONSISTENT USE WITH A HISTORIC CEMETERY.~~

February 3, 2021

Dear Historic District Commission,

I am writing to you today in opposition of the conditional use permit set forth and applied by Miller's Funeral Home at Lakeside Memorial Lawn, which is owned and operated by Caring Services Group. I live in the preserve neighborhood and have for the past 3 years and counting, I hope.

As I sit here and write this letter to you, I think about the reasons my wife and I decided to move into this neighborhood and start our family. First, we were excited it was so close to downtown Historic Folsom. We could walk to all the great restaurants and bars to meet friends and family for gatherings or just a casual date night. Next it was the amazing trail head down the street and the river. We have used the amazing trails for years now with it being so close to our home. The river is right here at our doorstep and who doesn't enjoy a day floating down the river or jumping in during the hot June, July and August days. Lastly it is a quiet and quaint little neighborhood that has little traffic and people who all look out for each other and truly give you a sense of community.

We have now grown our family and have a dog and an infant child. We have a swing in our front yard that hangs off of a very nice oak tree. I push our daughter in it very often as she enjoys being outdoors. Our home sits directly across from Lakeside Memorial Lawn which we really enjoy. The amount of wildlife we are able to introduce to our daughter as she sits in her swing is second to none. We have turkeys, deer, geese, owls, foxes and the bald eagles that fly over. You really can't ask for anything more. So it saddened me when I heard about Caring Services Groups plan from a neighbor to put in a crematorium across the street. We live just over 600 feet away from where they plan to cremate bodies five to seven days a week. I still have not received a single notice from Caring Services Group about the planned proposal. I thought they were great neighbors but now I see they care more about their bottom line than the community they are so eager to serve in their proposal to you all. The City of Folsom already benefits from the revenue the funeral home derives, even though they have to use an out of city crematorium. Caring Services/Miller Funeral Home simply just doesn't want to drive anymore to do it.

Once I found out about the crematorium potentially entering our residential neighborhood and listening to Igor Semenyuk speak, I did a little research. It still boggles my mind. Why in a residential neighborhood next to the trails and river? Why was it even a thought to put it in any neighborhood let alone a high fire zone area? In looking up what Semenyuk stated about the device, "[It] would be a puff of smoke and then it would only be heat waves after that." I found his statement hard to believe. The COO of Messinger Mortuaries (James Ahearne) stated "Every crematory will smoke; if they tell you they don't, they're lying. It's just the way it is." When talking about neighbors complaining about the amount of black smoke that is released from the companies crematoriums. The neighbors made several complaints with the county

regarding the smoke and the horrible odor that was released. Why would we want this so close to our homes or downtown Folsom?

Semenyuk stated their company wants to be able to serve the larger Indian and Sikh community. I do understand and I believe it is needed with the growing population in Folsom. In speaking to many different people who are Sikhs, they asked why would they put it in a neighborhood, and secondly, they shared there are a lot of good existing options a few minutes away. I do not believe Semenyuk wants to really serve any population in the City of Folsom except his own pocket. You can look it up and see how much of a financial gain they get off having the cemetery zoned in open space but he wants to put a commercial incinerator in an open spaced area of our city. In the city plan it states, "The City of Folsom Plan Area has been designed to showcase the best of life in Folsom. More than 30% - over 1000 acres - of the total Plan Area is maintained as **permanently protected open space to preserve sensitive habitat areas.**" This was voted on and approved in 2004, so help me understand how commercial incinerator in an open space zoned area which is permanently protected is even on your desk and the city's own planners are helping bring it to your ears? Seems ludicrous to me. I'm sure Ernie Sheldon, who is buried across the street, would be rather upset if you are considering this in a zoned open space preserve. It is mind boggling to think about

One of my other concerns besides the smells and heavy metal emissions which cannot be measured since they fall down so quickly is how the fire and police department are supposed to evacuate us in an emergency situation across the street with added ignition sources and high fire risk areas. They added fencing along the shed—yes sheds not a building built for a crematorium— but a shed like one you have in your backyard for mowers and shovels. There isn't a lock box to even get in at night let alone the EMS personnel would block our only exit out. No police consideration has even been given to this project and the increase demand which would reduce resources for the rest of the city with Caring Services wanting to allow in person cremations which according to Semenyuk the Sikh require without creating calls for services for fighting, drunk in public, DUI's and domestic violence issues which can and have occurred. All of these requirements are clearly outlined in CEQA guidelines and ignored by Caring Services Group.

I hope you really look at the motive behind this proposal and what you will be doing other zoned open space areas to in the long run, and consider the bad precedent you will set with this proposed project. This neighborhood is like a family to many of us. We ask, if it was your neighborhood would you want it with the unknowns presented to you? Is it right for a residential neighborhood? Is it right for an open spaced area? Is it right for Folsom? Ask yourself why wouldn't this be in a commercially zoned area?

Please, please vote "No" on this proposal.

Subject: Lakeside Memorial Lawn crematorium concerns.

Dear Council members and City Representatives,

I have recently been informed of the Lakeside Memorial Lawn's proposal for building a crematorium onsite and I am extremely concerned.

My fiance and our 9 week old son, plus a 12 year old son live just a stones throw away on Young Wo Circle. I myself have respiratory issues, and that along with having a newborn leaves me with great concern. Not to mention the chilling psychological effects of knowing that bodies are being cremated just a block away. It will have a lasting effect on our piece of mind, quality of life, health and property values.

With enough concern already regarding the annual wildfire smoke issues, please spare us another health and psychological factor in this beautiful city that we call home.

Warm regards,
Timothy Thomas

Mr. Josh Kinkade
Associate Planner
City of Folsom Historic District Commission

Re: Lakeside Memorial Lawn Crematorium
Planning No. PN-19-182

Dear Mr. Kinkade:

I am writing in opposition to the proposed Lakeside Memorial Lawn Crematorium project. The project site is zoned OS/P (Open Space/Public Primary Area) with an underlying zoning of OSC (Open Space and Conservation). The request of a Conditional Use Permit should be denied because the emissions will degrade the visual character of the area and mercury in the TAC have bioaccumulative and biomagnification effects on the adjacent waterway and its organisms.

The site is located adjacent to Jedidiah Smith Memorial Trail (American River Bike Trail), Lake Natoma, and a residential area. The American River Bike Trail runs adjacent to the American River and Lake Natoma. The trail and lake are used and frequented by families, tourists, and recreation visitors such as bikers, hikers, nature groups, picnickers, kayakers, and other water sport enthusiasts. The adjacent residential area is comprised of senior citizens and young families who recreate outside and have gardens and fruit trees to add to their food supplies.

I disagree with the applicant's findings in the Initial Study and Mitigated Negative Declaration, Section 9, Environmental Initial Study Checklist, Section 1 Aesthetics), the applicant determined a "Less Than Significant Impact" for letter c. In rebuttal, the proposed project does pose a "Potentially Significant Impact".

The proposed project does pose a "Potentially Significant Impact" under Appendix G, CEQA, 1 Aesthetics, letter c. Appendix G, CEQA states: "c) Substantially degrade the existing visual character or quality of the site and its surroundings." The emissions of a crematorium will

significantly degrade the visual character of the area in respect to both the recreation users/visitors of the American River Bike Trail, Lake Natoma and the adjacent residential area.

The recreation users of the American River Bike Trail and Lake Natoma are humans who are visiting and using the area to experience the natural surroundings of a riparian habitat, which include the aesthetics of the tree lines and skyline. These “viewers” are specifically seeking a view of nature and the surrounding riparian habitat. Emissions from a crematorium will “substantially degrade” the visual quality of the area. Humans seeking scenic views and experiences with nature are especially sensitive to man-created emissions. They are even more sensitive knowing the emissions are the resulting emissions from cremating human remains.

The “visual character and quality of the site” will also be substantially degraded for the residents in the adjacent area. The neighboring residents enjoy the outdoors of their backyards and enjoy the foods from their outdoor gardens. These groups of viewers will be substantially affected by seeing emissions and their awareness that they are from an adjacent crematorium while eating food from their gardens, having an outdoor dinner party, or having their children playing outdoors. The emissions from the proposed project will substantially affect their visual quality.

In Section III, Air Quality, letter c of the Initial Study and Mitigated Negative Declaration, found that “the project would not result in a cumulatively considerable increase of any criteria pollutant.” “Crematoriums are sources of air pollution including mercury emission and may cause plausibly subtle chronic health effects due to long-term low-dose exposure” (US National Library of Medicine, National Institutes of Health). More concerning than mercury emissions on chronic health of humans, is the bioaccumulation and biomagnification of mercury. As previously mentioned, the proposed site is adjacent to the American River/Lake Natoma which is the habitat for fish, bald eagles, deer, foxes, skunks, and many other wildlife. The waterway is also used for fishing. Mercury accumulates in organisms, increasing levels, which then is transferred to higher-level organisms such as fish, bald eagles, and humans. The Initial Study and Mitigated Negative Declaration did not address the bioaccumulation and biomagnification effects of mercury emissions, which is crucial since the site is next to a State riparian parkway.

Clearly, a crematorium should not be permitted next to a recreational riparian habitat and residential area. Its emissions will substantially degrade the visual quality of the area and will be a source of mercury bioaccumulation in the riparian organisms. I implore you to deny the conditional use permit for the above project.

Sincerely,

Tracy Wetzel

Historic District Commission

Re: Proposed crematory at Lakeside Memorial Lawn

Dear Historic District Commission,

I am writing to request for your opposition to the proposed conditional use permit to install and operate a crematorium at Lakeside Memorial Lawn.

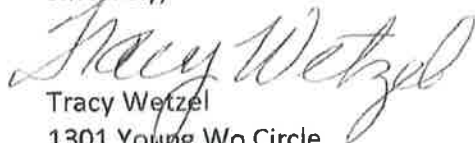

The crematorium will emit air pollutants that include toxic air contaminants such as trace metals and organic compounds. Emission and deposition of these air pollutants (even at low levels) can have accumulative adverse effects. They have the potential to cause cancer and other deleterious effects to both the human and wildlife populations and the land and water in the American River Parkway.

Lakeside Memorial Lawn is located next to a residential area and the American River Parkway. The residential area that is next to the proposed site contains families who are elderly, with young children, and pregnant women. These families are particularly vulnerable to pollutants. The American River Parkway that is adjacent to the site is used for outdoor recreation requiring physical exertion such as biking, running, hiking, kayaking, paddle boarding, etc. These activities require an increased respiration rate.

A crematorium belongs in an industrial area away from residential and recreational areas and riparian habitats. I implore you to oppose the approval of the crematorium conditional use permit.

Thank you for your consideration.

Sincerely,

Tracy Wetzel

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Historic District Commission Members,
Thank you for your time in considering my email to you.

I am writing in regard to the,
Noburningbodies.com campaign.

Evidently it is clear evident that no one on this committee has bothered to avail themselves in going to a cremation site to educate themselves about the process and what it involves.

One only has to ask for an appointment to go through their facility:

Affordable Cremation & Funeral Center

4750 Beloit Drive Sacramento

CA 95838

916-432-8443

To see clearly that the horrific picture captured at the top of a flyer is ludicrous and misleading. It resembles more of a Auschwitz picture than what is. I realize that to gain a point through fear, loathing and preying on the lack of knowledge in cremation, one would perhaps buy into their tactics to gain favor and a vote against the proposed facility.

The facility that I enclosed is one of the most clean, no odor, no smoke, respectful facilities in the chain of their business'.

First and foremost in cremating the deceased, there are nine different levels of filters one must go through. There is nothing that tosses any ash from the remain, any odor, any smoke, anything that could pollute the surrounding community at large.

It is clear that the " noburningbodies" campaign is one sided and a detriment to the community at large. It is a personal point of view that is uneducated, judgmental, and a prevarication.

Dental amalgam is a concern for those who may not know that the dental fillings can and will be removed before cremation at the request of who ever it is that is responsible for the deceased.

All avenues that are of a concern can be addressed with some inquiry to properly trained persons in a position to educate and answer all concerns.

It is my personal opinion that the plans for a crematorium proceed and be of benefit for the community at large.

Thank you for your time in reading this.

Appreciated

Dear Steve,

I am writing to you to get your SUPPORT to DECLINE the proposed Lakeside crematorium in the Historic Folsom district.

As the cemetery name eludes...it's lakeside and not the area to put a crematorium. I strongly oppose this crematorium being built inside such a small neighborhood, next to historic landmarks, in and around adjoining open space, bike trails and the lake. **Please!!! We need your support on stopping this crematorium in HISTORIC FOLSOM.**

I live at [REDACTED] Young Wo circle and am very concerned about the potential FIRE HAZARD propane tanks can cause if there was an explosion. Getting out of this neighborhood in an emergency situation would be horrific. The roads are narrow on Forrest Street and fire engines would have trouble coming through with all residences and the Vets from the Veteran's Hall trying to escape any fire. The light rail at the intersection of Forrest Street and Folsom Blvd runs every 15 minutes and backs up traffic leaving the neighborhood as it is and that alone often causes congestion. The trees and brush along the river gets very dry and we already have had extreme scares of fires from careless people starting fires along the river. There is NO GUARANTEE these propane tanks can be safe and never have an explosion and start a fire.

I'm concerned for HEALTH reasons of the dangerous particular matter that would be released into the air, plus the smell and the atrocious look. I have severe asthma and i don't want further respiratory issues, I also have a very strong sense of smell and i don't want to feel trapped in my home. I have children living with me in their twenties, plus i also watch my 2 year old grandson and newborn grandson. i fear for lasting known and unknown side effects that they could be exposed to, besides my fellow neighbors and anyone else enjoying the trails and lake. Several running clubs and bike clubs and use the bike trail consistently, plus the river is filled with other sport enthusiast like fisherman, paddle boarders, kayakers and that would be unsafe for their health also.

We also have the affect it can have on WATER and WILDLIFE.
Our PROTECTED BALD EAGLES HAVE A NEST directly across the river from the proposed crematorium.

I'm concerned for the REGULATION of how often they would cremate. The studies were done for a few cremations a day. You know they would need to up that number to make a profit and

that's what this business is about. Who would monitor them daily to make sure they aren't going above the regulated amount? You know they will- it's about making a profit to a business!

This area is designated OPEN SPACE and in the Historic district. If a crematorium is needed, this company needs to find a suitable "industrial area " away homes & schools where they can run a business efficiently without harming the residences and wildlife of Folsom. They applied for this permit and were denied and the homeowners here had to take time and resources to fight this proposal before and it was declined. How are they allowed to keep coming back- the Historic Area & Open space has not moved

Lastly, I am a local Realtor and it will DECREASE OUR HOME VALUES in the Preserves/Lake Natoma Shores. Property prices will be affected which in turn means LOWER TAX REVENUE for the city. Is there a crematorium tax on each cremation? and if so, would it even match the difference in property taxes for 150 plus immediate surrounding homes?? No one wants to live by a crematorium so close by where you can smell, see and feel its presence. It will definitely need to be disclosed on a seller's property disclosure forms for any home sales and will cut out a large number of potential buyers for this neighborhood. I have 3 clients that want to buy in this neighborhood- two of them will not

reside here if a crematorium is built for reasons listed above and the my 3rd client Liz Chighizola has stated to me, she would want the crematorium to be put in because home prices would than drop here and then she would finally be able to afford this neighborhood. Really?? How is it ok for this business to decrease our home values?? Residences bought homes knowing a historic cemetery was here- we did not agree to hurt our health, environment and property values when purchasing our HOMES next to a crematorium that was not even in existence and might have swayed our investment in a home here.

Please be our voice and VOTE NO, STOP and OPPOSE the Lakeside crematorium. Voting No and stopping this is what is right for the families in the City of Folsom.

WE THE LIVING RESIDENCES ARE WHO MAKE UP FOLSOM TODAY AND WE SHOULD HAVE PRIORITY, NOT THE DECEASED.

Lakeside needs to find an industrial area not in historic and open space to expand their business and profits. This will make it a win win for everyone in Folsom.

Thanks for your time and hoping your assistance.

Best regards,
Victoria Foster. [REDACTED]

To the Folsom Historic Commission,

This letter is in regards to the vote towards the application for a Crematory being built at the Lakeside Memorial Lawn Cemetery. I am asking you to protect our community with your vote of no, against having a crematory in our residential neighborhood.

Here are a few examples of what will happen to our air quality to our neighborhood and communities in our area when burning human remains. There will be toxic emissions associated with contaminants such as mercury amalgum dental fillings, organohalogens and other toxins which may also come from breast implants that contains toxic chemicals like PVC, Methylene Chloride. Let's not forget the other types of medical implants that may be left behind before cremation.

Studies has shown the risks of still birth was 4% higher as well as the high risk of a brain abnormality anencephalus among babies whose mothers lived near a crematorium. Fumes from a crematorium are potentially harmful and should not be located so close to residential neighborhood's where harmful toxins will be inhaled deep into our lungs tissues on a daily basis. We ask that you protect our families and our community and vote no to the Crematorium being built at Lakeside Memorial Lawn Cemetery.

Respectfully,

Wendy Yezzi 08/11/21

				<p>This is NOT the right location for a facility like this !</p> <p>There is a reason this neighborhood is not zoned for Commercial use - of any kind. It should definitely not be used for commercial use that is potentially hazardous !</p>
08/22/2021 11:45am	Darrell	Jenkins		Let's simple ask these people to move the crematorium.
08/22/2021 01:25pm	Stephanie	Nelson		We are residents of Historic Folsom and are concerned with the crematorium.
08/23/2021 12:02pm	Katie	Musfelt		Vote No on the historic Folsom crematorium at Lakeside Memorial.
08/23/2021 12:03pm	Adam	Musfelt		Vote No on the historic Folsom crematorium at Lakeside Memorial.
08/23/2021 12:38pm	Barbara	French		Strongly recommend this not be allowed to happen.
08/23/2021 12:40pm	Jack	French		Recommend a NO PASS of this permit
08/23/2021 01:41pm	Donna	Campagna		vote no please
08/23/2021 01:42pm	Mark	Campagna		vote no please.
08/23/2021 03:33pm	Andrea	Norris		No crematory
08/24/2021 10:09am	Leland	Wilson		No way !
				I have lived in Historic Folsom for 10 years and my son has severe asthma. I DO NOT want him to be breathing in polluted air. NO crematory should be allowed in our backyards of Historic Folsom. Our community has worked hard to persevere this unique area as a draw for social community gatherings.
08/24/2021 10:27am	Jessie	Kasko		No crematorium at Lakeside Memorial
08/24/2021 11:40am	Jean	Wiggin		We may need one BUT NOT in historical downtown Folsom.
08/24/2021 11:49am	Robert	Wiggin		NO HISTORIC FOLSOM CREMATORIUM AT LAKESIDE MEMORIAL.
08/24/2021 12:38pm	Mike	Cuevas		I vote NO on this permit application. I live two streets away and do not want this in our neighborhood.
08/24/2021 12:46pm	Liane	Powell		contact me
08/25/2021 12:17pm	gary	mcfarland		Voting NO ?
08/25/2021 03:04pm	Regina	Charette		We don't want a disgusting crematorium in the heart of beautiful Folsom!
08/25/2021 03:33pm	Tara	Munier		I would like to share my support in the opposition of the Lakeside Crematorium application and development. The Lake Natoma, Murer House, trails, and neighborhood is impacted by this decision. With the drought and risk of losing precious nature preserve areas, I would like to implore local government officials to oppose the crematorium at this location while leveraging alternative solutions. There are alternative retail sites/ sites that are vacant with no nature preserve, athletic, or residential impact. Please consider the alternative sites with no negative impact.
08/25/2021 09:25pm	Anne	Bentz		I am a resident of Sibley Street and the thought of living so close to a crematorium is depressing. Please reconsider another area for the construction of a crematorium as with the vastness of California I'm sure there are other more viable, less populated options.
08/26/2021 01:51pm	Michelle	Domingo		Please keep Historic Folsom protected from this crematorium.
08/26/2021 01:52pm	Alexander	DiStefano		No more ash in the air. Especially with all the fires lately. The land that is zoned historic and should stay pristine.
08/26/2021 06:34pm	Troy	Drennon		Troy Drennon

08/26/2021 10:29pm	Carolyn	Barker		I have lived in Old Town Folsom for 40 years. I have lost my Son at 34. Lost my Husband of 52 years. Both were cremated. But I cannot imagine being able to smell the stuff here where I live. Please find another open space., like the old dump sites that were here. Might cost you more money. Please think about this. Thank you for your time. Carolyn
08/27/2021 10:17am	Jerald	Lewis		I do not want a crematorium only a few blocks from my house.
08/27/2021 07:36pm	Paul	Zenak		As I live just 2 blocks away on Figueroa Street, I'm appreciative of your activism.
08/28/2021 07:38am	Darla	Dunn		Please do not allow a crematorium in Historic Folsom. I live in the historic district. We have enough smoke from all the natural fires and don't need or want year round crematory smoke. This is detrimental to us personally and for the city of Folsom. Please stop additional pollutants to our town.
08/28/2021 11:49am	Jenelle	Hallock		Voting No!
08/28/2021 06:47pm	Dlane	Colgan		No to a crematorium in Folsom. Our air quality here is worse than other areas in Sacramento as smoke gets trapped here and cannot get over the hill. The same thing happens with the fog in the winter and it settles in Folsom and does not lift as it is trapped. Unhealthy air in Folsom and we do not need anything that will add to it.
08/28/2021 07:53pm	Amanda	Watson		No thank you!! Keep our air clean! We get enough smoke with the fires!
08/30/2021 09:39am	Benjamin	Gamache		To whom it may concern: As I sit here writing this, I look outside to smoky skies and an ash-covered deck. Adding more smoke and particulate matter to this already impacted community must not happen. Historic Folsom is a quaint, family-oriented community that must remain preserved at all costs. Please vote NO on the permit application.
08/30/2021 08:57pm	Lori	Molitor		Sincerely, A Concerned Neighbor
09/01/2021 12:14am	Denise	Shuker		It's bad enough with fire season. Don't add more pollution to the air year round. This is a residential area near nature trails. This does not belong here.
09/02/2021 04:35pm	Robert	Yost		I have lived in Folsom on Forrest Street for nearly 24 years and do not want a crematorium in our little neighborhood.
09/03/2021 10:31am	Jill	Huckaby		The reasons are many; possible harm to the air if there is a problem with the process. I have had asthma most of my life and fear the potential for harm to my already sensitive lungs; possible harm to the eco-system in Lake Natoma and the American River Parkway; and if a spark escapes from the chimney stack or the 500 gallon propane tank explodes, it would be
09/03/2021 11:16am	Angelica	Galeana		My vote is no.
09/03/2021 11:30am	Jeremy	McNeill		Please NO cremation should occur in a neighborhood like this. Take it outside of residential neighborhood please!!!!
09/03/2021 11:41am	Allison	Hull		I vote NO on the Folsom Crematorium!
09/03/2021 12:41pm	alexia	hughes		N/A
				I work across the street from this location and am not ok with the idea of breathing potentially toxic fumes let alone the smell. Please consider a commercial location away from businesses and residential areas.
				we want clean air

09/03/2021 01:43pm	Michelle	Lozano	NO
09/03/2021 02:25pm	Kathryn	Ruiz	no on crematorium
09/03/2021 02:26pm	Kimberly	Shepherd	I feel like it needs to be in a commercial area Not next to restaurants, and small businesses
09/04/2021 12:41am	Nicole	Alexander	No
09/04/2021 07:06pm	Steve	Croft	No on the permit application. Keep our air clean and avoid the eyesore of this proposed crematorium in the historic district.
09/06/2021 07:20pm	Cassandra	Olson	Highly object to the installation of a crematorium due to public health issues.
09/06/2021 07:58pm	Susan	Lubiens	Vote NO!!!
09/06/2021 09:02pm	Siue	Railsback	No way. I live right across the lake from this. Furthermore, we have nesting Bald eagles each year in this very vicinity. The toxicity is probably harmful to our national treasure.
09/06/2021 09:48pm	Stephanie	Chandler	Stop the pollution
09/06/2021 10:17pm	Denise	Mullenax	I oppose a Folsom Crematorium! City planning has made many mistakes in the last 20 years. This is one that needs to be stopped.
09/06/2021 10:28pm	Laura	Basini	I have serious concerns on health and economic grounds.
09/06/2021 10:45pm	John	Iniguez	I am totally against allowing a crematorium to be build at the Lakeside memorial. There is already one on Greenback Lane near near Fair Oaks Blvd, This business is one that needs to be removed from any neighborhoods or within wind drift of neighbors. We have had a bridge with much traffic, and light rail added, and a flight path change that puts endless planes overhead. This area has already sacrificed, we should not have this business added as well. It will create too much noise, when they are started, mostly likely would run when electricity is cheaper(night?), be bad for air quality, remember we are already adding exhaust from cars to our area, and the smell is not good when you are near. This is not a good fit to neighborhoods that have already sacrificed much in quality of life.
09/06/2021 10:52pm	Julle	West	
09/07/2021 05:16am	Clarence	Macaspac	No to pollution
09/07/2021 06:18am	Leslie	Wynn	Please do not add more particulate matter to our air by allowing a crematorium to be put in, anywhere in Folsom. They need to find a place that is farther away from developed areas. Let's put this in a less populated area!
09/07/2021 06:48am	Cecelia	Cutler	
09/07/2021 07:43am	Margaret	Weaver	I oppose a crematorium in the Folsom Historic District and would encourage Lakeside to promote legislation for human composting instead. This third option is environmentally
09/07/2021 07:47am	Michael	Poncin	No, not in historic Folsom
09/07/2021 07:52am	Patricia	Foulk	Air quality should not be polluted.
09/07/2021 07:55am	Lauren	Britt	I am against the Lakeside Memorial Crematory.
09/07/2021 09:37am	Kathleen	Kenna	With the poor air quality lately due to fires, a crematorium should not even be a consideration.
09/07/2021 10:17am	Joanna	Stanfield	ABSOLUTELY NO crematorium at Lakeside Memorial
09/07/2021 10:19am	Christine	Gorman	NO crematorium please!!!
09/07/2021 10:20am	Thomas	Rasmussen	Let the people speak - we do not need or want a crematorium in a residential area. Vote "NO" as your constituency want!!

			<p>Hello,</p> <p>This was brought to my attention and I'd like to comment on it.</p> <p>First of all I'd like to say that I am pro business but I'm also pro community. I have a huge concern about the vapors and exhausts being pumped into the air and likely settling into Lake Natoma. The location is so close to this precious lake, the paddle borders, Sacramento State Rowing team, and the wild life. I'm sure we have done the environmental impact report, but I'd make sure that report include to biological impact on the water ways; specifically on Lake Natoma, the over flow into the American River and the effects on the fish that swim up river to lay their eggs at the Hatchery (on Hazel).</p> <p>I think it's best that this special use permit be denied. At least until all of these factors can be thoroughly worked through.</p> <p>This is not the location for a Crematorium. The negative implications on the Physical, Environmental and Fiscal Health of our community cannot be properly accounted for at this time. Nor can the actual impact be mitigated where the it is less than 20%.</p> <p>The residual ashes and gases alone will impact not only the American River Parkway/Natomas-Negro Bar area but the homes located to the NW of the proposed site. It should be noted that the majority of these homes are located significantly higher than the site for planning or in lower impact areas when there are periods of inversion.</p> <p>This is not in the best interest of the community.</p> <p>Thank You</p> <p>David D Sirsi</p> <p>Please keep our air as clean as possible, it's already bad enough with fire season.</p> <p>No, No, No!! On the permit for a crematory at the preserve in Folsom!!</p> <p>voting no</p> <p>I vote NO on the Lakeside Memorial Lawn Crematorium.</p> <p>Please don't allow a crematorium at this site</p> <p>My home is in line as to where the smoke would probably go (American River Canyon) And I am VERY sensitive to air quality.</p> <p>Thank you in advance for your careful consideration in not allowing this to go forward.</p> <p>No for permit</p> <p>No for permit</p> <p>My family does not want this crematorium here in Folsom. Put it on the other side of the freeway where Aerojet was. Why have it so close to homes? What are you guys thinking?????</p> <p>VOTE "NO" ON THE PERMIT APPLICATION. It will cause our air quality to be worse than it already is and it will drive down our home values.</p> <p>Please no</p> <p>Please no</p>
09/07/2021 10:34am	Levin	Hughes	
09/07/2021 12:15pm	David	Sirsi	
09/07/2021 12:28pm	Kathleen	Gately	
09/07/2021 02:06pm	Mary C	Meden	
09/07/2021 02:39pm	Judith	Bates	
09/07/2021 03:46pm	Monique	Green	
09/07/2021 05:01pm	Debby	Alberti	
09/07/2021 05:47pm	Joni	McColloch	
09/07/2021 05:47pm	Joni	McColloch	
09/07/2021 06:17pm	Janis	Kuwamoto	
09/07/2021 07:29pm	Hannah	Sanders	
09/07/2021 09:39pm	Michelle	Lu	
09/07/2021 09:40pm	Harry	Lu	

			<p>In the ten years that the Lakeside Crematorium has been proposed, I have not seen nor heard one good reason to build or operate it next a designated open space preserve; especially when there are industrial areas within a few miles of the proposed crematorium.</p> <p>These other areas are well-suited for commercial activities and are zoned for businesses that could create potentially toxic emissions and waste, noise, and other distractions unsuited to residential and historic neighborhoods.</p> <p>In all seriousness, may I suggest a location near the Keifer landfill? Perhaps there's a place on or near it that would be a safe location away from population centers for a crematorium. The last time I was out that direction, there was plenty of open space and I see no reason that a crematorium could not discreetly fit into that area -- I know it sounds disrespectful at first thought but it's just a stop - not a long term stay... maybe it could be called the Sloughhouse Facility..</p> <p>Please carefully consider the ramifications of this decision. Putting a Crematorium so near to homes, schools and wild areas is a bad idea and it is much harder to undo than NOT do.</p> <p>Please say NO to the Crematorium as currently proposed.</p> <p>Regards, Charlotte Bryant</p>
09/09/2021 08:32pm	Charlotte	Bryant	
09/09/2021 09:46pm	Christine	Vangelatos	<p>Please vote 'no' on the permit application. PLEASE VOTE "NO" ON THE PERMIT APPLICATION.</p>
09/11/2021 09:48am	Barbara	Barnett	<p>Seeing smoke coming from a crematory when enjoying our bike trails, kayaking on Lake Natoma or just driving down Folsom Boulevard would be depressing, especially for us older people who have lost so many close friends and family and no that's going to be us in that</p>
09/11/2021 02:08pm	LAURA	BROWN	<p>This type of establishment belongs in an industrial area not across the street from the hub of Folsom street fairies, farmers markets, restaurants, stores concerts & more that welcome tourists to visit Folsom. To see smoke from the crematory up in the sky while enjoying the bike trail or shopping , eating on sutter street is an affront. Tourism is crucial to the city of Folsom. There is a housing development that lives this area. They already have the cemetery. To put a crematorium near those people who live across from the cemetery is absolutely horrible. This is a bad idea. Move somewhere else.</p>
09/11/2021 06:04pm	Andrew	Cherniski	<p>I depend on the trail system in this area to improve and maintain my health. The addition of this crematorium will destroy the recreational experience that Folsom has worked hard to develop over the years. If this happens, I will be spending my recreation dollars elsewhere.</p>
09/11/2021 10:55pm	Barbara	Storm	<p>Please reject this proposal.</p>
09/12/2021 11:33pm	Lisa	Bracero	<p>Please don't allow a crematory to operate here!</p>

09/07/2021 09:54pm	Isaac	Monical	do to profit over the safety and wishes of a community.
09/07/2021 10:15pm	Mary	Gates	oppose the crematorium!
09/07/2021 11:45pm	Sara	Adams	do historic folsom crematorium at lakeside memorial
09/08/2021 07:16am	Jeff	Cruit	VERY Strongly opposed to a crematorium at this location
09/08/2021 09:22am	Vicki	Romani	do crematorium here, please do not for all of the obvious reasons. Let them line their pockets elsewhere!
09/08/2021 11:48am	Bonnle	Sirsi	Please vote no
09/08/2021 12:36pm	Terence	Gates	oppose having a crematorium built
			Our deceased relatives (parents) have been placed at this cementing domain, and Er are both strongly against any crematorium in Folsom ca. Near the parkway is no suitable site, nor anywhere close to Folsom. There are enough existing crematoriums within driving distance for cremations, and under no circumstances should this additional Folsom area site be permitted. Thank you.
09/08/2021 03:05pm	William/Dree	Bleay	William B Bleakly and Dree R Bleakly
			NOTE: NO! ON THE PERMIT APPLICATION. It will make our air quality even worse and drive our home values down!
09/08/2021 05:28pm	Hannah	Sanders	reflections neighborhood and I say no I don't want it. There's already enough pollution in this
09/08/2021 05:31pm	Catherine	Tenner	Please do not build a crematorium at Lakeside Memorial.
09/08/2021 10:43pm	Kristine	Wells	
09/09/2021 07:47am	Kimberly	Johnson	
09/09/2021 08:45am	Aurelio	Merlos	NO crematorium in lakeside, close to living areas and natural reserves.
09/09/2021 08:59am	Steve	Holden	oppose this in a residential area.
09/09/2021 09:10am	Karen	Pardieck	would hate to be eating outside at Karen's Bakery it SCOTTS and smell the smoke as it wafts over from the crematorium. Folsom does not need this!!!
09/09/2021 09:14am	Genevieve	Bergman	Voting NO on the permit application for the Lakeside Memorial Lawn Crematorium.
09/09/2021 09:38am	kim	roberts	Do not pollute Folsom. Over building is causing enough problems.
09/09/2021 12:01pm	Octavio	Sanchez	NOTE NO
			This is not an acceptable place for a crematorium. I saw all the signs in the neighborhood today. can't even imagine how terrible the smell would be and knowing what it is from. How can Folsom think this is ok?
09/09/2021 07:41pm	jack	baker	

09/13/2021 09:15am	Linda	Johnson	a crematorium should be in an industrial area where there are no homes, children, aging adults, pets.
09/14/2021 12:36am	Rochelle	Jacob	No crematorium in a residential area
09/14/2021 12:27pm	Megan	Shill	It's absurd to put one near homes like this. Not only is it not healthy, the city is forcefully decreasing the value of residents homes.
09/15/2021 07:19pm	Linzl	Miner	Keep historic air clean!
09/16/2021 11:42am	Victoria	Brown	Preserve our clean air!
09/17/2021 02:06pm	Susan	Rivieccio	This is not the area to place a crematory.
09/17/2021 02:08pm	Nicki	Rivieccio	I am against having this done without community input.
09/18/2021 11:08am	Allison	Knight	I say no to the crematorium and YES to keeping our air clean.
09/19/2021 04:24pm	Christine	Pocock	Voting NO on the crematory!!!
09/19/2021 04:28pm	Tyler	Rawles	No on the crematory!!! This would ruin the historic district!
09/19/2021 04:29pm	Christine	Rawles	Voting NO on the crematory, this would ruin our neighborhood. It would be terrible for the river, trails, and lake! Not to mention a total fire hazard!
09/20/2021 09:20am	Jennifer	Kelly	I would like to see Folsom protected against the Lakeside Memorial Lawn Crematorium.
09/20/2021 09:23am	Ryan	Kelly	For the sake our community, please no Historic Folsom crematorium at Lakeside Memorial.
			I am voting NO on the crematory. I am in my 60s and wanted to retire here in our town of Folsom. This crematory would be very bad for people like myself who enjoy walking, SUP, biking, listening to music. Our community here is special. PLEASE do not destroy our area for older people and younger children who enjoy being outside. Go someplace else where it is accepted. Ruth McGuire
09/20/2021 06:20pm	Ruthmarie	McGuire	
09/20/2021 08:48pm	Bruce	Fields	I do not want a crematorium in this beautiful area.
			I have lived at Folsom Village @ [redacted] Oakdale St. for over 5 Years. I'm a senior as most of the other residents in the park. Many of whom have respiratory problems. I am very much against the property across the street building a crematorium.
09/25/2021 03:27pm	Nancy	Thornton	This site is too close to homes and recreational areas.
			This is gross. Please do not put that here as that would ruin the air quality and hurt the community around it. Propane tanks next to the river and trees is a horrendous idea. We love this area and do not want it ruined. Not safe at all
09/26/2021 01:08pm	Chris	Bernardi	This is proven to be unsafe near wooded area and irresponsible creating air pollution in a designated historic site in this town.
09/26/2021 01:17pm	Garret	Foster	For the reasons given above, I don't want a Crematorium in my neighborhood. It should be outside of town, a good distance from neighborhoods. I see home owner property values going down if a crematorium was to be put this open space, (which shouldn't be allowed in the first place) who would pay a premium price for a home if a crematorium was so close to their
09/27/2021 06:04pm	Jerry	Amaral	A crematorium in very close proximity both to a residential community and the tourist attraction of historic Folsom is a terrible idea.
10/01/2021 08:26am	Alan	Gonsalves	I live in Historic Folsom & have a son with asthma. This would harm the air quality in, Folsom which makes it a health concern for our community.
10/01/2021 09:51am	Ben	Kasko	

10/01/2021 09:59am	Amy	Kunst		This should not be located anywhere near a town, especially one with such an outdoor lifestyle. This is not ok!!
10/03/2021 08:47pm	natalia	merlos		no crematorium! breathing dead people isnt helathy
10/05/2021 08:56am	Jennifer	Grattan		I reside in Historic Folsom in close proximity to the proposed crematorium site. I am in opposition to the permit and the designated location of the crematorium. I believe a crematorium belongs in an industrial zoned space and is not meant to be in a residential
10/05/2021 09:16am	Edwin	Grattan		I am 75 years old and I live within a stones throw of the selected Crematorium site. The unhealthy air produced by burning bodies is a risk to my health. I feel the Crematorium should be constructed in an industrial area.
10/07/2021 09:57am	Jessica	Birch		I oppose this crematorium. As a Jewish person whose faith forbids cremation and as someone whose community includes people whose relatives were killed by the Nazis and then burned in Crematoriums, the sight and smell of a crematorium in the middle of our beautiful historic town is disturbing.
10/12/2021 08:30am	Richard	Perez		I respect that being cremated is the choice of many after death and is the norm in some cultures, but please place the crematorium outside town. Thank you.
10/12/2021 08:41am	Sandra	Perez		Keep historic Folsom beautiful! No burning bodes!!!!
10/12/2021 08:44am	Estela	Lewis		A crematorium should be away from residential area. Keep historic Folsom clean and beautiful. The crematorium will be too close to residential and historic Folsom . Our city and the businesses will be stigmatized losing our clean air where our children play and families come to be close to nature.
10/17/2021 04:09pm	Caell	Horwith		No crematorium!
10/20/2021 08:22am	Keith	Derry		Under no circumstances would I expect a new crematorium to be constructed so near residential housing. This endeavor to build one here has been floated before and thankfully it did not happen. If one is needed find a place in the recently annexed land south of Highway 50 that can be designated for such a use. Then let homeowners not bothered by this use buy in the vicinity. To allow the cemetery to build it alongside an established small neighborhood that is obviously concerned and almost uniformly opposed would be a callous disregard of those residentsâ€™ wishes to enjoy the neighborhood they bought into
10/26/2021 07:27pm	Steve	Wetzel		Nobody should be asked to live next to a place that burns 100's of dead bodies every year. Even if you don't see the smoke you just know the air outside contains the micro particles of dead, burned people. Everyone has smelled the awful smell of burning skin or hair at one point in your life. Can you image that every day outside your home?
11/23/2021 12:26pm	Juli	Neal		Please consider relocating the site of this crematorium away from populated areas and the waterways. Thank you
12/04/2021 01:28pm	Sherry	Barron		I want to breathe clean air. Regularly ride bikes and walk the trails with my family. Itâ€™s a big NO for this crematory!
01/03/2022 08:59am	Kara	Kreutz		Crematorium should be located away from residential and natural areas. They are more appropriate in an industrial area.
01/03/2022 10:01am	Adrienne	Simpson		Vote no on the permit application.
01/10/2022 09:29am	Catherine	Reinmiller		I donâ€™t want this next to the river or tails in Folsom Please no crematory in the neighborhood. Is there open land close by that could be used for

10/04/2021 08:21am	Victoria	Foster		<p>I strongly oppose the crematorium being built in the historic district & inside a small neighborhood. I live on [redacted] Young Wo Circle and extremely concerned on the air quality impact. The air quality studies are done for a lot fewer than you know they will do. I have asthma and I don't want my health impacted. This is also zoned open space if this crematorium is so needed than it should be put in a commercial zoned development away from homes. In an industrial area. This is too close to the bike path and river where so many people exercise and enjoy what we have to offer.</p> <p>Another huge concern is fire safety- if there was an explosion and fire with the propane tanks we are in a one way in and one way our neighborhood. This company needs to build the crematory in an industrial park area not near a children's & recreational park.</p> <p>Please vote no and protect us.</p> <p>Sincerely, Victoria Foster [redacted]</p>
01/29/2022 05:01pm	Laurie	Brown		<p>I vote NO on the permit application! Super sad to see it is even being considered. As a person with severe asthma this is extremely disheartening. In July 2020 California approved alkaline hydrolysis cremation with very low (if any) emissions because it doesn't heat up to the high heat as the other uses and is water based. Anything burned in the high heat will not be good for the community...Burial caskets coated in insecticides or preservatives, things people leave in the caskets, dental amalgam fillings, presence of radioactive substances within the remains, either from devices or as a result of radiotherapy, etc. YEP....I VOTE NO!</p>

			oppose locating this crematorium in this designated open space location. Not only is it out of character with our treasured historic Folsom nearby, it would create toxic air pollutants particularly by virtue of being self regulated), and those pollutants would not only affect humans in the area but would have an affect on Lake Natoma and all of the wildlife that we reasure and that use that little jewel of a lake. Not to mention downstream pollution of the American River.
01/11/2022 06:45pm	Christine	Holmes	A better location for this facility would be near the landfill on the other side of Highway 50. An additional benefit may be that, since the landfill is heavily regulated, that may tend to affect
01/12/2022 02:54pm	Jenifer	Orr	We want to live in a community with clean air. Stop the burn!
			Please vote "No" for the conditional use permit to install a crematory at Lakeside Memorial Lawn cemetery located at Folsom Blvd and Forrest St.
01/14/2022 07:50am	Bert	Pittari	
			Please vote "No" for the conditional use permit to install a crematory at the Lakeside Memorial Lawn cemetery located at Folsom Blvd. and Forrest St.
01/14/2022 08:00am	Patricia	Zuccaro	This crematory will have a negative impact on current and future generations .
01/15/2022 06:24pm	Loretta	Poland	Please do not allow this in Folsom.
			Do not allow a crematorium!!!
01/15/2022 06:40pm	cliff	mombourquette	
01/17/2022 10:09am	Todd	Dambly	NO HISTORIC FOLSOM CREMATORIUM AT LAKESIDE MEMORIAL
			one day people will come to folsom and say[Whats historic about this place?
01/18/2022 09:22am	edward	livesay	No crematorium
01/22/2022 08:54am	kathryne	Hauser	snt there a less populated place for this lol
01/22/2022 02:18pm	Rebecca	Mendell	stop the crematory.
01/23/2022 09:23am	Heidi	Scherer	NO NO NO NO NO No No NO No!!!!
01/27/2022 02:10pm	Trevor	Moran	NO HISTORIC FOLSOM CREMATORIUM AT LAKESIDE MEMORIAL.
01/28/2022 04:08pm	Liz	Byer	As a resident of old town Folsom we definitely object to the crematorium. Summers are already becoming unbearable due to unprecedented fires. We believe this is not the time or
			The proposal to put a crematorium in this location is shocking. The impact to air quality and smell will be very detrimental to the historic district of Folsom. The historic district will be joked about as being under a cloud of death.
01/28/2022 06:17pm	Alan	Gonsalves	The health impact to local residents within very close proximity is also very impactful. How can this even be considered a good idea?
01/31/2022 04:53pm	Stacey	Meredith	Doesn't belong in residential area
02/02/2022 12:54pm	ADRIANNE	GALE	I BELIEVE IT WOULD BE TRAGIC TO ALLOW THIS PROJECT TO PROCEED . FOR THE SAKE OF A HEALTHY LIVING RESIDENTIAL AND HISTORIC AREA IT MUST NOT BE APPROVED.

NO LAKESIDE MEMORIAL LAWN CREMATORIUM!

Petition summary and background	Lakeside Memorial Lawn has applied for a conditional use permit to install and operate a crematorium on designated open space. This has significant negative implications for the physical, environmental and fiscal health of our community.
Action petitioned for	We, the undersigned, are highly concerned citizens who urge our leaders to act now to vote 'NO' on the permit application.

PROTECT FOLSOM HISTORIC DISTRICT

Vote **NO** on
Lakeside Memorial
Lawn Crematorium

Dear Historic District Commissioners,

Date: 8-26-2021

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- A small business in Aptoma Professional Center across the street.*

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Contact Information:

The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Dear Historic District Commissioners,

Date: _____

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- VERY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- HIGHLY CONCERNED ABOUT EXTREME FIRE RISK CAUSED BY LARGE PROPANE TANKS IN OPEN SPACE.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate an industrial crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for unborn children, developing children, elderly, and those with existing health conditions in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial or industrial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by *nonconforming use* of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an industrial incinerator does not belong in open space.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause *lasting damage on the physical, environmental and fiscal health* of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

PROTECT FOLSOM HISTORIC DISTRICT

Vote NO on Lakeside Memorial Lawn Crematorium

Date: 8/9/2021

Dear Historic District Commissioners,
I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- VERY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- HIGHLY CONCERNED ABOUT EXTREME FIRE RISK CAUSED BY LP TANKS IN OPEN SPACE.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for unborn children, developing children, elderly, and those with existing health conditions in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by *nonconforming use* of the land. This will harm the living to profit off of the dead. The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Kathy Kellogg

PROTECT FOLSOM HISTORIC DISTRICT

Vote **NO** on Lakeside Memorial Lawn Crematorium

Dear Historic District Commissioners,

Date: 8/3/21

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notes levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Dear Historic District Commissioners,

Date: 8/23/22

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- VERY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- HIGHLY CONCERNED ABOUT EXTREME FIRE RISK CAUSED BY LP TANKS IN OPEN SPACE.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Vote **NO** on Lakeside Memorial Lawn Crematorium

Date: 8/4/2021

Dear Historic District Commissioners,

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- VERY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- HIGHLY CONCERNED ABOUT EXTREME FIRE RISK CAUSED BY LP TANKS IN OPEN SPACE.

- OVER THE AGE OF 65 AND VULNERABLE.**
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.**

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

 AUREE ROMER

Vote **NO** on
Lakeside Memorial
Lawn Crematorium

Dear Historic District Commissioners,

Date: 8/6/21

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- Highly worried about the extreme fire risk caused by LP tanks in open space.*

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for unborn children, developing children, elderly, and those with existing health conditions in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by nonconforming use of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles. One fire will harm thousands. Such an operation does not belong in *any child's backyard*.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause *lasting damage on the physical, environmental and fiscal health of our community*. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Kari Sewan

Dear Historic District Commissioners,

Date: 8/8/21

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- VERY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- HIGHLY CONCERNED ABOUT EXTREME FIRE RISK CAUSED BY LP TANKS IN OPEN SPACE.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for unborn children, developing children, elderly, and those with existing health conditions in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Dear Historic District Commissioners,

Date: 8/1/21

I AM:

- ___ **HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.**
- ___ **A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.**
- ___ **AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.**
- ___ **OVER THE AGE OF 65 AND VULNERABLE.**
- ___ **HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.**

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by *nonconforming use* of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause *lasting damage on the physical, environmental and fiscal health* of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Diane Moore

Vote NO on Lakeside Memorial Lawn Crematorium

Dear Historic District Commissioners,

Date 05-05-21

I AM: Jonathan Van Dyke

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

91 years old.
On behalf of Joan Sexton

Vote **NO** on
Lakeside Memorial
Lawn Crematorium

Dear Historic District Commissioners,

Date: 8/9/21

I AM:

- ___ HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- ___ A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- ___ AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- ___ OVER THE AGE OF 65 AND VULNERABLE.
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

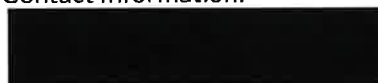

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Thomas Osburn

Lakeside Memorial
Lawn Crematorium

Dear Folsom Historic District Commissioners,

Date: 8-4-21

I AM: Fire

HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.

A CAREGIVER OF A DEVELOPING CHILD.

AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.

OVER THE AGE OF 65 AND VULNERABLE.

HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. As you know, Lakeside Memorial Lawn project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a conditional use permit, the following concerns require your attention and action on our behalf:

TOXICITY LEVELS FOR ADULTS V. CHILDREN

The Initial Study prepared by HELIX Environmental Planning, Inc. notes toxicity levels for many harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The report designates the levels as "not significant. This applies only to average, healthy adults. The Study fails to acknowledge and report the levels as significant and potentially deadly for **developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. The thousands of families, children, park visitors, trail and lake users shall not be inequitably impacted by a **nonconforming use** of the land that will harm the living to profit off of the dead. Such a business does not belong in *any child's backyard*.

AIR QUALITY, SMELL, PARTICULATE MATTER

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Air quality, smell, and particulate matter implications can have **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat is incredibly out of character for the District. Scent will be detected for miles, even if not visible. The smaller particulate matter and smoke created will be deadly to hundreds.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. VOTE "NO" CREMATORIUM.

Sincerely,

- VERY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- HIGHLY CONCERNED ABOUT EXTREME FIRE RISK CAUSED BY LP TANKS IN OPEN SPACE.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notes levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for unborn children, developing children, elderly, and those with existing health conditions in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by nonconforming use of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles. One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause lasting damage on the physical, environmental and fiscal health of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Holly Baller

Lawn Crematorium

Dear Historic District Commissioners,

Date: 11-5-21

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Contact Information:

Bobby McSherry

- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Mary Matthews

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Frances Servente

Vote **NO** on Lakeside Memorial Lawn Crematorium

Dear Historic District Commissioners,

Date: 8/4/21

I AM:

- ___ HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- ___ A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- ___ OVER THE AGE OF 65 AND VULNERABLE.

HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

Highly concerned about the extreme fire risks of liquid propane tanks in open space!

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely, *Jennifer K. Sorensen*

Vote **NO** on
Lakeside Memorial
Lawn Crematorium

Dear Historic District Commissioners,

Date: 8-6-21

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

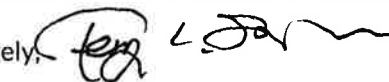

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. - OVER THE AGE OF 65 AND VULNERABLE.**
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.**

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Contact Information:

William Rowe

Vote NO on Lakeside Memorial Lawn Crematorium

Dear Historic District Commissioners,

Date: 8/3/21

I AM: Very worried on the days we have an unsafe Air Index Quality, the Crematorium would add to very high toxicity levels in the air.

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- VERY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- HIGHLY CONCERNED ABOUT EXTREME FIRE RISK CAUSED BY LP TANKS IN OPEN SPACE.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study *fails* to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Dinae Houck

- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.**
- OVER THE AGE OF 65 AND VULNERABLE.**
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.**

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Contact Information:

- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- HIGHLY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for unborn children, developing children, elderly, and those with existing health conditions in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by *nonconforming use* of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause lasting damage on the physical, environmental and fiscal health of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

It will affect you economically because of lack of tourism.
PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

Cheryl Adler

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

DIANNE BEASLEY

Vote NO on Lakeside Memorial Lawn Crematorium

Dear Historic District Commissioners,

Date: 8-20-21

I AM:

- HIGH RISK FOR AIR QUALITY HEALTH IMPLICATIONS.
- A PARENT OR CAREGIVER OF A CHILD OR CHILDREN.
- AN INDIVIDUAL WHO INTENDS TO HAVE CHILDREN.
- OVER THE AGE OF 65 AND VULNERABLE.
- VERY WORRIED ABOUT THE SAFETY & LEGACY OF HISTORIC FOLSOM.
- HIGHLY CONCERNED ABOUT EXTREME FIRE RISK CAUSED BY LARGE PROPANE TANKS IN OPEN SPACE.

I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate an industrial crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. I write to you with great concern about Lakeside Memorial Lawn's application for a conditional use permit to install and operate a crematorium. Lakeside Memorial Lawn's project site is designated as Open Space and includes historical burial grounds. In reviewing Lakeside Memorial's application for a condition use permit, the following concerns require your attention and action on the community's behalf:

TOXICITY LEVELS UNSAFE FOR CHILDREN, VULNERABLE

The Initial Study by HELIX Environmental Planning, Inc. notates levels for harmful toxins including chromium, mercury, and organics. Such toxins become the *most dangerous when vaporized*. The smaller the particulate matter, the more dangerous it becomes. The report designates the levels as "not significant." This applies *only* to average, healthy adults. The Study fails to report significant and potentially deadly levels for **unborn children, developing children, elderly, and those with existing health conditions** in the neighboring community.

NONCONFORMING USE OF OPEN SPACE

The proposed crematorium would be installed and operated in designated open space that is *not zoned for commercial use*. Thousands of families, children, park visitors, trail and lake users will be inequitably impacted by **nonconforming use** of the land. This will harm the living to profit off of the dead. With only one way in and out for emergency vehicles, One fire will harm thousands. Such an operation does not belong in *any* child's backyard.

AIR QUALITY, SMELL, PARTICULATE MATTER MAKING HISTORY

The Folsom Historic District is treasured for its legacy of community, architecture, and natural appeal. Poor air quality, smell, and toxic particulate matter will cause **lasting damage on the physical, environmental and fiscal health** of our community. Visually, the shed, smoke, and heat waves are incredibly out of character for the District. Scent will be detected for miles, even if not visible. A permanent pollutant, foul smell and toxins will leave a damaged legacy.

PROTECT HISTORIC FOLSOM. PROTECT THE VULNERABLE. NO CREMATORIUM.

Sincerely,

S. M. F. Chel

Historic District Commission
City of Folsom
50 Natoma Street
Folsom, CA 95630

RE: Lakeside Memorial Lawn Crematorium Proposal (PN-19-182)
Hearing Date: February 16, 2022

Dear Commissioners:

In my correspondence to you of February 7, 2022, I pointed out that an identical request for a CUP authorizing the construction and operation of a crematory at the Lakeside Cemetery was made back in 2003 and resulted in a Staff Report recommendation of denial. In brief, the Findings for Denial in support of that recommendation were as follows:

1. Lakeside is a historic cemetery and the introduction of a crematory on the site was inconsistent with such historic cemetery use;
2. Lakeside is, in fact, a conglomeration of historic cemeteries dating back to around 1850 which, when considered in conjunction with the adjacent Chung Wah Chinese Cemetery and the adjacent California State Dredger Tailings Preserve, creates a rare combination of unique cultural resources in one small area;
3. The crematory use applied for will be detrimental to the health, safety, or general welfare of the neighborhood and the surrounding City as a whole in that the introduction of such use would impact the historical character of the cemetery as well as the historical use of the area; and
4. The use of the proposed project is inconsistent with Goal 2 of the City's Historic District Design and Development Guidelines in that it did not maintain the historic use of the site and, in addition, did not further Design and Development Guideline policies 2.1, 2.2, and 2.3. Specifically, the County Historic Cemetery Commission has stated that a crematory is not a consistent use with a historic cemetery and has identified the site as locally significant and intends to present the cemetery to the Board of Supervisors for designation as a historic pioneer cemetery. Furthermore, approval of a CUP for such a contemporary use would jeopardize the eligibility status of the site and discourage, rather than encourage, national register nomination for the cemetery.

Based on the foregoing it was the opinion of this writer that the logic and reasoning employed by the City in its 2003 Staff Report would be followed by the City on this current iteration of the crematory proposal. But that trust in logic and reason proved ill-founded when the City recommended approval of a CUP for the crematory in its Staff Report released February 10. However, in doing so, the City set forth only two factors on which it relied in attempting to justify its departure from its 2003 decision on the exact same proposal. Those two factors, expressed on pages 29-30 of the Staff Report, are as follows:

1. That cremation technology "has improved significantly since 2003"; and
2. That the Sacramento County Cemetery Commission did not provide any comment regarding the current iteration of the proposal as it did in reference to the 2003 version.

In the opinion of this writer, this attempt by the City to distinguish its position on the 2003 crematory project from its current contrary position is incredibly weak and almost laughable. As to the first comment by the City (regarding cremation technology), the comment must be dismissed as irrelevant to the discussion at hand. The 2003 recommendation for denial was *not* based on the state of crematory technology (good or bad), at all, but rather on the fact that the presence of a crematory on the property was not compatible with the historical character of the cemetery.

Similarly, the second comment (regarding the lack of any expression of concern from the Sacramento County Cemetery Commission in reference to this renewed crematory effort) must be dismissed, as well. If the cemetery was deemed a historic cemetery of local significance and worthy of County designation as a historic pioneer cemetery with potential national recognition back in 2003, it certainly does so today absent some convincing evidence to the contrary. Furthermore, the conclusion expressed by the Cemetery Commission that the presence of a crematorium is not consistent with a historic cemetery remains valid, as well.

In conclusion, the reasoning behind the City's 2003 recommendation for denial of a CUP for the construction and operation of a crematorium on the grounds of the Lakeside Cemetery remain valid. The Findings expressed by the City in its 2003 Staff Report in support of that denial are compelling, have not been addressed, at all, by the City in its current Staff Report, and therefore remain conclusive on the issue at hand and mandate that this CUP request be denied.

Very truly yours,

/s/

Terry L. Sorensen

SUBJECT: Lakeside Crematorium - Comments for February 16, 2022, HDC Hearing

Dear HDC Commissioners:

This letter is to express my objection to the proposed Lakeside Crematorium Lakeside Memorial Lawn Crematorium as currently described and evaluated in the January 2022 Initial Study/Mitigated Negative Declaration (“IS/MND”); the staff report and attachments made available on February 10, 2022 (dated February 16, 2022) and included in the HDC’s February 16, 2022, meeting packet (“Staff Report”); and February 15, 2022, Topical Responses to Comments memorandum made available sometime after 4 p.m. on February 15, 2022 (“Topical Responses Memo”) for reasons including the following and as discussed in more detail in the remainder of this letter.

1. The Historic District Commission does not have authority to approve the project.
2. The proposed crematorium exhaust stack is not sufficiently described or illustrated to provide the necessary understanding of its design and appearance.
3. Design Review in compliance with the Folsom Municipal Code is required for the proposed shed modification.
4. The General Plan has no land use designation for either a cemetery or a crematorium, therefore the analysis cannot tier from the General Plan EIR.
5. The project description must identify whether the project would involve public attendance at services at the Lakeside Memorial cemetery and/or other locations within the City and, if so, define the parameters and evaluate impacts associated with such services.
6. The Staff Report and IS/MND fail to recognize the visibility of the existing shed and proposed modifications from public view locations (including Folsom Boulevard) and the impacts of such visibility on visual quality and locally designated historic resources.
7. The IS/MND does not adequately evaluate potential impacts on nesting and foraging bald eagles and other special-status bird and bat species.
8. The Staff Report’s consideration of fire risk is frighteningly dismissive and warrants a full evaluation and definitive determination by the City Fire Department and California State Parks.

1. The Historic District Commission (HCD) does not have authority to approve the project.

The City of Folsom Charter at Section 4.07, “Boards and Commissions,” establishes the City Council’s authority to create Boards and Commissions and to prescribe the powers and duties of such Boards and Commissions. However, Section 4.07 of the City Charter expressly states that “[a]ll boards and commissions only shall be advisory to the Council.” The City Charter

February 16, 2022

may be amended only by a vote of the citizens of the City of Folsom and the citizens of Folsom have not delegated approval authority to the HDC.

Neither City staff, the HDC, nor the City Council has the authority to amend or disregard this limitation on the HDC's authority. Therefore, to function within the limitations prescribed by the citizens of the City of Folsom in the City Charter, HDC decisions may not constitute final approvals. Instead, HDC decisions must be treated as advisory recommendations to the City Council for the City Council's final consideration and decision of whether to approve or otherwise take final action on a project.

2. The proposed crematorium exhaust stack is not sufficiently described or illustrated to provide the necessary understanding of its design and appearance.

Staff report Attachment 8 (meeting packet pages 62 and 63) illustrate a blurred and disproportionate black square that apparently is intended as the applicant's rendering of the proposed crematorium stack (inserted as Figure 1 below). The so-called rendering looks akin to a plastic garbage bag covering a rooftop air conditioner and is meaningless for demonstrating the actual visual appearance and height of the project exhaust stack. The applicant's rendering fails to demonstrate the actual height (which would extend to over 10 feet above the shed rooftop) and looks nothing like any of the five exhaust stacks illustrated in the representative crematorium photographs included in meeting packet pages 298 through 303. The representative photographs (discussed further below) illustrate at least five different crematorium exhaust stack designs, demonstrating the variation and diversity in design options for an exhaust stack, yet, it appears that no real effort has been made to consider and present an actual design and visual appearance of the exhaust stack that would be installed for the project. The stack's design and visual appearance is critical for the required design review and to the CEQA analysis of impacts associated with visual character, historical resources, and fire risk.

Figure 1. Applicant's Rendering of Exhaust Stack (from meeting packet pg. 62)

February 16, 2022

3. Design Review in compliance with the Folsom Municipal Code is required for the proposed shed modification.

The proposed shed modification with addition of the exhaust stack requires design review pursuant to Folsom Municipal Code (FMC) section 17.52.300, "Design Review," which requires design review for, "*B. All exterior renovations, remodeling, modification or addition to existing structures.*" FMC Section 17.52.310 provides design review application submittal (including design review application fee) requirements. The Community Development Department has erred by not identifying *design review* as a necessary entitlement and, therefore, by not requiring the project applicant to submit an application for design review. The Staff Report notes that comments on the IS/MND raised the issue of "whether a design review application is warranted" (meeting packet page 28) but the Staff Report provides no explanation of why a design review application has not yet been required for this project.

An application for design review containing the required submittals must be submitted and design review application fees paid before a decision regarding the CUP can be made. The design modification addition of a 10-foot exhaust stack above the roof of the existing shed is an integral component of the proposed use. Importantly, design review would consider whether the structure modification is consistent with Historic District design standards and guidelines or if the design of that structure requires additional modifications to comply with Historic District design standards and guidelines. The design review would necessarily consider the actual proposed design and visual character of the project exhaust stack which is currently unspecified.

As noted at item 2, above, the Staff Report (meeting packet pages 298-303) clearly demonstrates that various diverse designs for an exhaust stack are possible; but the design must be vetted through a public review and decision-making process, not ignored or addressed as an afterthought. Two examples from the Staff Report are presented in Figure 2 below and demonstrate the variation and importance of selecting an appropriate design for the exhaust stack. Without design review, the exhaust stack could be constructed with an intrusive oversized vertical pipe appearance (left photo) whereas with design review the HDC could ensure that the exhaust stack is thoughtfully designed in consideration of its context which is the very reason for design review for structure modifications in the Historic District.

Figure 2. Exhaust Stack Design Variability Examples

February 16, 2022

4. The General Plan has no land use designation for either a cemetery or a crematorium, therefore the analysis cannot tier from the General Plan EIR.

The IS/MND incorrectly states that the project would be consistent with the General Plan land use designation of Open Space. A review of the General Plan intent for the Open Space land use designation reveals that there is no basis for concluding that a crematorium is consistent with the General Plan Open Space land use designation. The General Plan mentions "cemeteries" just one time and crematoriums not at all.¹ Table LU-5 of the General Plan (page 2-7) defines the Open Space designation as, "The Open Space land use designation encompasses the preserved natural open space areas of Folsom." Throughout the General Plan, policies encourage that development incorporate areas of open space. It is unreasonable to suggest that the intent of those policies is that such open space areas could or might be used for siting a cemetery and a crematorium.²

The IS/MND's incorrect interpretation and the subsequent analysis which *tiers* from the General Plan EIR are fundamentally flawed. The IS/MND must be revised to eliminate the erroneous approach to General Plan consistency, and the impact analyses must fully evaluate the project without attempting to tier from the General Plan EIR.

Further, while FMC section 17.52.550 identifies "cemeteries" as a permitted use in the Open Space/Public primary area of the Historic District (subject to a conditional use permit when proposed by a private entity), the FMC does not extend the definition of cemetery to a crematorium. Additionally, the FMC is subordinate to, and may not conflict with, the General Plan. Therefore, attempting to expand the unspecified FMC definition of a cemetery to include a crematorium (and especially as an "accessory use" as asserted in the February 15 Topical Responses Memo; pg. 3 of 4) even further strays from the General Plan's Open Space definition and is impermissible.

5. The project description must identify whether the project would involve public attendance at services at the Lakeside Memorial cemetery and/or other locations within the City and, if so, define the parameters and evaluate impacts associated with such services.

Neither the Staff Report nor the IS/MND provide information on whether cremations (up to 4 per day and 500 per year) would or could be attended by family, friends, or other members of the public. If no such attendance will be permitted, a condition of any use permit for this project must specifically state that such attendance is prohibited and must include a mechanism to ensure the prohibition is enforced. Alternatively, if such attendance will be permitted, the IS/MND must be revised to discuss the maximum anticipated attendance at each cremation and evaluate the impacts associated with vehicle trips, noise, parking capacity, neighborhood vehicle circulation and pedestrian safety, effects on other services and activities at the cemetery, and other factors associated with public attendance.

¹ The single General Plan cemetery reference pertains to Noise Compatibility Standards (Table SN-1) which is unrelated to establishing land use designations and uses

² Example: Policy LU 3.1.1 - "Encourage mixed-use development in nodes located at major intersections that include housing, open space, and offices." The IS/MND's interpretation would suggest that the expectation of that policy is for those open space areas to be eligible for siting a crematorium.

February 16, 2022

Furthermore, neither the Staff Report nor the IS/MND discuss whether cremations at the proposed Lakeside Crematorium would result in an increase in memorial services either at Lakeside cemetery or elsewhere in Folsom. If cremations at Lakeside cemetery would result in an increase in services at other locations in Folsom (e.g., the funeral home on Scott Street), similar evaluations of potential impacts associated with vehicle trips, noise, parking capacity, neighborhood circulation and pedestrian safety and other factors associated with those services must be addressed.

6. The Staff Report and IS/MND fail to recognize the visibility of the existing shed and proposed modifications from public view locations (Folsom Boulevard) and the impacts of such visibility on visual quality and locally designated historic resources.

The IS/MND aesthetics and cultural resources analyses are fundamentally flawed by failing to recognize that the existing structure is visible from public viewpoints including Folsom Boulevard and the bluffs on the north side of Lake Natoma. Page 2 of the IS/MND incorrectly states that “[t]ailing piles between the site and Folsom Boulevard prevent the site from being visible from that street.” This is incorrect. The roof and upper portion of the structure in which the crematorium is proposed to be located and on which an exhaust stack would be installed is clearly visible from Folsom Boulevard near the intersection of Natoma Street. The February 15 Topical Responses Memo discusses that the “site of proposed modifications is already largely shielded by tailings piles and concludes that the site of proposed modifications is already largely shielded from public view due to the presence of dredge tailing piles and would remain so” and then asserts with regard to the exhaust stack that “[t]his physical improvement to an already existing metal structure would not significantly impact the visual character of the project setting” but without discussing locations from where the shed *is* visible, providing no discussion of the visual appearance of the exhaust stack or analysis of how the stack’s would visually intrude on the quality of existing views, and no basis for a concludes that the impact would not be significant.

Figure 3 on the following page is a photograph of the viewshed toward the site taken Sunday, February 6, 2022, from the south side of Folsom Boulevard just east of the Natoma Street intersection and facing northwest toward the project site. The project shed as well as a recently constructed larger shed are both clearly visible from this segment of Folsom Boulevard. Folsom Boulevard is a heavily traveled public road with and adjacent public light-rail line and bicycle path, all from which the existing structures are clearly visible and from which the crematorium exhaust stack would be visible extending 10 feet or more above the heights of the existing structures.

Between Folsom Boulevard and the structure are cobble mine tailings that are identified in the City of Folsom Cultural Resources Inventory as import local historic resources. This section of tailings is one of the most prominent locations of representative historic mine tailings visible to the largest number of viewers anywhere in the City. The impact of the project’s structural modification with the addition of the exhaust stack would be visible in public views from and near segments of Folsom Boulevard, light-rail passengers, and bicycle path users (cyclists and pedestrians) and must be identified and evaluated in terms of impacts to the quality of views of the tailings and impacts to the historic quality of the tailings viewshed. The visual intrusiveness and inconsistent character of an exhaust stack of any design would be visible to a large number of viewers and would substantially and adversely affect the quality of the viewshed, and would result in a significant projects specific impact and cumulative impact in consideration of the substantial view modification caused by the

February 16, 2022

recently constructed shed. Mitigation, including alternatives to the proposed project, must be considered for this significant impact.

Figure 3. Viewshed from Folsom Boulevard

7. The IS/MND does not adequately evaluate potential impacts on nesting and foraging bald eagles and other special-status bird and bat species.

The Staff Report, IS/MND, and Topical Responses Memo fail to provide any discussion or analysis of impacts to the annually active bald eagle nest located just 0.5 mile north of the project site and the potential effects of the project and exhaust stack on foraging behavior of the eagles or other protected bird and bat species. While the IS/MND discusses that effects of vehicles and workers at the site would not adversely affect migratory birds, the analysis does not address the potential effects on foraging activity of the furnace exhaust heat blast with an assumed exhaust gas temperature of over 1,000 degrees Fahrenheit (°F) and a gas exit velocity of 14.7 feet per second that would occur for up to 90 minutes up to four times a day. The furnace exhaust blast would have the potential to adversely affect foraging behavior and could also result in direct injury or death of individual birds, including bald eagles and other protected species.

8. The Staff Report and IS/MND's consideration of fire risk is frighteningly dismissive and warrants a full evaluation and definitive determination by the City Fire Department and California State Parks.

The Staff Report and IS/MND consideration of potential fire risk associated with the project is insufficient. The discussion of potential exposure to wildland fire risks downplays and fails to provide a meaningful analysis of the project's potential fire risk. The IS/MND discusses

February 16, 2022

that the “project site is located in an urbanized area in the City of Folsom.” In fact, the project site contains and is located immediately adjacent to substantial oak woodland areas and oak canopy adjacent to the building proposed to house an exhaust flume with an assumed exhaust gas temperature of 1,080 degrees Fahrenheit (°F) and a gas exit velocity of 14.7 feet per second.

Within and adjacent to the site are oak canopy linkages to the large oak woodland open spaces to the north, west, and south of the project. The applicant’s rendering shown above, clearly shows tree canopy near the proposed exhaust stack location. The IS/MND states that, “the project is not likely to cause any ignition, given that the crematory will not emit sparks.” This conclusion is frighteningly dismissive. Evidence providing a definitive conclusion that the crematory – a facility designed for burning and with an exhaust stack emitting temperatures of over 1,000 °F – will not create an eminent fire risk

Furthermore, the IS/MND discusses that the City Fire Department reviewed the project and did not raise any concerns regarding *water supply or site access*. This fails to address whether the Fire Department raised other concerns and even suggests some uncertainty of whether the Fire Department reviewed and considered the project at all. The Folsom Fire Department’s specific consideration of the potential fire risk associated with the project must be provided and with assurances that the Fire Department has considered *actual existing site conditions* including the large new structure blocking emergency vehicle maneuverability near the project shed that was not identified in project drawings until just a few days ago.

The proposal to install and operate a large furnace in an open space area adjacent to oak woodlands with residences beyond warrants specific review and documented feedback from the Folsom Fire Department specifically confirming that the Fire Department has carefully reviewed the project and all potential fire risk issues. Also, because the project site is immediately adjacent to lands managed by State Parks, similar definitive review and input from State Parks wildland fire experts should be documented and included in the analysis.

Thank you for considering my comments.

Sincerely,

Bob Delp

Re: HDC Staff APPROVAL recommendation to APPROVE this falsehood-laden application

Context: Neighbor took photos revealing fully the fraudulent documents filed by owners and filed by city with higher officials.

Clearly Health, Safety, and Fire Regulations mean Nothing to this city of "approve everything whether illegal & fraudulent in process."

COMMENTS in re pre-approved LPG tanks and furnace or multiple furnaces with Zero Access and Zero Water for explosions/fires.

Does our silent/ inactive City Engineer S. Krahn know the background and expertise of this Commenter?

Does S. Krahn anticipate Complaints against his License which requires him to Certify/Seal/Sign all approvals for New Projects?

Does it bother our silent engineer that there IS NOT ROAD ACCESS sufficient to handle Explosions of LPG which has huge blast range?

What does our City Engineer say about this Parcel having only a tiny 3" water supply line, with a 2" meter restriction?

As Sac Bee said on its first new style Front Page:
 "Folsom what are you thinking?"

Folsom has NO Liability Insurance, and no Oversight agency since Northern CA self-insured cities bumped city out.

What did this Igor applicant offer to the city for this PRE-Approval?

How can the private citizens on the "judgment panel" think they have no personal exposure to potential Liability issues?

City has no Liability Insurance to cover them. Why we wish to know, did the Staff in Development Pre-Approve this project?

Add to this another neighbor who is PhD in environmental issues, and clearly opposed. Add to this the city actual/current members of this alleged 2nd Plan Commission or false Zoning Appeals Board are NOT posted at city website as this is written.

We know nothing about who is doing What [in Truth/reality] and what actual Imminent Physical Dangers they pose for entire city, Federal American River and federal Forests and Natl Historic Site.

How many humans can this city's pre-approved applicants kill with impunity? How much of Federal Assets can they destroy, pollute, and harm with impunity?

I thank our neighbors for standing up against Secrecy, "scoff law" Folsom Officials, employees, and "consultants". FYI, city had a consultant file at CEQA SCH, an NOC Notice of Completion. Folsom CA never filed and Circulated properly a Notice of Intention to file Negative environmental impact Declaration.

We know what the world thinks about these behaviors, but why are those who profit so arrogant and insisting they are Above the Law.

Concerned abutting neighbor.

Our neighbor who supplied these Comments and Photos Knows the Issues & dangers. I thank him and his extended family. Our Firefighters should be thankful and proud of this wonderful new neighbor, Dave.

He's right: these pictures tell the entire filthy, dangerous, story.

This picture was taken January 13th, 2022. This is what the maintenance ground is currently. The new storage shed is in the background and the existing shed metal security fencing surrounds the grounds and has a locked security gate. Tailing Pile condition. It has been disturbed over the years.

This picture was taken January 13th, 2022. This picture illustrates the current maintenance grounds, sheds and security fencing. The metal shed on the right proposed crematory is to be installed.

This picture shows the propane tank pad right of the building under the large photograph was taken January 13th, 2022. The application site plan confirms propane pad. In addition, the site plan calls for 2 x 500 gallon tanks, not the tanks in the Negative Declaration text.

This photograph taken January 13th 2021 displays another angle of the local tanks pad. Blocked by a wooden fence, metal security fencing, a large red v metal shed.

This picture was taken on August 4th, 2021. This is Lakeside Memorial Lav Valdimir Semenyuk, driving out of the cemetery with a 250 gallon propane ta disturbing on many levels. It is my opinion that the Caring Service is very cc outcome of the Conditional Use Permit. If indeed this tank is for the Cremati arrogant for the Caring Service Group to show no discretion in their activities

Dear Commissioner,

Please **Vote NO** on a Crematorium in the Historic Folsom neighborhood. This is a historic area, around residents, beautiful trails, and a great touristic attraction due to Folsom's rich Nature. A crematorium should not be part of such beautiful scenery.

Sincerely,

Richard and Sandra Perez

Re: Lakeside Cemetery

From: Dr. Bob LaPerriere
Chair, Sacramento County Cemetery Advisory Commission

“Lakeside Memorial Lawn” has not existed since 1850, but the multiple historic cemeteries that became merged as Lakeside did. Unfortunately, much of the history related to those cemeteries and burials has been lost over the past 1 ½ centuries.

I am writing regarding the plans to build a crematorium at Lakeside Cemetery. Due to COVID our Commission has not been meeting regularly, but I am attaching comments from 2003 that have represented the feeling of the Commission that such construction would be inappropriate so closely related to multiple cemeteries of historic importance, including one of our rare remaining Chinese Cemeteries. Also attached is documentation of our designation for Lakeside as a Historic Cemetery. I am not aware of the signage with that designation, which we provided, ever being erected on the site.

Please consider our concerns about the inappropriate location for a crematory.

Thank you

Bob LaPerriere
Chair, Sacramento County Cemetery Advisory Commission

URL: <http://www.coroner.saccounty.net/sccac/Pages/default.aspx>

Historical Designation On the recommendation of the Commission, the Board of Supervisors has designated 21 cemeteries as “historic”. This is phase I of the project, as there are many other historic cemeteries in Sacramento County. Cemeteries designated were:

- | | |
|--|-------------------|
| 1.Bellview Cemetery | Sacramento County |
| 2.Union Cemetery | Sacramento County |
| 3.Lakeside Cemetery | Folsom |
| 4.Matthew Kilgore Cemetery | Rancho Cordova |
| 5.24th & Meadowview Cemetery | Sacramento City |
| 6.Chung Wah Cemetery | Folsom |
| 7.Elder Creek Cemetery | Sacramento |
| 8.Rancho Murieta Cemetery (North & South) (2) | Rancho Murieta |
| 9.Sacramento Historic City Cemetery | Sacramento City |
| 10.Michigan-Bar Cemetery (Ione Road) | Sacramento County |
| 11.Sloughouse Cemetery | Sloughouse |
| 1.Sylvan District Cemetery | Citrus Heights |
| 12.Galt /Arno District Cemeteries (2) | Galt |
| 13.Elk Grove Consumnes District Cemeteries (5) | Elk Grove |
| 14.Fair Oaks District Cemetery | Fair Oaks |

Plaques were provided for each cemetery, and we still have several to distribute. The text of the plaque is as below:

***THIS SITE HAS BEEN DESIGNATED BY
SACRAMENTO COUNTY AS A
HISTORIC CEMETERY.***

HERE REST MANY OF THE MEN, WOMEN AND CHILDREN WHO SAW THE BEAUTY
AND VALUE OF THIS LAND, CHOOSING TO SETTLE HERE
AND BUILD THE COUNTY WE CHERISH TODAY.

PLEASE HELP US PRESERVE THESE GRAVES, MARKERS,
AND LANDSCAPING FOR FUTURE GENERATIONS.

HISTORIC DISTRICT COMMISSION STAFF REPORT

PROJECT TITLE: Lakeside Cemetery Crematorium

PROPOSAL: Request for approval of a Conditional Use Permit to allow for the operation of crematorium

RECOMMENDATION: Denial

APPLICANT AND OWNER: Lorin Claney

LOCATION: 1201 Forrest Street

ASSESSOR'S PARCEL NO.: 070-0082-014, 070-0130-002, 070-0130-004

ATTACHED REFERENCE MATERIAL:

1. Vicinity Map
2. Site Plan, dated 12/19/97
3. Project Description and Crematorium Illustrations
4. Documentation from the Sacramento County Historic Cemetery Commission
5. Lakeside Cemetery Research Paper written by Sue Silver
6. Letters from the Public
7. Site Photographs

PROJECT PLANNER: Jane Talbot, Assistant Planner

BACKGROUND

The Planning Commission approved a Use Permit and Variance for Mausoleums at Lakeside Memorial Lawn in 1991 (PC91-042). An amendment to the approval was granted in 1995 (PC95-033). That approval allowed for the construction of twelve mausoleums. To date, one mausoleum has been built and one additional mausoleum is under construction. An existing maintenance building, approximately 975 square feet in area, is located along the south border of the cemetery. The front of the project site is mostly level with a slight to moderate downward slope towards the rear of the site. Lakeside Cemetery has a variety of mature deciduous and evergreen trees. The front of the cemetery, along Forrest Street, is bounded by a brick wall capped with wrought iron fencing.

**Documentation from the
Sacramento County Historic Cemetery Commission**

Sacramento County Cemetery Advisory Commission
4800 Broadway, Suite 100
Sacramento CA 95820

City of Folsom Historic District Commission
50 Natoma Street
Folsom, CA 95630

Attn: Jane Talbot

Dear Ms Talbot::

The Sacramento County Cemetery Advisory Commission is in receipt of your Notice of Public Hearing regarding PN 02-258 Conditional Use Permit and Mitigated Negative Declaration 1201 Forrest Street.

The commission is charged with the duty to encourage the preservation and designation of historical cemeteries. We are currently preparing a list of those cemeteries in Sacramento County, which should be considered historic. It is my opinion that Lakeview Cemetery will be one of the cemeteries in Sacramento County that will be on the list that is to be presented to the Board of Supervisors for designation as an historic cemetery.

While no official action has yet been taken by either The Cemetery Advisory Commission or The Board of Supervisors regarding Lakeview Cemetery we ask that you consider the above mentioned conditional use permit in the context of Lakeview's historic significance and endeavor to preserve its historic elements.

Sincerely,

James A. Purcell, Chairman
Cemetery Advisory Commission

Chair, James A. Purcell

Vice Chair, Dr. Robert La Perriere

Sacramento County Cemetery Advisory Commission
4800 Broadway, Suite 100
Sacramento CA 95820

January 2, 2003

Ms. Jane Talbot
City of Folsom Planning, Inspections and Permitting Department
50 Natoma Street
Folsom, CA 95630

Dear Ms Talbot:

The Sacramento County Board of Supervisors on June 12, 2001 approved Ordinance No. SCC-1193, which established The Sacramento County Cemetery Advisory Commission (The Commission).

The purpose of the advisory commission is:

1. To advise the Sacramento County Board of Supervisors on citizen's concerns and issues related to cemeteries;
2. To provide recommendations to preserve, protect, and maintain cemeteries;
3. To make recommendations to the Board of Supervisors regarding mechanisms for funding the preservation, protection and maintenance of cemeteries and the appropriation of funds so raised; and
4. To encourage the preservation and designation of historical cemeteries.

With regard to number 4, above, and in reference to your request for comments on the proposal for a crematorium at Lakeside Cemetery, The Commission would like to submit the following:

The area incorporating Lakeside Cemetery, the Chung Wah Historic Cemetery, and the California State Dredging Tailings Park is possibly the only site in the State of California that combines these important aspects of our heritage in one small area. Lakeside Cemetery, in fact, may be a grouping of 19th century cemeteries, which would most likely fit the criteria currently being developed to define a historic cemetery. It is the opinion of The Commission that the addition of a crematorium on that site would have a negative impact on the historical significance of the area. It is believed that a crematorium could be placed in an industrial area within Folsom to avoid the impact on the history of our countywide community.

Chair, James A. Purcell

Vice Chair, Dr. Robert La Perriere

Ms. Jane Talbot
January 2, 2003
Page 2

Area residents have notified our Commission that they oppose the placement of the crematorium on the site.

Research that has been provided to our Commission indicates that there have been instances in which monuments, and copings have been moved or destroyed, plot maps of burial locations are misplaced and that legal questions exist regarding the ownership of portions of Lakeside Cemetery. Further degradation of the historic value of the cemetery by the addition of a crematorium would only serve to lessen its cultural importance to the City of Folsom and Sacramento County.

Please contact us if we can provide any other information or support.

Sincerely,

James A. Purcell, Chairman
Sacramento County Cemetery Advisory Commission

February 15, 2002

Folsom Historical Commission

To Whom it May Concern:

Back in 2003 there was a plan to originally build a Crematorium at Lakeside Cemetery. Lakeside Cemetery is not 100 years old but was formed from smaller cemeteries dating back to the Gold Rush. As such, the current cemetery borders another cemetery occupied by the Chinese and is currently administered by the Bureau of Land Management and the Chan Trust on a previously arranged agreement. The Chinese cemetery is a registered National Landmark and another close by has potential for a National Landmark nomination. The proposal could push nomination into oblivion.

With this going on, there has been no consultation with the Bureau of Land Management and the Chan Trust on how it will affect the National Landmark nomination. Lakeside Cemetery is an amalgamation of several cemeteries, their records are rather vague, and there are issues of this proposal being built on other existing burial sites that are difficult to pinpoint. There could be a destruction of different cultural groups that are historic in nature without the Chinese community or others being able to give their input. This proposal would adversely affect the historic features and burials of the Chinese, Euro American and other interested parties that may be buried there. This could potentially be a violation of the National Historic Preservation Act, as well as the California Graves Protection Act, in which six or more burial sites is considered an official cemetery.

This late notification of this meeting has not allowed the Sacramento County Cemetery Advisory Board due diligence to respond in a timely manner to the meeting taking place on February 16, 2022. In the past we were against this same proposal taking place at this cemetery. I consider this is a historic cemetery and the records for this location are poor in nature and the possibility of disturbing the graves of the dead is highly irregular. In the past graves have been destroyed during construction phases.

Yours,

StephAnie Kadle
District 2
Sacramento County Cemetery
Advisory Commission

HELIX Topical Responses to IS/MND Comments

Memorandum

HELIX Environmental Planning, Inc.
11 Natoma Street, Suite 155
Folsom, CA 95630
916.365.8700
www.helixepi.com

Date: February 15, 2022

Project: Lakeside Memorial Lawn Crematorium

RE: Topical Responses to Comments (public review draft Initial Study/Mitigated Negative Declaration)

Aesthetics

Neither the project site nor the surrounding areas are scenic vistas due to the presence of existing nearby commercial and residential developments. Further, neither the project site, nor views to or from the project site, have been designated as important scenic resources by the City of Folsom or any other public agency. Additionally, the site of proposed modifications is already largely shielded from public view due to the presence of dredge tailing piles and would remain so. Therefore, the proposed development would not interfere with or degrade a scenic vista, and no impact would occur.

The crematory would be placed inside a metal structure that already exists on the property and is already mostly shielded from public view. The only external modifications would be the addition of two 250-gallon propane tanks on a concrete pad near the edge of the building and the addition of a small exhaust stack to the roof of the shed. This stack would be approximately 19.5 feet above grade and would project approximately 10 feet above the existing roof of the shed. This physical improvement to an already existing metal structure would not significantly impact the visual character of the project setting. An existing wooden fence would shield the propane tanks from view from the publicly used areas of the cemetery.

Air Quality

Criteria pollutant and precursor emissions for long-term operation of the proposed crematory were calculated using propane combustion emissions factors from the USEPA AP-42 Compilation of Emissions Factors Chapter 1.5, and crematory emissions factors provided by the Sacramento Metropolitan Air Quality Management District (SMAQMD), which combined USEPA AP-42 data and the USEPA Factor Information Retrieval Program.

Potential health risks to nearby sensitive receptors from the emission of toxic air contaminants (TACs) during operation of the proposed crematory were analyzed after consultation with the SMAQMD and in accordance with the Office of Environmental Health Hazard Assessment (OEHHA) *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*.

Localized concentrations of TACs were modeled using Lakes AERMOD View version 9.8.3 and the California Air Resources Board's (CARB's) Hotspots Analysis and Reporting Program (HARP), Air Dispersion Modeling and Risk Tool (ADMRT) version 19121. SMAQMD provides two sets of

Lakeside Memorial Lawn Crematorium
February 15, 2022

Page 2 of 4

meteorological data files for use with AERMOD: one for the Sacramento International Airport and one for the Sacramento Executive Airport. Data for the Executive Airport was recommended for use by SMAQMD staff (provided by Venk Reddy on 8/28/2019).

Though it is uncertain whether the exhaust stack will include a rain cover, for the purposes of dispersion modeling, assuming a rain cover is installed on the crematorium exhaust stack is the more conservative approach. The rain cover would limit the initial dispersion of the exhaust gases, thereby resulting in increased concentrations near the source. Without a rain cover, the exhaust may travel farther, but would result in decreased concentrations in any given volume of air. These decreased concentrations would result in decreased exposure and health risks.

HELIX's coordination with Sacramento Metropolitan Air Quality Management District (SMAQMD) began in August 2019 when HELIX's Senior Air Quality Specialist, Victor Ortiz, reached out to SMAQMD Air Quality Engineer, Venk Reddy, via phone. Ongoing coordination via phone and email with SMAQMD staff, including Venk Reddy, Karen Huss, Steve Mosunic, and Brian Krebs, continued through the end of October 2021. Initial coordination included discussion of SMAQMD approved methodologies, models, and emission factors for use in quantifying emissions and risks associated with crematory operations. Mr. Reddy provided Mr. Ortiz with the SMAQMD approved toxic air contaminant (TAC) emission rates and the recommended meteorological data for use in the AERMOD dispersion model. In the late spring of 2021, Mr. Reddy and his team conducted a review of HELIX'S AERMOD and HARP modeling files used in the health risk assessment (HRA). All comments made by Mr. Reddy following his review dealt with confirming manufacturer specs included in the modeling. Items specifically called out, including exhaust flow rate, physical dimensions of the equipment, and hourly burn rate, were provided by Hartwick Combustion Technologies, Inc.

The HRA examined risks to the human population as required by CEQA. Both inhalation of gaseous TACs and oral consumption of deposited TACs were examined. The exposure duration was set to 30 years beginning with infants in utero in the third trimester of pregnancy, in accordance with OEHHA guidelines. All risks were found to be below the CEQA significance thresholds.

Criteria pollutant emissions are compared to the SMAQMD thresholds of significance, which are established with the goal of helping the SMAQMD attain the ambient air quality standards. These standards are designed to protect people most sensitive to respiratory distress, such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. By resulting in emissions less than the thresholds developed to attain the standards aimed at protecting the most sensitive populations, the project's criteria pollutant emissions are not expected to result in adverse health effects on said populations.

Cultural and Tribal Cultural Resources

The presence of the nearby historic Chinese cemeteries was acknowledged in Section 5.1 of the required confidential cultural resources technical study prepared for the project, which was used to support the IS/MND. However, these cemeteries are not located within the project area. At their closest points, the Chung Wah Cemetery is located approximately 263 feet southwest of the project area, and the Young Wo Cemetery is located approximately 847 feet north of the project area. The local historical significance of the Lakeside Cemetery itself and its origins and historic use extending back to 1846 were addressed in Section 3.5.4 of the confidential cultural resources study prepared for the project.

Lakeside Memorial Lawn Crematorium
February 15, 2022

Page 3 of 4

The use of a crematorium would be exclusively within the boundaries of an existing facility in the modern portion of the cemetery. The cemetery complex in the immediate area already reflects several different religious or cultural funerary practices, including Chinese, Jewish, Masonic, Odd Fellows, and others. Introducing a crematorium is not the first time a new funerary practice was introduced to the cemetery area.

The project would not create an adverse effect on significant historical cemeteries and resources. The project area does not contain any historical graves or interments and the confidential cultural resources survey of the project area failed to identify any historic or cultural resources within its footprint. No changes to the existing adjacent or nearby cemeteries or mine tailings will occur as a result of the project. The crematorium equipment will be housed within an existing shed and there will be no visible or physical change to the surrounding area. None of the features of the historic or modern portions of the cemetery will be affected.

The visibility of the proposed stack does not have a direct effect on the historical significance of the historic cemeteries, especially as there is no visible exhaust and no deposition of cremated remains. The qualities that make the cemeteries significant are the aspects of integrity of setting, feeling, and association (according to the National Registration Form for the Chung Wah cemetery). The footprint of the proposed project is minor and would not result in an impact on the project site's integrity, setting, and feeling.

Hazards and Emergency Evacuation

The City of Folsom Fire Department provides fire protection services. There are four fire stations providing fire/rescue and emergency medical services within the City of Folsom with a fifth station planned near the eastern city limits. Station 35 is the nearest station to the project site and is located at 535 Glenn Drive, approximately 1.5 miles east of the project site. Station 36 is second nearest to the project site and is located at 9700 Oak Avenue, approximately 2.3 miles north of the project site. The project site is easily accessible to fire service personnel. Consistent with the City's Multi-Hazard Emergency Management Plan, the City of Folsom maintains pre-designated emergency evacuation routes along major streets and thoroughfares.

The project is not located in or near a State Responsibility Area or in a Very High Fire Hazard Severity Zone. Vegetation on the property is irrigated and includes maintained lawns and well-spaced trees with a generally open canopy and limbs pruned near ground level. Furthermore, the project is subject to standard structural separation requirements from the Fire Department with regards to the crematorium's distance to the propane tanks and potentially flammable material.

Land Use and Planning

Cemeteries are a permitted use within the OS/P Primary Area upon approval of a Conditional Use Permit (CUP) per Section 17.52.550 of the FMC. The subject cemetery has been in operation since the 1800's and pre-dates the requirement for a CUP. The cemetery did receive a CUP for operation of a mausoleum in 1995. The proposed crematorium would be operating as an accessory use to the existing cemetery, not as a stand-alone business.

In this case, the cemetery is the primary or principal use and the applicant is proposing a crematorium as an accessory use to the existing cemetery. As proposed, the crematorium would be subordinate in area, extent, and purpose to that of the existing cemetery. It would provide a service related to and

Lakeside Memorial Lawn Crematorium
February 15, 2022

Page 4 of 4

supportive of the service already provided by the cemetery and mausoleum. It would be located on the same lot and in the same zoning district as the principal use. It would be owned and operated by the same people who own and operate the existing cemetery and mausoleum. As such, a crematory can be considered as an accessory use subject to a CUP.

29. Jennifer Lane addressed the Historic District Commission in opposition to the proposed project.
30. June Chan addressed the Historic District Commission in opposition to the proposed project.
31. Charles Noble addressed the Historic District Commission in opposition to the proposed project.
32. Daron Bracht addressed the Historic District Commission commending Commissioners and City Staff.
33. Steve Walsh addressed the Historic District Commission in opposition to the proposed project.
34. Brian Pacciotti addressed the Historic District Commission in opposition to the proposed project.
35. Jill Hamer addressed the Historic District Commission in opposition to the proposed project.
36. Pat Binley addressed the Historic District Commission in opposition to the proposed project.

COMMISSIONER RAITHEL MOVED TO ADOPT THE MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM FOR THE LAKESIDE MEMORIAL LAWN CREMATORIUM, PER ATTACHMENT 11; AND MOVED TO APPROVE THE CONDITIONAL USE PERMIT (PN 19-182) FOR OPERATION OF A CREMATORIUM WITHIN AN EXISTING 1,071-SQUARE FOOT METAL STRUCTURE LOCATED AT 1201 FORREST STREET, WITHIN THE LAKESIDE MEMORIAL LAWN CEMETARY AS ILLUSTRATED IN ATTACHMENTS 5 AND 6, WITH THE FINDINGS (A-K) AND CONDITIONS (NOS. 1-30)

COMMISSIONER ANKHELYI SECONDED THE MOTION.

COMMISSIONER LANE RECOMMENDED A FRIENDLY AMENDMENT TO INCLUDE THE FOLLOWING CONDITION UNDER "MISCELLANEOUS CONDITIONS":

"31. A Davis Instruments Vantage Vue, Vantage Pro2 or similar weather station shall be installed on the shed on which the crematory machine is proposed prior to installation of the crematorium to the satisfaction of the Community Development Department."

COMMISSIONER WEST RECOMMENDED A FRIENDLY AMENDMENT TO INCLUDE THE FOLLOWING CONDITION UNDER "MISCELLANEOUS CONDITIONS":

"32. The proposed stack shall be subject to Design Review approval subsequent to obtaining a permit from the Sacramento Metropolitan Air Quality Management District (SMAQMD)."

COMMISSIONER RAITHEL AND COMMISSIONER ANKHELYI ACCEPTED THE FRIENDLY AMENDMENTS TO THE MOTION, WHICH LEAD TO THE FOLLOWING VOTE:

AYES: RAITHEL
NOES: DASCALLOS, WEST, LANE, ANKHELYI, FELTS, COLE
RECUSED: NONE
ABSENT: NONE

MOTION FAILED.

COMMISSIONER WEST MOVED TO DENY THE PROJECT WITH THE FOLLOWING FINDING:

"The use applied for is detrimental to the health, safety, or general welfare of persons residing or working in the neighborhood, detrimental or injurious to property and improvements in the neighborhood and the general welfare of the City because introduction of this use will impact the historical character of the existing cemetery and historical use of the area."

COMMISSIONER LANE SECONDED THE MOTION WHICH CARRIED THE FOLLOWING VOTE:

AYES: DASCALLOS, WEST, LANE, ANKHELYI, FELTS, COLE
NOES: RAITHEL
RECUSED: NONE
ABSENT: NONE

MOTION PASSED.

PRINCIPAL PLANNER REPORT

The next Historic District Commission meeting is tentatively scheduled for March 16, 2022.

RESPECTFULLY SUBMITTED,

Kelly Mullett, ADMINISTRATIVE ASSISTANT

APPROVED:

Kathy Cole, CHAIR

City Council Members,

We, Adam and Katie Musfelt, are unable to attend the Lakeside Memorial Lawn Crematorium meeting on April 12, 2022. We would like to go on the record and say that we strongly oppose the building of this crematorium.

Our quality of life will have a significant negative impact if this crematorium is allowed to be built; families and businesses will suffer repercussions for years to come. Please consider the future of this neighborhood by preserving the historical and cultural integrity of it and voting no on the crematorium.

Thank you,

Adam and Katie Musfelt

Subject: Proposed Crematorium at Lakeside Cemetery

You don't often get email from [REDACTED] [Learn why this is important](#)

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Elaine Anderson,

I, together with my neighbors at Lake Natoma Shores, a community next to the Lakeside Memorial Lawn Cemetery am asking you to halt the proposed construction of a crematorium there. The crematorium will be located adjacent to a residential neighborhood, the Historic District, and the American River Parkway. This area resides near many outdoor activities promoted by our city as family-friendly, safe, and “distinctive by nature”. It entails a farmers market, outdoor concerts; city-sponsored festivals, and sits adjacent to the American River Parkway that is actively used by many walkers, runners, and bicyclists daily. The Parkway serves as a window to the natural world, for all those that live and visit Folsom.

In researching the toxicity impacts of a crematorium I went to the National Collaborating Center for Environmental Health and found the following information, as per an article written in the [US National Library of Medicine](#):

“Cremation is a combustion process whereby a casket and human remains are incinerated at a high temperature in a closed chamber. The process of corpse cremation generates numerous harmful air pollutants, including particulate matter, sulfur dioxide, nitrogen oxides, volatile organic compounds, and heavy metals. These pollutants are carcinogenic and could have **severe effects** on human health and the surrounding environment.” (*)

It is of great concern to me that scientific papers have been written proving that the emissions from crematorium incineration are toxic. And that the level of toxicity is a danger to people’s health and well-being, has destroyed surrounding watersheds & water quality, and is of great harm to the natural environment. So improvements in the burner’s design do not mitigate the fact that it does emit pollutants, and if installed, will negatively impact this area for generations.

The proposed crematorium owners may see a viable commercial need for such an operation, but I portend, it is not in the Historic District, adjacent to a residential neighborhood and a State Parkway. It is best suited for a heavy industrial park where the zoning and utility systems can better accommodate any toxic air emissions, toxic water runoff, and any potential fire danger that may transpire by such an operation.

Please consider our concerns and let that serve as your guide forward.

Sincerely,

Bert Pittari,
Resident Lake Natoma Shores

Patricia Zuccaro

Hello,

My name is Breanne Higgins and I am opposing the proposal for The Lakeside Memorial Lawn Crematorium. I am a resident of the Preserves Neighborhood and have many family members and friends within this small community. So this is very important to me. I am opposing it for many reasons: quality of life, cultural insensitivities, and not belonging in a historical district.

This has already affected my quality of life and consumed my time. It has been difficult, as many of us have careers, young children and households to maintain. I have a 21 month old and am 36 weeks pregnant. I should be looking up baby names, but instead I find myself researching crematoriums and city council meeting dates. Our neighborhood is a tight knit community with many young children. Should our kids have to see white puffs of smoke and know that a body is burning in a storage shed. At the age of 7 should you really know what a crematorium is? Is that age appropriate?

There is a big difference between living near a cemetery and living next to a crematorium. Being next to a cemetery is peaceful, somewhere you show respect, it's quiet and green. It's wonderful to see family's come to visit buried loved ones. A crematorium is loud with the noise of propane tanks being transported in and out. The sight of smoke indication a body being burned. Although the propane tank is "not anticipated" to be seen, there is no guarantee. As a neighbor I don't want to hear this, see this or smell this. Do you think someone visiting a deceased loved one at the cemetery does? Can YOU gaurtenee me that there won't be any smell? Can Igor gaurtenee this, would he put it in writing?

My husband, Kyal Vongunten spoke during the Historical Commissioners meeting suggesting the environmentally friendly aquamation instead of cremation. We are offering different alternatives and locations to his crematorium. It just doesn't belong in a neighborhood, especially one within a historical district.

The crematorium hasn't even been out in yet and it is distributing our lives. If this is approved, I can guarantee once I smell the scent of burning bodies, I will call and report it. Every time. In the Historic District meeting, it was reported that residents living next to crematoriums did call to report "smells." Nothing is guaranteed about not having a smell associated with the burning of a body. Another resident of the Preserves neighborhood, Sean Gates, mentioned during the Historic District meeting that we can smell the Kikkoman's food plant on certain days. This is true. The Kikkoman's Food, Inc. building is less than 1 mile away from my house. One can only assume, with the right wind, that the smell of burning bodies from the proposed crematorium would be present at not only my house, but on Sutter Street, which is

within a mile radius of the proposed crematory. Do we really want our visitors who are enjoying the business on Sutter Street saying "What is that smell?"

The Chung Wah Cemetery, is listed on the National Register of Historic Places and is in the center of our neighborhood. The Chung Wah cemetery is less than a .2 miles away from the proposed crematorium. As a historic/sacred site, it should be preserved and protected. Recently, The Murer House was also listed as a National Register of Historic Places. We as a city should respect and protect these unique additions to our neighborhood.

I have thought about the pros of putting this crematorium in our neighborhood. It is really just convenient for Igor. If Folsom needs a crematorium, place it in a properly zoned area. Not in open space within a historical district. Do we really bend for one person? What does the city get out of placing a crematorium in a historic district within a residential area so close to Sutter Street? Sure, there are other crematoriums in residential areas, but are they in a historical district? No, they are not. Why? Because they don't belong there. It's not appropriate.

Please vote NO to the proposed crematorium being placed in the preserves neighborhood. Protect our historic district.

Thank you for your time,

Breanne Higgins

March 22, 2022

To Whom it May Concern,

I live with the Preserve neighborhood, and I recently learned from my neighbors that the Lakeside Memorial Lawn (owned by the Caring Service Group) has applied for a conditional use permit to install a crematory on the grounds.

I live at 1357 Young Wo Circle. The region where the crematory will sit (currently a shed) is within about 400-500 feet from our home. My wife Dawn, and our twelve-year-old son Austin, have lived here for 12 years—we enjoy the lake, our wonderful neighbors, and the Folsom historical areas nearby. The Chinese cemetery in our neighborhood is an awesome tribute to the past Chinese immigrants. Unsurprisingly, we prefer our current situation, and we prefer to not smell or breath the output from the crematorium. Although our personal situation is obviously import to our family (me), the message of this letter concerns the greater public good of conserving history and ecological landscapes (us).

I understand the societal need for crematoriums—we need them. However, it makes more sense as a community to keep industrial operations separate from neighborhoods, historical regions, and precious ecological reserves. There are societies that have chosen a hands-off approach to regulation. In one large US city, I recall seeing a brothel, chemical plant, churches, and residences all in the same neighborhood. Folsom is not like this at all—we have a planned community that includes some of the best parks, bike paths, historical districts, and neighborhoods in the country. Thus, people move to Folsom and will continue to move here in the future due to our desirable planned community.

Yet what will residents think if they internalize the brand of “distinctive by nature”, come to enjoy our historical district, and then learn that the city allowed an unattractive industrial process to occur directly in the heart of the most precious area of the city?

I strongly believe that the Folsom Historical District and others need to work together to ensure that our city follows its brand—we are distinctive by nature. Moreover, we are distinctive by our historical treasures. Let us work together to live our distinctive and precious brand.

Best,

Brian Paciotti

Folsom City Council Members

Re: Lakeside Crematorium

As you are aware, The Proposed Lakeside Crematorium is being appealed by the applicant. You are also aware that this is a sensitive issue for the Historic District, especially the Preserve/Natoma Shores Neighborhood.

The Preserve Neighborhood is a community bound together by strong relationships and common interests. This proposed crematorium has in the last year and a half put our small community on edge and diminished our quality of life.

If you haven't been in the neighborhood for awhile I suggest you come and visit. Walk around and reacquaint yourself with the Lakeside Cemetery, Chung Wah Cemetery, Young Wo cemetery, Dredger Diggings Preserve, Veterans Hall, Murer House, Lake Natomas, the bald eagles, our small park and of course, the Residents.

I am available anytime to act as your tour guide if you so choose. I am acutely aware of the Brown Act and will not put you in a compromising position. Email, text, phone or just come by and ring the bell.

Thanks for your time

Dave Higgins

March 24, 2022

Extension of Appeal Hearing for Lakeside Memorial Cemetery.

Ms. Anderson,

I was recently made aware of the rescheduling of the appeal hearing for the proposed Lakeside Memorial crematorium. It is my understanding you granted the rescheduling to April 26, 2022. This is in violation of FMC 17.52.710 titled Appeal Hearings.

According to FMC 17.52.710, this appeal hearing needs to be heard on April 12, 2022.

On February 22, 2022 the applicant, Igor Semenyuk submitted a handwritten request for appeal well within the 10 day appeal period. After the 10 day appeal period Igor Sementyuk was allowed to resubmit a more detailed application for appeal. This too is a violation of the appeal process.

The ignoring of Codes and Ordinances and Procedures is disturbing. The special treatment Igor Semenyuk and the Miller Funeral home is receiving is blatant.

Please rescind the rescheduling and reset the Hearing to April 12, 2022.

David Higgins

To whom it may concern with the City of Folsom leadership,

The Lakeside Memorial Lawn crematorium proposal is deeply troubling to me and my family. The Caring Service Group is not a small business and states outright on their website that they're in the business of buying up and aggregating small funeral home businesses. This model further distances the business from its community's concerns and it shows with the "Initial Study/Mitigated Negative Declaration" dated April 2021.

The TAC (Toxic Air Contaminants) assessment in Appendix B of the "Lakeside Memorial Lawn Crematorium Initial Study/Mitigated Negative Declaration" dated April 2021 is flawed and irresponsible. Most specifically in terms of the evaluation of the impact to "Sensitive Receptors". The report by Helix Environmental Planning notes the fact that the adjacent residential houses are as close as 450 feet which is not that far! That's about the width of 5 or 6 lots in our neighborhood. 5 houses down the street. The report makes it sound like the combustion stack is remotely located away from our neighborhood which couldn't be farther from the truth. I walk the neighborhood regularly with my 1 and 3 year old children and it's a short walk from the closest house to the proposed site which is where my son likes to occasionally ride his balance bike. The Historic District Historical Society write-up of the cemetery (<https://www.folsomhistoricalsociety.org/post/lakeside-cemetery>) concludes with "The next time you are in town I highly suggest you take a visit to the cemetery; the older burial sites are beautiful, and its quiet location makes a perfect Fall afternoon walk." This will certainly change when there are constant emissions adjacent to the cemetery and increased vehicular activity carting the deceased to and from the crematorium "shed".

The report also neglects to recognize the American River Bike Trail that is adjacent to the proposed site where numerous people of all ages including sensitive groups, i.e. elderly and families with young children religiously use the trail. The proposed industrial process does not fit within the open space plan of the adjacent area which should not be used for a pollution buffer zone, it's a recreation area. While using the trail, the folks that are exercising are going to be subject to toxic emissions while breathing heavily which is an even more sensitive time to be outside which is why the Air Quality Board recommends restricted exertion levels of people depending on levels of air quality, especially sensitive groups.

The assumption that the meteorological data used from the Sacramento Executive Airport station, almost 20 miles away, which regularly gets the delta breeze where the planned site does not, appears to be laughably unethical. The canyon near the proposed site has significantly different geography and often has stagnated air that collects along the river trail which can be confirmed when exercising along the trail in the summer and winter months where the air is perfectly still and the combustion gas from leaf blowers from the adjacent business parking lots simply stagnates right on the trail. In addition to the overuse of leaf blowers, the trail users will now get to look forward to breathing in toxic hydrocarbon and heavy metal combustion products combined with new unpleasant smells. The near-zero initial vertical gas velocity assumption of the stack configuration in the source parameters paragraph will only exacerbate the emissions settling issue on the trail and adjacent neighborhood. The 500 meter radius geography sample used in the analysis is not enough to capture the adjacent yet substantial cliffs in the region and could be interpreted to be an attempt to replicate geography near the airport which would also be unethical in terms of being non-representative.

For a city that wants to define itself as distinctive by nature, this is a far cry from the current mission statement. The benefits to the community are substantially outweighed by the safety risk and miss-use of the planned site.

It's been noted by the Folsom Historic Commission that nearby crematoriums exist and they have been shown to have issues from time to time as shown by the historic commissions own research. Equipment breaks down and we don't want to be subject to issues when they inevitably rise. I ask why would the commission assume this project would be any different?

The first time a request for a Crematorium came up many years ago, the Historic District did not believe the historic site was appropriate for this kind of activity and nothing has changed except for the aggressiveness of the applicant.

This project was chosen to evaluate the CUP based on essentially the general welfare of the neighborhood or city but the charter of the commission is first and foremost to protect the historic and cultural character of the city's Historic District. This is a distinct industrialization of the area which will degrade the character of the district.

It already appears that the applicant has created the pad for the propane tanks as if this has already been approved. The application is based on equipment in a metal shed but it has been communicated by the applicant at the last public comment session with the Historic District Commission that the intent is actually to improve the structure as well for inevitable viewings. It appears that wool is being pulled over the eyes of the approving boards and this is not the end of the development.

The fencing has been improved and gates have been constructed in preparation for installation. There is now a fence that has been improved that further restricts access to the Chung Wah historical cemetery. It would seem logical that the commissions' energy would be better spent enhancing access to Chung Wah and Showing a better connection with our past rather than allowing further restricting of access for an industrial process.

The crematorium will only increase the toxins that already surround us, we don't need more. The world needs less CO2 emissions and with low to zero emissions technology available, this project doesn't make sense for the community. This is further industrialization of a quaint location. This will not be limited cremations in a shed.

The project site is currently within the Open Space/Public Primary Area of the Historic District (OS/P), with an underlying zoning of Open Space and Conservation (OSC). Does adding industrial equipment, of which is an air emitter, to the area continue to comply with the idea of open space and conservation?

I encourage the commissioners of the board to reconsider and follow the precedent of the previous rejection of the same proposal. Do you care if you get cremated right here in Folsom or not? There are several local crematoriums to

choose from and the carbon footprint to get there is in the noise so there is no environmental benefit of having one in the requested location.

The Historic Commission evaluation criteria was as follows: " The establishment, maintenance, or operation of the use or building applied for will or will not, under the circumstances of the particular case, be detrimental to the health, safety, peace, morals, comfort, and general welfare of persons residing or working in the neighborhood of such proposed use, or be detrimental or injurious to property and improvements in the neighborhood, or to the general welfare of the City"

- The peace and comfort of the neighborhood will be violated with inevitable smell especially when equipment breaks down.
- The industrialization of the site will be injurious to the properties cultural/historical significance going back to the violation of the Chung Wah cemetery in the first place - time to stop that cycle
- The need to disclose the industrial site near a residential neighborhood will undoubtedly hurt property values thus be injurious to property and the neighborhood.

I strongly encourage the Folsom City Leadership to reevaluate the applicant's intentions to monetize a currently quaint property with a toxic industrial process directly adjacent to a family oriented neighborhood and world class nature trail.

Sincerely,

Isaac Monical

Toxic Air Contaminants (TAC's)

Attached is an excellent article concerning the toxicity associated with cremations. During the Historic District Commission hearing comments were made concerning the Helix Report and Air Quality District standards for emissions resulting in a less than significant impact. The findings were accepted as they should be. The issue of Toxic Air Contaminants (TAC) in the IS/MND was covered by Josh Kinkade in his presentation. However, I believe the topic was dismissed. The TAC's metals and inorganics listed in the IS/MND;

Metals, (mercury, arsenic,beryllium, cadmium, chromium, copper, hydrogen fluoride, lead,nickel' selenium)

VOC's(benzene, toluene, xylenes, vinyl chlorides).

Aldehydes,

Polyaromatic Hydrocarbons, (PAHS)

Polychlorinated Dibenzodioxins

Polychlorinated Dibenzofurans

These TAC's are not a Air Quality Board concern. These TAC's fall under the EPA. The Sac County Air Board's mission is carbon monoxide, nitrogen dioxide, lead, sulfur dioxide, sulfates, hydrogen sulfide, and visibility reducing particle emissions. The IS/MND defined mercury in a generic form, naturally occurring. The IS/MND does not discuss vaporized mercury. Mercury when vaporized becomes a deadly concern along with the other TAC's listed and should not be released in a residential neighborhood. This health risk is unexceptable.

Please read this document.

Thank You

JOHN MUIR GREEN BURIAL SANCTUARY

a beautiful green burial in a spectacular location

WHY CREMATION IS NOT A GREEN CHOICE

10 Green Reasons To Avoid the Toxicity of Cremation

1. **Mercury Vapors.** This is the #1 lethal toxin in crematory vapors. Currently, no crematories have adequate filters for mercury or the many other heavy metals, plastics, and dioxins that are emitted in the vaporization of a body. Most mercury vapors are due to the mercury-silver dental fillings (eight on average in each body) that are liquified and vaporized into the air from each cremation. With over a million bodies cremated each year, that's a lot of toxic mercury in the air that we breathe.
2. **Alzheimer's Disease (#3 cause of death in the U.S.)** and other neurological diseases such as **MS, ALS, Parkinson's Disease, Depression**, etc are caused largely by mercury build-up in the body over 20-40 years. Unlike cyanide poison which has an immediate effect, mercury has a long half-life in the brain. Mercury

contamination is due to mercury dental fillings, coal mining, and... you guessed it, cremation vapors. The United Nations 2019 estimates show that 680,000 pounds of mercury is emitted from dental amalgams into the wastewater and air annually.

Even if all mercury fillings were removed prior to cremation, most human bodies, including children's, have unsafe levels of mercury in the liver and other organs. According to science, no amount of mercury is considered safe in any amount or form. With the rise of cremation in America we have seen an epidemic in neurological illnesses. (Watch the Youtube video "Evidence of Harm" by Dr. Boyd Haley, who originated the chelation medication Emeramide to pull mercury safely out of the body of those suffering from neurological diseases.)

3. **Climate Change:** Cremation is a huge climate change contributor: each cremation uses about 28 gallons of fuel and releases about 540 lbs. of carbon dioxide into the atmosphere. Estimates from the UK say their cremations contribute about 16% of total climate emissions. There are no statistics by the EPA, though 70% of westerners unknowingly choose cremation, mis-informed by the industry to believe it is "green" because of decreased land use. About 1.7 Billion pounds of CO² are emitted every year in the US alone from about a million cremated bodies. Planting thousands of Legacy Trees at the site of a plot helps to reduce our carbon footprint and sequester carbon dioxide from the atmosphere back into the earth.
4. **Mercury contamination of our global environment.** Mercury is known to travel long distances, and biologists are finding mercury in alarming levels in far-reaching places around the planet. Polar bears in the arctic now have peak bioaccumulation of mercury. Mountain lions and deer are drinking mercury-contaminated fog droplets, and showing high levels in their fatty tissues in coastal areas of California, and mammals in the eastern U.S. and Europe also have high levels in their blood and fur.
5. **Industry diseases related to mercury use** - Crematory workers, biologists and other handlers of mercury tainted mammals, dental workers, mortuary and morgue workers are all showing evidence of chronic illness from mercury vapors

that are rising in air pollution, through skin absorption, in office vapors and within the air surrounding the site of mercury contamination. They suffer from higher rates of neurological disease as well as rates of acute and chronic respiratory disease.

6. A positive reason to choose an alternative like Green Burial is **Restoration of the Earth's Soil**. Giving your body back to the earth after a lifetime of food, water, sustenance and enjoyment of nature's bounty helps restore the rich agricultural biome that America has enjoyed over three centuries. Scientists predict that the topsoil across the U.S. will be depleted by 2060 at the rate we continue to use it. Even though bodies contain contaminants, experts maintain that mercury and other heavy metals will trickle down into the soil to form deep mines from where they originated. The safest place for mercury is actually back into the soil to be returned deep into the earth.
7. **Your Wallet** – Green burial has the least cost of all funeral choices at **\$1k to \$3k on average**, compared with cremation costs of \$6,000 and conventional cemetery costs of \$7,000 to \$20,000 or more.
8. **Conservation and Restoration of Nature – A legal and beautiful sense of place** for your body to be held in a natural reserve that your descendants can visit. Location of your plot is through GPS, and Conservation certified cemeteries have a long-term easement for nature to return to its beautiful state. Planting a Legacy tree or other native tree of your choice can help restore native forests to be enjoyed by many future generations. Conservation burial meadows can help restore pollinator meadows, wildflower meadows, and habitat and food for a wide variety of wildlife. Many certified green burials are open to the public on weekends for quiet enjoyment of the natural surroundings and a new appreciation of cemetery use. Since there is no use of pesticides, herbicides like RoundUp, or embalming fluids, the local watershed is free of toxin runoff as found in conventional cemeteries. No concrete or steel vaults are used for the sole purpose of lawn care as in conventional cemeteries. Saving these resources could

assist with rebuilding failing infrastructures across the U.S.

9. **The only non-toxic, truly green choice in deathcare** is green burial. So-called “alternatives” of Alkaline Hydrolysis (“water cremation”), Human Composting, and Conventional Cremation all are extremely polluting in their lack of responsible mercury handling, hazardous waste disposal, and housing of hazardous waste sites in residential neighborhoods and industrial sites. These expose the public to dangerous availability of mercury in the form of vapor, contaminated wastewater, and natural disaster unpreparedness in the event of wildfire, earthquake, or other environmental disasters.

10. **Taking time for natural grief, enjoyment of a beautiful funeral in nature.** Most green cemeteries don't put a limit on how long you and your family can take alongside a green grave-side burial. Memorial Halls with spectacular views of nature can remind us of its eternal aspect and the natural cycle of life and death.

As John Muir wrote in 1869, in “My First Summer in the Sierras”, “Another glorious Sierra day in which one seems to be dissolved and absorbed and sent pulsing onward we know not where. Life seems neither long nor short, and we take no more heed to save time or make haste than do the trees and stars. This is true freedom, a good practical sort of immortality... One is constantly reminded of the infinite lavishness and fertility of Nature ... no particle of her material is wasted or worn out. It is eternally flowing from use to use, beauty to yet higher beauty; and we soon cease to lament waste and death, and rather rejoice and exult in the imperishable, unspendable wealth of the universe...[We] faithfully watch and wait the reappearance of everything that melts and fades and dies about us, feeling sure that its next appearance will be better and more beautiful than the last.”

Additional statistics relating to cremation pollution:

- The Environmental Protection Agency estimates crematoriums emit 320 pounds of mercury per year, while activists say the real figure could be as high as three tons in 2007. A review of a study done by the EPA that estimated emissions from dental amalgam has since been underestimated. The United Nations Environmental Programme current (2019) accounts

indicate that 340 tons (680,000 pounds) of mercury is discharged into the environment from dental amalgam, 100 tons of which enters the waste stream. From cremation, tooth loss, human waste and infectious waste are released significant releases, and it was determined that cremation is the most critical because of the invisibility of vapors into the air without adequate or appropriate filters.

- Mercury in dental amalgams has been banned in Denmark, Norway and Sweden. However it is estimated by the EU EPA that 1,500 tonnes (200,000 pounds) of mercury is held in human bodies and will be released in cremation, with 75% of 500 million EU residents having had mercury fillings in their older generations, 1,500 tons (3 million pounds) total mercury in their bodies to become cremated. [Http://www.eea.europa.eu/publications](http://www.eea.europa.eu/publications)
- Overall the US has a 51% cremation rate, while Oregon and Washington have 70% rates mostly due to the myth in advertising that cremation saves on cemetery land use and is therefore “green”. However, Neptune Society, the largest funeral monopoly in the US, will not comment about high fossil fuel use or about mercury vapor emissions, claiming instead that cremation is “green”.
- 340 tons of dental mercury in the world is dumped directly into waste water systems, 34 tons at minimum in the U.S. In 2008, the average European held 2-5 grams of mercury in their bodies, while the allowable amounts are zero grams.
- For an excellent discussion of the link between mercury vapors in the environment and the link with Alzheimer’s Disease (the 3rd largest cause of death in the US), watch the documentary “Evidence of Harm” a youtube video by AD researcher Dr Boyd Haley, PhD. <https://www.youtube.com/watch?v=Wqb4fDSODiQ> and <http://Evidence-of-Harm.com>

This is a documentation of Dr Haley’s 26 year NIH career linking mercury toxicity with Lewy bodies in Alzheimer’s Disease and other neurological diseases.

It is commonly thought that cremation is more environmentally-friendly because it seems to simplify the funeral/burial process and minimizes land use for cemeteries and their inherent pollutants. However, research shows the facts which reveal disturbing problems for the environment. In our research into the effects of cremation on the environment, **there was a strange lack of studies, particularly by the EPA and U.S. government.**

"In 2012, the EPA Crematorium Working Group reported that crematoria are significant sources of mercury, dioxin, and particulate matter. Incineration of bodies, body parts, and infectious and chemotherapeutic wastes collectively represent the second largest known source of dioxin and mercury pollution in the US. The World Health Organization, the US EPA and other public health experts consider any level, no matter how low, of emissions of mercury, dioxins, furans, and particulate matter from incineration to be a threat to human health. Vulnerable populations such as babies, children, women of childbearing age, and the elderly are particularly at risk from exposure to these toxins. Employees who work in these environments, as well as those populations who live near the source are exposed to higher levels of these pollutants. The effects of mercury vapor exposure can last long after the exposure has ended. While typical symptoms and signs, such as tremors, gingivitis and salivation may quickly disappear after exposure has stopped, mechanisms of long-lasting or remote effects have not been investigated. This is possibly due to the damage caused by mercury vapor exposure remaining for a long period of time, or by mercury remaining in the body and continuing to cause adverse effects, or to the prior exposure somehow stimulating aging, resulting in poorer neurobehavioral performance.

The final report of the Senate Crematoria Study Committee was prepared in 2012. This report noted that while there are emissions of other chemicals during the cremation process, mercury is of the most concern to communities near crematoriums. When mercury is burned, it becomes a colorless and odorless gas that can travel long distances. While mercury exposure has the potential to cause a variety of health problems, the brain and kidneys are especially vulnerable. According to Dr. Anne Summers of the University of Georgia, there is no known lower level for toxicity of mercury, and scientists clearly agree that mercury

toxicity can have serious consequences on human health.” (from *Mercury Contamination from Dental Amalgam*, 2019)

Amy Cunningham, a “green” funeral director of Fitting Tribute Funeral Services (and Crematory) in the Greater New York City area writes in her well-known blog:

“Cremation takes up less land and might save some money, but here’s the downside with some crematories: it takes a lot of fossil fuel to heat that retort (or cremation chamber) to 1800 degrees F and keep it heated for two to three hours... Then perhaps, if you are not satisfied with the answers you’re getting and your family is open to changing plans quite dramatically, consider the love of my life (sorry Steve)–Green Burial. Pine box. Or simple shroud. Drive out of the city and convene in a green cemetery. Let your loved one descend into the soil naturally–without chemicals or vaults or barriers to Mother Nature.”

More studies and research have been done in Europe in recent decades as the rate of cremation has increased slowly over the last century. Several articles reveal periodic surveys of literature over twenty years that showed a largely unregulated industry by the US Environmental Protection Agency. At the grassroots level, citizens in both Canada and in over 35 U.S. states have set up blocks and ordinances, built a library of research for other states to refer to and assisted in local initiatives to deconstruct or prevent the further building of crematories.

Several studies in the last two decades have shown a correlation between local crematories and stillbirth, anencephaly, and increasingly widespread air pollution containing toxic gases. Finally, a visit to the Crematorium will show you that both the time a family can say goodbye to their loved one’s body and naturally move through the letting-go process is very minimized and tends to make the grief process interrupted.

Cremation involves a box or casket containing the body to be placed in a steel incinerator and heated to temperatures from 7600 to 21000 F. At the highest temperature, most of the body is vaporized and oxidized as water within about

two hours. However, gases released are then temporarily held in a second metal chamber or “filter” and then released to the outside air through an exhaust system.

It is commonly thought that crematories have “filters” –adjacent storage tanks that are supposed to catch and “hold” toxins such as mercury. The EPA's answer to this has been to add a second “chimney” in effort to somehow “catch” some of the toxic vapors.

“Gaseous emissions are by far the greatest source of cremation pollution and thus far the only crematorium waste that is regulated. In addition to harmless compounds such as water vapor, emissions include:

- the greenhouse gas carbon dioxide
- extremely toxic mercury vapors
- toxins and carcinogens of carbon monoxide, nitrogen oxide, and sulfur oxide;
- volatile acids such as hydrogen chloride and hydrogen fluoride, both of which form during vaporization of plastics and insulation
- compounds such as benzenes, furans and acetone are also emitted and react with HCl and HF under combustion conditions to form polychlorinated dibenzodioxins (PCDDs) and polychlorinated dibenzofurans (PCDFs), both of which cause cancer.

“These and mercury are of special concern because they are susceptible to bioaccumulation.”

An estimated one-third of all air-borne mercury pollution is due to the cremation of bodies containing mercury from dental amalgams in the deceased person's mouth. In a “Summary of References on Mercury Emissions from Crematoria, September 25, 2012”, Jon Reindl, P.E. investigated studies in both the U.S. and Europe for three aspects of cremation: mercury emissions, deposits in filters and chimneys, and mercury found in cremains (cremation ash):

“Crematoria represent a significant source of mercury emissions to the

environment. While estimates of the quantities vary significantly, it appears that each cremation releases between 2 and 4 grams, with the maximum seen by this reviewer at 8.6 grams in an individual cremation in Switzerland. There has been an increase in the number of cremations annually and forecasts include both a further increase in the number of cremations over time and an increase in the amount of mercury released in the next few decades due to an increase in the number of the deceased having a larger number of their own teeth with amalgam restorations. This increase is expected to be followed by a decrease in mercury emissions from industrialized countries as the next generation of people has both fewer cavities and an increased substitution of amalgam restorations with restorations that do not use mercury.”

“In the US, a mercury flow worksheet developed for Region V of the EPA estimates that in 2005, just under 3,000 kilograms of mercury were released to the environment from cremation to the US. Bender estimates that this will increase to 7,700 kilograms by 2020.”

“Most of the mercury from crematoria is released into the air, although some may collect on the walls of the oven and chimney. Soil surveys have shown that while there is often an elevation of mercury in the topsoils near crematoria, most (over 99%) of the mercury emitted to the air does not settle to the soil in the nearby area, but is instead added to the general atmosphere. Mercury levels in the ash have been only rarely tested, and have been shown to be negligible in those tests.” One wondered what the blood and tissue levels of air-borne mercury is in crematory industry workers who breathe in mercury fumes every day.

“Mercury emissions from crematoria are regulated in few places in the world, although the amount of regulation is slowly growing. Possible control of mercury from crematoria includes the removal of teeth with amalgam restorations before cremation, the use of selenium capsules to bind up the mercury and exhaust gas capture systems. The effectiveness of the selenium capsules is controversial and the effectiveness of the exhaust gas capture systems is not well documented.”

Although laws now require crematoriums to place mercury storage tanks on their incinerators, most of the toxic residues are released. These also include toxic metals or plastics that can leach into the air and then water, causing a public health concern. One study of the Cremation Association of North America found that “filtering crematorium fumes has little effect on the toxins released.” In India, where outdoor cremation has been the norm for thousands of years, air pollution is in the top five highest percent in the world. Meanwhile, more research needs to be done in the U.S. to assess these very real effects of crematory air pollution.

In addition, there is the issue of cremation remains and their dispersal into the air. “Cremains are often sprinkled somewhere in memorial, releasing whatever compounds and toxins found in them back into the environment in a form that is easily picked up by wind or water,” writes Huffman. A scientific method for analyzing cremains is X-ray diffraction and has found that “calcified compounds within cremains can contain metals such as **lead, boron, cadmium, chromium, cobalt, copper, tin, lithium, magnesium, manganese, nickel, and strontium.** Metals such as arsenic and selenium, though present in a live human body, are volatile and decompose quickly upon burning... I have found no studies of whether or not sprinkling cremation remains could have a significant impact on the levels of metals in the soil.” Often the ashes are then stored in metal urns or other non-biodegradable receptacles, and then buried in cemeteries which are already over-filled. Many cemeteries, particularly in larger US cities, as well as in Japan and Europe have reached maximum use. In London, a space crisis led to proposals to reopen old graves to create more space for the burial of cremains and the deceased.

“Not all that remains is bone. There may be melted metal lumps from missed jewelry, casket furniture, dental fillings, and surgical implants, such as hip replacements. Breast implants do not have to be removed before cremation. Large items such as titanium hip replacements (which tarnish but do not melt) or casket hinges are usually removed before processing, as they may damage the processor. (If they are missed at first, they must ultimately be removed before

processing is complete, as items such as titanium joint replacements are far too durable to be ground.) Implants may be returned to the family, but are more commonly sold as ferrous/non-ferrous scrap metal. After the remains are processed, smaller bits of metal such as tooth fillings, and rings (commonly known as gleanings) are sieved out and may later be interred in common 'consecrated' ground in a remote area of the cemetery."

While cemeteries may have the illusion of holding consecrated ground, they are actually sites of heavy metal waste that accumulate over time and which cause leaching downstream, especially when located adjacent to natural water sources such as creeks, rivers, and oceans as is more common in older cemeteries.

On a more positive note, Community Awareness Network (CAN!) is an informal grassroots organization that advocates on the local, state and national levels for change in the way the crematory industry in America is being operated and regulated. It "educates communities about the real nature of toxins in crematory emissions and what they can do to succeed when faced with the challenge of preventing or stopping a crematory from operating in a residential area or near schools and daycare facilities."

As of 2015, CAN has grown to 55 individual communities in 35 states. Originally, it started as a small group of volunteers and then grew to 700 residents who organized a protest that successfully proved to their county planning department that their town was too densely populated to accommodate a crematorium. They believe no more communities should have to absorb another crematory that is unsafe for public health and the environment.

The CAN Website reports:

"When first faced with this daunting task, it was noticed that there are communities who had challenged crematories near their residential areas ... but with varied results. Wanting to learn from the success stories, and the failures, many hours were spent online searching blogs and forums of newspapers around

the country. The successful communities all had one thing in common: someone in that community was willing and able to stop everything else they were doing and devote their energy to finding the data, and these voluntary warriors motivated their neighbors to act. These communities fought back and won – but at a huge cost. The cost was so great to most of these “activists/advocates” that once the fight was over, they mostly just wanted to go back to their normal lives. Who could blame them? The fight is exhausting. The only reward is winning – preventing or stopping or even closing down a crematory. There is no financial gain, only the stop-loss prevention of property devaluation and keeping one more pollution source away. For the communities that have lost – the cost to their health, homes, and happiness has no measure. How can you measure that? It was decided that no community should ever have to re-invent the wheel when faced with a crematory near their homes. No community should win or lose based on whether or not there is a volunteer activist among them. No more communities should have to spend months of research just to determine if the crematory is going to be unsafe and then prove that to their local government authority.”

Is it not strange that a government agency such as the EPA would not preventatively or even extensively study the toxic emissions of cremation? Why is the cremation industry largely unregulated when there clearly are toxic gas emissions? With cremation reaching an all-time high of nearly 50-70%, and with humanity’s huge impact on the environment worldwide over the last two centuries, the mercury and gaseous emissions of our cremains must now be extensively studied, and existing crematoria must be regulated by local, state or federal agencies. Further building of crematoria should be halted while alternatives for our deceased and their descendants and environment should be put first. Alternatives include green burial which allows for the natural return of our bodies to the earth.

Finally, cremation does not allow for the necessary time essential for the natural letting-go and grief process that is made “real” for people with burial. People tend to “send away” the body, or if they actually visit the Crematory, there is a short

amount of time to “say goodbye” to their loved one’s body. Numerous experiences and videos show how there is limited time at a crematory. The “industrial” environment of cement walls and steel ovens has little ambiance of emotional safety for the grieving person or family. The grief process then tends to be aborted or put off for some other time when it is more “convenient”. Although some families have a memorial prior to cremation there is often still a lingering feeling of difficulty accepting that a loved one has died. A grief that is complicated from a sudden loss, traumatic accident or suicide becomes even more difficult when the body is boxed away and cremated before a person can fully accept it and come to terms with the surreal feeling, numbness and other feelings specific to these types of loss.

With memorialization and burial, there is much more time to see the body, tend to it, and bury a beloved in a final goodbye with an attitude of acceptance and in a timely way. Grave-side funerals also allow for the influence of nature, where we can see that everyone is given the gift of both birth and death in the natural life cycle. With the twenty-year-old natural burial movement, which is really a return to ancient million-year-old traditions, there is much more involvement by the family to be involved in natural deathcare, even if a funeral home is involved. The movement invites people to spend up to 3 days being with their loved one in a home vigil, home funeral, and natural rites of passage that ease and more quickly heal the grief process.

I am Marie Gonzales and my husband and I have been living in the Preserves for over 10 years. We have a lovely neighborhood and I love my small community. I have asthma and I had thyroid cancer 4 years ago so I do not have the best respiratory system. I love the clean air that we breathe and love to keep it that way. I know Igor has presented his views on how there's no concern for us as to air quality but cannot believe there will be 0% toxic emissions. Just like the HCD has voted no to this project, please let me have trust in that you'd do the same. In a poll that somebody did on FB chat, a large percentage of our local residents do not place a lot of emphasis on being cremated here in Folsom, a lot answered they did not care where they were cremated. I know a lot of people may think what's the big deal, but I think they are thinking, "oh I'm glad it's not in my neighborhood!". Nobody is going to say, "Oh how lucky are those people living next to the crematorium! I wished I lived there!" Will you? Thank you for being so understanding. Marie Gonzales

Subject: **Crematorium****Council Members,**

After reaching out to Dr. Bob Laperriere, of the of the Sacramento County Cemetery Advisory Commission, he answered a few of my questions after the Historic Commission meeting regarding the historical site designation of the Lakeside Memorial Cemetery. Here is our email question and answer text (received 2/19/22 at 10:52pm):

Me: Do you know the date the Lakeside Memorial Cemetery received its historic designation?

Bob: Do no have the date handy but it was over 10 years ago.

Me: I feel that the owner/applicant, Igor Semenyuk, is trying to downplay the sites historical significance. During the Commission meeting he said to the best of his knowledge it was not a registered historical site, and that it didn't have historical significance.

Bob: I can see where he is not clear on "registered" as it is not on the State or National historic designation...only the designation that our Commission requested of the board of supervisors. However it is difficult to not believe or deny the historic significance of the cemeteries that "became" Lakeside and date back to the 1800's in addition to the adjacent Chinese Cemetery. We did give a large aluminum sign to the Funeral Home to post at the cemetery with its historic designation on it but do not recall ever seeing it posted.

Bob LaPerriere
Chair, Sacramento County Cemetery Advisory Commission
chca@winfirst.com
(916) 481-4525 (voice)
(916) 712-8991 (text)
POB 255345, Sacramento CA 95865-5345

During the 2/16/22 Historic District Commission meeting (at the 4:46 mark) the applicant, Igor Semenyuk, states, "this is not an historical cemetery." Clearly, he is mistaken. His partner Lorin Claney's father purchased the funeral home in 1962, so Lorin Claney had been a part of the family business when the funeral home received their designation and plaque.

The "Complete Sacramento County Cemetery List" from the Sacramento County Advisory Commission states there are many historical parts of Lakeside Cemetery. These historic portions of Lakeside Memorial Cemetery include: Babyland, Citizens, Cook, Jewish, Masonic, and Oddfellows cemeteries. There's also a question of historic Negro Bar Cemetery being a part of Lakeside.

Also, according the The Miller Funeral Home website they state: " Miller is also proud to own and operate Lakeside Memorial Lawn, Folsom's only active historic cemetery. With headstones and burials dating back to 1846, Lakeside remains a beautiful memorial to Folsom's citizens both past and future."

More so, in 1995 the United States Department of the Interior National Park Service also entered Chung Wah Cemetery in the National Register.

I have contacted the list of historic cemeteries that Dr. Bob LaPerriere included in his letter to the Historic District Commission. I reached out to all of them, and none have a crematory on their historical site. I have included the email correspondence. Why put a crematory on this historical site? Does Folsom really want to have the only crematory on historic grounds? Once it's in, it's forever.

The Lakeside Memorial Cemetery has Historic Designation! Let's protect it!

Thank you for your time,

Nicole Gates

Historical Designation On the recommendation of the Commission, the Board of Supervisors has designated 21 cemeteries as "historic". This is phase I of the project, as there are many other historic cemeteries in Sacramento County. Cemeteries designated were:

1. Bellview Cemetery
2. Union Cemetery
3. Lakeside Cemetery
4. Matthew Kilgore Cemetery
5. 24th & Meadowview Cemetery
6. Chung Wah Cemetery
7. Elder Creek Cemetery
8. Rancho Marieta Cemetery (North & South) (2)
9. Sacramento Historic City Cemetery
10. Michigan-Bar Cemetery (Ione Road)
11. Sloughhouse Cemetery
1. Sylvan District Cemetery
12. Galt /Arno District Cemeteries (2)
13. Elk Grove Consumnes District Cemeteries (5)
14. Fair Oaks District Cemetery

double checked with address and Federal reference.
 Sacramento County No crematory - satellite view
 Sacramento County No - only 10 gravestones
 Folsom \emptyset
 Rancho Cordova - No crematory (email 2/22)
 Sacramento City - NO crematory - DEFUNCT cemetery
 Folsom \emptyset
 Sacramento - No crematory - checked on Fed. list
 Rancho Marieta - No crematory (email 2/25)
 Sacramento City - No crematory (email 2/23)
 Sacramento County - No crematory (email 2/25)
 Sloughhouse - No crematory (email 2/25)
 Citrus Heights - No crematory (email 2/22)
 Galt - No crematory (email 2/22)
 Elk Grove - No crematory (email 2/25)
 Fair Oaks - No crematory (email 2/22)

Plaques were provided for each cemetery, and we still have several to distribute. The text of the plaque is as below:

***THIS SITE HAS BEEN DESIGNATED BY
 SACRAMENTO COUNTY AS A
 HISTORIC CEMETERY.***

***HERE REST MANY OF THE MEN, WOMEN AND CHILDREN WHO SAW THE BEAUTY
 AND VALUE OF THIS LAND, CHOOSING TO SETTLE HERE
 AND BUILD THE COUNTY WE CHERISH TODAY.***

Hi Nicole:

There is not a crematorium at **Kilgore Cemetery**. The City contracts with Green Valley Cemetery and Mortuary and they have a crematorium. They can be reached at [916 985-8844](tel:9169858844).

Please feel free to contact me if you have additional questions. Thanks!

Hi Nicole

I am a Board member of the Elk Grove Historical Society and also a Trustee for the Elk Grove Cemetery District.

In answer to your question, Sloughhouse Cemetery does not have a crematorium in their cemetery, nor do any of the 5 cemeteries in the Elk Grove Cemetery District. While the Elk Grove cemeteries are not designated as historic yet, they do date back to the 1870's. The Rancho Muieta cemeteries also do not have a crematorium.

I would think that the zoning laws would be very restrictive for the placement of a crematorium for the cremating of bodies. Check with the County of Folsom to see what restrictions there are for a crematorium. It sounds like the cemetery your concerned about is privately owned, so they may have rights that public cemeteries do not.

In the Elk Grove Cemetery District, we do have Niche Banks for the placement of ashes in 4 of our 5 cemeteries. These niche banks are about 5 feet high. Sloughhouse does not have a niche bank.

If you have any other questions, please let me know.

Dennis Buscher

Subject: Crematorium Council Meeting Change
Date: Friday, March 25, 2022 4:46:23 AM

Some people who received this message don't often get email from [REDACTED]
[Learn why this is important](#)

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Members of the Council,

Our lives have been on hold and turbulent for one greedy business and their “business opportunity.”

This has cost us time, money, sleepless nights, our real estate, and our health. In fact, a neighbor had a health event while in a conversation about the crematorium! Our neighbor has no fight left, and is very upset over that fact. This is a neighborhood in turmoil!

“The Folsom City Council is dedicated to ensuring Folsom's high standards for public health, safety, and quality of life.”

Why is The Caring Services Group allowed to add to their appeal after the deadline? Why are they allowed to extend the hearing date when the municipal code says the meeting has to be within a specific time frame? Why is the applicant getting extra hand holding? What’s the point of municipal codes if they aren’t followed?

Why weren’t the citizens notified of the meeting date change? We have been in contact with the Council, Clerk, and Planning Department this whole process. Why aren’t the residents being kept up to date...transparency?

Please move the hearing date back to April 12. That’s our kids spring break at school. When we heard that the crematorium meeting date was over spring break we cancelled our vacation to attend the meeting. It’s too expensive to purchase tickets again. We stopped our lives for this. Please consider the residents as well in this process.

Thank you for your time.

Nicole Gates

[You don't often get email from [REDACTED] Learn why this is important at <http://aka.ms/LearnAboutSenderIdentification.>]

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To City Manager Anderson.

Hello. My name is Patrick Nooren and I am a longtime resident of El Dorado Hills. My wife and I are currently in the escrow process on a house in Folsom directly across from Lakeside Memorial Lawn Cemetery [REDACTED] Fong St.). Our intent is to live there with our disabled daughter, Dutch, who has Pallister-Killian Syndrome (PKS) and is compromised in a number of ways, including respiratory issues and being wheelchair bound.

This leads us to "why" we are moving. We are looking to downsize into a single-story house with a short, flat, walk to Sutter Street...a rarity in the adjoining neighborhoods...and [REDACTED] Fong is perfect!

While performing my due diligence I came across the upcoming vote on the crematorium and, as a result, I have read each of the "Helix" studies, including the Greenhouse Gas and Emissions study (and amendments). The results of these studies indicate the environmental impact would be statistically insignificant, but fall short of indicating there would be "no impact." In fact, my particular home at [REDACTED] Fong would be within the zone of elevated emissions.

Should this vote approve the crematorium, I will, unfortunately, not be able to continue with the purchase of this, the perfect home. I simply cannot risk the elevated emissions and the potential for a negative impact on my extremely vulnerable daughter.

Please vote no.

While there may be some potential for additional Folsom tax revenue, it is far outweighed by the potential negative ramifications to nearby property values, the Sutter Street experience (and potential odor) and, unfortunately, the health and safety of those who would live nearby with compromised health.

Thank you.

Patrick M. Nooren
President

RE: Lakeside Crematorium Application

To the Folsom City Manager and Folsom Council Members:

I am a resident in The Preserve neighborhood, which is directly across the street from Lakeside Memorial Lawn. I am writing this letter to request that you deny Caring Services Group's appeal to build a crematorium at Lakeside Memorial Lawn, and uphold the decision of the Historic District Commission that was reached on February 16, 2022, denying the Applicant's conditional use permit.

There are several details regarding the appellant's Initial Study and proposed Mitigated Negative Declaration (IS/MND) that do not comply with the California Environmental Quality Act (CEQA). Among the shortcomings, the IS/MND does not address key environmental safety and health issues that may significantly affect the surrounding community, despite that fact that there is substantial evidence indicating the potential for such significant effects. It would be very important to achieve a well-informed project review by preparing an environmental impact report (EIR) with all the relevant environmental topics where potential impacts could occur, sufficient substantial evidence to describe the nature and magnitude of potentially significant effects, and feasible alternatives and mitigation measures that could reduce or avoid potentially significant impacts.

A summary of the CEQA inadequacies is presented below:

1. Hazards and Hazardous Materials: The explosion risk and consequences in the event of explosion from two 250-gallon propane tanks are not analyzed. The potential for an explosion is dismissed as not likely without evaluation or evidence. Although there is a low probability of an accident, there would be high impact if it in fact occurred. As an example, the following story is from the website news feed of MTI Industries, a manufacturer of fire alarms, regarding the explosion of a 250-gallon propane tank in Prunedale, Monterey County.

Propane Tank Explodes in Prunedale, 2 Injured (Jul 28, 2011)

Prunedale, CA. Two people are injured after a propane tank exploded in Prunedale Thursday morning, said the North County Fire Department. The propane tank held 250

gallons of propane. The explosion happened around 11 am on the 500 block of Strawberry Road. Both of the victims were taken to the hospital with minor to moderate injuries. Fire officials say that there was a leak in the propane tank that ignited and caused the explosion. Witnesses say that they could feel the explosion all the way across the street. According to the fire department, the explosion sent a shock wave through the house that blew out the windows and shifted the walls of the house.

The concussion wave of explosions can be modeled to address how far damage would occur. The concussion may affect the homes in our neighborhood and travelers on Folsom Boulevard. Also, there is no analysis of exacerbation of wildfire risk if an explosion occurred. All these topics should be addressed in an EIR, because impacts may be significant. The analysis in the environmental study needs to be backed by evidence, analysis, and modeling. If a significant hazard is identified, feasible mitigation must be implemented.

2. Inaccurate/Unstable Project Description. The project description appears unstable and potentially flawed. For CEQA compliance, a project description must be accurate, and it needs to be stable during the course of environmental review.

The IS/MND says no family gathering will occur as a reason to not provide facilities for gathering. This premise is flawed, because it conflicts with the stated objective that the crematorium is designed to serve the customs of the families seeking cremation. Several cultures seek to have family members gather at the cremation site. Facilities would be needed to accommodate them (e.g., a turnaround for a hearse and dropping off family, parking including handicapped spaces, broad walkways to the crematory, seating on the grounds around the crematory).

Also, the IS/MND says no sewer is needed but does not comment on the sanitary needs of the employees working there. Where are comfort stations nearby for employees? Recognizing the likelihood of demand for family gathering, how will the sanitary needs of visitors be accommodated? This is a shortcoming of the project description that could overlook potentially significant environmental impacts related to sewer construction, such as increased tree removal.

The IS/MND states a fixed estimate of the rate of cremations (1 or 2 per day, 500 per year), which is misleading because it does not assume growth in demand. It is reasonable to conclude that the stated rate of cremations is likely underestimated in the future, based on the evidence that there are no local, nearby alternative crematories and the Folsom/eastern Sacramento County/southern Placer County region is projected to grow substantially. In fact, the document takes credit for the lack of nearby facilities through an estimate of reduced vehicle miles traveled to more distant sites, because the surrounding communities and funeral homes would logically use this closer facility. The document acknowledges growing demand with nearby populations over time, but does not account for the growth in demand in the environmental analysis by failing to provide future projections of cremations per day or per year based on that growing demand. Without such a demand-driven estimate, the analysis is short-sighted, inaccurate, and potentially well understated for 5 years, 10 years, or more, in the future.

A revised accurate, credible, and stable project description is needed to address these issues and provide adequate environmental review. With an accurate project description, environmental analyses will likely need to be revised and corrected.

3. Air Quality/Toxic Air Contaminants: If the demand is substantially higher than 500 cremations per year in the future, as questioned in the previous item, the air quality and toxic air contaminant estimates would also be underestimated. Higher emissions may result in significant health impacts, and it is important for neighbors to be able understand the nature and magnitude of potential health impacts. A more detailed study and non-technical explanation of potential health impacts, and if needed feasible mitigation, should be prepared and included in an EIR.

4. Noise: The analysis of noise impacts is without evidence substantiating the noise level generated by the crematory. There are no facts confirming "roughly" estimated noise generations, no evidence from other similar facilities, no document cited in the text, nor any description of noise reduction features. The document says the estimate is "rough", which means it appears to be qualitative, maybe even arbitrary. Noise measurements from other crematories would be easy and cost-effective to obtain as the basis for accurate noise modeling; such measurements are standard practice in CEQA noise studies. Recognizing the early (7:00 am) and late (10:00 pm) operation, the noise impacts during otherwise quiet times of day may be significant, especially single-event noise, or short-term noise during the hour or so of burning. Noise impacts, particularly during quieter times and reflecting growing demand, should be provided in an EIR with feasible mitigation for potentially significant noise effects.

These are the details regarding the appellant's Initial Study and proposed Mitigated Negative Declaration that I believe do not comply with the California Environmental Quality Act. Based on this noncompliance, I would ask that the Applicant's conditional use permit to install a crematorium be denied, upholding the Historic District Commission's vote on February 16.

Sincerely,

Salwa Kasabian

Council Members,

I live in the Lake Natoma Shores neighborhood with my wife and two young children. This is a wonderful neighborhood. Each house shows pride of ownership. I can look out my front windows and see slivers of Lake Natoma. We have neighborhood access to the trails and lake. The bald eagles fly over my house and perch at the Lakeside Cemetery.

Putting a crematory in the historic cemetery will change all this. I don't want to look out my back windows and see "puffs of smoke" per Igor's words. I want to enjoy the beauty of the cemetery out my back windows. Lake view out the front windows and smoke puffs out the back window. What a contradiction.

I don't want to have to close my windows while 90 minute cremations are happening. I don't want to tell my kids to come in the house and stop playing with the neighborhood kids because the crematory is running.

This effects our quality of life.

During the 1/11/22 city council meeting there was much concern for the preservation of the oak trees with the Toll Brothers at Folsom Ranch Phase 2 Subdivision Project. Ten minutes was spent discussing grading concerns, buffering, and the probability of survival of one oak tree. I hope the Council gives the history at the cemetery, Historic District, open space, and residents of The Preserves/Lake Natoma Shores community as much time, concern, and thoughtfulness as the oak trees received.

Thank you,

Sean Gates

RE: Lakeside Memorial Lawn
 Crematorium Conditional Use Permit
 (PN-19-182)
 Hearing Date: April 26, 2022

Dear Councilpersons:

This letter is submitted in opposition to the request of applicant Igor Semenyuk (hereinafter, Applicant) for a conditional use permit (hereinafter, C.U.P.) allowing the operation of a crematorium on the premises of Lakeside Memorial Lawn, a historic cemetery located in the City. Numerous grounds have been raised in opposition to Applicant's request by various members of the community, but this letter will focus on only one ground; to wit: that Applicant's assertion that "the crematorium, as proposed, is an appropriate accessory use to the existing cemetery" is without merit and therefore cannot provide the basis for the issuance of the C.U.P. sought by Applicant. (emphasis added.)

Applicant's argument that the proposed crematorium should be allowed based solely on its "accessory use" status is set forth on pages 9-10 of the Historic District Commission Staff Report issued by the City. Basically, the argument advanced is that the existing cemetery is the principal (or primary) use of the property whereas "the proposed crematorium would be operating as an accessory use to the existing cemetery, not as a stand-alone business." (emphasis added.)

In support of this argument, the Staff Report relies on Section 4.46 of California Land Use Practice (2021) "Primary and Accessory Uses" by Adam U. Lindgren & Steven T. Mattas which reads as follows: "A primary or principal use is the main use to which the premises are devoted and the primary purpose for which the premises exist. Primary uses may be permitted by right or may be conditional uses subject to a CUP. Accessory uses are structures or activities that are subordinate in area, extent, and purpose to the primary use; contribute to the comfort, convenience, or necessity of the principal use; and are located on the same lot and the same zoning district as the principal use.... By definition, an accessory use must be associated with a principal use and cannot be established on a property without a principal use." (emphasis added.)

Obviously, reliance on Section 4.46 in support of the argument advanced in the Staff Report is misplaced in the fact setting a hand, and fatally so. Clearly, the proposed crematory operation could be established and function fully on a non-cemetery property, its existence and operation not in any way dependent on an underlying cemetery business. This is made clear by the City's finding on page 22 of the Staff Report that, of the 16 crematoriums currently operating in Sacramento County, only five are located within cemeteries.

Accordingly, and to quote the Lindgren & Mattas work relied on in the Staff Report, the operation of a crematorium on the cemetery property in question would not, "by definition," constitute an accessory use. To the contrary it would be operating as a stand-alone business. As such, Applicant's attempt to piggy-back its way to C.U.P. status by way of the proposed crematorium's "accessory use" status must be rejected, and the request for a C.U.P. denied.

Respectfully submitted,

/s/

Subject: No crematorium

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Council Members,

I have sent previous emails but none have touched on the emotional toll this has taken on me and my family. This proposed crematorium is effecting our sleep and mental health. I used to be a sound sleeper, but recently I am such an insomniac over thoughts and nightmares of the crematorium coming in. I write and research when I should be sleeping. I've been getting migraines for the first time in my life. I realize this sounds dramatic, but it's very true. This is the definition of stress.

I am so proud of my neighbors and family who are fighting so hard against this. I am not trained and educated to fight a city and business. I am, however, a mother, wife, daughter, sister and auntie to other families that live in the Preserves. I want my children, niece, and future niece/nephew living in a neighborhood where propane trucks aren't constantly rattling in. I don't want them knowing that when they see a puff of smoke or smell the smell of cremation they need to stop playing basketball or riding their bikes to come home and close the windows. I tried to shield my young kids about what we were fighting against in the neighborhood. This didn't last long with all the protest in the neighborhood. This has effected our quality of life already!

I drive around with "No Crematorium" magnets on my car. Everyday I take them off when I'm picking my kids up from school. I don't want to traumatize other kids the same way mine are being traumatized. They shouldn't have to know at an elementary school what a crematorium is.

I love the peaceful cemetery with animals. I have nothing against cemeteries or cremation, but this is not the right location for it. The cemetery was here before the neighborhood, but the neighborhood was here before the proposed crematorium.

Should this crematorium proposal pass, I will call to report every time there is odor. I will call every time there's smoke. I will call if there is after hours burning. I will call if ANYTHING from Lakeside disrupts the neighborhood.

I would like to add that I personally collected numerous signatures on the petition from people inside the Lake Natoma Shores neighborhood who use the trail to Lake Natoma that's located on Young Wo Circle. It's not just the people in this neighborhood who don't want the crematorium here, it's people from the greater Folsom area that use the neighborhood for recreation. Please listen the the public outcry!

Folsom's City Council motto, " The Folsom City Council is dedicated to ensuring Folsom's high standards for public health, safety, and quality of life."

I will protect my children's quality of life. Please help me protect it. I hope the council keeps their motto in mind during their vote.

Thank you,

Nicole Gates

**RE: UPDATE FROM COUNCIL MEETING OF APRIL 26, 2022 – LAKESIDE MEMORIAL LAWN
CREMATORIUM (PN 19-182)**

**Dear Mayor Howell, Vice-Mayor Rodriguez, Councilmembers Aquino, Chalamcherla and Kozlowski,
Director Johns, Ms. Freemantle, and Mr. Kinkade,**

I really appreciated the opportunity to provide citizen input at yesterday's Council Meeting, it was my first time in the chambers. I was the speaker who suggested that the city consider providing an incentive (tax or otherwise) to facilitate the siting of a crematorium at an alternate location further away from residential and especially the Historic District.

I have two additional insights after this meeting which I'd like to share with all.

#1 – Why the focus on needing a crematorium with Folsom city limits? The city and residents of Folsom leverage numerous other key services from Sacramento County instead of having it provided by the city itself or by businesses within city limits. A few examples:

- **Weekly residential and commercial trash disposal** – Folsom doesn't insist on it's own landfill, we use Kiefer landfill for this important **service function**. I know because I've had occasion to use Kiefer and always seem to see Folsom "Distinctive by Nature" painted dump trucks there.
- **Electric utility** - Folsom doesn't insist on having its own electric utility, it uses SMUD for this important **service function**.
- **Folsom Police Department** - Folsom doesn't insist on having its own "Police Academy" to train new police officers, it relies on other larger police departments like the City of Sacramento to

conduct Police Academy training for this important service function. I know this because a relative is attending the Sacramento Police Academy next month.

#2 – Cremation as a Service function. I took a fresh look at the funeral process to connect the dots a bit better, at least for myself. The base components are:

- **Funeral home – a service function** not usually located on cemetery property. It's a business housed in a business-zoned area that provides families with body preparation and funeral services such as viewing.
- **Cemetery – a physical plot of land** for the express purpose of burying or housing the remains of the deceased. Traditionally cemeteries have cultural or religious significance and are considered sacred by many people, not to mention having historic significance as in this case. *There is a service ceremony with burial but primarily it's a sacred resting place for the deceased.*
- **Crematory – a service function** usually not located on cemetery sites themselves. It's a business housed in a business-zoned area. As explained by Mr. Semenyuk, the cremation process is typically done by an attendant and can be facilitated by a live video feed if desired by the relatives or friends of the deceased. This provides great flexibility on location, since a crematory is basically a giant industrial oven.

In reflecting on the wishes of my own parents before they passed, both asked to be buried in family plots. I have relatives who chose cremation and not one stated *"I wish my cremation process takes place in Auburn, Folsom, San Diego"*. What you do hear is that *"Please scatter my ashes in the Pacific Ocean, at Lake Tahoe, the mountains, or keep them at home with family"*.

My main point is that the physical cremation facility is really suited to a flexible location as a service function, even more so than a funeral home. Folsom is within Sacramento County and we leverage numerous services from the county as stated above. Why struggle to find a suitable Folsom location of greater than 500 feet from residential areas when Sacramento County offers locations with 15-20 minutes' drive that easily exceed the 500 or even 5,000 feet boundary? I see a great business opportunity for a Sacramento County sited location that can provide high volume services to multiple cities throughout the Sacramento area.

As a minor point with the stated quantity of possible cremations, it was claimed that a maximum of 4 per day could take place daily with a 500 annual limit. Given there are 365 days in the year and regardless if cremation days are 5,6 or 7 days a week, the math always exceeds 500 annually.

Please consider my additional insights and do not allow crematory operations to take place in our historic area cemetery.

Sincerely,

Peter Lucyga

RE: Lakeside memorial Lawn
 Crematorium Conditional Use Permit
 (PN-19-182)
 Hearing Date: May 10, 2022

Dear Councilpersons:

Please accept this correspondence as my attempt to summarize the written submissions that have been made to date by concerned citizens on the "loss in property value" issue that has been raised in this matter.

The issue is addressed forcefully in a 4-20-22 email to the City from Victoria Foster, a resident of The Preserve and a realtor with Interø Real Estate Services (page 9 of 4-26-22 Additional Information Transmittal). She has been a realtor for over 30 years and works full-time at Interø. She asserts that "being next to a crematorium will absolutely affect our property values.... Some homeowners stated they will feel compelled to move. This absolutely will affect our home values and eliminate a large number of buyers not only for health concerns, but yes, the creep factor." She further opines that all of this will cause a loss of home values of "tens of thousands of dollars and possibly even more...compared to other areas in Folsom because we have a crematorium dropped in our neighborhood."

Ms. Foster states that the California Association of Realtors requires that a seller of real property fill out a Sellers Property Questionnaire which constitutes a mandatory disclosure document that must be included in every sales transaction. She points out seven difference paragraphs on page 4 thereof which would require the seller to make disclosure of the existence of a crematorium in the area. In her words: "It's not something to be taken lightly." She adds that "No buyer coming to Folsom has ever asked me, 'how is your crematorium her?'" They come...and they stay for the quality of life – not death."

Nearly identical in tone and substance is an email dated 9-13-21 from RE/MAX Gold real estate agent Barbara Krieger (Staff Report Part 1 of 2, page 330). She recounts her inability to sell a property that she recently listed "in the beautiful Historical District of Lake Natoma Shores because of buyer concerns about the crematorium going in." The third paragraph of her email merits a verbatim quotation:

"I am not a Folsom resident, but am writing this letter out of concern for the neighborhood. Having personally seen every single buyer that walked through this beautiful home get turned off from the highly desirable location because of an undesirable crematorium should concern every single representative of the people, the nearby homes and the neighborhood itself as an entity. I wonder why the City has allowed the cemetery owner to get this far in the planning phase of the project, despite the multiple and loud cries from the Folsom residents and groups, who should not

have to trouble themselves with such a threat while living in such a popular, sophisticated and historically protected area. I am absolutely astonished this is occurring at all.”

Another “decrease in property value” comment is found at pages 456-7 of the Staff Report, Part 1 of 2, a 7-20-21 email from Preserve resident Kim Higgins. On the second page of that email in the next-to-the last paragraph, she references an article by Mark Agree dated June 19, 2008 from “Applied Economics Magazine” that analyzed 27 months of home sale data (7 months before and 20 months after the startup of crematory operations) in which it was concluded “that proximity measured in terms of direction and distance from the crematory, imparts a statistically significant negative impact on average home sale prices,” the prices increasing the further the home was from the crematory.

Ms. Higgins concludes her email with these comments: “California disclosure law requires us to disclose. Not many people desire to live near one. Do you?...Our quality of life will be affected if the crematorium goes forward. Honestly, would you want this in your backyard?”

At pages 144-5 of the Staff Report, Part 2 of 2, we find another email from realtor Victoria Foster who identifies herself as a resident of the Preserve living on Young Wo Circle. She voices numerous objections to the proposed crematory. Finally she focuses on decreased property values on the second page of her email, as follows:

“Lastly, I am a local Realtor and it will DECREASE OUR HOME VALUES in the Preserves/Lake Lake Natoma Shores if a crematorium is built...I have 3 clients that want to buy in this neighborhood – two of them will not reside here if a crematorium is built and my 3rd client Liz Chighizola has stated to me, she would want the crematorium to be put in because home prices would then drop here and then she would finally be able to afford this neighborhood. Really?? How is it OK for this business to decrease our home values??”

Last, I would invite the attention of the members of the Council to an email dated March 30, 2022, from Patrick Nooren of El Dorado Hills (Staff Report, Part 2 of 2, page 618). I would classify this email as a “cross-over” between the issue of property values and the issue of health concerns raised by the proposed crematory. In any event, I found the email heart-wrenching, dealing as it does with the proposed crematory crushing the hopes of Mr. Nooren to obtain the “perfect” home on Fong Street for his disabled daughter (wheelchair-bound with respiratory issues and compromised in a number of other ways due to PKS). As Mr. Nooren puts it: “Should this vote approve the crematorium, I will, unfortunately, not be able to continue with the purchase of this, the perfect home. I simply cannot risk the elevated emissions and the potential for a negative impact on my extremely vulnerable daughter.”

In closing, I would like to raise a personal concern/irritation in regard to the manner in which many of the issues on the crematory question have been framed. To put it bluntly, I am sick and tired of hearing it implied (if not flat-out asserted) that the residents of the Preserve are motivated by a selfish, “not-in-my-backyard” (NIMBY) attitude, using that attitude to deprive the Applicant of his property rights. Nothing could be further from the truth.

No one is claiming that the Cemetery does not have the right to exist and do business as a cemetery. The Cemetery has preexisted the Preserve residential development by many, many years. However, that certainly is not the case with the crematory. With the crematory, the situation is reversed with the Preserve preexisting even a claim by the Applicant of any right to establish a crematory on the Cemetery property. To put the issue in “territorial” terms, the Applicant is the “intruder” on the crematory issue, not the residents of the Preserve. It is the Applicant who is taking the role of the

aggressor here, not the residents. The residents are OK with the Applicant pursuing his cemetery business, but not OK with the Applicant opening a new business enterprise (i.e., a crematory) that interferes with and diminishes the preexisting private property rights of his neighbors.

Respectfully submitted,

/s/

[Historic Preservation Master Plan plus Cultural Resources Inventory](#)

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Council Members and Staff,

There was a brief discussion at last night's City Council Meeting regarding the significance of the Chung Wah Cemetery and its National Register of Historic Places status. Attached please find the national application finalized for Folsom's Chung Wah Cemetery to the National Register of Historic Places on March 21, 1995. This application was submitted by Mary L. Maniery, Historian and Cindy Baker, Historian. The national importance of this Chinese Cemetery to the nation's founding, contains valuable information about the Chinese pioneers and events they participated in critical to the founding of the American West, the City Folsom, and the State of California. The Chung Wah is of national importance.

The authentication of the Chung Wah Chinese Cemetery was archived at:

- the Folsom Historical Society and History Museum in Folsom,
- the Chinese Historical Society of America in San Francisco,
- the Sacramento County Archives and Museum Collection Center in Sacramento,
- and the California State Historic Preservation Office.

The Chung Wah Cemetery, the Young Wo Cemetery, along with all eight of the small Lakeside Cemeteries, together, were included in the City of Folsom's Historic Preservation Master Plan and Cultural Resources Inventory List, adopted by the City of Folsom on November 5, 1998. The authentication of these cultural resources and sites on the Cultural Resources List was archived at:

- The City of Folsom;
- The Folsom Historical Society and History Museum;
- referenced in Folsom Zoning Code 17-57 Historic District;
- and referenced in Folsom's Historic District Design and Development Guidelines.

How could ECorp's Cultural Resources report, contained in the 2022 Lakeside Memorial Lawn Crematorium Project, have missed all of these publicly available environmental documents in its Cultural Resources report for inclusion in the Initial Study and the C.U.P. Mitigated negative Declaration?

Indeed, how could the Community Services Director have missed cultural significance of these environmental documents for inclusion in the Staff Report's Initial Study and Mitigated Negative Declaration?

This information is critical to the Findings that the City Council will make on the Lakeside

Memorial Lawn Crematorium Project proposal and C.U.P.

Sincerely,

Deborah Grassl

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B** Property is associated with the lives of persons significant in our past.
- C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D** Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply)

- A** owned by a religious institution or used for religious purposes.
- B** removed from its original location.
- C** a birthplace or grave.
- D** a cemetery.
- E** a reconstructed building, object, or structure.
- F** a commemorative property.
- G** less than 50 years of age or achieved significance within the past 50 years.

Property Name Chung Wah Cemetery
AGENCY RESOURCES DIVISION
NATIONAL PARK SERVICE

SUMMARY

Folsom's Chung Wah cemetery encompasses 2.616 acres of land south and west of Block 70 and on parts of Lots 7, 8, 9, and 10. Located on a bluff near today's Lake Natoma, the cemetery is surrounded by dredge tailings, native oaks, and mature grey pines. Its features include burial mounds, exhumation depressions, brick-lined vaults, a burning pit, and the remains of a shrine. Although subject to vandalism in the 1960s, this site retains a high level of integrity. Its physical separation from the main Folsom cemetery, haphazard arrangement of burial mounds and pits, lack of formal landscaping, and rural setting increases the integrity of setting, feeling, and association that cloaks the site.

DESCRIPTION

The town of Folsom, located in eastern Sacramento County, once housed a flourishing Chinese community. Two cemeteries were associated with the community and were owned and maintained by different associations. The Yeong Wo Association's plot currently is landscaped and partially obscured by a building and retains no surface reminders of its use as a burial ground for members of the Yeong Wo association. The Chung Wah cemetery, used by members of the Sze Yup and Sam Yup associations, is the larger and probably older of the two cemeteries and retains numerous features and burials.

The present 2.616-acre site includes parts of Lots 7, 8, 9, and 10 of Block 70, then extends south and west to the Bureau of Reclamation property line. The larger portion of this cemetery lies outside the original 1855 town limits depicted on Theodore Judah's plat map for the City of Folsom (see Maps 1 and 2). The Chung Wah cemetery is near Folsom's non-Asian cemetery, which dates to the 1850s. Chinese burials in the motherlode region were typically located in segregated sections of non-Asian cemeteries. The Chung Wah is close to the other cemetery, but is a separate, remote site.

The site's irregular shape suggests it was haphazardly planned, perhaps beginning with a few Chinese burials and then spreading out as more Chinese died in Folsom over the years. The lack of historical photographs and maps for the cemetery precludes an accurate description of its early physical appearance. Oral testimony presents an image of the cemetery in the 1920s to the 1940s, allowing for a reconstruction of the cemetery's physical appearance. Physically, the site was located on the outskirts of town. Dredging occurred around the perimeters of the site in 1907 and 1908 (Map 3), but the cemetery plot was left undisturbed. Throughout its period of use it nestled on the bluff near the American River, surrounded by dredge tailings or steep escarpments leading to the American River.

The Chung Wah plot was accessed from the north by passing through a gate. A wagon road led east, then south and west, traversing the perimeter of the cemetery (Map 4). The road exited out the southwest side of the cemetery, allowing mourners to enter at the gate, travel around the cemetery, and leave without backtracking or crossing over their entry path. Graves were dug wherever there was room, with no specific orientation or layout. People were buried in shallow graves about two feet deep and were covered with a mound of earth. The earthen mounds were often touching or at angles to each other and protruded about two to three feet above the ground surface. Occasionally wooden markers or inscribed bricks marked the surface of graves. More often than not, however, graves were unmarked. As one Chinese-American related, it was better to be "unmarked and undisturbed" (G. Chan, Jr. 1994). While the deceased were often not identified by surface grave markers, other markers of bricks, stone, or wood inscribed with name, date, association affiliation, and ancestral village or province were placed in the graves to assist in identification of remains during exhumation.

National Park Service

NATIONAL REGISTER OF HISTORIC PLACES CONTINUATION SHEET

Section number 7 Page # 2

Property Name Chung Wah Cemetery

Scattered in and around the mounds were depressions from the exhumation of bodies. While bodies were carefully exhumed, the pits were not backfilled (and could have been used for future burials) and the pits were interspersed with the mounds. While the majority of exhumed remains were sent to China for reburial, others were placed in urns and reburied at the Chung Wah cemetery. Graves were not well-tended, aside from yearly ancestral ceremonies. The Chung Wah cemetery was not landscaped with lawns, benches, domestic trees or shrubs, or other landscaping elements typical in a non-Chinese burial site. Instead, the cemetery was left in a natural state and its appearance matched that of the surrounding vacant fields, seasonally covered with grasses with occasional scattered native oaks or grey pines. The road was sometimes kept clear by mowing, but the mounds were often overgrown.

Apart from the mounds and pits several burials were placed in brick-lined, rectangular-shaped vaults that were laid into the ground. A large depression was dug just inside and to the south of the entry gate and served as a burning pit where the belongings of the deceased were set afire. A rectangular brick, cobble, and concrete shrine, used during the *Ch'ing Ming* ceremony, was in place on the west side of the cemetery by 1940 and was likely constructed by the 1920s or before. This shrine stood approximately four feet high, and was eight feet wide and 13 feet long.

By the 1930s, the Chung Wah cemetery was still in use, although declining, as only a few families remained in the area to tend to the graves of their deceased relatives and friends. In the early 1940s, brick markers still remained on some of the grave mounds, and some lay scattered around. In addition, the burning pit and shrine were still in use into the 1960s.

In 1967 vandals desecrated the cemetery. The graves of Chin Oak, his wife, Ping Woo Choy, and Chin Lai Shee were uncovered and their coffins smashed. The Chan family discovered bones left scattered on the ground (H. Chan, Sr. 1981). The vandals also destroyed the shrine, believing it to be the grave of a wealthy person (*Sacramento Bee* n.d.). A deep hole extending below the shrine foundation attests to this vandalism. Jewelry stolen from the graves was sold and was later traced to San Francisco pawn shops. Those responsible for the desecration were only charged with public health laws concerning unlawful digging in a cemetery (G. Chan, Jr. 1991). The Chans reburied their family's remains on site and covered the graves with a concrete slab. A brass grave marker was set flush into the concrete at this time and is the only marker currently visible at the cemetery.

Today the cemetery retains much of its original appearance (see Map 4). The wagon road, while overgrown, can still be traced around the perimeter of the site. The cemetery contains between 75 and 100 mounds, many barely discernible due to settling. The mounds vary from only a few inches to about two feet in height. Their location is haphazard, with many perpendicular to each other and arranged in no set pattern. Exhumation pits, ranging in depth from six inches to several feet, are interspersed among the mounds. The entire burial site is overgrown with tall grasses, thistles, and encroaching vegetation and appears hummocky. This untended appearance, however, is in keeping with the historical appearance of the site as related by numerous people in Folsom. The graves of Chin Oak and his kin are clearly marked, covered by a large concrete slab with a flat brass monument.

The burning pit is evident inside the gate, although immature oaks and vegetation are growing inside it. An ash lens attests to its past use. While the shrine was dismantled by the vandals, its foundation and part of its cobble and brick walls are still intact (Map 5). One rectangular brick-lined vault, now empty, is exposed and evident along the west edge of the fence line. The vault is four feet wide, eight feet long, and about four feet deep. Four courses of brick are present around the top of the vault. In addition to its physical features, the site remains secluded, tucked between dredger tailings and an undeveloped area along Lake Natoma and physically separated from the Folsom cemetery by a vacant lot. Its seclusion, hummocky appearance, and intact features all contribute to the sense of peace and timelessness that pervades the site, adding to the integrity of feeling and association so apparent at the cemetery.

NATIONAL REGISTER OF HISTORIC PLACES CONTINUATION SHEET

Section number 8 Page # 1

Property Name Chung Wah Cemetery

SUMMARY

The Chung Wah cemetery in Folsom is unusual for its strong association ties and ownership, for its continued existence in an area that has been extensively mined, and for the intact associated features. Folsom's Chinese community once contained the homes, businesses, and gardens of hundreds of people. Today, only this cemetery remains as the last visual reminder of a rich heritage and a viable Chinese population that once flourished in town. Acquired in 1906, the cemetery also represents strong district association relationships that were maintained in Folsom well into the twentieth century. It has numerous features associated with historical use, including burial mounds and vaults, exhumation depressions, a burning pit, and a shrine foundation, all attesting to the overall physical integrity of the cemetery and reflecting the spiritual beliefs and practices of the association members. The sense of time and place evident when standing in the cemetery grounds is strong. The historical and ethnic associations of the cemetery, combined with its high level of physical integrity, contribute to its importance under Criterion A, Consideration D and G. The last burial occurred in 1946, ending a 40-year period of use and representing the decline of the Chinese community in Folsom.

HISTORICAL CONTEXT

Folsom's Chinese Heritage

Chinese men and women have lived in Folsom since the California gold rush. Arriving as miners, laborers and merchants, their numbers gradually climbed through the 1850s and 1860s, sharply rose during the 1870s and peaked in the 1880s. Exclusionary immigration laws, dwindling mining and labor opportunities, and racial tension precipitated a steep population decline during the 1890s and 1900s. By the early twentieth century, only a handful of the original Chinese community remained. Today the Chan family is the last remaining fragment of what was once a large and flourishing community.

Gold Rush Era

The start of large-scale Chinese immigration to California dates to the early months of the gold rush. News of the discovery of gold drew thousands of Chinese to California from throughout the Pearl River delta in South China, particularly the City of Canton. Given the political unrest, worsening economic conditions, and the repressive Manchu rule in China in the mid-nineteenth century, reports of the fabulous *Gum Shan* (Mountain of Gold) became even more appealing, resulting in a mass immigration to California, primarily by people from the Kwangtung Province (cf. Chinn 1969; Chiu 1967; Hoexter 1976; Lai and Choy 1972; Sung 1967). Immigration records from the Customs House in San Francisco attest to this migration: 325 immigrants recorded in 1849, 450 in 1850, and 2,716 in 1851. This number jumped to 20,000 in 1852 (Chiu 1967:12; Hoexter 1976:10; Lai and Choy 1972:45).

Some scholars estimate that one in ten newly arriving Chinese remained in San Francisco, while the others headed out to either the northern or southern mining regions (Chinn 1969; Chiu 1967; Williams 1930). In the first few years of the gold rush, mining in the northern region focused on the American River because of its proximity to Sacramento (Williams 1930). It is probable that by late 1849 Chinese arrived at Negro Bar, predecessor to the town of Folsom, where they either stopped to mine or continued up the river.

Property Name Chung Wah Cemetery

Typically, a Chinese merchant would set up shop in a central location in a mining region to sell food, supplies, and clothing to both his countrymen and Anglo miners. Often the store owner would start serving tea to his kinsmen in the back of the store and, if interest was high, might expand into a restaurant business, selling Chinese delicacies as well as beef steaks to American miners (Hoexter 1976:61-62). If business was steady and profitable, a back room might have housed a few fan-tan or domino tables, or other diversions. Sometimes, a woman might be brought in to entertain the miners. As one merchant thrived, others might join him and a Chinatown would grow. In larger mining towns, one or more temples would be erected by local Chinese leaders or benevolent associations to allow immigrants to offer prayers to the gods (Hoexter 1976:62).

From such humble beginnings a Chinatown would emerge, as was probably the case at Folsom. While there is some indication that at least one Chinese merchant was operating at Negro Bar in 1852, the location of this center is uncertain (J. Chan 1992; *The Telegraph* 1966). It is probable that the Chinese center of Negro Bar in 1852 was situated upstream and separated from the Anglo camp, at or near the area known as Chinatown today. The first evidence of a Chinese presence centered in Folsom is found in the first assessment plat of the newly formed town of Folsom, completed in 1855. According to the 1855 Folsom Map Book, Chinese owned lots or owned improvements on lots on Blocks 8, 9, 10, and 19. In addition, they had a church located in Block 11 (Sacramento County 1855).

In the late 1850s, as the initial gold rush ended and claims were abandoned, many Chinese miners arrived in the region to rework old claims or work as laborers for the Natoma Company. While usually residing at their mining claims, these men contributed to the growth of the local Chinatown, frequenting it on their day of rest. The local benevolent association hall (You See Tong) probably served as a social center for the men, providing mail from home, news of friends, gambling diversions, and tea or food. Barbers and doctors took care of personal hygiene and health needs, while the many stores offered a variety of supplies (United States Bureau of the Census 1860).

A Flourishing Community - 1860 to 1900

Folsom's Chinatown continued to expand rapidly in the 1860s, fed in part by miners retreating to the town to escape escalating racial violence. Trouble continued in the region in the 1860s, but Chinese miners found other ways to earn a living. While independent miners and companies were driven off their claims and harassed, hundreds of others were being employed to work on Anglo-owned claims, particularly in hydraulic and ground sluicing operations. The Natoma Company also hired Asian laborers to work their property, especially after 1864 when they acquired legal title to the eastern half of the historic Rancho de los Americanos (Castaneda et al. 1984:83).

As gold deposits dwindled and Anglo miners left the region, independent Chinese miners and companies once again began working old tailings and claims and the population increased in number. This general pattern is evident in the census records. In 1860, 94 miners were enumerated within the Chinese district of Folsom. In 1870 this number increased to 187. In addition, at least 370 miners were living in camps outside Folsom, but likely visited town occasionally to obtain supplies (United States Bureau of the Census 1860, 1870). By 1879 some 3,000 Chinese were said to be mining in the Folsom area (Askin et al. 1980:11; Plimpton n.d.). It is probable that many of these miners lived at least seasonally in Folsom and used it as a residential base.

During the 1880s, Chinatown continued to grow. This growth was related to anti-Chinese sentiment throughout the region in the late 1870s. As racial violence forced miners and laborers out of the countryside and surrounding communities, they often retreated to Folsom. The San Francisco *Alta* reported trouble in the region in 1878, noting that

CONTINUATION SHEET**

Section number 8 Page # 3

Property Name Chung Wah Cemetery

Chinese expelled from Rocklin, Roseville, and Penryn had gone to Folsom "where a camp of several hundred strong has been formed" (*Alta* 20 September 1878; Bancroft n.d.:37). This pattern continued for years.

In the midst of this period of economic prosperity and peak population, two Chinese associations purchased land for Chinese cemeteries. Yeong Wo & Company purchased Lots 3 through 8 of Block 40 from James and Mary Harris for their cemetery in 1883 (Sacramento County 1883). Two years later, Chung Wah Company purchased Lots 6 through 11 of Block 71 from James S. Meredith for \$190 (Sacramento County 1885b).

The Chinese living in town who did not own stores typically formed small companies to mine claims, or went to work for others. The Natoma Company continued to be the major source of employment during the 1880s. The company hired Chinese as employees and paid them \$1.00 a day, or rented land to them for mining. Company records note several mining companies buying water from the Natoma Company in 1882 (Plimpton n.d.). As employees, Chinese worked building, maintaining and clearing water ditches, as well as on company agricultural operations.

While manuscript census records are not available for 1890, Folsom's Chinatown appears to have continued to flourish during the late 1880s and 1890s, despite tepid local efforts to eliminate the Chinese from the city. In fact, Chinese advertisements in the local paper indicate a growing interaction with the non-Asian community. Three companies placed business ads in the *Folsom Telegraph* beginning in 1889: Fong Lee Lung, whose store carried groceries and miners' supplies; Cop Kee, a grocer; and Wing Sing Wah, a grocery store owned by merchant Chin Oak.

In 1893 an undetermined epidemic killed many Chinese in Folsom. The local paper reported that "Chinatown is full of sick heathens . . . and the number of deaths is greater than ever before known in history" (*Folsom Telegraph* 4 November 1893). Perhaps this epidemic, striking near the peak of Chinatown's population, marked the beginning of the community's gradual decline. The decline was also aided by the development of dredging in the region, an activity that effectively ended mining by small, independent companies around Folsom (Askin et al. 1980:13).

Decline - 1900 to 1946

As a new century dawned, Chinatown was holding its own. The 1900 census records depict a decrease in population within Chinatown since 1880, but only by 30 people. The district still had 13 merchants or grocers (three less than 1880), shoemakers, barbers, clerks, gardeners, cooks, butchers, launderers, restaurant owners, and gamblers (United States Bureau of the Census 1900). The main difference in 20 years is the numbers of Chinese within Granite Township but living outside of Folsom. This number fell from about 300 in 1880 to only 27 in 1900. Without the hundreds of miners and laborers frequenting Chinatown on days off, the economy within the district began to fail (Castaneda et al. 1984).

Ideally the decline of Chinatown would have occurred gradually, but was unfortunately hurried by fire. In August 1901 a big fire broke out in Chinatown at 3:00 a.m. According to the *Folsom Telegraph*, the fire started near the Tong Hing store (southwest corner of Block 9) and ended up consuming half of Chinatown. Firecrackers, bombs, and an oil tank helped spread the fire (*Folsom Telegraph* 17 August 1901).

By 1910, census records indicate only five merchants remained in town, compared to the 13 listed in 1900 (United States Bureau of the Census 1910). A few Chinese-operated laundries, some of whom had relocated on Sutter Street after a major fire, were still open (Sanborn Company 1899, 1910) and several Chinese cooks were privately employed (United States Bureau of the Census 1910).

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

Section number 8 Page # 4

Property Name Chung Wah Cemetery

Over the next ten years Chinatown declined rapidly. In 1913 the old Chinese temple located on a knoll in Block 11 burned down. This building had stood on the same spot since the early 1850s and was a fixture in the district. By the time it burned, however, the paper noted that it was "little used of late due to the small number of Chinese remaining in this community" (*Folsom Telegraph* 20 June 1913; Plimpton n.d.a). By 1920 two Asian merchants remained in town, among them Chin Oak and his family store on Sutter Street, along with the three laundries and a few cooks. Only 26 Chinese were enumerated in Granite Township that year, most of whom lived on Block 10 in Folsom or on Sutter Street (Sacramento County 1921; United States Bureau of the Census 1920).

When Chin Oak died in 1924, the last pioneer Chinese in Folsom was laid to rest, signaling the end of the original gold rush Chinese community. His family continued to live and work in town, although the other few remaining Chinese families moved away looking for opportunity elsewhere over the next two decades. By 1925, non-Chinese residents were building new residences on abandoned sections of Folsom's historic Chinese district (Sanborn 1925). Chinatown dwindled to a couple of old stores, which were all gone by the late 1930s (Fong 1994). Some Chinese bachelors remained in Folsom until their death.

During the 1920s and 1930s, other Chinese families who had left Folsom occasionally returned to bury family members and to perform the annual ceremonies at their family grave sites. The shrine was intact and in use during the early 1940s (Puffer 1994). After her death in 1946, Chin Lai Shee became the last Chinese person interred in the cemetery (G. Chan, Jr. 1991).

After Chin Oak's death, his eldest son, George, Sr., ran the family store, the Chan and Chan Market on Sutter Street. Until his death in 1959, George, Sr., led his family as they observed the annual cemetery ceremonies. These rituals were modified during the 1930s and 1940s when food became precious during the Great Depression, followed by World War II rationing (G. Chan, Jr., 1994). All of Chin Oak's children in Folsom continued to observe these ceremonies, although more sporadically as the decades slipped by.

Today, only Chin Oak's grandchildren remain in town as active representatives of Folsom's early Chinese heritage. His grandson, George, Jr., continues to run the family store on Sutter Street and is the guardian of the Chung Wah Cemetery. His granddaughter, June Chan, continues her parents' efforts to honor and preserve the Chinese legacy in Folsom.

District Associations in Folsom

The Chinese who came to California during the mid-1800s came from 24 districts in Kwangtung Province (Map 6). The overwhelming majority was comprised of three major dialect groups: the Sam Yup (a.k.a. Sam Yip), Sze Yup (a.k.a. See Yup, Sze Yap), and Heungshan (a.k.a. Chungshan) people (Chinn 1969:4; Leung 1984:15, 28; Minnick 1988:6-7). Sam Yup-speaking people came from the districts of Namhoi, Punyu, and Shuntak. Sze Yup-speakers arrived from Sunwui, Hoiping, Yanping, and Toishan districts. Heungshan people immigrated from the district of Chungshan. The Hakka, a fourth smaller dialect group, came from a scattering of districts throughout Kwangtung Province (Chinn 1969:4).

The Sam Yup, Sze Yup, and Heungshan formed separate district associations to assist their members during their time abroad. All three associations offered temporary housing for their new arrivals disembarking in San Francisco, as well as in smaller Chinese communities near mining and agricultural centers. The Heungshan people named their association Yeong Wo (a.k.a. Young Wah, Yong Wa), while the Sam Yup and Sze Yup used their district name. These

United States Department of the Interior
National Park Service

CONTINUATION SHEET**

Section number 8 Page # 5

Property Name Chung Wah Cemetery

associations provided employment and legal assistance, recreational and spiritual considerations, advice on dealing with non-Asians, and access to familiar foods, medicines, and clothing (Minnick 1988:9-10).

Chinese usually maintained their distance from other Chinese from different districts or associations. According to Chinese-American historian Sylvia Minnick, "Those from Toishan encamped away from the Heungshan diggings, and both kept their distance from the Hakkas" (Minnick 1988:13). This was due to personal preference as well as distinct dialectic differences; people from one district often could not understand those from another district. In addition, Chinese from these two districts felt a great deal of animosity towards each other and brought their long-standing feud with them to America (Leung 1984:7).

The feuding between the districts, especially the Sze Yup and/or Sam Yup versus the Yeong Wos, resulted in "wars" or small-scale battles that occurred in the 1850s in several of the mining camps in California. In Weaverville, disputes over mining claims led to a full scale battle between the "See-Yups" and the "Yong Wahs" that culminated in a series of fights and numerous deaths between 1853 and 1859 (Brott 1982:13-17; Minke 1960:14-15). Chinese Camp, in Tuolumne County, was the site of another physical battle between numerous "Sam Yups" and "Yan Wos" over mining claim disputes. This battle took place in 1856 and ended in four dead and four wounded (Minke 1960:18-19; Paden and Schlichtmann 1959:71-72). While no known battles occurred at Folsom, these incidents point to the level of antagonism that existed between the various factions.

The Sam Yup Association quickly established branches in Sacramento and Stockton to meet the needs of the large number of Sam Yup immigrants heading for the gold fields. During the 1860s Chinese from some non-Sze Yup districts previously under the jurisdiction of the Sze Yup applied to the Sam Yup for membership (Lai n.d.:16). By 1878 Sam Yup membership peaked at 12,000 members statewide (Lai n.d.:17). Unfortunately a feud, climaxing in the 1890s, created tension between Sam Yup and Sze Yup people (Lai n.d.:18), although there is no evidence to indicate how this affected the Chinese community in Folsom.

The separation between the Yeong Wo and Sze Yup/Sam Yup lasted in Folsom into the 1920s. The Yeong Wo Association members, while doing business with other Chinese, socialized separately from members of other district associations in Folsom's Chinese community. Yeong Wo members traveled into Sacramento to visit other Yeong Wo rather than socialize with the Folsom Sze Yup or Sam Yup (G. Chan, Jr. 1994). This, in part, explains why two different groups of Chinese in Folsom bought land for cemeteries instead of sharing one cemetery.

Members of all three major district associations resided in Folsom. Their association buildings were prominent fixtures in Folsom's Chinatown (Minnick 1988:22). The Sam Yup Association established their Folsom branch during the 1850s (Lai n.d.:15). The association rented land on Block 19 for their operations into the twentieth century, including a store, social hall, and housing for the sick and aging (Minnick 1988:22; Sacramento County, 1893a, 1893b, 1895a, 1895b, 1900). In the 1880s, the branch corresponded with their headquarters in San Francisco regarding funding for repairs to their association hall building (Lai 1994). This perhaps indicates the vitality of the association and its positive outlook for continued membership in Folsom.

The Yeong Wo Association, comprised of Heungshan people, owned property for its operations by 1883, although it probably rented for many years before buying (Map 7). The association built their benevolent hall and shrine on their property on Lots 1 through 4 of Block 17, on the southwest corner of the intersection of Leidesdorff and Burnett Streets (Sacramento County 1883, 1885a, 1912). Their shrine remained in the 1930s, although the structure, with its black doors and peeling red paint, was almost abandoned (G. Chan, Jr. 1994). All that remained of their benevolent hall at that

time was a small "shack" where a Chinese caretaker tended the gardens and fruit trees surrounding the site (Fong 1994). Yeong Wo also owned and maintained a cemetery on Lots 3 through 8 on Block 40, several blocks from the Chung Wah burial site (see Maps 3 and 7). No evidence of the Yeong Wo cemetery remains today.

Spiritual Life

Associations provided for the spiritual and religious needs of their members. As early as 1855 Folsom Chinatown had two "churches," one on Block 10 and one on Block 11 (Sacramento County 1855). In December, 1865 the *Folsom Telegraph* reported:

The Celestial portion of our community, dedicated their new temple on last Thursday -- Many strange looking images were placed upon their altars. On one side of the altar, there was a picture representing a dragon, on the other side was a tiger. At the entrance there was a representation of his Plutonic Majesty leading a tiger. Goats, pigs, chickens and numerous other edibles were placed upon the altar for their hungry gods to feast upon.

Despite frequent fires, the Chinese rebuilt and maintained their churches, or joss houses, into the twentieth century.

Concern for the Spirit After Death

Receiving proper care after death was a major concern to Chinese sojourners living far from their native land and family. Accounts in miners' diaries and newspapers detailing Chinese funerals, care of the dead, and burial practices began appearing as early as 1849. For example, one Euroamerican miner working in the Folsom region observed that after a Chinese miner drowned on the North Fork of the American River in 1850, his countrymen put gold dust in his mouth and hands and buried him. Four weeks after the burial the remaining members of the dead man's company came down to the grave, bringing boiled beef, pork, a dozen oranges, raisins and some brandy. They placed the food on the grave, burned cakes beside it, and shared the brandy with the Euroamerican on-lookers (Forbes 1850).

This attention and respect for the dead is deeply rooted in Chinese culture. Two traditional Chinese ceremonies annually honor and tend to relatives' spiritual afterlife. During the Pure Brightness Festival (*Ch'ing Ming* or Chinese Memorial Day) the family elder ritually sweeps the graves of relatives with a willow branch, believed to repel evil spirits. Once the grave is swept, the family cleans and removes weeds growing on the grave mound. Dishes of cooked food, such as roast pork, are placed before the grave, then wine is poured over the grave. As incense sticks, red candles, paper money and paper clothing are burned to send to the deceased in the spirit world, exploding firecrackers create confusion to hopefully stop evil spirits from pursuing the deceased. Following the ceremony the food is removed and eaten at home. This festival usually occurs during the spring, in the third month of the Chinese calendar (Chinn 1969:76; Culin 1887:195).

The second festival is celebrated on the fifteenth day of the seventh moon as relatives make their second visit to their family graves. This Spirits' Festival (*Shao'!* or "burning paper clothing") is described by Chinese historian, Thomas Chinn as:

the day the dead were believed to return to roam at will, or to visit living relatives. And since the spirits must have money to travel, more paper money and paper clothing was transmitted by burnt offerings than at the *Ch'ing Ming* festival [Chinn 1969:77].

Associations usually provided for the burial and later return of their members' remains to China, where their families would attend to their needs in the afterlife. Associations also frequently erected shrines within their cemeteries in America to meet the spiritual needs of the deceased before their remains were hopefully one day returned to China. These shrines were used extensively during *Ch'ing Ming* for burning incense and other offerings (Chinn 1969:77).

The patriarch of Folsom's Chan family, Chin Tock Oak, came from Toishan district in China, a member of the Sze Yup Association, and therefore he and his descendants used the Chung Wah cemetery. The Chan family celebrated *Haung Tien*, loosely translated as "Climb to Heaven" in the spring and autumn of each year. In this ceremony, the family would boil a whole chicken, with head and feet still attached, and take the chicken with boiled eggs, Chinese whisky and beer to the cemetery. Occasionally the family would travel into Sacramento or San Francisco to buy special Chinese foods, like leechee nuts, unavailable in Folsom. In later years, they also brought non-Chinese foods. The elder male would put the food near the head of the grave mounds of family members, pour whisky or beer over the grave, and talk to the deceased. He would also burn paper money and punks, lighting them three at a time, to send as offerings to the deceased. Some punks were thick, some thin, some red and some waxy, each conveying a different kind of message (G. Chan, Jr. 1994).

By custom, the deceased was buried in a wooden coffin in a shallow grave, about two feet deep. An identification marker was often placed in the coffin, and sometimes on the grave mound itself. This marker provided verification of the identity of the remains when the body was exhumed after a period of five or more years for return to China. Identification markers consisted of either a brick painted or etched with the deceased's name, a marked slip of paper in a bottle, or an above-ground wooden marker (Askin et al. 1980:11-12; Minnick 1988:291-292, 1994).

Professional exhumers from association headquarters in San Francisco periodically traveled to outlying Chinese communities to conduct exhumations. After ensuring all the deceased's bones had been properly cleaned and accounted for, the skeleton was reassembled in a crouching position and placed in an urn or small box. Sometime after the turn of the century, remains were only returned to China if relatives existed to pay the high costs of exhumation permits, shipping, and reburial (H. Chan, Sr. 1981; Minnick 1988:291-292). Otherwise, the urns were reburied in the cemetery.

One account of a nineteenth-century exhumation at Chinese Camp in Tuolumne County serves to illustrate the ceremony that surrounded this procedure. Paden and Schlichtmann (1959:137-138) quote Mr. Edwin Harper's story as follows:

I remember when a boy, that a group of us used to watch a certain Chinaman when he came here from San Francisco. He was a priest or some important official. We would hide in the bushes to watch the priest with several others as they walked slowly, in single file, to the graveyard. They wore fine Chinese clothing and hung bright-colored banners on the shrubs around the grave they had come to open. Then they chanted and gestured for a time. The officials brought Chinese laborers to do the actual digging but they were most particular to see that every tiny bone was gathered. A piece of silk was spread at one side of the grave and bones placed on that. When every single one was found and accounted for they were placed in a small wooden box which was given to the Chinese priest with a good deal of ceremony and they all went back to Chinatown.

Paden and Schlicktmann continue to relate that the box was always the length of a human thigh bone and that the bones were scraped clean and sealed, with the queue carefully placed on top of the bones.

The Sam Yup Association began exhuming and returning remains from California to China in 1858, again in 1863, and then every ten years thereafter until the 1910s (Lai n.d.). No records exist for exhumations in Folsom, although apparently they did occur until the late 1910s (Askin et al. 1980:12; G. Chan, Jr. 1994; H. Chan, Sr. 1981; Lai 1994). By periodically removing remains, hundreds of Chinese could be buried in a relatively small cemetery without running out of space.

Accounts of Funerals in Folsom

Accounts of Chinese funerals in Folsom offer a vivid image of the spiritual vitality of the Chinese community. Limited funds made most funerals simple affairs. A few friends of a miner or laborer would follow his coffin to the grave, scattering paper money along the way in the hopes of distracting evil spirits from bothering the dead. The noise from firecrackers, a fiddle or a gong would fill the air to scare away those spirits (Minnick 1988:288). Such was probably the case with Ah Tan, a miner who died in Folsom after a brief illness in 1889. He was buried "with the characteristic ceremonies of his race" in a fine coffin purchased from the Folsom undertaker, Jacob Miller. The coffin had been purchased by a Chinese merchant, presumably acting on behalf of the deceased's association (*Folsom Telegraph* 30 November 1889).

The elaborate funeral of Ah Chung, a merchant with Num Sing and Company, was described in the *Folsom Telegraph* on September 23, 1871 as follows:

His remains were followed to the grave by a large number of his countrymen in carriages and on foot. A son of the deceased who seemed almost overwhelmed with grief, was dressed in white, with a white cloth over his head, and carried a pan of ashes in front of him, and was supported in a bent position by a Chinaman on each side of him and presented a singular appearance.

The Chinese community conducted traditional funerals at least as late as 1910. The coffin was transported in a horse-drawn hearse from the 900 block of Sutter Street to one of the Chinese cemeteries. Some mourners walked along with the wagon, while others rode with the coffin. As the procession moved west down Sutter Street, the Chinese tossed food, small change, and red paper with holes in it along the way (F. Hill 1994). Strewing perforated strips of red paper was a common element of Chinese funerals (Minke 1960:10).

When Chin Oak, a well-known merchant and resident of Folsom for 65 years, died in 1924, his eldest son, George, washed his body and placed him in a coffin. The ceremony and casket were both simple. A Chinese priest, who tended the local joss house, conducted the ceremony dressed in a black gown and black hat. Presiding over Chinese funerals provided the priest's sole income, amounting to two or three dollars for Chin Oak's service in 1924. Many local residents, Asian and non-Asian alike, came to pay their last respects to this pioneer of Folsom's Chinese community (G. Chan, Jr. 1994; H. Chan, Sr. 1981; J. Chan 1994).

The Chinese used two locations in Folsom for burning the deceased's belongings needed for their journey in the afterlife, such as their clothes, shoes, and blankets. A finely-built brick oven with steel doors stood near the temple on the Yeong Wo property on Block 17. As the belongings burned, smoke rose out of a large exhaust pipe to accompany

NATIONAL REGISTER OF HISTORIC PLACES CONTINUATION SHEET

Section number 8 Page # 9

Property Name Chung Wah Cemetery

the deceased's spirit (H. Chan, Sr. 1981). At the Chung Wah Cemetery, relatives or friends of the dead person burned their belongings in a large depression located just inside the main entrance (G. Chan, Jr. 1994).

Identification of Chinese Burials

It is unlikely that the names and number of all Chinese and Chinese-Americans buried in Folsom can ever be discovered. The community of Folsom kept no death records, unlike Sacramento where city officials and cemetery owners maintained comprehensive records of deaths and burials dating back to 1849.

Jacob Miller, the founder of Folsom's sole funeral business from the 1860s to the present, retrieved those Chinese discovered dead or those who died from unnatural causes. He also signed most coroner's inquest reports. The Miller family funeral business sold coffins from their store on Sutter Street to the Chinese and let their hearse for conveyance to the cemetery. Unfortunately the Miller family kept no written business records (Askin et al. 1980:10; Claney 1994).

The *Folsom Telegraph* published notices of Chinese deaths, but rarely included given names prior to the 1890s, unless the deceased was well-known by the non-Asian community. The *Folsom Telegraph* notices indicate that burials were occurring in the Chinese cemeteries at least by 1871, although interment probably began in the 1850s. The Sacramento County Recorder only began issuing death certificates for Folsom after the Chinese community had dwindled to a mere handful. Three death certificates for Chinese burials in Folsom cited in Askin et al.'s report on Folsom's Chinese cemeteries are for Chin Him, 9-11-1916, Wing Sing Wo, 11-20-1923, and Charlie Heoung, 2-28-1935 (Askin et al. 1980:10). The death certificate of Wing Sing Wo, also known as Chin Oak, gives the date of death as November, 1923, his grave marker notes that he passed away in 1924. The majority of deaths in the Chinese community after 1893 were the result of old age.

As Chinese immigration and population in California declined, the original Chinese Six Companies (a composite of district associations and guilds) were succeeded by the Consolidated Chinese Benevolent Association or *Chung Wah Wui Kun* in Chinese (Minnick 1988:273). While the Chung Wah Association remained strong in California until the 1950s, no membership records have been found for Folsom. The Sam Yup Association does not know when its membership in Folsom ended, although Sam Yup historian, Him Mark Lai, believes it likely ended in the 1920s as the aging bachelor community died off or moved away (Lai 1994).

Chung Wah Cemetery

Records of property tax assessments and deeds usually provide concrete evidence of land ownership and use, but this is not the case with the Chinese. Due to prevailing prejudice, the transient nature of the Chinese sojourner in California, and lack of funds, among other reasons, it was common for Chinese associations and business people to rent property from non-Asians rather than purchase it themselves, or to rent for a while and then purchase the property. It is reasonable to assume that lots purchased for cemeteries were already being rented for that purpose prior to acquisition of title. After passage of the Alien Land Acts in 1913 and 1921, Chinese were no longer able to purchase land, but retained title to land acquired before 1913.

The first recorded Chinese burial in 1871 occurred 14 years before the Chung Wah Association acquired their land. There were certainly Chinese deaths in or near Folsom as early as 1850 (Forbes 1850). While some deceased may have

Property Name Chung Wah Cemetery

been transported by their association to burial sites in the New Helvetia or City cemeteries in Sacramento, the majority were likely buried in Folsom. Considering the intensive mining occurring in this area, as well as the great importance Chinese spirituality places on the afterlife, it is unlikely that Chinese were buried in isolated graves.

Comparative analysis of other Chinese burial sites further supports the use of the plot as a cemetery long before its purchase for that use. Throughout Sacramento County, Chinese were buried in segregated sections of non-Asian cemeteries. This did not occur in Folsom. The Chinese who died in Folsom before 1883 were not buried in other Folsom cemeteries, were probably not interred in isolated locations, and most likely were buried in devalued land already mined out well above seasonal river flooding levels, precisely the location of the Chung Wah site.

The Chung Wah cemetery is the larger and probably older of Folsom's Chinese cemeteries. Evidence suggests the present cemetery, along with another adjoining six lots, comprised a large Chinese cemetery dating from the gold rush. Initially, the Natoma Water and Mining Company, and its descendant, the Natoma Vineyard Company, owned the land, a tiny segment of the company's tens of thousands of acres of property. Although there appear to be no records of the Natoma Company leasing the land to the Chinese for a cemetery, several factors suggest that this may have been the case. First, the Natoma Company relied heavily on Chinese labor for its canal and ditch operations, as well as its ranch and vineyard businesses. Chinese use of two acres for burials, out of the company's more than 32,000 acres, would probably have been ignored, especially on land mined out early during the gold rush. Secondly, the Chung Wah cemetery is near Folsom's non-Asian cemeteries, which date to the 1850s. Chinese burials in the motherlode region were typically located in a segregated remote section of non-Asian cemeteries. The Chung Wah is close to the other cemeteries, but more remote.

The site's irregular shape suggests it was haphazardly planned, perhaps beginning with a few Chinese burials and then spreading out as more Chinese died in Folsom over the years. When the Folsom Development Company deeded the present site to the Chung Wah Company in 1906, the site was referred to on the deed as the China Mission cemetery, suggesting its pre-existence as a cemetery. When fire consumed the last Chinese temple, located on Block 11, in Folsom in 1913, the *Folsom Telegraph* referred to the structure as the "China Mission #1," stating it had stood since the 1850s (*Folsom Telegraph* 20 June 1913; Plimpton n.d.). The similarities in their names suggests they may have been related.

Concrete evidence for Chung Wah Company ownership of a cemetery begins in 1885. On October 6th, James S. Meredith deeded Lots 6 through 11 of Block 71 to Chung Wah for \$190 (Sacramento County 1885b). Previously, the only recorded owner was Charles G. W. French, an attorney who left Folsom to set up a practice in Sacramento after the death of his wife, Abby Hewes (Sacramento County 1875). French owned numerous lots in Folsom as investment property until his death in 1892 (Sacramento County 1892).

The Chung Wah Company owned no other land in Folsom. During this period the Sam Yup Company rented property for a store and possibly a hall, while other buildings identified as tongs (or associations) were prominent fixtures in Chinatown (Sacramento County 1893a, 1893b, 1900). It is probable the Sam Yup and other associations, such as the Sze Yup, combined resources to purchase the Chung Wah site as a cemetery for joint use.

In 1906 the Chung Wah Company exchanged Lots 6 through 11 of Block 71 for the present 2.616-acre site, then owned by the Folsom Development Company. C. G. Lang, listed as president of Chung Wah Company, acted as agent for the association. Presumably provisions were made for the removal of any remains in Lots 6 through 11 before the company dredged Block 71 in 1907 and 1908 (Sacramento County 1906a, 1906b).

As association membership was eclipsed by family and community identification, Chinese-American families in Folsom continued to bury and honor their relatives in the Chung Wah Cemetery. The last known burial in the site occurred in 1946 when Chin Lai Shee was interred there. The mother of Marie Chan, George Chan, Sr.'s wife, had lived for years in San Francisco. After she died there, the Chan family brought her to Folsom for burial (G. Chan, Jr. 1994; H. Chan, Sr. 1981).

For decades the Chan family and other families with friends or relatives buried in the Chung Wah Cemetery have celebrated holidays that honor and tend to the needs of the dead; each generation learning from the last, passing on and adapting the rituals to their times. Today, George Chan, Jr. is the trustee and guardian for the cemetery, a natural extension of the family association passed down through the Chung Wah Company lineage.

Comparative Analysis

Folsom's Chinese cemetery is unique in Sacramento County. All other known Chinese burial sites lie within community cemeteries shared by Asian and non-Asian alike. There appear to be no other separately owned and operated Chinese cemeteries in the county. Of particular note is the proximity of two Chinese cemeteries in Folsom, indicating the strong identification with district associations from China, as well as the vitality of the associations.

In Sacramento, the New Helvetia and City cemeteries both contained Chinese sections dating back to the gold rush. The Record of Deaths book for Sacramento City, 1850 to 1870, lists the first Chinese death in Sacramento occurring on September 25, 1851. This entry lists this individual as "Chinaman," native of China, no age, no former residence, no cause of death, no attending physician, and cites a burial location in either the New Helvetia or City Cemetery that can no longer be traced due to plot renumbering.

Chinese district and family associations bought large "family" lots for their member interment. For example, in 1891, Sow Yuen Tong & Co. purchased a 24-foot by 60-foot lot for \$270. Burial registers list Chinese burials in the City Cemetery as early as 1865. Chinese associations that purchased lots between 1867 and 1874 alone include Ming Yueng Co., See Yup Co., Sam Yup Co., Foulk Hing Tong Co., Hop Wo Co., Coy Chew Co., Chong Chaw Co., Hong Chew Co., Young Chow Co., and Quong Chew Co. (Sacramento, City of 1847-1955, 1850-1870, 1871-1874).

District associations periodically exhumed remains for return to China beginning in the 1850s. In 1955, Chinese remains were disinterred from the New Helvetia Cemetery when that cemetery was de-activated. Those remains were either returned to China or reburied in East Lawn Cemetery and marked with wooden markers. (A. Lee 1994).

The earliest Chinese burial sites in the City Cemetery, the "tiers," have been modified and the bodies moved to the southern corner of the cemetery. The Chinese association lot purchase records indicate that the Southside section of the City Cemetery became the Chinese section of the City Cemetery after 1900. No monument, altar or shrine was ever erected in this section. The Odd Fellows purchased the adjacent land from the City Cemetery in 1905 and retain its ownership to the present day. The Masonic Order bought more adjacent land in 1906. Together they presently maintain the appearance of the Chinese section (Bettencourt 1994).

In communities outside Sacramento, this pattern of burial in a section of the larger community cemetery continued. Elsewhere in the foothills, communities actively excluded the Chinese from the main cemeteries. Chinese can be found in separate areas set aside outside the main confines of the cemeteries (Bettencourt 1994).

The Elder Creek District Cemetery, between 65th Street and Power Inn road on Elder Creek Road, contained a Chinese section (Hayse 1994). Franklin had a Chinese section in their larger cemetery (L. Chan 1994; Hayse 1994; P. Lee 1994). The large Chinese community of Locke never had its own Chinese cemetery (P. Lee 1994). There are also no Chinese/Chinese-American burials in Courtland (L. Chan 1994).

In the nearby communities of Rio Vista, Franklin, and Stockton, all outside of Sacramento County, most Chinese burials exist only in the regular cemetery, not in exclusively Chinese cemeteries (P. Lee 1994). However, at least two exclusively-Chinese cemeteries outside of Sacramento County are known to exist. One is located on Matthews Road in French Camp. This private cemetery was founded in the late 1920s by Stockton's Chung Wah group and is still in use. The leaders of Chung Wah in that area conduct "tomb sweeping" rites twice every year (Minnick 1988:290). Another is located in Auburn. This cemetery, located in behind a gravel plant off Highway 49, still contains the oven used for burning belongs and offerings for the deceased (Costello 1994; Minnick 1994). In addition, there were three small Chinese cemetery sites at Virginiatown in Placer County. Two were exclusively Chinese and are on two separate hills. The third is smaller and an oral history map refers to this third cemetery as "the woman's Chinese cemetery" and also notes that the Sickles, a Euro-American family, were buried there. Apparently, all bodies were removed from all three cemeteries (exhumation pits are evident) and no associated features remain (Farnscomb 1994).

PERIOD OF SIGNIFICANCE

While it is likely that the cemetery was in use in the nineteenth century, there are no documents to support this supposition. Therefore, the period of significance begins in 1906 when Chung Wah Company acquired legal ownership of the plot in a trade with the Folsom Development Company. The last burial occurred in 1946 with the interment of Chin Lai Shee, ending the period of significance. Annual ceremonies, like *Ch'ing Ming*, continued long after 1946, but no burials or planned exhumations (other than those associated with the 1967 vandalism) occurred after this date.

STATEMENT OF SIGNIFICANCE

The Chung Wah Cemetery in the City of Folsom is eligible for the National Register of Historic Places under Criterion A, Consideration D and G. As the last visible reminder of the viable Chinese population that once inhabited Folsom, the cemetery acts as a link to the rich ethnic heritage of the town. The burning pit, shrine remains, and other features also attest to the spiritual value Chinese place on the afterlife and the permeation of religious beliefs into all aspects of their culture. One of two district cemeteries in town, the Chung Wah is unusual for its strong association ties and actual Chinese ownership. Elsewhere, Chinese shared a portion of Anglo cemeteries and other cemeteries in the county no longer contain traditional elements like the Chung Wah, increasing its importance on a local level.

Folsom's Chinese community consisted of stores, restaurants, barber shops, gaming houses, gardens, homes, churches, and association halls that serviced the hundreds of miners working around Folsom. As a commercial transportation center for a vast mining area, Folsom played an important role in the life of Chinese miners or laborers from the 1850s until around 1910, when the population rapidly declined. District associations were extremely important, providing a link to the traditional culture and to relatives back home in China, a social center for workers far from home, and a guarantee that one's remains would be properly taken care of after death. Regular exhumations, with remains sent home for burial and care by relatives, was an important role fulfilled by the association.

The last burial occurred 49 years ago, in 1946, marking the end of the period of significance and qualifying the cemetery under Consideration G. The significance placed on the burial place of relatives in Chinese culture is seen in the observation of yearly *Ch'ing Ming* ceremonies by Folsom's Chinese-American residents for many years after the termination of the Chinatown. The cemetery remains in the care of the Chan family, the last of Folsom's original Chinese families still residing in town. Its natural setting, its location in a remote area on the outskirts of town, the intact features, and the sense of time and place that pervade the site mark a high level of integrity and increase the historical value of the site.

Property Name Chung Wah Cemetery

VERBAL BOUNDARY DESCRIPTION

The cemetery encompasses 2.616 acres contained within an irregularly-shaped parcel. The parcel includes a portion of Lots 7 and 8 in Block 70 and continues south and west on unparceled land to the boundary of the Bureau of Reclamation's Lake Natoma holdings. The boundaries are depicted on attached Map 8, labeled "Chung Wah Cemetery Boundaries."

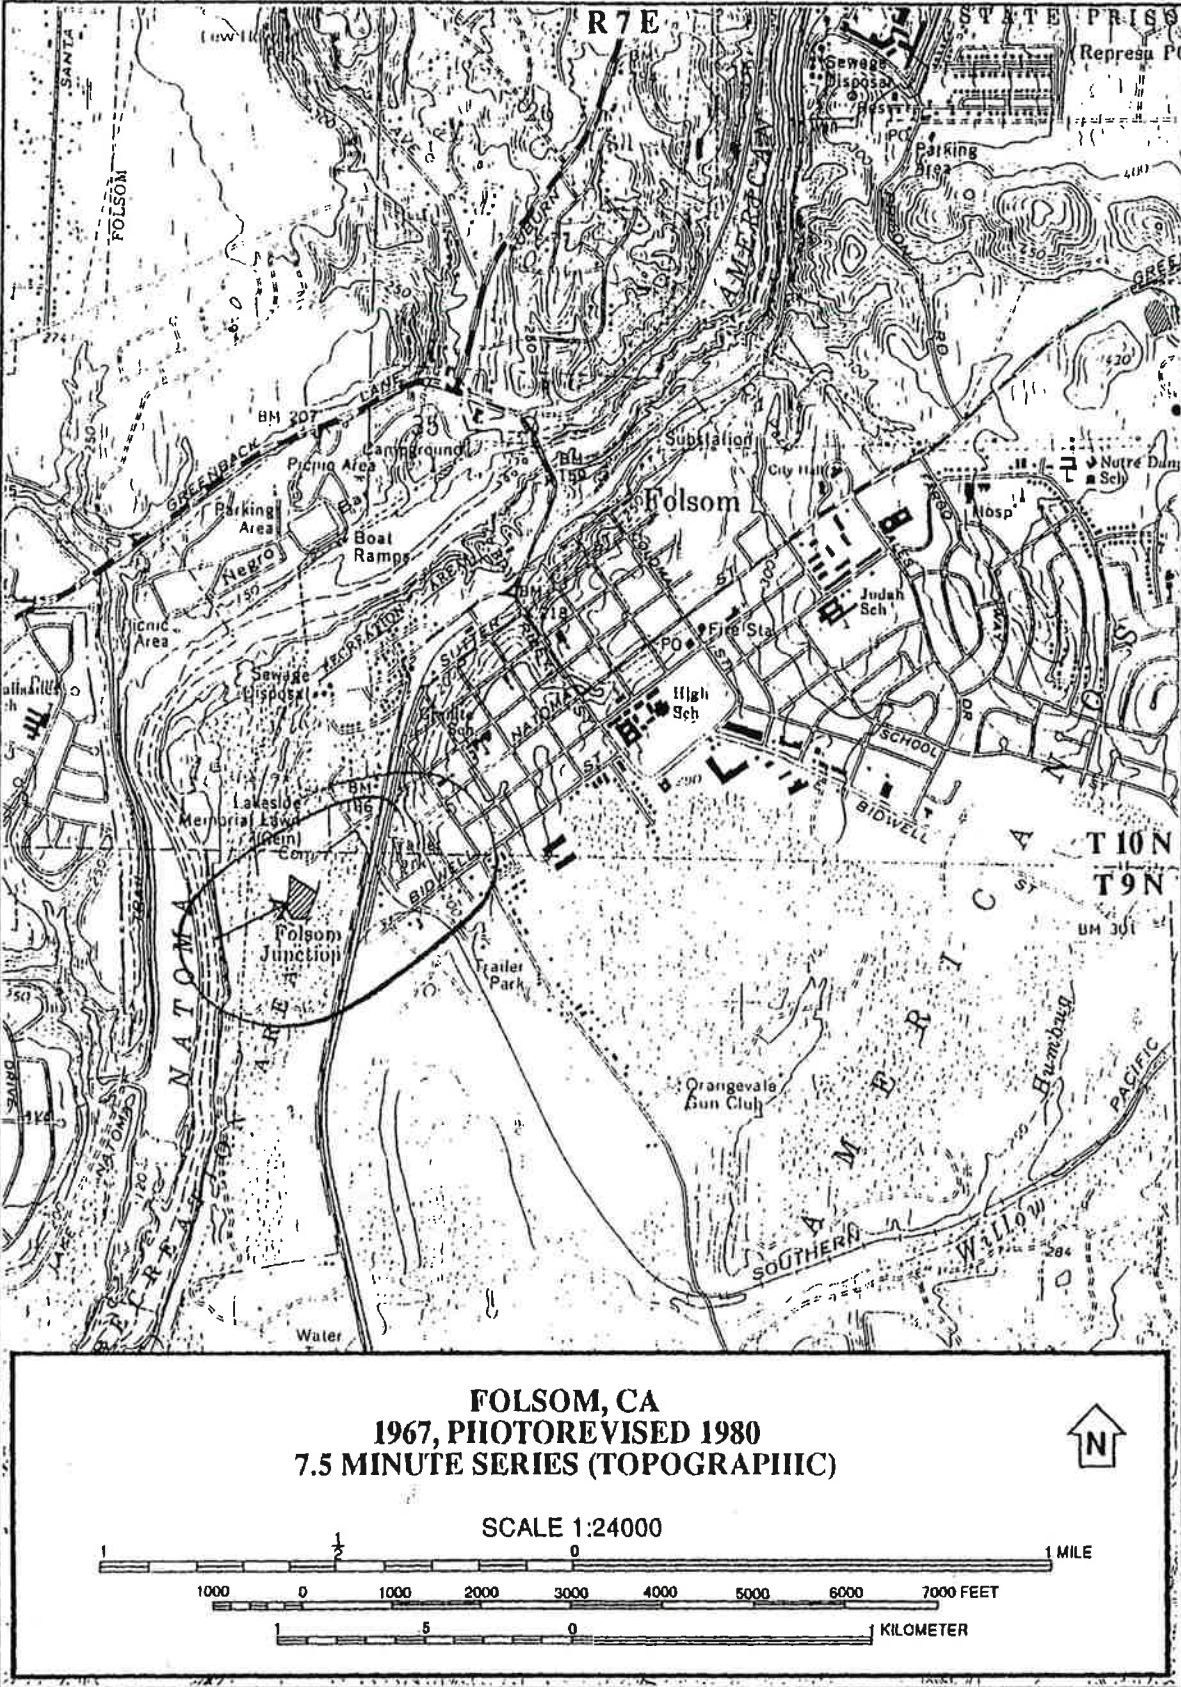

BOUNDARY JUSTIFICATION

The boundaries delineated for the Chung Wah cemetery include the area outlined on the 1906 land deed transferring this property to the Chung Wah company for use as a cemetery. The boundaries encompass the area currently held in trust under the guardianship of George Chan. All related cemetery features are contained within the fenced boundaries.

Introduction

During the State of the City Report delivered at the January 14, 1997 City Council meeting, Mayor Glenn Fait proposed that Council convene an ad hoc committee of representatives from historic preservation groups and others with similar interests in City of Folsom. The purpose of this committee was to develop a comprehensive Historic Preservation Master Plan to ensure that historic preservation is given proper consideration as the City continues to grow.

On March 25, 1997, the City Council passed and adopted Resolution No. 5346, a resolution establishing an ad hoc committee for the preservation of Folsom's history to develop a comprehensive historic preservation master plan. Mayor Fait appointed 12 committee members representing different aspects of Folsom's history.

This committee began meeting on November 19, 1997 in order to establish the plan, along with an inventory of cultural resources to present to the City Council. The following is that plan and inventory, along with recommendations for preservation action.

The committee's intention was to create an inventory that shall be updated over time. Listing on the inventory shall be accessible to all members of the community using an inventory nomination or registration form. Standardized forms will be available through the City of Folsom Planning, Inspections and Permitting Department (PIP) and accessible to the general public. Completed forms will then be submitted for review by PIP staff and then to the Historic District Commission for determination of eligibility.

The current Cultural Resources Inventory and a complete set of registration forms, including maps and photographs, shall be kept by City of Folsom PIP Department. Archaeologically sensitive or historically sensitive information will be considered as such and held back from public distribution if that distribution might endanger the resource through vandalism or theft, or for privacy considerations.

Goals and Objectives

- *Mission Statement*

The City of Folsom by this Master Plan seeks to preserve and promote its rich and colorful historical heritage by protecting its cultural and historical resources and educating the citizenry and general public of its past.

- *Ongoing Objectives*

1. To **identify** historical resources, including sites, structures, archaeological resources, documents, and artifacts,
2. To **protect and preserve** these resources for future generations,
3. To **educate** the public about these resources through interpretation and exhibition in the hopes that knowledge will result in a greater respect for and appreciation of these resources,
4. To **promote** Folsom's history through tourism and local programs in the hopes of enriching the city through cultural and economic development.

Area of Preservation

The City of Folsom shall extend this preservation policy throughout the City of Folsom limits and other areas outside the city limits that were part of Folsom's historical sphere of influence, including areas such as Mormon Island, Prairie City, and Aerojet.

Objective Actions

- *To identify historical and cultural resources, including sites, structures, archaeological resources, documents, and artifacts,*

An inventory of cultural resources shall be maintained and available to the public by the City through the PIP Department. This list shall be derived from the inventory submitted herein, as well as extant publications and reports, and updated systematically with the receipt of new and ongoing environmental documentation and historical publication. A registration or nomination form for applying and adding to the inventory shall be adopted so that the City, individuals, and organizations will be able to apply for listing of a resource with the City of Folsom.

- *To protect and preserve these resources for future generations,*

The City of Folsom shall consider the protection, preservation, documentation and/or recordation of cultural resources on the inventory when decisions affecting these resources come before the City. This includes notification of the Planning Commission, or any other decision-making body, of a resource's inclusion in the inventory as part of that body's staff report. The City, when possible, should consider the acquisition and storage or deposition of artifacts or resources when feasible or practicable.

The City of Folsom, in seeking to preserve the history and development of the municipality, shall maintain its system of records management whereby City documents are regularly cycled from active use, to inactive storage, to archival storage. The City shall designate an archival storage facility for said purpose.

These documents should at a minimum include the records of the City decision-making bodies, including the City Council and all commissions and public meetings or hearings. Other records should include the logs of the Police and Fire Departments, the PIP Department maps, plats, and other documents that will help plot the history and development of Folsom. Copies of the Department of Parks and Recreation flyers, brochures, and memorabilia should also be archived.

- *To educate the public about these resources through interpretation and exhibition in the expectation that knowledge will result in a greater respect for, recognition of and appreciation of these resources*

The City of Folsom shall recognize and support the important role of education and promotion in meeting its goals of preservation and protection. Further, the City shall recognize and support the importance of our heritage in the economic and cultural development of the community. The City shall suggest ways to make information about the resource interesting and readily available to the public and to promote tourism.

- *To promote Folsom's history through tourism and local programs in the hopes of enriching the city through cultural and economic development.*

The City shall continue to promote its cultural resources through tourism, events, and special programs. The City shall also cooperate with local historical interest groups to meet all the goals of the Historic Preservation Master Plan.

Cultural Resources Inventory

- *Processes for Applying to and Maintaining the Inventory*

A Cultural Resources Registration or Nomination Form shall be completed and submitted to the PIP Department staff for consideration. The PIP Department shall apply the criteria above in determining whether or not the resource appears to be eligible for the Inventory. The PIP Department shall then submit all applications with their recommendations to the Historic District Commission.

The Historic District Commission shall then consider the application and determine if it is eligible for listing on the Inventory. If an application is determined ineligible by the committee, the applicant may appeal to the City Council for consideration.

Responsibility for maintaining the inventory will be assigned to the Historic District Commission. PIP staff shall provide staff support to this committee. New additions to the Cultural Resources Inventory shall be forwarded to the Planning Commission for consideration in actions before that commission. PIP shall be responsible for notifying the Planning Commission of any cultural inventory listings in active project areas as part of its normal staff report to commissioners.

Listing on the City of Folsom Cultural Resources Inventory does not grant any special privileges or impose any restrictions on private property rights. Rather it recognizes the resource as significant in Folsom's cultural and historical heritage and may assist the property owner in obtaining awards or financial benefits from outside agencies. Listing may also grant a priority to a resource in applying for City of Folsom Redevelopment Agency funding for preservation or promotion. Listing may also provide for application of the more flexible Historic District Building Code to structures outside the Historic District, if the owner of the property so desires.

PIP shall notify the owner of the resource that it is being considered for nomination to the Inventory. The owner shall be provided with a copy of the application and given 90 days to comment on the nomination. No property shall be listed on the Inventory over the notarized objection of the owner. However, properties may still be registered as eligible for the Inventory.

Public Education

The City shall make available to the public free of charge a general information handout on the City of Folsom Cultural Resource Inventory, its impacts, and procedures for distribution to the general public (see Appendix B for example). The City shall also make available free of charge an instructions packet for individuals interested in nominating a resource to the inventory.

Mapping

A map indicating the location of the resource shall be submitted with the nomination or registration form. In order to establish standardization of the inventory and to avoid confusion, the applicant shall use the most current USGS 7.5' (minute) series topographical quadrangle map with the resource indicated in pencil, not ink. Coordinates of the resource shall be written in the margin of the map.

Identification

Identification of the resource shall be accomplished using the nomination form, inventory, USGS map, and photographic documentation. Black and white photographs and negatives shall be submitted to the PIP once a resource has been accepted to the inventory.

ADDITIONAL RECOMMENDATIONS FOR IMPLEMENTING THE GOALS AND OBJECTIVES

General Public Education

- A coordinating council/committee could be established to follow upon the implementation of these recommendations. Said council/committee would be representatives from the various historical groups and possibly city staff. This body would seek to coordinate the efforts of their representative groups by reporting upcoming events, issues and concerns and hopefully coordinating event planning and mutual support.
- **Initiate Historic Tours.** The Department of Parks and Recreation could institute periodic tours of the following: historic district residences, historic cemeteries, river-front nature trails in the following segments (1) from the zoo to the rainbow bridge focusing on the geologic history of the ravine, the natural botanical array, and the ditch and canal; (2) from the powerhouse to Lake Forest Café or Willow Creek Park access focusing on the Nisenan history, Chinatown history, Negro Bar mining town, Texas Hill mining town, placer bedrock sluicing and Natoma Company dredging tailings; (3) from Rainbow Bridge east along the bike trail on the north bank discussing the original toll bridges, the Stockton Flour Mill, Folsom Prison, and Folsom Dam. Similar tours conducted in kayaks or canoes could be developed on Lake Natoma in the same general configurations in conjunction with kayak rental facilities already in operation at Negro Bar State Park.
- Install a Historical Display Area in public waiting areas or lobbies of City Hall for changing historical exhibitions and notice of upcoming historical promotion events.

- Organize Folsom History events commemorating significant periods in Folsom's history (i.e. inauguration of the SVRR, etc.). Themes could change annually (i.e. Chinese history year, railroad history year, etc.) or be fixed (founding of Folsom City) and could include an historical theme parade, like the former Pioneer Days parade. Schools, community groups, and residential subdivisions would be encouraged to enter floats and entries with a theme relevant to the history of Folsom.
- Encourage local merchants and restaurants to name products and menu items after specific or general aspects of Folsom's past (i.e.: the Leidesdorff Burger, etc.)
- Install vista points at various overlooks in Folsom such as at top of Folsom Point (formerly Dyke 8) entrance looking south and southeast, another at the Folsom Dam Overlook, another near the new high school site, also at the Rainbow Bridge/ Historic Trestle Bridge site.
- Create and distribute public brochures, signage, and other materials for public information.
- New development street and project names should, if possible, have an historical linkage to the project area under development. These could be ranch names, local ditch or mining site names, historical personages, or general historical land use of the area.
- Establish Historic District Signage, such as a standardized program for residents of the historic district to apply to the City for a bronze or some other kind of sign identifying the history of their house. These would be keyed into a walking tour brochure, self-guided.
- Develop a Ranch Center at the Broder Ranch property. Move historical buildings from the Wilson Ranch to this center for historical interpretation/living history of Folsom's cattle ranching, farming/agricultural, and rodeo history. Site could also develop equine center for recreation and historical interpretation.
- Establish appropriate archival storage facility for record storage

Youth Programs

- Establish essay contests, like a local history day program, judged by City officials and awarded through a monetary scholarship or award and plaque (\$100 or less). The winning essay could then be published in the Folsom Telegraph, the City of Folsom Newsletter, or some other local periodical.

- Consider creating an Official Folsomite Card program: This program is designed to engage families (the greater majority of new Folsom residents) in actively learning about Folsom's history together. Children participating would ask the Department of Parks and Recreation for an application to become an official Folsomite. The application would include a general knowledge test and a list of historical sites in Folsom with a check-off list. The child would be required to pass the general knowledge test and visit three local sites of historical interest. The signature of an adult, either a parent, museum personnel, etc would verify visits. The test and visit list would then be returned to the Department of Parks and Recreation. The child would receive a business card-size "Official Folsomite" card and thereby become card-carrying Folsomite. This activity would encourage parents to spend their limited leisure time actively learning about Folsom.

APPENDIX A

DETERMINING ELIGIBILITY FOR CITY OF FOLSOM- CULTURAL RESOURCES INVENTORY

DETERMINING ELIGIBILITY

In order to be listed on the inventory, resources need to meet a level of significance within Folsom's history. By adopting the Secretary of the Interior's standards for the National Register of Historic Places to a local level, it is possible to establish a set of criteria for inclusion on the inventory.

Cultural resource significance is evaluated in terms of a resource's eligibility for listing in the National Register of Historic Places (36 CFR 60.6 [48 R 46306]) as outlined below.

The quality of significance in American history, architecture, archaeology, and culture is present in districts, sites, buildings, structures, and objects of state and local importance that possess integrity of location, design, setting, materials, workmanship, feeling, and association; and,

- That are associated with events that have made a significant contribution to the broad pattern of our history; or
- That are associated with the lives of persons significant in our past; or
- That embody the distinct characteristics of a type, period, method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction, or;
- That has yielded, or may be likely to yield, information important in prehistory or history.

Sites younger than 50 years, unless of exceptional importance, are not eligible for the National Register.

An integral part of assessing cultural resource significance, aside from applying the above criteria, is the physical integrity of the resource. Prior to assessing a resource's potential for listing on the National Register, it is important to understand the subtleties of the seven kinds of integrity mentioned above. To summarize a National Park Service (NPS) bulletin, entitled *How to Apply the National Register Criteria for Evaluation* (1991:44-48), the types of integrity are defined as:

- **Location** is the place where the historic property was constructed or the place where the historic event occurred;
- **Design** is the combination of elements that create the form, plan, space, structure and style of a property;
- **Setting** is the physical environment of a historic property;

- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property;
- *Workmanship* is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory;
- *Feeling* is a property's expression of the aesthetic or historic sense of a particular period of time; and
- *Association* is the direct link between an important historic event or person and a historic property.

Integrity is based on significance: why, where, and when a property is important. Only after significance is fully established is the issue of integrity addressed. Ultimately, the question of integrity is answered by whether or not the property retains the identity for which it is significant. A resource must have at least two types of integrity and meet one of the four criteria listed above in order to qualify for the Cultural Resources Inventory.

NOTE:

Guidelines and further information for determining what is or is not culturally significant are available through the National Park Service in Washington, D. C. and the State Office of Historic Preservation in Sacramento. Using these guidelines, the Commission shall seek to apply the standards at the local level, not at the national or state level, of significance. The applicant should be encouraged to seek state or national recognition if they feel the property merits that consideration.

APPENDIX B

**INFORMATION PACKET
FOR GENERAL DISTRIBUTION**

**THE CITY OF FOLSOM
CULTURAL RESOURCE INVENTORY
PURPOSE AND PROCEDURES**

TABLE OF CONTENTS

Introduction

- What is the Cultural Resource Inventory?
- Questions and Answers

The Nomination Process

- Procedures
- Appeals and Removals

Introduction

What is the Cultural Resources Inventory?

- The Cultural Resources Inventory is a guide to the City of Folsom's significant historical and archaeological resources.
- The City of Folsom has designed this program for use by private groups and citizens to identify, evaluate, register and protect Folsom's cultural resources.
- The Cultural Resources Inventory program encourages public recognition and protection of resources of architectural, historical, archaeological and cultural significance, identifies historical resources for City planning purposes and determines eligibility for Redevelopment Agency preservation grant funding.

Questions and Answers

What protection does listing in the Cultural Resources Inventory offer?

- Listing in the Inventory does not guarantee that a resource will not be preserved. Projects that will affect resources may be subject to review pursuant to the California Environmental Quality Act (CEQA). All projects carried out by public agencies are subject to environmental review (require preparation of an environmental impact report) as are projects involving privately owned properties when a permit or review is required. For questions related to a specific resource and CEQA review, please contact the local government or state agency with jurisdiction over the project.

How does the Inventory define a cultural resource?

- For the purposes of listing, a “cultural resource” includes, but is not limited to, any object, building, structure, site, area or place which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, education, social, political, military or cultural annals of Folsom. Historical resources may be eligible for listing in the inventory if they satisfy the criteria established by the City of Folsom for this program.

What are the criteria for listing a resource in the Inventory?

- While the significance criteria for the Inventory is similar to that used by the National Register of Historic Places and the California Register of Historical Resources, this inventory will document the unique history of Folsom. The resource must:
 - 1) Be associated with events contributing to the broad patterns of Folsom’s history and culture;
 - 2) Be associated with historically important people;
 - 3) Embody distinctive characteristics of a type, period, region or construction method, or represent the work of a creative individual; or
 - 4) Have the potential for yielding important information in Folsom’s history or prehistory.

How does a resource become listed in the Inventory?

Resources may be added in two ways:

- 1) Some are automatically eligible, including those determined eligible for the National Register of Historic Places, the California Register of Historical

Resources, and California State Historical Landmarks pertaining to Folsom and its historical sphere of influence.

- 2) Other resources can be nominated to the Inventory by private organizations or citizens.

Does listing on the Inventory affect property rights?

- Listing on the City of Folsom Cultural Resources Inventory does not grant any special privileges or impose any restrictions on private property rights. Rather it recognizes the resource as significant in Folsom's cultural and historical heritage and may assist the property owner in obtaining awards or financial benefits from outside agencies. Listing may also grant a priority to a resource in applying for City of Folsom Redevelopment Agency funding for preservation or promotion. Listing may also provide for application of the more flexible Historic District Building Code to structures outside the Historic District, if the owner of the property so desires.
- Cultural resources nominated to the Inventory may not be listed over the written notarized objection of the property owner. However, a resource whose owner objects to the listing may still be formally determined eligible for the Inventory. Property owners must be notified, sent a copy of the nomination and provided the opportunity to comment on the nomination. Property owners may specify that specific records of their property be confidential and not for public distribution.

What are the benefits of being listed in the Inventory?

- The Historic Building Code may be applied when the use of the Uniform Building Code threatens the historical integrity of a resource. Also, resources included on the Inventory will receive priority consideration for any funds available from the City of Folsom for historic preservation. Further, City of Folsom staff shall include a resource's eligibility to the inventory in its reports to City Council and all other decision-making bodies.

Where do I get more information on historical resources?

Further information about historical resources in Folsom can be obtained from the Folsom History Museum and Folsom Historical Society, the Folsom Chamber of Commerce, the Folsom Railroad Museum, the Folsom Prison Museum, and the Folsom Power House. These resources can also direct you to other agencies, museums, and repositories available in the region.

The Nomination Process

PROCEDURES

Cover Letter

- A cover letter must be submitted with the nomination and must include the names and addresses of the applicant and the resource owner, along with a concise statement of significance. The statement of significance should clearly list the justification for the importance of the historical resource.

Nomination Submission

- The application shall be submitted to the City of Folsom Department of Planning, Inspections, and Permitting (PIP), who will then review the documents for completion and apply the criteria to the application. PIP will also notify the resource owner within 30 days of receipt of the application. After the 90-day waiting period for owner comment, or as soon as comment is received, PIP will then forward the application and comments, along with its recommendations, to the Historic District Commission.
- The Historic District Commission will then consider and determine the resource's eligibility for inclusion on the Inventory.

City of Folsom Review

- The applicant, owner, interested parties, and the general public will be notified by PIP of time, date and location where the Historic District Commission will consider and determine the resource's eligibility. Notification will be sent at least 21 days prior to the hearing and decision. Following the hearing and decision, notification letters will be sent within 45 days to the applicant and owner(s) informing all entities of the Commission's decision and of procedures for requesting an appeal.
- PIP will notify all resource owners of the nomination within 30 days of receipt of the nomination. If the resource owner objects by notarized letter to the nomination, the resource cannot be listed in the Inventory, but can still be formally determined eligible for listing by the Historic District Commission.

Appeals and Removals

Request for Appeal

- Request for an appeal must be made to PIP in writing within 30 days of the Commission's decision. Only an error in the facts presented or an error in judgement by the Commission may be grounds for an appeal. Within 60 days of receipt of a request for an appeal, the Commission will advise the applicant if it will consider the request and, if so, the time and place where the hearing will take place. If the request for an appeal is denied, the applicant may make one final appeal in public hearing before the City Council.

Removal from the Inventory

- The Historic District Commission or its successor may remove a resource from the Inventory if the resource, through demolition, alteration or loss of integrity, has lost its historic qualities or potential to yield information or if new information or analysis shows that the resource was not eligible at the time of its listing. Requests for removal must be made to the Commission in writing and must include a detailed justification for removal, photographs, other documentation regarding the current condition of the resource, and complete ownership information. Requests for removal are subject to the same notification and Commission hearing process as those for nomination.

APPENDIXC

**CITY OF FOLSOM
CULTURAL RESOURCES INVENTORY
REGISTRATION FORM**

CITY OF FOLSOM CULTURAL RESOURCES INVENTORY REGISTRATION FORM

1. Name of Property

historic name: _____
 other name/site number: _____

2. Location

street & number: _____ not for publication
 city/town: Folsom vicinity
 state: California code: CA county: Sacramento zip code: 95630

3. City Agency Certification

As the designated authority under the City of Folsom Master Historic Preservation Plan of 1998, as amended, I hereby certify that this nomination request for determination of eligibility meets the documentation standards for registering properties in the City of Folsom Master Historic Preservation Plan and meets the procedural and professional requirements set forth in _____. In my opinion, the property meets does not meet the City of Folsom criteria. † recommend that this property be considered significant nationally statewide locally. (see continuation sheet for additional comments.)

8. Statement of Significance

Applicable Cultural Resources Inventory Criteria

Mark "x" in one or more boxes for the criteria qualifying the property for Cultural Resources listing.)

- A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B** Property is associated with the lives of persons significant in our past.
- C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D** Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply)

- A** owned by a religious institution or used for religious purposes.
- B** removed from its original location.
- C** a birthplace or grave.
- D** a cemetery.
- E** a reconstructed building, object, or structure.
- F** a commemorative property.
- G** less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance

Public Comment Letters Received After the April 26, 2022 Hearing

Folsom City Council Meeting

Additional Information Transmittal

MEETING DATE:	4/26/2022
AGENDA SECTION:	Public Hearing
STAFF REPORT TITLE	Agenda Item # 8- Appeal by Igor Semenyuk of a Decision by the Historic District Commission Denying a Conditional Use Permit for the Lakeside Memorial Lawn Crematorium project (PN 19-182) located at 1201 Forrest Street
FROM:	Community Development Department

Staff is providing the attached additional information for the above-referenced agenda item.

- Public comment letters received by Staff since the publication of the City Council staff report.

Instructions to staff: Deliver original and 30 stapled/double-sided copies to the City Clerk's Department; City Clerk's Department will distribute via email and hardcopy to City Council, City Manager, City Attorney, and City Clerk.

Council Members

Opposition to the Lakeside Crematorium

Disagreement with Primary Use

My name is Dave Higgins and I oppose the crematorium.

During the Historic District Commission hearing, 02-16-2022 Igor Semenyuk stated the crematorium is an accessory to the existing cemetery, as does the memo from Helix dated 02-15-2022.

In the Helix Memo dated 02-15-2022, page 3-4 states:

“In this case, the cemetery is the primary or principal and the applicant is proposing a crematorium as an accessory use to the existing cemetery. As proposed, the crematorium would be subordinate to area, extent and purpose to that of the existing cemetery.

It would provide a service related to and supportive to the service already provided by the cemetery and the mausoleum. It would be located on the same lot and in the same zoning district as the principal use. It would be owned and operated by the same people who own and operate the existing cemetery and mausoleum. As such, a crematory can be considered as an accessory use subject to a CUP”

So when the cemetery reaches capacity for in ground burials and the mausoleum niches are full is the crematorium still accessory to the cemetery? It is my opinion the crematorium will be the primary business immediately after approval. After more than 150 years of ground burials one would think the cemetery is full now.

I disagree. In my opinion the crematorium becomes the primary or principal use.

Using Igor Semenyuk’s data from his powerpoint presentation during the HDC hearing he states that:

70% of California’s population currently choose cremation as an disposition choice

54% of Folsom residents choose cremation.

In a letter **“Scope of Work - Installing a crematory”** dated 02-27-2020, Igor Semenyuk states:

“Since 2019, the City of Folsom has an estimated 450 deaths a year and rising as the population increases. That is an estimated 300 cremation needed to be performed every year”

What these statements tell me is that cremations are increasing. Over 50% of Folsom residents are choosing cremations. 2019 data, 450 Folsom deaths a year with 54% (243) Folsom residents choosing cremations. Igor's estimate is 300 needed to be performed. That leaves roughly 250 cremations from outside Folsom. Miller Funeral needs to import 250 corpses to the Historic District to fulfill the 500 cremations a year. Does Folsom want or need that kind of distinction?

Living directly across from the cemetery I witness an estimated one funeral a week, 52 per year. Some of the funerals are ground burials, the others are placements in the mausoleum. I speculate all the burials and mausoleum placements are not Folsom residents. However, this is still a far lower number than 500 cremations per year.

If the number of cremations exceeds the number of burials and mausoleum placements I believe the primary use becomes cremations. The cemetery is not the primary or principal entity anymore. Lakeside Cemetery becomes the accessory to the Crematory. As such, the crematory can not be considered an accessory; it becomes the principal and is not subject to a CUP. The Lakeside Cemetery does not have the ability or capacity to provide 500 burials or mausoleum placements a year. With the crematorium now becoming the new primary business I believe an environmental impact report (EIR) must be conducted.

Igor said they are running at a capacity of 500+ cremations a year now at some of their facilities. They are taking human remains from all over Northern California to their other facilities for processing. During the peak of Covid they received a temporary exception from Air Quality and were allowed to exceed the 800lbs a day, 500 per year numbers and burn more human remains.

Igor said Folsom needs a crematory so Miller Funeral Home can provide a necessary service to the community. What service and benefit is there when Miller Funeral Home begins importing human remains from the greater Sacramento Region to Folsom for processing? **How does the City of Folsom and the residents benefit?** The cemetery is tax exempt. I see no monetary gain for the City of Folsom. The only benefit is to Miller Funeral Home. There

are 16 other crematory businesses between Sacramento and Folsom. This is a very competitive industry. Igor is seeking that competitive advantage at the risk of Folsom residents.

Miller Funeral Home can find other locations outside the City of Folsom such as the commercial areas off Sunrise Blvd in Rancho Cordova, The Industrial Park off Latrobe Rd in El Dorado Hills, and Aerojet Industrial Park. There are other options. Miller Funeral Home does not want to invest in a practical manner. Miller Funeral home wants to go to the cheapest option, a metal tool shed.

Conditional Use Permit FMC 17.60.040

The establishment, maintenance, or the operation of the use or building applied for will or will not, under the circumstance of the peculiar case, be detrimental to the health, safety, peace, morals, comfort and general welfare of persons residing or working in the neighborhood of such proposed use, or be detrimental or injurious to property and improvement in the neighborhood, or to the general welfare of the City. (prior code 3122.04)

Thank You for your time and consideration

David Higgins

April 22, 2022

Council Members

Opposition to crematorium

On March 14, 2022 on I-80 near Applegate a propane delivery truck was involved in an accident which resulted in I - 80 closure and nearby evacuations for 9 hours.

My Name Is Dave Higgins. I live in the Preserves neighborhood. I'm a retired Fremont fire captain with 30 years experience, 10 of which I was assigned to the HazMat Response Team. Three years as a Training Officer.

I have a serious concern about the fire safety and egress in the neighborhood.

Miller Funeral Home wants to store 500 gallons of highly flammable propane on property. In two separate tanks. Within 13 -14 feet of a 19 ft. exhaust stack operating at over 1000 degrees.

The Fire Chief stated he didn't see a problem with this.

The problem I see with this is access and visibility

In the **Hazards Section** of the Negative Declaration it states:

“As an existing facility Lakeside Memorial Lawn maintains adequate fire response infrastructure for both current operations and the proposed project.”

I am curious as to what fire response infrastructure there is to control a fire involving 500 gallons of propane.

There are no fire hydrants on the property.

The closest fire hydrant is 650 feet away on Forrest St.

The old metal shed is there to store tools and equipment.

What is the fire Infrastructure? Is it a fire extinguisher??

In section F **Emergency Response or Evacuation Plan;**

States:

“Project site meets the fire department standards for fire engine maneuvering, location for fire engine to fight fire, rescue access to the units ???, and fire hose placement to all sides of the building.”

I don't know what the statement **“rescue access to the units” means.** Storage units, apartment units????
Maybe staff or Helix can explain.

This statement was obviously written before all the construction at the site.

This statement does not take into account the stored 500 gallons of highly flammable propane.

It does not take into account the automatic security gate at the entrance of the cemetery.

It does not take into account the metal security fence and locked gate surrounding the maintenance grounds.

It does not take into account the wooden fence hiding the propane tank pad.

It does not take into account the trees and shrubbery surrounding maintenance grounds.

It does not take into account the Dredger Tailing pile.

There is no emergency access to the propane tanks

In my opinion, Emergency response and mitigation will be delayed. Site access has become very difficult because of the obstacles created. Fire personnel will have difficulty identifying the nature of the incident because of hampered visibility.

Due to the difficulty in ACCESS and VISIBILITY fire apparatus and other emergency vehicles will be parked or staged in the street.

This would effectively block egress out of the Preserves Neighborhood trapping the community.

The difference between the Lakeside Cemetery propane tanks and the propane tanks you see throughout the City is access.

The other tanks are approachable from 360 degrees and visible from far better distances.

An Incident involving one of these propane tanks would have early detection and timely 911 notification.

People can self evacuate.

These tanks are not within 13-14 feet of an 1000 degree ignition source.

These other locations create a far safer planning and firefighting environment.

My suggestion, should this proposed project get approved, would be to require the energy source be **natural gas**. It would be extremely safer. The fuel is delivered underground and on demand. Removing the need to store 500 gallons of highly flammable propane gas near a 1000 degree exhaust stack. Natural gas would eliminate the need to have weekly propane deliveries in an already busy area, reducing the hazard further.

In the “**Environmental Setting**” section

There is a statement:

The project site not located in or near a State Responsibility area or lands classified a “Very High Fire Hazard Zone”

This is misleading. The project's environmental setting is located right next to a State Responsibility area.

Though the State Responsibility area is not classified as a **Very** High Fire hazard it is next to the recognized City of Folsom Community Wildfire Area which makes it a fire exposure.

The Community Wildfire Protection Plan, dated 2013, states the area around the City Corporation Yard and the East Natoma Lake Trail is a high fire priority for fuel management. This was proven true a couple of years ago with a wildfire at the entrance to the East Lake Natoma trail and Young Wo Circle. All we needed was a north wind (red flag weather) to make that situation worse.

So it's true it is not in a **Very** High Hazard Zone. It is near the City of Folsom High Fire Priority area. The threat of a wildfire is real.

In the webcast from the HDC hearing (at 1:34 minutes) The Fire Chief stated he had a hard time linking the evacuation wildland fire scenario and the Crematorium propane hazard scenario together.

The link is the location of the incident.

In the wildfire scenario, the incident is in the back of the neighborhood and the evacuation is directed away from the incident, past the cemetery. With the propane scenario the incident is at the evacuation exit, and will be likely blocked by emergency vehicles.

There are serious issues related to fire and life safety.

Miller Funeral Home needs to review their business plan. It would have been far cheaper to have originally invested in a zoned commercial site. Possibly in a neighboring community, close the Folsom. It would have protected the Miller Funeral Home Brand and Reputation from the frustration and anger fostered within this community and beyond.

Thank you for your time and consideration

Dave Higgins

Dear Elaine Andersen,

April 19, 2022

When the applicant first applied for the conditional use permit to start this new business – it was to burn 2 bodies a day- now it's already up to 4 bodies a day and the business hasn't even started. This application states it is putting the crematorium in an existing metal structure... a metal shed. They also are stating this is to help the growing demand for the community and of a religion where they need to be present during the cremation. I don't see how anyone can feel at peace standing inside a metal shed like this during the burning of their family member. I've seen nicer Rubbermaid sheds in backyards. So what would be next with the increasing demand?? A bigger and newer building to be put in this historic cemetery? You give an inch - they take a mile -It's the wrong location - it needs to be in an industrial area. So how big will that number grow too? A business needs to make money to sustain and like with any business, what does their business plan look like? What are their 3-5-10 -20 -year forecasts and projections? This business needs to be taken seriously and put in the proper place not just conveniently placed within a business he conveniently owns inside the **historic district**. With this demand growing how would anyone know if extra bodies aren't being cremated well past their allowed limit? You really think he's going to ask the city again for a license to increase the number of bodies to burn knowing what he's up against now? I don't think so! This business needs to be put in an industrial area that can increase with the demand and if Folsom doesn't have the industrial area, well than the applicant needs to find the next best location for it.

Also, I don't think anyone can guarantee that the emissions from mercury and unknown metals from the burning bodies won't affect the air we breathe. The air quality tests & data were done from the vicinity of the 2 Sacramento airport's- We are in a different geographical zone than that. I'm not an expert but common sense needs to come into play -the homes in The Preserves/ Lake Natoma Shores are on the American River/ Lake Natoma which is up against the canyon bluffs. This waterway is filled with wild- life, kayakers, paddle boarders and the trails filled with runners, bikers and families on strolls and into the cliffs, our protected bald eagles with 2 baby hatchlings. These massive sheer walls hold in the fog in the winter and smoke during fire season. How can you tell me it won't be any different for each burning body that's be expelled into the air with poisonous mercury? Some days during winter when it's foggy- we will be fogged in our neighborhood most the day - yet you drive out of our development and 1/4 mile away it's clear and sunny.

I and the neighbors are not coming to you as whiners and not just with the 'not in my neighborhood' mentality- we also come to you with facts. I'm a realtor for over 30 years and full time at Intero Real Estate services. Being next to a crematorium will absolutely affect our property values. As you know owning a house is a large investment and even more so a HOME where we live, breathe & raise our families. We as homeowners have purchased homes knowing a couple historical cemeteries were here, but not a business such as a crematorium - that's totally different. Some homeowners stated that they would feel compelled to move. This absolutely will affect our home values and eliminate a large number of buyers not only for health concerns, but yes, the creep factor. Why should we have to uproot from our homes for fear of unknown health risks that no one can guarantee? And on top of that, lose tens of thousands of dollars and possibly even more with the way home prices are going now in California, potentially lose a hundred thousand dollars or more compared to other areas in Folsom because we have a crematorium dropped in our neighborhood.

The real estate phrase that's been heard thru the years of "Location, location, location" is trumped in this litigation filled business of real estate where now Realtors chant to their clients "Disclose, disclose, disclose".

The California Association of Realtor's have a mandatory disclosure form that must be included in every sale. It's the Sellers Property Questionnaire. I am attaching it to this email and I highlighted and indicated in 7 different paragraphs on this 4 page document. This is where a seller would have to disclose about this crematorium and its issues. It's not something to be taken lightly.

In the applicant's case study, they pointed out that there are other crematoriums next to residential homes, but none are in a historic district. Pictures of those homes shown in the study looked vacant and abandon, cars were on the lawns, they were next to run down apartment buildings and in 'mixed use' zoning areas. Nothing in comparison to the historic quality or pricing of the neighborhood here or up next to such beautiful trails and waterways.

We have two very important boards in Folsom-The City Council and The Historic District Commission. **The Historic District already researched, heard the request from Lakeside Cemetery, heard the City's response and turned down this request 6-1!!!!** **I'm asking there be unity with their decision** and for the City Council to all be on the same page and support each other. One of the reason's we have a Historic Committee is to help uphold the history that makes Folsom quaint and unique.

As a realtor I talk to Families that love living here and ones that want to move to here- all for such reasons for the outstanding schools, for the trails & recreation of both lakes, the restaurants, shopping, for the family feel of the community, for the quaint historic feeling of Folsom. No buyer coming to Folsom has ever asked me, 'how is your crematorium here?' They come.... and they stay

for the quality of life- not death.

Is a Crematorium needed? maybe ... but not in an area that will affect **hundreds of tax paying residents home values and more importantly their health values and of the community enjoying the downtown, river and trails.** A crematorium needs to be placed in the proper area and zoning to be capable of the ever -increasing need and growth to come and not sacrificing the historic district and the living citizens of Folsom over the deceased.

Please vote No against this proposal.

Warm Regards,

Victoria Foster

SELLER PROPERTY QUESTIONNAIRE
(C.A.R. Form SPQ, Revised 12/21)

05/10/2022 Item No. 18.

This form is not a substitute for the Real Estate Transfer Disclosure Statement (TDS). It is used by the Seller to provide additional information when a TDS is completed. If Seller is exempt from completing a TDS, Seller should complete an Exempt Seller Disclosure (C.A.R. Form ESD) or may use this form instead:

NOTE TO SELLER: YOU ARE STRONGLY ADVISED TO CAREFULLY REVIEW THE DISCLOSURE INFORMATION ADVISORY (C.A.R. Form DIA) BEFORE YOU COMPLETE THIS SELLER PROPERTY QUESTIONNAIRE. ALL SELLERS OF CALIFORNIA REAL PROPERTY ARE REQUIRED TO PROVIDE VARIOUS DISCLOSURES, EITHER BY CONTRACT, OR BY STATUTE OR CASE LAW. MANY DISCLOSURES MUST BE MADE WITHIN CERTAIN TIME LIMITS. TIMELY AND THOROUGH DISCLOSURES HELP TO REDUCE DISPUTES AND FACILITATE A SMOOTH SALES TRANSACTION.

Seller makes the following disclosures with regard to the real property or manufactured home described as 123 Example Street, Assessor's Parcel No. _____, situated in _____ County of Sacramento California ("Property").

1. Disclosure Limitation: The following are representations made by the Seller and are not the representations of the Agent(s), if any. This disclosure statement is not a warranty of any kind by the Seller or any agents(s) and is not a substitute for any inspections or warranties the principal(s) may wish to obtain. This disclosure is not intended to be part of the contract between Buyer and Seller. Unless otherwise specified in writing, Broker and any real estate licensee or other person working with or through Broker has not verified information provided by Seller. A real estate broker is qualified to advise on real estate transactions. If Seller or Buyer desires legal advice, they should consult an attorney.

2. Note to Seller, PURPOSE: To tell the Buyer about known material or significant items affecting the value or desirability of the Property and help to eliminate misunderstandings about the condition of the Property.
- Answer based on actual knowledge and recollection at this time.
- Something that you do not consider material or significant may be perceived differently by a Buyer.
- Think about what you would want to know if you were buying the Property today.
- Read the questions carefully and take your time.
- If you do not understand how to answer a question, or what to disclose or how to make a disclosure in response to a question, whether on this form or a TDS, you should consult a real estate attorney in California of your choosing. A broker cannot answer the questions for you or advise you on the legal sufficiency of any answers or disclosures you provide.

3. Note to Buyer, PURPOSE: To give you more information about known material or significant items affecting the value or desirability of the Property and help to eliminate misunderstandings about the condition of the Property.
- Something that may be material or significant to you may not be perceived the same way by the Seller.
- If something is important to you, be sure to put your concerns and questions in writing (C.A.R. form BMI).
- Sellers can only disclose what they actually know. Seller may not know about all material or significant items.
- Seller's disclosures are not a substitute for your own investigations, personal judgments or common sense.

4. SELLER AWARENESS: For each statement below, answer the question "Are you (Seller) aware of..." by checking either "Yes" or "No." There is no time limitation unless otherwise specified. Explain any "Yes" answers in the space provided or attach additional comments and check section 19.

5. DOCUMENTS: ARE YOU (SELLER) AWARE OF...
Reports, inspections, disclosures, warranties, maintenance recommendations, estimates, studies, surveys or other documents (whether prepared in the past or present, including any previous transaction), pertaining to (i) the condition or repair of the Property or any improvement on this Property in the past, now or proposed; or (ii) easements, encroachments or boundary disputes affecting the Property whether oral or in writing and whether or not provided to the Seller.
[] Yes [] No
Note: If yes, provide any such documents in your possession to Buyer.
Explanation: _____

6. STATUTORILY OR CONTRACTUALLY REQUIRED OR RELATED: ARE YOU (SELLER) AWARE OF...
A. Within the last 3 years, the death of an occupant of the Property upon the Property [] Yes [] No
B. An Order from a government health official identifying the Property as being contaminated by methamphetamine. (If yes, attach a copy of the Order.) [] Yes [] No
C. The release of an illegal controlled substance on or beneath the Property [] Yes [] No
D. Whether the Property is located in or adjacent to an "industrial use" zone [X] Yes [] No
(In general, a zone or district allowing manufacturing, commercial or airport uses.)
E. Whether the Property is affected by a nuisance created by an "industrial use" zone [X] Yes [] No
F. Whether the Property is located within 1 mile of a former federal or state ordnance location (In general, an area once used for military training purposes that may contain potentially explosive munitions.) [] Yes [] No
G. Whether the Property is a condominium or located in a planned unit development or other common interest subdivision [] Yes [] No

RE: Lakeside memorial Lawn
 Crematorium Conditional Use Permit
 (PN-19-182)
 Hearing Date: April 26, 2022

Dear Councilpersons:

Applicant's request for the issuance of a C.U.P. allowing the operation of a crematorium on the grounds of Lakeside Memorial Lawn, an historic cemetery located in the Historic District, should be denied in light of the fact that such an issuance would be violative of the provisions and intent of Folsom's General Plan, Historic Preservation Master Plan, and Design and Development Guidelines. The relevant provisions of these documents are summarized, below.

General Plan 2035

"At the heart of the General Plan are 'Guiding Principles' that express the key values and aspirations of Folsom's future and act as guideposts for the goals, policies, and implementation measures contained within the General Plan." (Folsom General Plan 2035 [hereinafter, G.P.] I-15)

The following Guiding Principles appear to be relevant and controlling in regard to the Lakeside C.U.P. issue herein under consideration:

1. Guiding Principle #17: Embrace the City's rich historic...heritage, preserving, restoring, maintaining, and enhancing heritage sites throughout the city;
2. Guiding Principle #18: Recognize and celebrate the cultural diversity and Folsom residents; and
3. Guiding Principle #19: Facilitate active and meaningful community participation...and actively seeking citizen input in the decision-making process, ...guided by the public interest and... in maintaining and improving quality of life in Folsom. (G.P. I-18).

To ensure that City staff and decision-makers systematically implement the policies and proposals of the General Plan, State law since the early 1970s has increasingly insisted that the actions and decisions of a local governmental entity concerning private projects it approves are consistent with the adopted general plan of that entity. Included in the list of those public entity actions which must be consistent with that entity's general plan are approval of development projects. G.P., IM-3,4).

Historic Preservation Master Plan

The Cultural Resources section of the General Plan (commencing at G.P., NCR-10) provides as follows: "The policies in this section strive to preserve and protect Folsom's historic character as well as Folsom's archaeological resources. Folsom has many cultural resources, most notably Historic Folsom...."

Following this introductory comment, the General Plan goes on to state (at NCR-11) under the heading Goal NCR 5.1 as follows: “Encourage the preservation, restoration, and maintenance of cultural resources, including buildings and site, to enrich our sense of place and our appreciation of the city’s history.” To assist in achieving this goal, the General Plan goes on to require that the City:

1. Whenever feasible, require historic buildings and sites to be preserved (NCR 5.1.1);
2. Maintain an inventory of prehistoric and historic resources (NCR 5.1.2);
3. Nominate additional buildings and sites to the City of Folsom Cultural Resources Inventory of locally significant cultural resources (NCR 5.1.3);
4. Ensure compliance with City, State, and Federal historic preservation laws, regulations, and codes to protect and assist in the preservation of historic and archaeological resources as listed in the City of Folsom Historic Preservation Master Plan (NCR5.1.4);
5. Strive to obtain Federal, State, and private funding incentives for maintaining and rehabilitating historic buildings and sites (NCR 5.1.5); and
6. Maintain and implement design and development standards for the Historic District (NCR 5.1.6).

The City of Folsom has adopted many master plans, strategies, and programs focusing City attention on various types... of development or geographic areas so as to provide... direction for City decision-makers... on how the General Plan will be implemented. Among such plans, strategies, and programs is the Historic Preservation Master Plan. (G.P., IM-5).

The Historic Preservation Master Plan (H.P.M.P.), though dated November 5, 1998, was adopted by the City on November 24, 1998. The Introduction on page 3 of the Plan indicates that on March 25, 1997, the City Council authorized an ad hoc committee to develop a comprehensive historic preservation master plan. That committee began meeting on November 19, 1997, and eventually created the Historic Preservation Master Plan together with a Preliminary Inventory of Cultural Resources (Appendix D thereto) to be presented to the City Council for approval and adoption.

As is relevant to the issues presently under consideration, the Preliminary Cultural Resources Inventory lists the following cultural resources:

- Item No. 27: Odd Fellows and Mason’s Cemeteries, est. circa 1856 Remainder of Lakeside Cemetery, est. circa 1850s;
- Item No. 28: Chung Wah Cemetery, NRHP property, est. circa 1850s;
- Item No. 29: Young Wo Cemetery, CHL, est. circa 18870s; and
- Item No. 40: Dredger Tailing Piles representative of different dredging episodes.

The H.P.M.P. (on page 2 of the Cultural Resources Inventory attached to the H.P.M.P.) states that the Cultural Resources Inventory is designed to serve as a guide to the City’s significant historical and archaeological resources; for use by private groups and citizens to identify, evaluate, register, and to encourage public recognition and protection of resources of architectural, historical, archaeological, and cultural significance; and to identify historical resources for City planning purposes.

Historic District Design and Development Guidelines

Further guidance on the issue of preservation of cultural resources within the City is provided in the Historic District Design and Development Guidelines. Specifically, Goal 2 of those Guidelines defines the City's objective for the preservation of historic sites as follows: "To maintain, restore, and reconstruct sites which represent the history of the Folsom area." Specific policies are provided to assist in achieving this objective, as follows:

Policy 2.1: Locally significant structures and sites should be identified and documented to facilitate their preservation or restoration;

Policy 2.2: The City should encourage National Register nomination for historic sites, as well as other historical designations by State or local agencies; and

Policy 2.3: In prioritizing proposed projects, preferences should be given to authentic restoration of historical buildings or sites.

Concluding Comments

Clearly, the City, by way of its creation of the above-described policies, regulations, and guidelines, has evidenced an intent to protect and preserve its historic cultural resources for the benefit of present and future citizens of the City, the County of Sacramento, the State of California and yes, even the nation as a whole. This is particularly true of those resources existing in the Historic District which include, of course, not only the Lakeside Memorial Lawn Cemetery but the immediately adjacent Chung Wah Chinese Cemetery and Dredger Tailing Piles and the nearby Young Wo Chinese Cemetery, as well.

These historic/cultural treasures have all achieved local recognition as assets deserving preservation and protection and several have received County, State or National recognition as well, (Lakeside Memorial Lawn, Young Wo, and Chung Wah, respectively).

James A. Purcell, then Chair of the Sacramento County Cemetery Commission, opined in his letter to the City dated January 2, 2003, that "the area incorporating Lakeside Cemetery, Chung Wah Historic Cemetery, and the California State Dredging Tailings Park is possibly the only site in the State of California that combines these important aspects of our heritage in one small area." He added that "Degradation of the historic value of the Cemetery by the addition of a crematorium would serve to lessen its cultural importance to the City of Folsom in Sacramento County."

A similar letter from Dr. Bob La Perrier, Vice Chair of the County Cemetery Commission, voiced nearly identical sentiments but added that the Lakeside Cemetery, Chung Wah Cemetery, and the Dredger Tailings preserve "is probably the only site in the State that combines these aspects of our heritage in one small area." (Emphasis added.) He added that it would be, "extremely unfortunate if additional negative factors, such as the installation of a crematorium, further impacted these historic cemeteries (i.e., the grouping of historic cemeteries presently comprising Lakeside)...the final resting place of so many of our pioneers and early settlers...." (Parenthetical added.)

Perhaps the best recitation of the arguments in opposition to the crematorium C.U.P. in question is set forth in the Historic District Commission Staff Report created by City staff back in 2003. On page 4 of that Report, City staff sets forth the following Findings in support of its recommendation for denial:

"B. THE USE APPLIED FOR IS DETRIMENTAL TO THE HEALTH, SAFETY, OR GENERAL WELFARE OF PERSONS RESIDING OR WORKING IN THE NEIGHBORHOOD, AND DETRIMENTAL OR INJURIOUS TO PROPERTY AND IMPROVEMENTS IN THE

NEIGHBORHOOD AND THE GENERAL WELFARE OF THE CITY BECAUSE THE INTRODUCTION OF THIS USE WILL IMPACT THE HISTORICAL CHARACTER OF THE EXISTING CEMETERY AND HISTORICAL USE OF THE AREA.

- C. THE CONGLOMERATION OF THE HISTORIC CEMETERIES, COMBINED WITH THE CALIFORNIA STATE DREDGER TAILINGS DATING BACK TO THE 1850'S, CREATE A RARE COMBINATION OF UNIQUE CULTURAL RESOURCES THAT WILL BE IMPACTED BY THIS PROPOSAL.
- D. THE USE OF THE PROPOSED PROJECT IS NOT CONSISTENT WITH GOAL 2 OF THE DESIGN AND DEVELOPMENT GUIDELINES IN THAT IT DOES NOT MAINTAIN THE HISTORIC USE OF THE THE SITE. IN ADDITION, THE PROJECT DOES NOT FURTHER DESIGN AND DEVELOPMENT GUIDELINE POLICIES 2.1, 2.2, AND 2.3 IN THAT:
1. COMMISSIONERS FROM SACRAMENTO COUNTY HISTORIC CEMETERY COMMISSION HAVE IDENTIFIED THIS SITE AS LOCALLY SIGNIFICANT, AND COMMISSIONERS INTEND TO PRESENT LAKESIDE CEMETERY TO THE SACRAMENTO BOARD OF SUPERVISORS FOR DESIGNATION AS AN HISTORIC CEMETERY.
 2. APPROVAL OF A CONDITIONAL USE PERMIT FOR A CONTEMPORARY USE THAT WILL JEOPARDIZE THE ELIGIBILITY STATUS OF THE SITE WOULD WORK TO DISCOURAGE, RATHER THAN TO ENCOURAGE, NATIONAL REGISTER NOMINATION.
 3. BASED ON A LETTER FROM JAMES A. PURCELL, CHAIRMAN OF THE SACRAMENTO COUNTY HISTORIC CEMETERY COMMISSION DATED JANUARY 2, 2003, A CREMATORIUM IS NOT A CONSISTENT USE WITH A HISTORIC CEMETERY."

In summary, both the law and the facts support a denial of the request for the C.U.P. sought herein. The City staff agreed with that resolution of this matter in its 2003 ideation, and the Historic District Commission agreed with that determination in its decision of denial on February 16, 2022. It is respectfully submitted that the Council should follow the lead of both City staff (back in 2003) and, more recently, the Historic District Commission on the issue.

Respectfully submitted,

/s/

RE: Lakeside memorial Lawn
Crematorium Conditional Use Permit
(PN-19-182)
Hearing Date: April 26, 2022

Dear Councilpersons:

This memorandum is submitted in opposition to the request for the issuance of a C.U.P. allowing the construction and operation of a crematorium on the premises of Lakeside Memorial Lawn, a historic cemetery located in Folsom's Historic District.

This request should be denied in that the Historic District Commission, in conjunction with its denial of this request back on February 16, 2022, based that denial, in part, on evidence presented establishing that the proposed crematorium would significantly degrade the historical significance of the Cemetery and the immediate adjacent Chung Wah Cemetery and Dredger Tailing Piles, all of which have been listed in the City's Historic Preservation Master Plan as cultural resources requiring special protection/consideration. Specifically, the finding enunciated by the Historic District Commission in support of its denial reads:

"The use applied for is detrimental to the health, safety, or general welfare of persons residing or working in the neighborhood, detrimental or injurious to property and improvements in the neighborhood and the general welfare of the City because introduction of this use will impact the historical character of the existing cemetery and historical use of the area."

Accordingly, the situation presented by the subject C.U.P. request falls directly within the prohibition set forth in Folsom Municipal Code, Section 17.52.690(D) which reads as follows:

"Whether legally in place or not, a structure or feature which was not original may be deemed nonconforming if its existence..., in the opinion of the historic district commission, significantly degrades a locally significant structure or site."

That is exactly the determination the Historic District Commission has made in the situation presented by the C.U.P. request in question, and that determination should be final and binding.

Respectfully submitted,

/s/

Mary Johnson

██████████ Young Wo Circle Folsom CA
 ██████████
 ██████████

Dear Folsom City Counsel Members,

I am writing this letter to voice my concerns about the proposed construction of a crematorium behind my house, I am very much opposed to this construction. Per the study commissioned by the Cemetery owners I live in the area most affected by the potential emissions. My concerns are the devaluation of my property, the impact on air quality from toxins produced by burning bodies, a severe increase in fire hazards from propane tanks in a high fire risk area, impact on the surrounding wildlife and environment, and degradation of Cultural and Historic sites. Lastly the ability to enjoy my property and beautiful backyard without knowing I'm being exposed to cancer causing emissions such as Mercury and Hexavalent Chromium.

I was much encouraged when the Historic District voted 6 to 1 to stop the crematorium. These are the people who know our neighborhood and recognize the historic, cultural and natural resources present in this area. I do hope as City Counsel members you took the time to watch the hearing and consider the concerns presented at this meeting. I have not seen an issue galvanize our community in a unified opposition as the crematorium has done. The Historic District is the "Crown Jewel" of Folsom whose beautiful attributes - Lake Natoma, the State Park, the Bike trails and Sutter Street are featured prominently in all the brochures promoting Folsom. Do you think a crematorium that can be seen from Folsom Blvd should part of our "Distinctive by Nature Slogan"?

In my previous letters I did not address the Historic and Cultural aspects of our neighborhood but was exceedingly dismayed that Mr Semenyuk seemed to downplay the Historic significance of our area. One of his last comments during the Historic District was questioning if the cemetery even had a historic designation. I am concerned that he is the caretaker of this very historic place and He does not even recognize its significance. During the meeting much was made of the important Chinese artifacts and cultural sites located on the property. It's location adjacent to a State Park and its zoning as open space. There was much information presented about how the crematorium would be a major cultural affront to the Chinese ancestors buried there. But there was no mention of the significant number of Jewish graves present in the cemetery. From my research, cremation was traditionally prohibited by the Jewish faith, and only recently cremation has been accepted by a small minority within Reform Judaism. I doubt that the families of the Jews buried in the cemetery would be accepting of a crematorium so close to where their loved ones were buried according to Jewish Laws.

I am a retired RN who has worked in Oncology and Hospice. I have cared for patients prior to and during the death process. There are multiple medical implants, catheters, joint replacements and dental work that when cremated release toxic substances. Not to mention the toxic pharmaceuticals (chemotherapy, radioactive pellets and multiple drugs) that remain in human tissues. My concerns about the cremation process is that all of the above will vaporize and release toxins into the air in our neighborhood.

Toxic air contaminants are the greatest threat to the health of the neighborhood. Per the helix report they are a "diverse group of air pollutants that may cause or contribute to an increase in

deaths or serious illness. TACs can cause long term serious health effects such as cancer, birth defects, neurological damage, lung and respiratory issues. TACs can be carcinogenic or non carcinogenic". FOR CARCINOGENIC TACS THERE IS NO LEVEL OF EXPOSURE THAT IS CONSIDERED SAFE.

That is a direct quote from the Helix report. Yet they go on to state that there there will be two TACs that are of concern for health risks, Mercury and Hexavalent Chromium. These two substances are the "primary drivers of the health risks from crematory emissions". Mercury is considered a Non cancer chronic and acute health risk TACs. But mercury is known to be a potent neurotoxin and can cause developmental delays including decreased IQ in children. It can also cause kidney damage. A report from the NIH website state that "Crematoria represent a significant source of mercury emissions to the environment". The danger with mercury is long term indirect exposure to the environment and the food chain. This is because mercury can accumulate in our tissues over time. We live in a neighborhood where we eat fruits and vegetables from our yards and people and wildlife (including endangered Bald Eagles) catch and consume fish from lake Natoma. The Lake Natoma/ American River is a drinking water source for well over a million people.

Hexavalent Chromium is a known Cancer causing toxic air contaminant. Prolonged exposure has been known to cause lung cancer. Per their air quality report they know that this TAC will be released into our neighborhood even though per their report there are no safe levels.

In the Helix report they stated that our area is particularly prone to air stagnation due to the bluffs and hills that act as a barrier to airflow and can trap pollutants causing them to become more concentrated. In addition our neighborhood lies within the "Shultz Eddy". This eddy effect causes the wind pattern and pollutants to circle back southward further concentrating them. Please take this into consideration, not only will the crematorium produce Toxic Air Contaminants but the geographical location prevents the dispersement of these toxins.

Fire safety is my next area of concern. Our neighborhood is surrounded on three sides by woodlands and brush, a urban wild land interface. I was on the Folsom Fire safe council in 2012 because I was so concerned about the dry brush and vegetation build up behind my home. Because of our efforts, the area between our homes and cemetery was cleared. But unfortunately this brush clearing has not happened in 2 years. Not only that but the grounds keepers routinely toss trimmings and drag downed trees into that area. It has created a extreme fire hazard that I will be reporting to the fire department. I am worried that the people who routinely create a worse fire situation by piling brush will be the same workers in charge of maintaining the safety of the crematorium.

My last concern is the devaluation of my property. I am retired and a widow and I will need to sell my house in the future to downsize and access the equity for future expenses. There is a very real impact on the desire-ability and value of my home to potential sellers knowing that there are cremations occurring yards a few hundred yards away. Who wants to sit by the pool and eat outside knowing they a breathing residue of human bodies being burned?

Because of all the the above concerns please vote against building a crematorium in our neighborhood,

Thank you so much for your time,

Mary A Johnson

Subject: Vote No on Lakeside Memorial Crematorium Appeal on 4/26

Some people who received this message don't often get email from [REDACTED] [Learn why this is important](#)

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Members of the Council, City Manager Anderson, and Assistant City Attorney Dierklin,

I write this letter with great concern about the Caring Services Lakeside Memorial Crematorium appeal to be heard by this body on April 26, 2022. My concerns are rooted in the historical, racial, and cultural implications this appeal has on so many of us that already experience underrepresentation in this community.

In attending the Historic District Commission meeting on February 16, 2022 where the Commission voted to protect the historical significance and well-being of our unique community, I witnessed Caring Services Group's Igor Semenyuk comment on not wanting or asking to be recognized by regional, state, and national entities as a historical site. I have since read his written comment in his initial appeal document, later elaborated upon beyond the official timeline, about residents being "biased." As you are likely now aware, the proposed industrial crematorium is to be located in close proximity to several publicly recognized historical sites. Mr. Semenyuk's statements have sent a clear message to the Asian American, and Chinese American community specifically, as well as the larger community that our cultural heritage, our property values, and our health is meaningless in the face of an opportunity for profit.

Caring Services Group has been clear from the first virtual community meeting in 2021 that this effort is driven by the fact that cemeteries are a "dying business." What is missing in this business venture is the critical sensitivity and cultural competency that would reduce the consistent prejudice and minimization of racial history being enacted to support a business plan. Mr. Semenyuk can pretend the plaque provided by the Sacramento County Cemetery Advisory Commission to display Lakeside's historical designation does not exist, but I cannot pretend the shape of my eyes are not of Asian descent. I cannot choose to have different DNA simply because a local business chooses to not recognize unique elements essential to honoring our community's heritage. The fact that the historical designations of Lakeside Memorial Cemetery, the Chinese burial site adjacent to Lakeside Memorial Cemetery, and the

Chan Wah Historic Cemetery are completely disregarded by Caring Services Group's proposed industrial crematorium disrespects and devalues the cultural practices that honor these historic sites.

I deeply value the six Historic District Commissioner's firm stand on protecting the "historical character of the existing cemetery and historical use of the area," and recognition of the detrimental [impact the application has on] the health, safety, or general welfare of persons residing or working in the neighborhood." I respect the Commission's recognition of the historical evidence, documentation, and previous Planning Commission recommendations that the City has had access to for decades. As a pregnant Asian American woman who is raising a toddler in the Historic District, I felt we were seen. I felt that our concerns and fears about our history and future were heard. I felt represented.

Caring Services Group's appeal makes me feel discarded. It suggests that the sacrifices of our ancestors and founding community members are perceived to be irrelevant, as they do not garner a desirable profit margin for a private business. Overlooking the significance of the past in this way dehumanizes the present.

In a time of social and racial reckoning, the City of Folsom cannot afford to side with the face of cultural and historical disregard. Our City has much work to do to continue to recognize, repair, diversify, and create equitable opportunities for our residents to live in a community that values their unique cultural backgrounds. A decision to support Caring Services Group's appeal would serve as a loud, public step in the wrong direction toward cultural, and potentially racial, systemic discrimination. We cannot undo harm to history and to residents once executed and publicly supported. We cannot unknow the experience of being underrepresented by public figures once votes are finalized. The community will remember this.

Attending to a community's well-being as elected representatives involves more than ensuring natural and tangible resources are available and safe. As a governing body, there is a moral obligation to ensure that our marginalized communities are represented in the decisions that seek to protect where and who we came from, and what impacts our current quality of life in order to meet the future with a focus on diversity and equity.

As a tax-payer, I urge you to think beyond profit and local business relations on April 26th so that I may wake up my child on April 27th and tell them that being an Asian American in the City of Folsom matters. That they have a place in this community that is deeply respected and honored by the elected officials making decisions that impact their life course trajectory. I would like to give birth to another child later this year without fear of what heavy metals I may have ingested on days when several bodies have been cremated while sitting in our front yard. I want this child to come home to a community without fear that their racial identity will be minimized by a business decision in the Historic District.

Vote no on the Lakeside Memorial Crematorium appeal. Protect History. Honor cultural significance. Support your Historic District Commission. Represent *all* members of the community and their desire to belong.

Sincerely,
Dr. Mariko McGarry

Due to limitation of resources and time, we unfortunately cannot supply further comments on the concerns regarding the construction of a crematorium at Lakeside Memorial Park (Cemetery). You are welcome to use material we have submitted in the past, both recent and from several decades ago.

However, we would appreciate the following items be considered by Miller Funeral Home/Lakeside Memorial Park as a strong recommendation and a demonstration of responsibility for owning and maintaining a historic cemetery (cemeteries), well over 1½ centuries old.

1) Acceptance of the Historical Nature of Lakeside Cemetery (Memorial Park) and further documentation of its detailed history going back to the mid 1800's, both on its website and as a large interpretive sign on the Cemetery property, in addition to the placement of the aluminum signage we delivered years ago designating it as a Sacramento County Historic Cemetery.

2) Acceptance of the major significant of the Historic Chinese Cemetery in proximity to Lakeside.

3) If this has not been done, public access to an updated plot map of Lakeside, both historic and current.

4) Consideration of the construction of a retaining wall at the sloping area at the far back corner area both for stabilization and safety concerns.

Thank you for your assistance and support.

Dr. Bob LaPerriere
Chair, Sacramento County Cemetery Advisory Commission

TO: Folsom City Council Via Clerk, for distribution;
and for referral and Expert Reports from City Engineer, Licensed City Legal staff, and for city licensed civil engineers
Impacted Region jurisdictions; State enforcers; impacted US agencies
From: LJ Laurent
April 22 2022

Re: PN 21-115; County Parcel Number NOT shown; Changes Not shown; MAP NOT Shown;
Proof of Compliance - none apparent; Surveyor/Engineer Cert of Compliance and Nature of change -- NOT shown

Folsom Comm. Dev. obviously does not make use of "city engineer" Krahn, who is subordinate to Ms. Johns, a non-licensed city employee. Who is conducting the Publics' Business at cityhall? Make that who is Mis-conducting and not being Open about our business?

Comm Dev. person signed off on Public Notice which is just about 100% Deficient in Legal Compliance.

Although it is mind-numbing, below is a conglommeration of just a FEW of State Laws which city staff have violated, ignored, omitted, or been ordered to disregard -- or whatever else you have as explanation.

This include Total Disregard of using our CA Licensed Civil Engineer in residence as the Definitive expert to draw, examine, inspect, certify, and Determine Which State & federal & county PROCESSES must be observed, with certified papers filed, in order to be legally compliants.

The below citations will be totally Clear to an experienced, trained, and hopefully state-licensed Expert.

Too bad if it's complicated. The city & or its officials, or agents, or employees, or "beneficiaries" deliberately and without Public Hearings altered FMC. Look at the Commercial Table. It is a mess of incomprehensible check marks and lengthy columns/tables. It can be Proved the city NEVER brought such nonsense to Public Scrutiny. We had a few council who served over 115 years total together. One still sits, but has relinquished CA state engineer license last year.

This is a pathetic mess, which appears designed to confuse, deceive, avoid Due Process, and achieve Land Usages which are NOT sufficiently SUPPORTED by Infrastructure, Water Supply, and Public Comments, as well as Regional agency comments.

Complaint:

It is respectfully requested of Sacramento County District Attorney, County Assessor, and County

Recorder that they direct their fullest attention to the deficiencies noted below -- in no special order, since there are SO MANY.

Inline image

Inline image

First PROBLEM: This is **NOT CONSISTENT with 2018 GENERAL PLAN**, which shows "Regional Commercial" for the entire Parcel.

As REGIONAL, and at Hwy 50, HOW can this NOT be Subject to CEQA ??? Folsom is not legally defined as a "Region", but a "city."

Plan IS NOT consistent with Folsom GP Map 2018, and it is "Regional Commercial." abutting Hwy 50.... "regional" is NOT SAME as "city".

As for Planned Dev. Zone -- **without showing the PD Map and Engineer Assessment of IMPACTS on REGION**, how can you do a rezone which VIOLATES General Plan without advertising and giving Notices and doing the Entire Legal Process under CEQA and other laws?

Folsom RCC on Map/Gen Plan

Inline image

**Note: there is NO Definition of RCC, just a jumble of inscrutable "stuff" which was obviously NEVER brought to Public Hearing NOR Public Scrutiny, Nor Sealed/signed with a Lic. Civil Engineers license.
Who is responsible for all this, aside from city council who appear to "go along with stuff?"**

Inline image

HUGE HUGE PROBLEM: According to FMC 17.22 et seq, the **TABLE does NOT AGREE with TEXT**. Note in FMC, as photographed below, that in C3 Commercial, very heavy usage zone, the Footnote #7 states the **STANDARDS DO NOT APPLY**.

A. Commercial Use Table. The purpose of the commercial use table is to designate the uses permitted within the buildable area and within the yard areas in each of the following zones.....

3. C-3, general commercial zone as further regulated in Section 17.22.050 of this chapter. The purpose of the C-3 zone is to designate areas appropriate for heavy commercial activities. While all types of commercial activities are permitted, the C-3 zone is intended for the highest-intensity commercial activities, which include **heavy auto and truck traffic. The C-3 zone should be located on major arteries and thoroughfares.**

Perhaps FMC needs to include what an Engineer would know is required by higher Laws: that

STUDIES are Mandatory to ensure the "major arteries and thoroughfares" are not at Level F, or gridlock.

This location is on E. Bidwell, right at US Hwy 50 area. What are the Implications of adding this new "PD, Planned Development" without even knowing the Subdivision Map itself, the uses, the IMPACTS on Region and neighboring jurisdictions??? What about Water Supply? A hotel uses far more water than a "big box retailer" who brings in tons of tax dollars.

Folsom Municipal Code

Link to another dumb "table" which obscures analysis and understanding. No licensed Engineer would provide this as sufficient for legal enactment.

Check link: the table says one thing but Note 7 contradicts the table.

"not applicable" in fine print footnote.

Inline image

Commercial Use Table (17.22.030E)

	Zone
--	-------------

	Use, service or facility	C-1	C-2	C-3	BP
--	--------------------------	-----	-----	-----	----

119	Hotel	N			1
-----	-------	---	--	--	---

Would city engineer mind explaining what this Table really means, and exactly WHY is General Plan Inconsistency with Proposed Use NOT Subject to CEQA, with Notices, and Regional Impacts circulated for comments?
 After all, according to CA GC, a licensed Civil Engineer MUST, he/she "shall" do the proposed Subdivision Map or Supervise & approve its production in Compliant Form.

QUOTE: B. Permitted Uses Within the Buildable Area of Commercial Lots. A " " indicates that the described use is permitted in the zone represented by the described symbol appearing at the top of the column. An "N" indicates that the described use is not permitted in the zone represented by the symbol appearing at the top of the column. A number indicates that the described use is permitted in that zone upon continuing compliance of the special condition referenced by the corresponding number in Section 17.22.040 of this chapter. **The special condition requirements govern the described use.**

What "special condition requirements"??????
 Where are they hidden?

APN #: there is now response when you enter the APN in search. But, Folsom Comm Dev omitted the APN for this proposed "subdivision."
 Might city approve putting a 5 story hotel on just one acre? This city might.
 Is Water Supply certified adequate for such General Plan alterations without CEQA, and for Map Approvals without the Required Licensed Engineers' seal/signature?

Inline image

Who regulates subdivisions in California? The California Government Code – Subdivision Map Act (GC Section 66410 et seq.) regulates the subdivision of real property. The Revenue and Taxation Code (RTC Section 11511) also allows a County Assessor/ Tax Collector to subdivide a parcel and sell the “sufficient” part through a tax foreclosure auction.

19.76.010 - Purpose.

SHARPRINTEVENTUALDIRECTOR OF SECTIONS

This Chapter establishes requirements consistent with the Act for certificates of compliance, lot line adjustments, parcel mergers, and reversions to acreage.

19.76.020 - Certificates of compliance.

GOVERNMENT CODE - GOV

TITLE 7. PLANNING AND LAND USE [65000 - 66499.58] (*Heading of Title 7 amended by Stats. 1974, Ch. 1536.)*

DIVISION 2. SUBDIVISIONS [66410 - 66499.40] (*Division 2 added by Stats. 1974, Ch. 1536.)*

CHAPTER 2. Maps [66425 - 66450] (*Chapter 2 added by Stats. 1974, Ch. 1536.)*

ARTICLE 3. Parcel Maps [66444 - 66450] (Article 3 added by Stats. 1974, Ch. 1536.)

QUOTE --

The parcel map shall be prepared by, or under the direction of, a registered civil engineer or licensed land surveyor, shall show the location of streets and property lines bounding the property, and shall conform to all of the following provisions:

There are LOTS of "provisions", which are not same as City FMC and Standards "provisions." In other words, CA STATE LAW CONTROLS EVERY MOVE YOU MAKE, city staffers. Take Note City Council.

Perhaps you need to File this first with Sacramento County Recorder and RE ASSESSOR Office, ALONG with the Licensed Civil Engineers Seal/Signature, all CEQA compliance & Notices to regional jurisdictions. This PN is a travesty, NOT a compliant Notice of

- 1. General Plan alteration ignored -- but required.**
- 2. No Lic. Engineers seal/signature of oversight, enforcement, planning, and mandatory Notices.**
- 3. City is changing Zone District without using Mandatory public notice and Mandatory Processes.**
- 4. City has no Proof of water supply, Infrastructure, Impacts on Regional Services such as Fire control, evacuation routes, and**
- 5. NO comments from remainder of region and all higher or separate agencies serving Region, or Providing Utilities for this new use and Subdivision --**
- 6. of which we know NOTHING at all.**

Questions/comments welcomed. However, there is no way on earth I could explain how city gets away with this. There's water disaster afoot, 63 dead humans on city property, and the most secretive, jumbled set of "ordinances" enacted so secretly and without vetting, that one doubts anyone could explain it.

How does state administration and state governor tolerate this?

You don't often get email from [REDACTED] [Learn why this is important](#)

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

I urge you to vote NO on the proposed Lakeside Memorial Lawn crematorium. My reasons include heritage, the air we breathe, long term health problems, and fire danger.

The proposed site is zoned Open Space. Our city of Folsom is Distinctive by Nature. Let's work together to keep it that way.

I urge you vote to preserve this heritage, to preserve what sets our town apart from just another suburb of Sacramento. For ourselves, and for those who come after us. The following points are briefly noted; you most certainly will have the background information to which I refer in the Historic District Commission notes, or in other concerned citizens' letters.

The area immediately adjacent to the proposed crematorium is of historical note to our community. The Chinese community has been instrumental in the development of our town, and we as a community need to continue to acknowledge those contributions, and grow that appreciation. Our neighborhood is adjacent to ancient Chinese burial grounds. It is imperative that we respect our ancestors and our city's previous commitments.

The environmental reports presented earlier measured air quality near Sacramento Executive Airport, where almost every night the Delta breeze refreshes the air quality, and near Sacramento International Airport. By design that airport is on flat land in relatively wide -open spaces, and birds are actively discouraged.

The City of Folsom, and especially our neighborhood, rarely if ever gets the Delta breeze. The air in our neighborhood, adjacent to the cemetery, gets trapped between the foothills, our town and the bluffs across Lake Natoma from us.

In the summertime, we historically get forest fires in Northern California. It is predicted we will get more fires and more frequently. Fire smoke gets trapped, and the AQI is such that we are encouraged to stay in our homes. We have had neighbors move because of the summer trapped smoke, and their inability to be active outside. They moved so their kids could grow up where they can play outdoors.

Please consider that the proposed crematorium smoke and smell will contribute to this unhealthy atmosphere. And yes, there will be smoke, and there will be the smell of human flesh burning. This is the report of real people who have lived near crematoriums, not sales brochures. And there will be Toxic Air Contaminants (TACs) such as mercury vapor and hexavalent chromium, for which there is no level of exposure that is considered safe. According to the National Institute for Health "crematoria represent a significant source of mercury emissions to the environment." Mercury builds up in human tissue and causes developmental delays. There is a child care center five blocks from the entrance to our neighborhood. There are many young children playing in our neighborhood. We must protect them. Prolonged exposure to hexavalent chromium can cause lung cancer. Our community traps stagnant air; we must not risk contaminating the jewel of our Distinctive by Nature city by approving a crematorium. Once the crematorium would start burning bodies, the resulting air quality issues could and would make our air quality untenable. Please do not take that chance. Let's work together to keep Folsom Distinctive by Nature.

Perhaps you have seen the You Tube video demonstrating what happens when a propane tank malfunctions and blows up. (Search "propane tank explosion caught on camera.") If you have not seen it, I encourage you to do so and to consider your responsibility to vote NO to make sure that does not happen in Folsom.

We do not need a fire in our community, where there is one way in, and one way out. Yes, I heard the fire chief state they would open up the Leidesdorf access. I am not certain how fast that could happen and how quickly it could be communicated. I would like to avoid finding out by worst case scenario. Many if not most of us in this community have the bulk of our retirement savings in our homes. I would love to survive any fire, or course, but I am not willing to risk a fire that would destroy my life's possessions and memories.

In April the trees are all green, plants are budded out, and a walk or a bike ride on the American River bike trail has us believing that it will always be so. Please before you vote consider the tinderbox this whole area becomes when the seasons change and the ravaging effects of our multi-year drought make themselves known again. We must keep our City of Folsom safe and Distinctive by Nature.

With all these potential risks, what could be worth voting any way but NO? Respectively I urge you to support the City of Folsom Historic District Commission and their 6-1 vote against the proposed crematorium. I urge you to vote NO to the proposed crematorium and keep our city Distinctive by Nature.

Thank you for your service and for your time.

RE: 2022 Lakeside Memorial Lawn
Crematorium's Appeal and this Appeal's
relationship to the withdrawn 2003 Lakeside
Cemetery Crematorium Project

Dear Council Members:

The Lakeside Memorial Lawn Crematorium Appeal should be denied based on the same Finding made by the Historic District Commission on February 16, 2022: "B. THE USE APPLIED FOR IS DETRIMENTAL TO THE HEALTH, SAFETY, OR GENERAL WELFARE OF PERSONS RESIDING OR WORKING IN THE NEIGHBORHOOD, AND DETRIMENTAL OR INJURIOUS TO PROPERTY AND IMPROVEMENTS IN THE NEIGHBORHOOD AND THE GENERAL WELFARE OF THE CITY BECAUSE THE INTRODUCTION OF THIS USE WILL IMPACT THE HISTORICAL CHARACTER OF THE EXISTING CEMETERY AND HISTORICAL USE OF THE AREA." (page 4). This same Finding was used as the basis for the Staff Report recommendation of denial in reference to the Lakeside Cemetery Crematorium Project (composed of the crematorium and a "Tuff Shed" construction) that was scheduled for hearing before the Commission back in 2003 before it was withdrawn.

The Appeal before the Council is, also, directly related to the 2020 approval by the Historic District Commission (HDC) of PN-20-160 Lakeside Memorial Lawn Storage Shed and Determination that the Project is Exempt from CEQA, which involved a storage shed that was cherry-picked as an individual project from the 2003 Lakeside Cemetery Crematorium Project, a project which clearly was not CEQA-exempt. As such, this 2020 Storage Shed* successfully flew under the environmental radar by way of a ministerial building use permit application which allowed the 40'X40' Storage Shed to be constructed without proper CEQA vetting.

CEQA GUIDELINES Section 15300.2 EXCEPTIONS

(f) Historical resources. A categorical exemption shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource.

Staff was aware that the Lakeside Cemetery, already on the Sacramento County Historic Cemetery Commission's list of important pioneer cemeteries, needed protection in the estimation of the Sacramento County Cemetery Commissioners, to preserve the Cemetery's integrity should an application for listing on the National Register of Historic Places ever be applied for (Lakeside Cemetery Crematorium Project 01/15/2003 Staff Report, Attachment 4).

In addition, the City failed to apply certain provisions of the Folsom Municipal Code, as follows:

Folsom Municipal Code 17.52.690 Nonconforming structures.

D. Whether legally in place or not, a structure or feature which was not original may be deemed nonconforming if its existence prevents listing on the National Register of Historic Places of an otherwise eligible structure or site or, in the opinion of the historic district commission, significantly degrades a locally significant structure or site. (Ord. 890 § 2 (part), 1998)

Staff was aware, per the same HDC Staff Report, of the historical research on the Lakeside Cemetery's origins, and the pioneers buried there, which was submitted to the HDC by Sue Silver along with a record compiled by Eagle Scout Peter Kroff of the grave markers on head stones dating from 1850 to 1995. Both monographs should accompany any application to the National Register of Historic Places.

Folsom Municipal Code 17.52.480 Accessory Structures.

... an accessory structure is any freestanding roofed structure located on a parcel on which another larger structure (main structure) has been constructed...An accessory structure shall not be larger than the main structure in square footage or height. Design review is not required for accessory structures smaller than 60 square feet or which are below required fence height. (Ord. 890 § 2 (part), 1998)

Staff was aware, per the same HDC Staff Report, that the main structure on the Cemetery parcel was/is 975 sq ft. The proposed Storage Shed was/is 1,600 sq ft, (40'X40') and was **larger** than the main structure on the parcel and couldn't qualify as an Accessory Structure.

In conclusion, since the Applicant's clear purpose for constructing a new Storage Shed was to clear the way for the use of the "main" 975 sq ft structure for a future crematorium, the illegally-permitted 1,600 sq ft Storage Shed (40'X40') and the proposed crematorium in the Appeal are inexorably linked. The latter cannot go forward without the former. And, based on the foregoing analysis, the Storage Shed constructed on the grounds of the historic Lakeside Memorial Cemetery was not properly permitted by the City in 2020 and never should have been constructed.

To allow the Crematorium to go forward would be to reward the illegality of the whole underlying scheme. In equity and in good faith, such an outcome should not be allowed, and the logical remedy would be to deny the Crematorium Appeal. Otherwise, the applicant will be allowed to benefit from a 1,600 sq ft Storage Shed that has robbed the community of the integrity of some of its oldest historical resources based on an illegal underpinning. The City Council should not condone such an outcome.

Sincerely,

/s/

Deborah Grassl

Subject: New Shed build at Lakeside Lawn Cemetery and Public Records Request

Hi Josh,

I took five photos of a new slab foundation, approximately 10'X30', being finished next to the adjacent, existing shed at the proposed Lakeside Cemetery Crematorium project site. The photos were made on June 30, 2021. Shortly thereafter a metal Tuff Shed-style building was fully erected.

This newly built shed can be seen from Folsom Blvd, alongside and with the old Crematorium's Tuff Shed. At night there is a very strong light coming from the new shed that breaks up the shadows over the Cemetery and attracts drivers' eyes to the sheds. The sheds clearly stick up above the California State Dredger Tailings Preserve, and now block the riparian forest view shed, a part of the Chung Wah Chinese Cemetery's National Register of Historic Places description of site characteristics. In addition, the sightlines of the rare Lakeside Lawn's grouping of 8 contiguous pioneer cemeteries alongside the Chung Wah Cemetery and Dredger Tailings Preserve are now separated by the newly built shed. This unique grouping is described in the **Historical Significance** site description of the City's 01.15.03 Staff Report on page 2, paragraph 5.

It is noted, too, that the newly built shed corresponds to a new shed build description included in the 01/15/03 HDC Staff Report regarding the Request for Approval of a Conditional Use Permit to allow for the operation of [a] crematorium, page 2, **PROJECT DESCRIPTION**, paragraph 2. This CUP application was subsequently Withdrawn on 01/15/03 and the new shed was not built at that time.

However, when Igor Semenyuk was asked about this new building construction on the Zoom meeting LNS/Preserve residents had with owner, Igor told us not to pay any attention to this new construction. He stated that it had nothing to do with the current Lakeside Lawn Cemetery's Crematorium Conditional Use Permit application awaiting an HDC hearing date.

I did note in the current Lakeside Lawn Memorial Cemetery Crematorium IS/MND & CUP descriptions that a 10'X30' new shed build is NOT included.

Was a permit application to build this 10'X30' Tuff-style shed ever received and approved by the City? If so, I would like to put in a Public Records Request for a copy along with the environmental evaluation.

Thank you for your time researching this request.

Deborah Grassl

Art and Craft

At San Francisco's Legion of Honor museum, a sumptuous showcase for Chinese couturier Guo Pei.

It was one of the great fashion moments of the internet era: For the 2015 Met gala, marking the museum's "China: Through the Looking Glass" exhibition, Rihanna electrified the red carpet in a fur-trimmed, canary yellow cape with a traffic-stopping 16-foot train. As the fashion world descended in a joyous frenzy, the designer Guo Pei found, rather instantly, a rapt Western audience. "I did not expect such a strong reaction," Pei says now. In hindsight, she attributes it in part to "people's perception that China did not have fashion or design. Many people used to think of it as a developing country." Later that year, she was invited to join the Chambre Syndicale de la Haute Couture and show on the couture week calendar in Paris.

Though you can draw a straight line from that Yellow Empress cape to "Guo Pei: Couture Fantasy," the retrospective opening this month at the Legion of Honor museum in San Francisco, you won't find it there. The new exhibition mines Pei's career—characterized by sculptural silhouettes and painstaking craftsmanship—both before 2015 and since. (Born in Beijing, Pei studied fashion at Beijing Second Light Industry School in the 1980s and designed children's clothing and womenswear before launching her own label and atelier in 1997.)

"Our Costume program highlights extraordinary designers who have changed the course of fashion history," says Thomas P. Campbell, director and CEO of the Fine Arts Museums of San Francisco (which includes the Legion of Honor). "and Guo Pei is a perfect fit: Her career is emblematic of a shift in global fashion narratives and China's rise as a fashion leader."

The show's 80-plus looks, all sourced from Pei's archives, are sometimes arranged by season or theme (nature, architecture, and China's imperial past have all been creative springboards for the designer) and sometimes coupled with Western artworks—medieval icons, chinoiserie, and examples from the Italian Baroque and French Rococo periods among them. As curator Jill D'Alessandro notes, Pei's work resonates not only across cultures, but across media.

MAXIMUM IMPACT

CLOCKWISE FROM TOP: Rihanna in Guo Pei at the 2015 Met gala; a double-barreled creation from Pei's fall 2019 collection; an embroidered silk robe from fall 2012.

Take, for instance, pieces from her fall 2007 collection, "An Amazing Journey in a Childhood Dream," which open the show. "When the ensembles first debuted, it was theater at its best—a young girl in a canopied bed above the runway dreamed, while models below acted out her dreams in pastel-colored silk confections," D'Alessandro explains. "She paired these with separates embellished with raised metallic-thread embroidery, an homage to the costumes donned by Spanish matadors"—all part of a singular body of work that the curator describes as "occupying a space between fashion, theater, performance, and sculpture." There's another element, too, related to the Chinese concept of *lin* (灵), or "spiritual resonance." For Pei, fashion can also exist in a more personal realm. "Many are moved by my work, but they also say they don't understand why. I create these unwearable clothes," she says. "I think these clothes are needed in the spiritual world." —MARLEY MARIUS

Re: Comments in Opposition to Appeal by Igor Semenyuk of a Decision by the Historic District Commission Denying a Conditional Use Permit for the Lakeside Memorial Lawn Crematorium project (PN 19-182) located at 1201 Forrest Street - April 26, 2022 City Council Meeting, Agenda Item No. 8

Dear Mayor Howell, Vice-Mayor Rodriguez, Councilmembers Aquino, Chalamcherla, and Kozlowski, Director Johns, Ms. Freemantle, and Mr. Kinkade,

These comments are submitted on behalf of Tim & Mariko McGarry, Dave & Kim Higgins, Sean & Niki Gates and Kyal & Bre Von Gunten (hereinafter "Residents"), all of whom reside in the Folsom Historic District in close proximity to the proposed Lakeside Memorial Lawn Crematorium project. The Residents request that the Council deny Mr. Semenyuk's appeal. The record supports the Historic Commission's application of its discretion to find that the proposed crematorium, if allowed, would impact the historic character of the historic Lakeside Memorial Lawn as well as the unique historic assemblage it shares with the Chung Wah Cemetery, a site included on the National Register of Historic Places. As a result, the Council should uphold the Commission's finding that the proposed crematorium would be detrimental or injurious to property and improvements in the neighborhood and the general welfare of the City.

The Council also should uphold the Commission's denial because the project's proposed expansion of the accessory maintenance shed and its accessory use as a crematorium violates Municipal Code §§ 17.52.680 and 17.52.690 and the Folsom Historic District Design Guidelines. The City's Code and Design Guidelines prohibit any increases in scope of nonconforming structures or uses within the Historic District. The proposed crematorium would increase a non-

Folsom City Council
 April 25, 2022
 Page 2 of 8

conforming use as well as the nonconforming maintenance building by adding an exhaust stack that, according to the drawings attached to the MND would extend at least 19 feet above the existing roof line of the maintenance shed.

In addition, the Council should uphold the Commission's decision because the Initial Study and Mitigated Negative Declaration ("IS/MND") prepared for the crematorium project does not comply with the California Environmental Quality Act ("CEQA"), Pub. Res. Code §21000, *et seq.* First, the IS/MND's description of the project is unstable and inconsistent by evaluating a 19.5 feet high exhaust stack in the toxic pollutant dispersion analysis while at the same time depicting a 29.5 feet exhaust stack in the drawings of the project. Second, the record contains substantial evidence of a fair argument that the crematorium project may have a significant impact on historic resources requiring the preparation of an environmental impact report ("EIR") before the project may be considered for approval.

The following comments elaborate on these deficiencies. The Council should defer to the thorough evaluation and findings prepared by the Commission and should further uphold the denial of the crematorium by finding that the project would be inconsistent with the Municipal Code and Design Guidelines and the IS/MND is deficient pursuant to CEQA.

A. The Crematorium Project Would Violate the Municipal Code and Folsom Historic District Design Guidelines.

The City's Municipal Code governing the Historic District prohibits the proposed nonconforming crematorium use and the proposed expansion of the maintenance building structure. The City's Zoning Code establishes a comprehensive program not only to preserve the historic character of the Historic District but also to enhance it. Thus, core purposes of the zoning for the historic district include "[t]o preserve and enhance the historic, small-town atmosphere of the historic district as it developed between the years 1850 and 1950; ... [t]o ensure that new ... commercial development is consistent with the historical character of the historic district as it developed between the years 1850 and 1950; ... and "[t]o preserve and enhance open space areas." (Folsom Muni. Code § 17.52.010(B)(1), (5) & (7).)

The existing maintenance shed in which the crematorium is proposed to be located is an "accessory structure" as defined by the Guidelines, §4.06. The shed was constructed sometime between 1993 and August 1998. (Agenda Packet, p. 323.) The shed predates the City's historic district zoning ordinance which was enacted in October 1998. Thus, the shed was constructed at the time without consideration of the criteria established in the Code and the October 1998 Design Guidelines. Indeed, the pictures of the shed confirm that it was not designed to comply with any historic design criteria or guidelines. Rather than reflect any historic character of the District between 1850 and 1950, the shed is a metal shed constructed in the late 1990s.

As a result, the shed appears to be a Nonconforming Structure pursuant to the Guidelines. "A structure or part thereof is determined to be legally nonconforming if it was legally in place on the effectiveness date of Ordinance No. 890 but by reason of style, construction or placement it does not meet the standards or intent of the Primary Area or Subarea cause a structure or part thereof to be deemed nonconforming." (Guidelines, §4.16.02.) The Code and the Guidelines make the continuation of a nonconforming structure, like the shed, contingent on several conditions,

Folsom City Council
 April 25, 2022
 Page 3 of 8

including that “[t]he nonconformity is not increased....” (Code §17.52.690(B)(2); Guidelines § 4.16.02.)

The crematorium project proposes to expand the nonconforming, late-1990’s shed structure to include a prominent exhaust stack. As a result, the project proposes to expand the nonconformity of the existing shed. The addition of the vent stack is significantly more prominent than suggested in the renderings provided by the applicant. The residents are informed and believe that the rear of the maintenance shed, where the proposed crematorium would be positioned, is 10 feet in height. The drawings of Hartwick Combustion Technologies’ Apex 250 crematory clearly depict an exhaust stack extending 354.11 inches, *i.e.*, 29.5 feet, from ground level. (Agenda Packet, p. 255.) As a result, the exhaust stack will extend about 19.5 feet above the roof of the existing shed. The rendering attached to the IS/MND appears to suggest a stack extending a few feet above the rear roof of the shed. (*Id.*, pp. 261. 262.) In either event, the addition of the exhaust stack, whether extending 19.5 feet or a few feet above the shed, is an expansion of the nonconforming structure and hence prohibited by the Code and Guidelines.

The staff report prepared for the Historic Commission suggests that “[t]he height of the stack is determined during the SCAQMD permitting process in order to meet their air quality standards.” (Agenda Packet, p. 220.) However, the City Council staff report now notes that the “[Air District] representative noted that the Air District does not advocate for a specific height unless the height proposed by the applicant does not meet the district’s air quality standards for nearby sensitive receptors.” (*Id.*, p. 194.) In preparing its air pollution modeling, “HELIX commented that the analysis done for the IS/MND assumed a height of 19.5 feet from finished grade based on specifications provided to them by the applicant.” (*Id.*) However, the only stack height reflected in the materials attached to the IS/MND is that provided by Hartwick showing a 29.5 feet stack.

Whatever the actual height of the stack may be, it is a prohibited expansion of a nonconforming structure. The Guidelines recognize that mechanical equipment, such as a crematorium exhaust stack, are generally incompatible “with the design time frames of much of the Historic District and [have] inherent aesthetic drawbacks....” (Guidelines, §4.03.) For this reason alone, the Council should uphold the Commission and deny the permit.

The Historic District Zoning Code also provides for nonconforming uses if the use was “legally in place as of the effective date of the ordinance codified in this chapter[,]” *i.e.* October 1998. (Code §17.52.680.) As a result, no new nonconforming use can be approved by the City. The open space areas of the historic district permit a “cemeteries” use. (Code §17.52.550(A)(4). Cemetery is defined as “a burial ground.” The New Oxford American Dictionary, p. 275 (Oxford University Press (2d ed. 2005). On the other hand, a “crematorium” or “crematory” is “a place where a dead person’s body is cremated.” (*Id.*, p. 398.) The only accessory uses contemplated by the Historic District open space zoning are “[r]esidential uses accessory to a public use.” (*Id.*, §17.52.550(A)(7).) Whether a crematory would qualify as an accessory use to a cemetery in general, as discussed by staff in the Historic District Commission staff report, does not address the specific language of the City’s zoning code which specifies only one type of permitted accessory use for this subarea of the historic district. (Agenda Packet, p. 209.) Indeed, there is no general authority at all for accessory uses in the zoning code for the Historic District, with the exception of accessory uses associated with accessory structures for residences. (*See* Code §17.52.540.) The “[r]esidential uses accessory to a public use” is consistent with the limited accessory use permitted

Folsom City Council
 April 25, 2022
 Page 4 of 8

in the open space subarea. The Council cannot, however, extend that authorization to other new non-residential accessory uses, such as a crematory. For this reason, the Council should uphold the Commission's denial of the permit.

B. The IS/MND is Insufficient and Cannot be Relied Upon to Reverse the Commission's Decision and Approve the Project.

The IS/MND is unlawful pursuant to CEQA because the project description is unstable and because substantial evidence shows the project may have a significant impact on historic resources requiring the preparation of an EIR. Because the IS/MND is inadequate, the Council cannot overturn the Commission's denial and approve the Project without first preparing an EIR.

1. The IS/MND's description of the project is unstable and incomplete.

As discussed above, the City's zoning code of the Historic District highlights the importance of not expanding structures that are not consistent with the historic period the District is intended to preserve and enhance. Despite the importance of such proposed changes, the IS/MND fails to adequately describe the extent of the exhaust stack that must be installed for the project. The one hard piece of evidence attached to the IS/MND depicts the stack with an accompanying measured height of 354.11 inches, *i.e.*, 29.5 feet. (Agenda Packet, p. 255.) The IS/MND's air modeling assumes a height of 19.5 feet based on specifications provided by the applicant. (*Id.*, pp. 194, 305, 395, 430.) But no other written height specifications besides the manufacturer's drawing depicting a measured height of 29.5 feet are in the record. The importance of the stack height is highlighted by the comments by the Historic District Commissioner's uncertainty over the height of the stack. (*Id.*, p. 194.) The manufacturer's drawing indicates that the stack would extend 19.5 above the shed roof. (*Id.*, p. 255.) The IS/MND indicates that the stack would extend 10 feet above the roof. (*Id.*, p. 296.) However, as noted above, the rendering provided by the applicant shows a stack of no more than 2 to 3 feet. (*Id.*, p. 261.)

A negative declaration must accurately describe the proposed project. (*Christward Ministry v. Superior Court* (1986) 184 Cal.App.3d 180; CEQA Guidelines §15071(a).) The initial study must "provide documentation of the factual basis for the finding in a Negative Declaration that a project will not have a significant effect on the environment." (CEQA Guidelines § 15063(c)(5).) "An accurate, stable and finite project description is the sine qua non of an informative and legally sufficient [CEQA document]." (*County of Inyo v. City of Los Angeles* (1977) 71 Cal.App.3d 185, 193.) "[A] project description that gives conflicting signals to decision makers and the public about the nature and scope of the project is fundamentally inadequate and misleading." (*Washoe Meadows Community v. Department of Parks & Rec.* (2017) 17 Cal.App.5th 277, 287, quoting *Citizens for a Sustainable Treasure Island v. City and Cty. of San Francisco* (2014) 227 Cal.App.4th 1036, 1052.) "A curtailed or distorted project description may stultify the objectives of the reporting process." (*Cty. of Inyo*, 71 Cal.App.3d at 192.) "Only through an accurate view of the project may affected outsiders and public decision-makers balance the proposal's benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal ..., and weigh other alternatives in the balance." (*Id.*)

Where a lead agency relies on an insufficient project description, "the problem ... is not confined to 'the informative quality of the [environmental document]'s environmental forecasts.'" (*Stopthemillenniumhollywood.com v. City of Los Angeles* (2019) 39 Cal.App.5th 1, 17, citing

Folsom City Council
 April 25, 2022
 Page 5 of 8

Washoe Meadows, 17 Cal.App.5th at 288.) “A curtailed, enigmatic or unstable project description draws a red herring across the path of public input.” (*City of Inyo*, 71 Cal.App.3d at 198.) “The omission of relevant information is deemed prejudicial regardless of whether a different outcome would have resulted if the public agency had complied with those provisions.” (*Stoepthemillennium*, 39 Cal.App.5th at 17 [citations omitted].)

The IS/MND’s failure to provide a stable description of the exhaust stack for the proposed crematorium is fatal to the IS/MND. Because one cannot discern the actual height of the proposed stack, the project’s aesthetic impacts were not properly evaluated. Likewise, the extent of the project’s impacts on historic resources is not disclosed given the uncertainty of the stack height and impedes the IS/MND’s evaluation of the project’s consistency with the zoning code restrictions. Lastly, the air modeling is flawed, relying on a stack height that is 10 feet shorter than depicted and unsupported by any substantial evidence in the record. Accordingly, the IS/MND cannot be relied upon for any approval of the Project.

2. Substantial evidence in the record demonstrates a fair argument that the project may have significant impacts on cultural resources.

The IS/MND also is fatally flawed because substantial evidence in the record establishes a fair argument that the project may have a significant impact on historic resources. As a result, an EIR rather than a MND must be prepared for the project prior to any approval.

In 2003, the City’s staff prepared a report concluding that a crematorium in the same location would have significant impacts on historic resources. The 2003 staff recommendation concluded that adding a crematory use does not maintain the historic use of the site. (Agenda Packet, p. 777.) The report also found that adding a crematorium would discourage the inclusion of the Lakeside Cemetery on the State and National Historic Registers. (*Id.*) The report further cited evidence that a crematory use is not a consistent use with a historic cemetery. (*Id.*) As a result of the staff’s report and the recommendation to deny the permit for the proposed crematory, the applicant withdrew the project. Nevertheless, the staff’s report remains substantial evidence. (*See, e.g. Young v. City of Coronado* (2017) 10 Cal.App.5th 408, 433 (staff report included substantial evidence to support City’s ultimate decision to designate a property as a historic resource).)

As the California Supreme Court held, “[i]f no EIR has been prepared for a nonexempt project, but substantial evidence in the record supports a fair argument that the project may result in significant adverse impacts, the proper remedy is to order preparation of an EIR.” (*Communities for a Better Environment v. South Coast Air Quality Management Dist.* (2010) 48 Cal.4th 310, 319-320 [“*CBE v. SCAQMD*”], citing, *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.3d 68, 75, 88; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491, 504–505.) “The ‘foremost principle’ in interpreting CEQA is that the Legislature intended the act to be read so as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language.” (*Communities for a Better Environment v. Calif. Resources Agency* (2002) 103 Cal.App.4th 98, 109 [“*CBE v. CRA*”].)

The EIR is the very heart of CEQA. (*Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1214; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 927.) The EIR is an “environmental ‘alarm bell’ whose purpose is to alert the public and its responsible officials to environmental changes before they have reached the

Folsom City Council
 April 25, 2022
 Page 6 of 8

ecological points of no return.” (*Bakersfield Citizens*, 124 Cal.App.4th at 1220.) The EIR also functions as a “document of accountability,” intended to “demonstrate to an apprehensive citizenry that the agency has, in fact, analyzed and considered the ecological implications of its action.” (*Laurel Heights Improvements Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 392.) The EIR process “protects not only the environment but also informed self-government.” (*Pocket Protectors*, 124 Cal.App.4th at 927.)

An EIR is required if “there is substantial evidence, in light of the whole record before the lead agency, that the project may have a significant effect on the environment.” (Pub. Resources Code, § 21080(d); see also *Pocket Protectors*, 124 Cal.App.4th at 927.) In limited circumstances, an agency may avoid preparing an EIR by issuing a negative declaration, a written statement briefly indicating that a project will have no significant impact thus requiring no EIR (14 Cal. Code Regs., § 15371 [“CEQA Guidelines”]), only if there is not even a “fair argument” that the project will have a significant environmental effect. (Pub. Resources Code, §§ 21100, 21064.) Since “[t]he adoption of a negative declaration . . . has a terminal effect on the environmental review process,” by allowing the agency “to dispense with the duty [to prepare an EIR],” negative declarations are allowed only in cases where “the proposed project will not affect the environment at all.” (*Citizens of Lake Murray v. San Diego* (1989) 129 Cal.App.3d 436, 440.)

Where an initial study shows that the project may have a significant effect on the environment, a mitigated negative declaration may be appropriate. However, a mitigated negative declaration is proper *only* if the project revisions would avoid or mitigate the potentially significant effects identified in the initial study “to a point where clearly no significant effect on the environment would occur, and . . . there is no substantial evidence in light of the whole record before the public agency that the project, as revised, may have a significant effect on the environment.” (Public Resources Code §§ 21064.5 and 21080(c)(2); *Mejia v. City of Los Angeles* (2005) 130 Cal.App.4th 322, 331.) In that context, “may” means a *reasonable possibility* of a significant effect on the environment. (Pub. Resources Code, §§ 21082.2(a), 21100, 21151(a); *Pocket Protectors*, 124 Cal.App.4th at 927; *League for Protection of Oakland's etc. Historic Resources v. City of Oakland* (1997) 52 Cal.App.4th 896, 904–905.)

Under the “fair argument” standard, an EIR is required if any substantial evidence in the record indicates that a project may have an adverse environmental effect—even if contrary evidence exists to support the agency’s decision. (CEQA Guidelines, § 15064(f)(1); *Pocket Protectors*, 124 Cal.App.4th at 931; *Stanislaus Audubon Society v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150–15; *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602.) The “fair argument” standard creates a “low threshold” favoring environmental review through an EIR rather than through issuance of negative declarations or notices of exemption from CEQA. (*Pocket Protectors*, *supra*, 124 Cal.App.4th at 928.)

The “fair argument” standard is virtually the opposite of the typical deferential standard accorded to agencies. As a leading CEQA treatise explains:

This ‘fair argument’ standard is very different from the standard normally followed by public agencies in making administrative determinations. Ordinarily, public agencies weigh the evidence in the record before them and reach a decision based on a preponderance of the evidence. [Citations]. The fair argument standard, by contrast, prevents the lead agency from weighing competing evidence to determine who has a better

Folsom City Council
 April 25, 2022
 Page 7 of 8

argument concerning the likelihood or extent of a potential environmental impact. The lead agency's decision is thus largely legal rather than factual; it does not resolve conflicts in the evidence but determines only whether substantial evidence exists in the record to support the prescribed fair argument.

(Kostka & Zishcke, *Practice Under CEQA*, §6.29, pp. 273-274.) The Courts have explained that "it is a question of law, not fact, whether a fair argument exists, and the courts owe no deference to the lead agency's determination. Review is de novo, with a **preference for resolving doubts in favor of environmental review.**" (*Pocket Protectors*, 124 Cal.App.4th at 928 [emphasis in original].)

Because the prior staff report concluded that essentially the same crematorium project would significantly affect the surrounding historic resources, that report is substantial evidence of a fair argument that the current crematorium project may have a significant adverse effect on the same historic resources. In *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, the court rejected a county's argument that a revised initial study prepared by the county which contradicted the findings of the first initial study had not "relegated the first initial study to oblivion." (*Id.* at 154.) The court stated, "We analogize such an untenable position to the unringing of a bell. The first initial study is part of the record. The fact that a revised initial study was later prepared does not make the first initial study any less a record entry nor does it diminish its significance...." (*Id.* at 154) The City cannot conclude that a project may have significant impacts and then, when such admission is no longer convenient, simply change its conclusion to better suit its needs. Here, the analysis from the 2003 staff report, itself substantial evidence, creates a "fair argument" that the crematory project may have significant impacts on the surrounding historic resources, despite other evidence to the contrary. (*See, Id.; Gentry v. Murietta* (1995) 36 Cal.app.4th 1359 (petitioner may rely on statements made in initial study to establish fair argument, even in the face of contradictory evidence).)

The unsupported assertion that cremation furnace technology has significantly evolved since 2003 is not supported by the record. The type of equipment and size described for the 2003 project is essentially the same as that proposed for the current project. (Compare Agenda Packet, pp. 783-84 and 255-257.) There is no evidence in the record pointing to any differences in the performance of the two brands of equipment. (*Id.*) As a result, the assertion does not provide any evidence to distinguish the 2003 staff report's conclusions from the current project.

The City Council Staff Report further confirms that there is a fair argument that the project may have significant impacts on historic resources. Staff identifies the letters "sent by the Cemetery Advisory Commission [which] stated that the crematorium would be inappropriate near the surrounding cultural resources of historic importance and could threaten the nomination of the Young Wo Cemetery and adversely affect the historic features and burials of those buried nearby." (Agenda Packet, p. 198.) Likewise, the fact that the Historic Commission itself, the City's own expert agency on evaluating historic impacts in the Historic District, determined that the project would have significant impacts on the adjacent historic resources is itself substantial evidence of a fair argument that the project may have such impacts, requiring an EIR. (*See Stanislaus Audubon Society*, 33 Cal.App.4th at 154.)

Folsom City Council
April 25, 2022
Page 8 of 8

C. The Commission's Findings are Supportedd by the Record.

The above reasons that the City Council cannot overturn the Commission's denial are in addition to reasons articulated by the Commission in its findings and which are supported by substantial evidence in the record. In addition to the evidence provided by the Sacramento County Historic Cemetery Commission and the City's prior staff analysis, additional substantial evidence from expert organizations has been submitted. The Chinese Historical Society of America has reviewed the proposed project and submitted comments describing evidence of impacts to persons' experience of the cultural significance of the adjacent cemeteries. (Agenda Packet, pp. 554-556.) Likewise, the Heritage Preservation League of Folsom provided comments describing shortcomings in the IS/MND and potential impacts to the surrounding historic resources. (*Id.*, pp. 611-612.)

For all of these reasons, the Residents respectfully request that the City Council deny the appeal and uphold the Historic Commission's denial of the conditional use permit for the proposed crematorium. Thank you for your consideration of these comments.

Sincerely,

Michael R. Lozeau

FROM:	Community Development Department

RECOMMENDATION / CITY COUNCIL ACTION

Move to Adopt Resolution No. 10849 - A Resolution to Adopt a Mitigated Negative Declaration, Approve a General Plan Amendment, and Approve a Planned Development Permit for the Folsom Corporate Center Apartments project

And

Move to Introduce and Conduct First Reading of Ordinance No. 1327 - An Uncodified Ordinance to amend the zoning designation for a 7.24-acre parcel (Lot 1) from M-L PD to R-4 PD and to amend the zoning designation for a 4.68-acre parcel (Lot 6) from BP PD to R-4 PD for the Folsom Corporate Center Apartments project (Introduction and First Reading)

BACKGROUND / ISSUE

On August 15, 2000, the City Council approved a Tentative Subdivision Map and Planned Development for development of a 1.425-million-square-foot professional office center known as the Folsom Corporate Center. On May 1, 2002, the Planning Commission approved a Planned Development Permit and Conditional Use Permit for development of a 255,795-square-foot retail shopping center known as Folsom Gateway within the eastern portion of the previously approved Folsom Corporate Center. That approval resulted in the reduction of 395,000 square feet of office space within the Folsom Corporate Center.

A total of four professional office buildings have been developed within the Folsom Corporate Center with major tenants including HDR Engineering, Kaiser Permanente, Micron Technology, and SAFE Credit Union.

- On January 26, 2016, the City Council approved the development of the 126-unit senior retirement community known as the Iron Point Retirement Community on a 4.68-acre property located at 2275 Iron Point Road.
- On October 4, 2017, the Planning Commission approved an extension to the previous approval for the Iron Point Retirement Community project.
- On February 6, 2019, the Planning Commission approved an additional one-year extension to the project. Subsequently, the applicant decided not to pursue project development and withdrew their application. It is important to note that the 4.68 parcel associated with Iron Point Retirement Community project is one of the parcels (Lot 6) included with the proposed Folsom Corporate Center Apartments project.
- On October 7, 2020, the Planning Commission approved a 11,716-square-foot single-story medical building (Kidney Dialysis Treatment Center) on a 2.77-acre site located near the southwest corner of the intersection of Iron Point Road and Rowberry Drive within the Folsom Corporate Center. The Kidney Dialysis Treatment Center is currently under construction and is located directly to the east of one of the parcels (Lot 1) associated with the proposed Folsom Corporate Center Apartments project.

The applicant, FCC 50, LLC (Cole Partners), is requesting approval of a General Plan Amendment, Rezone, and Planned Development Permit for development of a 253-unit market-rate apartment community on two parcels (Lot 1: 7.24-acre parcel and Lot 6: 4.68-acre parcel) within the Folsom Corporate Center, which is generally located on the south side of Iron Point Road, east of the intersection of Iron Point Road and Oak Avenue Parkway.

The applicant's request for approval of a General Plan Amendment, Rezone, and Planned Development Permit was considered by the Planning Commission at its April 6, 2022 meeting. At this meeting, the Planning Commission discussed several items associated with the proposed project including land use impacts, regional housing needs and affordability, traffic impacts, pedestrian connectivity, vehicle parking, and oak tree preservation and mitigation.

In relation to land use, the Commission indicated that they were supportive of the proposed change in land use from commercial office to multi-family residential based on changing market dynamics relative to the office market in Folsom and the region. The Commission also commented that the proposed change in land use could potentially create a more vibrant mixed-use environment. A detailed discussion regarding the project's land use impacts is contained within the General Plan Amendment and Rezone section of this staff report. Below is a summary of the issues discussed at the Planning Commission meeting (a more detailed discussion of these items is found in the analysis section below):

- **RHNA**- The City's progress with meeting the RHNA numbers was discussed. City staff shared a table with the Commission that showed that 523 affordable housing units have been constructed in the City to date this year, with a total remaining RHNA obligation for construction of 5,840 housing units across all income levels. The Commission inquired as to whether the applicant had considered incorporating affordable housing units into the proposed apartment development. The applicant responded that their expertise is in developing and managing market-rate apartment communities and that their business model for this particular project would not accommodate any affordable units.
- **Traffic**- The traffic consultant for the project provided an overview of the Transportation Impact Study (Attachment 21) that was prepared for the proposed project and stated that the project is anticipated to generate a low volume of vehicle trips including 81 AM peak hours trips and 104 PM peak hour trips. Based on the low number of vehicle trips, the traffic consultant stated that the project is not expected to have a significant impact on level of service (LOS) at any of the 17 study intersections including the Iron Point Road/East Bidwell Street intersection. The traffic consultant also noted that the proposed project would not have a significant impact relative to Vehicle Miles Traveled (VMT).
- **Pedestrian Connectivity** - the Commission discussed whether it would be feasible to provide additional pedestrian connections from Lot 1 and Lot 6 to the existing sidewalk located along the south side of Iron Point Road. The applicant indicated that they had evaluated the possibility of providing these additional pedestrian connections but because of significant grade changes and because the sidewalk would be on an adjacent property not controlled by the applicant it was determined to be infeasible.
- **Parking** - The Commission discussed the parking requirements of the proposed project and inquired whether City staff thought that the project may be overparked. City staff responded that the proposed project meets the parking requirements established by the Folsom Municipal Code and the parking recommendations of the Design Guidelines for Multifamily Development. City staff further commented that the City does not require development projects to exceed the parking requirements established by the

Folsom Municipal Code and the Design Guidelines, but rather meet the minimum parking requirements and recommendations of these documents.

- **Oak Tree Mitigation** - The Commission engaged in a lengthy discussion regarding oak tree preservation and mitigation. The applicant provided an overview regarding the initial planning and development of the Folsom Corporate Center and how designated oak tree preserve areas were created to preserve as many oak trees as possible. With respect to this specific project, the applicant indicated that they are preserving as many trees as possible including preservation of a 41” diameter Heritage Blue Oak tree on Lot 1. The applicant also noted that they were planning to mitigate for the impact to oak trees by planting 35 Mitigation Oak trees on the project site.

Ultimately, the Planning Commission voted 4-1-0 (2 Commissioners absent) to recommend to the City Council approval of the proposed project, subject to the findings included with this report.

POLICY / RULE

The Folsom Municipal Code (FMC) requires that applications for General Plan Amendments and Rezones be forwarded to the City Council for final action. City Council actions regarding General Plan Amendments and Rezones are covered under Section 17.68.050 of the Folsom Municipal Code.

ANALYSIS

As noted above, the applicant is requesting approval of three entitlements to allow for development of the proposed apartment community. The first entitlement is a request for approval of a General Plan Amendment to change the General Plan land use designation for the two project parcels (Lot 1 and Lot 6) from IND (Industrial/Office Park) to MHD (Multi-Family High Density). The second entitlement is a request for approval of a Rezone to change the zoning designation for Lot 1 from M-L PD (Limited Manufacturing, Planned Development District) to General Apartment, Planned Development District (R-4 PD) and to change the zoning designation of Lot 6 from BP PD (Business and Professional, Planned Development District) to General Apartment, Planned Development District (R-4 PD). The third entitlement is a request for approval of a Planned Development Permit to establish project-specific development standards, review the project site design, evaluate the architectural design of the multi-family apartment and clubhouse buildings, and establish signage criteria.

The proposed Folsom Corporate Center Apartments project, which includes development of 11 three-story apartment buildings and two clubhouse buildings (three-story and one-story buildings respectively), is comprised of 253 market rate apartments within a gated community. The apartment buildings include a combination of 16-plex buildings, 21-plex buildings, 26-plex building, and 32-plex buildings with a total of 16 studio units (564 square feet), 126 one-bedroom units (687 square feet), 97 two-bedroom units (990-1057 square feet), and 14 three-

bedroom units (1,412 square feet). All apartment units are proposed to be accessible from interior hallways and include a full kitchen, living space, storage closets, bedrooms, bathrooms, and an outdoor patio/balcony. The one and three-story clubhouse buildings include a recreation room, a fitness center, a yoga studio, a spa room, a mail room, a bike storage facility, leasing offices, a storage room, and restroom facilities. Outdoor amenities associated with the clubhouse buildings include a pool, a spa, and deck areas. Additional outdoor amenities include two dog parks.

In relation to site design, Lot 1 includes seven rectangular apartment buildings that are evenly spaced within the eastern portion of parcel due to constraints associated with overhead transmission lines situated in the western portion of the parcel. Lot 6 includes four rectangular apartment buildings which are centrally located on the parcel.

The applicant proposes a modern contemporary architectural design theme intended to compliment the surrounding commercial buildings within the Folsom Corporate Center. Modern and unique design elements include angular building shapes and forms, varied roof heights, flat rooftops, recessed building elements, metal canopies, and extensive use of glass. Proposed building materials include stucco walls, stone veneer wainscoting, metal canopies, glass railing, and metal railing. The color scheme for the buildings is proposed to be generally earth tone, with extensive use of gray and brown colors accented by a mixture of lighter colors including white and tan.

General access to the project area is provided by three existing driveways located on the south side of Iron Point Road. Primary vehicle access to Lot 1 is provided by a new driveway on south side of an existing private ring road with secondary access accommodated by two emergency vehicle access driveways also situated on the south side of the ring road. Primary vehicle access to Lot 6 is provided by a new driveway on the north side of the private ring road with secondary access served by an emergency vehicle access driveway also positioned on the north side of the ring road. Each of the project driveways will accommodate all vehicle turning movements into and out of the respective sites. In addition, all project driveways will have access controlled by vehicle gates.

Proposed internal vehicle circulation consists of 27-foot-wide drive aisles to facilitate movement in and around the project sites. Pedestrian circulation is provided by a combination of new sidewalks and existing sidewalks located along the private ring road and along Iron Point Road. Internal pedestrian circulation is accommodated by a series of new pedestrian pathways that provide connectivity to the apartment buildings, the clubhouse building, the perimeter sidewalks, and the future Class I trail to the south. Additional site improvements include: 491 parking spaces (includes combination of garage, carport, and uncovered spaces), 51 bicycle parking spaces, 5 electric vehicle charging stations, underground utilities, drainage basins, site lighting, site landscaping, retaining walls, fencing, and project identification signs.

A. General Plan Amendment and Rezone

General Plan Amendment and Rezone

The Folsom Corporate Center Apartments project is comprised of two separate parcels, Lot 1, which is 7.24-acres in size and Lot 6, which is 4.68-acres in size. Lot 1 and Lot 6 each have a General Plan land use designation of IND (Industrial/Office Park). As shown on Attachment 6, the proposed project includes a request to change the General Plan land use designation for both parcels from IND (Industrial/Office Park) to MHD (Multi-Family High Density). Lot 1 currently has a Zoning designation M-L PD (Limited Manufacturing, Planned Development District), while Lot 6 has a zoning designation of BP PD (Business and Professional, Planned Development District). As shown on Attachment 7, the proposed project includes a request to change the zoning designation for Lot 1 from M-L PD (Limited Manufacturing, Planned Development District) to R-4 PD (General Apartment, Planned Development District) and to change the zoning designation of Lot 6 from BP PD (Business and Professional, Planned Development District) to R-4 PD (General Apartment, Planned Development District). With approval of the proposed amendments and rezones, the entire project site will have a General Plan land use designation of MHD and a Zoning designation of R-4 PD.

The project is consistent with both the proposed General Plan land use designations and the proposed zoning designations, as multi-family apartments are identified as a permitted land use within the Folsom Municipal Code (FMC, Section 17.18.020 Permitted Uses). The proposed project includes a density of 21.2 dwelling units per acre, is consistent with the allowable density range (20-30 dwelling units per acre) established by the General Plan for Multi-Family High Density (Table LU-1: Residential Designations). In addition, the proposed project meets the development requirements established by the Folsom Municipal Code (FMC, Chapter 17.18, General Apartment District) and the Folsom Corporate Center Planned Development Guidelines with some minor modifications (discussed within the Planned Development Permit section of this staff report). Proposed modifications to development standards include lot area, lot width, building coverage, building height, building setbacks, and parking, which are discussed in the Planned Development Permit section of this staff report.

In reviewing the proposed General Plan Amendment and the Rezone, staff took into consideration community benefits that the proposed apartment project will provide relative to the supply of new housing units. City staff also considered the changes in the region's office and housing markets over the past 10 to 15 years. According to the California Department of Housing and Community Development (HUD), the state of California is facing a severe shortage regarding housing supply, with some estimates indicating a shortfall of up to 3.5 million housing units. The housing shortage has a number of significant negative effects including but not limited to causing housing prices to rise which limits affordability and increasing the homeless population in communities. The benefit of the proposed project is that

it will increase the City's housing supply by providing 253 new market-rate rental units along the Iron Point Road corridor in close proximity to jobs and services in that area of the City.

Cole Partners, who is the original developer of the 900,000-square-foot Folsom Corporate Center, described efforts to bring new medical and office uses to the Folsom area over the last two decades. Since inception of the Corporate Center in 2000, the development has attracted prominent medical and office companies including Kaiser Permanente, Micron, and SAFE Credit Union. However, the applicant describes changing regional market dynamics over the last decade (changes in technology, acceptable of telecommuting, etc.) with the interest in housing projects far outpacing the demand for new office development. It has been more than 12 years since any new major office buildings (Waste Connections/SAFE Credit Union and Numonyx/Micron) were constructed within the Corporate Center. Notably, these two office buildings are the last privately developed larger suburban office buildings completed not only in Folsom, but along the Highway 50 corridor. While the office market dynamic has changed in a negative way, the regional demand for housing (single-family and multi-family) continues to remain extremely strong, especially in Folsom with a range of multi-family projects (Alder Creek Apartments, Avenida Senior Apartments, Mangini Ranch Apartments, Scholar Way Apartments, etc.) being approved recently. Based on these factors, staff has determined that the proposed changes in land use and zoning are warranted.

Land Use Compatibility

In evaluating the General Plan Amendment and the Rezone, staff also took into consideration the compatibility of the proposed project relative to existing land uses in the project area. The proposed project is located on two undeveloped parcels within the Folsom Corporate Center. The project site is bounded by Iron Point Road to the north with single-family residential development (Broadstone Unit. No. 2) and multi-family residential development (Sherwood Apartments) beyond, U.S. Highway 50 to the south with undeveloped properties within the Folsom Plan Area beyond, multi-family development (Revel Senior Living and CountryHouse Memory Care) to the west with future Oak Avenue Parkway extension and commercial development beyond, and commercial development to the east with East Bidwell Street beyond.

The most prominent land uses in the immediate project area are professional office-related and include SAFE Credit Union, Micron, Kaiser Permanente, and HDR. Residential land uses in close proximity to the site include the Broadstone Unit No. 2 Subdivision (approximately 150 feet to the north across Iron Point Road), Sherwood Apartments (approximately 400 feet to the northeast across Iron Point Road), and Revel Senior Living Apartments (approximately 500 feet to the west). Medical-office related land uses in the project vicinity include the aforementioned Kaiser Permanente Medical Office facility and the Kaiser Permanente Surgery Center. The nearest retail commercial development (Folsom Gateway Shopping Center, which was also developed by a Cole-related entity) is located approximately 1,200 feet to the east of

the project site. Additional retail commercial development is located north of Iron Point Road (Palladio at Broadstone), approximately 3,100 feet east of the project site.

As described above, the project site is situated in a unique location that includes a wide array of land uses including professional offices, medical offices, retail shopping, multi-family apartments, single-family residences, and a memory care facility. As mentioned within the project description, the Folsom Corporate Center Apartments project is a market-rate apartment community providing living opportunities for residents within 253 apartment units. Given the residential nature of the proposed use, staff has determined that the proposed project will be complimentary to the existing multi-family and single-family residential land uses located in the immediate project vicinity. In addition, considering the basic needs of the apartment residents, staff has determined that the proposed project is well-situated to take advantage of the numerous goods (grocery store, restaurants, and retail shops) and services (medical offices) and job opportunities that are located within walking distance of the site.

B. Planned Development Permit

The purpose of the Planned Development Permit process is to allow greater flexibility in the design of integrated developments than otherwise possible through strict application of land use regulations. The Planned Development Permit process is also designed to encourage creative and efficient uses of land. The following are proposed as part of the applicant's Planned Development Permit:

- Development Standards
- Building Architecture and Design
- Signage

Development Standards

The Folsom Corporate Center includes development standards that were intended to guide commercial development and did not consider that residential development might occur within the boundaries of the Corporate Center. As a result, the applicant's intent with the subject application is to create a set of unique set of development standards that are better suited for multi-family residential development, yet still generally comply with the development standards established for properties within the Folsom Corporate Center as well as being consistent with the development standards established for properties within the General Apartment (R-4) zoning district. Table 1 on the following page lists the existing and proposed development standards for the Folsom Corporate Center Apartments project.

TABLE 1: DEVELOPMENT STANDARDS TABLE

Development Standards Table Folsom Corporate Center Apartments						
	Lot Area	Lot Width	Front Yard Setback	Rear Yard Setback	Side Yard Setbacks	Building Height
Existing Standards	0.5-Acres	NA	30 Feet Iron Point Rd.	NA	5 Feet	60 feet
R-4 District Standards	6,000 S.F.	60 Feet	20 Feet	10 Feet	5 Feet/10 Feet	50 Feet
Proposed Standards	0.5-Acres	60 Feet	40 Feet Iron Point Rd. 20 Feet	15 Feet	15 Feet	41 feet

As shown in Table 1, the proposed project meets or exceeds all development standards established for the Folsom Corporate Center and for the R-4 (General Apartment) zoning district. However, the proposed project does deviate from one guideline that is not shown in the table above. The Folsom Corporate Center Planned Development Guidelines recommend that a 30-foot-wide landscape buffer be provided along the Iron Point Road frontage. Due to site constraints (topography, shape, etc.), the applicant is proposing to reduce the width of the landscape buffer (17-21 feet) along the eastern portion of the Lot 6 frontage with Iron Point Road, while at the same time expanding the width of the buffer (41-43 feet) along a greater length of the western portion of the Lot 6 frontage with Iron Point Road. With this proposed landscape modification, the average width of the landscape buffer along Iron Point Road would exceed 30 feet. Staff supports this landscape modification as the total amount of landscaping along the Iron Point Road frontage will be increased.

Building Architecture and Design

As detailed in the Project Description section of this report, the proposed project includes development of 11 three-story apartment buildings and two clubhouse buildings on two separate parcels within the Folsom Corporate Center. The design concept for the apartment building and clubhouse buildings features a modern contemporary architectural style with strong articulation of building forms and massing, both of which are used to break up the scale of the buildings. Proposed building materials include stucco walls, stone veneer wainscoting, metal canopies, glass railing, and metal railing. The color scheme for the buildings is proposed to be primarily earth tone, with prominent use of gray and brown colors accented by a mixture of lighter colors including white and tan. Proposed elevations and renderings of the apartment and clubhouse buildings are shown in the exhibits on the following pages.

FIGURE 1: BUILDING ELEVATIONS (16-PLEX)

FIGURE 2: BUILDING ELEVATIONS (21-PLEX)

FIGURE 5: CLUBHOUSE BUILDING ELEVATIONS (LOT 1)

FIGURE 6: CLUBHOUSE BUILDING ELEVATIONS (LOT 6)

FIGURE 7: BUILDING RENDERINGS (LOT 1)

FIGURE 8: BUILDING RENDERINGS (LOT 6)

The proposed project is subject to the Folsom Corporate Center Design Guidelines. The Design Guidelines, in respect to overall architectural design concepts, are intended to provide a framework for design, while not restricting creativity. The following are design parameters recommended by the Design Guidelines to ensure a high-level quality of development:

- Buildings should be responsive to views from all four elevations.
- Building masses should be made human in scale, present varied elevations, and use accent materials to add variety.
- Building materials such as tile, stone, glass, metal panels, and concrete should be utilized together to reflect the area's modernity, diversity, and traditions.
- Building entries shall be distinguished with accent materials such as stone, slate, color metal panels, or concrete.

In addition to the Folsom Corporate Center Design Guidelines, the proposed project is subject to the City's Design Guidelines for Multi-Family Development. The Design Guidelines for Multi-Family Development recommend that multi-family projects be designed in a manner that compliments the surrounding community. The following are some of the specific design recommendations suggested by the Design Guidelines:

- Variety and distinctness in design are desirable.
- Expanses of uninterrupted wall area and unbroken roof forms shall be discouraged. Balconies, porches, bay windows, chimneys, and other design elements with projections and varied setbacks shall be used to break up the physical characteristics of structures.
- The use of a variety and combination of building materials is encouraged. Building materials selected for multi-family projects shall be very durable and require low maintenance including, but not limited to, stucco, stone, and brick. Building materials shall integrate quality design elements consistent with the design of the development and the surrounding neighborhood.
- Exterior building colors shall be compatible with the surrounding neighborhood setting and shall not be out of character or in visual competition with the existing surrounding design elements.
- All accessory structures, including carports, garages, and solid waste enclosures, shall be designed with materials and in a manner consistent with the architectural design characteristics of the development.

As illustrated on the building elevations and color renderings (Attachments 15 and 16), the proposing apartment and clubhouse buildings incorporate many of the key design features recommended by the Folsom Corporate Center Design Guidelines and the Design Guidelines for Multi-Family Development including the use of rectilinear building shapes to create a sense of depth, use of varied forms to create visual relief, use of staggered building elements to create visual interest, and the inclusion of unique design details to reinforce the modern contemporary residential design theme.

As shown on the color and materials board (Attachment 17), the proposed project utilizes a variety of modern building materials to enhance the appearance of the building including the use of stucco on the walls, stone veneer wainscoting, glass windows and doors, metal canopies, glass railing, and metal railing. As recommended by the Design Guidelines, the proposed project features a natural color scheme with extensive use of earth tone colors including gray and brown, complimented with lighter colors including white and tan.

Based on the analysis, staff has determined that the proposed project represents a high-quality design that is consistent with the design recommendations of the Folsom Corporate Center Design Guidelines and the Design Guidelines for Multi-Family Development. In addition, staff has determined that the project design is complimentary to the design of existing commercial and residential buildings in the immediate project area. As a result, staff recommends approval of the applicant's design with the following conditions:

1. This approval is for 11 three-story apartment buildings and two clubhouse buildings associated with the Folsom Corporate Center Apartments project. The applicant shall submit building plans that comply with this approval and the attached building elevations and color renderings dated November 16, 2021.
2. The design, materials, and colors of the proposed Folsom Corporate Center apartment and clubhouse buildings shall be consistent with the submitted building elevations, color renderings, materials samples, and color scheme to the satisfaction of the Community Development Department.
3. Brick pavers or another type of colored masonry material (ADA compliant) shall be used to designate pedestrian crosswalks on the project site, in addition to where pedestrian paths cross drive aisles, and shall be incorporated as a design feature at the two primary driveway entrances for Lot 1 and Lot 6 to the satisfaction of the Community Development Department.
4. Roof-mounted mechanical equipment, including satellite dish antennas, shall not extend above the height of the parapet walls. Ground-mounted mechanical equipment shall be shielded by landscaping or trellis type features.
5. Utility equipment such as transformers, electric and gas meters, electrical panels, and junction boxes shall be screened by walls and or landscaping.

These recommendations are included in the conditions of approval (Condition No. 60) presented for consideration by the Planning Commission.

Signage

The proposed project includes placement of three monument signs at strategic locations within the project site. The first monument sign is proposed to be located on a decorative six-foot-tall wall within a landscaped area at the southwest corner of Iron Point Road and private driveway entrance into the Folsom Corporate Center. The second and third monument signs

are proposed to be located on decorative six-foot-tall walls at their respective driveway entrances to Lot 1 and Lot 6. In terms of design, the monument signs will include individual letters made of metal with copy reading "Iron Point Apartment Homes". The monument signs, which are six-feet-tall and will include approximately 24 square feet of sign area each, will be indirectly illuminated. Staff has determined that the design of the proposed monument identification signs is complementary to the design of the proposed Folsom Corporate Center Apartments.

The Folsom Municipal Code (FMC, Section, 17.50.040 D) states that monument identification signs are an acceptable form of identification for multi-family residential projects. The Folsom Municipal Code also states that multi-family residential projects are permitted one freestanding sign that is a maximum of six-feet-tall with a maximum sign area of 32 square feet. Through the Planned Development Permit process, the applicant is seeking approval for three monument signs to provide identification for the proposed project. Staff has determined that three monument signs are appropriate based on several factors including lack of direct access to the project site from Iron Point Road, the project having two distinct driveway entrances in different locations, and the large physical scale of the apartment community. Staff recommends that the owner/applicant obtain a sign permit prior to installation of the three monument signs. Condition No. 62 is included to reflect this requirement.

C. Traffic/Access/Circulation

Existing Roadway Network

General access to the Folsom Corporate Center and the project parcels is provided by three existing driveways located on the south side of Iron Point Road. The westerly driveway is restricted to vehicle right-turn in and right-turn out movements only. The central driveway, which is located at the signalized intersection of Iron Point Road and Rowberry Drive, allows all vehicle turning movements. The easterly driveway allows vehicle right-turn in, right-turn out, and left-turn in movements only. Lots 1 and 6 both have new driveways with full access turning movements directly from existing private loop roads connecting to existing driveways on Iron Point Road.

Significant roadways in the project vicinity include Iron Point Road, Oak Avenue Parkway, Broadstone Parkway, and Rowberry Drive. Iron Point Road is an east-west arterial roadway with a raised median that runs from Folsom Boulevard to the eastern city limit along the north side of U.S. Highway 50. Within the vicinity of the project site, Iron Point Road (45 mph posted speed limit) has six lanes, bike lanes, sidewalk, curb, and gutter. Oak Avenue Parkway (45 mph posted speed limit) is a north-south arterial that extends from Willow Creek Drive to Iron Point Road. Oak Avenue Parkway is a four-lane urban arterial road between Willow Creek Drive and Blue Ravine Road, a six-lane urban arterial road between Blue Ravine Road and Riley Street, and a four-lane urban arterial road between Riley Street and Iron Point Road. Broadstone Parkway (45 mph posted speed limit) in the project vicinity is a four-lane east-west arterial, that wraps around the back of the Palladio at Broadstone Shopping Center from Iron Point Road to connect with Empire Ranch Road near the Sacramento-El Dorado County line. Rowberry Drive is a north-south two-lane local road that runs northward from the Kaiser

Permanente Medical Offices into neighborhoods to the north of Iron Point Road. A future extension of Rowberry Drive across U.S. Highway 50 and into the Folsom Plan Area is planned.

The traffic, access, and circulation analysis associated with the proposed project is based on the results of a Transportation Impact Study that was prepared in February 2022 by T. Kear Transportation Planning and Management, Inc. The transportation study analyzed traffic operations at the following 17 study intersections in the vicinity of the project site:

- Prairie City Road/U.S Highway 50 Eastbound Ramps
- Prairie City Road/U.S. Highway 50 Westbound Ramps
- Prairie City Road/American Aggregates Road
- Prairie City Road/Iron Point Road
- Iron Point Road /Grover Road
- Iron Point Road /Oak Avenue Parkway
- Iron Point Road /West Kaiser Access Road
- Iron Point Road /Rowberry Way
- Iron Point Road /Safe Credit Union Access
- Iron Point Road /Broadstone Parkway
- Iron Point Road /East Bidwell Street
- East Bidwell Street/U.S. Highway 50 Westbound Ramps
- East Bidwell Street/U.S. Highway 50 Eastbound Ramps
- APN 072-3120-023 "Lot 6" Access
- APN 072-3120-023 "Lot 1" Access
- Oak Avenue Parkway/U.S. Highway 50 Westbound Ramps (2035 Only)
- Oak Avenue Parkway/U.S. Highway 50 Eastbound Ramps (2035 Only)

Six different scenarios were evaluated in reviewing traffic operations at the 17 aforementioned study intersections including Existing 2021 without Project Condition, Existing 2021 with Project Condition, Existing Plus Approved Projects (EPAP) 2026 without Project Condition, EPAP 2026 with Project Condition, Cumulative 2035 without Project Condition, and Cumulative 2035 with Project Condition.

The proposed Folsom Corporate Center Apartments project is expected to generate a total of 81 vehicle-trips during the weekday AM peak hour and 104 vehicle-trips during the weekday PM peak hour trips. Overall, the proposed project is projected to generate a total of 1,376 daily vehicle trips. Based on the projected volume of project-related vehicle trips, the Transportation Study concluded that the proposed project would not have a significant impact on vehicle level of service (LOS) at any of the 17 study intersections. In addition, the Transportation Study determined that the proposed project would not have a significant impact relative to Vehicle Miles Traveled (VMT).

While the Transportation Study determined that the proposed project would not have any significant impacts on study intersections relative to LOS and VMT, the Study did indicate

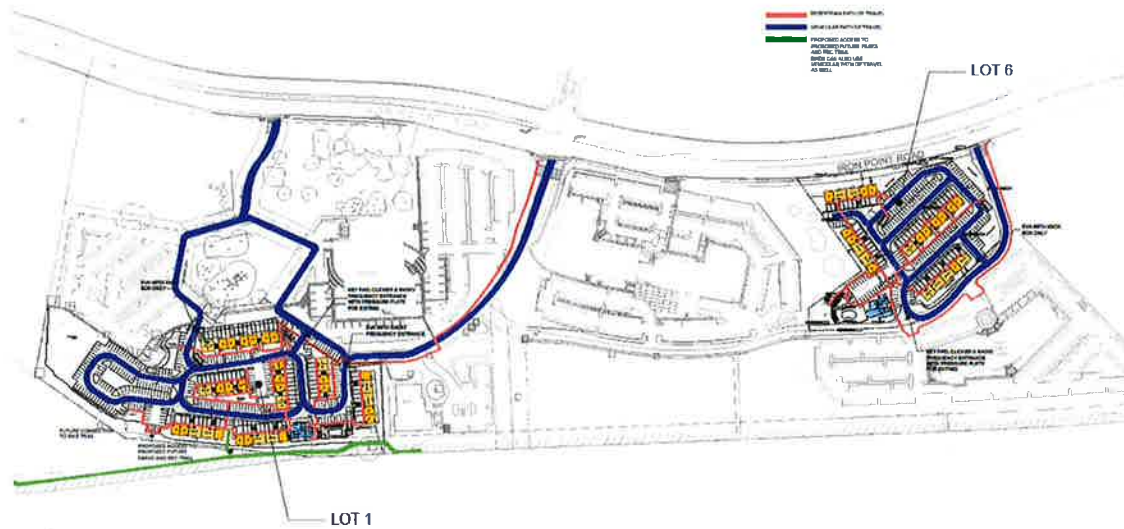

that the project would result in a queueing deficiency (project would add 1 vehicle to a queue that already exceeds available storage) in the AM Peak Hour for the westbound left-turn lanes at the intersection of Prairie City Road and Iron Point Road under two different study scenarios (Existing 2021 Conditions with Project and EPAP 2026 Conditions with Project). To address this impact and reduce the vehicle queuing caused by the proposed project, the Transportation Study recommends the following measure (Condition No. 51) be implemented:

- The owner/applicant shall modify Prairie City Road/ Iron Point Road signal timing plan by shifting 1 second from the eastbound through movement to the westbound left turn movement, reduce the vehicle extension setting from adding five to six additional seconds to the green phase for through movements to adding four seconds to the green phase for through movements for each vehicle passing the detector after the minimum green phase length has been exceeded. This mitigation measure shall be implemented by the City through the reimbursement agreement with the owner/applicant to cover any City costs. The implementation of this mitigation measure shall occur prior to issuance of the first building permit.

Project Access and On-Site Circulation

As shown on the submitted site plans (Attachments 8 and 9), access to the project area (Folsom Corporate Center) is provided by three existing driveways located on the south side of Iron Point Road. Primary vehicle access to Lot 1 is provided by a new driveway on south side of an existing private ring road with secondary access provided by two emergency vehicle access driveways also situated on the south side of the ring road. Primary vehicle access to Lot 6 is provided by a new driveway on the north side of the private ring road with secondary access served by an emergency vehicle access driveway also positioned on the north side of the ring road. Each of the project driveways from the private loop roads will accommodate all vehicle turning movements into and out of the respective sites. In addition, all project driveways will have access controlled by a vehicle gate. Internal vehicle circulation is provided by 27-foot-wide drive aisles that accommodate movement in and around the project sites. Pedestrian circulation is provided by a combination of new sidewalks and existing sidewalks located along the private ring road and also along Iron Point Road. Internal pedestrian circulation is accommodated by a series of new pedestrian pathways that provide connectivity to the apartment buildings, the clubhouse building, and the perimeter sidewalks. Access and circulation exhibits for the proposed project are shown in the figures on the following pages.

FIGURE 9: OVERALL ACCESS AND CIRCULATION EXHIBIT

FIGURE 11: LOT 6 ACCESS AND CIRCULATION EXHIBIT L 6

The Transportation Impact Study prepared for the proposed project evaluated the internal operation and configuration of the project access system in terms of right-turn deceleration lanes and tapers for driveways, minimum required driveway throat depth, emergency vehicle access, and entry gate queuing. As referenced previously within this report, the project parcels are accessed via private roadways within the Folsom Corporate Center. Access to City streets (Iron Point Road) is not being modified by the proposed project, thus the City's requirements for right-turn tapers and deceleration lanes are not applicable. Additionally, the Study determined that vehicle speeds and volumes within the Folsom Corporate Center's internal roadway network do not create a safety issue that would necessitate right-turn tapers and deceleration lanes at either of the internal project driveways.

As noted earlier, access to the two project parcels is provided by an existing private roadway network within the Folsom Corporate Center. As a result, the City's minimum required throat depth is not applicable. The Study determined that the design and throat depth of each of the proposed project driveways was acceptable and would function appropriately. In terms of emergency vehicle access, there are three gated emergency vehicle access driveways proposed to serve the proposed project. In addition, the project's internal drive isles have 25-foot inner/50-foot outer minimum turning radii to accommodate all fire and police department access. Based on this information, the Study determined that adequate emergency vehicle access is being provided for the project.

Primary vehicle access to Lot 1 is provided by a new driveway on south side of an existing private ring road and primary vehicle access to Lot 6 is provided by a new driveway on the north side of the private ring road. Both of these project driveways will have access controlled by a vehicle gate. As shown on the submitted Individual Site Plans and Details (Attachment 9), the two project driveways have been designed to accommodate queuing of up to three vehicles for entry into the respective sites. The Study determined that the design of the two project driveways provides adequate queuing space for vehicles entering the project sites.

To ensure implementation of the traffic control and pedestrian circulation measures identified on the submitted site plans, staff recommends the following recommendations be included as conditions of approval for the project (Condition No. 52):

- A “stop” sign and appropriate pavement markings shall be installed at the internal approach to the private ring road at the two primary project driveways.
- The vehicle entry gates at the two primary project driveway locations shall open inward, away from the private ring road or retract sideways. In addition, the design of the vehicle entry gates and the vehicle entry gate area shall conform to all requirements established by the City of Folsom for gated multi-family residential developments.
- If vehicles are observed backing up into the private ring road at either of the two gated primary project entries, City staff will evaluate and require appropriate measures to alleviate the traffic congestion including but not limited to requiring the two project entry gates to remain open during the AM (7:00 a.m. to 9:00 a.m.) and PM (4:00 p.m. to 6:00 p.m.) peak hours on weekdays.
- Residents of the Folsom Corporate Center Apartments project shall be issued remote transmitters to allow them to open the entry gates without needing to stop to enter a code in the keypad at either entrance location.
- The owner/applicant shall provide at least one pedestrian connection from Lot 1 to the southern property boundary to allow for a connection to the future Class I bicycle trail expected to be located within the 50-foot-wide landscape easement between the project site and U.S. Highway 50.

D. Parking

The Folsom Municipal Code (Section 17.18.110 Parking) requires 1.5 parking spaces per unit for multi-family structures and complexes located within the R-4 (General Apartment Zoning District) zoning district. The Design Guidelines for Multi-Family Development require that multi-family apartment developments provide 1.5 parking spaces for studio and one-bedroom units, 1.75 parking spaces for two-bedroom units, 2.0 parking spaces for three-bedroom units, and 1 guest parking space for every 5 apartment units.

As noted in the Project Description, the proposed project includes a total of 253 apartment units including 16 studio units, 126 one-bedroom units, 97 two-bedroom units, and 14 three-bedroom units. As shown and described on the submitted site plan, the proposed project provides a total of 491 parking spaces including 120 integrated garage parking spaces, 133 carport covered parking spaces, and 238 uncovered surface parking spaces. Based on this parking information, Staff has determined that the proposed project meets the parking requirements established by the Folsom Municipal Code by providing 491 parking spaces whereas 379 parking spaces are required. In addition, staff has determined that the proposed project meets the parking recommendations of the Design Guidelines by providing 491 parking spaces whereas 462 parking spaces are recommended.

The Folsom Municipal Code (FMC, Section 17.57.090) requires multi-family residential developments to provide one bicycle parking space for every five dwelling units. The proposed project features 55 bicycle parking spaces including 31 bicycle storage room in the Lot 6 clubhouse building, 20 bicycle parking spaces in bicycle storage room in the Lot 1 clubhouse building, and 4 additional bicycle parking distributed throughout both project parcels. In addition to the dedicated bicycle storage facilities, bicycle parking opportunities are provided in each of the 120 integrated garages on the project site. Staff has determined that the proposed project meets the bicycle parking requirements established by the Folsom Municipal Code (FMC, Section 17.57.090) by providing 55 bicycle parking spaces whereas 51 bicycle parking spaces are required.

E. Noise Impacts

Based on the proximity of the project site to U.S. Highway 50, Iron Point Road, and existing commercial land uses within the immediate project vicinity, acoustical measurements and modeling were preliminarily prepared by Bollard Acoustical on May 3, 2021 and bolstered by Helix Environmental Planning on February 23, 2022 to analyze potential noise impacts at the proposed Folsom Corporate Center Apartments project site. The purpose of the noise analysis was to quantify existing noise levels associated with traffic on U.S. Highway 50 and Iron Point Road, and to compare those noise levels against the applicable City of Folsom noise standards for acceptable noise exposure at the project site. In addition, noise generated by the proposed project including construction activities, on-site parking/circulation, and mechanical equipment noise, was also evaluated in the noise analysis.

Two aspects of noise impacts were evaluated relative to the proposed apartment project, noise directed at the proposed project, and noise caused by the proposed project. As noted previously, the predominant existing noise sources in the project vicinity that cause an impact to the project site are from vehicles traveling on U.S. Highway 50 and Iron Point Road, as well as background noises from adjacent nearby commercial land uses. Potential noise impacts that might result from development of the Folsom Corporate Center Apartments project community are construction-related activities and operational activities. Construction-related noise would have a short-term effect, while operational noise would continue throughout the lifetime of the project.

The Noise Element of the City of Folsom General Plan regulates noise emissions from public roadway traffic on new development of residential or other noise sensitive land uses. The Noise Element states that noise from traffic on public roadways shall not exceed 65 CNEL for outdoor use areas and 45 CNEL for interior use areas. To evaluate such potential noise impacts to the proposed project, Bollard Acoustical conducted ambient noise measurements to calibrate the predictive noise modeling program that estimates noise levels based on estimated future traffic noise affecting the project site.

As stated above, a significant direct noise impact would occur if traffic-related noise levels exceed 65 CNEL at the proposed project's designated outdoor use areas (outdoor pool/amenity areas). The noise modeling program determined that the outdoor noise level at the clubhouse area on Lot 1 would be 65 CNEL, while the outdoor noise level at the clubhouse area on Lot 6 would be 63 CNEL. Based on these projected noise levels at the project two exterior use areas, staff has determined that the proposed project would comply with the City's exterior noise threshold.

As referenced above, a significant direct noise impact would also occur if the project's interior use areas would be exposed to noise levels greater than 45 CNEL from roadway traffic. A 45 CNEL interior limit would be achieved if exterior locations are exposed to a noise level of 60 CNEL or less, based on a typical attenuation of 15-20 dB by standard residential building construction. The noise modeling program determined that three buildings on Lot 1 (Buildings 1, 2, and 7) and two buildings on Lot 6 (Buildings 2 and 5) would potentially exceed the City's interior noise level standard of 45 CNEL. To reduce these potential noise impacts to a less than significant level and comply with the City's interior noise level standards, staff recommends that the following measures be implemented (Condition No. 56).

For habitable areas (both living rooms and bedrooms) with a direct line-of-sight to U.S. Highway 50 for Lot 1 and Iron Point Road for Lot 6, the following measures shall be incorporated in the design of the project to reduce interior noise levels to 45 CNEL or less:

- Lot 1 (Buildings 1 and 2) and Lot 6 (Building 2) – Minimum exterior wall requirement of STC 46.
- Lot 1 (Buildings 1 and 2) and Lot 6 (Building 2) – Minimum window and glass sliding door requirement of STC 35.
- Lot 1 (Building 7) and Lot 6 (Building 5) – Minimum window and glass sliding door requirement of STC 28.
- The building design shall include a mechanical ventilation system that meets the criteria of the International Building Code (Chapter 12, §1203.3 of the 2013 California Building Code) to ensure that windows would be able to remain permanently closed.

Construction of the Folsom Corporate Center Apartments project would temporarily increase noise levels in the project vicinity during the construction period, which would take approximately 20 to 26 months. Construction activities, including site clearing, excavation, grading, building construction, and paving, would be considered an intermittent noise impact throughout the construction period of the project. The City's Noise Ordinance excludes construction activities from meeting the General Plan Noise Element standards, provided that all phases of construction are limited to the hours between 7:00 a.m. and 6:00 p.m. on weekdays, and between 8:00 a.m. and 5:00 p.m. on Saturdays. To ensure compliance with the City's Noise Control Ordinance and General Plan Noise Element, staff recommends that hours of construction operation be limited from 7:00 a.m. to 6:00 p.m. on weekdays and 8:00 a.m. to 5:00 p.m. on Saturdays with no construction permitted on Sundays or holidays. In addition, staff recommends that construction equipment be muffled and shrouded to minimize noise levels. Condition No. 55 is included to reflect these requirements.

Operational noises generated by the proposed project include sounds associated with new vehicle trips, vehicle parking, and mechanical equipment associated with the apartment project. Persons and activities potentially sensitive to noise in the project vicinity include residents within the Broadstone Unit No. 2 Subdivision (150 feet north across Iron Point Road) across Iron Point Road to the north of the project site, residents within the Sherwood Apartments (approximately 450 northeast of the project site across Iron Point Road), and residents of the Revel Senior Living Apartments (approximately 500 feet to the west). Due to the limited volume of project-generated vehicle trips (81 weekday AM peak hour trips and 104 weekday PM peak hour trips), vehicle noise exposure would increase only slightly as compared to existing conditions in the project vicinity. Based on the significant distance and buffers between the project site and the nearby residential land uses, staff has determined that potential noise impacts relative to these operational noise sources will not be significant.

F. Walls/Fencing

The proposed project includes the construction of retaining walls and fencing. As shown on the submitted Grading and Drainage Plans (Attachment 11), retaining walls that predominantly range from 1-8 feet in height, with a maximum height of 15 ft at Lot 6 at the northeast corner. The walls are proposed to be constructed in various locations on Lot 1 and Lot 6 due to substantial changes in elevation on the sites. As shown the submitted Landscape Plan and Details (Attachment 12), decorative six-foot-tall metal open view fencing is proposed to be placed around the perimeter of Lots 1 and 6. In addition to the perimeter fencing, vehicle gates and pedestrian gates are also proposed at various locations on the Lots 1 and 6. Staff recommends that the final location, design, height, materials, and colors of the retaining walls, fences, and gates be subject to review and approval by the Community Development Department. Condition No. 59 is included to reflect this requirement.

G. Site Lighting

As shown on the Preliminary Lighting Plan (Attachment 14), the applicant is proposing to use a combination of pole-mounted parking lot lighting, carport lighting, building-attached

lighting, and bollard lights along the walkways on the project site. All lighting would be designed to minimize light/glare impacts to the adjacent properties by ensuring that all exterior lighting is shielded and directed downward. Staff recommends that the final exterior building and site lighting plans be submitted for review and approval by Community Development Department for location, height, aesthetics, level of illumination, glare and trespass prior to the issuance of any building permits. In addition, staff recommends all lighting is designed to be shielded and directed downward onto the project site and away from adjacent properties and public rights-of-way. Condition No. 23 is included to reflect these requirements.

H. Trash/Recycling

The proposed project includes three trash/recycling enclosures to manage trash, recycling, and organics associated with the apartment community. Lot 1 includes one trash/recycling enclosure and one trash compactor, while Lot 6 includes two trash/recycling enclosures. The proposed trash/recycling enclosures, which are constructed of textured concrete masonry blocks with a decorative trim cap, feature metal gates to control access. Staff recommends that the final location, design, materials, and colors of the trash/recycling enclosures be subject to review and approval by the Community Development Department. Condition No. 58 is included to reflect these requirements.

I. Existing and Proposed Landscaping

Lot 1, which is largely undisturbed, is predominantly comprised of non-native annual grassland with a single oak tree situated in the southeast corner of the site. Lot 1 does include small parking lot area with associated landscaping in the northwest corner of the project site. This small parking lot and landscaped area, which is associated with the adjacent Kaiser Permanente Medical Office Complex, is proposed to remain in place. A 50-foot-wide landscape easement, which is located between the southern boundary of Lot 1 and U.S. Highway 50, is steeply sloped and contains non-native grasses. Lot 6, which has been greatly disturbed by prior grading and stockpiling activities, features non-native grasses with a small stand of oak trees located in the southwest corner of the site. A 20-foot-wide landscape easement, which is located within the northern portion of Lot 6 adjacent to Iron Point Road, features a rockery retaining wall and sidewalk with minimal landscaping and non-native grasses.

As shown on the Preliminary Landscape Plans (Attachment 12), the applicant is proposing to install landscaping that features California-native and low water-use trees, shrubs, and groundcover selections intended to comply with the requirements of the Model Water Efficiency Landscape Ordinance (MWELo). Proposed landscape improvements include a variety of drought-tolerant trees, shrubs, and groundcover. Among the proposed trees are; Chinese Pistache, Coast Live Oak, Dwarf Strawberry Tree, Interior Live Oak, Red Crape Myrtle, Redpointe Maple, Sweet Bay, and Swan Hill Olive. Proposed shrubs and groundcover include; Australian Bluebell Creeper, Autumn Sage, Deer Grass, Dwarf Bottlebrush, Dwarf Hawthorne, Heavenly Bamboo, Manzanita, Red Fountain Grass, and Biofiltration Sod. The

preliminary landscape plan meets the CALgreen and City shade requirement by providing 50 percent shade in the parking lot area within fifteen years. Staff recommends that the final landscape plans be reviewed and approved by the Community Development Department. Condition No. 36 is included to reflect this requirement.

Oak Tree Preservation and Removal

Chapter 12.16 of the Folsom Municipal Code, the Tree Preservation Ordinance, regulates the cutting or modification of trees, including oaks and specified other trees; requires a Tree Permit prior to cutting or modification; and establishes mitigation requirements for cut or damaged trees. The Tree Preservation Ordinance establishes policies, regulations, and standards necessary to ensure that the City will continue to preserve and maintain its “urban forests”.

An Arborist Report and Arborist Inventory prepared for the proposed project found that the project parcels contain a total of 11 protected native oak trees (oak trees measuring six inches in diameter or larger) including nine Blue Oaks and two Valley Oaks. Of the 11 oak trees mentioned above, one Blue Oak tree located on Lot 6 is recommended for removal due to compromised health and structural defects. The remaining ten native oak trees, which are located on Lot 6, are identified as being in fair to good condition by the Arborist Report.

As shown on the submitted Landscape Plan, the applicant is proposing to preserve three oak trees on the project site including a 41” diameter Blue Oak tree (Heritage Tree) on Lot 1 and two Blue Oak trees (30” and 26” in diameter respectively) on Lot 6. The remaining eight oak trees on the project site (southwest corner of Lot 6) are proposed to be removed to allow for development of the proposed project. To offset the loss of the protected native oak trees, the applicant is proposing to plant 35 Mitigation Oak trees (Coast Live Oak and Interior Live Oak) in appropriate locations (through consultation with the City Arborist) on the project site and to pay in-lieu fees for any outstanding Oak tree mitigation that is required. To mitigate the impact to the protected native Oak trees, staff recommends that the following measures be implemented (Condition No. 37) in accordance with requirements of the Tree Preservation Ordinance:

- A Tree Permit Application containing an Application Form, Tree Protection and Mitigation Plan, and Arborist Report shall be submitted to the City of Folsom by the owner/applicant for issuance of a Tree Work Permit and Tree Removal Permit prior to commencement of any grading or site improvement activities. The tree protection and mitigation plan shall be prepared in collaboration with a qualified arborist and shall be subject to review and approval by the City. The tree protection and mitigation plan shall contain the contact information of the project arborist and shall be included in all associated plan sets for the project.
- Removal of any protected tree shall be mitigated by planting replacement trees and/or payment of “In-Lieu” fees on a diameter inch basis in accordance with FMC, Section 12.16.150. The proposed method of mitigation shall be subject to review and approval by the City.

- Prior to starting construction, oak trees to be preserved shall be fenced with high visibility fencing consistent with the city-approved tree protection and mitigation plan. Parking of vehicles, equipment, or storage of materials is prohibited within the Tree Protection Zone of Protected Trees at all times. Signs shall be posted on exclusion fencing stating that the enclosed trees are to be preserved. Signs shall state the penalty for damage to, or removal of, the protected tree.
- The owner/applicant shall retain the services of a project arborist for the duration of the development project to monitor the health of oak trees to be preserved and carry out the City-approved tree protection plan. All regulated activity conducted within the Critical Root Zone of protected trees, as that term is defined in Folsom Municipal Code (FMC) 12.16.020, shall be performed under the direct supervision of the project arborist. A copy of the executed contract for these arboricultural services shall be submitted to the City prior to the issuance of any tree or grading permits
- Certification letters by the project arborist attesting compliance with the tree protection and mitigation plan and tree permit conditions shall be submitted to the City at the following stages of the project:
- The owner/applicant shall plant 35 Mitigation Oak Trees on the project site in the locations as shown on the Preliminary Landscape Plans. The final number, location, and type of Mitigation Oak Trees shall be subject to review and approval by the Community Development Department. The owner/applicant shall pay in-lieu fees for any outstanding required Oak Tree Mitigation that is not satisfied through planting of Mitigation Oak Trees.

J. Conformance with Relevant General Plan Goals and Policies

The City of Folsom General Plan (2035) outlines a number of goals, policies, and implementation programs designed to guide the physical, economic, and environmental growth of the City. Staff has determined that the proposed project is consistent with the General Plan goals and policies as outlined and discussed below:

APPLICABLE GENERAL PLAN GOALS AND POLICIES

GP GOAL LU 1.1 (Land Use/Growth and Change)

Retain and enhance Folsom's quality of life, unique identity, and sense of community while continuing to grow and change.

GP POLICY LU 1.1.12-1 (Infill Development)

Respect the local context: New development should improve the character and connectivity of the neighborhood in which it occurs. Physical design should respond to the scale and features of the surrounding community, while improving critical elements such as transparency and permeability.

The proposed project is consistent with this policy in that the project features significant site and design improvements which will enhance the overall character of the area including

introducing new market rate apartment units with a contemporary modern residential design intended to complement the architecture and design of existing residential and commercial buildings in the project vicinity.

GP POLICY LU 1.1.15 (SACOG Blueprint Principles)

Strive to adhere to the Sacramento Regional Blueprint Growth Principles.

The proposed project is consistent with this policy in that the project has been designed to adhere to the primary SACOG Blueprint Principles including Compact Development, Housing Choice and Diversity, Use of Existing Assets, and Quality Design. Compact Development involves creating environments that are more compactly built and use space in an efficient but attractive manner to encourage more walking, biking, and transit use and shorter auto trips. Housing Choice and Diversity includes providing a variety of places where people can live (apartments, townhomes, condominiums, and single-family detached homes) and also creating opportunities for the variety of people who need them such as families, singles, seniors, and people with special needs. Use of Existing Assets entails intensification of the existing use or redevelopment in order to make better use of existing public infrastructure, including roads. Quality Design focuses on the design details of any land development (such as relationship to the street, placement of buildings, sidewalks, street widths, landscaping, etc.), which are all factors that influence the attractiveness of living in a compact development and facilitate the ease of walking within and in and out of a community.

APPLICABLE GENERAL PLAN GOALS AND POLICIES

GP GOAL LU 6.1 (Residential Neighborhoods)

Allow for a variety of housing types and mix of uses that provide choices for Folsom residents, create complete and livable neighborhoods, and encourage walking and biking.

GP POLICY LU 6.1.3 (Efficiency through Density)

Support an overall increase in average residential densities in identified urban centers and mixed-use districts. Encourage new housing types to shift from lower-density, large-lot developments to higher-density, small-lot and multifamily developments, as a means to increase energy efficiency, conserve water, reduce waste, as well as increase access to services and amenities (e.g., open space) through an emphasis on mixed uses in these higher-density developments.

The proposed project is consistent with this policy in that the project is a new market-rate multi-family residential project developed at a residential density of 21.2 units per acre. Its location within Folsom Corporate Center and proximity to the Folsom Gateway retail center will create a compact/horizontal mixed-use development. The proposed project design will be consistent with California Green Building Standards Code (CALGreen), and the residential units are being designed to be all-electric, and the project intends to participate the SMUD SolarShares program. In addition, the proposed project includes electric vehicle charging stations, and will meet or exceed the percentage of electric vehicle capable parking spaces per CALGreen code.

GP GOAL M 4.1 (Vehicle Traffic and Parking)

Ensure a safe and efficient network of streets for cars and trucks, as well as provide an adequate supply of vehicle parking.

GP POLICY M 4.1.3 (Level of Service)

Strive to achieve a least traffic Level of Service “D” (or better) for local streets and roadways throughout the City. In designing transportation improvements, the City will prioritize use of smart technologies and innovative solutions that maximize efficiencies and safety while minimizing the physical footprint. During the course of Plan buildout, it may occur that temporarily higher Levels of Service result where roadway improvements have not been adequately phased as development proceeds. However, this situation will be minimized based on annual traffic studies and monitoring programs. Staff will report to the City Council at regular intervals via the Capital improvement Program process for the Council to prioritize projects integral to achieving Level of Service D or better.

The proposed project is consistent with this policy in that the project will not result in a change in the level of service (LOS) at any of the 17 study intersections. In addition, the proposed project is anticipated to generate less than 82% of the regional per capita Vehicle Miles Traveled (VMT), consistent with new State Law that took effect July 1, 2020 (SB 743).

GP GOAL M 4.2 (Vehicle Traffic and Parking)

Provide and manage a balanced approach to parking that meets economic development and sustainability goals.

GP POLICY M 4.2.4 (Electric Vehicle Charging Stations)

Encourage the installation of electric vehicle charging stations in parking spaces throughout the city, prioritizing installations at multi-family residential units.

The proposed project is consistent with this policy in that the project includes five electric vehicle charging stations to serve electric vehicles of residents and guests. In addition, the applicant has committed to having at least 10 percent of parking spaces be EV Capable. The number of proposed electric vehicle charging stations (5) and percentage of EV Capable parking spaces is consistent with the California Green Buildings Standards Code’s provisions (10 percent of all parking spaces) required to be EV Capable) for multi-family residential development.

GP GOAL H-2 (Removing Barriers to the Production of Housing)

To minimize governmental constraints on the development of housing for households of all income levels.

GP POLICY H 2.7

The City shall educate the community on the needs, the realities and the benefits of affordable and high-density housing.

The proposed project is consistent with this policy in that the project will result in development of a high-density market-rate apartment community on parcels that are not currently zoned for multi-family high density residential development.

K. Native American Consultation (SB 18/AB52)

Senate Bill (SB) 18 was signed into law in September 2004 and became effective in March 2005. SB 18 requires city and county governments to consult with California Native American tribes early in the planning process with the intent of protecting traditional tribal cultural places. In accordance with Government Code 65352.3(a)(2), the City sent project notifications to each of listed tribes on October 26, 2021 and afforded them 90 days to respond and request consultation. The City received a response from one tribe (UAIC-United Auburn Indian Community) who expressed a desire to consult regarding the proposed project. During the consultation process, the City provided UAIC with a Cultural Resources Assessment document that indicated there are no known Tribal Cultural Resources present on the project site. Subsequently, UAIC submitted information to the City that stated that heritage trees, in general, are an important Tribal Cultural Resource. The City responded to UAIC that there is one Heritage Oak Tree on the project site (41” diameter Oak tree on Lot 1) that is intended to be preserved. City staff also responded to UAIC that a mitigation measure (Condition No. 39) will be placed on the project to protect any unanticipated discovery of Tribal Cultural Resources on the project site.

On March 9, 2022, and in accordance with Government Code §65352(a)(11), the City mailed the 45-day referral notices to the listed tribes. No tribes provided comment within that timeframe. The City will mail specific details of the pending City Council public hearing to listed tribes at least 10 days in advance of the meeting, in accordance with Government Code §65092. In summary, the City has assumed and concluded consultation responsibilities in accordance with the *Tribal Consultation Guidelines: Supplement to General Plan Guidelines* (November 14, 2005) published by the Governor’s Office of Planning and Research.

Assembly Bill (AB 52), which was signed into law in July 2015, requires City or County Governments to consult with California Native American Tribes to identify Tribal Cultural Resources that may be significantly impacted by development projects and to avoid or mitigate those impacts. On September 21, 2021, the City sent project notification letters to the three California Native American tribes named on the City’s AB 52 contact list, with the United Auburn Indian Community (UAIC) being the only tribe to respond. The City subsequently initiated consultation with UAIC concurrently with respect to AB 52 and SB 18 as the issues raised by UAIC under these two sets of State regulations were identical. On February 4, 2022, the City concluded the consultation with UAIC with the acknowledgement that measures would be included with the project to ensure protection of the Heritage Oak Tree on Lot 1 and the protection of previously unknown Tribal Cultural Resources on the project site during construction activities.

FINANCIAL IMPACT

No financial impact is anticipated with approval of the Folsom Corporate Center Apartments project as the project will be subject to all applicable development impact fees.

ENVIRONMENTAL REVIEW

Staff has prepared an Initial Study, Mitigated Negative Declaration, and Mitigation Monitoring and Reporting Program (Attachment 23) for the project in accordance with the California Environmental Quality Act (CEQA) and associated regulations and determined that with the proposed mitigations, the project will not have a significant effect on the environment. The Mitigated Negative Declaration has been prepared and noticed for public comment, and mitigation measures have been included as Conditions of Approval. One written comment was received from the public during the Mitigated Negative Declaration public review period (March 8, 2022 to April 6, 2022).

On March 24, 2022, the Sacramento Metropolitan Air Quality Management District (SMAQMD) submitted a response letter (Attachment 23) regarding the Initial Study and Mitigated Negative Declaration that was prepared for the proposed project. In the response letter, SMAQMD recommends that additional measures be implemented to protect residents from exposure to toxic air contaminant emissions produced by vehicles traveling on U.S. Highway 50. Specifically, SMAQMD recommends that a continuous landscape buffer or dense landscape plantings be provided along the southern, western, and eastern edges of the project site consistent with the Air District's *Landscaping Guidance for Improving Air Quality Near Roadways*. As shown on the submitted Preliminary Landscaped Plans (Attachment 12), the project includes a robust amount of landscaping along the perimeter of the site (Lot 1) adjacent to U.S. Highway 50. However, to further reduce residents' exposure to air contaminant emissions, staff recommends additional landscape plantings be provided where feasible along the southern, western, and eastern perimeter of Lot 1 to the satisfaction of the Community Development Department. Condition No. 45 is included to reflect this requirement. It is important to note that each of the apartment buildings will have a mechanical ventilation system that accommodates air filters with a minimum efficiency rating to reduce residents' exposure to air contaminant emissions.

In their letter, SMAQMD also recommends that the proposed project consider implementing additional energy related measures to help reduce the urban heat island effect. Specifically, SMAQMD recommends that certified cool roofs be installed on all of the apartment buildings and that solar photovoltaic shade structures be placed over the parking spaces in the area under the overhead power lines in the western portion of Lot 1. The applicant has indicated that they will be installing certified cool roofs on all the apartment buildings consistent with CALgreen code requirements. Unfortunately, the placement of solar photovoltaic shade structures over parking spaces in the power line easement area is not feasible because these types of structures are not permitted by the responsible utility agencies (PG&E and SMUD). However, it is important to reiterate that the applicant intends to participate in the SMUD SolarShares program.

ATTACHMENTS

1. Resolution No. 10849 - A Resolution to Adopt a Mitigated Negative Declaration, Approve a General Plan Amendment, and Approve a Planned Development Permit for the Folsom Corporate Center Apartments project
2. Ordinance No. 1327 - An Uncodified Ordinance to amend the zoning designation for a 7.24-acre parcel (Lot 1) from M-L PD to R-4 PD and to amend the zoning designation for a 4.68-acre parcel (Lot 6) from BP PD to R-4 PD for the Folsom Corporate Center Apartments project (Introduction and First Reading)
3. Planning Commission Staff Report, dated April 6, 2022

24. Attachment 24 - Folsom Corporate Center Planned Development Guidelines

Submitted,

PAM JOHNS
Community Development Director

Attachment No. 1

**Resolution No. 10849 - A Resolution to Adopt a Mitigated
Negative Declaration, Approve a General Plan Amendment, and
Approve a Planned Development Permit for the Folsom
Corporate Center Apartments project**

RESOLUTION NO. 10849**A RESOLUTION TO ADOPT A MITIGATED NEGATIVE DECLARATION,
APPROVE A GENERAL PLAN AMENDMENT, AND APPROVE A PLANNED
DEVELOPMENT PERMIT FOR THE FOLSOM CORPORATE CENTER
APARTMENTS PROJECT**

WHEREAS, the Planning Commission on April 6, 2022, held a public hearing on the proposed General Plan Amendment, considered public comment and determined that the development of a market rate apartment community on the project site is consistent with and compatible to the existing land uses in the project vicinity which are a mixture of commercial and residential land uses, thus providing sufficient justification for changing the General Plan land use designations from IND (Industrial/Office Park) to MHD (Multi-Family High Density); and

WHEREAS, the Planning Commission on April 6, 2022 held a public hearing on the proposed Planned Development Permit, considered public comment and determined that based on the proposed building design, building heights, building setbacks, lot configuration, lot areas, building coverage, density, and parking, the project is consistent with the City's General Plan, the Folsom Municipal Code, and the Folsom Corporate Center Planned Development Guidelines; and

WHEREAS, notice has been given at the time and in the manner required by State Law and City Code; and

WHEREAS, staff has prepared a Mitigated Negative Declaration in accordance with the California Environmental Quality Act (CEQA).

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Folsom that the City Adopt the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program for the Folsom Corporate Center Apartments, Amend the General Plan land use designation for a 7.24-acre parcel (Lot 1) and a 4.68-acre parcel (Lot 6) from IND (Industrial/Office Park) to MHD (Multi-Family High Density, and Approve a Planned Development Permit for the development of a 253-unit market rate apartment community for the Folsom Corporate Center Apartment Community project, with the General Plan map exhibit as set forth on Exhibit A and the conditions of approval as set forth on Exhibit B and the following findings:

GENERAL FINDINGS

- A. NOTICE OF HEARING HAS BEEN GIVEN AT THE TIME AND IN THE MANNER REQUIRED BY STATE LAW AND CITY CODE.
- B. THE PROJECT IS CONSISTENT WITH THE GENERAL PLAN, THE ZONING CODE OF THE CITY, AND THE FOLSOM CORPORATE CENTER PLANNED DEVELOPMENT GUIDELINES AS AMENDED.

CEQA FINDINGS

- C. A MITIGATED NEGATIVE DECLARATION HAS BEEN PREPARED FOR THE PROJECT IN ACCORDANCE WITH CEQA.
- D. THE CITY COUNCIL HAS CONSIDERED THE PROPOSED MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM BEFORE MAKING A DECISION REGARDING THE PROJECT.
- E. ON THE BASIS OF THE WHOLE RECORD BEFORE THE CITY COUNCIL, THERE IS NO SUBSTANTIAL EVIDENCE THAT THE PROJECT, AS CONDITIONED, WILL HAVE A SIGNIFICANT EFFECT ON THE ENVIRONMENT.
- F. THE MITIGATED NEGATIVE DECLARATION REFLECTS THE INDEPENDENT JUDGMENT AND ANALYSIS OF THE CITY OF FOLSOM.
- G. THE MITIGATED NEGATIVE DECLARATION HAS DETERMINED THAT THE PROPOSED PROJECT, AS CONDITIONED AND CONSISTENT WITH THE REQUIRED MITIGATION MONITORING AND REPORTING PROGRAM, WOULD NOT HAVE A SIGNIFICANT EFFECT ON THE ENVIRONMENT WITH MITIGATION MEASURES.
- H. THE LOCATION AND CUSTODIAN OF THE DOCUMENTS WHICH CONSTITUTE THE RECORD OF PROCEEDINGS UPON WHICH THE DECISION IS BASED ARE: CITY OF FOLSOM COMMUNITY DEVELOPMENT DEPARTMENT, 50 NATOMA STREET, FOLSOM, CA 95630.

GENERAL PLAN AMENDMENT FINDINGS

- I. THE PROPOSED GENERAL PLAN AMENDMENT IS CONSISTENT WITH THE GOALS, POLICIES AND OBJECTIVES OF THE CITY OF FOLSOM GENERAL PLAN
- J. THE PROPOSED GENERAL PLAN AMENDMENT IS CONSISTENT WITH THE OBJECTIVES OF THE LAND USE ELEMENT OF THE CITY'S GENERAL PLAN AND DEVELOPMENT POLICIES.
- K. THE PROPOSED GENERAL PLAN AMENDMENT WILL NOT RESULT IN A NET LOSS OF RESIDENTIAL CAPACITY.
- L. THE PROPOSED GENERAL PLAN AMENDMENT IS IN THE PUBLIC INTEREST.

- M. PURSUANT TO GOVERNMENT CODE SECTION 65352.3, THE CITY CONTACTED ALL CALIFORNIA NATIVE AMERICAN TRIBES ON THE CONTACT LIST MAINTAINED BY THE NATIVE AMERICAN HERITAGE COMMISSION IN ASSOCIATION WITH THIS PROJECT. THE CITY RECEIVED ONE REQUEST FOR CONSULTATION FROM A NATIVE AMERICAN TRIBE, INITIATED CONSULTATION, AND SUBSEQUENTLY CONCLUDED CONSULTATION ON FEBRUARY 4, 2022

REZONE FINDING

- N. THE PROJECT IS CONSISTENT WITH THE CITY'S GENERAL PLAN, THE FOLSOM MUNICIPAL CODE, AND THE FOLSOM CORPORATE CENTER PLANNED DEVELOPMENT GUIDELINES AS AMENDED.

PLANNED DEVELOPMENT PERMIT FINDINGS

- O. THE PROPOSED PROJECT COMPLIES WITH THE INTENT AND PURPOSES OF CHAPTER 17.38 (PLANNED DEVELOPMENT DISTRICT) OF THE FOLSOM MUNICIPAL CODE AND OTHER APPLICABLE ORDINANCES OF THE CITY.
- P. THE PROPOSED PROJECT IS CONSISTENT WITH THE OBJECTIVES, POLICIES AND REQUIREMENTS OF THE DEVELOPMENT STANDARDS OF THE CITY.
- Q. THE PHYSICAL, FUNCTIONAL AND VISUAL COMPATIBILITY BETWEEN THE PROPOSED PROJECT AND EXISTING AND FUTURE ADJACENT USES AND AREA CHARACTERISTICS IS ACCEPTABLE.
- R. THERE ARE AVAILABLE PUBLIC FACILITIES, INCLUDING BUT NOT LIMITED TO, WATER, SEWER AND DRAINAGE TO ALLOW FOR THE DEVELOPMENT OF THE PROJECT SITE IN A MANNER CONSISTENT WITH THIS PROPOSAL.
- S. THE PROPOSED PROJECT WILL NOT CAUSE UNACCEPTABLE VEHICULAR TRAFFIC LEVELS ON SURROUNDING ROADWAYS, AND THE PROPOSED PROJECT WILL PROVIDE ADEQUATE INTERNAL CIRCULATION.
- T. THE PROPOSED PROJECT WILL NOT BE DETRIMENTAL TO THE HEALTH, SAFETY AND GENERAL WELFARE OF THE PERSONS OR PROPERTY WITHIN THE VICINITY OF THE PROJECT SITE, AND THE CITY AS A WHOLE.
- U. ADEQUATE PROVISION IS MADE FOR THE FURNISHING OF SANITATION SERVICES AND EMERGENCY PUBLIC SAFETY SERVICES TO THE PROJECT.

PASSED AND ADOPTED this 10th day of May, 2022, by the following roll-call vote:

AYES: Councilmember(s):
NOES: Councilmember(s):
ABSENT: Councilmember(s):
ABSTAIN: Councilmember(s):

Kerri M. Howell, MAYOR

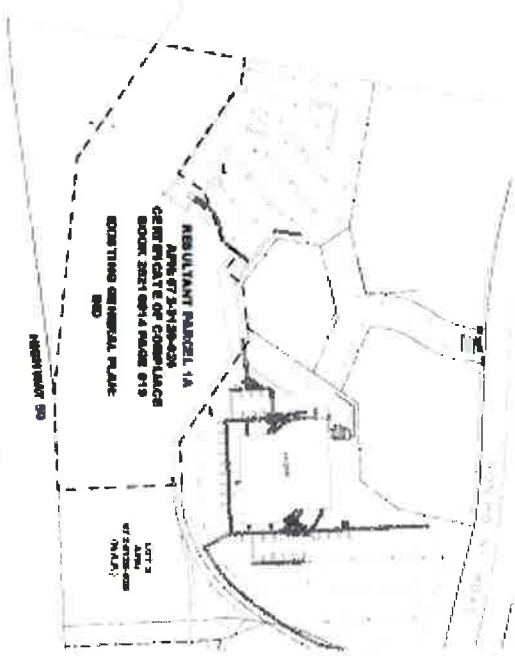

ATTEST:

Christa Freemantle, CITY CLERK

Conditions of Approval

CONDITIONS OF APPROVAL FOR THE FOLSOM CORPORATE CENTER APARTMENTS PROJECT (PN 21-120) GENERAL PLAN AMENDMENT, REZONE, AND PLANNED DEVELOPMENT PERMIT SOUTH SIDE OF IRON POINT ROAD, SLIGHTLY EAST OF OAK AVENUE PARKWAY				
1.		<p>The applicant shall submit final site development plans to the Community Development Department that shall substantially conform to the exhibits referenced below:</p> <ol style="list-style-type: none"> 1. Vicinity Map 2. General Plan Amendment Exhibits, dated November 16, 2021 3. Rezone Exhibits, dated November 16, 2021 4. Overall Site Plan, dated November 16, 2021 5. Individual Site Plans and Details, dated February 8, 2022 6. Preliminary Utility Plans, dated November 16, 2021 7. Preliminary Grading and Drainage Plans, dated November 16, 2021 8. Preliminary Landscape Plans and Details, dated November 16, 2021 9. Preliminary Access and Circulation Plan, dated November 16, 2021 10. Preliminary Lighting Plan and Details, dated November 16, 2021 11. Building Elevations, Floor Plans, and Details dated November 16, 2021 12. Color Renderings and Perspectives, dated November 16, 2021 13. Color and Materials Board, dated November 16, 2021 14. Signage Details, dated November 16, 2021 15. Building and Parking Summary, dated February 8, 2022 <p>The project is approved for the development the 253-unit Folsom Corporate Center Apartment Community, which includes 11 three-story apartment buildings, two clubhouse buildings, and associated site improvements. Implementation of the project shall be consistent with the above-referenced items as modified by these conditions of approval.</p>	B	CD (P)(E)

1.		Building plans, and all civil engineering and landscape plans, shall be submitted to the Community Development Department for review and approval to ensure conformance with this approval and with relevant codes, policies, standards and other requirements of the City of Folsom.	I, B	CD (P)(E)(B)
2.		The project approvals (Planned Development Permit) granted under this staff report shall remain in effect for two years from final date of approval (May 10, 2024). Failure to obtain the relevant building (or other) permits within this time period, without the subsequent extension of this approval, shall result in the termination of this approval.	B	CD (P)
3.		<p>The owner/applicant shall defend, indemnify, and hold harmless the City and its agents, officers and employees from any claim, action or proceeding against the City or its agents, officers or employees to attack, set aside, void, or annul any approval by the City or any of its agencies, departments, commissions, agents, officers, employees, or legislative body concerning the project. The City will promptly notify the owner/applicant of any such claim, action or proceeding, and will cooperate fully in the defense. The City may, within its unlimited discretion, participate in the defense of any such claim, action or proceeding if both of the following occur:</p> <ul style="list-style-type: none"> • The City bears its own attorney’s fees and costs; and • The City defends the claim, action or proceeding in good faith <p>The owner/applicant shall not be required to pay or perform any settlement of such claim, action or proceeding unless the settlement is approved by the owner/applicant.</p>	OG	CD (P)(E)(B) PW, PR, FD, PD
4.	✓	The owner/applicant shall be required to participate in a mitigation monitoring and reporting program pursuant to City Council Resolution No. 2634 and Public Resources Code 21081.6. The mitigation monitoring and reporting measures identified in the Mitigated Negative Declaration prepared for this project have been incorporated into these conditions of approval in order to mitigate or avoid significant effects on the environment. These mitigation monitoring and reporting measures are identified with a check mark (✓) in the mitigation measure column.	G, I	CD (P)(E)
DEVELOPMENT COSTS AND FEE REQUIREMENTS				
5.		The owner/applicant shall pay all applicable taxes, fees and charges at the rate and amount in effect at the time such taxes, fees and charges become due and payable.	I, B	CD (P)(E)
6.		If applicable, the owner/applicant shall pay off any existing assessments against the property, or file necessary segregation request and pay applicable fees.	B	CD (E)

7.		The City, at its sole discretion, may utilize the services of outside legal counsel to assist in the implementation of this project, including, but not limited to, drafting, reviewing and/or revising agreements and/or other documentation for the project. If the City utilizes the services of such outside legal counsel, the applicant shall reimburse the City for all outside legal fees and costs incurred by the City for such services. The applicant may be required, at the sole discretion of the City Attorney, to submit a deposit to the City for these services prior to initiation of the services. The applicant shall be responsible for reimbursement to the City for the services regardless of whether a deposit is required.	I	CD (P)(E)
8.		If the City utilizes the services of consultants to prepare special studies or provide specialized design review or inspection services for the project, the applicant shall reimburse the City for actual costs it incurs in utilizing these services, including administrative costs for City personnel. A deposit for these services shall be provided prior to initiating review of the improvement plans or beginning inspection, whichever is applicable.	I, B	CD (P)(E)
9.		This project shall be subject to all City-wide development impact fees, unless exempt by previous agreement. This project shall be subject to all City-wide development impact fees in effect at such time that a building permit is issued. These fees may include, but are not limited to, fees for fire protection, park facilities, park equipment, Quimby, Humbug-Willow Creek Parkway, Light Rail, TSM, capital facilities and traffic impacts. The 90-day protest period for all fees, dedications, reservations or other exactions imposed on this project has begun. The fees shall be calculated at the fee rate in effect at the time of building permit issuance.	B	CD (P)(E), PW, PK
10.		The owner/applicant agrees to pay to the Folsom-Cordova Unified School District the maximum fee authorized by law for the construction and/or reconstruction of school facilities. The applicable fee shall be the fee established by the School District that is in effect at the time of the issuance of a building permit. Specifically, the owner/applicant agrees to pay any and all fees and charges and comply with any and all dedications or other requirements authorized under Section 17620 of the Education Code; Chapter 4.7 (commencing with Section 65970) of the Government Code; and Sections 65995, 65995.5 and 65995.7 of the Government Code.	B	CD (P)

SITE DEVELOPMENT REQUIREMENTS				
11.		Prior to the issuance of any grading and/or building permit, the owner/applicant shall have a geotechnical report prepared by an appropriately licensed engineer that includes an analysis of site suitability, proposed foundation design for all proposed structures, and roadway and pavement design.	G, B	CD (E)
12.		Public and private improvements, including roadways, curbs, gutters, sidewalks, bicycle lanes and trails, streetlights, underground infrastructure and all other improvements shall be provided in accordance with the current edition of the City of Folsom <u>Standard Construction Specifications</u> and the <u>Design and Procedures Manual and Improvement Standards</u> . All necessary rights-of-way and/or easements shall be dedicated to the City of Folsom for these improvements.	I, B	CD (P)(E)
13.		The applicant/owner shall submit water, sewer and drainage studies to the satisfaction of the Community Development Department and provide sanitary sewer, water and storm drainage improvements with corresponding easements, as necessary, in accordance with these studies and the current edition of the City of Folsom <u>Standard Construction Specifications</u> and the <u>Design and Procedures Manual and Improvement Standards</u> .	I	CD (E)
14.		The improvement plans for the required public and private improvements shall be reviewed and approved by the Community Development Department prior to issuance of a building permit for the project.	B	CD (E)
15.		Final lot and building configurations may be modified to allow for overland release of storm events greater than the capacity of the underground system.	B	CD (E)
16.		The owner/applicant shall coordinate the planning, development and completion of this project with the various utility agencies (i.e., SMUD, PG&E, etc.).	I	CD (P)(E)
17.		The owner/applicant shall be responsible for replacing any and all damaged or hazardous public sidewalk, curb and gutter along the site frontage and/or boundaries, including pre-existing conditions and construction damage, to the satisfaction of the Community Development Department.	O	CD (E)
18.		For any improvements constructed on private property that are not under ownership or control of the owner/applicant, a right-of-entry, and if necessary, a permanent easement shall be obtained and provided to the City prior to issuance of a grading permit and/or approval of improvement plans.	G, I	CD (E)

19.		The on-site water and sewer systems shall be privately owned and maintained. The fire protection system shall be separate from the domestic water system. The fire system shall be constructed to meet the National Fire Protection Association Standard 24. The domestic water and irrigation system shall be metered per City of Folsom <i>Standard Construction Specifications</i> .	I	CD (E)
20.		Any reimbursement for public improvements constructed by the applicant shall be in accordance with a formal reimbursement agreement entered into between the City and the owner/applicant prior to approval of the improvement plans.	I	CD (E)
21.		The owner/applicant shall dedicate a 12.5-foot-wide public utility easement for underground facilities and appurtenances adjacent to all public rights-of-way. The owner/applicant shall also dedicate any private drive, ingress, and egress easement as a public utility easement for underground facilities and appurtenances. An easement shall also be dedicated to SMUD based on the location of as constructed facilities placed beyond the limits of the private drives.	I	CD (E)
22.		Final exterior building and site lighting plans shall be submitted for review and approval by Community Development Department for location, height, aesthetics, level of illumination, glare and trespass prior to the issuance of any building permits. All lighting, including but not limited to free-standing parking lot lights, building-attached lights, and landscape lights shall be designed to be screened, shielded, and directed downward onto the project site and away from adjacent properties and public rights-of-way. The final design of the building-attached lights shall be subject to review and approval by the Community Development Department. Lighting shall be equipped with a timer or photo condenser. In addition, pole-mounted parking lot lights shall utilize a low-intensity, energy efficient lighting method.	I, B	CD (P)
STORM WATER POLLUTION/CLEAN WATER ACT REQUIREMENTS				
23.		The owner/applicant shall be responsible for litter control and sweeping of all paved surfaces in accordance with City standards. All on-site storm drains shall be cleaned immediately before the commencement of the rainy season (October 15).	G, I, B	CD (E)
24.		The storm drain swale or onsite improvement plans shall provide for “Best Management Practices” that meet the requirements of the water quality standards of the City’s National Pollutant Discharge Elimination System Permit issued by the State Regional Water Quality Control Board.	G, I, B, O	CD (E)

25.		Erosion and sedimentation control measures shall be incorporated into construction plans. These measures shall conform to the City of Folsom requirements and the County of Sacramento <i>Erosion and Sedimentation Control Standards and Specifications</i> -current edition and as directed by the Community Development Department.	G, I	CD (E)
26.		The proposed development will add new impervious area to the site; therefore, stormwater quality treatment shall be provided. The City requires developers to utilize the <i>Guidance Manual for On-Site Stormwater Quality Treatment Control Measures</i> (January 2000) (“On-Site Manual”) in selecting and designing source control and post-construction facilities to treat runoff from the project.	G, I	CD (E)
27.		Prior to issuance of grading permits, the owner/applicant shall submit detailed drainage plans for evaluation by the City. Approved plans shall be implemented prior to project occupancy. The drainage plans shall include measures to minimize the total amount of additional surface runoff and to limit the flows released to off-site receiving waters to existing pre-development levels in accordance with the requirements of the City of Folsom Public Works Department.	G, I	CD (E), PW
28.		Prior to issuance of grading permits, the owner/applicant shall submit erosion control plans and other monitoring programs for the construction and operational phases of the proposed project for review by the City. The plan shall include Best Management Practices (BMP) to minimize and control the level of pollutants in stormwater runoff, and in runoff released to off-site receiving waters. Specific techniques may be based on geotechnical reports or the Erosion and Sediment Control Handbook of the California Department of Conservation, and shall comply with current City standards.	G, I	CD (E), PW
29.		Prior to issuance of grading permits, the owner/applicant shall obtain coverage under the State Water Resources Control Board General Permit for Discharges of Storm Water Associated with Construction Activity (Order 2009-0009-DWQ), including preparation and submittal of a project-specific Storm Water Pollution Prevention Plan (SWPPP) at the time the Notice of Intent (NOI) is filed. The project applicant shall also prepare and submit any other necessary erosion and sediment control and engineering plans and specifications for pollution prevention and control to the City of Folsom.	G, I	CD (E), PW
ENVIRONMENTAL AND WATER RESOURCE REQUIREMENTS				
30.		The water system shall be protected with USC Certified and approved RPPA and RPDA devices.	I	EWR
31.		All on-site water and sewer systems shall be privately owned and maintained.	I	EWR

32.		A Sewer Manhole or cleanout shall be placed at the property line/Right of Way line to distinguish private vs public ownership.	I	EWR
33.		All proposed sewer within the Right of Way shall be 8-inch SDR-26 sewer pipe.	I	EWR
LANDSCAPE/TREE PRESERVATION REQUIREMENTS				
34.		The owner/applicant shall be responsible for on-site landscape maintenance throughout the life of the project to the satisfaction of the Community Development Department. Vegetation or planting shall not be less than that depicted on the final landscape plan, unless tree removal is approved by the Community Development Department because the spacing between trees will be too close on center as they mature. No decorative turf or sod shall be permitted to the satisfaction of the Community Development Department.	B, OG	CD (P)(E)

35.		<p>Final landscape plans and specifications shall be prepared by a registered landscape architect and approved by the City prior to the approval of the first building permit. Said plans shall include all on-site landscape specifications and details including a tree planting exhibit demonstrating sufficient diversity and appropriate species selection to the satisfaction of the Community Development Department. The tree exhibit shall include all street trees, accent trees, parking lot shading trees, and mitigation trees proposed within the development. Said plans shall comply with all State and local rules, regulations, Governor’s declarations and restrictions pertaining to water conservation and outdoor landscaping.</p> <p>Landscaping of the parking area shall meet shade requirements as outlined in the Folsom Municipal Code Chapter 17.57. The landscape plans shall comply and implement water efficient requirements as adopted by the State of California (Assembly Bill 1881) (State Model Water Efficient Landscape Ordinance) until such time the City of Folsom adopts its own Water Efficient Landscape Ordinance at which time the owner/applicant shall comply with any new ordinance. Shade and ornamental trees shall be maintained according to the most current American National Standards for Tree Care Operations (ANSI A-300) by qualified tree care professionals. Tree topping for height reduction, view protection, light clearance or any other purpose shall not be allowed. Specialty-style pruning, such as pollarding, shall be specified within the approved landscape plans and shall be implemented during a 5-year establishment and training period. The owner/applicant shall comply with city-wide landscape rules or regulations on water usage. The owner/applicant shall comply with any state or local rules and regulations relating to landscape water usage and landscaping requirements necessitated to mitigate for drought conditions on all landscaping in the Folsom Corporate Center project.</p>	I	CD(P)(E)
-----	--	---	---	----------

36.	✓	<p>A Tree Permit Application containing an Application Form, Tree Protection and Mitigation Plan, and Arborist Report shall be submitted to the City of Folsom by the owner/applicant for issuance of a Tree Work Permit and Tree Removal Permit prior to commencement of any grading or site improvement activities. The tree protection and mitigation plan shall be prepared in collaboration with a qualified arborist and shall be subject to review and approval by the City. The tree protection and mitigation plan shall contain the contact information of the project arborist and shall be included in all associated plan sets for the project.</p> <p>Removal of any protected tree shall be mitigated by planting replacement trees and/or payment of “In-Lieu” fees on a diameter inch basis in accordance with <u>FMC, Section 12.16.150</u>. The proposed method of mitigation shall be subject to review and approval by the City.</p> <p>Prior to starting construction, oak trees to be preserved shall be fenced with high visibility fencing consistent with the city-approved tree protection and mitigation plan. Parking of vehicles, equipment, or storage of materials is prohibited within the Tree Protection Zone of Protected Trees at all times. Signs shall be posted on exclusion fencing stating that the enclosed trees are to be preserved. Signs shall state the penalty for damage to, or removal of, the protected tree.</p> <p>The owner/applicant shall retain the services of a project arborist for the duration of the development project to monitor the health of oak trees to be preserved and carry out the City-approved tree protection plan. All regulated activity conducted within the Critical Root Zone of protected trees, as that term is defined in <u>Folsom Municipal Code (FMC) 12.16.020</u>, shall be performed under the direct supervision of the project arborist. A copy of the executed contract for these arboricultural services shall be submitted to the City prior to the issuance of any tree or grading permits</p> <p>Certification letters by the project arborist attesting compliance with the tree protection and mitigation plan and tree permit conditions shall be submitted to the City at the following stages of the project:</p> <ul style="list-style-type: none"> ○ Following completion of grading, prior to issuance of Building Permits. ○ At the time of final inspection, prior to Certificate of Occupancy 	I, G, B, O	CD(P)(E)
-----	---	---	------------	----------

		The owner/applicant shall plant 35 Mitigation Oak Trees on the project site in the locations as shown on the Preliminary Landscape Plans. The final number, location, and type of Mitigation Oak Trees shall be subject to review and approval by the Community Development Department. The owner/applicant shall pay in-lieu fees for any outstanding required Oak Tree Mitigation that is not satisfied through planting of Mitigation Oak Trees.		
CULTURAL RESOURCE REQUIREMENTS				
37.	✓	It is always possible that ground-disturbing activities during project development may uncover previously unknown archaeological resources. In the event that archaeological resources are discovered during construction, construction operations shall stop within a 100-foot radius of the find and a qualified archaeologist shall be consulted to determine whether the resource requires further study. The City shall include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. The archaeologist shall make recommendations concerning appropriate measures that will be implemented to protect the resources, including but not limited to, excavation and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Archaeological resources could consist of, but are not limited to, stone, bone, wood, or shell artifacts or features, including hearths. Any previously undiscovered resources found during construction within the project area should be recorded on appropriate Department of Parks and Recreation (DPR) 523 forms and evaluated for significance in terms of CEQA criteria.	G, I, B	CD (P)(E)
38.	✓	If any suspected TCRs are discovered during ground disturbing construction activities, all work shall cease within 100-feet of the find, or an agreed upon distance based on the Project Area and nature of the find. A Tribal Representative from a California Native American tribe that is traditionally and culturally affiliated with a geographic area shall be immediately notified and shall determine if the find is a TCR (PRC §21074). The Tribal Representative will make recommendations for further evaluation and culturally appropriate treatment as necessary. If deemed necessary by the City, a qualified cultural resources specialist meeting the Secretary of Interior’s Standards and Qualifications for Archaeology may also assess the significance of the find in joint consultation with Native American Representatives to ensure that Tribal values are considered. Work at the discovery location may not resume until the City, in consultation as appropriate and in good faith, determines that all necessary investigation and treatment of the discovery under the requirements of CEQA, including AB52, have been satisfied.	G, I, B	CD (P)(E)

39.	✓	<p>In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines § 15064.5; Health and Safety Code § 7050.5; Public Resources Code § 5097.94 and § 5097.98 must be followed. If during the course of project development there is accidental discovery or recognition of any human remains, the following steps shall be taken:</p> <p>There shall be no further excavation or disturbance within a 100-foot radius of the potentially human remains until the County Coroner is contacted to determine if the remains are Native American and if an investigation of the cause of death is required. If the coroner determines the remains to be Native American, the coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the “most likely descendant” (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in PRC Section 5097.98.</p> <p>Where the following conditions occur, the landowner or his authorized representative shall reburial the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the most likely descendant or on the project site in a location not subject to further subsurface disturbance:</p> <ul style="list-style-type: none">○ The NAHC is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 48 hours after being notified by the commission.○ The descendant identified fails to make a recommendation.○ The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.	G, I, B	CD (P)(E)
-----	---	--	---------	-----------

BIOLOGICAL RESOURCE REQUIREMENTS

40.	✓	<p><u>Nesting Birds:</u> Mitigation Measure BIO-2: If project (construction) ground-disturbing or vegetation clearing and grubbing activities commence during the avian breeding season (February 1 through August 31), a qualified biologist shall conduct a pre-construction nesting bird survey no more than 14 days prior to initiation of project activities and again immediately prior to construction. The survey area shall include suitable raptor nesting habitat within 500-feet of the project boundary (inaccessible areas outside of the project site can be surveyed from the site or from public roads using binoculars or spotting scopes). Preconstruction surveys are not required in areas where project activities have been continuous since prior to February 1, as determined by a qualified biologist. Areas that have been inactive for more than 14 days during the avian breeding season must be re-surveyed prior to resumption of project activities. If no active nests are identified, no further mitigation is required. If active nests are identified, the following measure is required:</p> <ul style="list-style-type: none"> • A suitable buffer (e.g., typically 300-500-feet for raptors; and 50-100-feet for passerines) shall be established by a qualified biologist around active nests and no construction activities within the buffer shall be allowed until a qualified biologist has determined that the nest is no longer active (i.e., the nestlings have fledged and are no longer reliant on the nest, or the nest has failed). Encroachment into the buffer may occur at the discretion of a qualified biologist. Any encroachment into the buffer shall be monitored by a qualified biologist to determine whether nesting birds are being impacted. • With implementation of the above mitigation measures, potential impacts to special-status species and nesting birds would be less than significant and no additional mitigation measures would be required. 	G, I	CD (E)(P)
-----	---	--	------	-----------

<p>41.</p>	<p>✓</p>	<p>Burrowing Owl Mitigation Measure BIO-1: Prior to the commencement of construction activities (which includes clearing, grubbing, or grading) a survey for burrowing owl shall be conducted by a qualified biologist. The survey shall occur within 30 days of the start of construction activities. Surveys shall be conducted in accordance with the following:</p> <ul style="list-style-type: none"> • A survey for active burrows and burrowing owls shall be conducted by walking through suitable habitat over the entire project site and in areas within 150-meters (~500-feet) of the project impact zone where accessible. • Pedestrian survey transects shall be spaced to allow 100 percent visual coverage of the ground surface. The distance between transect center lines shall be no more than 30-meters (~100-feet) and shall be reduced to account for differences in terrain, vegetation density, and ground surface visibility. Surveyor(s) shall maintain a minimum distance of 50-meters (~160-feet) from any owls or occupied burrows. It is important to minimize disturbance near occupied burrows during all seasons. • If no occupied burrows or burrowing owls are found in the survey area, a letter report documenting survey methods and findings shall be prepared and no further mitigation is necessary. • If occupied burrows or burrowing owls are found, then a complete burrowing owl survey is required. This consists of a minimum of four site visits conducted on four separate days, which must also be consistent with the Survey Method, Weather Conditions, and Time of Day sections of Appendix D of the California Fish and Wildlife “Staff Report on Burrowing Owl Mitigation” (March 2012). A survey report shall be prepared that is consistent with the Survey Report section of Appendix D of the California Fish and Wildlife “Staff Report on Burrowing Owl Mitigation” (March 2012). • If occupied burrows or burrowing owls are found, the applicant shall contact the City and consult with CDFW prior to construction and will be required to submit a Burrowing Owl Mitigation Plan (subject to the approval of the City and in consultation with California Fish and Wildlife). This plan must document all proposed measures, including avoidance, minimization, exclusion, relocation, or other measures, and include a plan to monitor mitigation success. The CDFW “Staff Report on Burrowing Owl Mitigation” (March 2012 shall be used. 	<p>G, I</p>	<p>CD (E)(P)</p>
<p>AIR QUALITY REQUIREMENTS</p>				

42.		<p>Control of fugitive dust is required by District Rule 403 and enforced by SMAQMD staff. The owner/applicant shall implement the following measures as identified by the SMAQMD:</p> <ul style="list-style-type: none"> • Water all exposed surfaces two times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads. • Cover or maintain at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered. • Use wet power vacuum street sweepers to remove any visible trackout mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited. • Limit vehicle speeds on unpaved roads to 15 miles per hour (mph). • All roadways, driveways, sidewalks, parking lots to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used. • Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to 5 minutes [required by California Code of Regulations, Title 13, sections 2449(d)(3) and 2485]. Provide clear signage that posts this requirement for workers at the entrances to the site. • Maintain all construction equipment in proper working condition according to manufacturer’s specifications. The equipment must be checked by a certified mechanic and determine to be running in proper condition before it is operated. 	G, I, B	CD (P)(E)(B)
43.	✓	<p>The building design shall include a mechanical ventilation system that meets the criteria of the International Building Code (Chapter 12, §1203.2 of the California Building Code) to ensure that windows would be able to remain closed while maintaining adequate ventilation and temperature control. The mechanical ventilation system shall be designed to accommodate, and equipped with, filters having a Minimum Efficiency Reporting Value (MERV) rating of 13 or higher.</p>	B	CD (P)(B)

44.		Additional landscape plantings shall be provided where feasible along the southern, western, and eastern perimeter of Lot 1 to the satisfaction of the Community Development Department.	I	CD(P)(E)
GREENHOUSE GAS REQUIREMENTS				
45.	✓	In accordance with the City General Plan GHG Reduction Measure T-3, the project shall provide a minimum of five percent more bicycle parking than required in the City's Municipal Code Section 17.57.090 (for a total of 54 bicycle parking spaces).	B	CD (P)(B)
46.	✓	In accordance with the City General Plan GHG Reduction Measure T-6, the project shall use high-performance diesel (also known as Diesel-HPR or Reg-9000/RHD) for all diesel-powered equipment utilized in construction of the project.	B	CD (P)(B)
47.	✓	In accordance with the City General Plan GHG Reduction Measure T-8, the project shall provide electric vehicle capable parking spaces in ten percent of the total parking spaces on the project site (for a total of 49 EV Capable charging spaces).	B	CD (P)(B)
48.	✓	In accordance with the City General Plan GHG Reduction Measure SW-1, the project shall divert to recycle or salvage a minimum 65 of nonhazardous construction and demolition waste generated at the project site in accordance with Appendix A4 (Residential) of the as outlined in the California Green Building Standards Code (2019 CALGreen).	B	CD (P)(B)
49.	✓	In accordance with the City General Plan GHG Reduction Measure W-1, the project shall comply with all applicable indoor and outdoor water efficiency and conservation measures required under 2019 CALGreen Tier 1, as outlined in the California Green Building Standards Code.	B	CD (P)(B)

TRAFFIC, ACCESS, CIRCULATION, AND PARKING

50.	✓	<p>Based on the recommendations of the Transportation Impact Study dated February 2022 (Attachment 21), the following condition of approval shall be implemented to the satisfaction of the Community Development Department and the Public Works Department:</p> <ul style="list-style-type: none">• The owner/applicant shall modify Prairie City Road/ Iron Point Road signal timing plan by shifting 1 second from the eastbound through movement to the westbound left turn movement, reduce the vehicle extension setting from adding five to six additional seconds to the green phase for through movements to adding four seconds to the green phase for through movements for each vehicle passing the detector after the minimum green phase length has been exceeded. This mitigation measure shall be implemented by the City through the reimbursement agreement with the owner/applicant to cover any City costs. The implementation of this mitigation measure shall occur prior to issuance of the first building permit.	I	CD (P)(E), PW
-----	---	--	---	---------------

51.		<p>To further ensure safe travel within the project site, the following measures shall be implemented to the satisfaction of the Community Development Department:</p> <ul style="list-style-type: none"> • A “stop” sign and appropriate pavement markings shall be installed at the internal approach to the private ring road at the two primary project driveways. • The vehicle entry gates at the two primary project driveway locations shall open inward, away from the private ring road or retract sideways. In addition, the design of the vehicle entry gates and the vehicle entry gate area shall conform to all requirements established by the City of Folsom for gated multi-family residential developments. • If vehicles are observed backing up into the private ring road at either of the two gated primary project entries, City staff will evaluate and require appropriate measures to alleviate the traffic congestion including but not limited to requiring the two project entry gates to remain open during the AM (7:00 a.m. to 9:00 a.m.) and PM (4:00 p.m. to 6:00 p.m.) peak hours on weekdays. • Residents of the Folsom Corporate Center Apartments project shall be issued remote transmitters to allow them to open the entry gates without needing to stop to enter a code in the keypad at either entrance location. • The owner/applicant shall provide at least one pedestrian connection from Lot 1 to the southern property boundary to allow for a connection to the future Class I bicycle trail expected to be located within the 50-foot-wide landscape easement between the project site and U.S. Highway 50. 	I	CD (P)(E)
52.		A minimum of 462 on-site parking spaces shall be provided for the project.	I, O	CD (P)(E)
53.		A minimum of 51 on-site bicycle parking spaces shall be provided for the project in the two clubhouse buildings and at locations that are close proximity to the primary building entrances.	I, O	CD (P)(E)

NOISE REQUIREMENTS				
54.		Compliance with Noise Control Ordinance and General Plan Noise Element shall be required. Hours of construction operation shall be limited from 7:00 a.m. to 6:00 p.m. on weekdays and 8:00 a.m. to 5:00 p.m. on Saturdays. No construction is permitted on Sundays or holidays. Construction equipment shall be muffled and shrouded to minimize noise levels.	G, I, B	CD (P)(E)

<p>55.</p>	<p>✓</p>	<p>Construction activities shall be required to comply with the following and be noted accordingly on construction contracts:</p> <ol style="list-style-type: none"> 1. Construction hours/Scheduling: The following are required to limit construction activities to the portion of the day when occupancy of the adjacent sensitive receptors are at the lowest: <ol style="list-style-type: none"> a. Construction activities for all phases of construction, including servicing of construction equipment shall only be permitted during the hours of 7:00 a.m. and 6:00 p.m. Monday through Friday and between 8:00 a.m. to 5:00 p.m. on Saturdays. Construction is prohibited on Sundays and on all holidays. b. Delivery of materials or equipment to the site and truck traffic coming to and from the site is restricted to the same construction hours specified above. 2. Construction Equipment Mufflers and Maintenance: All construction equipment powered by internal combustion engines shall be properly muffled and maintained. 3. Idling Prohibitions: All equipment and vehicles shall be turned off when not in use. Unnecessary idling of internal combustion engines is prohibited. 4. Equipment Location and Shielding: All stationary noise-generating construction equipment, such as air compressors, shall be located as far as practical from the adjacent homes. Acoustically shield such equipment when it must be located near adjacent residences. 5. Quiet Equipment Selection: Select quiet equipment, particularly air compressors, whenever possible. Motorized equipment shall be outfitted with proper mufflers in good working order. 6. Staging and Equipment Storage: The equipment storage location shall be sited as far as possible from nearby sensitive receptors. 	<p>G, I, B</p>	<p>CD (P)(E)</p>
------------	----------	---	----------------	------------------

56.	✓	<p>For habitable areas (both living rooms and bedrooms) with a direct line-of-sight to U.S. Highway 50 for Lot 1 and Iron Point Road for Lot 6, the following measures shall be incorporated in the design of the project to reduce interior noise levels to 45 CNEL or less:</p> <ul style="list-style-type: none"> ○ Lot 1 (Buildings 1 and 2) and Lot 6 (Building 2) – Minimum exterior wall requirement of STC 46. ○ Lot 1 (Buildings 1 and 2) and Lot 6 (Building 2) – Minimum window and glass sliding door requirement of STC 35. ○ Lot 1 (Building 7) and Lot 6 (Building 5) – Minimum window and glass sliding door requirement of STC 28. ○ The building design shall include a mechanical ventilation system that meets the criteria of the International Building Code (Chapter 12, §1203.3 of the 2013 California Building Code) to ensure that windows would be able to remain permanently closed. 	B	CD (P)(E)
ARCHITECTURE/SITE DESIGN REQUIREMENTS				
57.		The final location, design, materials, and colors of the trash/recycling enclosures be subject to review and approval by the Community Development Department.	I, B	CD (P)(E)
58.		The final location, height, design, materials, and colors for the proposed retaining walls and fencing shall be subject to review and approval by the Community Development Department.	I, B	CD (P)(E)

59.		<p>The project shall comply with the following architecture and design requirements:</p> <ol style="list-style-type: none"> 1. This approval is for 11 three-story apartment buildings and two clubhouse buildings associated with the Folsom Corporate Center Apartments project. The applicant shall submit building plans that comply with this approval and the attached building elevations and color renderings dated November 16, 2021. 2. The design, materials, and colors of the proposed Folsom Corporate Center apartment and clubhouse buildings shall be consistent with the submitted building elevations, color renderings, materials samples, and color scheme to the satisfaction of the Community Development Department. 3. Brick pavers or another type of colored masonry material (ADA compliant) shall be used to designate pedestrian crosswalks on the project site, in addition to where pedestrian paths cross drive aisles, and shall be incorporated as a design feature at the two primary driveway entrances for Lot 1 and Lot 6 to the satisfaction of the Community Development Department. 4. Roof-mounted mechanical equipment, including satellite dish antennas, shall not extend above the height of the parapet walls. Ground-mounted mechanical equipment shall be shielded by landscaping or trellis type features. 5. Utility equipment such as transformers, electric and gas meters, electrical panels, and junction boxes shall be screened by walls and or landscaping. 	I, B	CD (P)
GRADING REQUIREMENT				
61.		<p>Prior to the approval of the final facilities design and the initiation of construction activities, the applicant shall submit an erosion control plan to the City for review and approval. The plan shall identify protective measures to be taken during excavation, temporary stockpiling, any reuse or disposal, and revegetation. Specific techniques may be based upon geotechnical reports, the <u>Erosion and Sediment Control Handbook</u> of the State of California Department of Conservation, and shall comply with all updated City standards.</p>	G, I	CD (E)
SIGN REQUIREMENT				
62.		<p>The owner/applicant shall obtain a sign permit prior to installation of the three monument signs.</p>	B	CD (P)
OTHER AGENCY REQUIREMENT				

63.		The owner/applicant shall obtain all required State and Federal permits and provide evidence that said permits have been obtained, or that the permit is not required, subject to staff review and approval of any grading or improvement plan.	G, I	CD (P)(E)
FIRE DEPARTMENT REQUIREMENTS				
64.		The building shall have illuminated addresses visible from the street or drive fronting the property. Size and location of address identification shall be reviewed and approved by the Fire Marshal.	I	FD
65.		Prior to the issuance of any improvement plans or building permits, the Community Development and Fire Departments shall review and approve all detailed design plans for accessibility of emergency fire equipment, fire hydrant flow location, and other construction features.	I, B	FD
66.		All fire protection devices shall be designed to be located on site: fire hydrants, fire department connections, post indicator valves, etc. off-site devices cannot be used to serve the building. A water model analysis that proves the minimum fire flow will be required before any permits are issued. The fire sprinkler riser location shall be inside a Fire Control Room (5' X 7' minimum) with a full-sized 3'-0" door. This room can be a shared with other building utilities. The room shall only be accessible from the exterior.	I, B	FD
67.		All-weather emergency access roads and fire hydrants (tested and flushed) shall be provided before combustible material or vertical construction is allowed on site. All-weather access is defined as 6" of compacted AB from May 1 to September 30 and 2"AC over 6" AB from October 1 to April 30.	I, B	FD
POLICE/SECURITY REQUIREMENT				
68.		<p>The owner/applicant shall consult with the Police Department in order to incorporate all reasonable crime prevention measures. The following security/safety measures shall be required:</p> <ul style="list-style-type: none"> • A security guard shall be on-duty at all times at the site or a six-foot security fence shall be constructed around the perimeter of construction areas. (This requirement shall be included on the approved construction drawings). • Security measures for the safety of all construction equipment and unit appliances shall be employed. • Landscaping shall not cover exterior doors or windows, block line-of-sight at intersections or screen overhead lighting. 	G, I, B	PD

MISCELLANEOUS REQUIREMENTS				
69.		The proposed project shall comply with all State and local rules, regulations, Governor’s Declarations, and restrictions including but not limited to: Proclamation of a State of Emergency due to drought conditions issued by the Governor of California on October 19, 2021 relative to water usage and conservation, requirements relative to water usage and conservation established by the State Water Resources Control Board, and water usage and conservation requirements established within the <u>Folsom Municipal Code, (Section 13.26 Water Conservation)</u> , or amended from time to time. Attachment No. 2

Ordinance No. 1327 - An Uncodified Ordinance to amend the zoning designation for a 7.24-acre parcel (Lot 1) from M-L PD to R-4 PD and to amend the zoning designation for a 4.68-acre parcel (Lot 6) from BP PD to R-4 PD for the Folsom Corporate Center Apartments project (Introduction and First Reading)

ORDINANCE NO. 1327**AN UNCODIFIED ORDINANCE TO AMEND THE ZONING DESIGNATION FOR A 7.24-ACRE PARCEL (LOT 1) FROM M-L PD TO R-4 PD AND TO AMEND THE ZONING DESIGNATION FOR A 4.68-ACRE PARCEL (LOT 6) FROM BP PD TO R-4 PD FOR THE FOLSOM CORPORATE CENTER APARTMENTS PROJECT**

WHEREAS, the proposed Folsom Corporate Center Apartments project consists of the development of a 253-unit market-rate apartment community on an 11.92-acre site located within the Folsom Corporate Center; and

WHEREAS, the Planning Commission, at its regular meeting on April 6, 2022, considered the proposed rezone of two parcels associated with the Folsom Corporate Center Apartments project and determined that the proposed rezone was appropriate given the existing residential and commercial land uses in the project vicinity; and

WHEREAS, all notices have been given at the time and in the manner required by State Law and the Folsom Municipal Code.

NOW, THEREFORE, the City Council of the City of Folsom hereby does ordain as follows:

SECTION 1. PURPOSE

- A. A certain property, a 7.24-acre parcel (APN: 072-3120-023), located at 2275 Iron Point Road, is proposed for rezoning, from M-L PD (Limited Industrial, Planned Development District) to R-4 PD (General Apartment, Planned Development District) and a certain property, a 4.68-acre area (APN: 072-3120-026), located at 2275 Iron Point Road, is proposed for rezoning, from BP PD (Business and Professional, Planned Development District) to R-4 PD (General Apartment, Planned Development District); and
- B. The proposed rezoning is consistent with the objectives, goals and policies of the Folsom General Plan; and
- C. A duly noticed public hearing was held before the Planning Commission on April 6, 2022; and
- D. A Mitigated Negative Declaration has been prepared for the project in accordance with the California Environmental Quality Act. The Negative Declaration and the Initial Study are incorporated herein by reference; and
- E. Notice of hearing before the City Council has been given in the form and in the manner required by State statute and Folsom City Code.

SECTION 2. CHANGE OF ZONING MAP DESIGNATION

The Zoning Map designation for the subject parcels are hereby amended from M-L PD (Limited Manufacturing, Planned Development District) to BP PD (Business and Professional, Planned Development District) and BP PD (Business and Professional, Planned Development District) to R-4 PD (General Apartment, Planned Development District) as set forth on Exhibit A.

SECTION 3. SEVERABILITY

If any section, subsection, sentence, clause, or phrase in this Ordinance or any part thereof is for any reason held to be unconstitutional, invalid, or ineffective by any court of competent jurisdiction, such decision shall not affect the validity or effectiveness of the remaining portions of this Ordinance or any part thereof. The City Council declares that it would have passed each section irrespective of the fact that any one or more section, subsection, sentence, clause, or phrase be declared unconstitutional, invalid, or ineffective.

SECTION 4. EFFECTIVE DATE

This ordinance shall become effective thirty (30) days from and after its passage and adoption, provided it is published in full or in summary within twenty (20) days after its adoption in a newspaper of general circulation in the City.

This ordinance was introduced and the title thereof read at the regular meeting of the City Council on May 10, 2022, and the second reading occurred at the regular meeting of the City Council on May 24, 2022.

On a motion by _____, seconded by _____ the foregoing ordinance was passed and adopted by the City Council of the City of Folsom, State of California, this 10th day of May, 2022 by the following vote, to wit:

AYES: Council member(s):

Sacramento CA 95833

Recommendation: Conduct a public hearing and upon conclusion recommend to City Council approval of a General Plan Amendment, Rezone, and Planned Development Permit for the Folsom Corporate Center Apartments project, subject to the findings (Findings A-U) and conditions of approval (Conditions 1-69) attached to this report.

Project Summary: The proposed project includes development of a 253-unit market-rate apartment community on two sites (Lot 1: 7.24-acre parcel and Lot 6: 4.68-acre parcel) within the Folsom Corporate Center, which is located on the south side of Iron Point Road, slightly east of the intersection of Iron Point Road and Oak Avenue Parkway. The following are the specific entitlements requested with the proposed project.

- A **General Plan Amendment** to change the General Plan land use designation for the two project parcels (Lot 1 and Lot 6) from IND (Industrial/Office Park) to MHD (Multi-Family High Density).

AGENDA ITEM NO. 2

Type: Public Hearing

Date: April 6, 2022

- A **Rezone** to change the zoning designation for Lot 1 from M-L PD (Limited Manufacturing, Planned Development District) to R-4 PD (General Apartment, Planned Development District) and to change the zoning designation of Lot 6 from BP PD (Business and Professional, Planned Development District) to R-4 PD (General Apartment, Planned Development District).
- A **Planned Development Permit** which contains detailed development and architectural standards for the proposed 253-unit residential apartment community.

These proposed actions are described in detail and analyzed later in this report.

ATTACHMENT 1 BACKGROUND AND SETTING

Background:

On August 15, 2000, the City Council approved a Tentative Subdivision Map and Planned Development for development of a 1.425-million-square-foot professional office center known as the Folsom Corporate Center. On May 1, 2002, the Planning Commission approved a Planned Development Permit and Conditional Use Permit for development of a 255,795-square-foot retail shopping center known as Folsom Gateway within the eastern portion of the previously approved Folsom Corporate Center. That approval resulted the reduction of 395,000 square feet of office space within the Folsom Corporate Center. A total of four professional office buildings have been developed within the Folsom Corporate Center with major tenants including HDR Engineering, Kaiser Permanente, Micron Technology, and SAFE Credit Union.

On January 26, 2016, the City Council approved a General Plan Amendment, Rezone, Planned Development Permit, and Conditional Use Permit for development of the 126-unit senior retirement community known as the Iron Point Retirement Community on a 4.68-acre property located at 2275 Iron Point Road. On October 4, 2017, the Planning Commission approved a one-year extension to the previously approved Planned Development Permit and Conditional Use Permit associated with the Iron Point Retirement Community project. On February 6, 2019, the Planning Commission approved an additional one-year extension to the previously approved Planned Development Permit and Conditional Use Permit associated with the Iron Point Retirement Community project. Subsequently, the applicant decided not to pursue development of the project and withdrew their application. It is important to note that the 4.68 parcel associated with Iron Point Retirement Community project is one of the parcels (Lot 6) included with the proposed Folsom Corporate Center Apartments project.

On October 7, 2020, the Planning Commission approved a Design Review application for development of an 11,716-square-foot single-story medical building (Kidney Dialysis Treatment Center) on a 2.77-acre site located near the southwest corner of the intersection of Iron Point Road and Rowberry Drive within the Folsom Corporate Center. The Kidney Dialysis Treatment Center is currently under construction and is located directly to the east of one of the parcels (Lot 1) associated with the proposed Folsom Corporate Center Apartments project.

Physical Setting

The Folsom Corporate Center Apartments project site consists of two separate parcels located within the Folsom Corporate Center development, which is generally located on the south side of Iron Point Road, slightly east of the intersection of Iron Point Road and Oak Avenue Parkway. Lot 1, which is a 7.24-acre parcel located between the Kaiser Permanente Medical Office Building and U.S. Highway 50 to the south, features moderately sloped terrain covered with non-native grasses and a single native Oak tree. Lot 6, which is a 4.68-acre parcel located between Iron Point Road and the SAFE Credit Union building to the south, has gently sloped terrain and contains non-native grasses and 10 native Oak trees. An aerial photograph of the project site and surrounding land uses is shown in Figure 1 below.

FIGURE 1: AERIAL PHOTOGRAPH OF PROJECT SITE

ATTACHMENT 2 PROJECT DESCRIPTION

APPLICANT'S PROPOSAL

The applicant, FCC 50, LLC (Cole Partners), is requesting approval of a General Plan Amendment, Rezone, and Planned Development Permit for development of a 253-unit market-rate apartment community on two parcels (Lot 1: 7.24-acre parcel and Lot 6: 4.68-acre parcel) within the Folsom Corporate Center, which is generally located on the south side of Iron Point Road, slightly east of the intersection of Iron Point Road and Oak Avenue Parkway.

As noted above, the applicant is requesting approval of three entitlements to allow for development of the proposed apartment community. The first entitlement is a request for approval of a General Plan Amendment to change the General Plan land use designation for the two project parcels (Lot 1 and Lot 6) from IND (Industrial/Office Park) to MHD (Multi-Family High Density). The second entitlement is a request for approval of a Rezone to change the zoning designation for Lot 1 from M-L PD (Limited Manufacturing, Planned Development District) to General Apartment, Planned Development District (R-4 PD) and to change the zoning designation of Lot 6 from BP PD (Business and Professional, Planned Development District) to General Apartment, Planned Development District (R-4 PD). The third entitlement is a request for approval of a Planned Development Permit to establish project-specific development standards, review the project site design, evaluate the architectural design of the multi-family apartment and clubhouse buildings, and establish signage criteria.

The proposed Folsom Corporate Center Apartments project, which includes development of 11 three-story apartment buildings and two clubhouse buildings (three-story and one-story buildings respectively), is comprised of 253 market rate apartments within a gated community. The apartment buildings include a combination of 16-plex buildings, 21-plex buildings, 26-plex building, and 32-plex buildings with a total of 16 studio units (564 square feet), 126 one-bedroom units (687 square feet), 97 two-bedroom units (990-1057 square feet), and 14 three-bedroom units (1,412 square feet). All apartment units are proposed to be accessible from interior hallways and include a full kitchen, living space, storage closets, bedrooms, bathrooms, and an outdoor patio/balcony. The one and three-story clubhouse buildings include a recreation room, a fitness center, a yoga studio, a spa room, a mail room, a bike storage facility, leasing offices, a storage room, and restroom facilities. Outdoor amenities associated with the clubhouse buildings include a pool, a spa, and deck areas. Additional outdoor amenities include two dog parks.

In relation to site design, Lot 1 includes seven rectangular apartment buildings that are evenly spaced within the eastern portion of parcel due to constraints associated with overhead transmission lines situated in the western portion of the parcel. Lot 6 includes four rectangular apartment buildings which are centrally located on the parcel.

The applicant proposes a modern contemporary architectural design theme intended to compliment the surrounding commercial buildings within the Folsom Corporate Center. Modern and unique design elements include angular building shapes and forms, varied roof heights, flat rooftops, recessed building elements, metal canopies, and extensive use of glass. Proposed building materials include stucco walls, stone veneer wainscoting, metal canopies, glass railing, and metal railing. The color scheme for the buildings is proposed to be generally earth tone, with extensive use of gray and brown colors accented by a mixture of lighter colors including white and tan.

General access to the project area is provided by three existing driveways located on the south side of Iron Point Road. Primary vehicle access to Lot 1 is provided by a new driveway on south side of an existing private ring road with secondary access accommodated by two emergency vehicle access driveways also situated on the south side of the ring road. Primary vehicle access to Lot 6 is provided by a new driveway on the north side of the private ring road with secondary access served by an emergency vehicle access driveway also positioned on the north side of the ring road. Each of the project driveways will accommodate all vehicle turning movements into and out of the respective sites. In addition, all project driveways will have access controlled by vehicle gates.

Proposed internal vehicle circulation consists of 27-foot-wide drive aisles to facilitate movement in and around the project sites. Pedestrian circulation is provided by a combination of new sidewalks and existing sidewalks located along the private ring road and also along Iron Point Road. Internal pedestrian circulation is accommodated by a series of new pedestrian pathways that provide connectivity to the apartment buildings, the clubhouse building, the perimeter sidewalks, and the future Class I trail to the south. Additional site improvements include: 491 parking spaces (includes combination of garage, carport, and uncovered spaces), 51 bicycle parking spaces, 5 electric vehicle charging stations, underground utilities, drainage basins, site lighting, site landscaping, retaining walls, fencing, and project identification signs. The proposed site plans are shown in Figure 2, Figure 3, and Figure 4 on the following pages.

FIGURE 2: OVERALL SITE PLAN

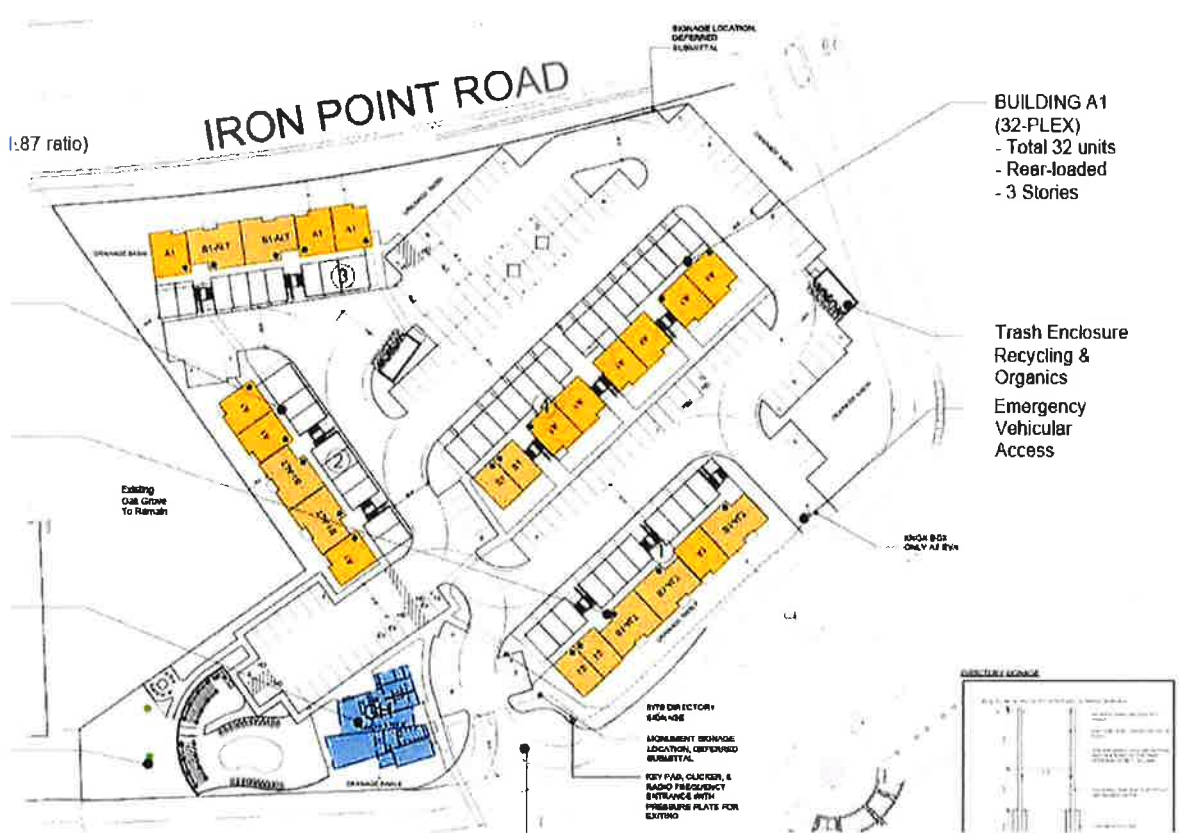

FIGURE 3: LOT 1 SITE PLAN

FIGURE 4: LOT 6 SITE PLAN

ATTACHMENT 3 ANALYSIS

The following sections provide an analysis of the applicant's proposal. Staff's analysis includes:

- A. General Plan Amendment and Rezone
- B. Planned Development Permit
 - Development Standards
 - Building Architecture and Design
 - Signage
- C. Traffic/Access/Circulation
- D. Parking
- E. Noise Impacts
- F. Walls/Fencing
- G. Site Lighting
- H. Trash/Recycling
- I. Existing and Proposed Landscaping
- J. Conformance with Relevant Folsom General Plan Objectives and Policies
- K. Native American Consultation

A. General Plan Amendment and Rezone

General Plan Amendment and Rezone

The Folsom Corporate Center Apartments project is comprised of two separate parcels, Lot 1, which is 7.24-acres in size and Lot 6, which is 4.68-acres in size. Lot 1 and Lot 6 each have a General Plan land use designation of IND (Industrial/Office Park). As shown on Attachment 6, the proposed project includes a request to change the General Plan land use designation for both parcels from IND (Industrial/Office Park) to MHD (Multi-Family High Density). Lot 1 currently has a Zoning designation M-L PD (Limited Manufacturing, Planned Development District), while Lot 6 has a zoning designation of BP PD (Business and Professional, Planned Development District). As shown on Attachment 7, the proposed project includes a request to change the zoning designation for Lot 1 from M-L PD (Limited Manufacturing, Planned Development District) to R-4 PD (General Apartment, Planned Development District) and to change the zoning designation of Lot 6 from BP PD (Business and Professional, Planned Development District) to R-4 PD (General Apartment, Planned Development District). With approval of the proposed amendments and rezones, the entire project site will have a General Plan land use designation of MHD and a Zoning designation of R-4 PD.

The project is consistent with both the proposed General Plan land use designations and the proposed zoning designations, as multi-family apartments are identified as a permitted land use within the Folsom Municipal Code (FMC, Section 17.18.020 Permitted Uses). The proposed project includes a density of 21.2 dwelling units per acre, is consistent with the allowable density range (20-30 dwelling units per acre) established by the General Plan for Multi-Family High Density (Table LU-1: Residential Designations). In addition, the proposed project meets the development requirements established by the Folsom Municipal Code (FMC, Chapter 17.18, General Apartment District) and the Folsom Corporate Center Planned Development Guidelines with some minor modifications (discussed within the Planned Development Permit section of this staff report). Proposed modifications to development standards include lot area, lot width, building coverage, building height, building setbacks, and parking, which are discussed in the Planned Development Permit section of this staff report.

In reviewing the proposed General Plan Amendment and the Rezone, staff took into consideration community benefits that the proposed apartment project will provide relative to the supply of new housing units. City staff also considered the changes in the region's office and housing markets over the past 10 to 15 years. According to the California Department of Housing and Community Development (HUD), the state of California is facing a severe shortage with regard to housing supply, with some estimates indicating a shortfall of up to 3.5 million housing units. The housing shortage has a number of significant negative effects including but not limited to causing housing prices to rise which limits affordability, and increasing the homeless population in communities. The benefit of the proposed project is that it will increase the City's housing supply by providing 253 new market-rate rental units along the Iron Point Road corridor in close proximity to jobs and services in that area of the City.

Cole Partners, who is the original developer of the 900,000-square-foot Folsom Corporate Center, described efforts to bring new medical and office uses to the Folsom area over the last two decades. Since inception of the Corporate Center in 2000, the development has attracted prominent medical and office companies including Kaiser Permanente, Micron, and SAFE Credit Union. However, the applicant describes changing regional market dynamics over the last decade (changes in technology, acceptable of telecommuting, etc.) with the interest in housing projects far outpacing the demand for new office development. It has been more than 12 years since any new major office buildings (Waste Connections/SAFE Credit Union and Numonyx/Micron) were constructed within the Corporate Center. Notably, these two office buildings are the last privately developed larger suburban office buildings completed not only in Folsom, but along the Highway 50 corridor. While the office market dynamic has changed in a negative way, the regional demand for housing (single-family and multi-family) continues to remain extremely strong, especially in Folsom with a range of multi-family projects

(Alder Creek Apartments, Avenida Senior Apartments, Mangini Ranch Apartments, Scholar Way Apartments, etc.) being approved recently. Based on these factors, staff has determined that the proposed changes in land use and zoning are warranted.

Land Use Compatibility

In evaluating the General Plan Amendment and the Rezone, staff also took into consideration the compatibility of the proposed project relative to existing land uses in the project area. The proposed project is located on two undeveloped parcels within the Folsom Corporate Center. The project site is bounded by Iron Point Road to the north with single-family residential development (Broadstone Unit. No. 2) and multi-family residential development (Sherwood Apartments) beyond, U.S. Highway 50 to the south with undeveloped properties within the Folsom Plan Area beyond, multi-family development (Revel Senior Living and CountryHouse Memory Care) to the west with future Oak Avenue Parkway extension and commercial development beyond, and commercial development to the east with East Bidwell Street Beyond.

The most prominent land uses in the immediate project area are professional office-related and include SAFE Credit Union, Micron, Kaiser Permanente, and HDR. Residential land uses in close proximity to the site include the Broadstone Unit No. 2 Subdivision (approximately 150 feet to the north across Iron Point Road), Sherwood Apartments (approximately 400 feet to the northeast across Iron Point Road), and Revel Senior Living Apartments (approximately 500 feet to the west). Medical-office related land uses in the project vicinity include the aforementioned Kaiser Permanente Medical Office facility and the Kaiser Permanente Surgery Center. The nearest retail commercial development (Folsom Gateway Shopping Center, which was also developed by a Cole-related entity) is located approximately 1,200 feet to the east of the project site. Additional retail commercial development is located north of Iron Point Road (Palladio at Broadstone), approximately 3,100 feet east of the project site. Both retail commercial developments include grocery stores and a variety of retail shops.

As described above, the project site is situated in a unique location that includes a wide array of land uses including professional offices, medical offices, retail shopping, multi-family apartments, single-family residences, and a memory care facility. As mentioned within the project description, the Folsom Corporate Center Apartments project is a market-rate apartment community providing living opportunities for residents within 253 apartment units. Given the residential nature of the proposed use, staff has determined that the proposed project will be complimentary to the existing multi-family and single-family residential land uses located in the immediate project vicinity. In addition, taking into account the basic needs of the apartment residents, staff has determined that the proposed project is well-situated to take advantage of the numerous goods (grocery stores, restaurants, and retail shops) and services (medical offices) and job opportunities

that are located within walking distance of the site.

B. Planned Development Permit

The purpose of the Planned Development Permit process is to allow greater flexibility in the design of integrated developments than otherwise possible through strict application of land use regulations. The Planned Development Permit process is also designed to encourage creative and efficient uses of land. The following are proposed as part of the applicant's Planned Development Permit:

- Development Standards
- Building Architecture and Design
- Signage

Development Standards

The Folsom Corporate Center includes development standards that were intended to guide commercial development and did not take into account that residential development might occur within the boundaries of the Corporate Center. As a result, the applicant's intent with the subject application is to create a set of unique set of development standards that are better suited for multi-family residential development, yet still generally comply with the development standards established for properties within the Folsom Corporate Center as well as being consistent with the development standards established for properties within the General Apartment (R-4) zoning district. Table 1 lists the existing and proposed development standards for the Folsom Corporate Center Apartments project.

TABLE 1: DEVELOPMENT STANDARDS TABLE

Development Standards Table Folsom Corporate Center Apartments						
	Lot Area	Lot Width	Front Yard Setback	Rear Yard Setback	Side Yard Setbacks	Building Height
Existing Standards	0.5-Acres	NA	30 Feet Iron Point Rd.	NA	5 Feet	60 feet
R-4 District Standards	6,000 S.F.	60 Feet	20 Feet	10 Feet	5 Feet/10 Feet	50 Feet
Proposed Standards	0.5-Acres	60 Feet	40 Feet Iron Point Rd. 20 Feet	15 Feet	15 Feet	41 feet

As shown in Table 1, the proposed project meets or exceeds all development standards established for the Folsom Corporate Center and for the R-4 (General Apartment) zoning district. However, the proposed project does deviate from one guideline that is not shown in the table above. The Folsom Corporate Center Planned Development Guidelines

Planning Commission
 Folsom Corporate Center Apartments (PN 21-120)
 April 6, 2022

recommend that a 30-foot-wide landscape buffer be provided along the Iron Point Road frontage. Due to site constraints (topography, shape, etc.), the applicant is proposing to reduce the width of the landscape buffer (17-21 feet) along the eastern portion of the Lot 6 frontage with Iron Point Road, while at the same time expanding the width of the buffer (41-43 feet) along a greater length of the western portion of the Lot 6 frontage with Iron Point Road. With this proposed landscape modification, the average width of the landscape buffer along Iron Point Road would exceed 30 feet. Staff supports this landscape modification as the total amount of landscaping along the Iron Point Road frontage will be increased.

Building Architecture and Design

As detailed in the Project Description section of this report, the proposed project includes development of 11 three-story apartment buildings and two clubhouse buildings on two separate parcels within the Folsom Corporate Center. The design concept for the apartment building and clubhouse buildings features a modern contemporary architectural style with strong articulation of building forms and massing, both of which are used to break up the scale of the buildings. Proposed building materials include stucco walls, stone veneer wainscoting, metal canopies, glass railing, and metal railing. The color scheme for the buildings is proposed to be primarily earth tone, with prominent use of gray and brown colors accented by a mixture of lighter colors including white and tan. Proposed elevations and renderings of the apartment and clubhouse buildings are shown in the exhibits below and on the following pages.

FIGURE 11: BUILDING RENDERINGS (LOT 1)

FIGURE 12: BUILDING RENDERINGS (LOT 6)

The proposed project is subject to the Folsom Corporate Center Design Guidelines. The Design Guidelines, in respect to overall architectural design concepts, are intended to provide a framework for design, while not restricting creativity. The following are design parameters recommended by the Design Guidelines to ensure a high-level quality of development:

- Buildings should be responsive to views from all four elevations
- Building masses should be made human in scale, present varied elevations, and use accent materials to add variety
- Building materials such as tile, stone, glass, metal panels, and concrete should be utilized together to reflect the area's modernity, diversity, and traditions.
- Building entries shall be distinguished with accent materials such as stone, slate, color metal panels, or concrete.

In addition to the Folsom Corporate Center Design Guidelines, the proposed project is subject to the City's Design Guidelines for Multi-Family Development. The Design Guidelines for Multi-Family Development recommend that multi-family projects be designed in a manner that compliments the surrounding community. The following are some of the specific design recommendations suggested by the Design Guidelines:

- Variety and distinctness in design are desirable.

- Expanses of uninterrupted wall area and unbroken roof forms shall be discouraged. Balconies, porches, bay windows, chimneys, and other design elements with projections and varied setbacks shall be used to break up the physical characteristics of structures.
- The use of a variety and combination of building materials is encouraged. Building materials selected for multi-family projects shall be very durable and require low maintenance including, but not limited to, stucco, stone, and brick. Building materials shall integrate quality design elements consistent with the design of the development and the surrounding neighborhood.
- Exterior building colors shall be compatible with the surrounding neighborhood setting and shall not be out of character or in visual competition with the existing surrounding design elements.
- All accessory structures, including carports, garages, and solid waste enclosures, shall be designed with materials and in a manner consistent with the architectural design characteristics of the development.

As illustrated on the building elevations and color renderings (Attachments 15 and 16), the proposing apartment and clubhouse buildings incorporate many of the key design features recommended by the Folsom Corporate Center Design Guidelines and the Design Guidelines for Multi-Family Development including the use of rectilinear building shapes to create a sense of depth, use of varied forms to create visual relief, use of staggered building elements to create visual interest, and the inclusion of unique design details to reinforce the modern contemporary residential design theme.

As shown on the color and materials board (Attachment 17), the proposed project utilizes a variety of modern building materials to enhance the appearance of the building including the use of stucco on the walls, stone veneer wainscotting, glass windows and doors, metal canopies, glass railing, and metal railing. As recommended by the Design Guidelines, the proposed project features a natural color scheme with extensive use of earth tone colors including gray and brown, complimented with lighter colors including white and tan.

Based on the aforementioned analysis, staff has determined that the proposed project represents a high-quality design that is consistent with the design recommendations of the Folsom Corporate Center Design Guidelines and the Design Guidelines for Multi-Family Development. In addition, staff has determined that the project design is complimentary to the design of existing commercial and residential buildings in the immediate project area. As a result, staff recommends approval of the applicant's design with the following conditions:

1. This approval is for 11 three-story apartment buildings and two clubhouse buildings associated with the Folsom Corporate Center Apartments project. The

applicant shall submit building plans that comply with this approval and the attached building elevations and color renderings dated November 16, 2021.

2. The design, materials, and colors of the proposed Folsom Corporate Center apartment and clubhouse buildings shall be consistent with the submitted building elevations, color renderings, materials samples, and color scheme to the satisfaction of the Community Development Department.
3. Brick pavers or another type of colored masonry material (ADA compliant) shall be used to designate pedestrian crosswalks on the project site, in addition to where pedestrian paths cross drive aisles, and shall be incorporated as a design feature at the two primary driveway entrances for Lot 1 and Lot 6 to the satisfaction of the Community Development Department.
4. Roof-mounted mechanical equipment, including satellite dish antennas, shall not extend above the height of the parapet walls. Ground-mounted mechanical equipment shall be shielded by landscaping or trellis type features.
5. Utility equipment such as transformers, electric and gas meters, electrical panels, and junction boxes shall be screened by walls and or landscaping.

These recommendations are included in the conditions of approval (Condition No. 60) presented for consideration by the Planning Commission.

Signage

The proposed project includes placement of three monument signs at strategic locations within the project site. The first monument sign is proposed to be located on a decorative six-foot-tall wall within a landscaped area at the southwest corner of Iron Point Road and private driveway entrance into the Folsom Corporate Center. The second and third monument signs are proposed to be located on decorative six-foot-tall walls at their respective driveway entrances to Lot 1 and Lot 6. In terms of design, the monument signs will include individual letters made of metal with copy reading "Iron Point Apartment Homes". The monument signs, which are six-feet-tall and will include approximately 24 square feet of sign area each, will be indirectly illuminated. Staff has determined that the design of the proposed monument identification signs is complementary to the design of the proposed Folsom Corporate Center Apartments.

The Folsom Municipal Code (FMC, Section, 17.50.040 D) states that monument identification signs are an acceptable form of identification for multi-family residential projects. The Folsom Municipal Code also states that multi-family residential projects are permitted one freestanding sign that is a maximum of six-feet-tall with a maximum sign area of 32 square feet. Through the Planned Development Permit process, the applicant is seeking approval for three monument signs to provide identification for the proposed

project. Staff has determined that three monument signs are appropriate based on a number of factors including lack of direct access to the project site from Iron Point Road, the project having two distinct driveway entrances in different locations, and the large physical scale of the apartment community. Staff recommends that the owner/applicant obtain a sign permit prior to installation of the three monument signs. Condition No. 62 is included to reflect this requirement.

C. Traffic/Access/Circulation

Existing Roadway Network

General access to the Folsom Corporate Center and the project parcels is provided by three existing driveways located on the south side of Iron Point Road. The westerly driveway is restricted to vehicle right-turn in and right-turn out movements only. The central driveway, which is located at the signalized intersection of Iron Point Road and Rowberry Drive, allows all vehicle turning movements. The easterly driveway allows vehicle right-turn in, right-turn out, and left-turn in movements only.

Significant roadways in the project vicinity include Iron Point Road, Oak Avenue Parkway, Broadstone Parkway, and Rowberry Drive. Iron Point Road is an east-west arterial roadway with a raised median that runs from Folsom Boulevard to the eastern city limit along the north side of U.S. Highway 50. Within the vicinity of the project site, Iron Point Road (45 mph posted speed limit) has six lanes, bike lanes, sidewalk, curb, and gutter. Oak Avenue Parkway (45 mph posted speed limit) is a north-south arterial that extends from Willow Creek Drive to Iron Point Road. Oak Avenue Parkway is a four-lane urban arterial road between Willow Creek Drive and Blue Ravine Road, a six-lane urban arterial road between Blue Ravine Road and Riley Street, and a four-lane urban arterial road between Riley Street and Iron Point Road. Broadstone Parkway (45 mph posted speed limit) in the project vicinity is a four-lane east-west arterial, that wraps around the back of the Palladio at Broadstone Shopping Center from Iron Point Road to connect with Empire Ranch Road near the Sacramento-El Dorado County line. Rowberry Drive is a north-south two-lane local road that runs northward from the Kaiser Permanente Medical Offices into neighborhoods to the north of Iron Point Road. A future extension of Rowberry Drive across U.S. Highway 50 and into the Folsom Plan Area is planned for the future.

The traffic, access, and circulation analysis associated with the proposed project is based on the results of a Transportation Impact Study that was prepared in February 2022 by T. Kear Transportation Planning and Management, Inc. The transportation study analyzed traffic operations at the following 17 study intersections in the vicinity of the project site:

- Prairie City Road/U.S Highway 50 Eastbound Ramps
- Prairie City Road/U.S. Highway 50 Westbound Ramps
- Prairie City Road/American Aggregates Road

- Prairie City Road/Iron Point Road
- Iron Point Road /Grover Road
- Iron Point Road /Oak Avenue Parkway
- Iron Point Road /West Kaiser Access Road
- Iron Point Road /Rowberry Way
- Iron Point Road /Safe Credit Union Access
- Iron Point Road /Broadstone Parkway
- Iron Point Road /East Bidwell Street
- East Bidwell Street/U.S. Highway 50 Westbound Ramps
- East Bidwell Street/U.S. Highway 50 Eastbound Ramps
- APN 072-3120-023 "Lot 6" Access
- APN 072-3120-023 "Lot 1" Access
- Oak Avenue Parkway/U.S. Highway 50 Westbound Ramps (2035 Only)
- Oak Avenue Parkway/U.S. Highway 50 Eastbound Ramps (2035 Only)

Six different scenarios were evaluated in reviewing traffic operations at the 17 aforementioned study intersections including; Existing 2021 without Project Condition, Existing 2021 with Project Condition, Existing Plus Approved Projects (EPAP) 2026 without Project Condition, EPAP 2026 with Project Condition, Cumulative 2035 without Project Condition, and Cumulative 2035 with Project Condition.

The proposed Folsom Corporate Center Apartments project is expected to generate a total of 81 vehicle-trips during the weekday AM peak hour and 104 vehicle-trips during the weekday PM peak hour trips. Overall, the proposed project is projected to generate a total of 1,376 daily vehicle trips. Based on the projected volume of project-related vehicle trips, the Transportation Study concluded that the proposed project would not have a significant impact on vehicle level of service (LOS) at any of the 17 study intersections. In addition, the Transportation Study determined that the proposed project would not have a significant impact relative to Vehicle Miles Traveled (VMT).

While the Transportation Study determined that the proposed project would not have any significant impacts on study intersections relative to LOS and VMT, the Study did indicate that the project would result in a queueing deficiency (project would add 1 vehicle to a queue that already exceeds available storage) in the AM Peak Hour for the westbound left-turn lanes at the intersection of Prairie City Road and Iron Point Road under two different study scenarios (Existing 2021 Conditions with Project and EPAP 2026 Conditions with Project). To address this impact and reduce the vehicle queuing caused by the proposed project, the Transportation Study recommends the following measure (Condition No. 51) be implemented:

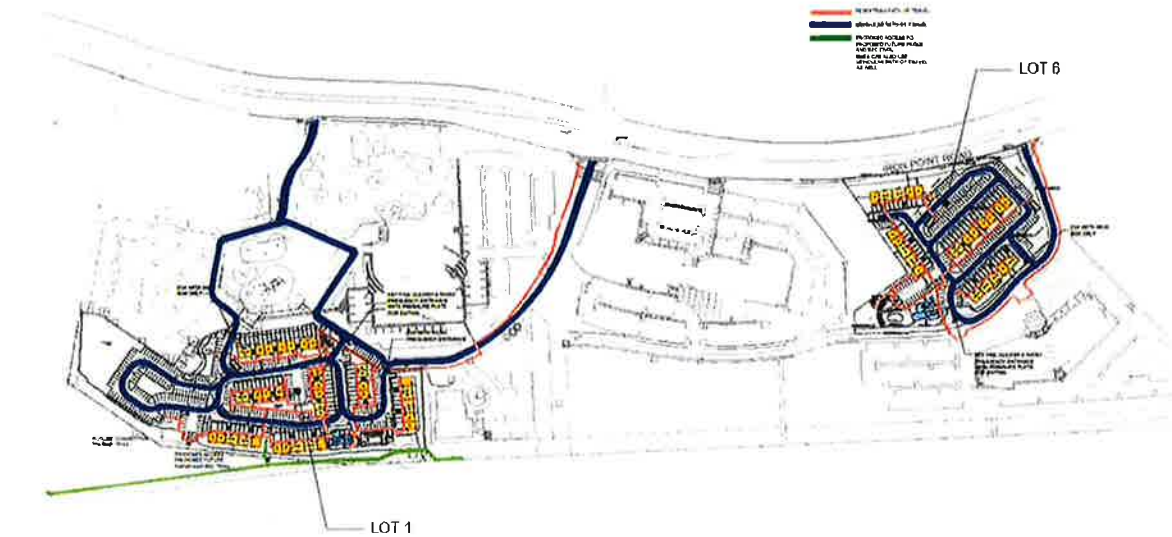

- The owner/applicant shall modify Prairie City Road/ Iron Point Road signal timing plan by shifting 1 second from the eastbound through movement to the westbound left turn movement, reduce the vehicle extension setting from adding five to six additional seconds to the green phase for through movements to adding four

seconds to the green phase for through movements for each vehicle passing the detector after the minimum green phase length has been exceeded. This mitigation measure shall be implemented by the City through the reimbursement agreement with the owner/applicant to cover any City costs. The implementation of this mitigation measure shall occur prior to issuance of the first building permit.

Project Access and On-Site Circulation

As shown on the submitted site plans (Attachments 8 and 9), access to the project area (Folsom Corporate Center) is provided by three existing driveways located on the south side of Iron Point Road. Primary vehicle access to Lot 1 is provided by a new driveway on south side of an existing private ring road with secondary access accommodated by two emergency vehicle access driveways also situated on the south side of the ring road. Primary vehicle access to Lot 6 is provided by a new driveway on the north side of the private ring road with secondary access served by an emergency vehicle access driveway also positioned on the north side of the ring road. Each of the project driveways will accommodate all vehicle turning movements into and out of the respective sites. In addition, all project driveways will have access controlled by a vehicle gate. Internal vehicle circulation is provided by 27-foot-wide drive aisles that accommodate movement in and around the project sites. Pedestrian circulation is provided by a combination of new sidewalks and existing sidewalks located along the private ring road and also along Iron Point Road. Internal pedestrian circulation is accommodated by a series of new pedestrian pathways that provide connectivity to the apartment buildings, the clubhouse building, and the perimeter sidewalks. Access and circulation exhibits for the proposed project are shown in the figures on the following pages.

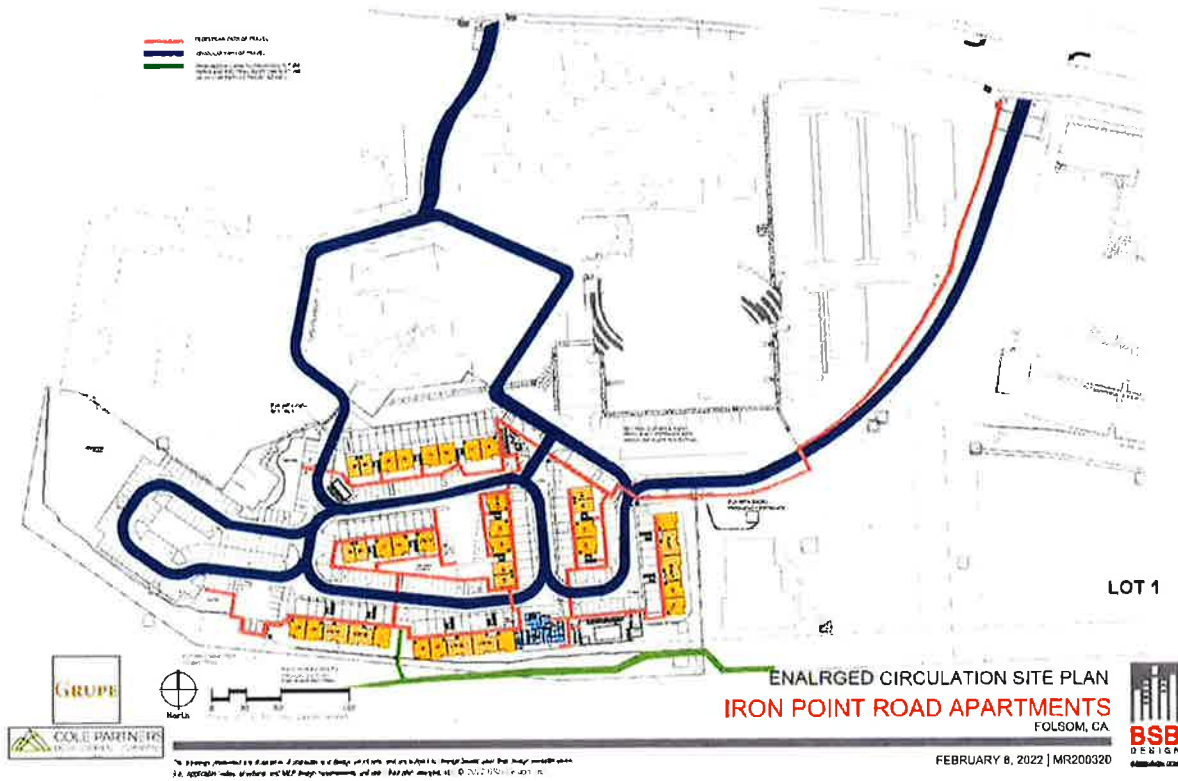

FIGURE 13: OVERALL ACCESS AND CIRCULATION EXHIBIT

- Red Line: Pedestrian Access**

The Transportation Impact Study prepared for the proposed project evaluated the internal operation and configuration of the project access system in terms of right-turn deceleration lanes and tapers for driveways, minimum required driveway throat depth, emergency vehicle access, and entry gate queuing. As referenced previously within this report, the project parcels are accessed via private roadways within the Folsom Corporate Center. Access to City streets (Iron Point Road) is not being modified by the proposed project, thus the City's requirements for right-turn tapers and deceleration lanes are not applicable. Additionally, the Study determined that vehicle speeds and volumes within the Folsom Corporate Center's internal roadway network do not create a safety issue that would necessitate right-turn tapers and deceleration lanes at either of the internal project driveways.

As noted earlier, access to the two project parcels is provided by an existing private roadway network within the Folsom Corporate Center. As a result, the City's minimum required throat depth is not applicable. That being said, the Study determined that the design and throat depth of each of the proposed project driveways was acceptable and

would function appropriately. In terms of emergency vehicle access, there are three gated emergency vehicle access driveways proposed to serve the proposed project. In addition, the project's internal drive isles have 25-foot inner/50-foot outer minimum turning radii to accommodate all fire and police department access. Based on this information, the Study determined that adequate emergency vehicle access is being provided for the project.

Primary vehicle access to Lot 1 is provided by a new driveway on south side of an existing private ring road and primary vehicle access to Lot 6 is provided by a new driveway on the north side of the private ring road. Both of these project driveways will have access controlled by a vehicle gate. As shown on the submitted Individual Site Plans and Details (Attachment 9), the two project driveways have been designed to accommodate queuing of up to three vehicles for entry into the respective sites. The Study determined that the design of the two project driveways provides adequate queuing space for vehicles entering the project sites.

To ensure implementation of the traffic control and pedestrian circulation measures identified on the submitted site plans, staff recommends the following recommendations be included as conditions of approval for the project (Condition No. 52):

- A "stop" sign and appropriate pavement markings shall be installed at the internal approach to the private ring road at the two primary project driveways.
- The vehicle entry gates at the two primary project driveway locations shall open inward, away from the private ring road or retract sideways. In addition, the design of the vehicle entry gates and the vehicle entry gate area shall conform to all requirements established by the City of Folsom for gated multi-family residential developments.
- If vehicles are observed backing up into the private ring road at either of the two gated primary project entries, City staff will evaluate and require appropriate measures to alleviate the traffic congestion including but not limited to requiring the two project entry gates to remain open during the AM (7:00 a.m. to 9:00 a.m.) and PM (4:00 p.m. to 6:00 p.m.) peak hours on weekdays.
- Residents of the Folsom Corporate Center Apartments project shall be issued remote transmitters to allow them to open the entry gates without needing to stop to enter a code in the keypad at either entrance location.
- The owner/applicant shall provide at least one pedestrian connection from Lot 1 to the southern property boundary to allow for a connection to the future Class I bicycle trail expected to be located within the 50-foot-wide landscape easement between the project site and U.S. Highway 50.

Traffic Safety Committee

The proposed project was reviewed by the Traffic Safety Committee at its January 27, 2022 meeting. Upon a thorough review of the project's Site Plan and Access and Circulation Plan, the Committee made two recommendations relative to vehicle circulation and pedestrian circulation. With respect to vehicle circulation, the Committee recommended that the applicant evaluate implementing a traffic or right-of-way control solution (round-a-bout, stop-sign control, etc.) in the vicinity of the Lot 1 primary driveway and the two driveways across the private road on the Kaiser Permanente Medical Campus site due to the odd angles and configuration of this intersection. With regard to pedestrian circulation, the Committee recommended that the applicant evaluate providing improved pedestrian access between Lot 1 and Iron Point Road in the vicinity of the westernmost Kaiser Permanente project driveway.

Subsequent to the Traffic Safety Committee meeting, City staff met with the project applicant and the traffic consultant to discuss the two recommendations of the Committee. In relation to providing a traffic control solution near the primary entrance to Lot 1, the traffic consultant indicated that the volume of traffic at this location does not warrant the installation of a traffic control solution. In addition, it was determined that installation of any type of traffic control feature at this location would require off-site improvements on property that owned by the applicant. Based on this feedback, staff has determined that construction of traffic control feature near the Lot 1 driveway entrance is not necessary nor feasible.

In reviewing the possibility of providing improved pedestrian access between Lot 1 and Iron Point Road, City staff identified numerous challenges. Specifically, the construction of pedestrian pathway from Lot 1 to Iron Point Road near the westernmost Kaiser Permanente driveway would require a significant number of off-site improvements on property owned by Kaiser Permanente, not the applicant. In addition, construction of pedestrian walkways in this area would be extremely difficult due to the severe change in grade between Lot 1 and Iron Point Road. Lastly, the construction of a pedestrian walkway in this area would like required encroachment into a number of open space parcels containing Oak trees and sensitive habitat. Based on these factors, staff has determined that construction of new pedestrian pathways between Lot 1 and Iron Point Road is not feasible. Of note, Lot 1 in conjunction with the Dialysis Clinic (which is currently under construction) will construct additional sidewalk that would allow for pedestrian access to Iron Point along Rowberry and the eastern edge of the Kaiser Permanente property.

D. Parking

The Folsom Municipal Code (Section 17.18.110 Parking) requires 1.5 parking spaces per unit for multi-family structures and complexes located within the R-4 (General Apartment Zoning District) zoning district. The Design Guidelines for Multi-Family Development require that multi-family apartment developments provide 1.5 parking spaces for studio

and one-bedroom units, 1.75 parking spaces for two-bedroom units, 2.0 parking spaces for three-bedroom units, and 1 guest parking space for every 5 apartment units.

As noted in the Project Description, the proposed project includes a total of 253 apartment units including 16 studio units, 126 one-bedroom units, 97 two-bedroom units, and 14 three-bedroom units. As shown and described on the submitted site plan, the proposed project provides a total of 491 parking spaces including 120 integrated garage parking spaces, 133 carport covered parking spaces, and 238 uncovered surface parking spaces. Based on this parking information, Staff has determined that the proposed project meets the parking requirements established by the Folsom Municipal Code by providing 491 parking spaces whereas 379 parking spaces are required. In addition, staff has determined that the proposed project meets the parking recommendations of the Design Guidelines by providing 491 parking spaces whereas 462 parking spaces are recommended.

The Folsom Municipal Code (FMC, Section 17.57.090) requires multi-family residential developments to provide one bicycle parking space for every five dwelling units. The proposed project features 55 bicycle parking spaces including 31 bicycle storage room in the Lot 6 clubhouse building, 20 bicycle parking spaces in bicycle storage room in the Lot 1 clubhouse building, and 4 additional bicycle parking distributed throughout both project parcels. In addition to the dedicated bicycle storage facilities, bicycle parking opportunities are provided in each of the 120 integrated garages on the project site. Staff has determined that the proposed project meets the bicycle parking requirements established by the Folsom Municipal Code (FMC, Section 17.57.090) by providing 55 bicycle parking spaces whereas 51 bicycle parking spaces are required.

E. Noise Impacts

Based on the proximity of the project site to U.S. Highway 50, Iron Point Road, and existing commercial land uses within the immediate project vicinity, acoustical measurements and modeling were preliminarily prepared by Bollard Acoustical on May 3, 2021 and bolstered by Helix Environmental Planning on February 23, 2022 to analyze potential noise impacts at the proposed Folsom Corporate Center Apartments project site. The purpose of the noise analysis was to quantify existing noise levels associated with traffic on U.S. Highway 50 and Iron Point Road, and to compare those noise levels against the applicable City of Folsom noise standards for acceptable noise exposure at the project site. In addition, noise generated by the proposed project including construction activities, on-site parking/circulation, and mechanical equipment noise, was also evaluated in the noise analysis.

Two aspects of noise impacts were evaluated relative to the proposed apartment project, noise directed at the proposed project, and noise caused by the proposed project. As noted previously, the predominant existing noise sources in the project vicinity that cause

an impact to the project site are from vehicles traveling on U.S. Highway 50 and Iron Point Road, as well as background noises from adjacent nearby commercial land uses. Potential noise impacts that might result from development of the Folsom Corporate Center Apartments project community are construction-related activities and operational activities. Construction-related noise would have a short-term effect, while operational noise would continue throughout the lifetime of the project.

The Noise Element of the City of Folsom General Plan regulates noise emissions from public roadway traffic on new development of residential or other noise sensitive land uses. The Noise Element states that noise from traffic on public roadways shall not exceed 65 CNEL for outdoor use areas and 45 CNEL for interior use areas. To evaluate such potential noise impacts to the proposed project, Bollard Acoustical conducted ambient noise measurements to calibrate the predictive noise modeling program that estimates noise levels based on estimated future traffic noise affecting the project site.

As stated above, a significant direct noise impact would occur if traffic-related noise levels exceed 65 CNEL at the proposed project's designated outdoor use areas (outdoor pool/amenity areas). The noise modeling program determined that the outdoor noise level at the clubhouse area on Lot 1 would be 65 CNEL, while the outdoor noise level at the clubhouse area on Lot 6 would be 63 CNEL. Based on these projected noise levels at the project two exterior use areas, staff has determined that the proposed project would comply with the City's exterior noise threshold.

As referenced above, a significant direct noise impact would also occur if the project's interior use areas would be exposed to noise levels greater than 45 CNEL from roadway traffic. A 45 CNEL interior limit would be achieved if exterior locations are exposed to a noise level of 60 CNEL or less, based on a typical attenuation of 15-20 dB by standard residential building construction. The noise modeling program determined that three buildings on Lot 1 (Buildings 1, 2, and 7) and two buildings on Lot 6 (Buildings 2 and 5) would potentially exceed the City's interior noise level standard of 45 CNEL. To reduce these potential noise impacts to a less than significant level and comply with the City's interior noise level standards, staff recommends that the following measures be implemented (Condition No. 56).

- For habitable areas (both living rooms and bedrooms) with a direct line-of-sight to U.S. Highway 50 for Lot 1 and Iron Point Road for Lot 6, the following measures shall be incorporated in the design of the project to reduce interior noise levels to 45 CNEL or less:
 - Lot 1 (Buildings 1 and 2) and Lot 6 (Building 2) – Minimum exterior wall requirement of STC 46.
 - Lot 1 (Buildings 1 and 2) and Lot 6 (Building 2) – Minimum window and glass sliding door requirement of STC 35.

- Lot 1 (Building 7) and Lot 6 (Building 5) – Minimum window and glass sliding door requirement of STC 28.
- The building design shall include a mechanical ventilation system that meets the criteria of the International Building Code (Chapter 12, §1203.3 of the 2013 California Building Code) to ensure that windows would be able to remain permanently closed.

Construction of the Folsom Corporate Center Apartments project would temporarily increase noise levels in the project vicinity during the construction period, which would take approximately 20 to 26 months. Construction activities, including site clearing, excavation, grading, building construction, and paving, would be considered an intermittent noise impact throughout the construction period of the project. The City's Noise Ordinance excludes construction activities from meeting the General Plan Noise Element standards, provided that all phases of construction are limited to the hours between 7:00 a.m. and 6:00 p.m. on weekdays, and between 8:00 a.m. and 5:00 p.m. on Saturdays. To ensure compliance with the City's Noise Control Ordinance and General Plan Noise Element, staff recommends that hours of construction operation be limited from 7:00 a.m. to 6:00 p.m. on weekdays and 8:00 a.m. to 5:00 p.m. on Saturdays with no construction permitted on Sundays or holidays. In addition, staff recommends that construction equipment be muffled and shrouded to minimize noise levels. Condition No. 55 is included to reflect these requirements.

Operational noises generated by the proposed project include sounds associated with new vehicle trips, vehicle parking, and mechanical equipment associated with the apartment project. Persons and activities potentially sensitive to noise in the project vicinity include residents within the Broadstone Unit No. 2 Subdivision (150 feet north across Iron Point Road) across Iron Point Road to the north of the project site, residents within the Sherwood Apartments (approximately 450 northeast of the project site across Iron Point Road), and residents of the Revel Senior Living Apartments (approximately 500 feet to the west). Due to the limited volume of project-generated vehicle trips (81 weekday AM peak hour trips and 104 weekday PM peak hour trips), vehicle noise exposure would increase only slightly as compared to existing conditions in the project vicinity. Based on the significant distance and buffers between the project site and the nearby residential land uses, staff has determined that potential noise impacts relative to these operational noise sources will not be significant.

F. Walls/Fencing

The proposed project includes the construction of retaining walls and fencing. As shown on the submitted Grading and Drainage Plans (Attachment 11), retaining walls that predominantly range from 1-8 feet in height, with a maximum height of 15 ft at Lot 6 at the northeast corner. The walls are proposed to be constructed in various locations on Lot 1 and Lot 6 due to substantial changes in elevation on the sites. As shown the submitted Landscape Plan and Details (Attachment 12), decorative six-foot-tall metal

open view fencing is proposed to be placed around the perimeter of Lots 1 and 6. In addition to the perimeter fencing, vehicle gates and pedestrian gates are also proposed at various locations on the Lots 1 and 6. Staff recommends that the final location, design, height, materials, and colors of the retaining walls, fences, and gates be subject to review and approval by the Community Development Department. Condition No. 59 is included to reflect this requirement.

G. Site Lighting

As shown on the Preliminary Lighting Plan (Attachment 14), the applicant is proposing to use a combination of pole-mounted parking lot lighting, carport lighting, building-attached lighting, and bollard lights along the walkways on the project site. All lighting would be designed to minimize light/glare impacts to the adjacent properties by ensuring that all exterior lighting is shielded and directed downward. Staff recommends that the final exterior building and site lighting plans be submitted for review and approval by Community Development Department for location, height, aesthetics, level of illumination, glare and trespass prior to the issuance of any building permits. In addition, staff recommends all lighting is designed to be shielded and directed downward onto the project site and away from adjacent properties and public rights-of-way. Condition No. 23 is included to reflect these requirements.

H. Trash/Recycling

The proposed project includes three trash/recycling enclosures to manage trash, recycling, and organics associated with the apartment community. Lot 1 includes one trash/recycling enclosure and one trash compactor, while Lot 6 includes two trash/recycling enclosures. The proposed trash/recycling enclosures, which are constructed of textured concrete masonry blocks with a decorative trim cap, feature metal gates to control access. Staff recommends that the final location, design, materials, and colors of the trash/recycling enclosures be subject to review and approval by the Community Development Department. Condition No. 58 is included to reflect these requirements.

I. Existing and Proposed Landscaping

Lot 1, which is largely undisturbed, is predominantly comprised of non-native annual grassland with a single Oak tree situated in the southeast corner of the site. Lot 1 does include small parking lot area with associated landscaping in the northwest corner of the project site. This small parking lot and landscaped area, which is associated with the adjacent Kaiser Permanente Medical Office Complex, is proposed to remain in place. A 50-foot-wide landscape easement, which is located between the southern boundary of Lot 1 and U.S. Highway 50, is steeply sloped and contains non-native grasses. Lot 6, which has been greatly disturbed by prior grading and stockpiling activities, features non-native grasses with a small stand of Oak trees located in the southwest corner of the site.

A 20-foot-wide landscape easement, which is located within the northern portion of Lot 6 adjacent to Iron Point Road, features a rockery retaining wall and sidewalk with minimal landscaping and non-native grasses.

As shown on the Preliminary Landscape Plans (Attachment 12), the applicant is proposing to install landscaping that features California-native and low water-use trees, shrubs, and groundcover selections intended to comply with the requirements of the Model Water Efficiency Landscape Ordinance (MWELo). Proposed landscape improvements include a variety of drought-tolerant trees, shrubs, and groundcover. Among the proposed trees are; Chinese Pistache, Coast Live Oak, Dwarf Strawberry Tree, Interior Live Oak, Red Crape Myrtle, Redpointe Maple, Sweet Bay, and Swan Hill Olive. Proposed shrubs and groundcover include; Australian Bluebell Creeper, Autumn Sage, Deer Grass, Dwarf Bottlebrush, Dwarf Hawthorne, Heavenly Bamboo, Manzanita, Red Fountain Grass, and Biofiltration Sod. The preliminary landscape plan meets the CALgreen and City shade requirement by providing 50 percent shade in the parking lot area within fifteen years. Staff recommends that the final landscape plans be reviewed and approved by the Community Development Department. Condition No. 36 is included to reflect this requirement.

Oak Tree Preservation and Removal

Chapter 12.16 of the Folsom Municipal Code, the Tree Preservation Ordinance, regulates the cutting or modification of trees, including oaks and specified other trees; requires a Tree Permit prior to cutting or modification; and establishes mitigation requirements for cut or damaged trees. The Tree Preservation Ordinance establishes policies, regulations, and standards necessary to ensure that the City will continue to preserve and maintain its "urban forests".

An Arborist Report and Arborist Inventory prepared for the proposed project found that the project parcels contain a total of 11 protected native oak trees (oak trees measuring six inches in diameter or larger) including nine Blue Oaks and two Valley Oaks. Of the 11 oak trees mentioned above, one Blue Oak tree located on Lot 6 is recommended for removal due to compromised health and structural defects. The remaining ten native Oak trees, which are located on Lot 6, are identified as being in fair to good condition by the Arborist Report.

As shown on the submitted Landscape Plan, the applicant is proposing to preserve three Oak trees on the project site including a 41" diameter Blue Oak tree (Heritage Tree) on Lot 1 and two Blue Oak trees (30" and 26" in diameter respectively) on Lot 6. The remaining eight oak trees on the project site (southwest corner of Lot 6) are proposed to be removed to allow for development of the proposed project. To offset the loss of the protected native oak trees, the applicant is proposing to plant 35 Mitigation Oak trees (Coast Live Oak and Interior Live Oak) in appropriate locations (through consultation with the City Arborist) on the project site and to pay in-lieu fees for any outstanding Oak tree

mitigation that is required. To mitigate the impact to the protected native Oak trees, staff recommends that the following measures be implemented (Condition No. 37) in accordance with requirements of the Tree Preservation Ordinance:

- A Tree Permit Application containing an Application Form, Tree Protection and Mitigation Plan, and Arborist Report shall be submitted to the City of Folsom by the owner/applicant for issuance of a Tree Work Permit and Tree Removal Permit prior to commencement of any grading or site improvement activities. The tree protection and mitigation plan shall be prepared in collaboration with a qualified arborist and shall be subject to review and approval by the City. The tree protection and mitigation plan shall contain the contact information of the project arborist and shall be included in all associated plan sets for the project.
- Removal of any protected tree shall be mitigated by planting replacement trees and/or payment of "In-Lieu" fees on a diameter inch basis in accordance with FMC, Section 12.16.150. The proposed method of mitigation shall be subject to review and approval by the City.
- Prior to starting construction, oak trees to be preserved shall be fenced with high visibility fencing consistent with the city-approved tree protection and mitigation plan. Parking of vehicles, equipment, or storage of materials is prohibited within the Tree Protection Zone of Protected Trees at all times. Signs shall be posted on exclusion fencing stating that the enclosed trees are to be preserved. Signs shall state the penalty for damage to, or removal of, the protected tree.
- The owner/applicant shall retain the services of a project arborist for the duration of the development project to monitor the health of oak trees to be preserved and carry out the City-approved tree protection plan. All regulated activity conducted within the Critical Root Zone of protected trees, as that term is defined in Folsom Municipal Code (FMC) 12.16.020, shall be performed under the direct supervision of the project arborist. A copy of the executed contract for these arboricultural services shall be submitted to the City prior to the issuance of any tree or grading permits
- Certification letters by the project arborist attesting compliance with the tree protection and mitigation plan and tree permit conditions shall be submitted to the City at the following stages of the project:
- The owner/applicant shall plant 35 Mitigation Oak Trees on the project site in the locations as shown on the Preliminary Landscape Plans. The final number, location, and type of Mitigation Oak Trees shall be subject to review and approval by the Community Development Department. The owner/applicant shall pay in-lieu fees for any outstanding required Oak Tree Mitigation that is not satisfied through planting of Mitigation Oak Trees.

J. Conformance with Relevant General Plan Goals and Policies

The City of Folsom General Plan (2035) outlines a number of goals, policies, and implementation programs designed to guide the physical, economic, and environmental growth of the City. Staff has determined that the proposed project is consistent with the General Plan goals and policies as outlined and discussed below:

APPLICABLE GENERAL PLAN GOALS AND POLICIES

GP GOAL LU 1.1 (Land Use/Growth and Change)

Retain and enhance Folsom's quality of life, unique identity, and sense of community while continuing to grow and change.

GP POLICY LU 1.1.12-1 (Infill Development)

Respect the local context: New development should improve the character and connectivity of the neighborhood in which it occurs. Physical design should respond to the scale and features of the surrounding community, while improving critical elements such as transparency and permeability.

The proposed project is consistent with this policy in that the project features significant site and design improvements which will enhance the overall character of the area including introducing new market rate apartment units with a contemporary modern residential design intended to complement the architecture and design of existing residential and commercial buildings in the project vicinity.

GP POLICY LU 1.1.15 (SACOG Blueprint Principles)

Strive to adhere to the Sacramento Regional Blueprint Growth Principles.

The proposed project is consistent with this policy in that the project has been designed to adhere to the primary SACOG Blueprint Principles including Compact Development, Housing Choice and Diversity, Use of Existing Assets, and Quality Design. Compact Development involves creating environments that are more compactly built and use space in an efficient but attractive manner to encourage more walking, biking, and transit use and shorter auto trips. Housing Choice and Diversity includes providing a variety of places where people can live (apartments, townhomes, condominiums, and single-family detached homes) and also creating opportunities for the variety of people who need them such as families, singles, seniors, and people with special needs. Use of Existing Assets entails intensification of the existing use or redevelopment in order to make better use of existing public infrastructure, including roads. Quality Design focuses on the design details of any land development (such as relationship to the street, placement of buildings, sidewalks, street widths, landscaping, etc.), which are all factors that influence the attractiveness of living in a compact development and facilitate the ease of walking within and in and out of a community.

APPLICABLE GENERAL PLAN GOALS AND POLICIES

GP GOAL LU 6.1 (Residential Neighborhoods)

Allow for a variety of housing types and mix of uses that provide choices for Folsom residents, create complete and livable neighborhoods, and encourage walking and biking.

GP POLICY LU 6.1.3 (Efficiency through Density)

Support an overall increase in average residential densities in identified urban centers and mixed-use districts. Encourage new housing types to shift from lower-density, large-lot developments to higher-density, small-lot and multifamily developments, as a means to increase energy efficiency, conserve water, reduce waste, as well as increase access to services and amenities (e.g., open space) through an emphasis on mixed uses in these higher-density developments.

The proposed project is consistent with this policy in that the project is a new market-rate multi-family residential project developed at a residential density of 21.2 units per acre. Its location within Folsom Corporate Center and proximity to the Folsom Gateway retail center will create a compact/horizontal mixed-use development. The proposed project design will be consistent with California Green Building Standards Code (CALGreen), and the residential units are being designed to be all-electric, and the project intends to participate the SMUD SolarShares program. In addition, the proposed project includes electric vehicle charging stations, and will meet or exceed the percentage of electric vehicle capable parking spaces per CALGreen code.

GP GOAL M 4.1 (Vehicle Traffic and Parking)

Ensure a safe and efficient network of streets for cars and trucks, as well as provide an adequate supply of vehicle parking.

GP POLICY M 4.1.3 (Level of Service)

Strive to achieve a least traffic Level of Service "D" (or better) for local streets and roadways throughout the City. In designing transportation improvements, the City will prioritize use of smart technologies and innovative solutions that maximize efficiencies and safety while minimizing the physical footprint. During the course of Plan buildout, it may occur that temporarily higher Levels of Service result where roadway improvements have not been adequately phased as development proceeds. However, this situation will be minimized based on annual traffic studies and monitoring programs. Staff will report to the City Council at regular intervals via the Capital improvement Program process for the Council to prioritize projects integral to achieving Level of Service D or better.

The proposed project is consistent with this policy in that the project will not result in a change in the level of service (LOS) at any of the 17 study intersections. In addition, the proposed project is anticipated to generate less than 82% of the regional per capita Vehicle Miles Traveled (VMT), consistent with new State Law that took effect July 1, 2020 (SB 743).

GP GOAL M 4.2 (Vehicle Traffic and Parking)

Provide and manage a balanced approach to parking that meets economic development and sustainability goals.

GP POLICY M 4.2.4 (Electric Vehicle Charging Stations)

Encourage the installation of electric vehicle charging stations in parking spaces throughout the city, prioritizing installations at multi-family residential units.

The proposed project is consistent with this policy in that the project includes five electric vehicle charging stations to serve electric vehicles of residents and guests. In addition, the applicant has committed to having at least 10 percent of parking spaces be EV Capable. The number of proposed electric vehicle charging stations (5) and percentage of EV Capable parking spaces is consistent with the California Green Buildings Standards Code's provisions (10 percent of all parking spaces) required to be EV Capable) for multi-family residential development.

GP GOAL H-2 (Removing Barriers to the Production of Housing)

To minimize governmental constraints on the development of housing for households of all income levels.

GP POLICY H 2.7

The City shall educate the community on the needs, the realities and the benefits of affordable and high-density housing.

The proposed project is consistent with this policy in that the project will result in development of a high-density market-rate apartment community on parcels that are not currently zoned for multi-family high density residential development.

K. Native American Consultation (SB 18/AB52)

Senate Bill (SB) 18 was signed into law in September 2004 and became effective in March 2005. SB 18 requires city and county governments to consult with California Native American tribes early in the planning process with the intent of protecting traditional tribal cultural places. In accordance with Government Code 65352.3(a)(2), the City sent project notifications to each of listed tribes on October 26, 2021 and afforded them 90 days to respond and request consultation. The City received a response from one tribe (UAIC-United Auburn Indian Community) who expressed a desire to consult regarding the proposed project. During the consultation process, the City provided UAIC with a Cultural Resources Assessment document that indicated there are no known Tribal Cultural Resources present on the project site. Subsequently, UAIC submitted information to the City that stated that heritage trees, in general, are an important Tribal Cultural Resource. The City responded to UAIC that there is one Heritage Oak Tree on the project site (41" diameter Oak tree on Lot 1) that is intended to be preserved. City staff also responded to UAIC that a mitigation measure (Condition No. 39) will be placed on the project to protect any unanticipated discovery of Tribal Cultural Resources on the project site.

On March 9, 2022, and in accordance with Government Code §65352(a)(11), the City mailed the 45-day referral notices to the listed tribes. No tribes provided comment within that timeframe. The City will mail specific details of the pending City Council public hearing to listed tribes at least 10 days in advance of the meeting, in accordance with Government Code §65092. In summary, the City has assumed and concluded consultation responsibilities in accordance with the *Tribal Consultation Guidelines: Supplement to General Plan Guidelines* (November 14, 2005) published by the Governor's Office of Planning and Research.

Assembly Bill (AB 52), which was signed into law in July 2015, requires City or County Governments to consult with California Native American Tribes in order to identify Tribal Cultural Resources that may be significantly impacted by development projects and to avoid or mitigate those impacts. On September 21, 2021, the City sent project notification letters to the three California Native American tribes named on the City's AB 52 contact list, with the United Auburn Indian Community (UAIC) being the only tribe to respond. The City subsequently initiated consultation with UAIC concurrently with respect to AB 52 and SB 18 as the issues raised by UAIC under these two sets of State regulations were identical. On February 4, 2022, the City concluded the consultation with UAIC with the acknowledgement that measures would be included with the project to ensure protection of the Heritage Oak Tree on Lot 1 and the protection of previously unknown Tribal Cultural Resources on the project site during construction activities.

ENVIRONMENTAL REVIEW

Staff has prepared an Initial Study, Mitigated Negative Declaration, and Mitigation Monitoring and Reporting Program (Attachment 23) for the project in accordance with the California Environmental Quality Act (CEQA) and associated regulations and determined that with the proposed mitigations, the project will not have a significant effect on the environment. The Mitigated Negative Declaration has been prepared and noticed for public comment, and mitigation measures have been included as Conditions of Approval. To date, one written comment has been received from the public during the Mitigated Negative Declaration public review period (March 8, 2022 to April 6, 2022).

On March 24, 2022, the Sacramento Metropolitan Air Quality Management District (SMAQMD) submitted a response letter (Attachment 23) regarding the Initial Study and Mitigated Negative Declaration that was prepared for the proposed project. In the response letter, SMAQMD recommends that additional measures be implemented to protect residents from exposure to toxic air contaminant emissions produced by vehicles traveling on U.S. Highway 50. Specifically, SMAQMD recommends that a continuous landscape buffer or dense landscape plantings be provided along the southern, western, and eastern edges of the project site consistent with the Air District's *Landscaping Guidance for Improving Air Quality Near Roadways*. As shown on the submitted Preliminary Landscaped Plans (Attachment 12), the project includes a robust amount of landscaping along the perimeter of the site (Lot 1) adjacent to U.S. Highway

50. However, to further reduce residents' exposure to air contaminant emissions, staff recommends additional landscape plantings be provided where feasible along the southern, western, and eastern perimeter of Lot 1 to the satisfaction of the Community Development Department. Condition No. 45 is included to reflect this requirement. It is important to note that each of the apartment buildings will have a mechanical ventilation system that accommodates air filters with a minimum efficiency rating to reduce residents' exposure to air contaminant emissions.

In their letter, SMAQMD also recommends that the proposed project consider implementing additional energy related measures to help reduce the urban heat island effect. Specifically, SMAQMD recommends that certified cool roofs be installed on all of the apartment buildings and that solar photovoltaic shade structures be placed over the parking spaces in the area under the overhead power lines in the western portion of Lot 1. The applicant has indicated that they will be installing certified cool roofs on all of the apartment buildings consistent with CALgreen code requirements. Unfortunately, the placement of solar photovoltaic shade structures over parking spaces in the power line easement area is not feasible due to the fact that these types of structures are permitted by the responsible utility agencies (PG&E and SMUD). However, it is important to reiterate that the applicant intends to participate the SMUD SolarShares program

RECOMMENDATION/PLANNING COMMISSION ACTION

City staff recommends that the Planning Commission recommend City Council approval of this project, subject to the findings and conditions of approval attached to this report.

PLANNING COMMISSION ACTION:

- Adopt the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program prepared for the Folsom Corporate Center Apartments project (PN 21-120) per Attachment 23; and
- Approve a General Plan Amendment to change the General Plan land use designation for Lot 1 (APN No. 072-3120-023) and Lot 6 (APN No. 072-3120-023) from IND (Industrial/Office Park) to MHD (Multi-Family High Density); and
- Approve a Rezone to change the zoning designation for Lot 1 (APN No. 072-3120-026) from M-L PD (Limited Manufacturing, Planned Development District) to R-4 PD (General Apartment, Planned Development District) and to change the zoning designation of Lot 6 (APN No. 072-3120-023) from BP PD (Business and Professional, Planned Development District) to R-4 PD (General Apartment, Planned Development District); and
- Approve a Planned Development Permit to establish detailed development and architectural standards for the 253-unit Folsom Corporate Center Apartments project.

These recommended approvals are subject to the proposed findings below (Findings A-U) and the conditions of approval (Conditions 1-69) attached to this report.

GENERAL FINDINGS

- A. NOTICE OF HEARING HAS BEEN GIVEN AT THE TIME AND IN THE MANNER REQUIRED BY STATE LAW AND CITY CODE.
- B. THE PROJECT IS CONSISTENT WITH THE GENERAL PLAN, THE ZONING CODE OF THE CITY, AND THE FOLSOM CORPORATE CENTER PLANNED DEVELOPMENT GUIDELINES AS AMENDED.

CEQA FINDINGS

- C. A MITIGATED NEGATIVE DECLARATION HAS BEEN PREPARED FOR THE PROJECT IN ACCORDANCE WITH CEQA.
- D. THE PLANNING COMMISSION HAS CONSIDERED THE PROPOSED MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM BEFORE MAKING A DECISION REGARDING THE PROJECT.
- E. ON THE BASIS OF THE WHOLE RECORD BEFORE THE PLANNING COMMISSION, THERE IS NO SUBSTANTIAL EVIDENCE THAT THE PROJECT, AS CONDITIONED, WILL HAVE A SIGNIFICANT EFFECT ON THE ENVIRONMENT.
- F. THE MITIGATED NEGATIVE DECLARATION REFLECTS THE INDEPENDENT JUDGMENT AND ANALYSIS OF THE CITY OF FOLSOM.
- G. THE MITIGATED NEGATIVE DECLARATION HAS DETERMINED THAT THE PROPOSED PROJECT, AS CONDITIONED AND CONSISTENT WITH THE REQUIRED MITIGATION MONITORING AND REPORTING PROGRAM, WOULD NOT HAVE A SIGNIFICANT EFFECT ON THE ENVIRONMENT WITH MITIGATION MEASURES.
- H. THE LOCATION AND CUSTODIAN OF THE DOCUMENTS WHICH CONSTITUTE THE RECORD OF PROCEEDINGS UPON WHICH THE DECISION IS BASED ARE: CITY OF FOLSOM COMMUNITY DEVELOPMENT DEPARTMENT, 50 NATOMA STREET, FOLSOM, CA 95630.

GENERAL PLAN AMENDMENT FINDINGS

- I. THE PROPOSED GENERAL PLAN AMENDMENT IS CONSISTENT WITH THE GOALS, POLICIES AND OBJECTIVES OF THE CITY OF FOLSOM GENERAL PLAN
- J. THE PROPOSED GENERAL PLAN AMENDMENT IS CONSISTENT WITH THE OBJECTIVES OF THE LAND USE ELEMENT OF THE CITY'S GENERAL PLAN AND DEVELOPMENT POLICIES.
- K. THE PROPOSED GENERAL PLAN AMENDMENT WILL NOT RESULT IN A NET LOSS OF RESIDENTIAL CAPACITY.
- L. THE PROPOSED GENERAL PLAN AMENDMENT IS IN THE PUBLIC INTEREST.
- M. PURSUANT TO GOVERNMENT CODE SECTION 65352.3, THE CITY CONTACTED ALL CALIFORNIA NATIVE AMERICAN TRIBES ON THE CONTACT LIST MAINTAINED BY THE NATIVE AMERICAN HERITAGE COMMISSION IN ASSOCIATION WITH THIS PROJECT. THE CITY RECEIVED ONE REQUEST FOR CONSULTATION FROM A NATIVE AMERICAN TRIBE, INITIATED CONSULTATION, AND SUBSEQUENTLY CONCLUDED CONSULTATION ON FEBRUARY 4, 2022

REZONE FINDING

- N. THE PROJECT IS CONSISTENT WITH THE CITY'S GENERAL PLAN, THE FOLSOM MUNICIPAL CODE, AND THE FOLSOM CORPORATE CENTER PLANNED DEVELOPMENT GUIDELINES AS AMENDED.

PLANNED DEVELOPMENT PERMIT FINDINGS

- O. THE PROPOSED PROJECT COMPLIES WITH THE INTENT AND PURPOSES OF CHAPTER 17.38 (PLANNED DEVELOPMENT DISTRICT) OF THE FOLSOM MUNICIPAL CODE AND OTHER APPLICABLE ORDINANCES OF THE CITY.
- P. THE PROPOSED PROJECT IS CONSISTENT WITH THE OBJECTIVES, POLICIES AND REQUIREMENTS OF THE DEVELOPMENT STANDARDS OF THE CITY.
- Q. THE PHYSICAL, FUNCTIONAL AND VISUAL COMPATIBILITY BETWEEN THE PROPOSED PROJECT AND EXISTING AND FUTURE ADJACENT USES AND AREA CHARACTERISTICS IS ACCEPTABLE.

- R. THERE ARE AVAILABLE PUBLIC FACILITIES, INCLUDING BUT NOT LIMITED TO, WATER, SEWER AND DRAINAGE TO ALLOW FOR THE DEVELOPMENT OF THE PROJECT SITE IN A MANNER CONSISTENT WITH THIS PROPOSAL.
- S. THE PROPOSED PROJECT WILL NOT CAUSE UNACCEPTABLE VEHICULAR TRAFFIC LEVELS ON SURROUNDING ROADWAYS, AND THE PROPOSED PROJECT WILL PROVIDE ADEQUATE INTERNAL CIRCULATION.
- T. THE PROPOSED PROJECT WILL NOT BE DETRIMENTAL TO THE HEALTH, SAFETY AND GENERAL WELFARE OF THE PERSONS OR PROPERTY WITHIN THE VICINITY OF THE PROJECT SITE, AND THE CITY AS A WHOLE.
- U. ADEQUATE PROVISION IS MADE FOR THE FURNISHING OF SANITATION SERVICES AND EMERGENCY PUBLIC SAFETY SERVICES TO THE PROJECT.

Attachment No. 4

Minutes from April 6, 2022 Planning Commission Meeting

FOLSOM
CITY OF FOLSOM

PLANNING COMMISSION MINUTES
April 6, 2022
CITY COUNCIL CHAMBERS
6:30 P.M.
50 Natoma Street
Folsom, CA 95630

CALL TO ORDER PLANNING COMMISSION: Bill Miklos, Ralph Peña, Barbara Leary, Eileen Reynolds, Daniel West, Bill Romanelli, Justin Raithel

ABSENT: Justin Raithel, Ralph Peña

PLEDGE OF ALLEGIANCE

CITIZEN COMMUNICATION: None

MINUTES: The minutes of the December 15, 2021 meeting were approved as submitted.

Oath of Office Administered to Bill Romanelli

Election of Chair and Vice Chair

COMMISSIONER MIKLOS MOVED TO RECOMMEND EILEEN REYNOLDS TO SERVE AS CHAIR AND DAN WEST TO SERVE AS VICE CHAIR FOR THE PLANNING COMMISSION

COMMISSIONER LEARY SECONDED THE MOTION WHICH CARRIED THE FOLLOWING VOTE:

AYES: MIKLOS, LEARY, REYNOLDS, WEST, ROMANELLI

NOES: NONE

RECUSED: NONE

ABSENT: PEÑA, RAITHEL

PRESENTATIONS

1. Draft Active Transportation Plan (Brett Bollinger, Parks and Recreation Department)

PUBLIC HEARING**2. PN 21-120, Folsom Corporate Center Apartments General Plan Amendment, Rezone and Planned Development and Determination that the Project is Exempt from CEQA**

A Public Hearing for approval of a General Plan Amendment, Rezone, and Planned Development Permit for the Folsom Corporate Center Apartments project. The proposed project includes development of a 253-unit market-rate apartment community on two sites (Lot 1: 7.24-acre parcel and Lot 6: 4.68-acre parcel) within the Folsom Corporate Center, which is located on the south side of Iron Point Road, slightly east of the intersection of Iron Point Road and Oak Avenue Parkway. A General Plan Amendment to change the General Plan land use designation for the two project parcels (Lot 1 and Lot 6) from IND (Industrial/Office Park) to MHD (Multi-Family High Density) and A Rezone to change the zoning designation for Lot 1 from M-L PD (Limited Manufacturing, Planned Development District) to R-4 PD (General Apartment, Planned Development District) and to change the zoning designation of Lot 6 from BP PD (Business and Professional, Planned Development District) to R-4 PD (General Apartment, Planned Development District). This project is exempt from the California Environmental Quality Act in accordance with Section 15315 of the CEQA Guidelines. (Principal Planner: Steve Banks / Applicant: Cole Partners

COMMISSIONER WEST MOVED TO RECOMMEND CITY COUNCIL APPROVAL OF THIS PROJECT, SUBJECT TO THE PROPOSED FINDINGS (FINDINGS A – U) AND CONDITIONS OF APPROVAL ATTACHED TO THIS REPORT (CONDITIONS 1-89). SPECIFICALLY, COMMISSIONER WEST MOVED TO RECOMMEND THAT CITY COUNCIL TAKE THE FOLLOWING ACTIONS TO APPROVE THIS PROJECT:

- ADOPT THE MITIGATED NEGATIVE DECLARATION AND MITIGATION MONITORING AND REPORTING PROGRAM PREPARED FOR THE FOLSOM CORPORATE CENTER APARTMENTS PROJECT (PN 21-120) PER ATTACHMENT 23; AND
- APPROVE A GENERAL PLAN AMENDMENT TO CHANGE THE GENERAL PLAN LAND USE DESIGNATION FOR LOT 1 (APN NO. 072-3120-023) AND LOT 6 (APN NO. 072-3120-023) FROM IND (INDUSTRIAL/OFFICE PARK) TO MHD (MULTI-FAMILY HIGH DENSITY); AND
- APPROVE A REZONE TO CHANGE THE ZONING DESIGNATION FOR LOT 1 (APN NO. 072-3120-026) FROM M-L PD (LIMITED MANUFACTURING, PLANNED DEVELOPMENT DISTRICT) TO R-4 PD (GENERAL APARTMENT, PLANNED DEVELOPMENT DISTRICT) AND TO CHANGE THE ZONING DESIGNATION OF LOT 6 (APN NO. 072-3120-023) FROM BP PD (BUSINESS AND PROFESSIONAL, PLANNED DEVELOPMENT DISTRICT) TO R-4 PD (GENERAL APARTMENT, PLANNED DEVELOPMENT DISTRICT); AND
- APPROVE A PLANNED DEVELOPMENT PERMIT TO ESTABLISH DETAILED DEVELOPMENT AND ARCHITECTURAL STANDARDS FOR THE 253-UNIT FOLSOM CORPORATE CENTER APARTMENTS PROJECT.

COMMISSIONER ROMANELLI SECONDED THE MOTION WHICH CARRIED THE FOLLOWING VOTE:

AYES: MIKLOS, REYNOLDS, WEST, ROMANELLI
 NOES: LEARY
 RECUSED: NONE
 ABSENT: PEÑA, RAITHEL

PLANNING COMMISSION / PLANNING MANAGER REPORT

The next Planning Commission meeting is scheduled for April 20, 2022.

RESPECTFULLY SUBMITTED,

Karen Sanabria, ADMINISTRATIVE ASSISTANT

APPROVED:

Preliminary Landscape Plan NOV 16th, 2021 | MR200320.00

DESIGN STATEMENT
 THE LANDSCAPE WILL BE DESIGNED TO MEET THE COUNTY DEVELOPMENT STANDARDS AND DESIGN GUIDELINES. THE PLANTING AND IRRIGATION WILL MEET THE WMELO REQUIREMENTS BY UTILIZING LOW WATER USE PLANT MATERIAL AND IRRIGATED WITH A HIGH EFFICIENCY IRRIGATION SYSTEM. THE STORMWATER FEATURES HAVE BEEN COORDINATED WITH THE CIVIL ENGINEER FOR PLACEMENT AND SIZE TREES UNDER THE OVERHEAD UTILITY EASEMENT WILL MEET THE HEIGHT CRITERIA.

GENERAL PLANTING NOTES
 1. ALL PLANTING AREAS SHALL BE IRRIGATED WITH AN AUTOMATIC IRRIGATION SYSTEM THAT WILL BE COMPLIANT WITH THE STATE'S WATER EFFICIENT LANDSCAPE ORDINANCE.
 ALL SHRUBS AND GROUNDCOVER AREAS SHALL RECEIVE A 3" LAYER OF BARK CHIP MULCH TOP DRESSING.
 GROUND COVERS SHALL NOT BE INSTALLED WITHIN A 4' RADIUS OF THE TREE DRUM.

- 1 WELDED GATE PANEL, DECORATIVE STYLE TO MATCH FENCE DETAIL.
 - 2 1-1/2" SQ. RAILS - 18 GA.
 - 3 2" SQ. POST, BOTH SIDES OF GATE - 11 GA. WITH CAP PROVIDER 1/8" SP. SPACING BETWEEN POSTS FOR GATE.
 - 4 2" SQ. POST - 18 GA.
 - 5 0.1" HEAVY DUTY - FINISH, TYP.
 - 6 CLARE LOCK WITH KEY CATCH AND PIVOT BAR Z61
 - 7 1" X 1/2" STEEL EXPANDED PLATE.
 - 8 EXPANDED METAL 6"X6"
 - 9 1/2" METAL TRIM OVER EXPANDED METAL, SANDING
 - 10 HYDRAULIC CLOSER.
 - 11 FINISH GRADE.
 - 12 6" X 24" CONCRETE FOOTING, TYP. SLOPE TOP AWAY FROM POST TO PREVENT STANDING WATER.
- FINISH:
PAINT ALL METAL WITH TWO COATS SHOP PRIMER AND ONE COAT ENAMEL, PAINT COLOR: BLACK.

3 DECORATIVE METAL PEDESTRIAN GATE - 8'-0" HEIGHT

- 1 WELDED PANEL.
- 2 2" SQ. RAIL - 14 GA.
- 3 2" SQ. POST - 13 GA. WITH CAP PLATE NORTH & S.C. 1/2" DIA. X 1/2" H. S.A.
- 4 1/2" X 3/4" CONCRETE FOR DRG. TYP. SLOPE TOP AWAY FROM RIGHT TO PREVENT STANDING WATER.
- 5 2" ABSOLUTE BALK, CONSTRUCTED.
- 6 CONSTRUCTED SUBGRADE TO 10% MIN. SLOPE.
- 7 2" ABSOLUTE BALK WITH TWO COATS SHOP PRIMER AND ONE COAT ENAMEL, PAINT COLOR: BLACK.

2 TUBULAR METAL FENCE

- 1 TUBULAR STEEL GATES, TYP. OF 0.1 MINIMUM 1-1/2" SQ. FINISHING WITH 1/2" SQ. Pickets.
- 2 6" SQ. WALL WITH SECTION BETWEEN TO MATCH BUILDING.
- 3 1/2" DIA. METAL RAIL WITH 1/2" DIA. PICKETS.
- 4 CONCRETE CURB.
- 5 STREET FINISH SURFACE. SEE CIVIL PLANS FOR SECTION.
- 6 PROVIDE 1/2" GROOVE WHEELER AND TRACK INST. ALL PER MANUFACTURER'S SPEC.
- 7 PROVIDE ELECTRONIC OVER RISE SWITCH PER FIRE DEPARTMENT REQUIREMENTS.
- 8 1/2" DIA. METAL RAIL WITH 1/2" DIA. PICKETS.
- 9 1/2" DIA. METAL RAIL WITH 1/2" DIA. PICKETS.
- 10 CONCRETE DATE TRACK FOR ALIDE DATE. TOP OF CONCRETE DATE TRACK TO BE AT FINISH GRADE.

GATE FABRICATION NOTES:
CONTRACTOR TO PROVIDE SHOP DRAWINGS AND SPECIFICATIONS FOR TYPE AND GRADE OF ALL IRON TO GAINER FOR REVIEW AND APPROVAL PRIOR TO FABRICATION.

ALL WELDS SHALL BE WELD BUILT PER LOCAL FIRE DEPARTMENT REQUIREMENTS AND PAINTED. GRIND ALL SQUARE WELDS OCCURRING ON FLAT STEEL.

ALL PICKETS TO BE WELDED ALL AROUND.

FIRE NOTES:
PER CITY STANDARD, A LENS KEY SWITCH (MODEL 8002) SHALL BE AFFIXED TO THE SETTING ON THE FACE OPPOSITE OF THE GATE. PROVIDE PER LOCAL FIRE DEPARTMENT REQUIREMENTS.

1 ENTRY GATE - SLIDING

- 1 TUBULAR STEEL GATES, TYP. OF 0.1 MINIMUM 1-1/2" SQ. FINISHING WITH 1/2" SQ. PICKETS.
- 2 6" SQ. WALL WITH SECTION BETWEEN TO MATCH BUILDING.
- 3 1/2" DIA. METAL RAIL WITH 1/2" DIA. PICKETS.
- 4 CONCRETE CURB.
- 5 STREET FINISH SURFACE.
- 6 PROVIDE 1/2" GROOVE WHEELER AND TRACK INST. ALL PER MANUFACTURER'S SPEC.
- 7 PROVIDE ELECTRONIC OVER RISE SWITCH PER FIRE DEPARTMENT REQUIREMENTS.
- 8 1/2" DIA. METAL RAIL WITH 1/2" DIA. PICKETS.
- 9 1/2" DIA. METAL RAIL WITH 1/2" DIA. PICKETS.
- 10 CONCRETE DATE TRACK FOR ALIDE DATE. TOP OF CONCRETE DATE TRACK TO BE AT FINISH GRADE.
- 11 FINISH GRADE.

4 EVA GATE - SLIDING

GATE FABRICATION NOTES:
CONTRACTOR TO PROVIDE SHOP DRAWINGS AND SPECIFICATIONS FOR TYPE AND GRADE OF ALL IRON TO GAINER FOR REVIEW AND APPROVAL PRIOR TO FABRICATION.

ALL WELDS SHALL BE WELD BUILT PER LOCAL FIRE DEPARTMENT REQUIREMENTS AND PAINTED. GRIND ALL SQUARE WELDS OCCURRING ON FLAT STEEL.

ALL PICKETS TO BE WELDED ALL AROUND.

FIRE NOTES:
PER CITY STANDARD, A LENS KEY SWITCH (MODEL 8002) SHALL BE AFFIXED TO THE SETTING ON THE FACE OPPOSITE OF THE GATE. PROVIDE PER LOCAL FIRE DEPARTMENT REQUIREMENTS.

FINISH:
PAINT ALL METAL WITH TWO COATS SHOP PRIMER AND ONE COAT ENAMEL, PAINT COLOR: BLACK.

This drawing is preliminary and subject to all local codes and regulations. It may be altered without notice. Please refer to the preliminary site plan and landscape site plan for more information. All dimensions are in feet unless otherwise noted. All dimensions are to the centerline of the structure unless otherwise noted. All dimensions are to the centerline of the structure unless otherwise noted.

REVISION HISTORY

Date	Title	Comment
Dec 7, 2021	Draft TIS	
Feb 3, 2022	Final Report	Updated parking per revised site plan, clarified gate queue storage. Clarified "mitigation" vs "abatement".

EXECUTIVE SUMMARY

This Transportation Impact Study identifies impacts of the proposed Folsom Corporate Center Apartments project (the Project) on the motorized and unmotorized transportation systems in Folsom, California. This study has been prepared for the City of Folsom, Helix Environmental Inc., and FCC 50, LLC.

Project Description

Figure ES-1 provides a Project vicinity map. The Project consists of 253 apartment units on two separate parcels within the Folsom Corporate Center. The two Project parcels are Accessors Parcel number 072-3120-001 (referred to as "Lot 1") and 072-3120-023 (referred to as "Lot 6"). The Project parcels are generally located east of Oak Avenue Parkway, south of Iron Point Road, and north of U.S. Highway 50. One portion of the Project will be located on a 4.13-acre parcel situated in front of the Safe Credit Union Building and adjacent to Iron Point Road (Lot 6). The second portion of the project will be located on a 7.18-acre parcel situated directly behind the Kaiser Permanente office building (Lot 1). The Project offers walkable access to employment opportunities within the Folsom Corporate Center and is less than a mile from excellent shopping and entertainment options at the Palladio. 491 parking spaces are proposed for an overall parking ratio of 1.94 spaces per dwelling unit. A preliminary site plan is provided in **Figure ES-2**, with driveway queue storage detail shown in **Figure ES-3** and **Figure ES-4**.

Analysis Scope

The analysis considers CEQA Vehicle Miles of Travel impacts and the traffic operations at intersections in Folsom that could potentially be impacted by Project traffic. Study intersections and segments are shown in **Figure ES-5** and listed in **Table ES-1** and **Table ES-2**. This Transportation Impact Study considers six study scenarios:

- Existing 2021 without Project Condition;
- Existing 2021 with Project Condition;
- Existing Plus Approved Projects (EPAP) 2026 without Project Condition;
- EPAP 2026 with Project Condition;
- Cumulative 2035 without Project Condition; and
- Cumulative 2035 with Project Condition.

Findings and Recommendations

The Project is anticipated to generate 1376 daily vehicle trips, 81 AM peak-hour vehicle trips, and 104 PM peak-hour vehicle trips. There are no anticipated Project related level-of-service deficiencies.

The Project is anticipated to have a **less-than-significant** impact on vehicle level-of-service, bike and pedestrian activity and facilities, transit operations and facilities, and VMT.

Parking supply at an overall ratio of 1.94 spaces per apartment exceeds the City requirements and is sufficient to meet the anticipated parking demand. Lot 1 has a parking ratio of 1.99 spaces per apartment and Lot 6 has a parking ratio of 1.87 spaces per apartment. All of which exceed the City requirement of 1.5 spaces per dwelling unit.

Storage for two or more vehicles is provided in front of entry gates, which is adequate to store the anticipated 95% gate queues.

As described in section 8.3 Queueing (page 74), Project related queueing deficiencies are anticipated on the westbound left-turn from Iron Point Rd to Prairie City Rd during the AM peak hour in under Existing 2021 with Project and EPAP 2026 with Project conditions (Deficiency 1 and Deficiency 2, respectively). To avoid confusion, General Plan deficiencies are labeled as "deficiencies" rather than (CEQA) "impacts", and the related improvements are labeled as "abatement measures" rather than "mitigation measures". This is done to emphasize that any level-of-service and/or queueing concerns are not considered to be impacts under CEQA.

Abatement 1 and Abatement 2 (also described in Section 8.3) are anticipated to reduce queues such that the Project has a less-than-significant effect on traffic operations. These two Abatement measures are identical. The project should be conditioned to coordinate with the City to implement Abatement 1 and 2, prior to issuance of the first building permit:

Abatement 1 and Abatement 2

(Prior to issuance of the First building permit, at applicants expense): "Modify Prairie City Rd/Iron Point Rd signal timing plan by shifting 1 second from the eastbound through movement to the westbound left turn movement, reduce the vehicle extension setting from adding five to six additional seconds to the green phase for through movements to adding four seconds to the green phase for through movements for each vehicle passing the detector after the minimum green phase length has been exceeded."

Otherwise, the City's standard approval conditions and fees are adequate.

1. INTRODUCTION

This transportation impact study identifies impacts of the proposed Folsom Corporate Center Apartments project (the Project) on the motorized and unmotorized transportation systems in Folsom, California. This study has been prepared for the City of Folsom, Helix Environmental Inc., and the applicant FFC 50, LLC.

1.1 Project Description

Figure 1 provides a project vicinity map. The applicant is requesting approval of a General Plan Amendment, Rezone, Planned Development Permit Modification, and Design Review for development of a 253-unit multi-family market rate apartment community on two separate parcels within the Folsom Corporate Center. The two Project parcels are Accessors Parcel number 072-3120-001 (referred to as "Lot 1") and 072-3120-023 (referred to as "Lot 6"). The project parcels are generally located east of Oak Avenue Parkway, south of Iron Point Road, and north of U.S. Highway 50. One portion of the project will be located on a 4.13-acre parcel situated in front of the Safe Credit Union Building and adjacent to Iron Point Road (Lot 6). The second portion of the project will be located on a 7.18-acre parcel situated directly behind the Kaiser Permanente Office Building (Lot 1). The proposed apartment community is comprised of 12 three-story apartment buildings containing between 20 and 31 rental units. The applicant is requesting a General Plan amendment, Rezone, Planned Development Permit Modification, and Design Review.

The proposed apartments, which include a combination of one, two, and three bedroom units, range in size from 690 square feet to 1,325 square feet. In addition, the proposed Project includes two clubhouse buildings featuring indoor and outdoor amenities. Access to the two Project parcels is proposed to be provided by three existing driveways located along the south side of Iron Point Road. The proposed project includes 491 parking spaces including garage parking spaces, carport covered parking spaces, and uncovered parking spaces. Additional site improvements include drive aisles, curbs, gutters, sidewalks, internal walkways, underground utilities, retaining walls, site lighting, site landscaping, and monument signs.

A preliminary site plan is provided in **Figure 2**, with driveway detail in **Figure 3** and **Figure 4**. Lot 1 will accommodate 153 dwelling units and 304 parking spaces. Lot 6 will accommodate 100 dwelling units and 187 parking spaces. Each portion of the development will be gated with full access driveways to Folsom Corporate Center's private roadways. Two of three Folsom Corporate Center driveways onto Iron Point Road have restricted access (either limiting left turns out or limiting left turns both in and out) and are side street stop controlled. The Folsom Corporate Center driveway aligned with Rowberry Drive is a full access intersection with signal control. Under cumulative conditions, Rowberry Drive is assumed to be extended across US 50 to Alder Creek Parkway in Folsom Ranch.

1.2 Report Organization

The following sections are discussed after this Introduction: Setting and Study Area (key roadways and intersections, the regulatory setting, and analysis scenarios); Methodology (detailing the

analysis procedures); six analysis sections; and, the final sections summarizing project impacts, mitigations, triggers for those mitigations, and recommended conditions of approval.

Figure 4. Entry Gate Detail At For "Lot 6" (Eastern Portion Of Project) Showing Queue Storage At Entry Gate

(This page intentionally left blank)

2. SCENARIOS, SETTING AND STUDY AREA

The Transportation Impact Study area generally consists of the region along the portion of East Bidwell Street from Folsom Lake College to US 50, and along Cavitt Drive from Broadstone Parkway to Iron Point Road within the City of Folsom, California. Key roadways within the study area, and study intersections, are shown in Figure 5.

2.1 Study Scenarios

Four scenarios were identified for inclusion in this Transportation Impact Study through consultation with City of Folsom staff. The study determines the weekday AM peak-hour and PM peak-hour level-of-service at study intersections under the following scenarios:

- Existing 2021 without Project Condition;
- Existing 2021 with Project Condition;
- Existing Plus Approved Projects (EPAP) 2026 without Project Condition;
- EPAP 2026 with Project Condition;
- Cumulative 2035 without Project Condition; and
- Cumulative 2035 with Project Condition.

Existing 2021, and Existing 2021 with Project Condition

Analysis of the existing condition reflects the traffic volumes and roadway geometry at the time the study began. These two scenarios (with and without the Project) quantify performance measures, serve as a known reference point for those familiar with the study area, and identify project related impacts anticipated to occur if the project opened in 2021.

EPAP 2026 Condition, and EPAP 2026 with Project Condition

EPAP scenarios, with and without the Project, analyze conditions with the addition of traffic from approved and reasonably foreseeable projects that affect study intersections and segments. These scenarios are intended to reflect anticipated traffic approximately five years into the future, when the project could reasonably be anticipated to be constructed. This "phasing analysis" is intended to assist the City of Folsom in phasing of improvements at study intersections which may be necessary to accommodate traffic from all approved and anticipated tentative maps over the next five years.

Cumulative 2035 Condition, and Cumulative 2035 with Project Condition

Cumulative scenarios, with and without the Project, analyze anticipated conditions at the General Plan 2035 horizon year. These scenarios are intended to reflect anticipated traffic from Folsom Ranch, and shifts in traffic patterns anticipated after construction of two new interchanges and US 50 overcrossings.

Figure 5. Project Area Roadways Including Study Intersections and Study Road Segments

2.2 Project Area Roadways

Brief descriptions of the key roadways serving the Project site are provided below.

Iron Point Road is an east-west arterial roadway with a raised median that runs from Folsom Boulevard to the eastern city limit along the north side of US 50. Within the vicinity of the Project, Iron Point Road has six lanes, bike lanes, sidewalk, curb, and gutter. The posted speed limit is 45 mph. Turn pockets are provided at intersections.

Oak Avenue Parkway is a north-south arterial that extends from Willow Creek Drive to Iron Point Road. It is a four-lane urban arterial road between Willow Creek Drive and Blue Ravine Road. It is a six-lane urban arterial road between Blue Ravine Road and Riley Street. It is a four-lane urban arterial road between Riley Street and Iron Point Road. Oak Avenue Parkway will be extended across US 50 into Folsom Ranch and a new interchange will be constructed prior to the cumulative analysis scenarios.

Rowberry Drive is a north-south two-lane local road that runs northward from the Kaiser Permanente Folsom Medical Offices into neighborhoods to the north of Iron Point Road. A future extension of Rowberry across US 50 to Folsom Ranch is planned for the future.

Broadstone Parkway in the project vicinity is a four-lane east-west arterial, that wraps around the back of the Palladio shopping center from Iron Point Road to connect with Empire Ranch Road near the Sacramento-El Dorado county line. Broadstone Parkway has bike lanes, sidewalk, curb, and gutter. Turn pockets are provided at intersections.

East Bidwell Street runs through the City of Folsom from White Rock Road to Riley Street. East Bidwell Street becomes Scott Road south of US 50. Near the Project area, East Bidwell Street is a six-lane arterial roadway with bike lanes, sidewalk, curb, and gutter. Turn pockets are provided at intersections. The speed limit on East Bidwell Street north of US 50 is 45 mph.

Prairie City Road is a north-south arterial that extends from Blue Ravine Road to White Rock Road, north of Blue Ravine Road it is called Sibley Street. It is a five-lane urban arterial road between Blue Ravine Road and Iron Point Road. Prairie City Road is a six-lane urban arterial road between Iron Point Road and Highway 50. It is a two-lane rural road between Highway 50 and White Rock Road.

2.3 Study Intersections

There are twenty study segments on US 50 (Table 1) and seventeen study intersections (Table 2). The Oak Avenue Parkway interchange will be constructed by the cumulative analysis year, resulting in changes to some study US 50 segments.

Table 1. US 50 Study Segment

* Two Way Stop Control

2.4 Transit

City of Folsom's public transportation includes bus and dial-a-ride service provided by the City through "Folsom Stage Lines" and light rail service provided by Sacramento Regional Transit (RT). El Dorado County Transit (EDC Transit) also provides limited bus connections to El Dorado County.

Folsom Stage Lines and Dial-A-Ride

The Folsom Stage Line buses run Monday through Friday. Since February 4, 2019 Folsom Stage Lines has been operated by Sacramento RT. There is no weekend service available. There are currently ten buses running on three routes. They are routes 10, 20 and 30 (Figure 6). Routes 10 and 20 intersect at Folsom Lake College. There is no charge to transfer from one Folsom Stage Line route to the other.

- Route 10 - Services Historic Folsom, E. Bidwell St., the Broadstone Market Place, Broadstone Plaza, Folsom Aquatics Center, Folsom Lake College, Intel, Kaiser Permanente, Folsom Premium Outlets, Mercy Hospital, Palladio Mall, and Century Theatres. It connects to light rail and with the RT bus service Line 24. Service with a one-hour headway starts at 5:25 AM with the last pickup at 7:25 PM.
- Route 20 - Services Empire Ranch Road, East Natoma Street, Vista del Lago High School, Folsom Lake College and transfers to Route 10. There are one morning bus and two afternoon buses on Route 20.

- **Route 30 - Services Folsom State Prison, City Hall, and Woodmere Drive during peak hours (6 AM – 8:10 AM and 2:35 PM – 4:55 PM) with four AM peak-period buses and five PM peak-period buses.**

Dial-A-Ride is a curb-to-curb transportation service that operates within the Folsom City limits. It provides transportation to residents who have a physical, developmental, or mental disability. Senior citizens who are 55 years of age or older also qualify for this program.

Sacramento RT

Sacramento Regional Transit (RT) light rail provides service via the Gold Line connecting the Historic Folsom, Glenn, and Iron Point light rail stations to downtown Sacramento and points in between. Service is provided from 5 AM to 7 PM on a 30-minute headway. There is also a connection to RT bus route 24 from Folsom Stage Lines route 10 at the Madison/Main stop. RT route 24 provides service to Sunrise Mall on a (roughly) hourly headway from 6 AM to 7 PM.

El Dorado County Transit

The EDC Transit route 50X (the 50 Express) operates every hour from 6 AM until 7 PM Monday through Friday, with service from Missouri Flat Transfer Center in El Dorado County to the Folsom Iron Point light rail station, Folsom Lake College, and back.

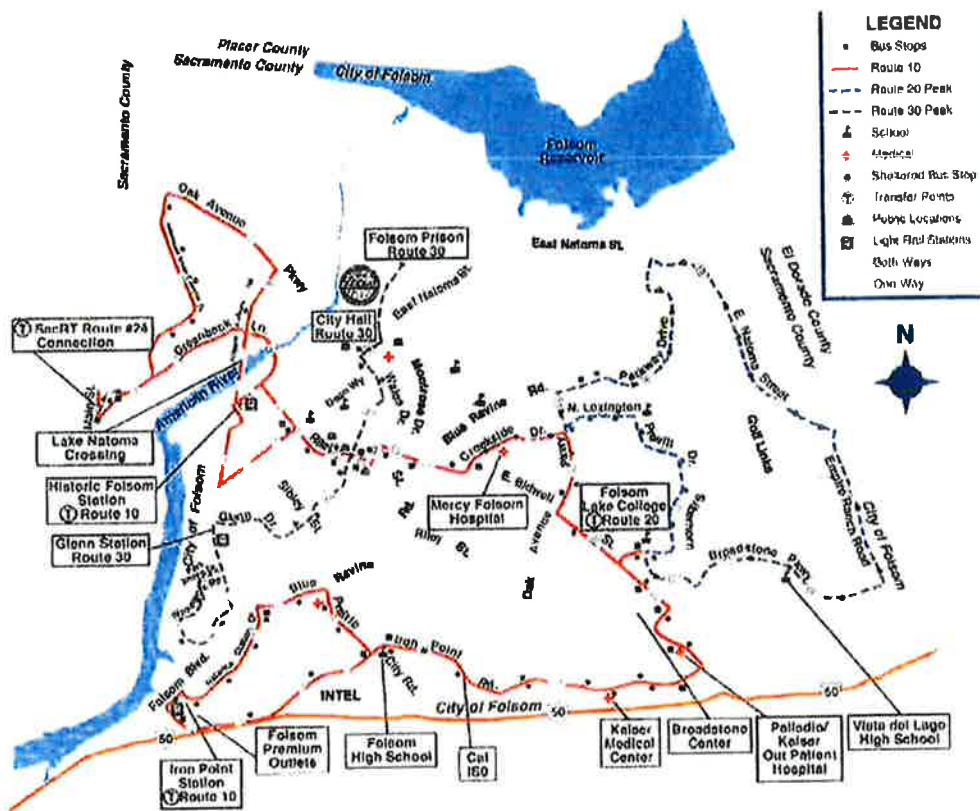

Figure 6. Folsom Stage Lines Routes 10, 20 and 30

2.5 Bicycle Facilities

The City of Folsom is one of the most bike friendly settings in California, with an existing comprehensive bikeway system that is extensive and connects to a vast number of historical and recreational attractions. Existing and planned bicycle facilities within the project area are described in the 2007 Folsom Bikeway Master Plan¹ which provide a framework for the design of a bikeway system that meets the California Street and Highway Code Section 890-894.2 - Bicycle Transportation Act and improves safety and convenience for all users. (Note that there is an updated bike plan under development as part of the Folsom Active Transportation Plan.) There are four types of bicycle facilities (Class 1, 2, 3, and 4) used in Folsom. Figure 7 provides a Folsom bike map. All road segments in the study area include Class 2 bike lanes. There are existing and planned Class 1 trails along Iron Point Road, as well as a class 1 trail connecting under US 50 paralleling the rail line located to the east of East Bidwell Street. The different classes of bicycle facilities are described after Figure 7.

Folsom Corporate Center Apartments
Transportation Impact Study

Folsom
California

Figure 7. Folsom Bike Map

Class I Bikeway (Bike Trail)

Class I bikeways, unless adjacent to an adequate pedestrian facility, are for the exclusive use of bicycles and pedestrians, therefore any facility serving pedestrians must meet accessibility requirements. Note that sidewalks are not Class I bikeways because they are primarily intended to serve pedestrians, generally cannot meet the design standards for Class I bikeways, and do not minimize vehicle cross flows. Motor vehicles are prohibited from bike paths per the California Vehicle Code (CVC). These prohibitions can be reinforced with signs. Within the Project vicinity there are Class 1 trails along the east side of the American River/Lake Natoma, the east side of Folsom Boulevard, and connections between those two trails both north and south of the Project site.

Generally, bike paths should be used to serve corridors not served by streets and highways or where a wide right-of-way exists, permitting such facilities to be constructed away from the influence of parallel streets. Bike paths should offer opportunities not provided by the road system. They can either provide a recreational opportunity, or in some instances, can serve as direct high-speed commute routes if cross flow by motor vehicles and pedestrian conflicts can be minimized. The most common applications are along rivers, ocean fronts, canals, utility right of way, abandoned railroad right of way, within school campuses, or within and between parks. There may also be situations where such facilities can be provided as part of planned developments. Another common application of Class I facilities is to close gaps to bicycle travel caused by construction of freeways or because of the existence of natural barriers (rivers, mountains, etc.).

Figure 8. Two-Way Class I Bikeway (Source: Caltrans 2012 HDM Figure 1003.1A)

Class II Bikeway (Bike Lane)

Class II Bikeways are bike lanes generally striped along streets in corridors where there is significant bicycle demand, and where there are distinct needs that can be served by them. The purpose should be to improve conditions for bicyclists in the corridors. Bike lanes are intended to delineate the right-of-way assigned to bicyclists and motorists and to provide for more predictable movements by each. But a more important reason for constructing bike lanes is to better accommodate bicyclists through corridors where insufficient room exists for side-by-side sharing of existing streets by motorists and bicyclists. This can be accomplished by reducing the number of lanes, reducing lane width, or prohibiting or reconfiguring parking on given streets in order to delineate bike lanes. In addition, other things can be done on bike lane streets to improve the situation for bicyclists that might not be possible on all streets (e.g., improvements to the surface, augmented sweeping programs, special signal facilities, etc.). Generally, pavement markings alone will not measurably enhance bicycling.

If bicycle travel is to be provided by delineation, attention should be made to assure that high levels of service are provided with these lanes. It is important to meet bicyclist expectations and increase bicyclist perception of service quality where capacity analysis demonstrates service quality measures are improved, from the bicyclist's point of view.

Class III Bikeway (Bike Route)

Bike routes are unstriped, shared facilities which serve either to:

- Provide continuity to other bicycle facilities (usually Class II bikeways); or
- Designate preferred routes through high demand corridors.

As with bike lanes, designation of bike routes should indicate to bicyclists that there are advantages to using these routes as compared with alternative routes. This means that responsible agencies have taken actions to assure that these routes are suitable as shared routes and will be maintained in a manner consistent with the needs of bicyclists. Normally, bike routes are shared with motor vehicles.

A variant on Class III bikeways, shared lanes, or "sharrow" lanes, are becoming more common. Sharrows are a form of Class III bikeways where the general-purpose lane is too narrow for a bicycle and a vehicle to travel safely side-by-side within the same lane. A sharrow symbol painted (Figure 9) on the roadway is used to indicate the likely lateral location of bikes in the lane to inform motor vehicles.

Figure 9. Sharrow

Class IV Bikeway (Separated Bikeway or "Cycle Track")

The Protected Bikeways Act of 2014 (Assembly Bill 1193 - Ting, Chapter 495) established Class IV bikeways for California. Class IV bikeways provide a right-of-way designated exclusively for bicycle travel adjacent to a roadway and which are protected from vehicular traffic. Types of separation include, but are not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking. An example is shown in Figure 10.

Figure 10. Class IV Bikeway

3. METHODOLOGY

This section provides a process overview, describes traffic forecasting, and discusses the methods/criteria used to evaluate level-of-service. A discussion of the significance criteria is also included.

3.1 Process Overview

The overall analysis process was structured to identify potential adverse transportation effects related to the proposed project.

- Traffic volumes and turning movements for the Existing 2021 Condition were determined from observed traffic counts taken on Thursday May 5, 2020 (pre pandemic); Tuesday May 18, 2021, and Thursday August 26, 2021. Consistent with other recent Folsom traffic studies, “post pandemic” counts were factored up to account for the impact of COVID 19 closures on the transportation system. AM peak-hour counts were increased by 52% and PM peak-hour counts were increased by 28%.
- EPAP 2026 volumes without the Project were based on growth from all reasonably foreseeable projects effecting the study intersections based on the greater of two forecasting approaches:
 - Trips from approved projects and reasonably foreseeable projects, or five years of growth based on the City of Folsom General Plan travel demand model. Travel demand model growth was based on linear interpolation between the model base year and cumulative year, with the cumulative year trip tables assigned to the base year network to eliminate the effects of the future Oak Avenue Parkway interchange and Empire Ranch interchange.
 - Travel demand model growth was used in this study because it resulted in higher traffic volumes than growth from identified projects. Particularly at the intersections of Iron Point Road and Prairie City Road.
 - The travel demand model was calibrated to local conditions using the traffic counts and travel demand model forecasts interpolated to 2021. The NCHRP 255 adjustment was applied to all future volume forecasts at intersections 1-13. Volumes at intersections 14 and 15 were scaled up based on growth on travel demand model growth on their TAZ’s centroid connectors. 2021 traffic counts were used as a floor to protect against negative growth
- Cumulative 2035 traffic volumes were based on existing traffic counts adjusted for growth from the City of Folsom General Plan travel demand model. Local calibration and NCHRP adjustments were applied similar to the 2026 methodology described above. Turning movements at the Oak Avenue Parkway interchange (intersections 16 and 17) were taken directly from the travel demand model.

- Study intersection and segment traffic operations were analyzed both with and without the proposed project to identify potential violations of General Plan level-of-service policies.
- California Environmental Quality ACT (CEQA) VMT impacts were evaluated using screening tools published by the Sacramento Area Council of Governments (SACOG).

3.2 Level-of-Service Methodology

Level-of-service (LOS) is a qualitative indication of the level of delay and congestion experienced by motorists using an intersection. Levels-of-service are designated by the letters A through F, with A being the best conditions and F being the worst (high delay and congestion). Calculation methodologies, measures of performance, and thresholds for each letter grade differ for road segments, signalized intersections, and unsignalized intersections.

Based on guidance from City of Folsom staff, the following procedures described below for intersection and segment traffic operations analysis were selected for this study.

Intersection Traffic Operations Analysis

Signalized Intersections

The methodology from the Highway Capacity Manual (HCM) 6th Edition², are used to analyze signalized intersections. Level-of-service can be characterized for the entire intersection, each approach, or by lane group. Control delay alone (the weighted average delay for all vehicles entering the intersection) is used to characterize level-of-service for the entire intersection or an approach. Control delay and volume to capacity ratio are used to characterize level-of-service for lane groups. The average delay criteria used to determine the level-of-service at signalized intersections is presented in Table 3. The HCM 2010 methodology is used as the primary method. HCM 2000 methods are only utilized where the signal phasing is incompatible with HCM 2010 methods.

Table 3. Level-of-Service Criteria for Signalized Intersections

Level -of- Service	Description	Average Delay ¹ (Sec. /Vehicle.)
A	Very Low Delay: This level-of-service occurs when progression is extremely favorable, and most vehicles arrive during a green phase. Most vehicles do not stop at all.	≤ 10.0
B	Minimal Delays: This level-of-service generally occurs with good progression, short cycle lengths, or both. More vehicles stop than at LOS A, causing higher levels of average delay.	10.1-20.0
C	Acceptable Delay: Delay increases due to only fair progression, longer cycle lengths, or both. Individual cycle failures (<i>to service all waiting vehicles</i>) may begin to appear at this level of service. The number of vehicles stopping is significant, though many still pass through the intersection without stopping.	20.1-35.0

² Transportation Research Board (2016) Highway Capacity Manual, Washington, D.C.

**Folsom Corporate Center Apartments
Transportation Impact Study**

Folsom,
California

D	Approaching Unstable/Tolerable Delays: The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	35.1-55.0
E	Unstable Operation/Significant Delays: This is considered by many agencies the upper limit of acceptable delays. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent occurrences.	55.1-80.0
F	Excessive Delays: This level, considered to be unacceptable to most drivers, often occurs with oversaturation (i.e., when arrival flow rates exceed the capacity of the intersection). It may also occur at high v/c ratios below 1.00 with many individual cycle failures. Poor progression and long cycle lengths may also contribute to such delay levels.	> 80.0 or v/c >1.0

Note 1: Weighted average of delay on all approaches. This is the measure used by the Highway Capacity Manual to determine level-of-service. Any movement with a volume-to-capacity ratio (v/c) greater than 1.0 is considered to be level-of-service F.

Source: Transportation Research Board (2016) Highway Capacity Manual 6th Edition, Washington D.C.

Unsignalized Intersections

The methodology from HCM 6th Edition is used for the analysis of unsignalized intersections. At an unsignalized intersection, most of the main street traffic is un-delayed, and by definition have acceptable conditions. The main street left-turn movements and the minor street movements are all susceptible to delay of varying degrees. Generally, the higher the main street traffic volumes, the higher the delay for the minor movements. Separate methods are utilized for Two-Way Stop-Controlled (TWSC) intersections and All-Way Stop-Controlled (AWSC) intersections.

- **TWSC:** The methodology for analysis of two-way stop-controlled intersections calculates an average total delay per vehicle for each minor street movement and for the major street left-turn movements, based on the availability of adequate gaps in the main street through traffic. A level-of-service designation is assigned to individual movements or combinations of movements (in the case of shared lanes) based upon delay, it is not defined for the intersection as a whole. Unsignalized intersection level-of-service reported herein is for each movement (or group of movements) based upon the respective average delay per vehicle. Table 4 presents the average delay criteria used to determine the level-of-service at TWSC and AWSC intersections.
- **AWSC:** At all-way stop-controlled intersections, the level-of-service is determined by the weighted average delay for all vehicles entering the intersection. The methodologies for these types of intersections calculate a single weighted average delay and level-of-service for the intersection as a whole. The average delay criteria used to determine the level-of-service at all-way stop intersections is the same as that presented in Table 4. Level-of-service for specific movements can also be determined based on the TWSC methodology.

It is not unusual for some of the minor street movements at unsignalized intersections to have level-of-service D, E, or F conditions while the major street movements have level-of-service A, B, or C conditions. In such a case, the minor street traffic experiences delays that can be substantial for individual minor street vehicles, but the majority of vehicles using the intersection have very little delay. Usually in such cases, the minor street traffic volumes are relatively low. If the minor street volume is large enough, improvements to reduce the minor street delay may be justified, such as channelization, widening, or signalization.

Table 4. Level-of-Service Criteria for Unsignalized Intersections

Level of Service (LOS)	Description	TWSC ¹	AWSC ²
		Average Delay by Movement (seconds / vehicle)	Intersection Wide Average Delay (seconds / vehicle)
A	Little or no delay	< 10	< 10
B	Short traffic delay	> 10 and < 15	> 10 and < 15
C	Average traffic delays	> 15 and < 25	> 15 and < 25
D	Long traffic delays	> 25 and < 35	> 25 and < 35
E	Very long traffic delays	> 35 and < 50	> 35 and < 50
F	Extreme delays potentially affecting other traffic movements in the intersection	> 50 (or, v/c > 1.0)	> 50

Note 1: Two-Way Stop-Control (TWSC) level-of-service is calculated separately for each minor street movement (or shared movement) as well as major street left turns using these criteria. Any movement with a volume to capacity ratio (v/c) greater than 1.0 is considered to be level-of-service F.

Note 2: All-Way Stop-Control (AWSC) assessment of level-of-service at the approach and intersection levels is based solely on control delay.

Source: Transportation Research Board (2016) Highway Capacity Manual 6th Edition, Washington D.C.

Signal Warrants

At each unsignalized intersection, the potential need for a traffic signal was evaluated. Traffic signal warrants are a series of standards that provide guidelines for determining if a traffic signal is appropriate. Signal warrant analyses are typically conducted at intersections of uncontrolled major streets and stop sign-controlled minor streets. If one or more signal warrants are met, signalization of the intersection may be appropriate. However, a signal should not be installed if none of the warrants are met, since the installation of signals would increase delays on the previously uncontrolled major street, and, may increase the occurrence of particular types of accidents.

As stated in the 2014 California Edition of the Manual on Uniform Traffic Control Devices (California MUTCD 2014)³, "An engineering study of traffic conditions, pedestrian characteristics,

³ Caltrans (2019) California Manual on Uniform Traffic Control Devices - FHWA's MUTCD 2009 Edition as amended for use in California - 2014 Edition - Revision 4, March 29, 2019. Section 4C.

and physical characteristics of the location shall be performed to determine whether installation of a traffic control signal is justified at a particular location.

The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:

- *Warrant 1, Eight-hour Vehicular Volume*
- *Warrant 2, Four-hour Vehicular Volume*
- *Warrant 3, Peak-hour*
- *Warrant 4, Pedestrian Volume*
- *Warrant 5, School Crossing*
- *Warrant 6, Coordinated Signal System*
- *Warrant 7, Crash Experience*
- *Warrant 8, Roadway Network*
- *Warrant 9, Intersection Near a Grade Crossing*

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal."

Consistent with the industry standard of practice, this Traffic Impact Analysis did not evaluate the full panoply of warrants for traffic signals, but instead focused on the peak-hour warrant. The MUTCD states that, "*This [peak-hour] signal warrant shall be applied only in unusual cases, such as office complexes, manufacturing plants, industrial complexes, or high-occupancy vehicle facilities that attract or discharge large numbers of vehicles over a short time.*" So, the peak-hour warrant is being used in this impact analysis study as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed the peak-hour warrant are considered (for the purposes of this impact analysis) to be likely to meet one or more of the other signal warrants (such as the 4-hour or 8-hour warrants). This peak-hour analysis is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction.

Unsignalized intersections were evaluated using the Peak-hour Volume Warrant (Warrant No. 3) in the California MUTCD 2014. The Peak-hour Volume Warrant was applied where the minor street experiences long delays in entering or crossing the major street for at least one hour in a day.

Even if the Peak-hour Volume Warrant is met, a more detailed signal warrant study is recommended before a signal is installed. The more detailed study should consider volumes during the daily peak-hours of roadway traffic, pedestrian traffic, and accident histories.

Freeway Segment Analysis

Freeway merge/diverge segments and basic segments were analyzed utilizing the methodologies outlined in Chapters 12 and 13 of the Highway Capacity Manual, 2010 (HCM 2010)⁴.

Basic Segments

Basic freeway segments operations and level-of-service is defined by density (passenger cars per mile per lane) which depends upon traffic volumes, and segment, characteristics. These characteristics include the geometry, grade, free flow speeds, and heavy vehicles. Table 6 shows the relationship of level-of-service to freeway density for merge, diverge, and weaving segments.

Table 5. Level-of-Service Criteria – Basic Freeway Segments

Level of Service	Maximum Density (passenger vehicles per mile per lane)
A	<11
B	18
C	26
D	35
E	45
F	> 45, or Demand exceeds capacity

Source: Transportation Research Board (2010) Highway Capacity Manual, Chapter 11, Washington, D.C.

Merge, Diverge, and Weave Segments

Freeway merge and diverge segments operations and level-of-service is defined by density (passenger cars per mile per lane) which depends upon traffic volumes and the ramp characteristics. These characteristics include the length and type of acceleration/deceleration lanes, free-flow speeds, number of lanes, grade, heavy vehicles, and types of facilities. Table 6 and Table 7 shows the relationship of level-of-service to freeway density for merge, diverge, and weaving segments.

Table 6. Level-of-Service Criteria – Freeway Ramp Merge/Diverge Areas

Level of Service	Maximum Density (passenger vehicles per mile per lane)

3.3 Standards of Significance

Level-of-service impacts of the proposed project were determined based on the methods described above and identified as either "significant" or "less-than-significant" in the following thresholds:

City of Folsom

Policy M 4.13 of the City of Folsom General Plan (adopted August 28, 2018) calls for the City to:

Strive to achieve at least traffic Level of Service "D" (or better) for local streets and roadways throughout the City. In designing transportation improvements, the City will prioritize use of smart technologies and innovative solutions that maximize efficiencies and safety while minimizing the physical footprint. During the course of plan buildout, it may occur that temporarily higher levels-of-service result where roadway improvements have not been adequately phased as development proceeds. However, this situation will be minimized based on annual traffic studies and monitoring programs. City Staff will report to the City Council at regular intervals via the Capital Improvement Program process for the Council to prioritize projects integral to achieving level-of-service D or better.

Consistent with historical practice within the City of Folsom, the General Plan EIR also includes a criterion addressing potential impacts at locations that operate at level-of-service E or F under no-project conditions. Under that standard, a significant impact would occur if the proposed project would:

Increase the average delay by five seconds or more at an intersection that currently operates (or is projected to operate) at an unacceptable level-of-service under "no-project" conditions.

For the purposes of this analysis, an impact is considered potentially significant if implementation of the Project would result in any of the following:

- Cause an intersection in Folsom that currently operates (or is projected to operate) at level-of-service D or better to degrade to level-of-service E, or worse;

- Increase the average delay by five seconds or more at an intersection in Folsom that currently operates (or is projected to operate) at an unacceptable level-of-service E or F.

Freeway Facilities

An impact is considered significant on freeway facilities if the project causes the facility to change from an acceptable to unacceptable level-of-service. For facilities that are or will be operating at unacceptable level-of-service without the project, an impact is considered significant if:

- The existing level-of-service cannot be maintained with the addition of project traffic;
- The project traffic increases vehicle density on a freeway mainline segment or freeway ramp junction by 0.1 passenger cars per lane per mile;
- The project increases the number of peak-hour vehicles on a freeway mainline segment or freeway ramp junction by more than 1 percent.

Per the Caltrans' Guide for the Preparation of Traffic Impact Studies, Caltrans strives to maintain a target level of service at the transition between level-of-service C and level-of-service D on state highway facilities. However, for the effected portion of US 50, Caltrans has established a concept level-of-service E threshold⁵. For consistency with other traffic impact studies performed in the City of Folsom that considered US 50, level-of-service E was selected as the minimum standard for all study freeway facilities.

Bicycle/Pedestrian/Transit Facilities

An impact is considered significant if implementation of the Project would:

- Inhibit the use of bicycle, pedestrian, or transit facilities;
- Eliminate existing bicycle, pedestrian, or transit facilities;
- Prevent the implementation of planned bicycle, pedestrian, or transit facilities.

3.6 Analysis Tools

Macroscopic Intersection Analysis

Control delay and level-of-service for study intersections were calculated using the PTV Vistro⁶ analysis software (Version 2022 SP 0-0). Vistro is a software package for modeling vehicle delay and optimizing traffic signal timings. Version 6 implements the methodologies of the 2000 (4th Ed.), 2010 (5th Ed.), and the 6th Ed. of the HCM for signalized and unsignalized intersections. Vistro requires data on road characteristics (geometric), traffic counts, and the signal timing data for each analysis intersection.

⁶ PTV (2021) Vistro, PTV America, Portland OR.

Macroscopic Freeway Analysis

Basic freeway segments, merge, and diverge segments were analyzed using FREEVAL 2015e⁷. FREEVAL provides freeway planning-level capacity analyses based on HCM 6th Edition for undersaturated and oversaturated conditions for estimating vehicle density and level-of-service.

⁷ Lake Trask, Aghdashi, B., Schroeder, S., and Roupail, N. (2015) Freeway Facilities And Reliability Analysis Computational Engine For The HCM 6th Edition: A Guide For Multimodal Mobility Analysis, North Carolina State University, Raleigh NC, <http://freeval.org/#home>.

4. EXISTING 2021 CONDITIONS

This section presents the Existing Condition. For purposes of this study, Existing Conditions represent typical midweek, non-holiday, traffic volumes in late August/early September of 2021 adjusted to negate the impact of the COVID-19 pandemic on traffic volumes.

4.1 Existing 2021 Condition

Data Sources

The analysis tools require a variety of data to generate the evaluation criteria. The following sections describe data collection procedures for Existing Conditions. There were three primary data elements (roadway characteristics, intersection turning movement counts, and traffic control data); and two supplementary elements (other recent studies, and field data) that comprised the data collection program for this traffic analysis.

Roadway Geometry and Usage Characteristics

The geometry and usage data for the analysis were collected through aerial photographs, field visits, and prior studies. Current intersection geometry was field validated. Table 8 shows the key items included in the geometric data and the source for each item.

Table 8. Key Items and Sources for Geometry and Usage Data

Key Item	Source
Lane configurations and width	Aerial photographs and field visits
Lane utilization	Prior studies, aerial photographs, and field visits
Intersection spacing	Aerial photographs and field visits
Length of storage bays	Aerial photographs and field visits
Transit stops and routes	Transit schedules, aerial photographs, and field visits
Turn prohibitions or allowance	Aerial photographs, field visits, and traffic counts

Lane configurations and width – These data specify the number of lanes and the width of the roadway in each direction, and the directional turns that are allowed from each lane.

Lane utilization – These data specify how lanes are used by drivers, such as traffic distribution between lanes on a multi-lane roadway.

Intersection spacing – These data refer to the distance (in feet) between intersections.

Length of storage bays – These data refer to the length (in feet) of available storage for left-turning or right-turning vehicles where exclusive turn lanes are available. It is collected for right-turn lanes when the parking lane is used as a right-turn lane.

Transit stops and routes – A transit stop is an area where passengers await, board, alight, and transfer between transit vehicles. A transit route is the roadway that transit vehicles operate on.

Turn prohibitions or allowance – These data specify if right turns on red (RTOR) are allowed on the roadway.

Intersection Turning Movement Counts

Existing morning and evening peak-period vehicle and pedestrian turning movement counts were collected at study intersections on Thursday May 5, 2020; Tuesday May 18, 2021; and Thursday August 26, 2021. Pre COVID-19 pandemic counts, collected along East Bidwell Street on March 5, 2020, were used to factor up the 2021 counts to account for short term traffic reductions caused by the economic effect of COVID-19. AM peak hour counts were factored up by 52% and PM peak-hour counts were factored up by 28%. Traffic count data sheets are provided in **Appendix A** of this report. Peak-hour traffic counts were used to conduct the intersection level-of-service analysis. Turning movement counts at consecutive intersections were balanced and adjusted where appropriate to conservatively reflect existing traffic flows. Observed intersection peak hour factors (PHF) were applied. **Figure 11** provides a summary of the intersection lane geometry and peak-period turning movements under Existing Conditions.

Existing Condition Intersection and Segment Level-of-Service

Table 9 and **Table 10** present a summary of level-of-service results for the study intersections under Existing Conditions. The results indicate that all study segments are anticipated to operate at an acceptable level-of-service. Three study intersections exceed the General Plan level-of-service standard prior to the addition of Project traffic.

- Prairie City Rd/American Aggregate Dr would operate at a deficient level-of-service during the AM peak if not for the Covid-19 related traffic reductions.
- Prairie City Rd/Iron Point Rd would operate at a deficient level-of-service during the AM and PM peak if not for the Covid-19 related traffic reductions.
- East Bidwell St/Iron Point Rd would operate at a deficient level-of-service during the PM peak if not for the Covid-19 related traffic reductions.

These locations are shown in orange highlight in the tables below. Calculation sheets for intersection delay and level-of-service are provided in **Appendix B**.

4.2 Assessment of Proposed Project

Trip Generation

Traffic generated by the proposed project was based on Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition (2017), and is provided in Table 11 below.

Table 11. Project Trip Generation

Location	Quantity	Units	Metric	Daily	AM Peak-Hr			PM Peak-Hr		
					Tot	In	Out	Tot	In	Out
"Lot 6"	100	du	Rate	5.44	0.32	27%	73%	0.41	60%	40%
			Trips	544	32	9	23	41	25	16
"Lot 1"	153	du	Rate	5.44	0.32	27%	73%	0.41	60%	40%
			Trips	832	49	13	36	63	38	25
Total	253	du	Rate	5.44	0.32	27%	73%	0.41	60%	40%
			Trips	1376	81	22	59	104	62	42

Source: ITE (2017) Trip Generation Manual, 10th Ed, Institute of Transportation Engineers, Washington DC.

Trip Distribution and Assignment

Trip distribution was based on observed traffic counts and select zone analysis within the travel demand model, and nearby projects. Because of the planned additions of freeway crossings and interchanges by 2035, separate distributions and assignments were done for existing 2021/EPAP 2026 conditions and Cumulative 2035 condition.

Project trip distribution and assignment for existing 2021 and EPAP 2026 conditions are shown in Figure 12 and Figure 13. Project trip distribution and assignment for existing 2021 and EPAP 2026 conditions are shown in Figure 14 and Figure 15.

Figure 12. Project Trip Distribution for Existing 2021 and EPAP 2026 Conditions

Figure 13. Project Trip Assignment for Existing 2021 and EPAP 2026 Conditions

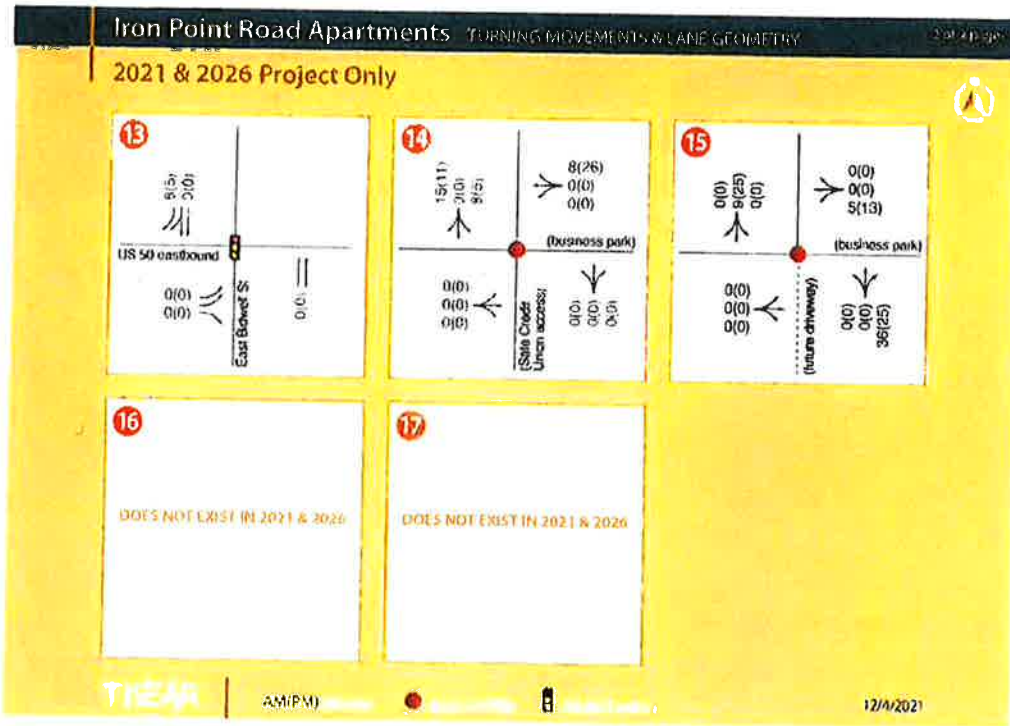

Figure 13. Project Trip Assignment for Existing 2021 and EPAP 2026 Conditions (continued)

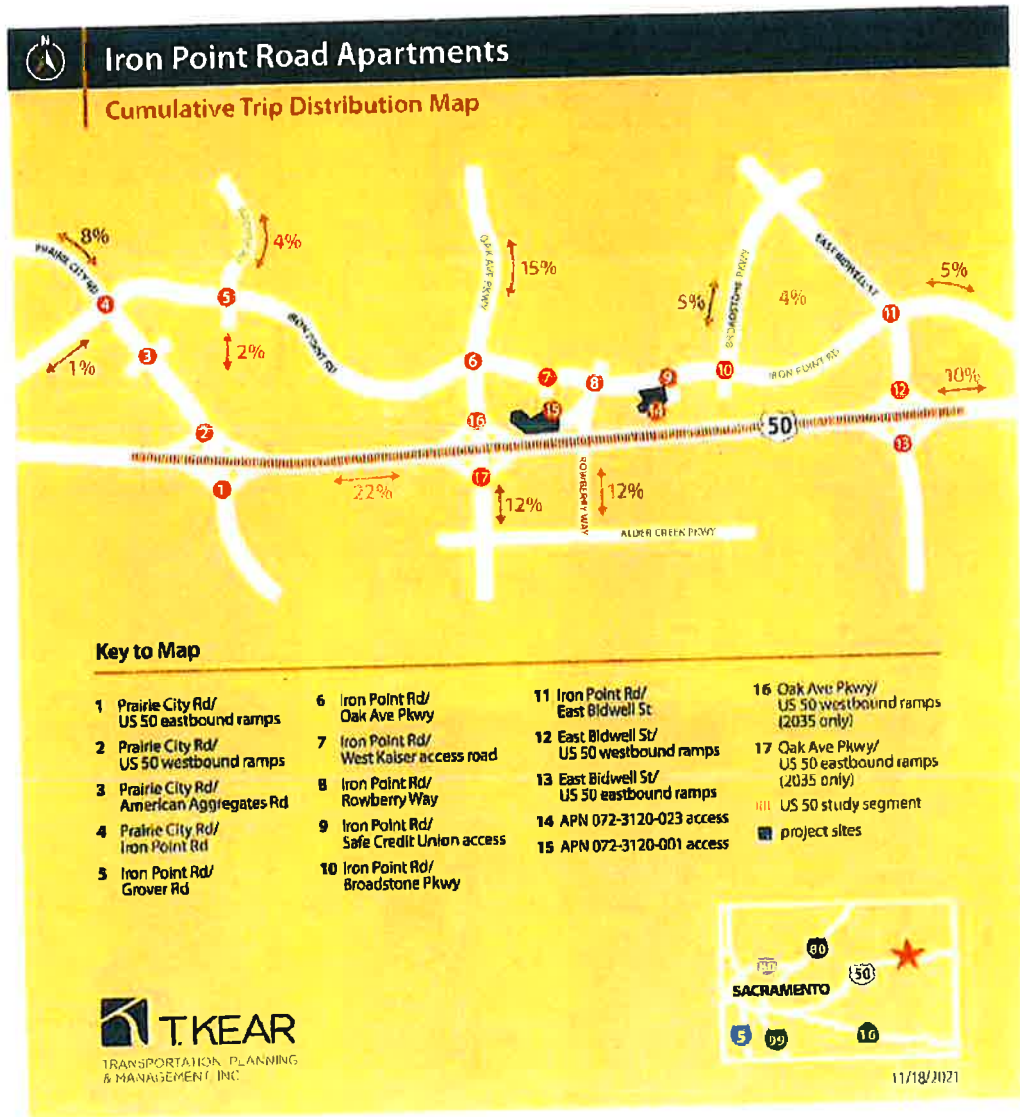

Figure 14. Project Trip Distribution for Cumulative 2035 Conditions

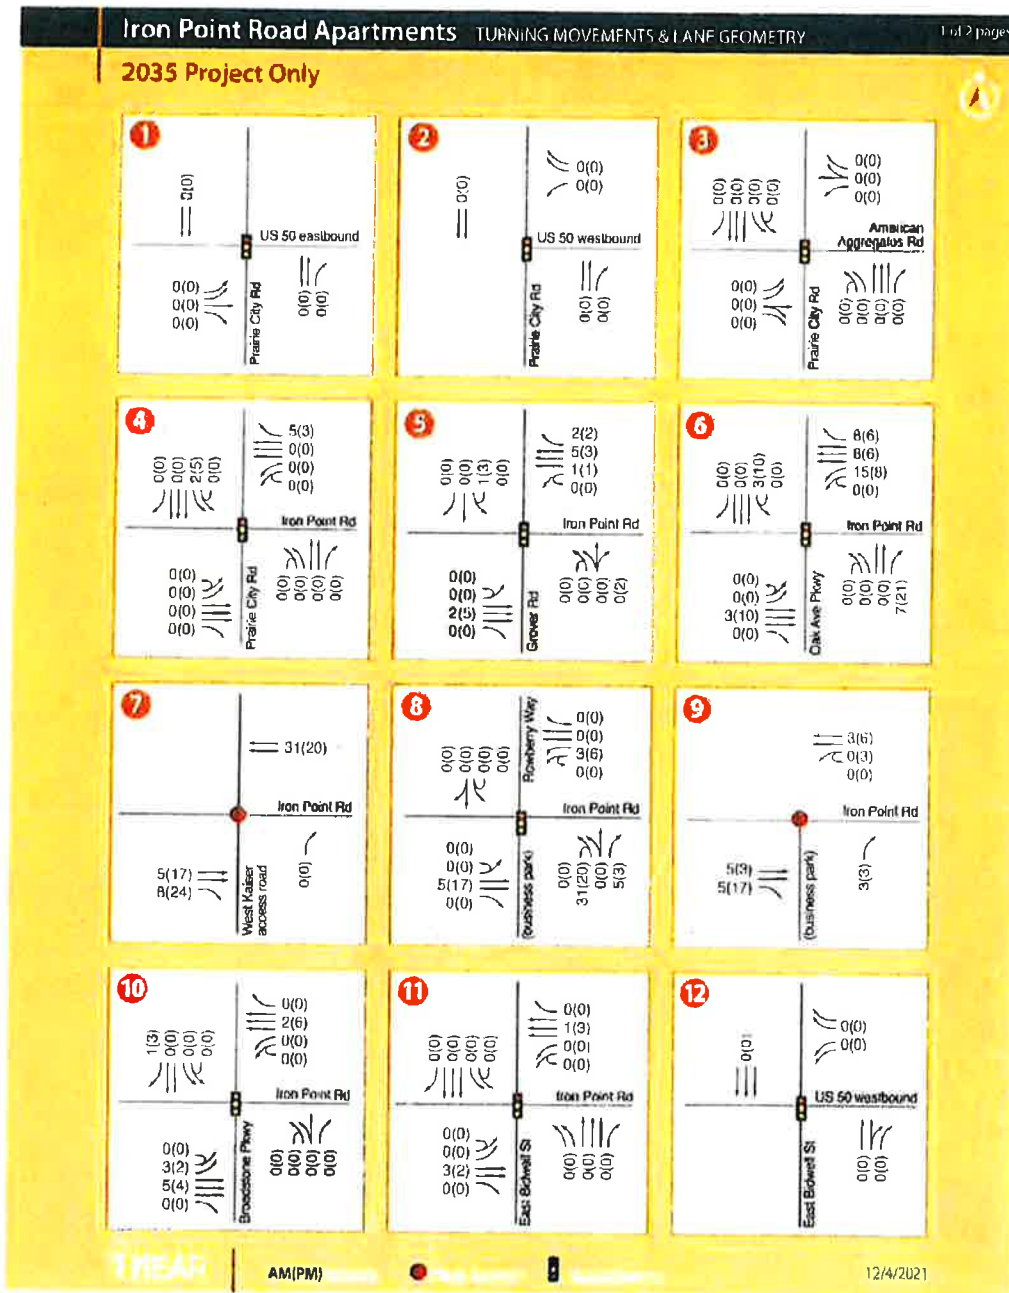

Figure 15. Project Trip Assignment for Cumulative 2035 Conditions

Figure 15. Project Trip Assignment for Cumulative 2035 Conditions (continued)

4.3 Existing 2021 with Project Conditions

Peak-hour traffic associated with the Project was added to the Existing 2021 turning volumes at each intersection. Delay and level-of-service were determined at the study intersections and segments. **Figure 16** summarizes the turning movements and lane configurations for the Existing with Project Condition. **Table 12** and **Table 13** presents a summary of the level-of-service results for the study intersections and segments.

The results indicate that all study segments are anticipated to operate at an acceptable level-of-service; three study intersections exceed the General Plan level-of-service standard prior to the addition of Project traffic.

- Prairie City Rd/American Aggregate Dr would operate at a deficient level-of-service during the AM peak if not for the Covid-19 related traffic reductions.
- Prairie City Rd/Iron Point Rd would operate at a deficient level-of-service during the AM and PM peak if not for the Covid-19 related traffic reductions.
- East Bidwell St/Iron Point Rd would operate at a deficient level-of-service during the PM peak if not for the Covid-19 related traffic reductions.

These locations are shown in orange highlight in the tables below. Because the increase in delay is less than five seconds, these violations of the General Plan level-of-service policy is not considered a Project impact. Calculation sheets for intersection delay and level-of-service are provided in **Appendix B**.

In addition to level-of-service, the 95th percentile left turn queues with and without the project were reviewed to identify any study intersections with Project queueing impacts. One location, the westbound left turn movement at Intersection #4 Prairie City Rd/Iron Point Rd during the AM peak has a queueing deficiency that Project traffic is anticipated to add more than one vehicle length to. This is considered a Project Related deficiency. An Abatement Measure⁸ to address this deficiency is provided in Section 8.

⁸ To avoid confusion, General Plan deficiencies are labeled as “deficiencies” rather than (CEQA) “impacts”, and the related improvements are labeled as “abatement measures” rather than “mitigation measures”. This is done to emphasize that level-of-service and/or queueing concerns are not considered to be impacts under CEQA.

5. EXISTING PLUS APPROVED PROJECTS (EPAP) 2026 CONDITION WITH AND WITHOUT PROJECT

This section presents Existing Condition traffic plus traffic from planned and approved projects that are reasonably expected to be constructed by the time the project is constructed, corresponding to five years' worth of growth.

5.1 EPAP 2026 Growth Increment

Five-year traffic forecasts were developed using two different methodologies, and the higher (more conservative) volume projections were used for this analysis.

- The first method was based on the traffic anticipated from approved projects that have not been fully built as of August 2021.
- The second method used the City of Folsom General Plan travel demand model to estimate growth through 2026. Base year (2015) and Cumulative year (2035) trip tables were both assigned to the base year model network. The resulting 2015 and 2035 volumes interpolated to 2021 and compared with counts to calibrate the model to conditions in the immediate project vicinity. Results were then interpolated to 2026 and the NCHRP 255 adjustment methodology applied⁹. Supporting material for Traffic forecasting calculations are provided in **Appendix C**.

The second method resulted in higher traffic volumes and was therefore used as the bases for EPAP 2026 condition analysis.

5.2 EPAP 2026 Conditions

EPAP Conditions analysis utilizes lane configurations and signal timing plans from the Existing Conditions. **Figure 17** summarizes the turning movements and lane configurations for the EPAP 2026 Conditions scenario. **Table 14** and **Table 15** present a summary of level-of-service results for the study intersections under EPAP 2026 Conditions.

The results indicate that all study segments are anticipated to operate at an acceptable level-of-service; three study intersections exceed the General Plan level-of-service standard prior to the addition of Project traffic.

- Prairie City Rd/American Aggregate Dr would operate at a deficient level-of-service during the AM peak if not for the Covid-19 related traffic reductions.
- Prairie City Rd/Iron Point Rd would operate at a deficient level-of-service during the AM and PM peak if not for the Covid-19 related traffic reductions.
- East Bidwell St/Iron Point Rd would operate at a deficient level-of-service during the AM and PM peak if not for the Covid-19 related traffic reductions.

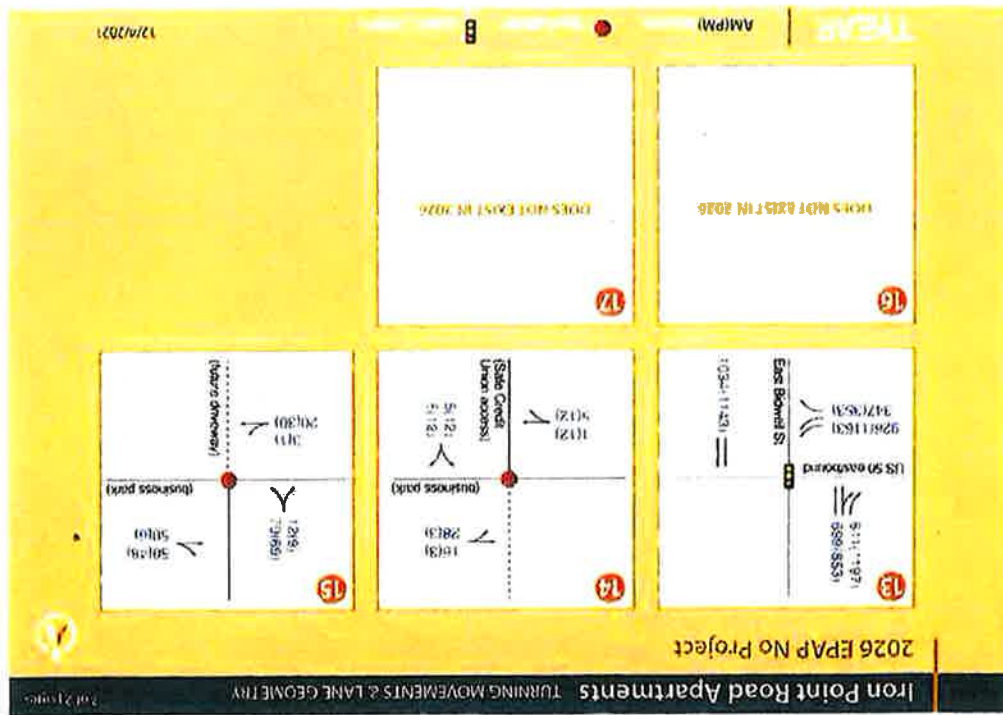

⁹ The NCHRP 255 adjustment uses anticipated traffic growth on each intersections approach and departure legs and observed traffic counts to estimate future year turning movements.

These locations are shown in orange highlight in the tables below. Calculation sheets for intersection delay and level-of-service are provided in Appendix B.

* Level of Service

5.3 EPAP 2026 with Project Condition

Peak-hour traffic associated with the Project was added to anticipated EPAP 2026 turning volumes at each intersection. Delay and level-of-service were then determined at the study intersections. **Figure 18** summarizes the turning movements and lane configurations for the EPAP 2026 with Project condition. **Table 16** and **Table 17** present a summary of the level-of-service results for the study intersections.

The results indicate that all study segments are anticipated to operate at an acceptable level-of-service; three study intersections exceed the General Plan level-of-service standard prior to the addition of Project traffic.

- Prairie City Rd/American Aggregate Dr would operate at a deficient level-of-service during the AM peak if not for the Covid-19 related traffic reductions.
- Prairie City Rd/Iron Point Rd would operate at a deficient level-of-service during the AM and PM peak if not for the Covid-19 related traffic reductions.
- East Bidwell St/Iron Point Rd would operate at a deficient level-of-service during the AM and PM peak if not for the Covid-19 related traffic reductions.

These locations are shown in orange highlight in the tables below. Because the increase in delay is less than five seconds, these violations of the General Plan level-of-service policy is not considered a Project impact. Calculation sheets for intersection delay and level-of-service are provided in **Appendix B**.

In Addition to level-of-service, the 95th percentile left turn queues with and without the project were reviewed to identify any study intersections with Project queueing impacts. One location, the westbound left turn movement at Intersection #4 Prairie City Rd/Iron Point Rd during the AM peak has a queueing deficiency that Project traffic is anticipated to add more than one vehicle length. This is considered a Project related deficiency. This deficiency is identical to the Project related deficiency previously identified under Existing 2021 with Project conditions. An Abatement measure to address this deficiency is provided in **Section 8**¹⁰.

¹⁰ To avoid confusion, General Plan deficiencies are labeled as "deficiencies" rather than (CEQA) "impacts", and the related Improvements are labeled as "abatement measures" rather than "mitigation measures". This is done to emphasize that level-of-service and/or queueing concerns are not considered to be impacts under CEQA.

6. CUMULATIVE 2026 CONDITION WITH AND WITHOUT PROJECT

This section presents Cumulative Condition traffic.

6.1 Cumulative 2035 Growth Increment

The City of Folsom General Plan travel demand model was used to estimate growth through 2035. The travel demand model was calibrated to the immediate project vicinity by using Base year (2015) and Cumulative year (2035) trip tables, both assigned to the base year model network. The resulting 2015 and 2035 volumes were interpolated to 2021 and compared with the counts to calibrate the model to conditions in the immediate project vicinity. The calibrated model was then applied using the cumulative 2035 trip tables and network to estimate Cumulative condition volumes. The NCHRP 255 adjustment methodology applied¹¹ was used to refine forecast turning movements. Supporting material for traffic forecasting calculations are provided in Appendix C.

6.2 Cumulative 2035 Conditions

The Cumulative Conditions analysis accounts for several planned changes to Folsom's transportation system:

- Addition of a third northbound through lane at intersection #4 (Prairie City Rd/Iron Point Rd);
- Widening of Iron Point Rd to six lanes on all segments between Prairie City Rd and East Bidwell St (effecting intersections 6-9);
- Construction of the Rowberry Way overcrossing of US 50;
- Construction of the Empire Ranch Rd interchange;
- Construction of the Oak Avenue Pkwy interchange; and
- The extension of Alder Creek Pkwy through Oak Avenue Pkwy (along with other Folsom Ranch infrastructure).

Figure 19 summarizes the turning movements and lane configurations for the Cumulative 2035 Conditions scenario. Table 18 and Table 19 present a summary of level-of-service results for the study intersections under EPAP 2026 Conditions. All study intersections and segments are anticipated to operate at an acceptable level-of-service. Calculation sheets for intersection delay and level-of-service are provided in Appendix B.

¹¹ The NCHRP 255 approach is an iterative algorithm that uses anticipated traffic growth on each intersections' approach and departure legs, and observed traffic counts, to estimate future year turning movements.

1.0 INTRODUCTION

This Initial Study addresses the proposed Folsom Corporate Center Apartments (proposed project) and whether it may cause significant effects on the environment. These potential environmental effects are further evaluated to determine whether they were examined in the 2035 City of Folsom General Plan Environmental Impact Report (EIR; City of Folsom 2018) as amended by Code (PRC) §21083.3. This Initial Study focuses on any effects on the environment which are specific to the proposed project and were not analyzed as potentially significant effects in the 2035 City of Folsom General Plan EIR as amended by the EIR for the East Area Facilities Plan, or for which substantial new information shows that identified effects would be more significant than described in the previous EIRs. For additional information regarding the relationship between the proposed project and the previous EIRs, see Section 6.0 of this Initial Study.

The Initial Study is also intended to assess whether any environmental effects of the project are susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or by other means [Section 15152(b)(2)] of the California Environmental Quality Act (CEQA) Guidelines. If such revisions, conditions, or other means are identified, they will be identified as mitigation measures.

This Initial Study relies on CEQA Guidelines Sections 15064 and 15064.4 in its determination of the significance of environmental effects. According to Section 15064, the finding as to whether a project may have one or more significant effects shall be based on substantial evidence in the record, and that controversy alone, without substantial evidence of a significant effect, does not trigger the need for an EIR.

2.0 PROJECT BACKGROUND

The following project specific technical reports quantified analysis and or surveys were used in preparation of this Initial Study and are incorporated by reference:

- Air Quality, Greenhouse Gases Analysis, prepared by HELIX (2022)
- Health Risk Assessment, prepared by HELIX (2021)
- Biological Resources Memo, prepared by SCS Engineers (2021)
- Biological Resources Inventory, prepared by HELIX (2021)
- Arborist Report, prepared by Arborwell (2021)
- Noise Analysis, prepared by Bollard Acoustical, May 3, 2021 – revised by HELIX (2021)
- Transportation Impact Study, prepared by T. Kear Transportation Planning and Management, Inc. (2021).
- Tribal Cultural Resource technical memo, prepared by ECORP (2021)
- Cultural Resources Assessment, prepared by HELIX (2021)
- Preliminary Water Quality Report, prepared by RSC Engineering (2021)
- Geotechnical Investigation, Folsom Senior Living Facility, Geocon Consultants (2017)
- Sewer Capacity Analysis, prepared by Water Works Engineers (2021)

3.0 PROJECT DESCRIPTION

3.1 Project Location

The project site consists of two parcels situated in south/central City of Folsom in northeastern Sacramento County, California (Figures 1-2 in Appendix A). The first parcel, referred to as Lot 1 (APN: 072-3120-026), is an estimated 7.24-acre parcel located south of Rowberry Drive at a point south of Iron Point Road. The second parcel, referred to as Lot 6 (APN 072-3120-023), is a 4.68-acre parcel located south of Iron Point Road between Broadstone Parkway and Rowberry Drive, approximately 1,400-feet northeast of Lot 1. The street address is currently unnumbered. The project site is located within Section 7, 8, 17 & 18, Township 9 North, Range 8 East (Mount Diablo Base and Meridian, United States Geological Survey 7.5 minute "Folsom Quadrangle").

3.2 Project Setting and Surrounding Land Uses

The project site is located within the Folsom Corporate Center, a commercial business center containing a combination of commercial office buildings and open space areas. The area in which the project is located is characterized by suburban residential development, commercial business centers, transportation, and open space and undeveloped lots. Neighboring land uses are summarized in Table 1.

Table 1. Neighboring Land Uses

DIRECTION	LAND USE
North	Lot 1: Office buildings, oak woodland, and medical offices Lot 6: Iron Point Road, residential development north of Iron Point Road
East	Lot 1: vacant land Lot 6: constructed ponds/wetland, office buildings
South	Lot 1: US Highway 50, vacant land Lot 6: office buildings, US Highway 50, undeveloped land containing scattered oaks
West	Lot 1: commercial buildings, memory care facility, and undeveloped land Lot 6: office buildings, stand of oaks

Lot 1 is largely undeveloped, and is bordered by office buildings, oak woodland, and medical offices to the north, vacant land to the east, US Highway 50 and vacant land to the south, and commercial buildings, a memory care facility, an active-adult apartment community, and undeveloped land to the west. The parcel slopes from east to west with elevations ranging from 371 feet above mean sea level (amsl) in the eastern portion of the parcel to 317 feet amsl in the western portion of the parcel. The parcel is raised above the adjacent properties to the north and south. Several electrical transmission and telecommunications easements cross through the western portion of the parcel within an approximately 377.5-foot-wide restricted building and use area. Overhead transmission lines and utility poles occur on the parcel within the easements. A small area of the northwestern portion of the parcel is developed with parking, landscaping, and a walkway associated with the existing adjacent medical offices, located north and northeast of the parcel. A 50-foot landscape easement lines the southern parcel boundary. An existing US Highway 50 right-of-way fence is located along the southern parcel boundary. Additionally, one existing oak tree is located in the southeastern corner of the parcel.

Lot 6 is largely undeveloped and is bordered by Iron Point Road and residential development to the north, a constructed pond/wetland and office buildings to the east, office buildings and undeveloped land containing scattered oaks to the south, and office buildings to the west. An unnamed road borders the parcel along its eastern and southern boundaries. The parcel slopes from west to east, with elevation ranging from 370-feet amsl in the western portion of the site to 358-feet amsl in the eastern portion of the site. The parcel is elevated above the surrounding properties. An existing sidewalk with a curb and gutter, and an existing retaining wall, are located in a 20-foot-wide public utility, landscape, and pedestrian easement that lines the northern parcel boundary along Iron Point Road. The parcel frontage with the unnamed roadway is landscaped within an existing 20-foot-wide access easement. Additional areas of the parcel are undeveloped and sparsely vegetated. A group of oak trees are located in the southwestern portion of the parcel. Seven oak trees are proposed to be removed, and two oak trees would remain and become incorporated into the landscape design.

3.3 Project Characteristics

The proposed project includes the construction of a new multi-family apartment community on two separate parcels (referred to as Lot 1 and Lot 6) within the Folsom Corporate Center. The apartment community in total would consist of 253 apartment units, two clubhouses, 491 parking spaces, and indoor and outdoor amenities unique to each parcel. On-site parking would include garage parking spaces, carport covered parking spaces, and uncovered parking spaces. The units would be available as one-, two-, or three-bedroom apartments, and would range from 690-square feet (sf) to 1,325-sf. The proposed project would require a General Plan Amendment, Rezone, Planned Development Permit, Design Review, and Tree Removal Permit.

Lot 1 is a 7.24-acre parcel and would develop seven, 3-story apartment buildings with a total of 153 units (**Figure 3 in Appendix A**). The site would have 304 parking spaces provided as carports and uncovered spaces throughout the parcel. The parcel would include an approximately 6,700-sf, 3-story clubhouse with a pool located in the southeastern portion of the parcel. Additional amenities would include a dog park in the southwest portion of the parcel, fire pit with seating and a picnic area located near the center of the parcel, and a landscaped seating area near the main entrance at the northeastern portion of the parcel. Bicycle parking would be in an enclosed structure adjacent to the clubhouse. The existing oak tree in the southeast corner of the parcel would remain.

Lot 6 is a 4.86-acre parcel and would develop five, 3-story apartment buildings with a total of 100 units (**Figure 4 in Appendix A**). The site would have 187 parking spaces provided as carports and uncovered spaces throughout the parcel. The parcel would include an approximately 3,200-sf, one story clubhouse with a pool and amenity area located in southwestern portion of the parcel, east of the main entrance driveway. Additional amenities would include proposed seating areas, picnic areas, a fire pit, and a dog park in the southwestern portion of the parcel. Bicycle parking would be located in a dedicated room in the clubhouse. A group of oak trees are located in the southwestern corner of the parcel. Seven of the trees on the parcel are proposed to be removed, while the remaining two would remain and be incorporated into the landscape design.

Additional proposed improvements include drive aisles, curbs, gutters, sidewalks, internal walkways, underground utilities, retaining walls, site lighting, site landscaping, and monument signs. Building materials would consist of stucco, fiber cement siding and stone veneer. The height of each building would be approximately 38 feet with a parapet roof system to blend with the commercial buildings and

to screen the mechanical equipment (HVAC) on the roof. The project features are summarized in **Table 2** and are described in detail in the following paragraphs.

Table 2. Summary of Project Features

PROJECT FEATURE	UNITS/ PARKING SPACES	SITE COVERAGE (square feet)
Lot 1		
Total residential building units	153 units	
Clubhouse		6,782
Total parking spaces/paved areas	304 spaces	98,849
Landscaping/Shaded Area		34,945
Subtotal Lot 1		
Lot 6		
Total residential building units	100 units	
Clubhouse		3,098
Total parking spaces/paved areas	187 spaces	67,868
Landscaping/Shaded Area		34,186
Subtotal Lot 6		
Total project	253 units/491 parking spaces	

Source: BSB Design, Folsom Corporate Center Apartments Site Plan (2021).

Parking and Circulation

Parking proposed on both Lot 1 and Lot 6 currently meet the Zoning Ordinance requirement of 1.5 stalls per unit. Under the current multi-family guidelines, Lot 1 exceeds the Folsom Design guidelines by providing 304 parking spaces (1.99 ratio); inclusive of 74 garaged spaces and 79 covered stalls. Lot 6 also meets the guidelines with 187 spaces (1.87 ratio); inclusive of 46 garaged spaces and 54 covered stalls. The overall parking ration of Lots 1 and 6 together exceed the City's current multi-family guidelines with a parking ratio of 1.94.

Car Parking and Circulation

Lot 1

Lot 1 would have one gated main access driveway with two gated emergency vehicle access driveways. The main gated entrance would be located on the northern parcel boundary and would connect to Rowberry Drive. Additionally, a gated emergency vehicle access driveway entrance would be located approximately 640-feet west of the main entrance and would connect to the existing parking associated with the medical office north of the parcel. A secondary gated, emergency vehicle access driveway would connect to Rowberry Drive at a point 640-feet east of the main driveway. On-site circulation would consist of a circular driveway that would connect directly with the main public entrance driveway on the northern parcel boundary. Lot 1 includes sidewalk pedestrian connections to the Kaiser outer parking lot to the north of the parcel, and to the planned dialysis clinic to the east of the parcel. The two emergency vehicle access driveways would connect with the main on-site circulation driveway that would provide access to the proposed buildings and clubhouse located in the southeastern portion of the parcel.

A 6-foot height metal pedestrian gate would be located next to each entrance, the main access driveway, and the two emergency access driveways. Pedestrian circulation would consist of sidewalks throughout the parcel, and crosswalks providing pedestrian access to the apartment units, clubhouse and pool, and the main and emergency entrances.

Lot 6

Lot 6 would be accessed by one main access driveway and one emergency vehicle access driveway. The gated main entrance would be located on the southern parcel boundary and would connect to the unnamed road that borders the parcel to the south and east. A gated emergency vehicle access driveway would be located 170-foot east of the main access driveway and would connect to the unnamed road that borders the parcel to the south and east. On-site circulation would consist of a circular driveway that provides access to the proposed buildings and clubhouse, the amenities, the emergency access driveway, and the main entrance/ exit driveway.

One 6-foot metal pedestrian gate would be located next to each entrance, the main entrance driveway, and the emergency access driveway. Pedestrian circulation would consist of sidewalks throughout the parcel, and crosswalks providing pedestrian access to the apartment units, clubhouse and pool, and the main and emergency entrances.

Bicycle Parking

The proposed project would provide bicycle parking spaces throughout Lot 1 and Lot 6 that would exceed City and Title 24 requirements. Lot 1 bicycle parking would be in an enclosed structure adjacent to the main clubhouse. Lot 6 would include bicycle parking within a dedicated room in the clubhouse. By exceeding the bicycle parking standards, the intent is to help offset the need for motorized vehicles. In addition, the proposed project plans to provide some community-owned bicycles for use by residents between Lot 1 and Lot 6, or for easier access to nearby amenities such as the wetland and oak preserves, Folsom Gateway, or the shops at the Palladio. Of note, Lot 6 is located less than 0.25-mile from Folsom Gateway and 0.6-mile from Palladio, and Lot 1 is located approximately 0.5-mile from Folsom Gateway and 0.9-mile from Palladio.

Trash and Recycling Service Access

For Lot 1, the trash compactor would be serviced by entering through the emergency vehicle access and exiting the main access point. Recycling would enter and exit through the main access driveway. For Lot 6, trash and recycling would use the main access to enter and exit.

Grading and Drainage

Lot 1

Nearly the entire parcel of Lot 1 would be disturbed during site preparation and grading. Lot 1 would be terraced to the extent possible to account for significant existing elevation change from the eastern to western boundaries. Due to the topography of the parcel and surrounding areas, retaining walls would be installed along portions of the southern and eastern parcel boundaries, as well as along the northwestern parcel boundary. An existing oak tree in the southeastern portion of the parcel would remain.

Stormwater generated in Lot 1 would be collected by storm drain inlets throughout the parcel. The parcel would contain multiple drainage management areas that would manage the stormwater with bioretention facilities and/or Contech stormfilter units as necessary for compliance with the City of Folsom standards.

Lot 6

A majority of Lot 6 would be disturbed during site preparation and grading. An existing retaining wall along the northern boundary of the parcel would remain. Due to the topography of the parcel, a retaining wall would be installed along portions of the northern and eastern parcel boundaries, and a rockery wall would be installed along the western parcel boundary. The existing grade in the southwestern corner of the parcel would be maintained, to preserve the existing oak trees beyond the parcel boundary. Seven oak trees located within the parcel boundary would be removed, and two oak trees would remain and would be incorporated into landscaping.

Stormwater generated in Lot 6 would be collected by several storm drain inlets, gutter flowlines and sidewalk underdrains throughout the parcel. The parcel would contain multiple drainage management areas that would manage the stormwater through the use of disconnected roof drains, bioretention facilities and/or Contech stormfilter units as necessary for compliance with the City of Folsom standards.

Utilities

Lot 1

Both lots contain utility stubs for water and sewer, which would tie into existing water and sewer lines that were provided when the previous phase of the Folsom Corporate Center development project were completed. Multiple existing storm drain stubs located on the northern portion of the site will be used to connect the proposed storm drain system. Proposed water line stubs would connect to existing water service stubs located east of the parcel and on the eastern boundary line. Additionally, proposed sewer line stubs would connect to an existing sewer line with a new manhole provided by a parcel located just north. Stormwater planters and Contech Stormfilter Units are proposed on the project site to address the stormwater quality requirement of the City. Additionally, dry utilities (electric, gas, telephone, and cable TV) would be provided. An easement would be provided and centered over their facilities. An existing 12.5-foot public utility easement is located along Iron Point Road. Proposed fire service lines as well as proposed fire hydrants are located throughout the parcel. Each junction of the utility stubs would be covered by an existing or proposed manhole.

Lot 6

Both lots contain utility stubs for water and sewer, which would tie into existing water and sewer lines that were provided when the previous phase of the Folsom Corporate Center development project were completed. An existing storm drain stub would connect to the proposed site storm drain system. Proposed water lines would connect to an existing domestic water service stub located in the northeastern corner of the parcel. Additionally, proposed sewer line stubs would connect to existing sewer lines stubs located in the eastern portion of the parcel. Stormwater planters, Contech Stormfilter Units, and Disconnected Roof Drains are proposed on the project site to address the stormwater quality requirements of the City. Additionally, dry utilities (electric, gas, telephone, and cable TV) would be provided. An easement would be provided and centered over their facilities. An existing 12.5-foot public

utility easement is located along Iron Point Road. Proposed fire service lines would connect to existing fire lane stubs and fire hydrants are proposed throughout the parcel. Each junction of the utility stubs would be covered by an existing or proposed manhole.

Lighting

Lighting on Lot 1 and Lot 6 would be comprised of 12 and 18-foot-tall light poles with a dark bronze finish in the parking lot that have photo-controlled shut-off, with auto-schedule and motion sensors along with down lighting at 8-feet under the car ports. There would also be building wall sconces at 8-feet above finished floor. All lighting would be designed to minimize light/glare impacts to the adjacent properties by ensuring that all exterior lighting and pole-mounted parking lot and driveway lighting be shielded and directed downward. Light-emitting diode luminaires would be used for all of the proposed outdoor lighting.

Landscaping

Lot 1

The project applicant proposed a landscaping plan for Lot 1 that included a variety of new and existing trees, shrubs, and groundcover. Seasonal accented trees and shrubs would be planted the main entrance to Lot 1, and the parking areas would be populated with a canopy of trees and an understory of low shrubs and groundcovers. The proposed project is requesting a deviation from the 50 percent shade requirement on Lot 1 due to the restrictions associated with the power line easements that prohibit full size shade trees. Small trees that meet the standards within the easements have been clustered within these planters to maximize shade patterns. Evergreen shrub clusters would be planted along the eastern and southern parcel boundaries to screen adjacent properties. Purple crape myrtle would line the parking lot in the western portion of Lot 1. Red oak trees would line the southern and eastern parcel boundaries, and several Chinese pistache trees would provide additional cover along walkways between the apartment complexes. An existing oak tree in the southeastern corner of the parcel would remain. Masonry walls would be constructed to provide privacy for the fire pit and picnic area, which are situated between two apartment buildings in the center of the parcel, and for the seating area, which is located adjacent to the main entrance in the northeast portion of the parcel.

Lot 6

The project applicant proposed a landscaping plan for Lot 6 that includes a variety of new and existing trees, shrubs, and groundcover. The main entrance to Lot 6 would be defined by seasonal accented trees and shrubs. Chinese pistache trees would provide a canopy of shade in conjunction with the parking area. Understory planting within the parking lot would consist of low shrubs and groundcover. Lacebark elms would line the bioretention filter in the southeast corner of the parcel, and along the additional carports in the northwest corner of the parcel. Red oak trees would line the northern boundary of the Lot. The planting and irrigation would be designed to meet the Model Water Efficient Landscape Ordinance requirements by utilizing low water use plant material and a high efficiency irrigation system. Seven oak trees in the southwest corner of the project site would be removed, while two oak trees would be incorporated into the landscape design. Masonry walls would be constructed to provide privacy for the fire pit and picnic area, adjacent to the pool area in the southwestern corner, and for the seating area, adjacent to the main entrance in the southern portion of the parcel.

Fencing

A 6-foot height metal fence would be installed along the northeastern, eastern, southern, and western boundaries of Lot 1. A 6-foot height metal fence would be installed along the eastern, southern, and western boundary of Lot 6.

Signage

Project signage would be installed on masonry walls at the main entrance driveway of Lot 1 and Lot 6. In addition, directional signage would be provided on each parcel.

3.4 General Plan Land Use Designation and Zoning

The City of Folsom updated their General Plan 2035 in August 2018. The General Plan is a long-term planning document that guides growth and land development in the City. It provides the foundation for establishing community goals and supporting policies, and directs appropriate land uses for all land parcels within the City.

General Plan Land Use Designation

The General Plan is a long-term planning document that guides growth and land development in the City. It provides the foundation for establishing community goals and supporting policies, and directs appropriate land uses for all land parcels within the City. Under the current General Plan, both project parcels have a land use designation of Industrial/Office Park (IND). However, the proposed project would require a General Plan Amendment from IND to multi-family high density residential (MHD) for both Lot 1 and Lot 6. The MHD designation provides for multifamily residential units in apartment buildings. The proposed multi-family apartment complex and related amenities on Lot 1 and Lot 6 are identified as permitted uses under the MHD designation in the General Plan.

Zoning Ordinance

Developed land uses in the City of Folsom are regulated specifically by the City's Zoning Code (Title 17 of the City's Municipal Code), in addition to the other adopted regulations and programs that apply to all proposed development within the City. In more detail than the General Plan, the Zoning Code regulates land uses on a parcel-by-parcel basis throughout the City. To achieve this regulation, the City assigns each parcel within the City to a zoning district, such as a district for single-family homes. Regulations for each district apply equally to all properties within the district.

Current zoning for Lot 1 is Limited Manufacturing, Planned Development District (M-L PD), and current zoning for Lot 6 is Business and Professional, Planned Development District (B-P PD). The proposed project would require a rezone at Lot 1 from M-L PD to R-4 PD, and a rezone at Lot 6 from B-P PD to R-4 PD. The Planned Development combining zone would remain.

Chapter 17.17 of the Zoning Code outlines use standards for Multi-Family High Density (MHD). The purpose of the MHD zone is to designate areas where group dwellings and apartments are a logical and desirable use. This designation allows for multi-family residential units with 20 to 30 dwelling units per acre.

3.5 City Regulation of Urban Development

Other City Regulation of Urban Development

The City of Folsom further regulates urban development through standard construction conditions and through mitigation, building, and construction requirements set forth in the Folsom Municipal Code. Required of all projects constructed throughout the City, compliance with the requirements of the City's standard conditions and the provision of the Municipal Code avoids or reduces many potential environmental effects. City procedures to minimize negative environmental effects and disruptions include an analysis of existing features, responsible agency and public input to the design process, engineering and design standards, and construction controls. The activities that mitigate typical environmental impacts to be implemented by the City during the project review, design, and construction phases are described in greater detail below.

Community Development Department Standard Construction Conditions

The City's standard construction requirements are set forth in the City of Folsom, Community Development Standard Construction Specifications updated in May 2020. A summary of these requirements is set forth below and incorporated by reference into the project description. Copies of these documents may be reviewed at the City of Folsom, Community Development Department, 50 East Natoma Street, Folsom, California 95630.

The Department's standard construction specifications are required to be adhered to by any contractor constructing a public or private project within the City.

Use of Pesticides – Requires contractors to store, use, and apply a wide range of chemicals consistent with all local, state, and federal rules and regulations.

Air Pollution Control – Requires compliance with all City of Folsom and County of Sacramento air pollution regulations.

Water Pollution – Requires compliance with City water pollution regulations, including National Pollutant Discharge Elimination System (NPDES) provisions.

Noise Control – Requires that all construction work comply with the Folsom Noise Ordinance (discussed further below), and that all construction vehicles be equipped with a muffler to control sound levels. The Contractor shall comply with all local sound control and noise level rules, regulations and ordinances which apply to any work performed pursuant to the Contract Documents.

Naturally Occurring Asbestos – All work involved asbestos containing material must be performed in accordance with California Labor Code, sections 6501.5 through 6510, inclusive, and California Administrative Code, Title 8, Section 5208 and all other pertinent laws, rules, regulations, codes, ordinances, decrees and orders.

Weekend, Holiday, and Night Work – Prohibits construction work during evening hours, or on Sunday or holidays, to reduce noise and other construction nuisance effects.

Public Convenience – Regulates traffic through the work area, operations of existing traffic signals, roadway cuts for pipelines and cable installation, effects to adjacent property owners, and notification of adjacent property owners and businesses.

Public Safety and Traffic Control – Regulates signage and other traffic safety devices through work zones.

Existing Utilities – Regulates the relocation and protection of utilities.

Preservation of Property – Requires preservation of trees and shrubbery and prohibits adverse effects to adjacent property and fixtures.

Cultural Resources – Requires that contractors stop work upon the discovery of unknown cultural or historic resources, and that an archaeologist be retained to evaluate the significance of the resource and to establish mitigation requirements, if necessary.

Protection of Existing Trees – Specifies measures necessary to protect both ornamental and native oak trees.

Clearing and Grubbing – Specifies protection standards for signs, mailboxes, underground structures, drainage facilities, sprinklers and lights, trees and shrubbery, and fencing. Also requires the preparation of a Stormwater Pollution Prevention Plan (SWPPP) to control erosion and siltation of receiving waters.

Reseeding – Specifies seed mixes and methods for reseeded of graded areas.

City of Folsom Municipal Code

The City regulates many aspects of construction and development through requirements and ordinances established in the Folsom Municipal Code. These requirements are summarized in **Table 3**, and hereby incorporated by reference into the Project Description as though fully set forth herein. Copies of these documents may be reviewed at the City of Folsom, Office of the City Clerk, 50 Natoma Street, Folsom, California 95630.

Table 3. City of Folsom Municipal Code Regulating Construction and Development

CODE SECTION	CODE NAME	EFFECT OF CODE
8.42	Noise Control	Establishes interior and exterior noise standards that may not be exceeded within structures, including residences; establishes time periods for construction operations.
8.70	Stormwater Management and Discharge Control	Establishes conditions and requirements for the discharge of urban pollutants and sediments to the storm-drainage system; requires preparation and implementation of Stormwater Pollution Prevention Plans.
9.34	Hazardous Materials Disclosure	Defines hazardous materials; requires filing of a Hazardous Material Disclosure Form by businesses that manufacture, use, or store such materials.
9.35	Underground Storage of Hazardous Substances	Establishes standards for the construction and monitoring of facilities used for the underground storage of hazardous

		substances, and establishes a procedure for issuance of permits for the use of these facilities.
12.16	Tree Preservation	Regulates the cutting or modification of trees, including oaks and specified other trees; requires a Tree Permit prior to cutting or modification; establishes mitigation requirements for cut or damaged trees.
13.26	Water Conservation	Prohibits the wasteful use of water; establishes sustainable landscape requirements; defines water use restrictions.
14.19	Energy Code	Adopts the California Energy Code, 2010 Edition, published as Part 6, Title 24, C.C.R. to require energy efficiency standards for structures.
14.20	Green Building Standards Code	Adopts the California Green Building Standards Code (CALGreen Code), 2010 Edition, excluding Appendix Chapters A4 and A5, published as Part 11, Title 24, C.C.R. to promote and require the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices.
14.29	Grading Code	Requires a grading permit prior to the initiation of any grading, excavation, fill or dredging; establishes standards, conditions, and requirements for grading, erosion control, stormwater drainage, and revegetation.
14.32	Flood Damage Prevention	Restricts or prohibits uses that cause water or erosion hazards, or that result in damaging increases in erosion or in flood heights; requires that uses vulnerable to floods be protected against flood damage; controls the modification of floodways; regulates activities that may increase flood damage or that could divert floodwaters.

4.0 PROJECT OBJECTIVES

The objective of the proposed project is to develop a high-quality planned residential development on two currently vacant infill sites in the City of Folsom. The objective of providing the residential development must be achieved while minimizing environmental impacts to the maximum extent practicable and while meeting the requirements of the General Plan, as amended.

5.0 REQUIRED APPROVALS

A listing and brief description of the regulatory permits and approvals required to implement the proposed project is provided below. This environmental document is intended to address the environmental impacts associated with all the following decision actions and approvals:

- Planned Development Permit:** Because the proposed project would be sited within a Planned Development overlay zoning designation, the project requires a Planned Development Permit. This designation requires review by the Planning Commission from design review purposes.

- **General Plan Amendment:** Because the proposed project would include the construction of a multi-family unit apartment community, the project requires a General Plan Amendment to change the existing land use designation from Industrial (IND) to Multi-family High Density (MHD).
- **Rezone Permit:** Currently, Lot 1 is zoned for Limited Manufacturing Planned Development (M-L, PD) and Lot 6 is zoned for Business and Professional Planned Development (BP, PD). Because the proposed project would include the construction of a multi-family unit apartment community on both lots, a rezone is required to change both zones to General Apartment, Planned Development District (R-4 PD).
- **Design Review:** The proposed project of Lot 1 and Lot 6 would bring new construction to these vacant parcels. Therefore, the proposed construction of Lot 1 and Lot 6 will be subject to design review.
- **Tree Removal Permit:** The proposed project requests a tree permit to remove five trees of Lot 6. Per the Amended Arborist Report by Arborwell, one additional tree is recommended for removal due to its poor condition.

The City has the following discretionary powers related to the proposed project:

- **Certification of the environmental document:** The City Council will act as the lead agency as defined by the California Environmental Quality Act (CEQA) and will have authority to determine if the environmental document is adequate under CEQA.
- **Approval of project:** The City Council will consider approval of the project and all entitlements as described above.

California Department of Fish and Wildlife consultation would be required if active nests are found for species protected by the Migratory Bird Treaty Act, as applicable.

6.0 PREVIOUS RELEVANT ENVIRONMENTAL ANALYSIS

6.1 City of Folsom General Plan

The City of Folsom General Plan provides a framework for the long-range development of Folsom. This General Plan also covers what was previously described in the East Area Facilities Plan. The General Plan guides policy decision-making about land use, transportation improvements, public services, economic development housing, and other issues. The EIR for the 2035 City of Folsom General Plan updated and revised the environmental conclusions of the 1988 General Plan EIR, expanding analysis to include development in unincorporated areas around the City and five additional chapters on matters of local interest (City of Folsom 2018). The EIR for the 2035 General Plan provides the foundation environmental document for evaluating development throughout this part of the City.

6.2 Tiering

“Tiering” refers to the relationship between a program-level EIR (where long-range programmatic cumulative impacts are the focus of the environmental analysis) and subsequent environmental analyses such as the subject document, which focus primarily on issues unique to a smaller project within the larger program or plan. Through tiering a subsequent environmental analysis can incorporate, by reference, discussion that summarizes general environmental data found in the program EIR that establishes cumulative impacts and mitigation measures, the planning context, and/or the regulatory background. These broad-based issues need not be reevaluated subsequently, having been previously identified and evaluated at the program stage.

Tiering focuses the environmental review on the project-specific significant effects that were not examined in the prior environmental review, or that are susceptible to substantial reduction or avoidance by specific revisions in the project, by the imposition of conditions or by other means. Section 21093(b) of the Public Resources Code requires the tiering of environmental review whenever feasible, as determined by the Lead Agency.

In the case of the proposed project, this Initial Study tiers from the EIR for the City of Folsom General Plan as amended by approval of the East Area Facilities Plan. The Folsom General Plan, as amended, is a project that is related to the proposed project and, pursuant to §15152(a) of the CEQA Guidelines, tiering of environmental documents is appropriate. CEQA Guidelines §15152(e) specifically provides that:

“[w]hen tiering is used, the later EIRs or Negative Declarations shall refer to the prior EIR and state where a copy of the prior EIR may be examined. The later [environmental document] should state that the Lead Agency is using the tiering concept and that the [environmental document] is being tiered with the earlier EIR.”

The above mentioned EIRs can be reviewed at the following location:

City of Folsom
Community Development Department
50 Natoma Street
Folsom, CA 95630

Contact: Mr. Steve Banks, Principal Planner
(916) 461-6207

6.3 Incorporation of the Folsom General Plan by Reference

Due to various references to the Folsom General Plan EIR in this proposed project, and to its importance relative to understanding the environmental analysis that has occurred to date with respect to development in the Folsom area, the Folsom General Plan EIR is hereby incorporated by reference pursuant to CEQA Guidelines Section 15150.

6.4 Summary of Folsom General Plan EIR

The Folsom General Plan EIR analyzed the environmental impacts associated with adoption of the City of Folsom General Plan allowing for development, open space preservation, and provision of services land in and adjacent to the City of Folsom.

The Draft Program Environmental Impact Report for the Folsom General Plan identified 453 vacant parcels north of Highway 50 as an area of future development. The Folsom General Plan contemplates the full range of land uses that would constitute a balanced community, including residential uses at a variety of densities, as well as commercial, office, employment, and open space uses. Additionally, public or quasi-public uses are contemplated by the Folsom General Plan, including schools, parks, fire stations, government offices, and other uses.

7.0 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that may require mitigation to reduce the impact from "Potential Impact" to "Less than Significant" as indicated by the checklist on the following pages.

An Initial Study is conducted by a Lead Agency to determine if a project may have a potentially significant effect on the environment (CEQA Guidelines Section 15063). An EIR must be prepared if an Initial Study indicates that further analysis is needed to determine whether a significant impact will occur or if there is substantial evidence in the record that a project may have a significant effect on the environment (CEQA Guidelines Section 15064(f)).

<input type="checkbox"/> Aesthetics	<input type="checkbox"/> Agriculture/Forestry Resources	<input checked="" type="checkbox"/> Air Quality
<input checked="" type="checkbox"/> Biological Resources	<input checked="" type="checkbox"/> Cultural Resources	<input type="checkbox"/> Geology/Soils

<input type="checkbox"/> Mandatory Findings of Significance		

8.0 DETERMINATION

On the basis of this initial evaluation:

<input type="checkbox"/>	I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
<input checked="" type="checkbox"/>	I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
<input type="checkbox"/>	I find that the proposed project MAY have a significant effect on the environment, and an environmental impact report is required.
<input type="checkbox"/>	I find that the proposed project MAY have a "potential impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
<input type="checkbox"/>	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

 Title

9.0 ENVIRONMENTAL INITIAL STUDY CHECKLIST

Responses to the following questions and related discussion indicate if the proposed project will have or will potentially have a significant adverse impact on the environment, either individually or cumulatively with other projects. All phases of project planning, implementation, and operation are considered. Mandatory Findings of Significance are addressed in Section 9.19 below.

- A. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- B. "Less Than Significant With Mitigation" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from earlier analyses may be cross-referenced).
- C. "Less Than Significant Impact" applies where the project creates no significant impacts, only less than significant impacts.
- D. "No Impact" applies where a project does not create an impact in that category. "No Impact" answers do not require an explanation if they are adequately supported by the information sources cited by the lead agency which show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project would not expose sensitive receptors to pollutants, based on a project specific screening analysis).

I. AESTHETICS

AESTHETICS:		Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:					
a)	Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c)	Substantially degrade the existing visual character or quality of the site and its surroundings?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

Lot 1 is currently undeveloped, and is bordered by oak woodlands and the Kaiser medical clinic to the north, planned dialysis clinic to the east, and US Highway 50 to the south. The site is constrained by high tension powerlines on its west side, and commercial buildings, a memory care facility, and a vacant lot containing oak woodland to the west. Lot 1 has one existing oak tree in the southeastern corner of the parcel.

Lot 6 is currently undeveloped and is bordered by Iron Point Road to the north, a constructed pond/wetland and office buildings to the east, an office building and undeveloped land containing scattered oaks to the south, and an office building to the west. A strand of oak trees within a designated preserve separates Lot 6 from the existing office building to the west.

Evaluation of Aesthetics

Question a: No Impact. A scenic vista is defined as a viewpoint that provides expansive view of a highly valued landscape for the benefit of the public. Neither the project site nor the surrounding areas are considered to be scenic vistas due to the existing development and suburban environment typical of the area. Further, neither the project site, nor views to or from the project site, have been designated as an important scenic resource by the City of Folsom or any other public agency (Folsom 2018). Therefore, construction or operation of the proposed development would not interfere with or degrade a scenic vista. No impacts would occur, and no mitigation would be necessary.

Question b: No Impact. There are no state or locally designated scenic highways in the vicinity of the proposed project (CalTrans 2021, Folsom 2018). Implementation of the proposed project would not adversely affect scenic resources within a designated scenic highway. Although the project is bordered by US Highway 50 to the south, it is not considered a scenic highway. Therefore, no impact would occur, and no mitigation would be necessary.

Question c: Less than Significant Impact. The existing visual character of the area surrounding the project site is characteristic of suburban development and is primarily defined by commercial, business

offices, residential, and transportation land uses. Development of an apartment complex on Lot 1 and Lot 6 would be consistent with the surrounding suburban land uses and development. The project site would be visible by motorists and pedestrians travelling along Iron Point Road, and by motorists travelling along US Highway 50. Implementation of the project would result in the development of high-density residential structures on undeveloped land, surrounded by commercial, residential, and residential uses.

While the proposed project would inevitably result in a change in visual character on the vacant site, the proposed land uses are consistent with the overall suburban development in the vicinity, and the proposed developments are expected to integrate into the existing and planned development within the area. Therefore, a less than significant impact to visual character would occur and no mitigation is necessary.

Question d: Less than Significant Impact. Any new lighting associated with development of the project site would be subject to the City's standard practices regarding night lighting that would be made a condition of approval of the Planned Development Permit. Consistent with the City's practices, the lighting would be sited and designed to avoid light spillage and glare on adjacent properties, with photo-controlled shut-off, and auto-schedule and motion sensors. All lighting would be designed to minimize light/glare impacts to the adjacent properties by ensuring that all exterior lighting and pole-mounted parking lot and driveway lighting be shielded and directed downward. Light-emitting diode luminaires would be used for all of the proposed outdoor lighting. Because existing City practices would limit light spillover and intensity, this would be a less than significant impact, and no mitigation is necessary.

II. AGRICULTURE AND FORESTRY RESOURCES

AGRICULTURE AND FORESTRY RESOURCES:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non- forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

No agricultural activities or timber management occur on the project site or in adjacent areas and the site is not designated for agricultural or timberland uses. The California Important Farmlands Map prepared for Sacramento County by the California Department of Conservation classifies Lot 1 as grazing land surrounded by urban and built up and Lot 6 as other land (California Department of Conservation [CDC] 2018a). Urban and built-up land is land occupied by structures or infrastructure to accommodate a building density of at least one unit to one and one-half acres, or approximately six structures to 10-acres; grazing land is land on which vegetation is suited to the grazing of livestock; and other land is land not included in any other mapping category – typically vacant and nonagricultural lands (CDC 2018a).

Evaluation of Agriculture and Forestry Resources

Question a, b: No Impact. The project site is not considered Prime Farmland, Unique Farmland, or Farmland of Statewide importance (Farmland), pursuant to the Farmland Mapping and Monitoring Program of the California Department of Conservation (CDC 2018a). The project site is not zoned for

agricultural use or enacted into a Williamson Act contract. No impacts would occur, and no mitigation would be necessary for questions a) and b).

Question c, d: No Impact. Because no portion of the City or the project site are zoned for forest land, timberland, or zoned Timberland Production, no impact would occur, and no mitigation would be necessary for questions c) and d).

Question e: Less Than Significant Impact. Lot 1 has been identified as grazing land surrounded by urban and built-up land. This area is considered to be highly disturbed with marginal grazing opportunities due to its proximity to a main road and surrounding urban development. Because no important agricultural resources or activities exist on the project site, impacts would be less than significant, and no mitigation would be necessary.

III. AIR QUALITY

AIR QUALITY:

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

HELIX Environmental Planning, Inc. conducted air quality modeling (CalEEMod) for the proposed project based primarily on the preliminary site plan and the Transportation Impact Study conducted by T. Kear Transportation Planning and Management, Inc. (2021). Additionally, due to the proposed project's proximity to US Highway 50 a Health Risk Assessment was performed. Air quality modeling output files and quantitative results are presented in **Appendix B**.

Environmental Setting

Climate in the Folsom area is characterized by hot, dry summers and cool, rainy winters. During summer's longer daylight hours, plentiful sunshine provides the energy needed to fuel photochemical reactions between Oxides of Nitrogen (NO_x) and Reactive Organic Gasses (ROG), which result in Ozone (O₃) formation. High concentrations of O₃ are reached in the Folsom area due to intense heat, strong and low morning inversions, greatly restricted vertical mixing during the day, and daytime subsidence that strengthens the inversion layer. The greatest pollution problem in the Folsom area is from NO_x.

The City of Folsom lies within the eastern edge of the Sacramento Valley Air Basin (SVAB). The Sacramento Metropolitan Air Quality Management District (SMAQMD) is responsible for implementing emissions standards and other requirements of federal and state laws in the project area. As required by the California Clean Air Act (CCAA), SMAQMD has published various air quality planning documents as discussed below to address requirements to bring the District into compliance with the federal and state ambient air quality standards. The Air Quality Attainment Plans are incorporated into the State Implementation Plan (SIP), which is subsequently submitted to the U.S. Environmental Protection Agency (EPA), the federal agency that administrates the Federal Clean Air Act of 1970, as amended in 1990.

Ambient air quality is described in terms of compliance with state and national standards, and the levels of air pollutant concentrations considered safe, to protect the public health and welfare. These standards are designed to protect people most sensitive to respiratory distress, such as people with asthma, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. The EPA has established national ambient air quality standards (NAAQS) for seven air pollution constituents. As permitted by the Clean Air Act, California has adopted more stringent air emissions standards (California Ambient Air Quality Standards, or CAAQS) and expanded the number of regulated air constituents.

The California Air Resources Board (CARB) is required to designate areas of the state as attainment, nonattainment, or unclassified for any state standard. An “attainment” designation for an area signifies that pollutant concentrations do not violate the standard for that pollutant in that area. A “nonattainment” designation indicates that a pollutant concentration violated the standard at least once. The air quality attainment status of the SVAB, including the City of Folsom, is shown in **Table 4**.

Table 4. Sacramento Valley Air Basin Attainment Status

POLLUTANT	STATE OF CALIFORNIA ATTAINMENT STATUS	FEDERAL ATTAINMENT STATUS
Ozone (1-hour)	Nonattainment	No Federal Standard
Ozone (8-hour)	Nonattainment	Nonattainment
Coarse Particulate Matter (PM ₁₀)	Nonattainment	Attainment
Fine Particulate Matter (PM _{2.5})	Attainment	Nonattainment
Carbon Monoxide (CO)	Attainment	Attainment/Unclassified
Nitrogen Dioxide (NO ₂)	Attainment	Attainment/Unclassified
Lead	Attainment	Attainment/Unclassified
Sulfur Dioxide (SO ₂)	Attainment	Unclassified
Sulfates	Attainment	No Federal Standard
Hydrogen Sulfide	Unclassified	No Federal Standard
Visibility Reducing Particles	Unclassified	No Federal Standard

Sources: SMAQMD 2020a.

Sacramento County is designated as nonattainment for the state and federal ozone standards, the state PM₁₀ standards, and the federal PM_{2.5} standards. Concentrations of all other pollutants meet state and federal standards.

Ozone is not emitted directly into the environment, but is generated from complex chemical reactions between ROG, or non-methane hydrocarbons, and NO_x that occur in the presence of sunlight. ROG and NO_x generators in Sacramento County include motor vehicles, recreational boats, other transportation sources, and industrial processes. PM₁₀ and PM_{2.5} arise from a variety of sources, including road dust, diesel exhaust, fuel combustion, tire and brake wear, construction operations and windblown dust.

Toxic Air Contaminants

Toxic air contaminants (TAC) are a diverse group of air pollutants that may cause or contribute to an increase in deaths or in serious illness or that may pose a present or potential hazard to human health. TACs can cause long-term chronic health effects such as cancer, birth defects, neurological damage, asthma, bronchitis, or genetic damage, or short-term acute effects such as eye watering, respiratory irritation (a cough), runny nose, throat pain, and headaches. TACs are considered either carcinogenic or

noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For carcinogenic TACs, there is no level of exposure that is considered safe and impacts are evaluated in terms of overall relative risk expressed as excess cancer cases per one million exposed individuals. Noncarcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

The Health and Safety Code (§39655[a]) defines TAC as “an air pollutant which may cause or contribute to an increase in mortality or in serious illness, or which may pose a present or potential hazard to human health.” All substances that are listed as hazardous air pollutants pursuant to subsection (b) of Section 112 of the CAA (42 United States Code Sec. 7412[b]) are designated as TACs. Under State law, the California Environmental Protection Agency (CalEPA), acting through CARB, is authorized to identify a substance as a TAC if it determines the substance is an air pollutant that may cause or contribute to an increase in mortality or an increase in serious illness, or that may pose a present or potential hazard to human health.

Diesel engines emit a complex mixture of air pollutants, including both gaseous and solid material. The solid material in diesel exhaust is referred to as diesel particulate matter (DPM). Almost all DPM is 10 microns or less in diameter, and 90 percent of DPM is less than 2.5 microns in diameter (CARB 2021a). Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung. In 1998, CARB identified DPM as a TAC based on published evidence of a relationship between diesel exhaust exposure and lung cancer and other adverse health effects. DPM has a notable effect on California’s population—it is estimated that about 70 percent of total known cancer risk related to air toxics in California is attributable to DPM (CARB 2021a).

Air Quality Monitoring

The SMAQMD operates a network of ambient air monitoring stations throughout the Sacramento region. The purpose of the monitoring stations is to measure ambient concentrations of criteria air pollutants and determine whether the ambient air quality meets state and federal standards, pursuant to the CAAQS and the NAAQS. The nearest ambient monitoring station to the project site is the East Natoma Street monitoring station located approximately 3-miles northwest of the project site. The closest monitoring station with data for PM₁₀ is the Sacramento – Branch Center Road 2 monitoring station, approximately 13.2-miles southwest of the project site. Air quality data collected at these monitoring stations for the years 2018 through 2020 are shown in **Table 5**.

Table 5. Summary of Annual Air Quality Data for Folsom Area Air Quality Monitoring Stations

POLLUTANT	2018	2019	2020
<i>Ozone (O₃): Monitoring location: Folsom – East Natoma Street</i>			
Maximum concentration 1-hour period (ppm)	0.105	0.087	0.038
Maximum concentration 8-hour period (ppm)	0.094	0.073	0.036
Days above 1-hour state standard (>0.09 ppm)	5	0	0
Days above 8-hour state/federal standard (>0.070 ppm)	19	2	0
<i>Coarse Particulate Matter (PM₁₀): Monitoring location: Sacramento – Branch Center Road 2</i>			
Maximum 24-hour concentration (µg/m ³)	200.0	53.0	201.0
Measured Days above 24-hr state standard (>50 µg/m ³)	4	1	10
Measured Days above 24-hr federal standard (>150 µg/m ³)	1	0	1
Annual average (µg/m ³)	26.5	18.4	33.2
Exceed state annual standard (20 µg/m ³)	Yes	No	Yes
<i>Fine Particulate Matter (PM_{2.5}): Monitoring location: Folsom – East Natoma Street</i>			
Maximum 24-hour concentration (µg/m ³)	104.5	25.4	19.6
Measured Days above 24-hour federal standard (>35 µg/m ³)	9	0	0
Annual average (µg/m ³)	10.2	*	*
Exceed state and federal annual standard (12 µg/m ³)	No	*	*
<i>Nitrogen Dioxide (NO₂): Monitoring location: Folsom – East Natoma Street</i>			
Maximum 1-hour concentration (ppm)	0.029	0.015	*
Days above state 1-hour standard (0.18 ppm)	0	0	*
Days above federal 1-hour standard (0.100 ppm)	0	0	*
Annual average (ppm)	0.003	*	*
Exceed annual federal standard (0.053 ppm)	No	*	*
Exceed annual state standard (0.030 ppm)	No	*	*

Source: CARB 2021b.

ppb = parts per billion; ppm = parts per million; µg/m³ = micrograms per cubic meter, * = insufficient data available.

As Shown in **Table 5**, the state 1-hour ozone standard was exceeded on five days in 2018, the state/federal 8-hour ozone standard was exceeded on 19 days in 2018 and two days in 2019, and the state/federal PM₁₀ standards were exceeded on multiple day in 2018 through 2020 and the federal PM_{2.5} standard was exceeded on nine days in 2018. There were no exceedances of NO₂ standards in 2018 through 2020.

Air Quality Attainment Planning

In order to work towards attainment for ozone, PM₁₀ and PM_{2.5}, the EPA Office of Air Quality Planning and Standards requires that each state containing nonattainment areas develop a written plan for cleaning the air in those areas. The plans developed combine to make up the SIP. Through these plans, states outline efforts they will make to try to correct the levels of air pollution and bring their areas back into attainment. The status of air quality attainment planning for the Sacramento area is listed below (SMAQMD 2017):

- **8-Hour O₃.** The Sacramento region was classified by the EPA as a “serious” nonattainment area on June 15, 2004 for the federal 8-hour ozone standard, with an attainment deadline of June 15, 2013. Emission reductions needed to achieve the air quality standard were identified using an

air quality modeling analysis. An evaluation of proposed control measures and associated ROG and NO_x emission reductions concluded that no set of feasible controls were available to provide the needed emission reductions before the attainment deadline year. Given the magnitude of the shortfall in emission reductions, and the schedule for implementing new control measures, the earliest possible attainment demonstration year for the Sacramento region is determined to be the "severe" area deadline of 2019. Section 181(b)(3) of the Clean Air Act permits a state to request that the EPA reclassify a nonattainment area to a higher classification and extend the time allowed for attainment. This process is appropriate for areas that must rely on longer-term strategies to achieve the emission reductions needed for attainment. The EPA approved this request on May 5, 2010. The Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan was developed by the air districts in the Sacramento region to bring the region into attainment for the ozone NAAQS and CAAQS. The plan is a joint project between the SMAQMD, and four other air districts in the Sacramento region (SMAQMD 2017).

- **1-Hour O₃.** On May 9, 2011, EPA proposed to determine that California is no longer required to implement or submit a CAA Section 185 fee program for 1-hour ozone as a revision to the SIP for the Sacramento Metro 1-hour ozone nonattainment area. EPA has also taken an "interim final" action to stop sanctions from applying to the Sacramento Metro Area.
- **PM₁₀.** In March 2002, the EPA officially determined that Sacramento County had attained the PM₁₀ standards. In November 2010, the SMAQMD formally requested that the EPA redesignate Sacramento County from nonattainment to attainment for PM₁₀. The EPA approved this request effective October 28, 2013. The SMAQMD additionally adopted a PM₁₀ Maintenance Plan. The first Maintenance Plan showed maintenance from 2012 through 2022. A Second Maintenance Plan will be prepared and submitted by The SMAQMD to demonstrate maintenance for ten additional years, through 2032.
- **PM_{2.5}.** The Sacramento PM_{2.5} nonattainment area designation met the PM_{2.5} NAAQS by December 31, 2011. On May 9, 2012, CARB submitted a request that EPA find the Sacramento region in attainment for the 2006 24-hour PM_{2.5} NAAQS. EPA issued a proposed rule for Determination of Attainment for the Sacramento Nonattainment Area on October 26, 2012 and a final rule for Determination of Attainment on July 15, 2013. EPA used the updated 2010-2012 ambient air quality data for determination and the final rule became effective on August 14, 2013 (SMAQMD 2017) (EPA 2013). On May 10, 2017, the EPA found the area attained the 2006 24-hour NAAQS by the attainment date of December 31, 2015 based on monitoring data for 2013-2015. The 2013 Maintenance Plan and will be updated and submitted in the future based on the clean data finding made by the EPA.
- **CO.** The region is currently designated attainment for 1-hour and 8-hour CO standards. The Maintenance Plan developed for CO in 1996 was revised in 2004 to extend the 1996 CO Maintenance Plan demonstration to 2018.

Evaluation of Air Quality

While the final determination of whether or not a project has a significant effect is within the purview of the lead agency pursuant to CEQA Guidelines Section 15064(b), SMAQMD recommends that its air pollution thresholds be used to determine the significance of project emissions. The criteria pollutant

thresholds and various assessment recommendations are contained in SMAQMD's *Guide to Air Quality Assessment in Sacramento County* (CEQA Guide; 2020, revised), and are discussed under the checklist questions below.

Question a: Less than Significant Impact. In accordance with SMAQMD's CEQA Guide, construction-generated NO_x , PM_{10} , and $\text{PM}_{2.5}$, and operational-generated ROG and NO_x (all ozone precursors) are used to determine consistency with the Ozone Attainment Plan. The Guide states (SMAQMD 2020a p. 4-6):

By exceeding the District's mass emission thresholds for operational emissions of ROG, NO_x , PM_{10} , or $\text{PM}_{2.5}$, the project would be considered to conflict with or obstruct implementation of the District's air quality planning efforts.

As shown in the discussion for question b) below, the project's construction-generated emissions of NO_x , PM_{10} , and $\text{PM}_{2.5}$ and operation-generated emissions ROG and NO_x would not exceed SMAQMD thresholds. The project would not conflict with or obstruct implementation of the applicable air quality plan and the Impact would be less than significant.

Question b: Less than Significant Impact. The Sacramento region is in non-attainment for ozone (ozone precursors NO_x and ROG) and particulate matter ($\text{PM}_{2.5}$ and PM_{10}). The project's emissions of these criteria pollutants and precursors during construction and operation are evaluated below.

Construction Emissions

The California Emissions Estimator Model (CalEEMod) version 2020.4.0 was used to quantify project-generated construction emissions. The model output sheets are included in **Appendix B**. Construction activities were assumed to commence as early as May 2022 and be completed in early 2024. The quantity, duration, and intensity of construction activity influence the amount of construction emissions and related pollutant concentrations that occur at any one time. As such, the emission forecasts provided herein reflect a specific set of conservative assumptions based on the expected construction scenario wherein a relatively large amount of construction activity is occurring in a relatively intensive manner. Because of this conservative assumption, actual emissions could be less than those forecasted. If construction is delayed or occurs over a longer time period, emissions could be reduced because of: (1) a more modern and cleaner-burning construction equipment fleet mix than assumed in CalEEMod; and/or, (2) a less intensive buildout schedule (i.e., fewer daily emissions occurring over a longer time interval).

Construction emissions would be generated by vehicle engine exhaust from off-road construction equipment, on-road hauling trucks, vendor trips, and worker commuting trips. Grading cut/fill would be balanced on-site—no import or export of soil would be required. During paving approximately 289 truckloads (578 one-way truck trips) of aggregate/asphalt would be imported to the site. Model defaults were used for all construction activities with the following modifications:

- The project site is vacant, and no demolition would be required.
- An additional activity for excavation/installation of underground utilities was added, assumed to require one month.
- The use of a water truck for four hours per workday was assumed for the site preparation, grading, and underground utilities activities.

- Architectural coating (e.g., painting) was assumed to occur concurrently with the last three months of physical building construction.

The project's construction period emissions of ROG, NO_x, PM₁₀, and PM_{2.5} are compared to the SMAQMD construction thresholds in **Table 6**. The SMAQMD does not have a recommended threshold for construction-generated ROG. However, quantification and disclosure of ROG emissions is recommended. The SMAQMD considers any emissions of PM₁₀ and PM_{2.5} to be significant unless the Basic Construction Emissions Control Practices are implemented, also known as Best Management Practices (BMP). The project would implement all of the SMAQMD BMPs to control fugitive dust in accordance with SMAQMD Rule 403. The modeling accounts for emissions reductions resulting from watering exposed surfaces twice daily. As shown in **Table 6**, the proposed project construction period emissions of the ozone precursor NO_x, PM₁₀, and PM_{2.5} would not exceed the SMAQMD thresholds. Impacts related to construction-generated emissions of ROG, NO_x, PM₁₀, and PM_{2.5} would be less than significant.

Table 6. Construction Criteria Pollutant and Precursor Emissions

ACTIVITY	NO_x (pounds/day)	ROG (pounds/day)¹	PM₁₀ (pounds/day)	PM_{2.5} (pounds/day)
Site Preparation	35.1	3.5	10.7	6.1
Grading	40.9	4.0	6.0	3.3
Underground Utilities	10.2	1.1	0.5	0.4
Paving	16.6	1.8	1.2	0.7
Building Construction	19.5	2.8	3.1	1.4
Architectural Coatings	1.4	51.2	0.5	0.2
Concurrent 2023 Building Construction and Architectural Coating	19.1	53.7	3.5	1.5
Maximum Daily Emissions	40.9	53.7²	10.7	6.1
<i>SMAQMD Threshold</i>	<i>None</i>	<i>85</i>	<i>80</i>	<i>82</i>
Threshold exceeded?	No	No	No	No

Source of emissions estimates: CalEEMod output (Appendix B).

Source of threshold: SMAQMD 2020a.

¹ Maximum daily emissions of ROG would occur in summer, maximum daily emissions of all other analyzed pollutants would occur in winter or are not seasonally dependent.

² Maximum daily emissions of ROG would be the combined emissions from Building Construction and Architectural Coating which would occur concurrently in 2023.

Operational Emissions

Regional Emissions

SMAQMD provides screening levels to identify when additional analysis is necessary to determine potential significance for operational ROG, NO_x, PM₁₀, or PM_{2.5} emissions. The operational screening

levels represent the development size at which the operational emissions thresholds of significance would not be exceeded. According to the screening thresholds, if a proposed mid-rise apartment project is less than 740 dwelling units, then the project would not have the potential to exceed SMAQMD's recommended mass emission thresholds for NO_x or ROG during operation. The PM₁₀ and PM_{2.5} screening level is 1,485 dwelling units. The proposed project would develop 253 dwelling unit, less than the screening thresholds and project-specific modeling for operational emissions is not required. Therefore, impacts related to project long-term operational emissions of ROG, NO_x, PM₁₀, and PM_{2.5}, would be less than significant.

Impact Conclusion

The project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment, and the impact would be less than significant.

Question c: Less than Significant Impact. CARB and the Office of Environmental Health Hazard Assessment (OEHHA) have identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, infants (including in utero in the third trimester of pregnancy), and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis (CARB 2005, OEHHA 2015). Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved and are referred to as sensitive receptor locations. Examples of these sensitive receptor locations are residences, schools, hospitals, and daycare centers.

The closest existing sensitive receptor sites to the project site are multi-family senior housing buildings approximately 70 feet west of Lot 1, and single-family residences approximately 150 feet north (across Iron Point Road) of Lot 6. The closest school to the project site is the Gold Ridge Elementary School approximately 1,700 feet (0.32 mile) north of the project site. There are no hospitals or daycare centers located within 0.5-mile of the project site.

Implementation of the project would result in the use of heavy-duty construction equipment, haul trucks, and construction worker vehicles. These vehicles and equipment would generate the TAC DPM. Generation of DPM from construction projects typically occurs in a localized area (e.g., at the project site) for a short period of time. Because construction activities and subsequent emissions vary depending on the construction activity (e.g., grading, building construction), the construction-related emissions to which nearby receptors are exposed to would also vary throughout the construction period. During some equipment-intensive activities such as grading and excavation, construction-related emissions would be higher than other less equipment-intensive activities such as building construction.

The dose (of TAC) to which receptors are exposed is the primary factor used to determine health risk. Dose is a function of the concentration of a substance in the environment and the extent of exposure a person has with the substance; a longer exposure period to a fixed quantity of emissions would result in higher health risks. Current models and methodologies for conducting cancer health risk assessments are associated with longer-term exposure periods (typically 30 years for individual residents based on guidance from OEHHA) and are best suited for evaluation of long duration TAC emissions with predictable schedules and locations. These assessment models and methodologies do not correlate well with the temporary and highly variable nature of construction activities. Cancer potency factors are based on animal lifetime studies or worker studies where there is long-term exposure to the carcinogenic agent. There is considerable uncertainty in trying to evaluate the cancer risk from projects

that will only last a small fraction of a lifetime (OEHHA 2015). In addition, concentrations of mobile source DPM emissions disperse rapidly and are typically reduced by 70 percent at approximately 500-feet (CARB 2005). Considering this information, the highly dispersive nature of DPM, and the fact that construction activities would occur at various locations throughout the project site, it is not anticipated that construction of the project would expose sensitive receptors to substantial DPM concentrations.

According to the SMAQMD, land use development projects do not typically have the potential to result in localized concentrations of criteria air pollutants that expose sensitive receptors to substantial pollutant concentrations. This is because criteria air pollutants are predominantly generated in the form of mobile-source exhaust from vehicle trips associated with the land use development project. These vehicle trips occur throughout a paved network of roads, and, therefore, associated exhaust emissions of criteria air pollutants are not generated in a single location where high concentrations could be formed (SMAQMD 2020a). Therefore, localized concentration of CO from exhaust emissions, or “CO hotspots,” would only be a concern on high-volume roadways where vertical and/or horizontal mixing is substantially limited, such as tunnels or below grade highways. There are no high-volume roadways in the region with limited mixing that would be affected by project generated traffic. Once operational, the project would not be a significant source of TACs. Therefore, the project would not expose sensitive receptors to substantial pollutant concentrations, and the impact would be less than significant.

The project would site new sensitive receptors within 1,000-feet of US Highway 50. High volume roads (roads that carry 100,000 or more vehicles per days) are considered substantial sources of TACs, including DPM and other TACs contained in vehicle exhaust Total Organic Gases (TOG) emissions, including benzene, ethylbenzene, and formaldehyde. The SMAQMD does not consider the health risk to sensitive receptors sited by a land use development project from high volume roadways to be a CEQA analysis requirement in accordance with the 2015 California Supreme Court decision in the case of California Building Industry Association v. Bay Area Air Quality Management District (SMAQMD 2019). The SMAQMD recommends that lead agencies use their Mobile Sources Air Toxics Protocol to evaluate the potential increased health risks to receptors near high-volume roadways (SMAQMD 2020b). The increased health risks to future project residents were evaluated using the guidance and tools in the Mobile Sources Air Toxics Protocol and were found to be potentially significant. To reduce health risk associated with concentrations of TACs along US Highway 50, it is recommended that the project be conditioned to require the installation of heating, ventilation, and air conditioning (HVAC) systems equipped with filters having a minimum efficiency reporting value (MERV) of 13 or better. A letter summarizing the methodology, results, and risk reduction recommendations from the Mobile Sources Air Toxics Protocol analysis is included in **Appendix B**.

Question d: Less than Significant Impact with Mitigation. The project is located in proximity to US Highway 50; Lot 1 located approximately 90-feet from the nearest travel lane and Lot 6 is located approximately 370-feet from the nearest travel lanes. The increase in health risks to future project residents resulting from proximity to US Highway 50 was estimated using the SMAQMD’s Mobile Sources Air Toxics Protocol (MSAT Protocol).

Using the MSAT Protocol Mapping Tool, the project Lot 1 apartments are in an area with increased cancer risks ranging from 19 in 1 million to 32 in 1 million, and PM_{2.5} concentrations ranging from 0.49 µg/m³ to 0.91 µg/m³. Lot 6 has cancer risk ranging from 30 in 1 million to 47 in 1 million and PM_{2.5} concentrations ranging from 0.8 µg/m³ to 1.3 µg/m³. Note: Lot 6 has higher cancer risks even though it is further from US Highway 50. This result is likely due to the terrain—Lot 6 is close to the same elevation as the freeway and Lot 1 is elevated 30 to 40 feet above the freeway. The cancer risk increase would

exceed both the Bay Area Air Quality Management District's (BAAQMD) threshold of 10 in 1 million and the San Joaquin Air Pollution Control District's (SJCAPCD) threshold of 20 in 1 million. PM_{2.5} concentrations would exceed the BAAQMD's threshold of 08. $\mu\text{g}/\text{m}^3$. Therefore, the increase health risk to future project residents would be potentially significant. Accordingly, the proposed project shall be conditioned with the following health risk reduction measure:

Mitigation Measure AIR-1: Mechanical Ventilation System

- The building design shall include a mechanical ventilation system that meets the criteria of the International Building Code (Chapter 12, §1203.2 of the California Building Code) to ensure that windows would be able to remain closed while maintaining adequate ventilation and temperature control. The mechanical ventilation system shall be designed to accommodate, and equipped with, filters having a Minimum Efficiency Reporting Value (MERV) rating of 13 or higher.

Implementation of Mitigation Measure AIR-1 would reduce the potential impacts associated with elevated health risk due to the project's proximity to US Highway 50 to below a level of significance.

Question e: Less than Significant Impact. Odors associated with diesel exhaust and ROG from application of asphalt and architectural coatings would be emitted during project construction. The odor of these emissions is objectionable to some; however, emissions would disperse rapidly from the project site and therefore should not be at a level that would affect a substantial number of people. Further, construction activities would be temporary. As a result, impacts associated with temporary odors during construction are not considered significant.

As a residential development, operation of the project would not result in odors affecting a substantial number of people. Solid waste generated by the project would be collected by a contracted waste hauler, ensuring that any odors resulting from on-site waste would be managed and collected in a manner to prevent the proliferation of odors. The project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people, and the impact would be less than significant.

IV. BIOLOGICAL RESOURCES

BIOLOGICAL RESOURCES:				
Would the project:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Biological resource evaluations prepared for the proposed project have been incorporated by reference and are presented in their entirety in **Appendix C**.

Environmental Setting

The area in which the project is located is characterized by suburban residential development, commercial business centers, transportation, and small pockets of open space. US Highway 50 is immediately south of the project site. Lands in the City of Folsom surrounding the project site that lie north of US Highway 50 are largely developed with commercial and residential development, while lands across US Highway 50 to the south of the project site remain largely in open space (primarily used for cattle grazing), although development is occurring in the City of Folsom south of US Highway 50 and to the east of the project site.

Lot 1 shows no alteration in the use or condition of the property dating back to 1952 (NETR 2021). Lot 1 slopes downward from east to west with elevations ranging from 371 feet amsl in the east to 317 feet amsl in the west. Lot 1 is predominantly comprised of non-native annual grassland with a single oak tree in the southeast of the parcel. Lot 1 features a small parking lot in the northwest corner of the parcel, and a small sidewalk with minor landscaping elements connecting the parking lot to the rest of the parcel where the Kaiser Permanente Medical Offices are located. The rest of the site is vacant.

Lot 6 is dominated by ruderal/disturbed habitat, with a small stand of native oak trees (*Quercus* sp.) in the southwest corner of the parcel. The project site is not associated with any current land use; however, historic aerial imagery shows that Lot 6 was partially graded and used to store materials and debris in 2009 during the construction of the adjacent Folsom Corporate Center and much of that debris has remained on site. Lot 6 slopes down towards the east through a series of partially graded terraces, with elevations ranging from 370 feet amsl to the west and 358 feet amsl to the east.

Regulatory Framework Related to Biological Resources

Federal Regulations

Federal Endangered Species Act

The U.S. Fish and Wildlife Service (USFWS) enforces the provisions stipulated within the Federal Endangered Species Act of 1973 (FESA; 16 USC 1531 et seq.). Species identified as federally threatened or endangered (50 CFR 17.11, and 17.12) are protected from take, defined as direct or indirect harm, unless a Section 10 permit is granted to an entity other than a federal agency or a Biological Opinion with incidental take provisions is rendered to a federal lead agency via a Section 7 consultation. Pursuant to the requirements of FESA, an agency reviewing a proposed project within its jurisdiction must determine whether any federally listed species may be present in the project site and determine whether the proposed project will jeopardize the continued existence of or result in the destruction or adverse modification of critical habitat of such species (16 USC 1536 (a)[3], [4]). Other federal agencies designate species of concern (species that have the potential to become listed), which are evaluated during environmental review under the National Environmental Protection Act (NEPA) or CEQA although they are not otherwise protected under FESA.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) of 1918 established federal responsibilities for the protection of nearly all species of birds, their eggs, and nests. The Migratory Bird Treaty Reform Act of 2004 further defined species protected under the act and excluded all non-native species. Section 16 U.S.C. 703–712 of the Act states “unless and except as permitted by regulations, it shall be unlawful at any time, by any means or in any manner, to pursue, hunt, take, capture, kill, attempt to take, capture, or kill” a migratory bird. A migratory bird is any species or family of birds that live, reproduce or migrate within or across international borders at some point during their annual life cycle. Currently, there are 836 migratory birds protected nationwide by the Migratory Bird Treaty Act, of which 58 are legal to hunt. The U.S. Court of Appeals for the 9th Circuit (with jurisdiction over California) has ruled that the MBTA does not prohibit incidental take (952 F 2d 297 – Court of Appeals, 9th Circuit 1991).

State JurisdictionCalifornia Endangered Species Act

The California Endangered Species Act (CESA) (California Fish and Game Code Sections 2050 to 2097) is similar to the FESA. The California Fish and Wildlife Commission is responsible for maintaining lists of threatened and endangered species under CESA. CESA prohibits the take of listed and candidate (petitioned to be listed) species. "Take" under California law means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch capture, or kill (California Fish and Game Code, Section 86). The California Department of Fish and Wildlife (CDFW) can authorize take of a state-listed species under Section 2081 of the California Fish and Game Code if the take is incidental to an otherwise lawful activity, the impacts are minimized and fully mitigated, funding is ensured to implement and monitor mitigation measures, and CDFW determines that issuance would not jeopardize the continued existence of the species. A CESA permit must be obtained if a project will result in the "take" of listed species, either during construction or over the life of the project. For species listed under both FESA and CESA requiring a Biological Opinion under Section 7 of the FESA, CDFW may also authorize impacts to CESA species by issuing a Consistency Determination under Section 2080.1 of the Fish and Game Code.

California Code of Regulations Title 14 and California Fish and Game Code

The official listing of endangered and threatened animals and plants is contained in the California Code of Regulations Title 14 §670.5. A state candidate species is one that the California Fish and Game Code has formally noticed as being under review by CDFW to include in the state list pursuant to Sections 2074.2 and 2075.5 of the California Fish and Game Code.

Legal protection is also provided for wildlife species in California that are identified as "fully protected animals." These species are protected under Sections 3511 (birds), 4700 (mammals), 5050 (reptiles and amphibians), and 5515 (fish) of the California Fish and Game Code. These statutes prohibit take or possession of fully protected species at any time. CDFW is unable to authorize incidental take of fully protected species unless any such take authorization is issued in conjunction with the approval of a Natural Community Conservation Plan that covers the fully protected species (California Fish and Game Code Section 2835).

California Environmental Quality Act

Under the California Environmental Quality Act of 1970 (CEQA; Public Resources Code Section 21000 et seq.), lead agencies analyze whether projects would have a substantial adverse effect on a candidate, sensitive, or special-status species (Public Resources Code Section 21001(c)). These "special-status" species generally include those listed under FESA and CESA, and species that are not currently protected by statute or regulation, but would be considered rare, threatened, or endangered under the criteria included CEQA Guidelines Section 15380. Therefore, species that are considered rare are addressed under CEQA regardless of whether they are afforded protection through any other statute or regulation. The California Native Plant Society (CNPS) inventories the native flora of California and ranks species according to rarity; plants ranked as 1A, 1B, 2A, 2B, and 3 are generally considered special-status species under CEQA.

Although threatened and endangered species are protected by specific federal and state statutes, CEQA Guidelines Section 15380(d) provides that a species not listed on the federal or state list of protected species may be considered rare if it can be shown to meet certain specified criteria. These criteria have

been modeled after the definition in FESA and the section of the California Fish and Game Code dealing with rare or endangered plants and animals. Section 15380(d) allows a public agency to undertake a review to determine if a significant effect on species that have not yet been listed by either the USFWS or CDFW (i.e., candidate species) would occur.

Native Plant Protection Act

The California Native Plant Protection Act of 1977 (California Fish and Game Code Sections 1900-1913) empowers the Fish and Game Commission to list native plant species, subspecies, or varieties as endangered or rare following a public hearing. To the extent that the location of such plants is known, CDFW must notify property owners that a listed plant is known to occur on their property. Where a property owner has been so notified by CDFW, the owner must notify CDFW at least 10 days in advance of any change in land use (other than changing from one agricultural use to another), in order that CDFW may salvage listed plants that would otherwise be destroyed. Currently, 64 taxa of native plants have been listed as rare under the act.

Nesting Birds

California Fish and Game Code Subsections 3503 and 3800 prohibit the possession, take, or needless destruction of birds, their nests, and eggs, and the salvage of dead nongame birds. California Fish and Game Code Subsection 3503.5 protects all birds in the orders of Falconiformes and Strigiformes (birds of prey). Fish and Game Code Subsection 3513 states that it is unlawful to take or possess any migratory nongame bird as designated in the Migratory Bird Treaty Act or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the Migratory Bird Treaty Act. The Attorney General of California has released an opinion that the Fish and Game Code prohibits incidental take.

Jurisdictional Waters

Federal Jurisdiction

Unless considered an exempt activity under Section 404(f) of the Federal Clean Water Act, any person, firm, or agency planning to alter or work in "waters of the U.S.," including the discharge of dredged or fill material, must first obtain authorization from the USACE under Section 404 of the Clean Water Act (CWA; 33 USC 1344). Permits, licenses, variances, or similar authorization may also be required by other federal, state, and local statutes. Section 10 of the Rivers and Harbors Act prohibits the obstruction or alteration of navigable waters of the U.S. without a permit from USACE (33 USC 403). Activities exempted under Section 404(f) are not exempted within navigable waters under Section 10.

"Waters of the U.S." are defined as: "All waters that are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters that are subject to the ebb and flow of the tide; all interstate waters including interstate wetlands; all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sand flats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes or natural ponds, the use, degradation, or destruction of which could affect interstate commerce; impoundments of these waters; tributaries of these waters; the territorial sea; or wetlands adjacent to these waters (33 Code of Federal Regulations [CFR] Part 328)."

Within non-tidal waters that meet the definition cited above and, in the absence of adjacent wetlands, the indicator used by the USACE to determine the lateral extent of its jurisdiction is the ordinary high

water mark (OHWM) – the line on the shore established by fluctuations of water and indicated by a clear, natural line impressed on the bank, shelving, changes in soil character, destruction of terrestrial vegetation, and/or the presence of litter and debris.

Wetlands are defined under the CFR Part 328.3 as those areas that are inundated or saturated by surface or ground water at a frequency and duration to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

The USACE has determined that not all features which meet the wetland definition are, in fact, considered to be waters of the U.S. Normally, features not considered as waters of the U.S. include (a) non-tidal drainage and irrigation ditches excavated on dry land; (b) artificially irrigated areas which would revert to upland if the irrigation ceased; (c) artificial lakes or ponds created by excavating and/or diking dry land to collect and retain water and which are used exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing, (d) artificial reflecting or swimming pools or other small ornamental bodies of water created by excavating and/or diking dry land to retain water for primarily aesthetic reasons, and (e) waterfilled depressions created in dry land incidental to construction activity and pits excavated in dry land for the purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and the resulting body of water meets the definition of waters of the United States (see 33 CFR 328.3(a)). Other features may be excluded based on Supreme Court decisions (e.g., SWANCC and Rapanos) or by regulation.

Federal and state regulations pertaining to waters of the U.S., including wetlands, are discussed below.

Clean Water Act (33 USC 1251-1376). The CWA provides guidance for the restoration and maintenance of the chemical, physical, and biological integrity of the nation's waters.

Section 401 requires that an applicant for a federal license or permit that allows activities resulting in a discharge to waters of the U.S. must obtain a state certification that the discharge complies with other provisions of CWA. The Regional Water Quality Control Board (RWQCB) administers the certification program in California and may require State Water Quality Certification before other permits are issued.

Section 402 establishes a permitting system for the discharge of any pollutant (except dredged or fill material) into waters of the U.S.

Section 404 establishes a permit program administered by USACE that regulates the discharge of dredged or fill material into waters of the U.S. (including wetlands). Implementing regulations by USACE are found at 33 CFR Parts 320-332. The Section 404 (b)(1) Guidelines were developed by the USEPA in conjunction with USACE (40 CFR Part 230), allowing the discharge of dredged or fill material for non-water dependent uses into special aquatic sites only if there is no practicable alternative that would have less adverse impacts.

State Jurisdiction

Regional Water Quality Control Board

Any action requiring a CWA Section 404 permit, or a Rivers and Harbors Act Section 10 permit, must also obtain a CWA Section 401 Water Quality Certification. The State of California Water Quality Certification (WQC) Program was formally initiated by the State Water Resources Control Board (SWRCB) in 1990 under the requirements stipulated by Section 401 of the Federal CWA. Although the Clean Water Act is a

Federal law, Section 401 of the CWA recognizes that states have the primary authority and responsibility for setting water quality standards. In California, under Section 401, the State and Regional Water Boards are the authorities that certify that issuance of a federal license or permit does not violate California's water quality standards (i.e., that they do not violate Porter-Cologne and the Water Code). The WQC Program currently issues the WQC for discharges requiring USACE's permits for fill and dredge discharges within Waters of the United States, and now also implements the State's wetland protection and hydromodification regulation program under the Porter Cologne Water Quality Control Act.

On April 2, 2019, the SWRCB adopted a State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (Procedures), for inclusion in the forthcoming Water Quality Control Plan for Inland Surface Waters and Enclosed Bays and Estuaries and Ocean Waters of California. The Procedures consist of four major elements: 1) a wetland definition; 2) a framework for determining if a feature that meets the wetland definition is a water of the state; 3) wetland delineation procedures; and 4) procedures for the submittal, review and approval of applications for Water Quality Certifications and Waste Discharge Requirements for dredge or fill activities. The Office of Administrative Law approved the Procedures on August 28, 2019, and the Procedures became effective May 28, 2020.

Under the Procedures and the State Water Code (Water Code §13050(e)), "Waters of the State" are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state." Unless excluded by the Procedures, any activity that could result in discharge of dredged or fill material to Waters of the State, which includes Waters of the U.S. and non-federal Waters of the State, requires filing of an application under the Procedures.

The Porter-Cologne Water Quality Control Act (Porter-Cologne Act, Water Code Section 13000 et seq.) is California's statutory authority for the protection of water quality in conjunction with the federal CWA. The Porter-Cologne Act requires the SWRCB and RWQCBs under the CWA to adopt and periodically update water quality control plans, or basin plans. Basin plans are plans in which beneficial uses, water quality objectives, and implementation programs are established for each of the nine regions in California. The Porter-Cologne Act also requires dischargers of pollutants or dredged or fill material to notify the RWQCBs of such activities by filing Reports of Waste Discharge and authorizes the SWRCB and RWQCBs to issue and enforce waste discharge requirements, National Pollution Discharge Elimination System (NPDES) permits, Section 401 water quality certifications, or other approvals.

California Department of Fish and Wildlife

The CDFW is a trustee agency that has jurisdiction under Section 1600 et seq. of the California Fish and Game Code. Under Sections 1602 and 1603, a private party must notify CDFW if a proposed project will "substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of streambeds...except when the department has been notified pursuant to Section 1601." Additionally, CDFW asserts jurisdiction over native riparian habitat adjacent to aquatic features, including native trees over four inches in diameter at breast height (DBH). If an existing fish or wildlife resource may be substantially adversely affected by the activity, CDFW may propose reasonable measures that will allow protection of those resources. If these measures are agreeable to the parties involved, they may enter into an agreement with CDFW identifying the approved activities and associated mitigation measures. Generally, CDFW recommends submitting an application for a Streambed Alteration Agreement (SAA) for any work done within the lateral limit of water flow or the edge of riparian vegetation, whichever is greater.

Local Regulations

City of Folsom Tree Preservation Ordinance

Chapter 12.16 of the Folsom Municipal Code, the Tree Preservation Ordinance, regulates the cutting or modification of trees, including oaks and specified other trees; requires a Tree Permit prior to cutting or modification; and establishes mitigation requirements for cut or damaged trees. The Tree Preservation Ordinance establishes policies, regulations, and standards necessary to ensure that the City will continue to preserve and maintain its “urban forests”. Anyone who wishes to perform “Regulated Activities” on “Protected Trees” must apply for a permit with the City. Regulated activities include:

- Removal of a Protected Tree;
- Pruning/trimming of a Protected Tree; and/or,
- Grading or trenching within the Protected zone.

Protected trees include:

- Native oak trees with a diameter at standard height (DSH; 4.5 feet above ground level) of 6 inches or larger for single trunk trees or 20 inches or larger combined diameter of native oak multi-trunk trees. Native oak species include:
 - valley oak (*Quercus lobata*)
 - blue oak (*Quercus douglasii*)
 - interior live oak (*Quercus wislizenii*)
 - coast live oak (*Quercus agrifolia*)
- Heritage oak trees - native oaks with a trunk DSH of 19 inches or greater and native oaks with a multi-trunk diameter of 38 inches or greater;
- Landmark trees identified individually by the City Council through resolution as being a significant community benefit; and/or,
- Street trees within the tree maintenance strip.

Methods

Information used in preparation of this Initial Study comes from the following sources:

- Desktop review of regionally occurring special-status species and habitats with potential to occur in the project site and/or be affected by the proposed project;
- Biological reconnaissance survey performed by HELIX biologists in October 2021;
- Biological Review for Iron Point Road Apartments Development, prepared by SCS Engineers, dated February 25, 2021; and,
- Arborist Report – Iron Point Road Apartments, Folsom CA, prepared by Arborwell Professional Tree Management, dated December 29, 2020;
- Arborist inventory of remaining trees performed by HELIX biologist/arborist in November 2021.

For the purposes of this report, special-status species are those that fall into one or more of the following categories, including those:

- listed as endangered or threatened under the Federal Endangered Species Act (FESA; including candidates and species proposed for listing);
- listed as endangered or threatened under the California Endangered Species Act (CESA; including candidates and species proposed for listing);
- designated as rare, protected, or fully protected pursuant to California Fish and Game Code;
- designated a Species of Special Concern (SSC) by the California Department of Fish and Wildlife (CDFW);
- considered by CDFW to be a Watch List species with potential to become an SSC;
- defined as rare or endangered under Section 15380 of the California Environmental Quality Act (CEQA); or,
- Having a California Rare Plant Rank (CRPR) of 1A, 1B, 2A, 2B, or 3.

In order to evaluate special-status species and/or their habitats with the potential to occur on the project site and/or be impacted by the proposed project, HELIX obtained lists of special-status species known to occur and/or having the potential to occur in the project site and vicinity from the U.S. Fish and Wildlife Service (USFWS; USFWS 2021), the California Native Plant Society (CNPS; CNPS 2021), and the California Natural Diversity Database (CNDDDB; CDFW 2021). The results of the biological database and records searches for the project site, as well as a list of species observed during the biological reconnaissance, are compiled in **Appendix C**.

Biological Reconnaissance Survey

A biological reconnaissance survey was conducted on October 13, 2021, by HELIX biologists Stephen Stringer, M.S. International Society of Arboriculture (ISA) Certified Arborist (WE-7129A) and Stephanie McLaughlin, M.S., ISA Certified Arborist (WE-12922A) between 1230 and 1430 hours. The biological reconnaissance survey was accomplished by walking meandering transects through the project site in order to obtain 100 percent visual coverage of the site. Habitats present in the project site were classified based on the dominant plant species present and identifiable at the time of the survey. The project site was also reviewed for aquatic features exhibiting characteristics of waters of the U.S. or State, including the presence of hydrophytic vegetation, hydric soil, wetland hydrology, bed and bank, or depressional topography. Following the field survey, the potential for each species identified in the database query to occur within the project site was determined based on the site survey, soils, habitats present within the project site, and species-specific information, as shown in **Appendix C**.

Arborist Inventory

The Arborist Report prepared by Arborwell Professional Tree Management and dated December 29, 2020, inventoried a majority of the trees in the project site but did not include the trees located in the landscaped strip in the southeastern corner of Lot 6.

HELIX Biologist and International Society of Arboriculture certified arborist Stephanie McLaughlin (ISA # WE-12922A) surveyed the additional trees in the southeastern corner of Lot 6 on November 2, 2021. The following data were collected for all native and non-native oak trees with a DSH of six inches or greater on the site: species, trunk diameter at 4.5-feet above the ground (DSH), dripline radius, estimated height, and overall health and structure of the tree. Overall condition was rated on a five-point scale of 0 (dead), 1 (severe decline), 2 (declining), 3 (fair), 4 (good), or 5 (excellent). Comments such as number of trunks, irregularities, scars or other growth characteristics or vigor indicators were recorded for each tree. Recommendations for preservation or removal were made based on each tree's condition. The location of each tree was recorded using an EOS Systems Arrow 100 Global Navigation Satellite System receiver with sub-meter accuracy. Trees on the site were identified in the field with pre-printed numbered tags.

Habitat Types/Vegetation Communities

Habitat types/vegetation communities on the project site include blue oak woodland, non-native annual grassland, ruderal/disturbed, and developed. Habitats and land covers are depicted on **Figure 5 in Appendix A**.

Non-Native Annual Grassland

Non-native annual grasslands are open grasslands composed primarily of annual species. Germination follows the onset of winter rains; however, growth is slow during cold weather and plants remain low in stature until spring. Grasses flower and set seed by early summer, and large amounts of standing dead thatch are present by mid-summer in the absence of grazing.

The non-native annual grassland in the project site is found on Lot 1 and is dominated by ripgut brome (*Bromus diandrus*), soft brome (*Bromus hordeaceus*), prickly lettuce (*Lactuca serriola*), and yellow-star thistle (*Centaurea solstitialis*). The majority of the species observed were non-native; however, native species on the site include doveweed (*Croton setiger*) and yellowflower tarweed (*Holocarpha virgata*). The non-native annual grassland habitat on Lot 1 is in a somewhat disturbed condition. The contours of the parcel show a history of grading and fill, with tire ruts and depressions scattered throughout the site. The project site includes 6.95-acres of non-native annual grassland, all of which is found on Lot 1.

Blue Oak Woodland

Blue oak woodland is composed of a pronounced hardwood tree layer, with a poorly developed shrub stratum, and a sparse, grassy herbaceous layer. The canopy is entirely dominated by blue oak (*Quercus douglasii*). The herbaceous layer of this community consists of similar species to what was observed in the annual grassland habitat, such as ripgut brome, prickly lettuce, and yellow-star thistle. Blue oak woodland habitat comprises 0.62-acres of the project site, all of which is found in the southwest corner of Lot 6.

Ruderal/Disturbed

Ruderal/disturbed habitat occurs in areas that are heavily disturbed by past or ongoing human activities but retain a soil substrate. Ruderal/disturbed areas may be sparsely to densely vegetated, but do not support a recognizable community or species assemblage. Vegetative cover is usually herbaceous and dominated by a wide variety of weedy non-native species or a few ruderal native species.

Ruderal/disturbed habitat, which totals 3.61-acres, comprises much of Lot 6. This habitat on the project site is dominated by a dense cover of non-native annual grasses, with small patches of native and non-native grasses and forbs and is heavily disturbed. Riggut brome, yellow-star thistle, yellowflower tarweed, and medusa head (*Elymus caput-medusae*) make up the majority of the herbaceous cover on the project site in terms of percent cover. Nearly all herbaceous plant species observed during the biological reconnaissance are non-natives associated with disturbance; however, native plants observed include coyote brush (*Baccharis pilularis*) and deer grass (*Muhlenbergia rigens*). A small sliver of landscaping borders the eastern edge of Lot 6, it consists of ornamental scrub species as well as several valley oaks (*Quercus lobata*) and cork oaks (*Quercus suber*).

The contours of Lot 6 reflect a history of fill, grading, and other modifications resulting in tire ruts, graded areas, and depressions. There are several large debris piles consisting of rock and rebar in the center of Lot 6. Stormwater from the developed areas in the surrounding business park is discharged into a small, graded depression within the ruderal/disturbed habitat on the east end of Lot 6 through a culvert outfall that enters the site from under the parking lot to the south. The graded depression and culvert outfall appears to have been constructed as part of the stormwater management system for the Folsom Corporate Center. The graded depression contains some wetland plants typical of disturbed areas but is not considered a potential waters of the U.S. or State because it was constructed on a graded pad in uplands for the purposes of managing stormwater drainage.

Developed

Developed areas on the project site includes parking lots and roadways surrounding both parcels. A paved arterial roadway runs along the eastern and southern borders of Lot 6. Developed land near Lot 1 consists of a paved roadway and a portion of a parking lot along the parcels northern border. Developed habitat in the project site is asphalt paved and completely devoid of vegetative cover. This habitat type comprises 0.86-acres of the project site.

Wildlife

In general, wildlife use of the site is expected to be limited to common disturbance-tolerant species adapted to living in urban and suburban areas in close proximity to humans. Species observed using the habitats in the project site included mourning dove (*Zenaida macroura*), acorn woodpecker (*Melanerpes formicivorus*), northern flicker (*Colaptes aurata*), black-tailed jackrabbit (*Lepus californicus*), and house finch (*Carpodacus mexicanus*).

Special-Status Species with Potential to Occur

A total of 22 regionally occurring special-status plant species and 31 regionally occurring special-status wildlife species were identified during the database queries and desktop review and are evaluated in **Appendix C**.

Special-Status Plant Species

A total of 22 regionally occurring special-status plant species were identified during the database queries and desktop review. The majority of the special-status plant species are associated with aquatic habitats, including vernal pools. The remaining species are associated with grasslands, chaparral,

cismontane woodlands, coniferous forests, and alkaline habitat, or have specific requirements for lone, gabbroic, serpentinite, or volcanic soils that were not found in the project site.

There is currently no suitable habitat for special-status plant species in the project site and there have been no reported occurrences of special-status plant species on or adjacent to the project site in the CNDDB. Special-status plant species are not expected to occur in the project site or be impacted by the proposed project.

Special-Status Animal Species

A total of 31 regionally occurring special-status wildlife species were identified during the database searches and desktop review. The majority of the special-status wildlife species are associated with aquatic habitats of the adjacent Sacramento Valley such as rivers, sloughs, and freshwater wetlands, including vernal pools. The remaining species are associated with open areas, grasslands, coniferous forests, and cliff habitat, or have specific food species requirements that were not found on the project site.

No special-status wildlife species were observed in the project site during the biological reconnaissance survey and there are no reported occurrences in the CNDDB of special-status animal species in or adjacent to the project site. Based on the evaluation of regionally occurring special-status species documented in **Appendix C**, the project site provides marginal habitat for burrowing owl (*Athene cunicularia*) and white-tailed kite (*Elanus leucurus*) as well as habitat for other nesting raptors and migratory birds. These species are discussed briefly below. There is no suitable habitat in the project site for the remainder of the regionally occurring special-status species evaluated. Species determined to have no potential to occur in the project site or be impacted by the proposed project are not discussed further in this report.

Burrowing Owl

Burrowing owls are year-round residents of most parts of California, though local seasonal movements are common and populations in northeastern California and high elevations may migrate to lower elevations during the winter. Burrowing owls inhabit underground burrows, especially those of California ground squirrels (*Otospermophilus beecheyi*), and artificial holes such as pipes, culverts, and crevices in debris piles. Suitable habitat is open and relatively flat, with short vegetation, low perches or mounds, and abundant rodent and insect prey. Common examples of suitable habitat include agricultural fields, pastures, grasslands, deserts, and disturbed places. The breeding season for burrowing owl is April through August (CDFW 2012).

No burrowing owls or sign were observed during the biological reconnaissance, which included a thorough search for this species. However, there are three reported occurrences of burrowing owl in the CNDDB within 2.5-miles of the project site. These occurrences are generally located to the southeast in annual grassland habitat across US Highway 50 (CDFW 2021).

The non-native annual grassland and ruderal/disturbed habitat in the project site provides marginally suitable habitat for burrowing owl. There are several debris piles and small mammal burrows that provide elements of suitable habitat. The project site is too small in size to support significant burrowing owl foraging and is surrounded by disturbed industrial and residential parcels. The high levels of human

presence and disturbance in the project site likely discourage occupation of the project site by burrowing owls; however, there is a low potential for this species to occur in the project site.

If burrowing owls are residing in the project site or on adjacent properties, the project would have potential for adverse effects through injury or mortality, displacement, and loss of habitat. Injury or mortality to individual adults and young, or mortality of eggs and chicks due to forced nest abandonment by adults, would be a violation of the Fish and Game Code and a significant impact. Loss of occupied habitat including nesting burrows, satellite burrows, foraging habitat, dispersal habitat, wintering habitat, and linkages is considered a potentially significant impact to the local and regional populations of burrowing owl (CDFW 2012).

The recommended mitigation measures for nesting burrowing owl in the following section would reduce potential impacts to this species to less than significant.

White-tailed Kite

White-tailed kite is a year-round resident in coastal and valley lowlands, where it inhabits herbaceous and open stages of most habitat types. Individuals forage in grasslands, farmlands, and wetlands, preying mostly on small diurnal mammals. Nests are built near the top of dense tree stands, usually near open foraging areas (Zeiner et al. 1988).

No white-tailed kites were observed during the biological reconnaissance survey conducted for the proposed project. The nearest documented occurrence of white-tailed kite is 2.2-miles south in the City of Folsom (CDFW 2021).

The blue oak woodland habitat on and adjacent to the project site provides potential nesting habitat and the small patches of undeveloped grassland habitat in the vicinity provide suitable foraging habitat. This species is known to nest in tall trees in urban areas and forage in small habitat patches.

No adverse effects to white-tailed kite foraging are anticipated as a result of the loss of ruderal/disturbed habitat that would occur due to development of the proposed project. Non-breeding adults could readily avoid contact with construction equipment or personnel by moving out of the construction area. Displacement of non-breeding adults would not be a significant impact. The project has potential for adverse effects to white-tailed kite through nest disturbance leading to destruction of eggs or nestlings if this species were to nest in or adjacent to the project site. Eggs and young still dependent on the nest would be susceptible to injury or mortality through physical contact or through nest abandonment caused by displacement of adults. Destruction of eggs or young would be a violation of the Fish and Game Code and a significant impact.

The recommended mitigation measures for nesting migratory birds and raptors in the following section would reduce potential impacts to this species to less than significant.

Migratory Birds and Nesting Birds

As noted in the Regulatory Framework section, migratory and non-game birds are protected during the nesting season by California Fish and Game Code. The project site and immediate vicinity provides nesting and foraging habitat for a variety of native birds common to urbanized areas, such as mourning dove (*Zenaid macroura*), house finch (*Haemorrhous mexicanus*), and acorn woodpecker (*Melanerpes*

formicivorus). Nests were not observed during surveys; however, a variety of migratory birds have the potential to nest in and adjacent to the project site, in trees, shrubs and on the ground in vegetation.

Project activities such as clearing and grubbing during the avian breeding season (February 1 through August 31) could result in injury or mortality of eggs and chicks directly through destruction or indirectly through forced nest abandonment due to noise and other disturbance. Needless destruction of nests, eggs, and chicks would be a violation of the Fish and Game Code and a significant impact.

The recommended mitigation measures for nesting migratory birds and raptors in the following section would reduce potential impacts to nesting migratory birds and raptors to less than significant.

Protected Trees

Data in this section is from an Arborist Report prepared by Arborwell Professional Tree Management in December 2020 and an arborist inventory conducted by HEL in November 2021. There are a total of 14 trees found on the project site; one tree (#702) is on Lot 1 and the remaining trees are on Lot 6. Nine of the trees are blue oaks, three are cork oaks, and two are valley oaks. The majority of trees are in excellent to fair condition and one tree (#705) is in critical/poor condition. **Table 7** shows the details of all trees in the project site.

Table 7. Tree Inventory Details¹

Tree #	Species	DSH (inches)	Condition	Notes
702*	Blue Oak <i>Quercus douglasii</i>	41.1	4 - Good	Good shape, 2 Limb failures on southern side of tree, good structure. Appears to have minimal deadwood in lower part of canopy. May need to be raised up per plans for clearance.
703*	Blue Oak <i>Quercus douglasii</i>	30.4	3 - Fair	Appears to have minimal deadwood and good attachment at 6' high on trunk with 4 large limbs of attachment.
704*	Blue Oak <i>Quercus douglasii</i>	26.7	3 - Fair	Appears to have minimal deadwood, codominant at 6' with signs of included bark and V shaped crotch.
705*	Blue Oak <i>Quercus douglasii</i>	20	1 – Critical/Poor	Tree has poor structure with limb failure and is in severe decline.
706*	Blue Oak <i>Quercus douglasii</i>	19.4, 15.7	3 - Fair	Appears to have minimal deadwood, two trees at base, one to northwest is being overcrown by one to southeast.
707*	Blue Oak <i>Quercus douglasii</i>	23.1	3 - Fair	Appears to have minimal deadwood, co-dominant leader at 6' with V shaped crotch.
708*	Blue Oak <i>Quercus douglasii</i>	23.1	3 - Fair	Appears to have minimal deadwood.
709*	Blue Oak <i>Quercus douglasii</i>	20.7	3 - Fair	Appears to have minimal deadwood. Large limb near base of trees has visual signs of included bark.
710*	Blue Oak	11.4, 13.3	3 - Fair	Appears to have minimal deadwood, poor structure with co-dominant leaders at base.

	<i>Quercus douglasii</i>			
256**	Cork Oak <i>Quercus suber</i>	11.7	5- Excellent	
329**	Cork Oak <i>Quercus suber</i>	16	5-Excellent	
330**	Cork Oak <i>Quercus suber</i>	13.5	4 - Good	Co-dominant leaders
331**	Valley Oak <i>Quercus lobata</i>	8.4	4 - Good	Minor lean
332**	Valley Oak <i>Quercus lobata</i>	9.6	5-Excellent	Evidence of pruning

*Data from Arborist Report – Iron Point Road Apartments, Folsom CA, prepared by Arborwell Professional Tree Management, dated December 29, 2020.

** Data collected by HELIX November 2021.

‡Bold font indicates that a tree is protected

Eleven of the 14 trees in the study area are protected under the City of Folsom Tree Protection Ordinance, as they are native oaks and have a DSH greater than six-inches. Tree # 705 was recommended for removal due to its poor condition. Tree # 702 is considered to be a Heritage tree per City of Folsom and would be preserved on-site as part of the proposed project design. Three of the 14 trees in the study area are not protected (Trees # 256, 329, and 330) as they are not native oak species.

Jurisdictional Waters

There are no potentially jurisdictional waters of the U.S. or waters of the State on the project site. There is a small, constructed depression located on Lot 6 that appears to occasionally hold water. The constructed depression appears to be part of a larger stormwater management system that was constructed to collect runoff from the surrounding buildings, parking areas, and landscaped areas within the Folsom Corporate Center. The constructed depression receives stormwater runoff through a culvert outfall under the parking area/driveway to the south. The graded depression contains some wetland plants typical of disturbed areas but is not considered a potential waters of the U.S. or State because it was constructed on a graded pad in uplands for the purposes of managing stormwater drainage and is part of a currently functioning stormwater management system.

Wildlife Corridors

The project site is primarily surrounded by development with narrow bands of open space separating it from US Highway 50, Iron Point Road, Kaiser Permanente, and an office park. Lands north of Iron Point Road are densely developed, as are lands east of Kaiser Permanente and west of the office park; US Highway 50 is a 6-lane freeway. The project site represents an isolated island of open space with no connectivity to other suitable habitat and does not represent a significant wildlife movement corridor. Use of the site as a wildlife corridor is limited to movement of local wildlife. No native wildlife nursery sites would be affected.

Question a: Less than Significant with Mitigation Incorporated. No regionally occurring special-status plant species were identified as having the potential to occur in the project site, due to lack of suitable habitat. Therefore, impacts to special-status plant species are not anticipated as a result of the proposed project and no mitigation measures are necessary for special-status plants.

The project site provides potential marginal habitat for burrowing owl white-tailed kite and other nesting migratory birds. These species are discussed briefly below. Species determined to have no potential to occur in the project site or be impacted by the proposed project are not discussed further in this report.

Burrowing Owl

In the absence of proposed mitigation measures, potential adverse effects of the proposed project on burrowing owl could include harm to individual burrowing owls, nest disturbance/loss of occupied burrows, and loss of foraging habitat. Pre-construction surveys shall be conducted prior to project implementation to determine if burrowing owl are present on or adjacent to the project site, so that measures could be implemented if needed to avoid harming burrowing owl.

Mitigation Measure BIO-1: Avoid and Minimize Impacts to Burrowing Owl

Prior to the commencement of construction activities (which includes clearing, grubbing, or grading) a survey for burrowing owl shall be conducted by a qualified biologist. The survey shall occur within 30 days of the start of construction activities. Surveys shall be conducted in accordance with the following:

- A survey for active burrows and burrowing owls shall be conducted by walking through suitable habitat over the entire project site and in areas within 150-meters (~500-feet) of the project impact zone where accessible.
- Pedestrian survey transects shall be spaced to allow 100 percent visual coverage of the ground surface. The distance between transect center lines shall be no more than 30-meters (~100-feet) and shall be reduced to account for differences in terrain, vegetation density, and ground surface visibility. Surveyor(s) shall maintain a minimum distance of 50-meters (~160-feet) from any owls or occupied burrows. It is important to minimize disturbance near occupied burrows during all seasons.
- If no occupied burrows or burrowing owls are found in the survey area, a letter report documenting survey methods and findings shall be prepared and no further mitigation is necessary.
- If occupied burrows or burrowing owls are found, then a complete burrowing owl survey is required. This consists of a minimum of four site visits conducted on four separate days, which must also be consistent with the Survey Method, Weather Conditions, and Time of Day sections of Appendix D of the California Fish and Wildlife *"Staff Report on Burrowing Owl Mitigation"* (March 2012). A survey report shall be prepared that is consistent with the Survey Report section of Appendix D of the California Fish and Wildlife *"Staff Report on Burrowing Owl Mitigation"* (March 2012).
- If occupied burrows or burrowing owls are found, the applicant shall contact the City and consult with CDFW prior to construction and will be required to submit a Burrowing Owl Mitigation Plan (subject to the approval of the City and in consultation with California Fish and Wildlife). This plan must document all proposed measures, including avoidance, minimization, exclusion, relocation, or other measures, and include a plan to monitor mitigation success. The

CDFW "*Staff Report on Burrowing Owl Mitigation*" (March 2012) shall be used in the development of the mitigation plan.

White-tailed Kite, Other Raptors, and Migratory Birds

The project site provides suitable nesting habitat for native songbirds and large trees on and adjacent to the project site provide nesting habitat for white-tailed kite and other raptors. Removal of vegetation containing active nests would potentially result in destruction of eggs and/or chicks; noise, dust, and other anthropogenic stressors in the vicinity of an active nest could lead to forced nest abandonment and mortality of eggs and/or chicks. Needless destruction of eggs or chicks would be a violation of the Fish and Game Code and a significant impact. Pre-construction surveys shall be conducted prior to project implementation to determine if nesting birds are present on or adjacent to the project site, so that measures could be implemented if needed to avoid harming nesting birds.

The following mitigation measure shall be implemented to avoid and minimize adverse effects to nesting birds:

Mitigation Measure BIO-2: Avoid and Minimize Impacts to Nesting Birds

- If project (construction) ground-disturbing or vegetation clearing and grubbing activities commence during the avian breeding season (February 1 through August 31), a qualified biologist shall conduct a pre-construction nesting bird survey no more than 14 days prior to initiation of project activities and again immediately prior to construction. The survey area shall include suitable raptor nesting habitat within 500-feet of the project boundary (inaccessible areas outside of the project site can be surveyed from the site or from public roads using binoculars or spotting scopes). Pre-construction surveys are not required in areas where project activities have been continuous since prior to February 1, as determined by a qualified biologist. Areas that have been inactive for more than 14 days during the avian breeding season must be re-surveyed prior to resumption of project activities. If no active nests are identified, no further mitigation is required. If active nests are identified, the following measure is required:
 - A suitable buffer (e.g., typically 300-500-feet for raptors; and 50-100-feet for passerines) shall be established by a qualified biologist around active nests and no construction activities within the buffer shall be allowed until a qualified biologist has determined that the nest is no longer active (i.e., the nestlings have fledged and are no longer reliant on the nest, or the nest has failed). Encroachment into the buffer may occur at the discretion of a qualified biologist. Any encroachment into the buffer shall be monitored by a qualified biologist to determine whether nesting birds are being impacted.

With implementation of the above mitigation measures, potential impacts to special-status species and nesting birds would be less than significant and no additional mitigation measures would be required.

Question b: No Impact. There are no riparian habitats or other sensitive natural communities in the project site. Therefore, no impact would occur.

Question c: No Impact. There are no potential wetlands or other waters of the U.S. or waters of the State in the project site. Therefore, no impact would occur.

Question d: Less Than Significant Impact. The project would result in a less than significant impact to the movement of native resident wildlife or the use of native wildlife nursery sites, and no mitigation necessary.

Question e: Less than significant with Mitigation Incorporated. A total of 14 trees are found on the project site; one tree (#702) is on Lot 1 and the remaining trees are on Lot 6. Eleven of the 14 trees in the study area are protected under the City of Folsom Tree Protection Ordinance, as they are native oaks and have a DSH greater than six-inches. Tree # 705 was recommended for removal due to its poor condition. Tree # 702 is considered to be a Heritage tree per City of Folsom and will be preserved on-site as part of the proposed project design. Three of the 14 trees in the study area are not protected (Trees # 256, 329, and 330) as they are not native oak species.

Removal of protected trees requires a tree removal permit from the City of Folsom. Mitigation for tree removal includes on- or off-site replacement, payment of in-lieu fees, or credit for preservation of existing trees. Tree replacement shall be done at a ratio of one-inch DSH of tree replaced for each inch DSH of tree removed (1:1 ratio). The replacement value of planted trees is as follows:

- Sapling tree = 0.5-inch DSH
- Tree in container less than 15-gallon = 0.5-inch DSH
- A tree in a 15-gallon container = one-inch DSH.
- A tree in a 24-inch box = two-inch DSH.
- A tree in a 36-inch box or larger = three-inch DSH.

Preserved trees are eligible for a Tree Preservation Credit where a credit of 0.5-inch would be given for every one inch preserved. Mitigation for Tree #705 should not be required, due to its poor condition. Tree Preservation Credit should be given for the conservation of Tree #702, which has a DSH of 41.1-inches and results in a credit of 20.5-inches. The mitigation required for impacts to the remaining trees totals to 181-inches.

The following mitigation measure would be implemented to avoid and minimize impacts to protected trees:

Mitigation Measure BIO-3: Tree Permit

- A Tree Permit Application containing an application form, tree protection and mitigation plan, and arborist report shall be submitted to the City of Folsom by the owner/applicant for issuance of a Tree Work Permit and Tree Removal Permit prior to commencement of any grading or site improvement activities. The tree protection and mitigation plan shall be prepared in collaboration with a qualified arborist and shall be subject to review and approval by the City. The tree protection and mitigation plan shall contain the contact information of the project arborist and shall be included in all associated plan sets for the project.
- Removal of any protected tree shall be mitigated by planting replacement trees and/or payment of "In-Lieu" fees on a diameter inch basis in accordance with FMC 12.16.150. The proposed method of mitigation shall be subject to review and approval by the City.

- Prior to starting construction, oak trees to be preserved shall be fenced with high visibility fencing consistent with the city-approved tree protection and mitigation plan. Parking of vehicles, equipment, or storage of materials is prohibited within the Tree Protection Zone of Protected Trees at all times. Signs shall be posted on exclusion fencing stating that the enclosed trees are to be preserved. Signs shall state the penalty for damage to, or removal of, the protected tree.
- The owner/applicant shall retain the services of a project arborist for the duration of the development project to monitor the health of oak trees to be preserved and carry out the City-approved tree protection plan. All regulated activity conducted within the Critical Root Zone of protected trees, as that term is defined in Folsom Municipal Code (FMC) 12.16.020, shall be performed under the direct supervision of the project arborist. A copy of the executed contract for these arboricultural services shall be submitted to the City prior to the issuance of any tree or grading permits
- Certification letters by the project arborist attesting compliance with the tree protection and mitigation plan and tree permit conditions shall be submitted to the City at the following stages of the project:
 - Following completion of grading, prior to issuance of any building permits
 - At the time of the final inspection, prior to the Certificate of Occupancy

Question f: No Impact. No Habitat Conservation Plan, Natural Community Conservation Plan, or other local, regional, or state habitat conservation plan has been approved for the City of Folsom. Therefore, no impacts to an existing adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan would occur, and no mitigation is necessary.

V. CULTURAL RESOURCES

CULTURAL RESOURCES:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Cultural resource evaluations prepared for the proposed project have been incorporated by reference and are presented in their entirety in **Appendix D**.

Environmental Setting

State and federal legislation requires the protection of historical and cultural resources. In 1971, President's Executive Order No. 11593 required that all federal agencies initiate procedures to preserve and maintain cultural resources by nomination and inclusion on the National Register of Historic Places. In 1980, the Governor's Executive Order No. B-64-80 required that state agencies inventory all "significant historic and cultural sites, structures, and objects under their jurisdiction which are over 50 years of age and which may qualify for listing on the National Register of Historic Places." Section 15064.5(b)(1) of the CEQA Guidelines specifies that projects that cause "...physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historic resource would be materially impaired" shall be found to have a significant impact on the environment. For the purposes of CEQA, an historical resource is a resource listed in, or determined eligible for listing in the California Register of Historical Resources. When a project could impact a resource, it must be determined whether the resource is an historical resource, which is defined as a resource that:

(A) is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political or cultural annals of California; and,

(B) Meets any of the following criteria: 1) is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage; 2) is associated with the lives of persons important in our past; 3) embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or 4) has yielded, or may be likely to yield, information important in prehistory or history. The City of Folsom Standard Construction Specifications were developed and approved by the City of Folsom in May 2004 and updated in December 2014. They include Article 11 - Cultural Resources, which provides direction on

actions to be taken in the event that materials are discovered that may ultimately be identified as a historical or archaeological resource, or human remains (City of Folsom 2014).

Record Searches and Pedestrian Survey Results

This section describes the existing cultural resource setting and potential effects from project implementation on the project site and its surrounding area. The results are based on a record search conducted at the North Central Information Center on September 23, 2021 and a pedestrian field survey conducted on November 3, 2021. This section assesses potential impacts related to historic resources, archaeological resources, and human remains.

North Central Information Center Record Search

To determine the presence of cultural and historical resources within the project area and a 0.25-mile radius, a record search was conducted at the North Central Information Center (NCIC) on September 23, 2021. The record search included a review of National Register of Historic Places (NR), the California Register of Historic Resources (CRHR), the California Historical Landmarks (CHL) list, the California Points of Historical Interest list, the California State Historic Resources Inventory (HRI) listings for Sacramento County, and the Archaeological Determinations of Eligibility (ADOE). Historic maps were also examined to gain insights into past developments and changes within the project area and its surroundings.

The NCIC results indicate that 53 historic resources have been recorded within the 0.25-mile search radius; six resources were recorded as potentially occurring within the project area. The 53 historic resources are primarily scattered debris, ditches, and metal remnants from the Folsom Mining District and the Prairie Diggings Placer Mining District. The 53 historic Resources are outlined in **Table 8**.

The first resource identified, the Folsom Mining District (P-34-000335), was recorded as a variety of elements from the region's historic mining period, including mines, quarries, tailings, mining equipment, habitation sites, roads, railroad grades, water conveyances, and structural foundations. The results of HELIX's NCIC records search indicated that elements of this historic district could be present within both lots of the currently proposed Area of Potential Impact (APE). Records indicate that the Folsom Mining District taken as a unified entity has been determined to be ineligible for listing on the NRHP and CRHR, but that individual elements within the district may be eligible for listing and that they should be evaluated as eligible or ineligible on a case-by-case basis. This resource was first recorded in 1995 by Sandy Flint.

The second resource identified on the project site is known as the Rhoads Branch Ditch (P-34-001480). The results of HELIX's NCIC records search indicated that elements of this ditch system could be present within the current APE's Lot 6. The ditch was used for supplying water to most of the mined areas south of Alder Creek, east of Prairie City, and south of the Willow Hill diggings. Since its initial recordation this resource has been incorporated as an element of the American River Placer Mining District, now also known as the Folsom Mining District (P-34-000335). As of the time of ECORP Consulting Inc.'s 2013 survey, the resource is believed to be heavily disturbed from the construction of houses, roads and associated facilities, though portions of the ditch may still be in good condition. NRHP and CRHR eligibility have not been determined for this resource.

The third resource, first recorded in 2008 by Lisa Westwood, this resource is a 1940s-era transmission line that extends from Halsey to Newark. It is composed of metal towers and situated directly east of, and parallel to, two higher capacity, modern transmission lines that bisect the current APE's Lot 1. Built in the early 1940s, the line is now named the Gold Hill-Bellota-Lockford 115kV line. According to maintenance logs on file with PG&E, the line was upgraded in conjunction with the construction of the Gold Hill Substation in 1963, and again in 1975 and 1983. This resource has been determined ineligible for listing on the NRHP and CRHR. Most recently revisited in 2017 by ECORP Consulting Inc. archaeologists, the resource is considered to be in good condition.

The fourth resource was first recorded in 1994 by John Dougherty and David Davis, this site consists of a placer mine located approximately 10-meters north of US Highway 50, along an ephemeral northwest flowing drainage. NCIC maps show the site as intersecting Lot 1's southeast border. This site is considered an element of the Folsom Mining District (P-34-000335), and it abuts several other resources which are also part of the District, including other mining-related ground disturbances, mining camps,

and historic debris piles associated with mining activities. P-34-002292's NRHP and CRHR eligibility has not been determined.

The fifth resource, first recorded in 1994 by Susan Lindstrom, Judy D. Tordoff, and Daryl G. Noble, this site represents the Prairie Diggings Placer Mining District which contains 35 loci of nineteenth century cultural resources pertaining to mining activities and mining camp occupations. These resources include examples of early shallow placer mines; evidence of ground sluicing, drift mining, low-pressure hydraulic mining, and dry land dredging activities; water conveyances; and artifacts and landscape features associated with mining camp operations including personal effects, mining equipment, hearths and roads. The district encompasses approximately 302-acres and represents one of the mining areas within Prairie City's sphere of influence in the 1850s and 60s. The district is situated north of Alder Creek and largely east of Prairie City Road, with Willow Hill Reservoir in its western arm, and it includes the current APE's Lot 1 within its boundaries. As the result of development in the area, the district has suffered significant losses to its site integrity and has been determined ineligible for inclusion on the NRHP and CRHR as of 2014.

The sixth resource, first recorded in 2012 by K.A. Crawford, this site consists of a steel lattice transmission tower located in a large parking lot area in the City of Folsom, immediately adjacent to the current APE's Lot 1. The base of the tower was installed by the Pacific Gas and Electric Company prior to 1967 as part of their expansion of electrical services in the Folsom area. The tower was constructed with bolted steel L-shaped profiles, and as of its recording in 2012 was still in good condition. At the time the tower was also noted as retaining its structural and historic integrity because it had not been significantly altered since its original construction. This resource has been determined ineligible for listing on the NRHP.

A total of 23 reports have been prepared within the search radius, six of which included the project area. These previous reports are outlined in **Table 9**.

Pedestrian Survey

On November 3, 2021, HELIX Senior Archaeologist Clarus Backes R.P.A, conducted a pedestrian survey to characterize any prehistoric or historic-era archaeological resources located on the surface of the Area of Potential Effects (APE). During the survey, the ground surface throughout both parcels of the APE were examined for the presence of historic-era artifacts (e.g, metal, glass, ceramics), prehistoric artifacts (e.g., flaked stone tools, tool-making debris), and other features that might represent human activity that took place more than 50 years ago. Further, a concerted effort was made to locate the six cultural resources identified during the NCIC records search as lying within or adjacent to the current APE. Representative photographs taken during the survey are presented in **Appendix D**. The surveys of each individual lot (Lot 1 and Lot 6) are presented separately below.

Lot 1

Lot 1's ground surface can be characterized as slightly undulating, with a gradual (5-10 percent) slope downhill to the southwest (Photos 1 and 2). There is also a short, steep downslope from Lot 1's northeastern boundary north towards the nearby medical center parking lot (Photo 3). The entire Lot was found to be covered with dense, nonnative grasses approximately 24-inches high, and as a result surface visibility for the pedestrian survey was very poor (less than five percent visibility). Ground soils that were visible, however, proved to be brownish-red sandy silt with large pebbles and small cobble inclusions that are angular and granitic. There were also loose, large quartz cobbles and small boulders scattered throughout the area.

Overall, the area showed signs of moderate ground disturbance, with recent tire tracks crossing the Lot from all directions. There were also several small borrow pits and push piles, as well as several small concentrations of broken asphalt and rounded river cobbles that appear to have been brought in from off-site (Photos 4 and 5). Further, at the time of survey, the entire Lot was covered with a thin scatter of modern roadside debris.

Five cultural resources identified during the NCIC records search were found lying within or adjacent to Lot 1. They are as follows: P-34-000335, P-34-022195, P-34-002292, P-34-002306 and P-34-004518. The pedestrian survey revealed that no elements or cultural resources that could be associated with the historic Folsom Mining District (P-34-000335), the Prairie Diggings Placer Mining District (P-34-002306), or the mining feature listed as an element of the Folsom Mining District (P-34-002292). Cultural resource P-34-022195 is a 1940s era lattice metal tower. HELIX's pedestrian survey did not encounter any evidence of that mining feature within Lot 1. P-34-004518 is a mid-twentieth century metal lattice transmission tower. HELIX's pedestrian survey of Lot 1 encountered this resource and noted that there had been no significant changes to its condition or character since its initial recordation by archaeologist K.A. Crawford in 2012.

Lot 6

Lot 6's ground surface gently rises from the northeast to the southwest through a series of low artificial terraces (Photo 7). The lot is covered with dense nonnative grasses, though they were shorter than those found on Lot 1, allowing for slightly better ground surface visibility (a little less than 10 percent). There is also a small stand of oak trees in the lot's southwest corner (Photo 8). A few disturbed areas within the lot exposed bare soils which proved to be brown sandy silt with angular large pebbles and small cobbles, and include concentrations of gray and red slate. Overall, Lot 6 is considerably more disturbed than Lot 1, with tire tracks, small, graded areas, and push piles visible throughout the survey

area. In addition, along the lot's northeastern boundary there is a 69-meter long, 18-meter wide concentration of push piles and large granitic boulders (Photo 9). These piles also contained broken up fragments of reinforced concrete. It is unclear whether these boulders originated from within the lot, or if they were imported from off-site, but in either case it is clear they are not in their original placements.

Lot 6 also exhibited a thin scatter of industrial debris across the survey area including scrap metal, plastic fragments, and pipe fragments. None of this debris, however, appeared to be indicative of activities taking place on the site more than 45 years ago.

Near the center of the lot is a small, graded depression used as a stormwater control basin. This basin, which was seen holding standing water at the time of the survey, is fed by a small culvert that runs from the Folsom Corporate Center to the south. A ditch extends from this stormwater basin for approximately 40-meters. Together these elements appear to function as a modern water-control feature, rather than one of the historic ditches that have been documented by previous studies in the project vicinity. Two cultural resources identified during the NCIC records search were identified lying within or adjacent to Lot 6. These resources are P-34-000335 and P-34-001480. The pedestrian survey revealed that no elements or cultural resources that could be associated with this historic district (P-34-000335) or historic ditch (P-34-001480) are located on the ground surface of Lot 6.

Evaluation of Cultural Resources

Question a: Less than Significant. Review of historic topographic maps (dating from 1911 to 1975) and historic aerial photographs (dating 1952 to 2018) indicate that Lots 1 and 6 have not undergone any formal development between 1952 and 2018. Characterized during these periods as undulating grassy fields with moderate to sparsely populated oak stands, only tree clearing and dirt road construction activities were made apparent within the APE during HELIX's historic maps and images review, with those activities spanning only between 2002 and 2018. Of the six previously recorded resources that are indicated by the NCIC as potentially lying within or adjacent to the current APE, only two were encountered during HELIX's survey. These include P-34-002195 and P-34-004518, two metal lattice towers constructed for use in electrical transmission lines during the mid-20th century. The proposed project is not anticipated to have impacts on either of these two resources. Although NCIC records indicate that site P-34-002292 might lie within the currently proposed APE, the only traces of historic mining activity spotted during HELIX's pedestrian survey consisted of placer mining spoil piles which lie to the southwest of Lot 1 and outside of the project's APE. Consequently, the current project is not anticipated to impact this resource.

In the event that cultural resources are exposed during any future ground-disturbing activities, construction activities should be halted in the immediate vicinity of the discovery. If the site cannot be avoided during the remainder of the construction, an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards should then be retained to evaluate the find's significance under CRHR criteria. If the discovery proves to be significant, additional work, such as data recovery excavation, may be warranted and should be discussed in consultation with the County. With implementation of this guideline, and with consideration that no historic resources are anticipated to be impacted by the project, impacts would be less than significant.

Question b: Less than Significant with Mitigation. On November 2, 2021, HELIX requested that the NAHC conduct a search of their SLF for the presence of Native American sacred sites or human remains in the vicinity of the proposed project area. HELIX received a response from NAHC on November 16,

2021, which reported that the SLF search results were negative. However, it is possible that subsurface excavation activities may encounter previously undocumented archaeological resources. The implementation of standard cultural resource construction mitigation (Mitigation Measure CUL-1) would ensure that this impact is less than significant.

Mitigation Measure CUL-1: Avoid and minimize impacts to previously unknown archaeological resources.

It is always possible that ground-disturbing activities during project development may uncover previously unknown archaeological resources. In the event that archaeological resources are discovered during construction, construction operations shall stop within a 100-foot radius of the find and a qualified archaeologist shall be consulted to determine whether the resource requires further study. The City shall include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. The archaeologist shall make recommendations concerning appropriate measures that will be implemented to protect the resources, including but not limited to, excavation and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Archaeological resources could consist of, but are not limited to, stone, bone, wood, or shell artifacts or features, including hearths. Any previously undiscovered resources found during construction within the project area should be recorded on appropriate Department of Parks and Recreation (DPR) 523 forms and evaluated for significance in terms of CEQA criteria.

Question C: No Impact. The proposed project area is not located in an area that is considered likely to have paleontological resources present. Paleontological resources (fossils) are remains an/or traces of prehistoric life. Fossils are typically preserved in layered sedimentary rocks, and the distribution of fossils is a result of the sedimentary historic of the geologic units within which they occur.

Question D: Less than Significant with Mitigation. No human remains are known to exist within the project area, and there were no indications of human remains found during the field survey. However, there is always the possibility that subsurface construction activities associated with the proposed project, such as trenching and grading, could potentially damage or destroy previously undiscovered human remains. Accordingly, this implementation of Mitigation Measure CUL-2 would reduce this potential impact to a less than significant level.

Mitigation Measure CUL-2: Avoid and minimize impacts related to accidental discovery of human remains.

In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines § 15064.5; Health and Safety Code § 7050.5; Public Resources Code § 5097.94 and § 5097.98 must be followed. If during the course of project development there is accidental discovery or recognition of any human remains, the following steps shall be taken:

1. There shall be no further excavation or disturbance within a 100-foot radius of the potentially human remains until the County Coroner is contacted to determine if the remains are Native American and if an investigation of the cause of death is required. If the coroner determines the remains to be Native American, the coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the "most likely descendant" (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation

work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in PRC Section 5097.98.

2. Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the most likely descendant or on the project site in a location not subject to further subsurface disturbance:
 - The NAHC is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 48 hours after being notified by the commission.
 - The descendant identified fails to make a recommendation.
 - The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

VI. GEOLOGY AND SOILS

GEOLOGY AND SOILS:					
Would the project:		Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
a)	Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i.	Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii.	Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii.	Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv.	Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e)	Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The following discussion is based in part on the approach, methodology, results, and conclusions outlined in a geotechnical investigation report prepared by Geocon Consultants, Inc. (Geocon 2017). The geotechnical report was prepared for a project located adjacent to Lot 1, and its description of the environmental setting and geographic landscape of the area is used in the following analysis, and is included as **Appendix E**. A NRCS soil report was also prepared, specific to this project (NRCS 2021).

Environmental Setting

Geology

The project area is at the base of the western Sierra Nevada foothills and is underlain by metamorphic rocks. Site geology consists of existing fill within the northern portion of the site north of the pond and Jurassic-age Gopher Ridge Volcanics (Jgo) and Salt Springs Slate bedrock (Jss) (Geocon Consulting 2018).

The Foothill fault system is located along the western slope of the Sierra Nevada which is the nearest source of seismic activity to the project site. The Bear Mountain Fault, four miles east of Folsom, is a

potentially active trace of the Foothills fault system (CDC 2018b). Although historic seismic activity has been minor along this fault, the potential for strong ground shaking is present. An earthquake on the Bear Mountain fault could cause bedrock accelerations up to 0.35 g (acceleration of gravity).

The State Division of Mines and Geology has published a map of maximum potential earthquake intensities for California. The project area is within seismic risk Zone 3 (State Division of Mines and Geology 2015). A maximum credible earthquake (Richter scale magnitude 6.5) on the Bear Mountain Fault could cause ground shaking of modified Mercalli scale intensity VII or greater, and subsequently cause major damage to structures and injury to people (Folsom, USBR 1992).

The Alquist-Priolo Earthquake Fault Zone Act was passed in 1972 to mitigate the hazard of surface faulting to structures designed for human occupancy. The purpose of the Act is to prevent the construction of buildings used for human occupancy on the surface trace of active faults. No active or potentially active faults are located within the project site or in the project vicinity as mapped under the Act (CDC 2018b).

Soils

Soils on the project site are mapped as Whiterock loam (Lot 1 and Lot 6) and Argonaut-Auburn complex (Lot 1). Whiterock loam soil is somewhat excessively drained, and Argonaut-Auburn complex soil is well-drained (NRCS 2018).

City Regulation of Geology and Soils

The City of Folsom regulates the effects of soils and geological constraints on urban development primarily through enforcement of the California Building Code, which requires the implementation of engineering solutions for constraints to urban development posed by slopes, soils, and geology. The City has additionally adopted a Grading Code (Folsom Municipal Code Section 14.29) that regulates grading citywide to control erosion, storm water drainage, revegetation, and ground movement.

Evaluation of Geology and Soils

Question a (i): No Impact. There are no active or potentially active faults located within the project site, or in the project vicinity as mapped under the Alquist-Priolo Earthquake Fault Zone Act (CDC 2018b). Because no faults underlie the project site, no impact would result, and no mitigation would be necessary.

Question a (ii): Less than Significant Impact. The project area is within seismic risk Zone 3, and a maximum credible earthquake on the Bear Mountain Fault could cause ground shaking of modified Mercalli scale intensity VII or greater, and subsequently cause major damage to structures and injury to people within the project area. While earthquake-induced ground shaking could occur in the project vicinity, historically, seismic activity in the Folsom area has been limited. Further, the proposed project would be constructed in accordance with standards imposed by the City of Folsom through the Grading Code, and in compliance with California Building Code requirements. Potential impacts would be reduced to levels considered acceptable in the City and region. As a result, the project would not expose people or structures to substantial adverse effects of seismic events. This would be a less than significant impact and no mitigation would be required.

Question a (iii) Less than Significant Impact. Liquefaction is a process by which water-saturated materials, such as soil and sediment lose strength and fail during strong ground shaking. Liquefaction occurs when granular material is transformed from a solid state into a liquefied state as a consequence of increased water pressure. Liquefaction is most commonly induced by strong ground shaking associated with earthquakes.

Factors that contribute to liquefaction potential include soil type, the level and duration of seismic ground motions, the type and consistency of soils, and the depth to groundwater. Liquefaction can occur where unconsolidated sediments and a high-water table coincide. Loose sands and peat deposits are susceptible to liquefaction, while clayey silts, silty clays, and clays deposited in freshwater environments are generally stable under the influence of seismic ground shaking. According to the soils mapping for the site, both the Argonaut-Auburn complex soils (present on Lot 1) and the Whiterock loam soils (present on Lot 1 and Lot 6) onsite have a depth to the water table greater than 80 inches (NRCS 2018).

The soils on both parcels do not contain the characteristics typical of soils most susceptible to liquefaction, and because the depths to groundwater are more than 80 inches below the ground surface, it is unlikely that the proposed project would be exposed to liquefaction hazards. Further, the proposed project would be constructed in accordance with standards imposed by the City through the Grading Code, and in compliance with California Building Code requirements. Compliance with these regulations would further reduce potential impacts related to liquefaction. Impacts as a result of seismic-related ground failure or liquefaction hazard at the project site would be less than significant and no mitigation would be required.

Question a (iv): Less than Significant Impact. There is a potential that the proposed project could be exposed to the effects of earthquake-induced ground shaking; however, standards imposed by the City of Folsom through the Grading Code and compliance with California Building Code requirements would reduce this potential impact to levels considered acceptable in the City and region. Likewise, the moderate potential effects from weak soils and water erosion hazards would be minimized through implementation of these standards. There would be no potential for impacts associated with rupture of a known earthquake fault, and less than significant impacts associated with strong seismic ground shaking, seismic-related ground failure, landslides, soil erosion or loss of topsoil, unstable soils, and expansive soils. Overall impacts would be less than significant, and no mitigation would be required.

Question b: Less than Significant Impact. Soils on the project site are well drained; however, Argonaut-Auburn soil has a high runoff potential, which would indicate a higher potential for water erosion. Ground disturbing activities during construction of the project would further increase the potential for soil erosion.

The California Building Code and the City's Grading Code and standard conditions for approval contain requirements to minimize or avoid potential effects from water erosion hazards. As a condition of approval, prior to the issuance of a grading or building permit, the City would require the applicant to prepare a soils report, a detailed grading plan, and an erosion control plan by a qualified and licensed engineer. The soils report would identify soil hazards, including potential impacts from erosion. The City would be required to review and approve the erosion control plan based on the State of California Department of Conservation's "Erosion and Control Handbook." The erosion control plan would identify protective measures to be implemented during excavation, temporary stockpiling, disposal, and revegetation activities.

Table 10. Global Warming Potentials and Atmospheric Lifetimes

GREENHOUSE GAS	ATMOSPHERIC LIFETIME (years)	GLOBAL WARMING POTENTIAL (100-year time horizon)
Carbon Dioxide (CO ₂)	50.0–200.0	1
Methane (CH ₄)	12.0	25
Nitrous Oxide (N ₂ O)	114.0	298
HFC-134a	14	1,430

Regulatory Framework Relating to Greenhouse Gas Emissions

AB 32, the California Global Warming Solutions Act of 2006, recognizes that California is a source of substantial amounts of GHG emissions. The statute states that:

Global warming poses a serious threat to the economic wellbeing, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.

In order to help avert these potential consequences, AB 32 established a State goal of reducing GHG emissions to 1990 levels by the year 2020, which was a reduction of approximately 16 percent from forecasted emission levels, with further reductions to follow. In addition, AB 32 required CARB develop a Scoping Plan to help the state achieve the targeted GHG reductions. In 2015, Executive Order (EO) B-30-15 established California GHG emission reduction targets of 40 percent below 1990 levels by 2030 and 80 percent below 1990 levels by 2050. The EO aligns California's GHG emission reduction targets with those of leading international governments, including the 27 nation European Union. California met the target of reducing greenhouse gas emissions to 1990 levels by 2020, as established in AB 32. As a follow-up to AB 32 and in response to EO-B-30-15, Senate Bill (SB) 32 was passed by the California legislature in 2016 to codify the EO's California GHG emission reduction target of 40 percent below 1990 levels by 2030.

In December 2008, CARB adopted its first version of its Climate Change Scoping Plan (Scoping Plan), which contained the main strategies California was to implement to achieve the mandate of AB 32 to reduce statewide GHG emissions to 1990 levels by 2020. The Scoping Plan establishes an overall framework for the measures to be adopted to reduce California's GHG emissions. The Scoping Plan evaluates opportunities for sector-specific reductions, integrates all CARB and Climate Action Team early actions and additional GHG reduction measures by both entities, identifies additional measures to be pursued as regulations, and outlines the role of a cap-and-trade program.

On December 14, 2017, CARB adopted the 2017 Climate Change Scoping Plan (2017 Scoping Plan), which lays out the framework for achieving the mandate of SB 32 (2016) to reduce statewide GHG emissions to at least 40 percent below 1990 levels by the end of 2030 (CARB 2017).

The 2017 Scoping Plan includes guidance to local governments in Chapter 5, including plan-level GHG emissions reduction goals and methods to reduce communitywide GHG emissions. In its guidance, CARB recommends that “local governments evaluate and adopt robust and quantitative locally-appropriate goals that align with the statewide per capita targets and the State’s sustainable development objectives and develop plans to achieve the local goals.” CARB further states that “it is appropriate for local jurisdictions to derive evidence-based local per capita goals [or some other metric] that the local jurisdiction deems appropriate, such as mass emissions or per service population, based on local emissions sectors and population projections that are consistent with the framework used to develop the statewide per capita targets” (CARB 2017).

As part of the 2035 General Plan, the City prepared an integrated Greenhouse Gas Emissions Reduction Strategy (Appendix A to the 2035 General Plan; adopted August 28, 2018). The purpose of the Greenhouse Gas Emissions Reduction Strategy (GHG Strategy) is to identify and reduce current and future community GHG emissions and those associated with the City’s municipal operations. The GHG Strategy includes GHG reduction targets to reduce GHG emissions (with a 2005 baseline year) by 15 percent in 2020, 51 percent in 2035, and 80 percent in 2050. The GHG Strategy identifies policies within the City of Folsom General Plan that would decrease the City’s emissions of greenhouse gases. The GHG Strategy also satisfies the requirements of CEQA to identify and mitigate GHG emissions associated with the General Plan Update as part of the environmental review process and serves as the City’s “plan for the reduction of greenhouse gases”, per Section 15183.5 of the CEQA Guidelines, which provides the opportunity for tiering and streamlining of project-level emissions for certain types of discretionary projects subject to CEQA review that are consistent with the General Plan (City 2018).

Evaluation of Greenhouse Gas Emissions

The final determination of whether or not a project has a significant effect is within the purview of the lead agency pursuant to CEQA Guidelines Section 15064(b). The City’s GHG Strategy, described above, is a qualified plan for the reduction of greenhouse gases pursuant to CEQA Guidelines Section 15183.5. Consistency with the GHG Strategy may be used to determine the significance of the project’s GHG emissions.

The City’s 2035 General Plan Policy NCR 3.2.8 and GHG Strategy include criteria to determine whether the potential greenhouse gas emissions of a proposed project are significant (City 2018).

NCR 3.2.8 Streamlined GHG Analysis for Projects Consistent with the General Plan

Projects subject to environmental review under CEQA may be eligible for tiering and streamlining the analysis of GHG emissions, provided they are consistent with the GHG reduction measures included in the General Plan and EIR. The City may review such projects to determine whether the following criteria are met:

- Proposed project is consistent with the current general plan land use designation for the project site;

Further, projects resulting in one or more acre of ground disturbance require a General Construction Activity Stormwater Permit and a National Discharge Elimination System (NPDES) permit from the State Water Resources Control Board (SWRCB). Use of the permit requires the preparation of a Storm Water Pollution Prevention Plan (SWPPP) for approval by the SWRCB. The plan would contain best management practices to reduce potential impacts to water quality during construction of the project. Compliance with the City's regulations, the California Building Code requirements, and implementation of the SWPPP would reduce potential impacts related to soil erosion from water to less than significant and no mitigation would be required.

Question c: Less than Significant Impact. Lot 1 is mapped as Argonaut-Auburn soil (91.9%), and Whiterock loam (8.1 percent), and Lot 6 is mapped as Whiterock loam. The NRCS does not have information regarding the stability of Argonaut-Auburn complex soils, nor Whiterock loam (NRCS 2018). However, the project area is not noted for unstable geologic formations susceptible to landslide, lateral spreading, subsidence, liquefaction, or collapse. Compliance with the City's regulations and the California Building Code would minimize potential impacts from weak or unstable soils. Therefore, impacts related to unstable soils would be less than significant, and no additional mitigation would be necessary.

Question d: Less than Significant Impact. Expansive soils shrink and swell in response to changes in moisture levels. The changes in soil volumes can result in damage to structures including building foundations, and infrastructure, if the project design does not appropriately accommodate the changing soil conditions. The parcels are mapped as Argonaut-Auburn complex (Unit 107) and Whiterock loam (Unit 237), and NRCS does not have information regarding the shrink-swell of this soil type (NRCS 2018). The geotechnical report noted that soils of the study area (Argonaut-Auburn complex) do not have a high potential for shrink and swell (Geocon 2017). The proposed project would be designed to meet seismic safety requirements specified in the California Building Code, including standards to minimize impacts from expansive soils. Therefore, impacts related to the potential hazards of construction on expansive soils would be less than significant, and no mitigation would be required.

Question e: No Impact. The proposed project would tie into the City of Folsom's wastewater system and no on-site wastewater disposal would occur. No significant impacts from or to geophysical features or hazards would occur with implementation of the proposed project and no mitigation is required.

VII. GREENHOUSE GAS EMISSIONS

GREENHOUSE GAS EMISSIONS:				
Would the project:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

HELIX Environmental Planning, Inc. completed the City’s Greenhouse Gas Reduction Strategy Consistency Checklist for the proposed project. This checklist is presented in **Appendix B**.

Environmental Setting

Climate change refers to any significant change in measures of climate, such as average temperature, precipitation, or wind patterns over a period of time. Climate change may result from natural factors, natural processes, and human activities that change the composition of the atmosphere and alter the surface and features of the land. Significant changes in global climate patterns have recently been associated with global warming, which is an average increase in the temperature of the atmosphere near the Earth’s surface; this is attributed to an accumulation of greenhouse gas emissions (GHG) in the atmosphere. GHGs trap heat in the atmosphere which, in turn, increases the Earth’s surface temperature. Some GHGs occur naturally and are emitted to the atmosphere through natural processes, while others are created and emitted solely through human activities. The emission of GHGs through fossil fuel combustion in conjunction with other human activities appears to be closely associated with global warming.

GHGs, as defined under California’s Assembly Bill 32 (AB 32), include carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFC), perfluorocarbons (PFC), and sulfur hexafluoride (SF₆). General discussions on climate change often include water vapor, ozone, and aerosols in the GHG category. Water vapor and atmospheric ozone are not gases that are formed directly in the construction or operation of development projects, nor can they be controlled in these projects. Aerosols are not gases. While these elements have a role in climate change, they are not considered by either regulatory bodies, such as CARB, or climate change groups, such as the Climate Registry, as gases to be reported or analyzed for control. Therefore, no further discussion of water vapor, ozone, or aerosols is provided.

GHGs vary widely in the power of their climatic effects; therefore, climate scientists have established a unit called global warming potential (GWP). The GWP of a gas is a measure of both potency and lifespan in the atmosphere as compared to CO₂. For example, since CH₄ and N₂O are approximately 25 and 298 times more powerful than CO₂, respectively, in their ability to trap heat in the atmosphere, they have GWPs of 25 and 298, respectively (CO₂ has a GWP of 1). Carbon dioxide equivalent (CO₂e) is a quantity that enables all GHG emissions to be considered as a group despite their varying GWP. The GWP of each GHG is multiplied by the prevalence of that gas to produce CO₂e. The atmospheric lifetime and GWP of selected GHGs are summarized in **Table 10**.

- Proposed project incorporates all applicable GHG reduction measures (as documented in the Climate Change Technical Appendix to the General Plan EIR) as mitigation measures in the CEQA document prepared for the project; and,
- Proposed project clearly demonstrates the method, timing and process for which the project will comply with applicable GHG reduction measures and/or conditions of approval, (e.g., using a CAP/GHG reduction measures consistency checklist, mitigation monitoring and reporting plan, or other mechanism for monitoring and enforcement as appropriate).

Question a: Less than Significant Impact with Mitigation. GHG emissions would be generated by the project during construction (vehicle engine exhaust from construction equipment, on-road hauling trucks, vendor trips, and worker commuting trips) and during long-term operation (electricity and natural gas use, electricity resulting from water consumption; solid waste disposal, and vehicle engine exhaust). To determine significance of the project's GHG emissions, the City's Greenhouse Gas Reduction Strategy Consistency Checklist was completed (City of Folsom 2021a; included as **Appendix B**):

Part 1: Land Use Consistency

The proposed project is consistent with the City's 2035 General Plan land use and zoning designations?

Both project parcels are designated as Industrial/Office Park (IND) in the Folsom 2035 General Plan. The project proposes a General Plan Amendment to change the land use designation for both parcels to multi-family high density residential (MHD). Current zoning for Lot 1 is Limited Manufacturing Planned Development (M-L, PD), and current zoning for Lot 6 is Business and Professional Planned Development (B-P, PD). The proposed project would require a rezone at Lot 1 from M-L to R-4, and a rezone at Lot 6 from B-P to R-4. The Planned Development combining zone would remain. In accordance with the Greenhouse Gas Reduction Strategy Consistency Checklist, if the project would require a change in land use designation or a rezone, consistency is determined by calculating the estimated the GHG emissions resulting from maximum buildout of the project site allowed using the current zoning and using the proposed zoning change. If the land use designation/zoning change would not result in an increase in annual GHG emissions, the project would be consistent (City 2021a).

An office building would be an allowable use for both the M-L and B-P zones. The maximum allowable lot coverage for an office building is 60 percent and a maximum of two stories are allowed. The resulting maximum buildout of both project parcels under the existing zoning would be office buildings totaling 623,600-SF of floor space. Using CalEEMod and all model defaults, 623,600-SF of general office building would result in approximately 6,075-MT CO₂e per year.

Under the proposed land use designation/zoning, one apartment per 1,700-SF of lot area would be allowed, resulting in a maximum buildout of 304 apartments. Using CalEEMod and model defaults, 304 low-rise apartments would result in approximately 2,431-MT CO₂e per year. This would be 60 percent lower than the GHG emissions for maximum buildout under the current land use designation/zoning, and the project would be consistent with GHG emissions

generated by buildout of the 2035 General Plan. The CalEEMod output files are included in **Appendix B.**

Part 2: GHG Reduction Measures Consistency (only applicable measures shown):

E-1 Building energy Sector: The project will exceed the requirements of the 2016 California Building Energy Efficiency Standards (Title 24, Part 6) by 15 percent or more?

Consistent. The project would meet the requirement of the 2019 California Building Energy Efficiency Standards (Title 24, Part 6), including the requirements for onsite photovoltaic electricity generations (solar panels). According to the California Energy Commission (CEC), once rooftop solar electricity generation is factored in, homes built under the 2019 standards will use about 53 percent less energy than those under the 2016 standards (CEC 2018).

T-1 Mix of Uses: The project is a mixed-use building with two or more uses (i.e., residential, commercial, office, etc.) or if the site is 5-acres or larger there are two or more uses on the site connected by protected pedestrian paths (e.g., sidewalks, elevated walkways) excluding driveways?

Consistent. The project is larger than 5-acres and is located within the Folsom Corporate Center. With implementation of the project, the Folsom Corporate Center would contain a mix of uses including residential, office, medical office, and light manufacturing/research and development. Sidewalks and/or pedestrian paths would connect the project residences with adjacent land uses.

T-3 Bicycle Parking: Project provides five percent more bicycle parking spaces than required in the City's Municipal Code?

Consistent with mitigation. Mitigation Measure GHG-1 would require the installation of bicycle parking 5 percent or more higher than the requirements of City Code section 17.57.090 (for a total of 54 bicycle parking spaces).

T-6 High-Performance Diesel (Construction only): Use high-performance diesel (also known as Diesel-HPR or Reg-9000/RHD) for construction equipment?

Consistent with mitigation. Mitigation Measure GHG-2 would require the use of high-performance diesel for all project construction activities.

T-8 Electric Vehicle Charging (Residential): For multifamily projects with 17 or more dwelling units, provide electric vehicle charging in five percent of total parking spaces?

Consistent with mitigation. Mitigation Measure GHG-3 would require installation of electrical vehicle charging stations in a minimum of five percent of the total parking spaces on the project site.

SW-1 Enhanced Construction Waste Diversion: Project diverts to recycle or salvage at least 65 percent of nonhazardous construction and demolition waste generated at the project site in accordance with Appendix A4 (Residential) of CALGreen?

Consistent with mitigation. Mitigation Measure GHG-4 would require a minimum of 65 percent

of nonhazardous construction and demolition waste to be diverted, recycled or salvaged.

W-1 Water Efficiency: For new residential and non-residential projects, the project will comply with all applicable indoor and outdoor water efficiency and conservation measures required under CALGreen Tier 1?

Consistent with mitigation. Mitigation Measure GHG-5 would require implementation of all 2019 CALGreen Tier 1 applicable indoor and outdoor water efficiency and conservation measures.

With implementation of Mitigation Measures GHG-1 through -5, the project would be consistent with the City's GHG Strategy. Therefore, the project would not generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, and the impact would be less than significant with mitigation.

Mitigation Measure GHG-1: Bicycle Parking

In accordance with the City General Plan GHG Reduction Measure T-3, the project shall provide a minimum of five percent more bicycle parking than required in the City's Municipal Code Section 17.57.090 (for a total of 54 bicycle parking spaces).

Mitigation Measure GHG-2: High-Performance Diesel

In accordance with the City General Plan GHG Reduction Measure T-6, the project shall use high-performance diesel (also known as Diesel-HPR or Reg-9000/RHD) for all diesel-powered equipment utilized in construction of the project.

Mitigation Measure GHG-3: Electric Vehicle Charging

In accordance with the City General Plan GHG Reduction Measure T-8, the project shall provide electric vehicle charging stations in five percent of the total surface parking spaces on the project site (for a total of 16 EV charging stations).

Mitigation Measure GHG-4: Enhanced Construction Waste Diversion

In accordance with the City General Plan GHG Reduction Measure SW-1, the project shall divert to recycle or salvage a minimum 65 of nonhazardous construction and demolition waste generated at the project site in accordance with Appendix A4 (Residential) of the as outlined in the California Green Building Standards Code (2019 CALGreen).

Mitigation Measure GHG-5: Water Efficiency

In accordance with the City General Plan GHG Reduction Measure W-1, the project shall comply with all applicable indoor and outdoor water efficiency and conservation measures required under 2019 CALGreen Tier 1, as outlined in the California Green Building Standards Code.

Question b: Less than Significant Impact. There are numerous State plans, policies, and regulations adopted for the purpose of reducing GHG emissions. The principal overall State plan and policy is AB 32, the California Global Warming Solutions Act of 2006. The quantitative goal of AB 32 is to reduce GHG

emissions to 1990 levels by 2020. SB 32 would require further reductions of 40 percent below 1990 levels by 2030. The mandates of AB 32 and SB 32 are implanted at the state level by the CARB's Scoping Plan. Because the project's operational year is post-2020, the project aims to reach the quantitative goals set by SB 32. Statewide plans and regulations such as GHG emissions standards for vehicles (AB 1493), the LCFS, and regulations requiring an increasing fraction of electricity to be generated from renewable sources are being implemented at the statewide level; as such, compliance at the project level is not addressed. Therefore, the proposed project would not conflict with those plans and regulations.

The Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) for Sacramento County is the 2020 MTP/SCS adopted by the Sacramento Area Council of Governments (SACOG) on November 18, 2019. The 2020 MTP/SCS lays out a transportation investment and land use strategy to support a prosperous region, with access to jobs and economic opportunity, transportation options, and affordable housing that works for all residents. The plan also lays out a path for improving our air quality, preserving open space and natural resources, and helping California achieve its goal to reduce greenhouse gas emissions (SACOG 2019). The transportation sector is the largest source of GHG emissions in the state. A project's GHG emissions from cars and light trucks are directly correlated to the project's vehicle miles traveled (VMT). According to the Transportation Impact Study prepared for the project, the project is anticipated to generate 18 percent less VMT per capita than the regional residential average (T. Kear Transportation Planning and Management, Inc. 2021). This VMT reduction exceeds the 15 percent reduction required by SB 743. In addition to regional VMT projections, SACOG utilizes local growth projections to develop the strategies and measures in the 2020 MTP/SCS. As discussed in question a), above, the change in land use and zoning would result in lower maximum potential GHG emissions compared to current General Plan land use/growth assumptions. Therefore, the regional VMT and population growth resulting from implementation of the project would be consistent with the assumptions used in the 2020 MTP/SCS.

As discussed in question a), above, with implementation of Mitigation Measures GHG-01 through GHG-05, the project would be consistent with the City's GHG Strategy, a qualified plan for the reduction of greenhouse gases pursuant to CEQA Guidelines Section 15183.5. Therefore, the project would not conflict with CARB's 2017 Scoping Plan, the SACOG's 2020 MTP/SCS, or the City's GHG Strategy, and the impact would be less than significant with mitigation.

VIII. HAZARDS AND HAZARDOUS MATERIALS

HAZARDS AND HAZARDOUS MATERIALS:				
Would the project:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

Lot 1 and Lot 6 are currently undeveloped and have no past land uses associated with potentially hazardous sites. The schools located nearest to the project site are: Folsom High School, located approximately 1-mile west of the project site; Sandra J. Gallardo Elementary School, located approximately 1.20-miles west of the project site; and, Gold Ridge Elementary School, located 0.3-mile north of the project site.

The following databases were reviewed for the project site and surrounding area to identify potential hazardous contamination sites: the US EPA's EnviroStor website database (EPA 2021); and the US EPA's Superfund National Priorities List (EPA 2021). Based on the results of the databases reviewed, the project site is not listed as a hazardous waste site.

Federal and state laws include provisions for the safe handling of hazardous substances. The federal Occupational Safety and Health Administration (OSHA) administers requirements to ensure worker safety. Construction activity must also be in compliance with the California OSHA regulations (Occupational Safety and Health Act of 1970).

Evaluation of Hazards and Hazardous Materials

Question a, b, c: Less than Significant Impact. No existing hazardous materials have been identified on the project site, and the site has no history of past land uses associated with potentially hazardous sites. Development of the project site from undeveloped to residential land uses would result in an increase in the generation, storage, and disposal of hazardous wastes. During project construction, oil, gasoline, diesel fuel, paints, solvents, and other hazardous materials may be used. If spilled, these substances could pose a risk to the environment and to human health.

Following construction, household hazardous materials such as various cleansers, paints, solvents, pesticides, pool chemicals, and automobile fluids would be expected to be used. The routine transport, use, and disposal of hazardous materials are subject to local, state, and federal regulations to minimize risk and exposure. The potential risk of exposure or impacts from transport, use, and disposal of hazardous materials to schools and other nearby sensitive receptors would be minimized by implementation of regulations.

Further, the City has set forth its hazardous materials goals and policies in the Hazardous Materials Element of the General Plan. The policies protect the health and welfare of residents of Folsom through management and regulation of hazardous materials in a manner that focus on preventing problems. Additionally, the routine transport, use, and disposal of hazardous materials are subject to state and federal regulations to minimize risk and exposure. The potential for risks associated with the accidental release of hazardous materials during routine transport, use, or disposal would be less than significant for questions a) through c).

Question d: No Impact. The project site is not included on the lists of hazardous materials sites compiled and available on EnviroStor (California Department of Toxic Substances Control 2021) or the US EPA's Superfund National Priorities List (EPA 2021). Therefore, no significant hazard to the public or environment would result with project implementation. No impact would occur, and no mitigation is necessary.

Question e, f: No Impact. The project site is not located in an Airport Land Use Plan area, and no public or private airfields are within 2-miles of the project site; therefore, the project would not result in a safety hazard for people residing or working in the project area. No impact would occur, and no mitigation is necessary for questions e) and f).

Question g: Less than Significant Impact. The City of Folsom published an Evacuation Plan in 2020 (City of Folsom 2020). The project site is located in Evacuation Zone 31. Iron Point Road, which is located north of Lot 1 and Lot 6, is considered a minor evacuation route. No major evacuation routes occur within the vicinity of the project site. No aspect of the proposed project would modify traffic control points within Evacuation Zone 31 or preclude their continued use as an emergency evacuation route. The proposed project would not result in an increased concentration of large numbers of persons in any at-risk location, and the proposed project would not have a significant impact on any emergency plans. Thus, no significant impact would occur, and no mitigation would be necessary.

Question h: Less than Significant Impact. The project site is located in the City of Folsom, and it is provided by urban levels of fire protection by the City. Therefore, the proposed project would not increase the risk of wildland fires. No significant impact would occur, and no mitigation is necessary.

IX. HYDROLOGY AND WATER QUALITY

HYDROLOGY AND WATER QUALITY:					
Would the project:		Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
a)	Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e)	Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f)	Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g)	Place housing within a 100-year flood hazard area as mapped on a federal flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h)	Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i)	Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
j)	Inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

A Preliminary Water Quality Report was prepared by RSC Engineering to develop sizing of stormwater management infrastructure for Lot 1 and Lot 6. Water Quality Reports are incorporated by reference and included as **Appendix F**.

Environmental Setting

There are no existing aquatic resources or constructed stormwater management facilities on the project site. North of Lot 1 is an existing collection of oak trees. To the northwest of Lot 1 is the Revel Senior Living Apartment Complex and Country House Memory Care Facility. The land west of Lot 1 is zoned as a General Commercial District (C-3) Planned Development and populated by an office park. Vacant, undeveloped land that is a proposed medical office building lies east of Lot 1, and Micron Technology office park is northeast of the site. These land uses also serve as the western border for Lot 6. A small man-made pond lies east of Lot 6, in an area zoned for Limited Manufacturing. The land north of Lot 6 includes existing residential development, and the land south of Lot 6 includes an existing SAFE Credit Union.

Precipitation is the only apparent source of surface water for the project site. No developed storm drainage features are constructed on the project site. Because the project site is currently undeveloped, implementation of the project would result in an increase of impervious surface area and channelization of storm water runoff, the rates and volumes of which would increase. However, this is a normal consequence associated with development, and as shown in the preliminary grading plans for the project, the drainage patterns would be designed to not impact adjoining properties. Stormwater management features for the proposed project include: bioretention basins, Contech stormwater filters, and disconnected roof drains.

The multiple drainage management areas in Lot 1 would encompass the apartment buildings, pavement areas, pool, and amenity areas. The drainage areas direct the runoff to the proposed stormwater quality facilities by an onsite storm drain system. The stormwater quality facilities used (bio retention or Contech storm filters as appropriate) will be in accordance with City of Folsom requirements.

Lot 6 would be separated into multiple drainage management areas that would encompass the carports, parking areas, apartment buildings, pool, and amenity areas. The drainage areas direct the runoff to the stormwater quality facilities by an onsite storm drain system. The stormwater quality facilities used (bio retention, disconnected roof drain or Contech storm filters as appropriate) will be in accordance with City of Folsom requirements.

The on-site stormwater control system would tie-in to an existing stormwater stub at each site. The project would incorporate standard best management practices (BMP) to maintain existing water quality in accordance with City regulations.

Federal Emergency Management Agency (FEMA) flood insurance rate maps were reviewed for the project's proximity to a 100-year floodplain. The proposed project is on FEMA panel 06067C0119H, effective August 16, 2012 (FEMA 2012). The project site is not located within a 100-year floodplain.

Neither of the parcels are located in an area of important groundwater recharge. Domestic water in the City is provided solely by surface water sources. The City is the purveyor of water to the area in which the project is located.

Regulatory Framework Relating to Hydrology and Water Quality

The City is a signatory to the Sacramento Countywide National Pollutant Discharge Elimination Program (NPDES) permit for the control of pollutants in urban stormwater. Since 1990, the City has been a

partner in the Sacramento Stormwater Quality Partnership, along with the County of Sacramento and the Cities of Sacramento, Citrus Heights, Elk Grove, Galt, and Rancho Cordova. These agencies are implementing a comprehensive program involving public outreach, construction and industrial controls (i.e., BMPs), water quality monitoring, and other activities designed to protect area creeks and rivers. This program would be unchanged by the proposed project, and the project would be required to implement all appropriate program requirements.

In addition to these activities, the City maintains the following requirements and programs to reduce the potential impacts of urban development on stormwater quality and quantity, erosion and sediment control, flood protection, and water use. These regulations and requirements would be unchanged by the proposed project.

Standard construction conditions required by the City include:

- *Water Pollution* – requires compliance with City water pollution regulations, including NPDES provisions.
- *Clearing and Grubbing* – specifies protection standards for signs, mailboxes, underground structures, drainage facilities, sprinklers and lights, trees and shrubbery, and fencing. Also requires the preparation of a Stormwater Pollution Prevention Plan (SWPPP) to control erosion and siltation of receiving waters.
- *Reseeding* – specifies seed mixes and methods for reseeding of graded areas.

Additionally, the City enforces the following requirements of the Folsom Municipal Code as presented in **Table 11**.

Table 11. City of Folsom Municipal Code Sections Regulating the Effects on Hydrology and Water Quality from Urban Development

CODE SECTION	CODE NAME	EFFECT OF CODE
8.70	Stormwater Management and Discharge Control	Establishes conditions and requirements for the discharge of urban pollutants and sediments to the storm-drainage system; requires preparation and implementation of Stormwater Pollution Prevention Plans.
13.26	Water Conservation	Prohibits the wasteful use of water; establishes sustainable landscape requirements; defines water use restrictions.
14.20	Green Building Standards Code	Adopts the California Green Building Standards Code (CALGreen Code), 2010 Edition, excluding Appendix Chapters A4 and A5, published as Part 11, Title 24, C.C.R. to promote and require the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices.
14.29	Grading Code	Requires a grading permit prior to the initiation of any grading, excavation, fill or dredging; establishes standards, conditions, and requirements for grading, erosion control, stormwater drainage, and revegetation.
14.32	Flood Damage Prevention	Restricts or prohibits uses that cause water or erosion hazards, or that result in damaging increases in erosion or in flood heights; requires that uses vulnerable to floods be protected against flood damage; controls the modification of floodways; regulates activities that may increase flood damage or that could divert floodwaters.
14.33	Hillside Development	Regulates urban development on hillsides and ridges to protect property against losses from erosion, ground movement and flooding; to protect significant natural features; and to provide for functional and visually pleasing development of the city's hillsides by establishing procedures and standards for the siting and design of physical improvements and site grading.

Source: Folsom Municipal Code July 2011

Evaluation of Hydrology and Water Quality

Questions a, c, d, e, f: Less than Significant Impact. Ground disturbing activities associated with construction of the proposed project would include additional clearing and grading the project site. Modifications to the existing drainage patterns may result in localized flooding, and an increase in impervious surfaces may result in an increase in the total volume and peak discharges of stormwater runoff which may contribute to downstream erosion and flooding. Construction of the proposed project has the potential to degrade water quality associated with urban runoff. Ground disturbing activities would expose soil to erosion and may result in the transport of sediments which could adversely affect water quality.

Modifications to the onsite drainage resulting in on-or off-site erosion, pollutants, flooding, and/or otherwise substantially degrade water quality would be a potentially significant impact. The proposed project would be required to comply with various State and local water quality standards which would ensure the proposed project would not violate water quality standards or waste discharge permits, or otherwise substantially degrade water quality. As the project is greater than one acre, the proposed project would be subject to NPDES permit conditions which include the preparation of a SWPPP for implementation during construction. As described above, the proposed project would also be subject to all of the City's standard Code requirements, including conditions for the discharge of urban pollutants and sediments to the storm drainage system, and restrictions on uses that cause water or erosion hazards.

Further, prior to the issuance of grading and building permits, the applicant would be required to submit to the City a drainage plan that shows how project BMPs capture storm water runoff during project operations. Compliance with these requirements would ensure that water quality standards and discharge requirements are not violated, and water quality is protected. Impacts would be less than significant, and no mitigation would be necessary for questions a), c), d), e), and f).

Question b: Less than Significant Impact. Implementation of the proposed project would not result in the use of groundwater, because domestic water in the City is provided solely from surface water sources from the Folsom Reservoir. While the proposed project would result in additional impervious surfaces on the site that could affect groundwater recharge, the site is not known to be important to groundwater recharge. Further, because the proposed project would not rely on groundwater for domestic water and irrigation purposes, and because the site is not an important area of groundwater recharge, the proposed project would not deplete groundwater supplies or interfere substantially with groundwater recharge that would result in a net deficit in aquifer volume or a lowering of the local groundwater table. Therefore, no significant impacts would occur, and no mitigation would be necessary.

Question g and h: No Impact. Because the project site is located outside of a 100-year floodplain, development of the proposed project would not place persons or structures at risk from flood hazards, nor would it interfere with existing floodway capacity. Thus, no impacts would occur, and no mitigation would be necessary for questions g) and h).

Question i: Less than Significant Impact. The proposed project would not expose new development to inundation in the event of the failure of a dam. Should either of the City's two main dams (Folsom Lake and Mormon Island) fail, failure would most likely occur with adequate warning to evacuate residents. The project is required to adhere to City established evacuation plans as outlined in the City of Folsom Evacuation Plan (City of Folsom 2020) reviewed by the Reclamation District that establish protocol in the event of the dam failure. With implementation of the evacuation plan in the event of the failure of a dam, the impact would be less than significant, and no mitigation would be necessary.

Question j: Less than Significant Impact. The City of Folsom is located approximately 95-miles from the Pacific Ocean, at elevations ranging from approximately 140- to 828-feet amsl. Due to the distance and higher elevation, inundation by tsunami would not occur. The City is located adjacent to Folsom Lake, a reservoir of the American River impounded by a main dam on the river channel and wing dikes. Areas of the City adjacent to the wing dikes could be adversely affected by a seiche as a result of an earthquake, either through sloshing within a full reservoir or by a massive landslide or earth movement into the lake. Although historic seismic activity has been minor, the potential for strong ground shaking is present and

the possibility exists of a strong earthquake occurring when lake levels are high. This could create a large enough wave to overtop or breach the wing dikes although this is considered to be a remote possibility.

Mudslides and other forms of mass wasting occur on steep slopes in areas having susceptible soils or geology, typically as a result of an earthquake or high rainfall event. Slopes associated with the edges of the building pads are located on the project site; however, City grading standards, including requirements to evaluate slope stability and implement slope stabilizing measures as necessary, would prevent this potential effect. In summary, there would be no potentially significant effect from inundation by seiche, tsunami, or mudflow and no mitigation would be necessary.

X. LAND USE AND PLANNING

LAND USE AND PLANNING:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Environmental Setting

Land use in the project area is regulated by the City of Folsom through the various plans and ordinances adopted by the City. These include the City of Folsom General Plan and the City of Folsom Municipal Code, including the Zoning Code. The General Plan currently identifies Lot 1 as Industrial/Office Park (IND), and zoned for Limited Manufacturing, Planned Development District (M-L PD). The General Plan currently identifies Lot 6 as IND, and zoned for Business Park, Planned Development District (B-P PD).

The proposed project includes a General Plan Amendment to change the land use designation in Lot 1 and Lot 6 from Industrial (IND) to Multi-Family, High Density (MHD); as well as a rezone from M-L PD to General Apartment, Planned Development District (R-4 PD) at Lot 1 and, and a rezone from B-P to M-4 at Lot 6. The Planned Development combining zone would remain.

A Planned Development Permit would be required because the proposed project is sited within a planned development overlay zoning designation. The Planned Development Permit would allow the City to review the site plan and associated project site details to ensure the project meets the standards and requirements beneficial to the City and its residents as defined in Section 17.38.100 of the Zoning Code.

Evaluation of Land Use and Planning

Question a: No Impact. Lot 1 is largely undeveloped, and is bordered by office buildings, oak woodland, and medical offices to the north, vacant land to the east, US Highway 50 and vacant land to the south, and commercial buildings, a memory care facility and undeveloped land to the west. Lot 6 is largely undeveloped and is bordered by Iron Point Road and residential development to the north, a constructed pond/wetland and office buildings to the east, office buildings and undeveloped land containing scattered oaks to the south, and office buildings to the west. Development of the project site would not physically divide an established community as various office space, vacant land, commercial land surrounds Lot 1 and Lot 6. The residential development located north of Lot 1 and Lot 6 would not be altered. Therefore, there would be no impact and no mitigation is required.

Question b: Less than Significant. The development standard for Planned Development (PD) is that the proposed project must be designed to provide open space, circulation, off-street parking, and other conditions in such a way as to form a harmonious, integrated project of sufficient quality to justify exceptions to the normal regulations of this title.

The project would require a General Plan Amendment to change the land use designation from IND in Lot 1 and Lot 6 to MHD in Lot 1 and Lot 6. A Rezone would be required for Lot 1 from M-L PD to R-4 PD, and for Lot 6 from B-P PD to R-4 PD. The General Plan Amendment and Rezone would be reviewed and approved by the City, and the project would be reviewed by the City for consistency with the proposed land use and zoning designations prior to the City issuing permits. The project would comply with these standards and not conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project; therefore, project-related impacts would be less than significant, and no mitigation would be necessary.

Question c: No Impact. No Habitat Conservation Plan or Natural Community Conservation Plan has been approved for the project area. Implementation of the proposed project would not conflict with any conservation plan. No impact would occur, and no mitigation is necessary.

XI. MINERAL RESOURCES

MINERAL RESOURCES:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Environmental Setting

The Folsom area regional geologic structure is defined by the predominantly northwest- to southeast-trending belt of metamorphic rocks and the strike-slip faults that bound them. The structural trend influences the orientation of the feeder canyons into the main canyons of the North and South Forks of the American River. This trend is interrupted where the granodiorite plutons outcrop (north and west of Folsom Lake) and where the metamorphic rocks are blanketed by younger sedimentary layers (west of Folsom Dam) (Geotechnical Consultants, Inc 2003).

The presence of mineral resources within the City has led to a long history of gold extraction, primarily placer gold. No areas of the City are currently designated for mineral resource extraction.

Evaluation of Mineral Resources

Questions a, b: No Impact. The proposed project is not located in a zone of known mineral or aggregate resources (CDC 2021). No active mining operations are present on or near the site. Implementation of the project would not interfere with the extraction of any known mineral resources. Thus, no impacts would result, and no mitigation would be necessary.

XII. NOISE

NOISE:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Generation of a substantial temporary or permanent increase in the ambient noise levels in the vicinity of the project in excess of standards established in the local General Plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) For a project located in the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within two miles of a public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

The existing noise environment in the vicinity of the project site is dominated by vehicular traffic, primarily on US Highway 50, approximately 100-feet south of the project Lot 1, and Iron Point Road, approximately 20-feet north of the project Lot 6. Other noise sources include ambient urban noise sources (e.g., parking lots; heating, ventilation and air conditioning [HVAC] systems) associated with the commercial/industrial developments within the Folsom Corporate Center, including: the Kaiser Permanente medical offices on the north side of the project lot 1; Micron Technology between the project Lot 1 and Lot 6; and the SAFE Credit Union corporate office south of the project Lot 6.

Noise-sensitive land uses are land uses that may be subject to stress and/or interference from excessive noise, including residences, hospitals, schools, hotels, resorts, libraries, sensitive wildlife habitat, or similar facilities where quiet is an important attribute of the environment. Noise receptors (receivers) are individual locations that may be affected by noise. Noise-sensitive land uses in the project vicinity include multi-family residences across Iron Point Road, approximately 850-feet north of the project Lot 1 and approximately 160-feet north of the project Lot 6; and senior living apartments approximately 380 feet west of the project Lot 1.

An ambient noise survey for Lot 1 was conducted by Bollard Acoustical Consultants on February 4, 2021. A 24-hour measurement was taken with the microphone place between the proposed Lot 1 pool and building 1, approximately 210-feet from the centerline of US Highway 50. The result of the measurement was 66 dBA L_{DN}. The measurement was taken approximately 5-feet above existing ground level and does not account for project grading which would change ground level noise from US Highway 50 (Bollard 2021). The letter summarizing the noise survey is included as **Appendix G**.

Noise Metrics

All noise-level and sound-level values presented herein are expressed in terms of decibels (dB), with A weighting, abbreviated "dBA," to approximate the hearing sensitivity of humans. Time averaged noise

levels of one hour are expressed by the symbol “ L_{EQ} ” unless a different time period is specified. The Community Noise Equivalent Level (CNEL) is a 24-hour average, where noise levels during the evening hours of 7:00 p.m. to 10:00 p.m. have an added 5 dBA weighting, and sound levels during the nighttime hours of 10:00 p.m. to 7:00 a.m. have an added 10 dBA weighting. This is similar to the Day Night sound level (L_{DN}), which is a 24-hour average with an added 10 dBA weighting on the same nighttime hours but no added weighting on the evening hours.

Because decibels are logarithmic units, noise levels cannot be added or subtracted through standard arithmetic. Under the decibel scale, a doubling of sound energy corresponds to a 3 dBA increase. In other words, when two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than from one source under the same conditions. For example, if one automobile produces a sound pressure level (S_{PL}) of 70 dBA when it passes an observer, two cars passing simultaneously would not produce 140 dBA—rather, they would combine to produce 73 dBA. Under the decibel scale, three sources of equal loudness together produce a sound level 5 dBA louder than one source.

Under controlled conditions in an acoustical laboratory, the trained, healthy human ear is able to discern 1 dBA changes in sound levels, when exposed to steady, single-frequency (“pure-tone”) signals in the mid-frequency (1,000 Hertz [Hz]–8,000 Hz) range. In typical noisy environments, changes in noise of 1 to 2 dBA are generally not perceptible. It is widely accepted, however, that people begin to detect sound level increases of 3 dB in typical noisy environments. Further, a 5 dBA increase is generally perceived as a distinctly noticeable increase, and a 10 dBA increase is generally perceived as a doubling of loudness.

Vibration Metrics

Groundborne vibration consists of rapidly fluctuating motions or waves transmitted through the ground with an average motion of zero. Sources of groundborne vibrations include natural phenomena and anthropogenic causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g., explosions). Peak particle velocity (PPV) is commonly used to quantify vibration amplitude. The PPV, with units of inches per second (in/sec), is defined as the maximum instantaneous positive or negative peak of the vibration wave. Decibels are also used to compress the range of numbers required to describe vibration. Vibration velocity level (L_v) with units of VdB are commonly used to describe vibrations from transit sources.

Regulatory Framework

Noise Element

The Safety and Noise Element of the City of Folsom General Plan regulates noise emissions from public roadway traffic on new development of residential or other noise sensitive land uses. Policy SN 6.1.2 and Table SN-1 provide noise compatibility standards for land uses. For multi-family residential uses, noise due to traffic on public roadways, railroad line operations, and aircraft shall be reduced to or below 65 CNEL for outdoor activity areas and 45 CNEL for interior use areas (City 2021).

Policy SN 6.1.8 requires construction projects and new development anticipated to generate a significant amount of vibration to ensure acceptable interior vibration levels at nearby noise-sensitive uses based on Federal Transit Administration criteria. Table SN-3 provides vibration impact criteria. For

construction with infrequent vibration events, impacts would be significant if residences are subject to ground borne vibrations in excess of 80 VdB (City 2021).

Noise Ordinance

For stationary noise sources, the City has adopted a Noise Ordinance as Section 8.42 of the City Municipal Code (City of Folsom 1993). The Noise Ordinance establishes hourly noise level performance standards that are most commonly quantified in terms of the one-hour average noise level (L_{EQ}). Using the limits specified in Section 8.42.040 of the Noise Ordinance, noise levels generated by the project would be significant if they exceed 50 dBA L_{EQ} from 7:00 a.m. to 10:00 p.m. and 45 dBA L_{EQ} from 10:00 p.m. to 7:00 a.m. at off-site residential property boundaries. Noise from the project's air conditioning systems would be significant if exterior noise levels exceed 50 dBA, per Section 8.42.070 of the City Municipal Code. Section 8.42.060 exempts construction noise from these standards provided that construction does not occur before 7:00 a.m. or after 6:00 p.m. on weekdays, or before 8:00 a.m. or after 5:00 p.m. on Saturday or Sunday (City 1993).

Question a: Less than Significant with Mitigation

Construction Noise

Project construction noise was analyzed using the U.S. Department of Transportation (USDOT) Roadway Construction Noise Model ([RCNM]; USDOT 2008), which utilizes estimates of sound levels from standard construction equipment.

The nearest NSLUs to the project site area, single-family homes approximately 160 feet north of the project Lot 6. Heavy earthmoving equipment would have the potential to be used along the project's periphery, closest to NSLUs, including rubber-tired dozers, backhoes, excavators, graders, and scrapers. The noisiest construction equipment anticipated to be used near NSLUs would be a grader used during grading. Modeling shows that the noise from a grader would result in 70.9 dBA L_{EQ} at the closest residential property. Because construction equipment would be mobile as it moves across the project site, the noise level experienced by the neighboring uses would vary throughout the day. The modeling output for the grader and other anticipated construction equipment is included as **Appendix G**.

According to the City Code Section 8.42.060, noise sources associated with construction of the project which are conducted between the hours of 7:00 a.m. and 6:00 p.m., on Monday, Tuesday, Wednesday, Thursday, Friday and Saturday, and between 9:00 a.m. and 6:00 p.m. on Sunday, are exempt from the City noise standard (City 1993). Furthermore, the calculated short-term construction noise would be approximately 2 dBA higher than the calculated ambient traffic noise (see the off-site traffic noise discussions, below). A 2 dBA increase in ambient noise levels is generally not perceptible in typical outdoor environments and daytime construction noise increases would be less than significant. Nighttime construction noise is not anticipated for the project. However, nighttime construction is not exempt from the City Noise Ordinance and would exceed the nighttime standard of 45 dBA if it were to occur, resulting in a temporarily significant noise impact.

Off-Site traffic Noise

Modeling of the exterior noise environment for this report was accomplished using the Traffic Noise Model (TNM) version 2.5. TNM Version 2.5 was released in February 2004 by the U.S. Department of Transportation (USDOT) and calculates the daytime average hourly L_{EQ} from three-dimensional model

inputs and traffic data (USDOT 2004). The model-calculated one-hour L_{EQ} noise output is approximately equal to the CNEL (Caltrans 2009). The noise modeling input and output is included in **Appendix G**.

According to the Transportation Impact Study (TIS), the project is expected to generate approximately 1,376 daily trips and 104 trips during the PM peak hour (T. Kear 2021). Future traffic noise levels presented in this analysis are based on traffic volumes for five segments of Iron Point Road derived from intersection turning counts included in the TIS for four scenarios: existing (2021); existing plus project; cumulative (2035); and cumulative plus project. The traffic volumes for the five analyzed segments of Iron Point Road are included in **Appendix G**. Changes in traffic noise levels were calculated based on an average distance of 80 feet from the road centerline and adjacent residential land uses. The modeling does not account for intervening terrain or structures (e.g., sound walls, buildings).

The calculated off-site traffic noise levels are shown in **Table 12**. In typical outdoor environments, a 3 dBA increase in ambient noise level is considered just perceptible and a 5 dBA increase (a doubling of noise) is considered distinctly perceptible. In areas where existing or future ambient noise exceed the land use compatibility standards, an individual project's contribution to increases in ambient noise level could be considered significant if it exceeds 1.5 dBA. Because most of the areas along the analyzed road segments already exceed the land use noise compatibility standard listed in the city General Plan (60 dBA CNEL for low density residential; 65 dBA CNEL for multi-family residential and hotels, and 70 dBA for commercial), this analysis uses a threshold of a 1.5 dBA CNEL increase to be significant.

The maximum change in CNEL as a result of project-generated traffic would be 0.2 dBA CNEL, a change in ambient noise level that is lower than the threshold and is not discernable. Therefore, impacts related to the project generating a substantial permanent increase in ambient noise levels in the vicinity of the project in excess of General Plan standards from project-generated traffic would be less than significant.

Table 12: Off-Site Traffic Noise Levels

Roadway Segment	Existing (CNEL)	Existing + Project (CNEL)	Change in CNEL	2035 (CNEL)	2035 + Project (CNEL)	Change in CNEL
Iron Point Road.						
Grover Road to Oak Avenue Parkway	69.5	69.6	0.1	69.7	69.8	0.1
Oak Avenue Parkway to West Kaiser Access Road	68.8	69.0	0.2	71.1	71.2	0.1
West Kaiser Access Road to Rowberry Way	68.8	68.8	0.0	71.1	71.2	0.1
Rowberry Way to SAFE Credit Union Access	68.7	68.8	0.0	71.5	71.5	0.0
SAFE Credit Union Access to Broadstone Parkway	68.8	68.9	0.1	71.5	71.5	0.0

Source: TNM version 2.5

Heating, Ventilation, and Air Conditioning (HVAC)

The project includes the outdoor installation of HVAC units on the roof of the proposed project buildings. The units would be located behind a parapet wall of equal or greater height to the HVAC unit, which would provide substantial noise attenuation. Specific details on planned HVAC units were not available at the time of this analysis. A typical system for apartments in multi-story buildings would be a Carrier model 38BRC-024-34 2-ton system for each apartment which has a sound rating of 73.4 dBA S_{WL} . The closest NSLUs to project buildings systems would be the single-family homes across Iron Point Road from Lot 6. The minimum distance from potential HVAC systems and off-site residential property line would be approximately 160 feet. At 160-feet, an HVAC system producing 73.4 dBA S_{WL} would result in 35 dBA L_{EQ} , without considering reductions from the parapet walls. This noise level would not exceed the City Noise Ordinance daytime (50 dBA L_{EQ}) or nighttime (45 dBA L_{EQ}) maximum acceptable noise levels; and the impacts would be less than significant.

On-site Traffic Noise

Modeling of the exterior noise environment on the project site was accomplished using the Computer Aided Noise Abatement (CadnaA) model version 2021. The noise models used in this analysis were developed from Computer Aided Design (CAD) plans provided by the project architect. Input variables included, road alignment, elevation, area topography, projected traffic volumes, estimated truck composition percentages, and vehicle speeds. The one-hour L_{EQ} traffic noise level is calculated utilizing peak-hour traffic. The model-calculated one-hour L_{EQ} noise output is the equivalent to the CNEL (Caltrans 2009). The modeling includes the project buildings but does not account for terrain or off-site buildings and structures.

Traffic volumes on Iron Point Road were derived from the p.m. peak hour intersection turning counts reported in the TIS (T.Kear 2021). The truck composition for Iron Point Road was assumed to be typical for suburban streets: 3 percent medium trucks/busses and 1 percent heavy trucks. Traffic volumes and truck composition (2.7 percent medium trucks and 3.7 percent heavy trucks) for US-50 were modeled using data from the Caltrans traffic and truck counts for 2019 (Caltrans 2022).

Exterior Noise

As discussed above, the City General Plan Safety and Noise Element has established an exterior noise standard of 65 dBA CNEL for multi-family residential outdoor activity areas, defined as “[...] the patios or common areas where people generally congregate for multifamily development” (City 2021). The pool areas and patios surrounding the club houses would be the outdoor activity areas for the project. The modeling shows ground level noise for the clubhouse/pool area would be approximately 65 dBA CNEL in Lot 1 and 63 dBA CNEL in Lot 6. This noise level would not exceed the City exterior noise standard and the impact would be less than significant.

Interior Noise

Standard building design and construction using current building codes provides approximately 15 to 20 dBA of exterior to interior noise reduction with the windows and doors closed. The noise at the exterior facades for the project buildings was modeled for receptors on first, second, and third floors of all project residential buildings and is shown in **Table 13**.

Table 13: Building Exterior Noise Levels

Building	1 st Floor (CNEL)	2 nd Floor (CNEL)	3 rd Floor (CNEL)
Lot 1, Building 1	73.0	73.9	76.0
Lot 1, Building 2	72.5	71.8	73.4
Lot 1, Building 3	54.1	59.8	62.9
Lot 1, Building 4	56.8	58.1	60.8
Lot 1, Building 5	49.9	50.6	59.4
Lot 1, Building 6	52.7	54.7	57.1
Lot 1, Building 7	60.1	65.6	68.2
Lot 6, Building 1	62.6	62.9	63.3
Lot 6, Building 2	55.5	57.8	60.5
Lot 6, Building 3	71.0	71.0	70.7
Lot 6, Building 4	59.6	58.9	61.6
Lot 6, Building 5	65.0	68.2	68.5

Source: CadnaA version 2021

Buildings with exterior noise levels exceeding 65 dBA could result in interior noise levels in excess of the City General Plan Safety and Noise Element standard of 45 dBA CNEL. Lot 1 (buildings 1 and 2) and Lot 6 (building 3) would have exterior noise levels exceeding 70 dBA CNEL. Lot 1 building 7 and Lot 6 (building 5) would have exterior noise levels exceeding 65 dBA CNEL. Interior noise impacts would be potentially significant.

Exterior to interior noise reductions are dependent on the building exterior wall area, window area, door area, and room depth, which was not available at the time of this analysis. Calculations were made to estimate the minimum exterior wall and window sound transmissions class (STC) rating required for the project apartments to meet the City's interior noise standards. The calculations were based on an assumed typical 20-feet by 10-feet apartment room with two exterior walls, two windows measuring 3-feet by 5-feet and one sliding glass door measuring 5-feet by 7-feet. The calculation sheets are included in **Appendix G**. Lot 1 buildings 1 and 2 and, Lot 6 (building 3) would require exterior walls with line of sight to US Highway 50 or Iron Point Road to have a minimum STC 46 rating and widows/sliding glass doors to have a minimum STC 35 rating. Lot 1 building 7 and Lot 6 (building 5) would require windows/sliding glass doors to have a minimum STC 28 rating.

Impact Conclusion

Construction noise generated by the project would result in short-term substantial noise increases compared to baseline existing conditions. The implementation of Mitigation Measure NOI-1 would restrict construction to daytime and minimize noise levels to surrounding residential uses.

The addition of permanent project-generated traffic vicinity roadways would not result in a discernable increase in ambient noise levels. The project would expose residential land uses to noise levels that exceed compatibility guidelines in the General Plan and impacts would be potentially significant. The implementation of Mitigation Measure NOI-02 would ensure that noise reduction measures are included in building material specifications.

Long-term operation of project building HVAC systems would not result in noise levels exceeding the City noise ordinance standards, measured at the outdoor spaces of the closest NSLUs to the project site.

Mitigation Measure NOI-1: Construction Noise Reduction Measures

Construction activities shall be required to comply with the following and be noted accordingly on construction contracts:

1. **Construction hours/Scheduling:** The following are required to limit construction activities to the portion of the day when occupancy of the adjacent sensitive receptors are at the lowest:
 - a. Construction activities for all phases of construction, including servicing of construction equipment shall only be permitted during the hours of 7:00 a.m. and 7:00 p.m. Monday through Friday and between 9:00 a.m. to 5:00 p.m. on Saturdays. Construction is prohibited on Sundays and on all holidays.
 - b. Delivery of materials or equipment to the site and truck traffic coming to and from the site is restricted to the same construction hours specified above.
2. **Construction Equipment Mufflers and Maintenance:** All construction equipment powered by internal combustion engines shall be properly muffled and maintained.
3. **Idling Prohibitions:** All equipment and vehicles shall be turned off when not in use. Unnecessary idling of internal combustion engines is prohibited.
4. **Equipment Location and Shielding:** All stationary noise-generating construction equipment, such as air compressors, shall be located as far as practical from the adjacent homes. Acoustically shield such equipment when it must be located near adjacent residences.
5. **Quiet Equipment Selection:** Select quiet equipment, particularly air compressors, whenever possible. Motorized equipment shall be outfitted with proper mufflers in good working order.
6. **Staging and Equipment Storage:** The equipment storage location shall be sited as far as possible from nearby sensitive receptors.

Mitigation Measure NOI-2: On-site Interior Noise Level Reduction

For the project's habitable areas (both living rooms and bedrooms) with a direct line-of-sight to US Highway 50 for Lot 1 and Iron Point Road for Lot 2, the following measures shall be incorporated in the design of the project to reduce interior noise levels to 45 CNEL or less:

- Lot 1 (Buildings 1 and 2) and Lot 6 (Building 2) – minimum exterior wall requirement of STC 46.
- Lot 1 (Buildings 1 and 2) and Lot 6 (Building 2) – minimum window and glass sliding door requirement of STC 35.
- Lot 1 (Building 7) and Lot 6 (Building 5) – minimum window and glass sliding door requirement of STC 28.
- The building design shall include a mechanical ventilation system that meets the criteria of the International Building Code (Chapter 12, §1203.3 of the 2013 California Building Code) to ensure that windows would be able to remain permanently closed.

Question b: Less than Significant Impact. An on-site source of vibration during project construction would be a vibratory roller (primarily used to achieve soil compaction as part of the foundation and

paving construction), which could be used within approximately 160-feet of the single-family residences across Iron Point Road to the north. A large vibratory roller creates approximately 0.21 in/sec PPV at a distance of 25-feet, or 94.4 VdB. At a distance of 160-feet, a vibratory roller would create a PPV of 0.027 in/sec, or 77 VdB.¹ This would not exceed the City General Plan residential standard of 80 VdB for infrequent events. Once operational, the project would not be a source of groundborne vibrations. Impacts associated with construction-generated vibration would be less than significant. Therefore, the project would not result in the generation of excessive groundborne vibration or groundborne noise levels, and the impact would be less than significant.

Question c: Less than Significant Impact. The closest airports to the project site are the Cameron Park Airport, approximately 7.5-miles to the northeast, and Mather Airport, approximately 9.5-miles to the southwest. The project site is located within the review area identified in the Mather Airport Land Use Compatibility Plan (ALUCP). The project site is beneath the approach paths for runways 22 Left and 22 Right, however, the project site is not within the 60 dBA noise contour for the airport (Sacramento County Association of Governments 2020). Therefore, although the project site is subject to overflight by aircraft approaching and departing Mather Airport, the residents of the proposed project or people working in the project area would not be exposed to excessive levels of noise due to aircraft or airport operations, and the impact would be less than significant.

¹ Equipment PPV = Reference PPV * (25/D)ⁿ(in/sec), where Reference PPV is PPV at 25 feet, D is distance from equipment to the receptor in feet, and n= 1.1 (the value related to the attenuation rate through the ground); formula from Caltrans 2020. VdB = 20 * Log(PPV/4/10⁻⁶).

XIII. POPULATION AND HOUSING

POPULATION AND HOUSING:				
Would the project:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Environmental Setting

The proposed project includes the total construction of 253 new multi-family apartment units on two separate parcels, Lot 1, and Lot 6.

Evaluation of Population and Housing

Question a: Less than Significant. Implementation of the project would result in the construction of 253 apartment units. The proposed project would accommodate the demand for housing and would not induce substantial growth in the City of Folsom. It is anticipated that the project would generate between 253 and 665 new residents (assuming 2.63 people per unit, based on projected household size in 2035 [City of Folsom 2018]). The projected household size is for single family homes, which is anticipated to be larger than the apartment units within Lot 1 and Lot 6. Existing infrastructure in the area would not be expanded or extended as a result of the project. Lot 1 and Lot 6 would require the addition of main access driveways and emergency access driveways along the parcel boundaries; however, this addition would not impact the existing roadways within the vicinity of the project site. Moreover, the population generated by the project is within the projected increase in population from planned growth as projected in the City’s Housing Element. The impact would not be significant, and no mitigation would be required.

Question b and c: No Impact. The proposed project would include the development of residential units on a currently undeveloped and vacant site. There are no existing residences on the project site; therefore, neither housing units nor people would be displaced, and no replacement housing would be required. There would be no impact and no mitigation would be necessary for questions b) and c).

XIV. PUBLIC SERVICES

PUBLIC SERVICES:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:				
Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

The proposed project is in an area currently served by urban levels of all utilities and services. Public services provided by the City of Folsom in the project area include fire, police, school, library, and park services. The site is served by all public utilities including domestic water, wastewater treatment, and storm water utilities.

The City of Folsom Fire Department provides fire protection services. There are four stations within the City of Folsom. Station 37 is nearest to the project site; it is located at 70 Clarksville Road, approximately 0.76 miles north of the project site. The Fire Department responds to over 6,000 requests for service annually with an average of 16.4 per day. The City of Folsom Police Department is located at 46 Natoma Street, approximately 3-miles northwest of the project site.

The project site is located within the Folsom Cordova Unified School District and is within the attendance area for the Gold Ridge Elementary School, Sutter Middle School, and Folsom High School. There are several parks near the project site, including Livermore Community, John Kemp Community Park, and Willow Hills Reservoir Community Park.

The Sacramento Municipal Utilities District (SMUD) would supply electricity to the project site. Pacific Gas & Electric (PG&E) provides natural gas to the area and would provide natural gas to the project site.

The City of Folsom has a program of maintaining and upgrading existing utility and public services within the City. Similarly, all private utilities maintain and upgrade their systems as necessary for public convenience and necessity, and as technology changes.

Evaluation of Public Services

Questions a, b, c, d, e: Less than Significant. The project site is within the urban area of Folsom, and there is no indication that public services are inadequate. The proposed project would increase fire and police protection service due to the addition of 253 apartment units, but the project would not substantially render the current service level to be inadequate. Additionally, the project would have the potential to increase service to schools and parks, but the project would be required to pay development impact fees as well as park fees in order to accommodate for the new development, as required by the City of Folsom. Construction and operation of the proposed project would not require the construction or expansion of parks and other public facilities or result in the degradation of those facilities. Because there are no unique aspects of the project that would render the current service level to be inadequate, no new public facilities would be necessary to serve the proposed project. The impact of the project would be less than significant, and mitigation would not be necessary.

XV. RECREATION

RECREATION:				
Would the project:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

The Folsom Parks and Recreation Department provides and maintains a full range of recreational activities and park facilities for the community. There are several parks near the project site, including the Livermore Community Park, John Kemp Community, and Willow Hills Reservoir Community Park. The proposed project would include on-site recreation facilities, including pools and clubhouses, dog parks, and sitting and picnic areas for use by the residents.

Evaluation of Recreation

Question a: Less than Significant. One component of the proposed project is to change the land use designation of Lot 1 and Lot 6 from commercial/industrial (IND) to residential (MHD). In total, the associated number of residents would not result in a substantial population increase to the City of Folsom population. An increase of 253 apartment units would generate between 253 and 665 new residents (assuming 2.63 people per unit, based on projected household size in 2035 [City of Folsom 2018]). The project proposes several recreational facilities on both parcels for use by the residences. Each apartment complex would have a pool, a fire pit, a dog park, a seating area, and a picnic area. The complex on Lot 1 would have a 3-story, 6,700 sf clubhouse, and the complex at Lot 6 would have a one-story, 3,150-sf clubhouse. The Folsom Municipal Code set a standard of 5-acres of parkland per 1,000 residents (City of Folsom Section 4.10.020). The City of Folsom Parks and Recreation Master Plan estimated that for a build-out population of 94,400 residents, there would be a total build-out of 586.6 acres of parkland (City of Folsom 2015).

Based on the projects distant location from a park and the addition of proposed recreational facilities that would be provided for the residents, the proposed project would not result in a substantial increase in the use of demand for neighborhood or regional parks, or other recreational facilities. Further, the City of Folsom charges impact fees to all new developments to abate a project’s impacts on parks and recreational facilities in the City. These impact fees are also used to address the identified future needs for the City’s park system. The impact fees and the associated funded improvements would reduce any impacts from the project to less than significant, and no mitigation would be necessary.

Question b: Less than Significant. The proposed project includes the construction of a pool, picnic area, dog park, and seating area within each apartment complex, for use by the residents. The complex on Lot

1 would have a 3-story, 6,700-sf clubhouse while the complex on Lot 6 would have a one-story, 3,150-sf clubhouse. The facilities would be for exclusive use by the residents of the proposed project. Additionally, the proposed project would be subject to park development impact fees established and collected by the City's Parks and Recreation Department to ensure that the City has sufficient park land. The construction of new recreational facilities and/or parks to meet the recreational demands of the City has been evaluated for environmental impacts through the General Plan process. Payment of the Parks and Recreation Department development impact fee offsets the potential for any significant impact related to recreation stemming from the proposed project and mitigation is not necessary. With the implementation of the impact fee, impacts to recreation would be less than significant.

XVI. TRANSPORTATION AND TRAFFIC

TRANSPORTATION AND TRAFFIC:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Conflict with adopted policies, plans or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Transportation and traffic were evaluated in the Folsom Corporate Center Apartments Transportation Impact Study as presented in **Appendix H**.

Environmental Setting**Study Scenarios**

Four scenarios were identified for inclusion in this Transportation Impact Study through consultation with City of Folsom staff. The study determines the weekday AM peak-hour and PM peak-hour level of service (LOS) at study intersections under the following scenarios:

1. Existing 2021 without Project Condition;
2. Existing 2021 with Project Condition;
3. Existing Plus Approved Projects (EPAP) 2026 without Project Condition;
4. EPAP 2026 with Project Condition;
5. Cumulative 2035 without Project Condition; and,
6. Cumulative 2035 with Project Condition.

Existing 2021, and Existing 2021 with Project Condition

Analysis of the existing condition reflects the traffic volumes and roadway geometry at the time the study began. These two scenarios (with and without the project) quantify performance measures, serve as a known reference point for those familiar with the study area, and identify project related impacts anticipated to occur if the project opened in 2021.

EPAP 2026 Condition, and EPAP 2026 with Project Condition

EPAP scenarios, with and without the project, analyze conditions with the addition of traffic from approved and reasonably foreseeable projects that affect study intersections and segments. These scenarios are intended to reflect anticipated traffic approximately five years into the future, when the project could reasonably be anticipated to be constructed. This “phasing analysis” is intended to assist the City of Folsom in phasing of improvements at study intersections which may be necessary to accommodate traffic from all approved and anticipated tentative maps over the next five years.

Cumulative 2035 Condition, and Cumulative 2035 with Project Condition

Cumulative scenarios, with and without the project, analyze anticipated conditions at the General Plan 2035 horizon year. These scenarios are intended to reflect anticipated traffic from Folsom Ranch, and shifts in traffic patterns anticipated after construction of two new interchanges and US Highway 50 overcrossings.

Roadway Systems

Brief descriptions of the key roadways serving the project site are provided below:

- **Iron Point Road** is an east-west arterial roadway with a raised median that runs from Folsom Boulevard to the eastern city limit along the north side of US Highway 50. Within the vicinity of the Project, Iron Point Road has six lanes, bike lanes, sidewalk, curb, and gutter. The posted speed limit is 45 mph. Turn pockets are provided at intersections.
- **Oak Avenue Parkway** is a north-south arterial that extends from Willow Creek Drive to Iron Point Road. It is a four-lane urban arterial road between Willow Creek Drive and Blue Ravine Road. It is a six-lane urban arterial road between Blue Ravine Road and Riley Street. It is a four-lane urban arterial road between Riley Street and Iron Point Road. Oak Avenue Parkway will be extended across US Highway 50 into Folsom Ranch and a new interchange will be constructed prior to the cumulative analysis scenarios.
- **Rowberry Drive** is a north-south two-lane local road that runs northward from the Kaiser Permanente Folsom Medical Offices into neighborhoods to the north of Iron Point Road. A future extension of Rowberry across US Highway 50 to Folsom Ranch is planned for the future.
- **Broadstone Parkway** in the project vicinity is a four-lane east-west arterial, that wraps around the back of the Palladio shopping center from Iron Point Road to connect with Empire Ranch Road near the Sacramento-El Dorado county line. Broadstone Parkway has bike lanes, sidewalk, curb, and gutter. Turn pockets are provided at intersections.

- **East Bidwell Street** runs through the City of Folsom from White Rock Road to Riley Street. East Bidwell Street becomes Scott Road south of US Highway 50. Near the Project area, East Bidwell Street is a six-lane arterial roadway with bike lanes, sidewalk, curb, and gutter. Turn pockets are provided at intersections. The speed limit on East Bidwell Street north of US Highway 50 is 45 mph.
- **Prairie City Road** is a north-south arterial that extends from Blue Ravine Road to White Rock Road, north of Blue Ravine Road it is called Sibley Street. It is a five-lane urban arterial road between Blue Ravine Road and Iron Point Road. Prairie City Road is a six-lane urban arterial road between Iron Point Road and US Highway 50. It is a two-lane rural road between US Highway 50 and White Rock Road.

Study Intersections

There are twenty study segments on US Highway 50 (Table 14) and seventeen study intersections (Table 15). The Oak Avenue Parkway interchange will be constructed by the cumulative analysis year, resulting in changes to some study US Highway 50 segments.

Table 14. US Highway 50 Study Segments

US Highway 50 Segment	Segment Type	Applicable Years
US Highway 50 westbound East Bidwell offramp	Diverge	All
US Highway 50 westbound East Bidwell loop onramp	Merge	All
US Highway 50 westbound East Bidwell slip onramp	Merge	All

*Two-way Stop Control.

Level of Service Methodology

Level of service (LOS) is a qualitative indication of the level of delay and congestion experienced by motorists using an intersection. Levels-of-service are designated by the letters A through F, with A being the best conditions and F being the worst (high delay and congestion). Calculation methodologies, measures of performance, and thresholds for each letter grade differ for road segments, signalized intersections, and unsignalized intersections. Based on guidance from City of Folsom staff, the following procedures described below for intersection and segment traffic operations analysis were selected for this study.

Intersection Traffic Operations Analysis

Signalized Intersections

The methodology from the Highway Capacity Manual (HCM) 6th Edition², was used to analyze signalized intersections. LOS can be characterized for the entire intersection, each approach, or by lane group. Control delay alone (the weighted average delay for all vehicles entering the intersection) is used to characterize LOS for the entire intersection or an approach. Control delay and volume to capacity ratio are used to characterize LOS for lane groups. The average delay criteria used to determine the LOS at signalized intersections is presented in **Table 16**. The HCM 2010 methodology is used as the primary method. HCM 2000 methods are only utilized where the signal phasing is incompatible with HCM 2010 methods.

Table 16. Level of Service Criteria for Signalized Intersections

Level of Service	Description	Average Delay ¹ (Sec. /Vehicle.)
A	Very Low Delay: This level-of-service occurs when progression is extremely favorable, and most vehicles arrive during a green phase. Most vehicles do not stop at all.	≤ 10.0
B	Minimal Delays: This level-of-service generally occurs with good progression, short cycle lengths, or both. More vehicles stop than at LOS A, causing higher levels of average delay.	10.1-20.0
C	Acceptable Delay: Delay increases due to only fair progression, longer cycle lengths, or both. Individual cycle failures (<i>to service all waiting vehicles</i>) may begin to appear at this level of service. The number of vehicles stopping is significant, though many still pass through the intersection without stopping.	20.1-35.0
D	Approaching Unstable/Tolerable Delays: The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.	35.1-55.0
E	Unstable Operation/Significant Delays: This is considered by many agencies the upper limit of acceptable delays. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent occurrences.	55.1-80.0
F	Excessive Delays: This level, considered to be unacceptable to most drivers, often occurs with oversaturation (i.e., when arrival flow rates exceed the capacity of the intersection). It may also occur at high v/c ratios below 1.00 with many individual cycle failures. Poor progression and long cycle lengths may also contribute to such delay levels.	> 80.0 or v/c >1.0

Note 1: Weighted average of delay on all approaches. This is the measure used by the Highway Capacity Manual to determine LOS. Any movement with a volume-to-capacity ratio (v/c) greater than 1.0 is considered to be LOS F.

Source: Transportation Research Board (2016) Highway Capacity Manual 6th Edition, Washington D.C.

Unsignalized Intersections

The methodology from HCM 6th Edition is used for the analysis of unsignalized intersections. At an unsignalized intersection, most of the main street traffic is un-delayed, and by definition has acceptable conditions. The main street left-turn movements and the minor street movements are all susceptible to delay of varying degrees. Generally, the higher the main street traffic volumes, the higher the delay for the minor movements. Separate methods are utilized for Two-Way Stop-Controlled (TWSC) intersections and All-Way Stop-Controlled (AWSC) intersections.

- **TWSC:** The methodology for analysis of two-way stop-controlled intersections calculates an average total delay per vehicle for each minor street movement and for the major street left-turn movements, based on the availability of adequate gaps in the main street through traffic. A LOS designation is assigned to individual movements or combinations of movements (in the case of shared lanes) based upon delay, it is not defined for the intersection as a whole. Unsignalized intersection LOS reported herein is for each movement (or group of movements) based upon

the respective average delay per vehicle. **Table 17** presents the average delay criteria used to determine the LOS at TWSC and AWSC intersections.

- **AWSC:** At all-way stop-controlled intersections, the level-of-service is determined by the weighted average delay for all vehicles entering the intersection. The methodologies for these types of intersections calculate a single weighted average delay and LOS for the intersection as a whole. The average delay criteria used to determine the LOS at all-way stop intersections is the same as that presented in **Table 17**. LOS for specific movements can also be determined based on the TWSC methodology.

It is not unusual for some of the minor street movements at unsignalized intersections to have LOS D, E, or F conditions while the major street movements have LOS A, B, or C conditions. In such a case, the minor street traffic experiences delays that can be substantial for individual minor street vehicles, but the majority of vehicles using the intersection have very little delay. Usually in such cases, the minor street traffic volumes are relatively low. If the minor street volume is large enough, improvements to reduce the minor street delay may be justified, such as channelization, widening, or signalization.

Table 17. Level of Service Criteria for Unsignalized Intersections

Level of Service (LOS)	Description	TWSC ¹ Average Delay by Movement (seconds/vehicle)	AWSC ² Intersection Wide Average Delay (seconds/vehicle)
A	Little or no delay	< 10	< 10
B	Short traffic delay	> 10 and < 15	> 10 and < 15
C	Average traffic delays	> 15 and < 25	> 15 and < 25
D	Long traffic delays	> 25 and < 35	> 25 and < 35
E	Very long traffic delays	> 35 and < 50	> 35 and < 50
F	Extreme delays potentially affecting other traffic movements in the intersection	> 50 (or, v/c > 1.0)	>50

Source: Transportation Research Board (2016) Highway Capacity Manual 6th Edition, Washington D.C.

Note 1: Two-Way Stop Control (TWSC) LOS is calculated separately for each minor street movement (or shared movement) as well as major street left turns using these criteria. Any movement with a volume to capacity ratio (v/c) greater than 1.0 is considered to be LOS F.

Note 2: All-Way Stop Control (AWSC) assessment of LOS at the approach and intersection levels is based solely on control delay.

Signal Warrants

At each unsignalized intersection, the potential need for a traffic signal was evaluated. Traffic signal warrants are a series of standards that provide guidelines for determining if a traffic signal is appropriate. Signal warrant analyses are typically conducted at intersections of uncontrolled major streets and stop sign-controlled minor streets. If one or more signal warrants are met, signalization of the intersection may be appropriate. However, a signal should not be installed if none of the warrants are met, since the installation of signals would increase delays on the previously uncontrolled major street and may increase the occurrence of particular types of accidents.

As stated in the 2014 California Edition of the Manual on Uniform Traffic Control Devices (California MUTCD 2014)³, *“An engineering study of traffic conditions, pedestrian characteristics, and physical characteristics of the location shall be performed to determine whether installation of a traffic control signal is justified at a particular location.*

The investigation of the need for a traffic control signal shall include an analysis of factors related to the existing operation and safety at the study location and the potential to improve these conditions, and the applicable factors contained in the following traffic signal warrants:

- *Warrant 1, Eight-hour Vehicular Volume*
- *Warrant 2, Four-hour Vehicular Volume*
- *Warrant 3, Peak-hour*
- *Warrant 4, Pedestrian Volume*
- *Warrant 5, School Crossing*
- *Warrant 6, Coordinated Signal System*
- *Warrant 7, Crash Experience*
- *Warrant 8, Roadway Network*
- *Warrant 9, Intersection Near a Grade Crossing*

The satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal.”

Consistent with the industry standard of practice, the Traffic Impact Analysis did not evaluate the full panoply of warrants for traffic signals, but instead focused on the peak-hour warrant. The MUTCD states that, *“This [peak-hour] signal warrant shall be applied only in unusual cases, such as office complexes, manufacturing plants, industrial complexes, or high-occupancy vehicle facilities that attract or discharge large numbers of vehicles over a short time.”* So, the peak-hour warrant is being used in this impact analysis study as an “indicator” of the likelihood of an unsignalized intersection warranting a traffic signal in the future. Intersections that exceed the peak-hour warrant are considered (for the purposes of this impact analysis) to be likely to meet one or more of the other signal warrants (such as the 4-hour or 8-hour warrants). This peak-hour analysis is not intended to replace a rigorous and complete traffic signal warrant analysis by the responsible jurisdiction.

Unsignalized intersections were evaluated using the Peak-hour Volume Warrant (Warrant No. 3) in the California MUTCD 2014. The Peak-hour Volume Warrant was applied where the minor street experiences long delays in entering or crossing the major street for at least one hour in a day. Even if the Peak-hour Volume Warrant is met, a more detailed signal warrant study is recommended before a signal is installed. The more detailed study should consider volumes during the daily peak-hours of roadway traffic, pedestrian traffic, and accident histories.

Basic Segments

Basic freeway segments operations and level-of-service is defined by density (passenger cars per mile per lane) which depends upon traffic volumes, and segment, characteristics. These characteristics

³ Caltrans (2019) California Manual on Uniform Traffic Control Devices - FHWA’s MUTCD 2009 Edition as amended for use in California - 2014 Edition - Revision 4, March 29, 2019. Section 4C.

include the geometry, grade, free flow speeds, and heavy vehicles. **Table 18** shows the level of service criteria for basic freeway segments.

Table 18. Level of Service Criteria – Basic Freeway Segments

Level of Service	Maximum Density (passenger vehicles per mile per lane)
A	<11
B	18
C	26
D	35
E	45
F	> 45, or Demand exceeds capacity

Source: Transportation Research Board (2010) Highway Capacity Manual, Chapter 11, Washington, D.C.

Merge and Diverge Segments

Freeway merge and diverge segments operations and level-of-service is defined by density (passenger cars per mile per lane) which depends upon traffic volumes and the ramp characteristics. These characteristics include the length and type of acceleration/deceleration lanes, free-flow speeds, number of lanes, grade, heavy vehicles, and types of facilities. **Table 19** shows the relationship of level-of-service to freeway density for merge, diverge, and weaving segments.

Table 19. Level of Service Criteria – Freeway Ramp Merge/Diverge Areas

Level of Service	Maximum Density (passenger vehicles per mile per lane)
A	<10
B	20
C	28
D	35
E	> 35
F	Demand exceeds capacity

Standards of Significance

Consistency with General Plan LOS policies for the proposed project were determined based on the methods described above and identified as either "significant" or "less than significant". General Plan Policy M4.1.3 addresses LOS:

Strive to achieve at least traffic LOS "D" (or better) for local streets and roadways throughout the City. In designing transportation improvements, the City will prioritize use of smart technologies and innovative solutions that maximize efficiencies and safety while minimizing the physical footprint. During the course of Plan buildout, it may occur that temporally higher LOS result where roadway improvements have not been adequately phased as development proceeds. However, this situation will be minimized based on annual traffic studies and monitoring programs. City Staff will report to the City Council at regular intervals via the Capital Improvement Program process for the Council to prioritize projects integral to achieving LOS D or better.

Consistent with historical practice within the City of Folsom, the General Plan EIR also includes a criterion addressing potential impacts at locations that operate at level-of-service E or F under

no-project conditions. Under that standard, a significant impact would occur if the proposed project would:

Increase the average delay by five seconds or more at an intersection that currently operates (or is projected to operate) at an unacceptable level-of-service under “no-project” conditions.

For the purposes of the traffic analysis, an impact is considered potentially significant if implementation of the project would result in any of the following:

- Cause an intersection in Folsom that currently operates (or is projected to operate) at LOS D or better to degrade to LOS E or worse.
- Increase the average delay by five seconds or more at an intersection in Folsom that currently operates (or is projected to operate) at an unacceptable LOS E or F.

Freeway Facilities

An impact is considered significant on freeway facilities if the project causes the facility to change from an acceptable to unacceptable LOS. For facilities that are or will be operating at unacceptable LOS without the project, an impact is considered significant if:

- The existing LOS cannot be maintained with the addition of project traffic;
- The project traffic increases vehicle density on a freeway mainline segment or freeway ramp junction by 0.1 passenger cars per lane per mile;
- The project increases the number of peak-hour vehicles on a freeway mainline segment or freeway ramp junction by more than 1 percent.

Per the Caltrans Guide for the Preparation of Traffic Impact Studies, Caltrans strives to maintain a target LOS at the transition between LOS C and LOS D on state highway facilities. However, for the affected portion of US 50, Caltrans has established a concept LOS E threshold⁴. For consistency with other traffic impact studies performed in the City of Folsom that considered US Highway 50, LOS E was selected as the minimum standard for all study freeway facilities.

Bicycle/Pedestrian/Transit Facilities

An impact is considered significant if implementation of the project would:

- Inhibit the use of bicycle, pedestrian, or transit facilities.
- Eliminate existing bicycle, pedestrian, or transit facilities.
- Prevent the implementation of planned bicycle, pedestrian, or transit facilities.

Existing 2021 Conditions

Tables 20 and 21 present a summary of level-of-service results for the study intersections under Existing Conditions. The results indicate that all study segments are anticipated to operate at an acceptable LOS. Three study intersections exceed the General Plan LOS standard prior to the addition of project traffic.

- Prairie City Rd/American Aggregate Dr would operate at a deficient LOS during the AM peak if not for the Covid-19 related traffic reductions.
- Prairie City Rd/Iron Point Rd would operate at a deficient LOS during the AM and PM peak if not for the Covid-19 related traffic reductions.
- East Bidwell St/Iron Point Rd would operate at a deficient LOS during the PM peak if not for the Covid-19 related traffic reductions.

These locations are shown in orange highlight in the tables below. Calculation sheets for intersection delay and LOS are provided in **Appendix H**.

EPAP 2026 with Project Condition

The results indicate that all study segments are anticipated to operate at an acceptable LOS; three study intersections exceed the General Plan LOS standard prior to the addition of project traffic.

- Prairie City Rd/American Aggregate Dr would operate at a deficient LOS during the AM peak if not for the Covid-19 related traffic reductions.

Folsom Corporate Center Apartments ISMND

- Prairie City Rd/Iron Point Rd would operate at a deficient LOS during the AM and PM peak if not for the Covid-19 related traffic reductions.
- East Bidwell St/Iron Point Rd would operate at a deficient LOS during the AM and PM peak if not for the Covid-19 related traffic reductions.

These locations are shown in orange highlight in the tables below. Because the increase in delay is less than five seconds, these exceedance of the General Plan level-of-service policy is not considered a project impact. Calculation sheets for intersection delay and LOS are provided in **Appendix H**.

Cumulative 2026 Conditions with or without Project

The Cumulative Conditions analysis accounts for several planned changes to Folsom's transportation system:

- Addition of a third northbound through lane at intersection #4 (Prairie City Rd/Iron Point Rd);
- Widening of Iron Point Rd to six lanes on all segments between Prairie City Rd and East Bidwell St (effecting intersections 6-9);
- Construction of the Rowberry Way overcrossing of US Highway 50;
- Construction of the Empire Ranch Rd interchange;
- Construction of the Oak Avenue Pkwy interchange; and,
- The extension of Alder Creek Pkwy through Oak Avenue Pkwy (along with other Folsom Ranch infrastructure).

Tables 29 and 30 present a summary of LOS results for the study intersections under EPAP 2026 Conditions. All study intersections and segments are anticipated to operate at an acceptable LOS. Calculation sheets for intersection delay and LOS are provided in Appendix H.

Table 29. Cumulative 2035 Intersection Delay and LOS

Evaluation of Transportation and Traffic

Questions a, f: Less than Significant Impact with Mitigation. Under existing 2021 conditions with the project, the westbound left-turn queue during the AM peak hour exceeds available storage, and the project is anticipated to add 1 vehicle to the queue. Additional queued vehicles can contribute to LOS impacts when queues are longer than available storage and “spill-back” can affect the capacity of adjacent lanes. In order to avoid impacts to the westbound left-turn queue during the AM peak, Mitigation Measure TRA-1 shall be implemented. Additionally, under the EPAP 2026 conditions with the project, the westbound left-turn queue during the AM peak hour exceeds the available storage, and the project is anticipated to add 1 vehicle to the queue, contributing to potential LOS impacts. Similar to the existing 2021 conditions, in order to avoid impacts to the westbound left-turn queue, Mitigation Measure TRA-2 shall be implemented. With implementation of Mitigation Measures TRA-1 and TRA-2, the project would have a less than significant effect on traffic operations under 2021 conditions and under 2026 conditions with the addition of project traffic.

Mitigation Measure TRA-1: Prairie Road/ Iron Point Road Under Existing 2021 Conditions.

The applicant shall modify Prairie City Road/ Iron Point Road signal timing plan by shifting 1 second from the eastbound through movement to the westbound left turn movement, reduce the vehicle extension setting from adding five to six additional seconds to the green phase for through movements to adding four seconds to the green phase for through movements for each vehicle passing the detector after the minimum green phase length has been exceeded. This mitigation measure shall be implemented by the

City through the reimbursement agreement with the applicant to cover any City costs. The implementation of this mitigation measure shall occur prior to issuance of the first building permit.

Mitigation Measure TRA-2: Prairie Road/ Iron Point Road under EPAP 2026 Conditions.

The applicant shall modify Prairie City Rd/Iron Point Rd signal timing plan by shifting 1 second from the eastbound through movement to the westbound left turn movement, reduce the vehicle extension setting from adding five to six additional seconds to the green phase for through movements to adding four seconds to the green phase for through movements for each vehicle passing the detector after the minimum green phase length has been exceeded. This mitigation measure shall be implemented by the City through the reimbursement agreement with the applicant to cover any City costs. The implementation of this mitigation measure shall occur prior to issuance of the first building permit.

Question b: Less than Significant Impact. The Governors' Office of Planning and Research (OPR) has published guidance recommending a CEQA threshold for transportation impacts of land use projects of a 15% Vehicles Miles Travelled (VMT) reduction per capita, relative to either city or regional averages, based on the California's Climate Scoping Plan. Qualitative assessment of VMT reduction is acceptable to screen projects.

Under State Law (SB 743), VMT became the only CEQA threshold of significance for transportation impacts on July 1, 2020. Without specific General Plan guidance for VMT thresholds, this analysis uses qualitative screening against OPR's guidance of a 15 percent per capita VMT reduction. To support jurisdictions' SB743 implementation, SACOG developed thresholds and screening maps for residential projects, using outputs from the 2016 base year travel demand model run for the 2020 MTP/SCS. SACOG's travel demand model is activity/tour based and is designed to estimate an individual's daily travel, accounting for land use, transportation and demographics that influence peoples' travel behaviors. For residential projects, the threshold is defined as total household VMT per capita achieving 15% of reduction compared to regional (or any appropriate sub-area) average VMT. The map uses HEX geography. Residential VMT per capita per HEX is calculated by tallying all household VMTs, including VMT traveling outside the region, generated by the residents living at the HEX and divided by the total population in the HEX. Green hexagons denote areas where residential VMT is 50 to 85 percent of the regional average and yellow hexagons denote areas where residential VMT is 85 to 100 percent of the regional average.

The project is located within one of the green hexagons with average residential VMT of 17-miles per capita (per day). The project is anticipated to generate less than 82 percent of the regional per capita residential daily VMT of 20.82 miles. The project is therefore anticipated to have a less than significant impact on VMT.

Question c: No Impact. No private or public airports are located within the City of Folsom. The nearest public airfield is Cameron Airpark, located approximately 8.5-miles from the proposed project. The Mather Airport is located approximately 10-miles southwest of the project site. The proposed project would not result in modification to any air travel route. There would be no impact and no mitigation would be required.

Question d: Less than Significant Impact. The project would be accessed via proposed private roadways inside of the Folsom Corporate Center. Access to City streets is not being modified and Folsom's requirements for right turn tapers and deceleration lanes are not applicable. Additionally, vehicle speeds and volumes within the business park's internal roadway do not create a safety issue that would

necessitate right turn tapers and deceleration lanes. Project access is from private roadways within the Folsom Corporate Center and the City's minimum required throat depth is not applicable.

Potential geometric constraints and safety issues were evaluated in the traffic study and addressed as described above. No issues were identified that suggest atypical or unsafe frontage conditions that require additional analysis. Therefore, the proposed project would have a less than significant impact.

Question e: Less than Significant Impact. Consistent with the City of Folsom's Multi-Hazard Emergency Management Plan, the City maintains pre-designated emergency evacuation routes along major streets and thoroughfares. No aspect of the proposed project would modify these streets or preclude their continued use as an emergency evacuation route. The Project's internal drive isles have 25-foot inner/50-foot outer minimum turning radii to accommodate fire department access. In addition to the primary access to each project parcel, separate emergency vehicle access points are also provided. Lot 6 has one emergency vehicle access point located 170-feet east of the main access driveway along a private road. Lot 1 has two emergency vehicle access points located approximately 640-feet east and west of the main access driveway along a private road. The plans would be approved by the City Fire Department prior to project implementation; therefore, a less than significant impact to fire protection would occur and no mitigation would be necessary.

XVII. TRIBAL CULTURAL RESOURCES

TRIBAL CULTURAL RESOURCES:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

As amended in 2014, Assembly Bill (AB 52), requires that the City of Folsom (City) provide notice to any California Native American tribes that have requested notice of projects subject to CEQA review and consult with tribes that responded to the notice within 30 days of receipt with a request for consultation. Section 21073 of the Public Resources Code (PRC) defines California Native American tribes as “a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of the Statutes of 2004.” This includes both federally and non-federally recognized tribes. For the City of Folsom, these include the following tribes that previously submitted general request letters, requesting such noticing:

- Wilton Rancheria (letter dated January 13, 2020)
- Lone Band of Miwok Indians (letter dated March 2, 2016)
- United Auburn Indian Community (UAIC) of the Auburn Rancheria (letter dated November 23, 205 and updated per UAIC via email on September 29, 2021)

The purpose of consultation is to identify Tribal Cultural Resources (TCR) that may be significantly impacted by the proposed Project, and to allow the City to avoid or mitigate significant impacts prior to Project approval and implementation. Section 21074(a) of the PRC defines TCRs for the purpose of CEQA as: Sites, features, places, cultural landscapes (geographically defined in terms of the size and scope),

sacred places, and objects with cultural value to a California Native American tribe that are either of the following:

- a) Included or determined to be eligible for inclusion in the California Register of Historical Resources; and/or
- b) Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1; and/or
- c) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

Because criteria A and B also meet the definition of a Historical Resource under CEQA, a TCR may also require additional consideration as a Historical Resource. TCRs may or may not exhibit archaeological, cultural, or physical indicators and can only be identified by a culturally affiliated tribe, which has been determined under State law to be the subject matter expert for TCRs (ECORP 2022).

City Consultation

Assembly Bill 52

On September 21, 2021, the City of Folsom sent project notification letters to the three California Native American tribes named on the City's AB 52 contact list. The letters provided each tribe with a brief description of the Project and its location, contact information for the City's authorized representative, and a notification that the tribe has 30 days to request consultation. The 30-day response window closed on October 21, 2022.

The only tribe to respond was the UAIC. On September 29, 2021, the City received an email from Anna Cheng that acknowledged receipt of the City's notification letter and informed the City that the UAIC has a new point of all CEQA-related letters and documents, Anna Starkey. On September 30, 2021, the City received an email from Anna Starkey requesting consultation. The response indicated that there is a known TCR located west of the proposed Project boundary and requested access for a survey of the Project Area to ensure that the proposed Project does not extend into the TCR location.

On October 7, 2021, the City formally initiated consultation with UAIC and acknowledged the tribe's statement about a known TCR located in the vicinity. In the correspondence to the tribe, the City noted that a survey of the Project Area had been conducted recently and that a copy of the report would be provided to the tribe in advance of a meeting or further site visits.

On November 4, 2021, Anna Starkey responded to the City's separate SB 18 outreach (Section 2.2) and referenced AB 52 in her reply. (From this point forward, all correspondence between the City and UAIC was simultaneously under both AB 52 and SB 18.) She noted the cultural sensitivity of the property and requested a copy of the cultural resources survey report that was being prepared and indicated the tribe's desire to defer to the Shingle Springs Band of Miwok Indians, if they were consulting on the Project. The City responded on November 16, 2021 to confirm the plan to forward a copy of the cultural

resources survey report when it was completed and that Shingle Springs had already been provided the opportunity to consult.

Accordingly, on December 13, 2021, the City provided a copy of the cultural resources survey report (HELIX 2021) to UAIC for their review. Anna Starkey acknowledged receipt of the report the same day and stated that “for archaeological tribal cultural resources, UAIC believes that our standard unanticipated discoveries mitigation measure should suffice for this project.” In her response, she also inquired about the number of oak trees that are proposed for removal and how they will be mitigated for. She questioned if any heritage trees had been identified and whether an arborist report had been prepared. The City replied with a copy of the arborist report, and upon her review, she indicated that heritage trees (in general) are a significant TCR and should be protected and offered to provide language for use in the CEQA document. The City responded that staff are still awaiting information on the plans for the heritage tree, and that this information would be provided upon receipt.

On December 17, 2021, the City contacted UAIC to indicate that although there are many nonnative oaks on the property, there is a single heritage tree in the Project Area that will be preserved in place as part of the Project’s design, which is consistent with the City’s Tree Preservation Ordinance. The City provided a link to the ordinance and stated that it welcomed the submission of suggested CEQA language for staff consideration.

On January 3, 2022, UAIC provided a document to the City that expresses the UAIC’s belief that native heritage trees, in general, have significance to the Miwok and Maidu (Nisenan) people, and that conservation of heritage trees is important. The UAIC provided the language with the intent for it to be incorporated into the CEQA document, and therefore, would not be considered confidential information. A copy of the UAIC submittal is included in **Appendix I**.

Senate Bill 18

On behalf of the City, ECORP contacted the California NAHC on September 7, 2021, to request a list of tribal contacts under SB 18. The NAHC responded with the list on October 20, 2021. This list is usually different than the AB 52 list because it pulls from a different database at NAHC. Using the list provided, the City mailed project notices to the following tribes on October 26 and afforded them 90 days to respond to request consultation under SB 18 (ECORP 2022).

The 90-day response window closed on January 24, 2022.

- Buena Vista Rancheria of Me-Wuk Indians
- Chicken Ranch Rancheria of Me-Wuk Indians
- Colfax-Todds Valley consolidated Tribe
- Guidiville Indian Rancheria
- Lone Band of Miwok Indians
- Muwekma Ohlone Indian Tribe of the San Francisco Bay area
- Nashville Enterprise Miwok-Maidu-Nishinam Tribe
- North Valley Yokuts Tribe
- Shingle Springs Band of Miwok Indians

- The Confederated Villages of Lisjan
- Tsi Akim Maidu
- Tule River Indian Tribe
- United Auburn Indian Community
- Wilton Rancheria
- Yocha Dehe Wintun Nation

On November 4, 2021, Anna Starkey from UAIC responded to the notice. (From this point forward, all correspondence between UAIC and the City was carried out simultaneously relative to both AB 52 and SB 18.)

Among the remaining tribes noticed under SB 18, only one other tribe responded. On November 12, 2021, the Yocha Dehe Wintun Nation responded by email with a letter dated November 10, 2021, that stated that the Project is not within the aboriginal territories of the tribe, and referred the City to UAIC, Wilton Rancheria, and Shingle Springs. All three of these tribes had already received Project notices, as described above. None of the other tribes responded to the opportunity to consult.

Evaluation of Tribal Cultural Resources

Questions a (i): No Impact. Based on the records search at the NCIC and other efforts discussed in Section V, Cultural Resources, no resources listed or eligible for listing in the California Register of Historic resources of local register or historical resources were identified. The project would have no impact.

Question a (ii): Less than significant with mitigation. Information about tribal cultural resources under AB 52 and tribal cultural places under SB 18 was drawn from multiple sources, including the tribal consultation as summarized above, records searches and literature reviews with the California Historical Resources Information System, a review of existing ethnographic information, and a cultural resources survey (HELIX 2021) that included an analysis of buried site potential. Of these sources, most did not result in any information to indicate the presence of a tribal cultural resource or a tribal cultural place within the Project Area. Only the tribal consultation process, summarized above, produced information that requires further discussion.

The UAIC submitted information that heritage trees, in general, are important to the tribal community because they “have born witness to history and human interactions and are thought to hold a collective memory that is remembered and passed down from generation to generation. These resources also provide continuity between the past, present, and future.” UAIC also noted that “heritage trees not only provide an important ecological function, but they also play an important role in UAIC’s social and cultural identity” (**Appendix I**). According to the arborist survey for the project, one of the nine native oak trees present on the property is considered a heritage tree. This heritage tree will remain in place with a suitable buffer during construction to maintain tree integrity and minimize impact to the root zone, trunk, and canopy.

CEQA and SB 18 require that the City measure the information about the importance of heritage trees against the definitions of tribal cultural resources and tribal cultural places, as cited in Section 21074(a) of the PRC and Sections 5097.9 and 5097.995 of the PRC, respectively, while taking into account the

expert knowledge of the Tribe. First, Section 21074(a) of the PRC defines tribal cultural resource for the purpose of AB 52 and CEQA. While heritage oak trees are not resources that are made, modified, or moved by a human, and do not constitute cultural resources, and although the field survey by professional archaeologists did not reveal any indication that past human activity was associated with the specific heritage tree in the Project Area, the UAIC ascribes additional importance to heritage trees and recommended avoidance and preservation to the City. The information provided does not provide substantial evidence, as defined in PRC Section 21080, about the one oak tree would, specifically, qualify as a TCR, but the recommendation to avoid it is consistent with the City's Tree Preservation Ordinance and the Project's plans. In addition, UAIC informed the City that standard mitigation measures for unanticipated discovery would be sufficient for any TCRs that are archaeological in nature, if encountered during construction (see Mitigation Measure TCR-1, below). Second, Sections 5097.9 and 5097.993 of the PRC define the types of resources that would constitute a tribal cultural place pursuant to SB 18. Neither tribal consultation nor examination of other lines of evidence revealed the presence of any resource meeting these definitions.

Therefore, although the information provided about heritage trees does not meet the criteria for being considered a TCR under CEQA, the importance of heritage trees to the tribal community should be recognized as such, and taken into account for future project planning in Folsom. For this project, because the single heritage tree present on the property will be preserved in place, there would be no impact to a known TCR or a tribal cultural place. However, there remains the possibility that ground-disturbing activity could reveal the presence of a TCR or tribal cultural place that is archaeological in nature, and if present, the effect could be adverse. As supported by UAIC, implementation of unanticipated discovery procedures, as provided in Mitigation Measure TCR-1 below, would reduce that impact to a less than significant level (ECORP 2022).

Mitigation Measure TCR-1: Unanticipated Discovery of Tribal Cultural Resources. If any suspected TCRs are discovered during ground disturbing construction activities, all work shall cease within 100-feet of the find, or an agreed upon distance based on the Project Area and nature of the find. A Tribal Representative from a California Native American tribe that is traditionally and culturally affiliated with a geographic area shall be immediately notified and shall determine if the find is a TCR (PRC §21074). The Tribal Representative will make recommendations for further evaluation and culturally appropriate treatment as necessary. If deemed necessary by the City, a qualified cultural resources specialist meeting the Secretary of Interior's Standards and Qualifications for Archaeology may also assess the significance of the find in joint consultation with Native American Representatives to ensure that Tribal values are considered. Work at the discovery location may not resume until the City, in consultation as appropriate and in good faith, determines that all necessary investigation and treatment of the discovery under the requirements of CEQA, including AB52, have been satisfied.

XVIII. UTILITIES AND SERVICE SYSTEMS

UTILITIES AND SERVICE SYSTEMS:		Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
Would the project:					
a)	Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c)	Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f)	Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g)	Comply with federal, state, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Environmental Setting

Existing utilities on the project site include SMUD for electricity, PG&E underground gas lines, AT&T underground telephone lines, City of Folsom for solid waste disposal, and City of Folsom water and sewer facilities. The City of Folsom employs a design process that includes coordination with potentially affected utilities as part of project development. Identifying and accommodating existing utilities is part of the design process, and utilities are considered when finalizing public project plans. The City of Folsom coordinates with the appropriate utility companies to plan and implement any needed accommodation of existing utilities, including water, sewer, telephone, gas, electricity, and cable television lines. Based on the results of an initial request for comments from the utility providers, all utility services are able to accommodate the proposed project.

Evaluation of Utilities and Service Systems

Questions a, b, e: No Impact. The City of Folsom is responsible for managing and maintaining its wastewater collection system. This system ultimately discharges into the Sacramento Regional County Sanitation District interceptor sewer system. Wastewater is treated at the Sacramento Regional Wastewater Treatment Plant, located in Elk Grove (City of Folsom 2018).

In compliance with the 2006 State Water Resources Control Board (SWRCB) General Waste Discharge Requirements for Sanitary Sewer Systems, the City of Folsom adopted a Sewer System Management Plan (SSMP) on July 28, 2009. The SSMP has been revised every five years, with the newest version approved on July 23, 2019. The plan outlines how the municipality operates and maintains the collection system, and the reporting of all Sanitary Sewer Overflows (SSO) to the SWRCB's online SSO database. Because the City has sufficient capacity to accommodate any additional demand that could result from implementation of the proposed project, and because the City is in compliance with statutes and regulations related to wastewater collection and treatment, there would be **no impact** and mitigation would not be necessary.

Question c: Less than Significant Impact. Folsom's Public Works Department handles all stormwater management issues for the City, from design and construction of the storm drain system to operation and maintenance, and urban runoff pollution prevention (City of Folsom 2018). Stormwater drains would be installed throughout the site, and curb and gutter would be installed along the parking areas to collect stormwater flows and prevent flooding or ponding. On-site stormwater management facilities would include bioretention basins, Contech filters, and disconnected roof drains which would treat and dissipate stormwater prior to entering the City's system. With implementation of these measures, environmental impacts from expanding the stormwater facilities would be less than significant and no mitigation would be necessary.

Question d: Less than Significant Impact.

Water Supply

Folsom's Water Treatment Plant has a capacity of 50 million gallons per day. According to the City of Folsom General Plan Housing Element, the combination of treated and untreated water demands (through the time frame of the Housing Element which is 2021) are not anticipated to exceed the City's current water entitlements of 34,000 acre-feet annually (City of Folsom 2013). Because sufficient supplies are available, no additional facilities would need to be constructed or expanded and impacts would be less than significant.

Question f, g: No Impact. The City of Folsom provides solid waste, recycling, and hazardous materials collection services to its residential and business communities. In order to meet the State mandated 50 percent landfill diversion requirements stipulated under AB 939, the City has instituted several community-based programs. The City offers a door-to-door collection program for household hazardous and electronic waste, in addition to six "drop off" recycling locations within the City. An offsite sewer analysis was completed by Water Works Engineering, at the request of the City of Folsom. The analysis concluded that the backbone of the existing sewer collection system has the capacity to support the development (Water Works Engineering 2021).

After processing, solid waste is taken to the Kiefer Landfill, the primary municipal solid waste disposal facility in Sacramento County. The landfill facility sits on a site of 1,084-acres in the community of Sloughhouse. Currently 250-acres, the State permitted landfill is 660-acres in size and is of sufficient capacity to accommodate the solid waste disposal needs of the City of Folsom. Because the landfill serving the project area is of sufficient capacity to accommodate solid waste needs, no impact would occur, and no mitigation would be necessary.

XIX. MANDATORY FINDINGS OF SIGNIFICANCE

MANDATORY FINDINGS OF SIGNIFICANCE:	Potential Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact
<p>Would the project:</p> <p>The lead agency shall find that a project may have a significant effect on the environment and thereby require an EIR to be prepared for the project where there is substantial evidence, in light of the whole record, that any of the following conditions may occur. Where prior to commencement of the environmental analysis a project proponent agrees to MMs or project modifications that would avoid any significant effect on the environment or would mitigate the significant environmental effect, a lead agency need not prepare an EIR solely because without mitigation the environmental effects would have been significant (per Section 15065 of the State CEQA Guidelines):</p>				
<p>a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of past, present and probable future projects)?</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<p>c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Environmental Setting

Evaluation of Mandatory Findings of Significance

Question a: Less than Significant with mitigation. The preceding analysis indicates that the proposed project has the potential to adversely affect biological, cultural, and tribal cultural resources. See Sections IV, V, and XVII of this Initial Study for discussion of the proposed project’s potential impacts on these environmental issue areas. With implementation of the mitigation measures identified in those Sections, and compliance with City programs and requirements identified in this report, impacts would be reduced to a less than significant level. No significant or potentially significant impacts would remain.

Question b: Less than Significant with mitigation. While the project would indirectly contribute to cumulative impacts associated with increased urban development in the city and region, these impacts have previously been evaluated by the City and considered in development of the City's General Plan as set forth in this Initial Study. Key areas of concern are discussed in detail below.

Evaluation of cumulative biological resources impacts: Implementation of the proposed project, with continued growth within Folsom would contribute to continued loss of habitat for biological resources by converting undeveloped area to developed uses. There is currently no suitable habitat for special-status plant species in the project site and there have been no reported occurrences of special-status plant species on or adjacent to the project site in the CNDDB. Special-status plant species are not expected to occur in the project site or be impacted by the proposed project. No special-status wildlife species were observed in the project site during the biological reconnaissance survey and there are no reported occurrences in the CNDDB of special-status animal species in or adjacent to the project site. However, the project site provides marginal habitat for burrowing owl (*Athene cunicularia*) and white-tailed kite (*Elanus leucurus*) as well as habitat for nesting birds and raptors such as the mourning dove (*Zenaida macroura*), house finch (*Haemorhous mexicanus*), and acorn woodpecker (*Melanerpes formicivorus*). Nests were not observed during surveys; however, a variety of migratory birds have the potential to nest in and adjacent to the project site, in trees, shrubs and on the ground in vegetation. With implementation of Mitigation Measures BIO-01 and BIO-02, the potential impacts to the burrowing owl and the nesting birds and raptors due to project implementation would be reduced to a less than significant level. Additionally, there are a total of 14 trees found on the project site; one tree (#702) is on Lot 1 and the remaining trees are on Lot 6. Nine of the trees are blue oaks, three are cork oaks, and two are valley oaks. With implementation of Mitigation Measure BIO-03, trees in the project site would be protected from removal and from ground disturbance and potential impacts would be minimized. As a result, with implementation of Mitigation Measures BIO-01, -02, and -03 the proposed project would not result in significant cumulative impacts to protected biological resources, and no additional mitigation measures would be needed.

Evaluation of cumulative cultural resources impacts: A database records search was conducted for the project site, including a 0.25-mile buffer area, at the North Central Information Center at Sacramento State University. Additionally, a pedestrian survey was undertaken of the project site by a senior archaeologist. The City recognizes that sensitive and/or protected resources could be unintentionally discovered during project construction. With implementation of Mitigation Measures CUL-01 and CUL-02, the impacts relating to unanticipated discoveries would be reduced to a less than significant level and potentially cumulative effects would be avoided. No additional mitigation measures would be needed.

Evaluation of cumulative greenhouse gas (GHG) impacts: GHG emissions would be generated by the project during construction (vehicle engine exhaust from construction equipment, on-road hauling trucks, vendor trips, and worker commuting trips) and during long-term operation (electricity and natural gas use, electricity resulting from water consumption; solid waste disposal, and vehicle engine exhaust). GHG impacts were evaluated the City's Greenhouse Gas Reduction Strategy Consistency Checklist, which was completed by HELIX. The project would be consistent with the City's GHG Strategy through Mitigation Measures GHG-1 through -5. Mitigation Measure GHG-1 would provide a minimum of five percent more bicycle parking than required in the City's Municipal Code Section 17.57.090 (for a total of 54 bicycle parking spaces). Mitigation Measure GHG-2 would use high-performance diesel (also known as Diesel-HPR or Reg-9000/RHD) for all diesel-powered equipment utilized in construction of the project. Mitigation Measure GHG-3 would provide electric vehicle charging stations in five percent of

the total surface parking spaces on the project site (for a total of 16 EV charging stations). Mitigation Measure GHG-4 would divert to recycle or salvage a minimum 65 of nonhazardous construction and demolition waste generated at the project site in accordance with Appendix A4 (Residential) of the as outlined in the California Green Building Standards Code (2019 CALGreen). Mitigation Measure GHG-5 would comply with all applicable indoor and outdoor water efficiency and conservation measures required under 2019 CALGreen Tier 1, as outlined in the California Green Building Standards Code. With Mitigation Measures GHG-1 through -5, potentially cumulative impacts would be avoided, and no additional mitigation measures would be needed.

Evaluation of cumulative noise impacts: Noise impacts were evaluated in Noise Analysis, prepared by Bollard Acoustical, May 3, 2021 and revised by HELIX in 2021. Construction noise generated by the project would result in short-term substantial noise increases compared to baseline existing conditions. The implementation of Mitigation Measure NOI-1 would restrict construction to daytime and minimize noise levels to surrounding residential uses. With this mitigation, potentially cumulative impacts would be avoided, and no additional mitigation measures would be needed.

Evaluation of cumulative transportation impacts: Cumulative transportation impacts were evaluated in the Folsom Corporate Center Apartments Transportation Impact Study (T. Kear Transportation Planning and Management, Inc., 2021). Under existing 2021 conditions with the project, the westbound left-turn queue during the AM peak hour exceeds available storage, and the project is anticipated to add 1 vehicle to the queue. Additional queued vehicles can contribute to LOS impacts when queues are longer than available storage and “spill-back” can affect the capacity of adjacent lanes. In order to avoid impacts to the westbound left-turn queue during the AM peak, Mitigation Measure TRA-1 would be implemented. Additionally, under the EPAP 2026 conditions with the project, the westbound left-turn queue during the AM peak hour exceeds the available storage, and the project is anticipated to add 1 vehicle to the queue, contributing to potential LOS impacts. Similar to the existing 2021 conditions, in order to avoid impacts to the westbound left-turn queue, Mitigation Measure TRA-2 would be implemented. With implementation of Mitigation Measures TRA-1 and TRA-2, the project would have a less than significant effect on traffic operations under 2021 conditions and under 2026 conditions with the addition of project traffic. Therefore, the proposed project would result in a less than significant impact to project circulation under cumulative conditions.

Evaluation of cumulative tribal cultural resources impacts: The City of Folsom sent project notification letters to the three California Native American tribes named on the City’s AB 52 contact list. The only tribe to respond was the UAIC. On behalf of the City, ECORP contacted the California NAHC, to request a list of tribal contacts under SB 18. The two tribes to respond were UAIC and Yocha Dehe Wintun Nation. UAIC informed the City that standard mitigation measures, Mitigation Measure TCR-1, for unanticipated discovery would be sufficient for any TCRs that are archaeological in nature, if encountered during construction. As supported by UAIC, implementation of unanticipated discovery procedures, as provided in Mitigation Measure TCR-1, would reduce impacts to a less than significant level and therefore, potentially cumulative impacts would be avoided. No additional mitigation would be required.

Question c: Less than Significant Impact. Because of site conditions, existing City regulations, and regulation of potential environmental impacts by other agencies, the proposed project would not have the potential to cause substantial adverse effects on human beings as demonstrated in the evaluation contained in this Initial Study.

Table 33. LOS Summary¹ Cumulative Plus Project Conditions

Intersection	Traffic Control	AM Peak Hour						PM Peak Hour					
		Construction Year No Project			Construction Year + Project			Construction Year No Project			Construction Year + Project

SMAQMD ISMND Response Letter, dated March 24, 2022

SACRAMENTO METROPOLITAN

March 24, 2022

Steven Banks
 City of Folsom Community Development Department
 50 Natoma Street
 Folsom Cordova, CA 95630
sbanks@folsom.ca.us

Subject: Folsom Corporate Center Apartments Mitigated Negative Declaration (SAC202102624)

Dear Steven Banks:

Thank you for providing the Folsom Corporate Center Apartments Mitigated Negative Declaration (MND) to the Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) for review. The project includes a general plan amendment, rezone, planned development permit, design review and tree removal permit, for the construction and operation of a 253-unit multi-family apartment community on two parcels in the Folsom Corporate Center. Sac Metro Air District staff comments to improve health and air quality and reduce greenhouse gas emissions (GHG) follow.

Comments on the MND

The Air Quality section of the MND includes measure AIR-1, requiring a mechanical ventilation system that accommodates filters having a Minimum Efficiency Reporting Value (MERV) rating of 13 or higher to reduce resident exposure to toxic air contaminant emissions from Highway 50. Note that this is already required by the 2019 Building Energy Efficiency Standards.

To provide further protection of residents, Sac Metro Air District recommends:

- The landscape plan includes a continuous vegetative barrier along the southern, western, and eastern perimeter of the project consistent with the Sac Metro Air District's *Landscaping Guidance for Improving Air Quality Near Roadways*.¹ If a continuous barrier along the perimeter is not feasible, provide dense plantings where feasible and especially between the outdoor gathering areas and Highway 50.

The GHG section of the MND notes that the project includes onsite photovoltaic electricity generation, demonstrating consistency with Folsom's GHG Reduction Strategy measure E-1, Building Energy Sector. Sac Metro Air District recommends the project consider additional energy related measures, which provide a co-benefit of reducing the urban heat island effect:

¹ Sac Metro Air District Landscaping Guidance:

<http://www.airquality.org/LandUseTransportation/Documents/LandscapingGuidanceforImprovingAirQualityNearRoadwaysMay2020V2.pdf>

- Install certified cool roofs. The California Energy Commission's Title 24, Part 6,² suggests an aged solar reflectance of at least 0.63 for low-sloped roofs and at least 0.20 for steep-sloped roofs, and a minimum thermal emittance of 0.75. The Cool Roof Rating Council provides a product directory³ of roofs to assist. Cool roofs reduce the temperature of the buildings, requiring less energy to keep the buildings cool in the summer.
- Install solar photovoltaic shade structures over the parking lot planned under the overhead power lines on lot 1 since tree planting will be constrained. This will reduce urban heat island effect from the parking lot, generate renewable energy, and provide shading to parked vehicles to reduce their emissions of volatile organic compounds.

Comments on Site Design

Sac Metro Air District commends the project for providing infill housing near jobs and commercial uses, which can lead to reduced vehicle miles traveled (VMT) and reduced emissions. To further provide the opportunity for residents to reduce VMT, supporting Folsom General Plan Policies M 2.1.3 – Pedestrian and Bicycle Linkages, M 3.1.1 – Access to Public Transit, and NCR 3.1.3 – Reduce Vehicle Miles Traveled, Sac Metro Air District recommends the following improvements in bicycle/pedestrian connectivity:

- Include a direct connection from the north side of lot 6 to Iron Point Road. Convenient access to the existing sidewalks and bike lanes on Iron Point Road will connect lot 6 residents to the nearby transit stop and other commercial areas along Iron Point Road.
- Include a complete sidewalk network along the unnamed road bordering lot 6 and along Rowberry Drive bordering lot 1 to minimize pedestrian barriers and provide safe, convenient connections for residents to the surrounding land uses.
- Consider including a pedestrian gate from lot 1 that could allow a future connection to the planned class 1 bicycle trail south of the project, along Highway 50.

Rules Statement

All projects are subject to Sac Metro Air District rules in effect at the time of construction. A link to a list of the most common rules that apply during construction is included in the footnote.⁴ A complete listing of rules is available at www.airquality.org or by calling 279-207-1122.

Naturally Occurring Asbestos

The project site is in an area that may contain naturally occurring asbestos, as identified on Sac Metro Air District's Naturally Occurring Asbestos in Eastern Sacramento County Parcels map.⁵ Areas identified on the map are required prior to construction to either submit an Asbestos Dust Mitigation Plan or test out of the requirements of the Airborne Toxic Control Measure for Construction, Grading, Quarrying, and Surface Operations. More information can be found on the Sac Metro Air District's website⁶ or by contacting Daniel Noakes at 916-826-6366 or dnoakes@airquality.org. Folsom's construction specifications also include a reminder of these requirements.

Folsom Corporate Center Planned Development Guidelines

FOLSOM CORPORATE CENTER PLANNED DEVELOPMENT GUIDELINES

15 March 2000, revised 21 June 2000

DEVELOPMENT STANDARDS

- Total Gross Building Area: 1,425,000 square feet, provided all building and site designs meet all development standards.
- Building Setbacks:
 - Front yard: 30' along Iron Point Road.
 - Side yard: 5' or as required by building code.
 - Street side yard: 15'.
 - Rear yard: No requirement except as required by building code or other requirements.
 - Highway 50 frontage: 50 feet.
- Building Heights:
 - 4 story, not to exceed 80'* at parapets.
 - 3 story, not to exceed 60'* at parapets.
 - 2 story, not to exceed 40'* at parapets.
 - *Building height may increase at specific areas required for mechanical screening.
- Building Coverage: no requirement.
- Parking Requirements:
 - Offices: 1 space per 250 square feet of gross floor area.
 - Commercial uses and other ancillary retail: 1 space per 200 square feet of gross floor area.
- All required parking areas will meet City of Folsom requirements for dimensions, paving, disabled parking, and bicycle racks, per chapter 17.57 of the Folsom Zoning Codes.
- Pedestrian regulations:
 - Primary walkways will link street access, bus stops, parking areas, and buildings
 - Pedestrian safety and health will be a design focus.
 - Walkways will be landscaped to provide summer shade.
 - Parking areas will feature pedestrian connectors within parking stalls to facilitate safe travel through the parking area.
 - Textured/colored paving, or a change to materials, will delineate pedestrian connectors at intersections with parking areas and drives. Landscaping will delineate pedestrian walks elsewhere.
 - Disabled access will conform to State and Federal ADA regulations.
- Bicycle regulations:
 - Adequate space and access will be provided for bicycle racks per Folsom Zoning Code 17.57.090.
 - Bicycle racks will be provided near building entrances.
- Loading Areas:
 - Loading areas will be screened from public view by landscaping, walls, or other means to minimize their visibility from public streets. Where structural screen barriers are used, they shall be a minimum of 6 feet in height to adequately hide equipment and loading areas.
 - Materials used for screen barriers should be compatible and similar in quality to materials used for that site's buildings

SITE DESIGN

Elements

ENHANCED PAVING:

- Signifies entries, emphasizes intersections, creates informal meeting places.
- Adds clarity between pedestrian and driving routes.
- May be of embossed A.C. paving or colored concrete, or exposed aggregate.

PEDESTRIAN CONNECTORS

- Defined with landscaping and materials.
- Routes differentiated with specific pallettes of landscape materials.
- Will ease navigation through parking fields to and from a building.

PEDESTRIAN CROSSINGS:

- Differentiated by enhanced paving.
- Located where pedestrian connectors intersect parking areas or drives.
- Not required at every row.

ARCHITECTURAL DESIGN

Concept

The Folsom Corporate Center Planned Development Guidelines, in respect to overall architectural design concepts, are intended to provide a framework for design, not restrict creativity. Building developments are encouraged to share a common architectural language, be sensitive to energy conservation, and respond to outward site forces.

Bordering by major roadways, the overall site is highly visible. Since the buildings will be visible from 360 degrees, no elevation can be called the back and design should respond accordingly. Building masses should be made human in scale, present varied elevations and use accent materials to add to the variety.

Materials such as tile, stone, glass, metal panels, and concrete, when used together, will reflect the area's modernity, diversity, and traditions, while maintaining a harmonious relationship with the other structures, developments, and communities in the vicinity. The materials used shall be consistent with those mentioned within these Planned Development Guidelines, as approved by the City of Folsom Planning Commission.

ARCHITECTURAL DESIGN

General

OVERALL PROJECT:

- Building forms relate to a specific site, providing variety and interest.
- Accentuated with color, lighting, and landscaping.
- Consistent use of elements will unify structures.
- Groves of Native Oaks are an important design element.

BUILDING WALLS:

- The building base can be articulated and defined with darker colors or materials.
- Pedestrian visual interest shall be strengthened with patterns, textures or materials where appropriate, such as the use of a natural stone to accent a building's entries.
- Materials:
 - Primary surface materials shall cover no more than 80% of the exterior vertical walls and may be tilt-up concrete, pre-cast concrete, Exterior Insulated Finish System, glass, aluminum panels, aluminum window frames, or metal panels.
 - Accent materials will cover approximately 20% of the exterior vertical walls and may include stone, metal or aluminum panels, slate, or tile.

ARCHITECTURAL DESIGN

General

ENTRIES

- Entries shall be distinguished with accent materials, such as stone or slate, colored metal panels, and concrete.
- Enhanced paving shall be used at entrances, either embossed A.C. paving, colored concrete, or exposed aggregate.
- Entry facades may be accented with special lighting, secondary signage, graphics, or colors.

PARAPETS

- Parapets shall conceal any roof mounted equipment as seen from adjacent roads and parking.
- Mechanical penthouse or screen forms are also acceptable when finished to match materials used on adjacent wall surfaces. The penthouse shall maintain a similar quality of construction.
- Changes in parapet height may be used to keep a human scale, accent entries, or articulate building elements.
- Cornices may be used to provide variety and express the building form at key locations.

ARCHITECTURAL DESIGN

General

SERVICE AREAS:

Service areas, loading docks, and trash enclosures shall be separated from public spaces by solid screen walls or landscape buffers. The screen wall design shall be consistent with the wall design and colors of the more prominent building elements.

OTHER FEATURES:

- Exposed roofing or canopies, visible from the ground, may be metal, glass, simulated slate, or Kalwall glazing.
- Sunscreens may be canvas, metal, or Kalwall.
- Exterior glass shall be high performance glazing, and may be clear, lightly tinted, reflective, or spandrel glass.

ARCHITECTURAL DESIGN

Exterior Lighting

- Parking lot lighting shall be 15'-0" high at the circulation paths of the site, and no higher than 30'-0" at the parking areas.
- Lighting under power lines will be 15'-0" high.
- Wall mounted security lighting may be located at the service areas and at the perimeter of buildings.
- Entry drive lights may be decorative fixtures with a maximum height of 15'-0".
- Combination of accent, walkway & pedestrian-type lighting shall be used to illuminate pedestrian walkways.
- Exterior lighting shall be shielded to avoid off-site glare.
- Lights will be high pressure sodium.
- Wall areas may be highlighted by wall washing fixtures.

SIGNAGE

SIGN CRITERIA:

- Signs (directional and monument), visible from the street, shall be coordinated within the entire development for the mutual benefit of all occupants.
- While flexibility of design is encouraged, visual harmony shall be maintained.
- A sign application for each project shall be submitted to the City of Folsom Planning Department for review and approval prior to permit approval.
- All sign applications shall comply with the sign criteria, the City of Folsom Sign Requirements (chapter 17.59), city building codes, and the Uniform Sign Code, as from time to time amended.
- Conformity to the sign criteria shall be enforced by the landlord.
- Any non-conforming or unapproved sign shall be brought into conformity at the tenant's expense.
- Any sign between 30" and 6' above the adjacent grade at any corner formed by an intersection of 2 or more streets shall not obstruct the cross-visibility area as measured by a triangle having 2 sides 35' long and running along each curb line, and a third side connecting the ends of the other 2 lines.

MONUMENT SIGNS

- Freestanding monument signs may be placed in the landscape areas facing common drives to identify tenants of individual buildings.
- Signs shall be adjacent to access driveways. No more than one sign per driveway shall be allowed.
- Signs shall be located a minimum of 15 feet from the back of the curb along Iron Point Road and any internal drive's right of way when space permits. Signs shall be placed outside of vehicular sight lines.
- Allowable signs are subject to all applicable ordinances of the City of Folsom Sign Ordinance.
- Sign size shall be a maximum of 6'-0" high by the maximum square footage of text for that sign.
- Monument signs shall be concrete, CMU and/or metal.
- Signs shall be illuminated by exterior ground uplighting. No internal illumination shall be permitted.

SIGNAGE

BUILDING SIGNS:

- The maximum allowable sign area is 1 1/2 square feet for each lineal foot of building frontage, up to a maximum of 150 square feet on each building.
- Wall signs and canopy signs shall count towards the maximum sign area.
- Building signs may be placed on building frontages facing a street, parking lot, or Highway 50.
- Signs shall not be located above the top of parapet, project more than 18 inches from the building wall, nor exceed 75 percent of the building frontage.
- Freestanding signs shall be set back 5 feet from the public right of way and located outside of any clear vision triangles (see page 16). Signs will comply with chapter 17.59 of the Folsom Zoning Code.

LANDSCAPE DESIGN

CONCEPT:

The Evergreen Folsom Project should serve as the transition zone between the manicured ornamental landscape of the Broadstone Development and the oak woodlands adjacent to Highway 50. The new landscape should avoid creating a hard edge between the natural and developed landscape by bringing both types of plantings into the project in a manner that allows the transition zones to occur within the parking lots and landscape easements, rather than at the perimeter of the sites.

Highway 50 passes through oak woodlands all along the south side of Folsom with the exception of the east end of this project, where no trees are present. As a part of this project, the oak woodlands will be extended east, along Highway 50, to provide a buffer from the freeway (these extended areas will not be considered a part of the "common areas").

Landscape areas will enhance the office environment. Plantings should assist users in orienting themselves on the site and keep them as comfortable as possible during the hot summer months. Attractive views should be enhanced and detrimental views should be screened.

DEVELOPMENT STANDARDS

- All work shall conform with the City of Folsom's applicable codes, including, but not limited to, the City of Folsom Landscaping Guidelines and Tree Preservation Ordinance.
- Those plants which have not performed well previously in Broadstone, particularly Alder and Red Oak, shall be used minimally, if at all.
- Native Oaks shall be retained throughout the project wherever possible. Existing Oaks which are to remain shall be protected from damage. Within a circle two times the size of the canopy diameter, irrigation systems shall be designed to minimize damage to feeder roots and plant species will be tolerant of very limited water after establishment.
- All landscape areas shall be automatically irrigated using water efficient distribution systems.
- Trees shall be a minimum of 15 gallons in size, except where smaller containers can be used to minimize damage to existing trees or promote better rooting habits among native species.
- A minimum of 50% of the total quantity of shrubs shall be 5 gallon size.
- Groundcovers and Perennials should be a minimum of 1 gallon in size.
- Plant Palettes are included in these Guidelines to provide consistency throughout the project but are not intended to prevent the addition of other species that may enhance the planting concept.

LANDSCAPE DESIGN

General

HIGHWAY FRONTAGE AND AREAS ADJACENT TO OAK WOODLANDS:

- A 50 foot landscape easement shall be provided along the Highway 50 frontage.
- An Oak Woodland shall be established along Highway 50 to act as a buffer for the Project.
- Trees should be clustered to provide controlled views of project buildings.
- Shrubs should be used as necessary to obscure the view of the freeway from parking areas and the ground floor of the buildings.
- Mowed or manicured turf should generally not be used in this area.
- Tree Palette:
 - Redbud (*Cercis spp.*) multi-trunked
 - Afghan Pine (*Pinus eldarica*)
 - Aleppo Pine (*Pinus halepensis*)
 - Stone Pine (*Pinus pinea*)
 - Chinese Pistache (*Pistachia chinensis*)
 - California Sycamore (*Platanus racemosa*) multi-trunked
 - Blue Oak (*Quercus douglasii*) some multi-trunked
 - Valley Oak (*Quercus lobata*)
 - Cork Oak (*Quercus suber*)
 - Interior Live Oak (*Quercus wislizenii*) multi-trunked
- Shrub Palette:
 - Strawberry Tree (*Arbutus spp.*)
 - Manzanita (*Arctostaphylos spp.*)
 - California Lilac (*Ceanothus spp.*)
 - Parney Cotoneaster (*Cotoneaster lacteus*)
 - Silverberry (*Eleagnus pungens "Fruitlandi"*)
 - Molate Fescue (*Festuca rubra "Molate"*)
 - Toyon (*Heteromeles arbutifolia*)
 - Assorted Ornamental Grasses (*Miscanthus sinensis, Muhlenbergia rigens, Pennisetum spp.,*)

IRON POINT ROAD FRONTAGE

- A 30 foot Landscape Easement shall be maintained along the frontage of Iron Point Road.
- A pedestrian pathway shall occur along the entire length of Iron Point Road. The pathway shall meander except in areas of restricted width where existing boulder rip-rap is installed. The pathway in constricted areas shall be adjacent to the back of curb.
- Street trees shall be randomly clustered in a quantity at least equal to one tree per 35 feet of linear frontage (excluding driveways). Areas where rock rip-rap constricts the frontage area are exempt from this requirement. Street trees will be located at least 5' from the street curb and the meandering sidewalk. Street trees will be planted a maximum of 10 feet from the street curb or the back of sidewalk, as appropriate.

LANDSCAPE DESIGN

General

IRON POINT ROAD FRONTAGE (CONTINUED):

- The street trees along Iron Point Road shall not include White Alder (*Alnus rhombifolia*), which are planted on the other side of the street, due to severe borer infestations of this species in the past 5 years.
- The primary ground-plane planting shall be turf, which will meander with the walk.
- Shrub and groundcover plantings should be kept simple in order to emphasize project entries. These areas should occur primarily behind the meandering walk.
- Parking areas shall be screened by plant material or landform to a minimum height of 30 inches at plant maturity unless such screening obscures visibility at intersections.
- Tree Palette:
 - Afghan Pine (*Pinus eldarica*)
 - Aleppo Pine (*Pinus halepensis*)
 - Stone Pine (*Pinus pinea*)
 - London Planetree (*Platanus acerifolia* "Bloodgood")
 - Burr Oak (*Quercus macrocarpa*)
 - Cork Oak (*Quercus suber*)
- Shrub and Groundcover Palette:
 - Manzanita (*Arctostaphylos* spp.)
 - California Lilac (*Ceanothus* spp.)
 - Prostrate Cotoneaster (*Cotoneaster dameri* "Lowfast")
 - Compact Escallonia (*Escallonia* x. "Terri")
 - Juniper (*Juniperus* spp.)
 - Coffeeberry (*Rhamnus californica* "Eve Case")
 - Dwarf Indian Hawthorn (*Rhaphiolepis indica* "Ballerina")
 - Evergreen Current (*Ribes viburnifolium*)
 - Prostrate Rosemary (*Rosmarinus officinalis* spp.) deep blue varieties
 - Compact Laurustinus (*Viburnum tinus* "Spring Bouquet")

DRIVEWAY INTERSECTIONS

- Plantings adjacent to the driveways at Iron Point Road should maximize seasonal color and use a variety of colors and textures to draw attention to the intersection.
- Formal arrangements of plantings should be considered to increase the contrast with the streetscape plantings.
- All intersections should not be planted in the same manner in order to assist users in orientation.
- Mature plantings should never obscure visibility for drivers.

LANDSCAPE DESIGN

General

DRIVEWAY INTERSECTIONS (CONTINUED):

- Tree Palette:
 - Crape Myrtle (*Lagerstroemia x.*) Indian tribe hybrids
 - Flowering Pear (*Pyrus calleryana* varieties)
 - Afghan Pine (*Pinus eldarica*)
 - Aleppo Pine (*Pinus halepensis*)
 - Stone Pine (*Pinus pinea*)
 - Coast Redwood (*Sequoia sempervirens*) background as space allows
- Shrubs and Groundcovers: Plants from the Frontage Palette should be used to provide visual continuity with the intersections and the streetscape. Accent plantings are to be chosen at the designer's discretion.

INTERNAL ACCESS ROADS:

- Access roads within the various sites connect the parking areas and establish a major organizing element within the project. The landscape treatment should enhance this organization by emphasizing these roads.
- Driveways connecting to parking areas should be emphasized with accent plantings, but to a lesser extent than the driveway intersections at Iron Point Road.
- Mature plantings should never obscure visibility for drivers.
- Tree Palette:
 - Strawberry Tree (*Arbutus unedo*)
 - Redbud (*Cercis spp.*) multi-trunked
 - Crape Myrtle (*Lagerstroemia x.*) Indian tribe hybrids
 - Tulip Tree (*Liriodendron tulipifera*)
 - Stone Pine (*Pinus pinea*)
 - Flowering Pear (*Pyrus calleryana* "Aristocrat")
- Shrub and Groundcover Palette:
 - Lily of the Nile (*Agapanthus orientalis*)
 - Emerald Carpet Manzanita (*Arctostaphylos x.* "Emerald Carpet")
 - Prostrate Cotoneaster (*Cotoneaster dammeri* "Lowfast")
 - Fortnight Lily (*Dietes vegeta*)
 - Dwarf Indian Hawthorn (*Rhaphiolepis indica* "Ballerina")
 - Prostrate Rosemary (*Rosmarinus officinalis spp.*) deep blue varieties
 - Star Jasmine (*Trachelospermum jasminoides*)
 - Turf (Turf-Type Tall Fescue blends)

LANDSCAPE DESIGN

General

PARKING LOTS:

- Trees shall be interspersed throughout the parking areas to shade at least 40% of the parking area, including access roads, after 15 years of growth.
- Two distinctive types of planting will occur within the project parking lots consisting of “native” areas and an ordered planting of more exotic species. Plants in “native” areas should appear to be indigenous to the area.
- The boundary between the two planting zones should meander through each project site, with the non-native plantings connecting to frontage and building areas and the native plantings connecting to the Highway 50 corridor and oak woodland plantings.
- The proportion of one type of planting in relation to the other should vary from site to site as appropriate. For example, a site immediately adjacent to an oak woodland might have 80% of the parking area devoted to more native plantings, while a site further east might have a much higher percentage of non-native plantings.
- Spacings between plants should be more random in the “native” zone.
- Where parking area divider planters are perpendicular to significant pedestrian traffic, turf grass should be considered in the non-native areas and un-mowed Molate Fescue in the native areas.
- “Native” Tree Palette:
 - Strawberry Tree (*Arbutus unedo*) some multi-trunked
 - European Hackberry (*Celtis australis*)
 - Redbud (*Cercis spp.*) multi-trunked
 - Afghan Pine (*Pinus eldarica*)
 - Aleppo Pine (*Pinus halepensis*)
 - Stone Pine (*Pinus pinea*)
 - Chinese Pistache (*Pistachia chinensis*)
 - London Planetree (*Platanus acerifolia* “Bloodgood”) most multi-trunked
 - Coast Live Oak (*Quercus agrifolia*) some multi-trunked
 - Blue Oak (*Quercus douglasii*) some multi-trunked
 - Holly Oak (*Quercus ilex*)
 - Valley Oak (*Quercus lobata*)
 - Burr Oak (*Quercus macrocarpa*)
 - Cork Oak (*Quercus suber*)
- “Native” Shrub and Groundcover Palette:
 - Emerald Carpet Manzanita (*Arctostaphylos* x. “Emerald Carpet”)
 - McMinn Manzanita (*Arctostaphylos* d. “Howard McMinn”)
 - Dwarf Coyote Brush (*Baccharis pilularis*)
 - California Lilac (*Ceanothus spp.*) lower species or varieties
 - White Rockrose (*Cistus hybridus*)
 - Molate Fescue (*Festuca rubra* “Molate”)
 - Assorted Ornamental Grasses (*Miscanthus sinensis*, *Muhlenbergia rigens*, *Pennisetum spp.*)

LANDSCAPE DESIGN

General

PARKING LOTS (CONTINUED):

- Non-Native Tree Palette:
 - Crape Myrtle (*Lagerstroemia x.*) Indian tribe hybrids
 - London Planetree (*Platanus acerifolia* "Bloodgood") standard
 - Flowering Pear (*Pyrus calleryana* "Aristocrat")
 - Chinese Elm (*Ulmus parvifolia* "Drake")
 - Sawleaf Zelkova (*Zelkova serrata*)
- Non-Native Shrub and Groundcover Palette:
 - Prostrate Cotoneaster (*Cotoneaster dammeri* "Lowfast")
 - Fortnight Lily (*Dietes vegeta*)
 - Juniper (*Juniperus spp.*)
 - Dwarf Indian Hawthorn (*Rhaphiolepis indica* "Ballerina")
 - Prostrate Rosemary (*Rosmarinus officinalis spp.*) deep blue varieties
 - Star Jasmine (*Trachelospermum jasminoides*)
 - Turf (Turf-Type Tall Fescue blends)

BUILDING AREAS:

- Deciduous trees may be used to shade the south and west sides of the buildings where they will not obstruct significant architectural features.
- Trees should be located to avoid contact with buildings at maturity.
- Utility areas should be screened from view but plantings should not obstruct access to utility areas.
- Irrigation should be configured to avoid spraying windows.
- Tree Palette:
 - Maple (*Acer spp.*)
 - Strawberry Tree (*Arbutus unedo*)
 - Crape Myrtle (*Lagerstroemia x.*) Indian tribe hybrids
 - Tulip Tree (*Liriodendron tulipifera*)
 - Afghan Pine (*Pinus eldarica*)
 - Flowering Pear (*Pyrus calleryana* "Aristocrat")
 - Coast Redwood (*Sequoia sempervirens*)

LANDSCAPE DESIGN

General

BUILDING AREAS (CONTINUED)

- Shrub and Groundcover Palette:
 - Lily of the Nile (*Agapanthus orientalis*)
 - Emerald Carpet Manzanita (*Arctostaphylos* x. "Emerald Carpet")
 - McMinn Manzanita (*Arctostaphylos* d. "Howard McMinn")
 - Prostrate Cotoneaster (*Cotoneaster dammeri* "Lowfast")
 - Fortnight Lily (*Dietes vegeta*)
 - Prostrate Juniper (*Juniperus* c. "San Jose") or similar varieties
 - Deer Grass (*Muhlenbergia rigens*)
 - Heavenly Bamboo (*Nandina domestica*)
 - Dwarf Indian Hawthorn (*Rhaphiolepis indica* "Ballerina")
 - Evergreen Current (*Ribes viburnifolium*)
 - Prostrate Rosemary (*Rosmarinus officinalis* spp.) deep blue varieties
 - Star Jasmine (*Trachelospermum jasminoides*)
 - Compact Laurustinus (*Viburnum tinus* "Spring Bouquet")
 - Dwarf Periwinkle (*Vinca minor*) shade only
 - Assorted Ornamental Grasses (*Miscanthus sinensis*, *Muhlenbergia rigens*, *Pennisetum* spp.,)
 - Turf (Turf-Type Tall Fescue blends)

Folsom City Council Staff Report

MEETING DATE:	5/10/2022
AGENDA SECTION:	Old Business
SUBJECT:	Resolution No. 10831 - A Resolution of the City Council of the City of Folsom Approving an Affordable Housing Loan in the Amount of \$588,265.55 to Bidwell Place, LP for Construction of the 75-unit Bidwell Place Affordable Multifamily Project, and Appropriation of Funds
FROM:	Community Development Department

RECOMMENDATION / CITY COUNCIL ACTION

Move to Adopt Resolution No. 10831 - A Resolution of the City Council of the City of Folsom Approving an Affordable Housing Loan in the Amount of \$588,265.55 to Bidwell Place, LP for Construction of the 75-unit Bidwell Place Affordable Multifamily Project, and Appropriation of Funds.

BACKGROUND / ISSUE

On May 6, 2020, the Planning Commission approved the Bidwell Place Mixed-Use project. The Bidwell Place project is a 75-unit 100 percent affordable multifamily, mixed use housing project on the 3.24-acre Bank of America site located on East Bidwell Street between Rumsey Way and Market Street. The development, which is currently under construction, includes studio, one-bedroom, and two-bedroom floor plans and will serve a mix of extremely low, very-low- and low-income households.

The project is being financed by Federal Low Income Housing Tax Credits and tax-exempt Private Activity Bonds and all the approved project underwriting were based on a standalone asset that would be regulated as affordable housing for 55 years. As a result, the project site must be parcelized to separate the affordable housing community asset from the commercial retail property (Bank of America). At time of project approval, staff and the applicant were under the impression that separation of the Bank of America commercial use from the residential portion of the proposed project would be achieved by a simple lot line adjustment. However, through further surveying and title search it was discovered that, although there are two Assessor Parcel Numbers (APNs) associated with the site, these parcels only exist for assessment purposes and have not been mapped. As a result, the applicant is in the process of requesting Planning Commission approval for a Tentative Parcel Map to subdivide the existing 3.24-acre property into two individual parcels. The two newly created parcels will consist of a 1.11-acre parcel (403 East Bidwell Street) and a 2.07-acre parcel (425 East Bidwell Street) within the East Bidwell Mixed Use Overlay of the General Commercial zone of the City of Folsom.

In accordance with the Folsom Municipal Code, Section 16.32.040, the project is now subject to parkland dedication in-lieu fees (Quimby) as part of this subsequent Tentative Parcel Map approval request. Because this fee was not previously anticipated, the additional fees place a financial burden on the project which the affordable housing project cannot absorb. As such, City Council is being asked to approve a supplemental housing loan to the applicant in the exact amount of the levied Quimby parkland dedication in-lieu fees to offset this financial burden on the project. This loan will go directly towards the payment of the Quimby fee and will not provide any additional financial benefit to the project.

POLICY / RULE

Government Code section 66477, commonly referred to as the Quimby Act, establishes the statutory authority by which a local government may require the dedication of land or the payment of fees for park purposes (Government Code §66477(a).). In conformance with section 66477, the City of Folsom has adopted a parkland dedication ordinance, which allows the City to impose park dedication and/or fee payment obligations in conjunction with the consideration and approval of a tentative map or parcel map.

This loan requires City Council approval.

ANALYSIS

The Bidwell Place project is being financed with 4 percent non-competitive tax credits, tax-exempt bonds, developer equity, and a \$4.15 million affordable housing loan from the City. In addition, the project received a \$150,693.75 grant (Resolution No. 10630) from City to offset the loss of 60 sewer fee credits that had previously been approved for the project.

The project was financed in 2021 with a forward locked permanent debt rate. All sources and uses of financing were locked at that milestone. At the time of construction loan closing, the California Construction Cost Index (CCCI) was 7102. The CCCI, as of March of 2022, is 8736,

which represents a 23 percent increase from the previous year. And, although most of Bidwell Place's construction contracts were executed at the construction loan closing, several remaining trades experienced significant cost increases and those increased costs have been passed onto the project. In addition, it is important to note that as a 100 percent affordable housing project, all rental income is capped by federal and state agencies and cannot be increased to generate additional income for the project. For these reasons, the project cannot absorb the additional costs associated with the previously unanticipated Quimby fees.

Financial support of this affordable housing project is consistent with the City's Housing Element Goal of facilitating affordable housing. Based on City Council's previous commitment to award financial assistance to this project, staff is supportive of the developer's request for a \$588,265.55 supplemental affordable housing loan to offset the Quimby fees.

Loan Terms

A term sheet outlining the conditions of the loan has been prepared and is included in the staff report (Attachment 2). Key specifics of this term sheet include:

1. Loan amount of \$588,265.55
2. 3% simple interest
3. 50-year repayment term

FINANCIAL IMPACT

Funding for the requested affordable housing loan for this project is available from the City's Housing Fund (Fund 238). An appropriation will be required in the amount of \$588,265.55. There are sufficient funds available for this additional appropriation. This funding source does not impact the City's General Fund.

ENVIRONMENTAL REVIEW

The Bidwell Place project was determined by the Planning Commission on May 6, 2020 to be categorically exempt from the California Environmental Quality Act (CEQA) under Public Resources Code Sections 21159.21 and 21159.23 as further described in Sections 15192 and 5194 (Affordable Housing Exemption) of the CEQA Guidelines.

Resolution No. 10831 - A Resolution of the City Council of the City of Folsom Approving an Affordable Housing Loan in the Amount of \$588,265.55 to Bidwell Place, LP for Construction of the 75-unit Bidwell Place Affordable Multifamily Project, and Appropriation of Funds

RESOLUTION NO. 10831

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF FOLSOM APPROVING
A LOAN IN THE AMOUNT OF \$588,265.55 TO BIDWELL PLACE, LP FOR
CONSTRUCTION OF THE 75-UNIT BIDWELL PLACE AFFORDABLE
MULTIFAMILY PROJECT, AND APPROPRIATION OF FUNDS**

WHEREAS, on May 6, 2020, the Planning Commission approved the Bidwell Place Mixed-Use project which is currently under construction and will serve a mix of extremely low, very-low- and low-income households.; and

WHEREAS, the project is financed by Federal Low Income Housing Tax Credits, tax-exempt Private Activity Bonds and an affordable housing loan and grant from the City; and

WHEREAS, all the project was financed as a stand-alone affordable housing community; and

WHEREAS, for regulatory consistency, the project site must be parcelized to separate the affordable housing community from the commercial retail property; and

WHEREAS, at the time of project approval, staff and the applicant were under the impression that separation of the residential use from the commercial portion of the proposed project would be achieved by a lot line adjustment; and

WHEREAS, through further surveying and title search, it was discovered that although there are two Assessor Parcel Numbers (APNs) associated with the site, the parcels only exist for assessment purposes and are not mapped; and

WHEREAS, the applicant is in the process of requesting Planning Commission approval for a Tentative Parcel Map to subdivide the existing 3.24-acre property into two individual parcels; and

WHEREAS, in accordance with the Folsom Municipal Code, Section 16.32.040, the project will be subject to parkland dedication in-lieu fees (Quimby) as part of the subsequent Tentative Parcel Map approval request; and

WHEREAS, to off-set the additional cost to the project associated with the previously unanticipated Quimby parkland dedication /parkland in lieu fee, the developer is requesting an affordable housing loan from the City to assist with the construction of the Bidwell Place project; and

WHEREAS, providing financial assistance to affordable housing projects is consistent with the Goal H-3: Facilitating Affordable Housing in the City's Housing Element; and

WHEREAS, the requested loan amount of \$588,265.55 is appropriate as it represents the

monetary value of the unanticipated Quimby parkland dedication / parkland in lieu fee that Bidwell Place is subject to as part of the Tentative Parcel Map request; and

WHEREAS, funding for the requested affordable housing loan is available from the City's Housing Fund (Fund 238).

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of Folsom hereby approves an affordable housing loan in the amount of \$588,265.55 to Bidwell Place, LP for construction of the 75-unit Bidwell Place affordable multifamily project.

BE IT FURTHER RESOLVED that the Finance Director is directed to appropriate \$588,265.55 from the City's Housing Fund (Fund 238) for purpose of this Resolution.

PASSED AND ADOPTED this 10th day of May 2022, by the following roll-call vote:

AYES: Councilmember(s):
NOES: Councilmember(s):
ABSENT: Councilmember(s):
ABSTAIN: Councilmember(s):

Supplemental Subordinate Loan Term Sheet
Bidwell Place Apartments
City of Folsom
April 25, 2022

1. **Lender:** City of Folsom, a municipal corporation
2. **Borrower:** Bidwell Place, LP, a California limited partnership
 - i. **General Partners**
 1. St. Anton Bidwell Place, LLC (Co-GP)
 2. PacH Anton South Holdings, LLC (Managing GP) (Parent Company: Pacific Housing, Inc.)
 3. Bank of America, N.A. – Tax Credit Investor
3. **Loan Amount:** \$588,265.55
4. **Purpose:** Construction of the 75-unit Bidwell Place Affordable Multifamily Project
5. **Timing of Funding:** The City's loan will be funded in conjunction with when the Quimby Park Fee is due and payable.
6. **Interest Rate:** 3% per annum - simple
7. **Annual Payments:** Repayment of the principal amount of the loan together with accrued interest will be in a single balloon payment at loan maturity.
8. **Term:** 50 years.
9. **Balloon Payment:** At the expiration of the loan term, 100% of the principal balance of the loan and all accrued interest will be due.
10. **Refinancing:** In the event of refinancing, the City will subordinate to the new senior loan on substantially similar terms as the original financing.
11. **Security:** City's loan will be secured by a deed of trust junior to construction and permanent financing sources set forth.

Folsom City Council Staff Report

MEETING DATE:	5/10/2022
AGENDA SECTION:	New Business
SUBJECT:	Ordinance No. 1326 - An Uncodified Ordinance of the City of Folsom Approving the Folsom Police Department's Military Equipment Use Policy in compliance with Assembly Bill 481 (Introduction and First Reading)
FROM:	Police Department

RECOMMENDATION / CITY COUNCIL ACTION

Staff recommends that the City Council approve the attached military equipment use policy by introducing and conducting the first reading of Ordinance No. 1326 –An Uncodified Ordinance of the City of Folsom Approving the Folsom Police Department's Military Equipment Use Policy in accordance with Assembly Bill 481.

BACKGROUND / ISSUE

On September 30, 2021, Governor Gavin Newsom signed into law Assembly Bill 481, relating to the use of military equipment by law enforcement agencies.

Assembly Bill 481 (AB 481 or the Bill), codified at Government Code sections 7070 through 7075, requires a law enforcement agency (LEA) to obtain approval from the applicable governing body, via adoption of an ordinance approving a “military equipment” use policy, prior to the LEA, acquiring, using, or seeking funds for military equipment. AB 481 defines “military equipment” broadly and creates explicit parameters for the military equipment use policy it requires.

The Folsom Police Department (FPD) seeks City Council adoption of the attached ordinance approving the Military Equipment Use Policy – FPD Policy 707 (Exhibit A), in order to allow FPD to continue to use the vital equipment specified therein, as well as acquire one piece of new equipment.

POLICY / RULE

Assembly Bill 481 requires the following in summary:

- Law enforcement agencies must obtain approval from their governing body, by ordinance adopting a military equipment use policy, before engaging in specific actions related to the use or acquisition of military style equipment, including equipment that was acquired before January 1, 2022, when AB 481 went into effect.
- The proposed military equipment use policy must be available on the law enforcement agency's public website at least 30 days before the public meeting concerning the ordinance and the policy. If approved, the policy must remain publicly available on the website for as long as the military equipment is available for use.
- The proposed ordinance and military equipment use policy must be considered as an agenda item in open session at a regular meeting of the governing body, with the opportunity for public comment in accordance with the Brown Act.
- The governing body of a law enforcement agency shall only approve the military equipment use policy if it makes the specified determinations found in Government Code section 7071(d)(1). These findings are discussed in detail below.
- The governing body must review the ordinance and vote on whether to renew it at least annually. In deciding whether to renew the ordinance, the governing body must make specific determinations as described in Government Code section 7071(e)(2).
- The law enforcement agency must submit an annual report on military equipment funding, acquisition, and use to the governing body. The report must comply with the requirements of Government Code section 7072. The governing body must rely on the report in deciding whether to renew the ordinance and in making the specific determinations described in Government Code section 7071(e)(2). The annual report must be publicly available on the website for as long as the military equipment is available for use.
- Within 30 days of submitting and publicly releasing the annual report, the law enforcement agency must hold at least one well-publicized and conveniently located community engagement meeting, at which the general public may discuss and ask questions regarding the annual military equipment report and the law enforcement agency's funding, acquisition, or use of military equipment.

ANALYSIS

The legislative intent with Assembly Bill 481 was to have each jurisdiction's governing body be aware of and approve the use or acquisition of certain 'military' equipment described in California Government Code section 7070.

AB 481 defines “military equipment” broadly to include 15 categories of equipment. The term “military equipment”, as used in AB 481, in fact does not necessarily indicate equipment that has been used by the military. Pursuant to AB 481, items deemed to be “military equipment” include, but are not limited to, unmanned aerial or ground vehicles (drones), armored vehicles, command and control vehicles, pepper balls, less lethal shotguns, less lethal 40mm projectile launchers, long range acoustic devices, and flashbangs.

Other items deemed to be “military equipment” via AB 481 include foundational equipment such as rifles.

The Folsom Police Department acquired and used “military equipment”, as defined in AB 481, in accordance with applicable rules and regulations before January 1, 2022, when the new rules went into effect. State law now requires that the Department seek City Council approval, by an ordinance adopting a military equipment use policy, before it can use existing military equipment, acquire new military equipment, or collaborate with another law enforcement agency in the deployment of military equipment within the City of Folsom. The Department may continue to use any “military equipment” acquired before January 1, 2022, as long as it begins the approval process by May 1, 2022, and the Council adopts the ordinance approving the military equipment use policy within 180 days.

AB 481 contains specific requirements for the military equipment use policy itself. These include: a description of each type of military equipment, its capabilities, expected lifespan, product description from the manufacturer, and the quantity of each type of equipment; the purposes and authorized uses for each type of equipment; the fiscal impact; the rules that govern each authorized use; the training required before the equipment may be used by Department personnel; the mechanisms to ensure compliance with the policy; and the procedures by which members of the public may register complaints or concerns or ask questions about the equipment and its use. The attached policy contains all of the required information for the Department’s existing equipment and for the one piece of new equipment to be acquired in 2022.

The proposed policy must be considered by the Council as an agenda item in open session at a regular meeting in accordance with the Brown Act, with an opportunity for public comment. The Council shall only approve the policy if it makes all of the following determinations pursuant to Government Code section 7071 (d)(1):

- A. The military equipment is necessary because there is no reasonable alternative that can achieve the same objective of officer and civilian safety.
- B. The proposed military equipment use policy will safeguard the public’s welfare, safety, civil rights, and civil liberties.
- C. If purchasing the equipment, the equipment is reasonably cost effective compared to available alternatives that can achieve the same objective of officer and civilian safety.

- D. Prior military equipment use complied with the military equipment use policy that was in effect at the time, or if prior uses did not comply with the accompanying military equipment use policy, corrective action has been taken to remedy nonconforming uses and ensure future compliance.

All sworn officers with the Folsom Police Department are bound by a stringent set of laws, policies, and procedures which are in line with the public's welfare, safety, civil rights, and civil liberties. Similarly, all officers are trained in a variety of strategies and tactics which are in line with the laws, policies, and procedures in which we are bound, prior to the use or application of any 'military' equipment.

Items deemed to be "military equipment" by AB 481 are used as a component of overall best practices for LEAs throughout the country. These tools have been tested in the field, and are used by LEAs to enhance citizen safety and officer safety. Loss of these items would jeopardize the welfare of citizens and peace officers within the City of Folsom. For example, the rifles deemed to be "military equipment" allow peace officers to address lethal threats from a greater distance and with greater precision.

The Folsom Police Department is committed to using the most up to date tools and equipment to safeguard the citizens of Folsom. Many items deemed to be "military equipment" by AB 481 are in fact employed by the Folsom Police Department, and LEA's across the country, in order to specifically reduce risk to community members. These items provide peace officers with the ability to safely resolve volatile situations which otherwise might rise to the level of a lethal force encounter. To that end, the items at issue in this report, and accompanying Military Equipment Use Policy, also provide FPD's peace officers with vital tools that facilitate compliance with its stringent use of force policy.

AB 481 also includes a focus on transparency and public engagement. To that end, the proposed policy must be posted on the Department's website at least 30 days before the public hearing on the ordinance. If approved, the policy must be publicly available on the website for as long as the military equipment is available for use.

Similarly, AB 481 stated, 'The public has a right to know about any funding, acquisition, or use of military equipment by state or local government officials, as well as a right to participate in any government agency's decision to fund, acquire, or use such equipment.'

As such, the Police Department hosted a publicized community event on 3/31/2022 at the Folsom Police Department, to display and discuss the items applicable to this new law. The feedback of the event from the over 25 attendees was favorable, and the attendees supported the use of the equipment in order to keep the community safe.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment or to activities that are not otherwise considered a "project" as defined by Public Resources Code § 21065.

(CEQA Guidelines § 15061(c)(3) and § 15378.) The Council's decision regarding the military equipment use policy meets the above criteria and is not subject to CEQA. No environmental review is required.

FINANCIAL IMPACT

There is no direct financial impact caused by adoption of the ordinance or approval of the policy. The initial and ongoing financial impacts associated with each Type of existing Military Equipment are detailed in the policy. The financial impact of any new acquisition of Military Equipment approved by the Council through the policy is stated in the policy and will also be described in the contract and any staff report associated with acquisition of the specific piece of equipment.

ATTACHMENT

Ordinance No. 1326 – An Uncodified Ordinance approving the Folsom Police Department's Military Equipment Use Policy in accordance with Assembly Bill 481

Submitted,

Richard Hillman, Chief of Police

ORDINANCE NO. 1326**AN UNCODIFIED ORDINANCE OF THE CITY OF FOLSOM APPROVING THE FOLSOM POLICE DEPARTMENT'S MILITARY EQUIPMENT USE POLICY IN COMPLIANCE WITH AB 481**

The City Council of the City of Folsom does hereby ordain as follows:

SECTION 1 PURPOSE

The purpose of this ordinance is to authorize the Folsom Police Department's acquisition and use of Military Equipment through approval of the attached Military Equipment Use Policy in accordance with AB 481 (Government Code sections 7070 through 7072.)

SECTION 2 POLICY

The proposed Military Equipment Use Policy is attached to this Ordinance as Exhibit A.

SECTION 3 FINDINGS

- A.** On September 30, 2021, Governor Gavin Newsom signed into law Assembly Bill 481, relating to the use of "military equipment" by law enforcement agencies.
- B.** Assembly Bill 481, codified at Government Code sections 7070 through 7075, requires law enforcement agencies to obtain approval from the applicable governing body, by an ordinance adopting a "military equipment" use policy, at a regular meeting held pursuant to open meeting laws, before taking certain actions related to the funding, acquisition, or use of "military equipment".
- C.** The term "military equipment" is defined in Government Code section 7070.
- D.** Assembly Bill 481 allows a law enforcement agency's governing body to approve the funding, acquisition, or use of "military equipment" within its jurisdiction only if it makes specified determinations.
- E.** Once approved, the Folsom Police Department's Military Equipment Use Policy will be contained in the Folsom Police Department's Policy Manual and identified as Policy 707- City Council Military Equipment Approval.
- F.** The proposed Military Equipment Use Policy was published on the Folsom Police Department's public website on March 25 2022.
- G.** The proposed Military Equipment Use Policy was presented to City Council on May 10, 2022.

- H. The proposed Military Equipment Use Policy meets the requirements of Government Code section 7070, subdivision (d).

SECTION 4 DETERMINATIONS

Based on the information presented to the City Council at the public meeting on May 10, 2022, and the findings above, the City Council makes the following determinations:

1. The Military Equipment identified in the proposed Military Equipment Use Policy, attached hereto as Exhibit A, is necessary because there are no reasonable alternatives that can achieve the same objectives of officer and civilian safety.
2. The proposed Military Equipment Use Policy will safeguard the public's welfare, safety, civil rights, and civil liberties.
3. The piece of Military Equipment proposed to be purchased this year is reasonably cost effective compared to available alternatives that can achieve the same objectives of officer and civilian safety.
4. Prior Military Equipment use complied with applicable policies. The Folsom Police Department did not have a Military Equipment Use Policy in effect before the date of this ordinance, but the other applicable policies were followed.
5. The proposed Military Equipment Use Policy, attached hereto as Exhibit A, is approved and adopted.

SECTION 5 NO MANDATORY DUTY OF CARE

This Ordinance is not intended to and shall not be construed or given effect in a manner that imposes upon the City or any officer or employee thereof a mandatory duty of care toward persons or property within or without the City so as to provide a basis of civil liability for damages, except as otherwise imposed by law.

SECTION 6 SEVERABILITY

If any section, subsection, sentence, clause, or phrase in this Ordinance or the attached policy or any part thereof is for any reason held to be unconstitutional, invalid, or ineffective by any court of competent jurisdiction, such decision shall not affect the validity or effectiveness of the remaining portions of this Ordinance or the attached policy or any part thereof. The City Council declares that it would have passed each section irrespective of the fact that any one or more section, subsection, sentence, clause, or phrase be declared unconstitutional, invalid, or ineffective.

SECTION 7 EFFECTIVE DATE

This ordinance shall become effective thirty (30) days from and after its passage and adoption, provided it is published in full or in summary within twenty (20) days after its adoption in a newspaper of general circulation in the City.

This ordinance was introduced and the title thereof read at the regular meeting of the City Council on May 10, 2022 and the second reading occurred at the regular meeting of the City Council on May 24, 2022.

On a motion by Council Member _____ seconded by Council Member _____, the foregoing ordinance was passed and adopted by the City Council of the City of Folsom, State of California, this 24th day of May 2022, by the following roll-call vote:

AYES: Councilmember(s):
NOES: Councilmember(s):
ABSENT: Councilmember(s):
ABSTAIN: Councilmember(s):

Kerri M. Howell, MAYOR

ATTEST:

Christa Freemantle, CITY CLERK

Military Equipment

707.1 PURPOSE AND SCOPE

The purpose of this policy is to provide guidelines for the approval, acquisition, and reporting requirements of military equipment (Government Code § 7070; Government Code § 7071; Government Code § 7072).

707.1.1 DEFINITIONS

Definitions related to this policy include (Government Code § 7070):

Military equipment – Includes but is not limited to the following:

- 1 Unmanned, remotely piloted, powered aerial or ground vehicles.
- 2 Mine-resistant ambush-protected (**MRAP**) vehicles or armored personnel carriers. Police versions of standard consumer vehicles are not Military Equipment.
- 3 High mobility multipurpose wheeled vehicles (HMMWV), two-and-one-half-ton trucks, five-ton trucks, or wheeled vehicles that have a breaching or entry apparatus attached. Unarmored all-terrain vehicles (ATVs) and motorized dirt bikes are not Military Equipment.
- 4 Tracked armored vehicles that provide ballistic protection to their occupants and use a tracked system instead of wheels for forward motion.
- 5 Command and control vehicles that are either built or modified to facilitate the operational control and direction of public safety units.
- 6 Weaponized aircraft, vessels, or vehicles of any kind.
- 7 Battering rams, slugs, and breaching apparatuses that are explosive in nature. This does not include a handheld, one-person ram. Items designed to remove a lock, such as bolt cutters, are not Military Equipment.
- 8 Firearms and ammunition of .50 caliber or greater, excluding standard-issue shotguns and standard-issue shotgun ammunition.
- 9 Specialized firearms and ammunition of less than .50 caliber, including firearms and accessories identified as assault weapons in Penal Code § 30510 and Penal Code § 30515, with the exception of standard-issue handguns and ammunition of less than .50 caliber.
- 10 Any firearm or firearm accessory that is designed to launch explosive projectiles.
- 11 Flashbang grenades, noise-flash diversionary devices, and explosive breaching tools.
- 12 Tear gas, pepper balls, and other munitions containing tear gas or OC, excluding standard, service-issued handheld pepper spray.
- 13 TASER® Shockwave, microwave weapons, water cannons, and long-range acoustic devices (LRADs).

Folsom Police Department

Folsom PD Policy Manual

Military Equipment

14 The following projectile launch platforms and their associated munitions: 40 mm projectile launchers, bean bag, rubber bullet, specialty impact munition (SIM) weapons, and any kinetic energy weapons and munitions.

15 Any other equipment as determined by the City Council to require additional oversight.

Type – Each item that shares the same manufacturer model number.

707.2 POLICY

It is the policy of the Folsom Police Department that members of this department comply with the provisions of Government Code § 7071 with respect to military equipment.

707.3 MILITARY EQUIPMENT COORDINATOR

The Chief of Police should designate a member of this department to act as the military equipment coordinator. The responsibilities of the military equipment coordinator include but are not limited to:

- (a) Acting as liaison to the City Council for matters related to the requirements of this Policy.
- (b) Identifying equipment that qualifies as Military Equipment, as defined in this Policy, whether the equipment is in the current possession of the Department or is equipment the Department intends to acquire.
- (c) Conducting an inventory of all Military Equipment, as defined in this Policy, at least annually.
- (d) Collaborating with any other law enforcement agency that may use Military Equipment within the jurisdiction of Folsom Police Department (Government Code § 7071).
- (e) Preparing for, scheduling, and coordinating the annual community engagement meeting, including:
 1. Publicizing the details of the meeting.
 2. Preparing for public questions regarding the Department's funding, acquisition, or use of Military Equipment.
- (f) Preparing the annual Military Equipment report Council and ensuring that the report is made available on the department website consistent with this Policy. (Government Code § 7072). Additionally, updating the ordinance, policy, and Military List as necessary.
- (g) Ensuring that this Policy is made available on the Department's website and that any newly proposed version of the Policy is also available on the website at least 30 days before any public hearing concerning the Policy or the associated ordinance.
- (h) Evaluating the procedures by which members of the public may register complaints or concerns or submit questions about the use of any Type of Military Equipment and updating those procedures as needed.

Folsom Police Department

Folsom PD Policy Manual

Military Equipment

- (i) Ensuring that the Department responds in a timely manner to each complaint, concern, or question about Military Equipment

707.4 MILITARY EQUIPMENT INVENTORY

Attached is a list of the Folsom Police Department's qualifying Military Equipment, including the following information (Government Code § 7070):

- (a) A description of each Type of Military Equipment, including:
 1. Quantity
 2. Capabilities
 3. Expected lifespan
 4. Product description from the manufacturer.
- (b) The purposes and authorized uses of each Type of Military Equipment
- (c) The fiscal impact of each Type of Military Equipment, including:
 1. Initial cost of obtaining the equipment
 2. Estimated annual cost of maintaining the equipment
- (d) Rules that govern each authorized use
- (e) Training that must be completed before any member of the Department is allowed to use each specific Type of Military Equipment

707.5 USE OF MILITARY EQUIPMENT

Military Equipment used by any member of this Department shall first be approved for use by the City Council. Once approved, Military Equipment must be used in accordance with all applicable Folsom Police Department policies and used only by those members trained and authorized for such use.

707.6 ACQUISITION OF NEW MILITARY EQUIPMENT

- (a) The acquisition of new Military Equipment shall be approved in advance by the City Council, in accordance with this Policy.
- (b) The Department is authorized to acquire additional stock of approved Military Equipment from other law enforcement agencies in the event of an emergency when approved in advance by the Chief of Police or authorized designee. If that occurs, the Department must obtain City Council approval as described in this Policy as soon as practicable.

Folsom Police Department

Folsom PD Policy Manual

Military Equipment

707.7 FUNDING FOR MILITARY EQUIPMENT

Funding for Military Equipment shall be approved in advance by the City Council, in accordance with the City of Folsom budget process, the procurement requirements of the Folsom Municipal Code, and this Policy.

707.8 APPROVAL BY CITY COUNCIL

- (a) The Chief of Police or the authorized designee shall obtain approval from the City Council for the acquisition and use of Military Equipment by way of an ordinance adopting the Military Equipment Use Policy. (Government Code § 7071.)
- (b) The City Council shall review the ordinance approving the Military Equipment Use Policy annually and vote on whether to renew the ordinance. (Government Code § 7071.)
- (c) As part of the initial and annual approval process, the Chief of Police or the authorized designee shall submit the proposed Military Equipment Use Policy to the City Council and make it available on the Department's website at least 30 days prior to any public hearing concerning the Military Equipment at issue (Government Code § 7071).
- (d) The ordinance approving the Military Equipment Use Policy must be adopted by the City Council before the Department engages in any of the following (Government Code § 7071):
 1. Requesting military equipment made available pursuant to 10 USC § 2576a.
 2. Seeking funds for military equipment, including but not limited to applying for a grant, soliciting or accepting private, local, state, or federal funds, in-kind donations, or other donations or transfers.
 3. Acquiring military equipment either permanently or temporarily, including by borrowing or leasing.
 4. Collaborating with another law enforcement agency in the deployment or other use of military equipment within the jurisdiction of this department.
 5. Using any new or existing military equipment for a purpose, in a manner, or by a person not previously approved by the governing body.
 6. Soliciting or responding to a proposal for, or entering into an agreement with, any other person or entity to seek funds for, apply to receive, acquire, use, or collaborate in the use of military equipment.
 7. Acquiring military equipment through any means not provided above.

707.9 PUBLIC AVAILABILITY OF POLICY

- (a) The Chief of Police or the authorized designee shall make any proposed Military Equipment Use Policy publicly available on the Department's website at least 30 days before any public hearing concerning the Military Equipment at issue. This includes any proposed changes to the Policy or the Military Equipment Inventory associated with the City Council's annual review of the ordinance. (Government Code § 7071.)

Folsom Police Department

Folsom PD Policy Manual

Military Equipment

- (b) The Chief of Police or the authorized designee shall make any Military Equipment Use Policy publicly available on the Department's website for as long as the Military Equipment is available for use. (Government Code § 7071.)

707.10 COORDINATION WITH OTHER LAW ENFORCEMENT AGENCIES

Military Equipment used by any other law enforcement agency that is providing mutual aid to or operating in conjunction with this Department or the City of Folsom in a law enforcement capacity, shall comply with the law enforcement agency's own Military Equipment use policy. Use of another law enforcement agency's Military Equipment by that agency in the City of Folsom is approved as long as the use complies with the other agency's Military Equipment use policy.

707.11 ANNUAL REPORT

- (a) Within one year after approval of the Military Equipment Use Policy, and annually thereafter, the Chief of Police or the authorized designee should submit to the City Council an annual Military Equipment report for each Type of approved Military Equipment. (Government Code § 7072).
- (b) The Chief of Police or the authorized designee should make each annual Military Equipment report publicly available on the Department's website for as long as the Military Equipment is available for use. (Government Code § 7072.)
- (c) The annual Military Equipment report shall include, at a minimum, all of the following information for the preceding calendar year for each Type of Military Equipment (Government Code § 7072):
1. A summary of how the Military Equipment was used and the purpose of its use.
 2. A summary of any complaints or concerns received concerning the Military Equipment.
 3. The results of any internal audits, any information about violations of the Military Equipment Use Policy, and any actions taken in response.
 4. The total annual cost for each Type of Military Equipment, including acquisition, personnel, training, transportation, maintenance, storage, upgrade, and other ongoing costs, and from what source funds will be provided for the Military Equipment in the calendar year following submission of the annual Military Equipment report.
 5. The quantity possessed for each Type of Military Equipment.
 6. If the Department intends to acquire additional Military Equipment in the next year, the quantity sought for each Type of Military Equipment.

Folsom Police Department

Folsom PD Policy Manual

Military Equipment

707.12 REPLACEMENT OF EXISTING MILITARY EQUIPMENT

To maintain the quantity of each Type of Military Equipment included in the Military Equipment Inventory attached to this Policy, the Department is authorized to replace any approved Military Equipment without amending this Policy or the associated ordinance, if the Military Equipment is destroyed or rendered inoperable as a result of authorized use.

707.13 COMPLIANCE

Mechanisms to ensure compliance with the Military Equipment Use Policy include, but are not limited to, the following:

- (a) The Chief of Police shall be considered the ultimate authority for the content and adoption of the provisions of this Policy and shall ensure compliance with the Policy.
- (b) Each Division Commander will ensure that members under his/her command are aware of this Policy.
- (c) Each member will be required to acknowledge that he/she reviewed the Policy and shall seek clarification from an appropriate supervisor as needed.
- (d) The Training Officer is responsible for developing, reviewing, updating, and maintaining the Department's training plan so that required training is completed.
- (e) The Military Equipment Coordinator is responsible for compliance with specific components of the Policy as described above.
- (f) Violations of this Policy shall form the basis for departmental administrative action, training, or discipline consistent with the Policy Manual, the City of Folsom Personnel Rules and Regulations, and the applicable collective bargaining agreement.
- (g) This Policy shall not be construed to create a higher standard of care for civil or criminal liability against the City of Folsom or its employees.

707.14 COMMUNITY ENGAGEMENT

- (a) Within 30 days of submitting and publicly releasing the annual Military Equipment report, the Department shall hold at least one well-publicized and conveniently located community engagement meeting, at which the Department should discuss the annual Military Equipment report and respond to public questions regarding the report and the Department's funding, acquisition, or use of Military Equipment. (Government Code § 7072.)
- (b) Members of the public may register complaints or concerns or submit questions about the use of each specific Type of Military Equipment in any form, including in writing, by email sent to the following email address: FPDmilitaryequipment@folsom.ca.us, in person, by telephone at (916) 461-6400, at pre-determined community engagement meetings related to Military Equipment, or at any City Council meeting. Complaints related to the use of Military Equipment will be handled in accordance with FPD Policy 1019- Personnel Complaints.
- (c) The Department will ensure that each complaint, concern, or question receives a response in a timely manner. The Military Equipment Coordinator is specifically tasked

Folsom Police Department

Folsom PD Policy Manual

Military Equipment

with ensuring that each complaint, concern, or question receives a response in a timely manner.

List of Folsom Police Department's Qualifying Military Equipment

DJI Matrice 210	
Description	Commercial UAS
Quantity	1
Capability	Fly, Hover, broadcast video, record video, Photography, FLIR, carry payload up to approx. 7.5lbs.
Life Span	UAS devices need to be upgraded as software becomes obsolete by vendors.
Manufacturer's Description	Commercial grade UAV equipped with a thermal imaging camera and a 30x zoom camera. 38 mins. maximum flight time. Has live stream capabilities.
Purpose	Provide Aerial Support for L.E. operations
Authorized Usage	Investigative Used by SWAT, Patrol, Search and Rescue to locate persons.
Costs	\$30,000 approx. \$2,000 anticipated yearly maintenance & battery cost
Required Training	32-hr Basic Pilots Course (or equivalent), FAA Remote Pilot Certificate (Part 107)
Authority for Authorized Use	Certificate of Authority issued by FAA - #2020-WSA-7949-COA, FAA Part 107 holder and completion of Department Training, Folsom Police Department Policy – Section 391

DJI Phantom 4 Pro	
Description	Commercial UAS
Quantity	1
Capability	Fly, Hover, broadcast video, record video, Photography
Life Span	UAS devices need to be upgraded as software becomes obsolete by vendors.
Manufacturer's Description	Commercial grade UAS equipped with UHD capable camera. Has live stream capability and 28 min. flight time.
Purpose	Provide Aerial Support for L.E. operations
Authorized Usage	Investigative Used by SWAT, Patrol, Search and Rescue to locate persons.
Costs	\$2,500 approx. \$300 anticipated yearly maintenance & battery cost
Required Training	32-hr Basic Pilots Course (or equivalent), FAA Remote Pilot Certificate (Part 107)

Authority for Authorized Use	Certificate of Authority issued by FAA - #2020-WSA-7949-COA, FAA Part 107 holder and completion of Department Training, Folsom Police Department Policy – Section 391
------------------------------	---

DJI Mavic 2 Enterprise	
Description	Commercial UAS
Quantity	3
Capability	Fly, Hover, broadcast video, record video, Photography, broadcast instant and/or prerecorded notifications.
Life Span	UAS devices need to be upgraded as software becomes obsolete by vendors.
Manufacturer's Description	Commercial grade UAS equipped with Single 4k colored camera with Zoom capabilities. Has live stream capability and 30 min. flight time.
Purpose	Provide Aerial Support for L.E. operations
Authorized Usage	Investigative Used by SWAT, Patrol, Search and Rescue to locate persons.
Costs	\$3,600 approx. \$400 anticipated yearly maintenance & battery cost
Required Training	32-hr Basic Pilots Course (or equivalent), FAA Remote Pilot Certificate (Part 107)
Authority for Authorized Use	Certificate of Authority issued by FAA - #2020-WSA-7949-COA, FAA Part 107 holder and completion of Department Training, Folsom Police Department Policy – Section 391

DJI Mavic 2 Zoom	
Description	Commercial UAS
Quantity	1
Capability	Fly, Hover, broadcast video, record video, Photography.
Life Span	UAS devices need to be upgraded as software becomes obsolete by vendors.
Manufacturer's Description	Commercial grade UAS equipped with Single 4k colored camera with Zoom capabilities. Has live stream capability and 30 min. flight time.
Purpose	Provide Aerial Support for L.E. operations

Authorized Usage	Investigative Used by SWAT, Patrol, Search and Rescue to locate persons.
Costs	\$1,500 approx. \$400 anticipated yearly maintenance & battery cost
Required Training	32-hr Basic Pilots Course (or equivalent), FAA Remote Pilot Certificate (Part 107)
Authority for Authorized Use	Certificate of Authority issued by FAA - #2020-WSA-7949-COA, FAA Part 107 holder and completion of Department Training, Folsom Police Department Policy – Section 391

DJI Mavic Mini 2	
Description	Commercial UAS
Quantity	2
Capability	Fly, Hover, broadcast video, record video, Photography, Interior flights
Life Span	UAS devices need to be upgraded as software becomes obsolete by vendors.
Manufacturer's Description	Commerical grade UAS equipped with Single 4k colored camera. Has live stream capability and 30 min. fight time.
Purpose	Provide Aerial Support for L.E. operations
Authorized Usage	Investigative Used by SWAT, Patrol, Search and Rescue to locate persons.
Costs	\$500 approx. \$80 anticipated yearly maintenance & battery cost
Required Training	32-hr Basic Pilots Course (or equivalent), FAA Remote Pilot Certificate (Part 107)
Authority for Authorized Use	Certificate of Authority issued by FAA - #2020-WSA-7949-COA, FAA Part 107 holder and completion of Department Training, Folsom Police Department Policy – Section 391

DJI Mavic Mini	
Description	Commercial UAS
Quantity	1
Capability	Fly, Hover, broadcast video, record video, Photography, Interior flights.

Life Span	UAS devices need to be upgraded as software becomes obsolete by vendors.
Manufacturer's Description	Commerical grade UAS equipped with Single 4k colored camera. Has live stream capability and 30 min. flight time.
Purpose	Provide Aerial Support for L.E. operations
Authorized Usage	Investigative Used by SWAT, Patrol, Search and Rescue to locate persons.
Costs	\$400 approx. \$80 anticipated yearly maintenance & battery cost
Required Training	32-hr Basic Pilots Course (or equivalent), FAA Remote Pilot Certificate (Part 107)
Authority for Authorized Use	Certificate of Authority issued by FAA - #2020-WSA-7949-COA, FAA Part 107 holder and completion of Department Training, Folsom Police Department Policy – Section 391

DJI Aeroscope (Regional Item)	
Description	Commercial UAS detection device
Quantity	1
Capability	Drone detection and identification platform.
Life Span	UAS devices need to be upgraded as software becomes obsolete by vendors.
Manufacturer's Description	Drone detection platform that identifies UAV communication links, gathering information such as flight status, paths, and other information in real-time.
Purpose	Identify and track commercial drones within secured or restricted areas
Authorized Usage	Provide airspace security over restricted areas or during specilized events
Costs	Unknown – obtained through UASI grant applied for by regional partners approx. \$400 anticipated yearly maintenance & battery cost
Required Training	In house departmental training. No POST requirement.
Authority for Authorized Use	Completion of Department Training, Folsom Police Department Policy – Section 391

Blu-Link Streaming Box	
Description	Commerical streaming box
Quantity	1
Capability	Streams video in real-time HD video over a secure internet connection.
Life Span	3-5 years

Manufacturer's Description	Portable video streaming device to stream live HD video in real time over a secure Internet connection.
Purpose	Provide real-time video over a secure internet connection for situational awareness and scene assessment.
Authorized Usage	Completion of Department Training, Folsom Police Department Policy – Section 391
Costs	\$5,400 approx. \$50 anticipated yearly maintenance & battery cost
Required Training	In house departmental training. No POST requirement.
Authority for Authorized Use	Completion of Department Training, Folsom Police Department Policy – Section 391
Avatar III	
Description	Robotex INC Avatar III Robot
Quantity	1
Capability	The Avatar III Robot is a radio controlled robot on a track system of propulsion and is outfitted with Cameras, Speakers, and Microphones. The robot increases officers ability to conduct searches in high risk scenarios by providing video and audio into areas that may not be safe for officers to enter. In addition the cameras, speakers, and micorphones allow for 2 way communication between officers and subjects during critical incidents such as barricaded subjects, hostage situations, or suicidal subjects. The camera system provides additional safety for officers when placed in strategic positions to monitor doorways, hallways or access points. The Avatar III Robot is regulary used by the SWAT team during his risk search warrants, emergency calls, and during outside agency requests for assistance. The Crisis Negotiations Team (CNT) is also able to use the robot for direct communication during critical incidents when other forms of direct contact are unsuccessful.
Life Span	15 years

Manufacturer's Description	The AVATAR® enhances the capabilities of SWAT and tactical response teams by allowing them to inspect dangerous situations quickly and safely, there is no longer a need to send personnel in before you've had a chance to assess the situation. The AVATAR® saves lives by keeping first responders out of harm's way, and it does so at a fraction of the price of other robots. The AVATAR® Robots are regarded by tactical teams as a standard operational tool, like a firearm, vehicle, or piece of body armor. Departments across the United States and internationally are using the AVATAR® Robots	
Purpose	To enhance safety for officers and subjects during high risk or critical Incidents.	
Authorized Usage	Assisting in lawful searches and surveillance. Communications during critical incidents	
Costs	\$26000 anticipated yearly maintenance & battery cost	\$0
Required Training	In house departmental training. No POST requirement.	
Authority for Authorized Use	It is the policy of the FPD to utilize a robot only for official law enforcement purposes, and in a manner that respects the privacy of our community, pursuant to State and Federal law.	

Lenco Bearcat G2	
Description	Armored personnel carrier
Quantity	1
Capability	The BearCat is a large mobile armored vehicle used to conduct rescues mission for both officers and the public, transport personnel and equipment, and provide security to the public.
Life Span	25 years
Manufacturer's Description	<p>The Lenco Bearcat is an armored vehicle built on a Ford F550 frame and is manufactured for law enforcement purposes. The purpose of the Bearcat armored vehicle is to provide ballistic protection to officers and citizens from gunfire. The armored vehicle stops rifle rated rounds including .50 caliber which is commercially available and beyond the protection level of shield and personal body armor possessed by the department.</p> <p>The Bearcat is often deployed several times a month by SWAT personnel while serving high risk search warrants or assisting other agency. It can be utilized by trained patrol personnel to rescue downed officers and citizens. The Bearcat has been struck by gunfire several times and protected the officers inside, behind it, and the community.</p> <p>Protecting officers allows them to contain the suspect and reduce the immediacy of the threat while communicating and de-escalating. Crisis Negotiations Team (CNT) members have operated from inside the armored vehicles during search warrant and SWAT callouts where they communicate with the suspect and attempt to de-escalate.</p>
Purpose	Regional asset and provides armored vehicle response to critical incidents.
Authorized Usage	To protect and safely transport Police personnel to active scenes. Provide security for officers and the public. It is used by the SWAT and officers.
Costs	\$275,000 approx. \$1,000 anticipated yearly maintenance cost
Required Training	All drivers/ operators shall attend formalized instruction and be trained in vehicle operations and practical driving instruction.

Authority for Authorized Use	Use is established under FPD Policy 705. It is the policy of the Department to utilize armored vehicles only for official law enforcement purposes, and pursuant to State and Federal law.

Mobile Command & Communications Unit (MCCU)	
Description	LDV Custom Specialty Vehicles Command Vehicle
Quantity	1
Capability	The MCCU can be utilized for SWAT/CINT and other critical incidents, preplanned large events, searching for missing persons, natural disasters, and community events
Life Span	20 years
Manufacturer's Description	The LDV Custom Specialty Vehicle is a mobile command center built on a 2006 Freightliner chassis and customized for law/fire command/communication purposes. The purpose of the LDV Mobile Command and Communication Unit (MCCU) is to provide an interior space for command staff to plan and organize responses to critical incidents and special events. The MCCU is specially equipped with an onboard dispatch center, a command area, and a radio interoperability system (RIOS) which allows radio communication between local, state, and federal law enforcement entities which currently operate under different radio systems/frequencies. The vehicle contains radios with varying frequencies including 800 megahertz, very high frequency (VHF), ultrahigh frequency (UHF), low band, and short-wave radio systems. The vehicle has internet capability and computer resources along with access to television channels allowing access to real time news/information. The vehicle is also equipped with a video downlink system allowing command staff to view live feeds from fire/law enforcement aircraft and UAS devices.
Purpose	To be used based on the specific circumstances of a given critical incident, large event, natural disaster or community event that is taking place.
Authorized Usage	Situations which the MCCU is authorized for use would include but not be limited to critical incidents, emergencies, and natural disasters.

Costs	\$750,000 \$15,000 anticipated yearly maintenance cost	approx.
Required Training	The MCCU operators will receive training in the overall operation of the vehicle to include set up and break down procedures, and skills training in the computer, dispatch, and radio systems. The drivers will receive training in the safe handling of the vehicle with the assistance of an experienced driver. Drivers will undergo California Department of Motor Vehicles commercial vehicle testing. This training will occur on a bi-monthly basis	
Authority for Authorized Use	It is the policy of the Department to use the MCCU for official fire and law enforcement purposes, and in accordance with California State law regarding operation of motor vehicles	

Colt M4 Carbine (11.5")	
Description	Enhanced Patrol Rifle
Quantity	14
Capability	These rifles fire an intermediate-power cartridge (.223) which is more powerful than a standard pistol but less powerful than a standard rifle. It's a short barreled rifle which allows SWAT Officers better control while inside of structures while still providing great accuracy.
Life Span	10-15 years
Manufacturer's Description	Built for the demanding use of those who protect our communities every day, the Colt Enhanced Patrol Rifle (EPR) is the next evolution in the world's most dependable, thoroughly field-tested patrol rifle. Featuring an extended handguard that accepts modular rail segments for mounting a wide variety of pro-grade optics, lighting, and ergonomics-enhancing accessories, as well as the highly durable Magpul® MBUS® Pro Series front and rear back up sights and B5 Bravo buttstock. The Colt EPR reestablishes the Colt AR-15® as the finest tool for local, regional, and national law enforcement agencies.
Purpose	The AR-15 can stop threats of great bodily injury or death at close and intermediate ranges. The AR-15 platform is capable of firing more accurately and quicker than a pistol while holding more rounds in the magazine and having better ballistic qualities.
Authorized Usage	To defend against an imminent threat of serious bodily injury or death. Used by SWAT
Costs	\$1,100 \$0 anticipated yearly maintenance cost
Required Training	Prior to using a rifle, officers must be certified by POST instructors in the operation of the rifle. Additionally, all members that operate any rifle are required to pass a range qualification once a year.
Authority for Authorized Use	Use is established under FPD Policy 300 and Policy 311. It is the policy of the FPD to utilize rifles only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Accuracy International AT-.308

Description	Sniper Rifle
Quantity	4
Capability	This weapon shoots a heavier round. It is utilized when there is a potential need to engage a target further away than the capabilities of our issued rifles or to engage a target behind an intermediate barrier such as glass or metal. The weapon is often deployed in an overwatch capacity to protect the public during events such as the International Marathon.
Life Span	10-15 years
Manufacturer's Description	The AT (Accuracy Tactical) continues the legacy of the combat proven AW308 and takes the AW to new levels. The AIAT has a 20-inch quick change barrel and a folding stock. The AT is ideal for Law Enforcement and civilian users.
Purpose	The AIAT is an accurate rifle for precision shooting. These rifles are equipped with magnified optics and can be utilized to take precision shots at intermediate to long ranges. The .308 caliber bullet it shoots is also bigger and heavier than a typical .223 caliber bullet from an AR-15 which means it will penetrate barriers like glass with much less deflection.
Authorized Usage	To defend against an imminent threat of serious bodily injury or death. Used by SWAT
Costs	\$5,000 \$0 anticipated yearly maintenance cost
Required Training	Prior to using a rifle, officers must be certified by POST instructors in the operation of the rifle. Additionally, all members that operate any rifle are required to pass a range qualification once a year.
Authority for Authorized Use	Use is established under FPD Policy 300 and Policy 311. It is the policy of the FPD to utilize rifles only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Benelli M3 Tactical Shotgun	
Description	SWAT Shotgun
Quantity	3

Capability	This is a 12-gauge semi-automatic pump shotgun used by SWAT officers. The semi-automatic capability reduces time between rounds versus a standard pump action shotgun. Not having to manipulate a fore-end gives SWAT officer the ability to get back on target faster increasing officer safety. The round is good for defeating barriers.
Life Span	10-15 years
Manufacturer's Description	Benelli's M3 Tactical Shotgun delivers fast cycling semi-auto fire with conventional loads or pump action for low energy loads. It is available in a 12 gauge, pistol grip model that satisfies a shooters need for both a semi-automatic and a pump action shotgun in one convertible weapon.
Purpose	SWAT
Authorized Usage	To defend against an imminent threat of serious bodily injury or death. Used by SWAT
Costs	\$800 \$0 anticipated yearly maintenance cost
Required Training	Prior to using a shotgun, officers must be certified by POST instructors in the operation of the rifle. Additionally, all members that operate any shotgun are required to pass a range qualification once a year.
Authority for Authorized Use	Use is established under FPD Policy 300 and Policy 311. It is the policy of the FPD to utilize shotguns only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Colt (11.5-inch barrel) M4 Carbine – Enhanced Patrol Rifle	
Description	Enhanced Patrol Rifle
Quantity	24
Capability	Equipped with optical sight systems and mounted flashlights, the short-barreled rifle (SBR) fires an intermediate-power cartridge (.223/5.56) which is more powerful than a standard pistol but less powerful than a standard rifle. The SBR gives police officers better maneuverability in and out of patrol vehicles and motorcycles. The SBR is ideal for close quarter deployments inside of structures and provides improved accuracy for long distance engagements.
Life Span	10-15 years

Manufacturer's Description	Built for the demanding use of those who protect our communities every day, the Colt Enhanced Patrol Rifle (EPR) is the next evolution in the world's most dependable, thoroughly field-tested patrol rifle. Featuring an extended handguard that accepts modular rail segments for mounting a wide variety of pro-grade optics, lighting, and ergonomics-enhancing accessories, as well as the highly durable Magpul® MBUS® Pro Series front and rear back up sights and B5 Bravo buttstock. The Colt EPR reestablishes the Colt AR-15® as the finest tool for local, regional, and national law enforcement agencies
Purpose	The AR-15 can stop threats of great bodily injury or death at close and intermediate ranges. The AR-15 platform is capable of firing more accurately and quicker than a pistol while holding more rounds in the magazine and having better ballistic qualities.
Authorized Usage	To defend against an imminent threat of serious bodily injury or death. Used by the Officers
Costs	\$1,190 anticipated yearly maintenance cost
Required Training	Prior to using a rifle, officers must be certified by POST instructors in the operation of the rifle. Additionally, all members that operate any rifle are required to pass a range qualification once a year.
Authority for Authorized Use	Use is established under FPD Policy 300 and Policy 311. It is the policy of the FPD to utilize rifles only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Colt (16-inch barrel) M4 Carbine AR-15	
Description	Patrol Rifle
Quantity	22
Capability	Equipped with optical sight systems and mounted flashlights, these rifles fire an intermediate-power cartridge (.223/5.56) cartridge which is more powerful than a standard pistol but less powerful than a standard rifle. Provides improved accuracy for long distance engagements.
Life Span	10-15 years

Manufacturer's Description	The civilian model 6920 is the civilian version of the current Colt M4 Carbine used by our modern military war fighters. Throughout the world today Colt's reliability, performance and accuracy provide our armed Forces with the confidence required to accomplish any mission, and this rifle can do the same for you. Colt's 6920 series shares many of the same features as it's combat-proven brother the Colt M4. From the forged aluminum upper and lower receivers, to the chrome lined barrel, even through the gas operated semi automatic firing system. Don't settle for imitations, buy the real thing, buy a Colt
Purpose	The AR-15 can stop threats of great bodily injury or death at close and intermediate ranges. The AR-15 platform is capable of firing more accurately and quicker than a pistol while holding more rounds in the magazine and having better ballistic qualities.
Authorized Usage	To defend against an imminent threat of serious bodily injury or death. Used by the Officers
Costs	\$940 \$50 anticipated yearly maintenance cost
Required Training	Prior to using a rifle, officers must be certified by POST instructors in the operation of the rifle. Additionally, all members that operate any rifle are required to pass a range qualification once a year.
Authority for Authorized Use	Use is established under FPD Policy 300 and Policy 311. It is the policy of the FPD to utilize rifles only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Black Hills Gold .308 Winchester 180 Nosler AccuBond	
Description	Specialized ammunition
Quantity	700 rounds
Capability	Penetrate Intermediate Barriers, Residential windows/Automotive Glass
Life Span	Indefinite

Manufacturer's Description	This round is loaded with a high quality Nosler AccuBond bullet for excellent down range performance. Through a proprietary bonding process that eliminates voids in the bullet core, AccuBond marries Nosler's traditional copper-alloy jacket with its special lead-alloy core. The result is a bullet that flies true, penetrates deep, won't cause extensive barrel fouling, and will retain 60-70% of its weight. The white polymer tip helps protect against deformation while initiating expansion upon impact. This round is used to penetrate intermediate barriers, residential windows, and automotive glass at 2,500 feet per second.
Purpose	To defend against an imminent threat of serious bodily injury or death. Used by SWAT
Authorized Usage	To defend against an imminent threat of serious bodily injury or death. Used by SWAT
Costs	\$45 approx. \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing specialized ammunitions are trained by POST certified firearms instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, and Policy 311. It is the policy of the FPD to utilize specialized ammunition only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Hornaday .308 Winchester Tap 168 grain ELD Match Tap Precision	
Description	Specialized ammunition
Quantity	7,600 rounds
Capability	Precision Round, Limited Penetration
Life Span	Indefinite
Manufacturer's Description	Hornady .308 Winchester Tap 168 grain ELD Match Tap Precision bullet with Heat Shield tip delivers the excellent terminal performance TAP Precision is known for, but features a resilient, heat resistant polymer tip that improves the ballistic coefficient, resulting in higher impact velocities, less drop, less wind drift, and more energy on target. The round has a muzzle velocity of 2,672 feet per second.
Purpose	Precision round with limited Penetration

Authorized Usage	To defend against an imminent threat of serious bodily injury or death. Used by SWAT
Costs	\$45 approx. \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing specialized ammunitions are trained by POST certified firearms instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, and Policy 311. It is the policy of the FPD to utilize specialized ammunition only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Ferret 37mm CS 1192	
Description	Tear Gas
Quantity	5
Capability	Can be launched via the 37mm single launcher
Life Span	5 years
Manufacturer's Description	The Ferret® 37 mm CS Round is a frangible projectile filled with chemical agent. Upon impacting the barrier, the nose cone ruptures and instantaneously delivers the .16 oz. agent payload inside a structure. The munitions is 4.8 in. by 1.5 in. and travels at 650fps within an effective range of 50 yards.
Purpose	To safely resolve critical situations such as violent civil unrest and highrisk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$40 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Ferret 37mm OC 1160	
Description	Tear Gas
Quantity	8
Capability	Can be launched via the 37mm single launcher
Life Span	5 years
Manufacturer's Description	The Ferret® 37 mm OC Round is a frangible projectile filled with chemical agent. Upon impacting the barrier, the nose cone ruptures and instantaneously delivers the .16 oz. agent payload inside a structure. These munitions are 4.8 in. by 1.5 in. and travels at 650fps within an effective range of 50 yards.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations

Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$40 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Combined Tactical Systems 37mm Riot CS Powder Muzzle Blast	
Description	Tear Gas
Quantity	1
Capability	Can be launched via the 37mm single launcher
Life Span	5 years
Manufacturer's Description	A cartridge designed to blast irritant powder directly from the muzzle toward a hostile crowd or individual. These muzzle munitions are designed with a “dual-rim” enabling the operator to chamber the round in both 37MM and 40MM Launchers. However, only 37MM will deliver optimum performance as stated in this specification sheet.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$40 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Combined Tactical Systems 2430 CS/ 12-gauge barricade
--

Description	Tear Gas	
Quantity	9	
Capability	Can be launched via a 12 gauge shotgun	
Life Span	5 years	
Manufacturer's Description	Liquid filled, non-burning, fin-stabilized rounds designed to penetrate light to intermediate barriers such as windows and hollow core doors. The projectiles break upon impact and deliver agent payloads of powder or liquid throughout the adjacent target area.	
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations	
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT	
Costs	\$8	\$0
	anticipated yearly maintenance cost	
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Combined Tactical Systems 2440- 12-gauge OC powder		
Description	Tear Gas	
Quantity	5	
Capability	Can be launched via a 12 gauge shotgun	
Life Span	5 years	
Manufacturer's Description	OC Liquid filled, non-burning, fin-stabilized rounds designed to penetrate light to intermediate barriers such as windows and hollow core doors. The projectiles break upon impact and deliver agent payloads of OC powder throughout the adjacent target area.	
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations	

Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$8 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Ferret 40mm liquid barricade penetrator round, OC 2260	
Description	Tear Gas
Quantity	10
Capability	Can be launched via a 40mm launcher.
Life Span	5 years
Manufacturer's Description	The Ferret® 40mm Round is non-burning and suitable for indoor use. Used primarily by tactical teams, it is designed to penetrate barriers, such as windows, hollow core doors, wallboard and thin plywood. Upon impacting the barrier, the nose cone ruptures and instantaneously delivers a small chemical payload inside of a structure or vehicle. In a tactical deployment situation, the 40mm Ferret is primarily used to dislodge barricaded subjects from confined areas. Its purpose is to minimize the risks to all parties through pain compliance, temporary discomfort and/or incapacitation of potentially violent or dangerous subjects.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$10 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.

Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.
------------------------------	---

Defense Technology Ferret 40 mm powder barricade round, CS 2292	
Description	Tear Gas
Quantity	16
Capability	Can be launched via a 40mm launcher.
Life Span	5 years
Manufacturer's Description	The Ferret® 40 mm Barricade Penetrating Round is filled with a CS powder chemical agent. It is a frangible projectile that is spin stabilized utilizing barrel rifling. It is non-burning and designed to penetrate barriers. Primarily used to dislodge barricaded subjects, it can also be used for area denial. Primarily used by tactical teams, it is designed to penetrate barriers, such as windows, hollow core doors, wallboard and thin plywood. Upon impact the nose ruptures and instantaneously delivers the agent payload inside a structure or vehicle.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$10 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Ferret 40 mm liquid barricade penetrator round, CS 2262	
Description	Tear Gas
Quantity	10
Capability	Can be launched via a 40mm launcher.

Life Span	5 years
Manufacturer's Description	The Ferret® 40mm Round is non-burning and suitable for indoor use. Defense Technology Triple-chaser separating canister, CS 1026	
Description	Tear Gas
Quantity	10
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years
Manufacturer's Description	The Triple-Chaser® CS consists of three separate canisters pressed together with separating charges between each. When deployed, the canisters separate and land approximately 20 feet apart allowing increased area coverage in a short period of time. This grenade can be hand thrown or launched from a fired delivery system. The grenade is 6.5 in. by 2.7 in. and holds an approximately 3.2 oz. of active agent payload. It has an approximate burn time of 20-30 seconds.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations

Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$32 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Ferret 12-gauge liquid barricade round, CS 3012	
Description	Tear Gas
Quantity	10
Capability	Can be launched via a 12 gauge shotgun
Life Span	5 years
Manufacturer's Description	The Ferret® 12-Gauge Liquid CS non pyrotechnical properties also eliminate the fire hazard common with other products. The Ferret round is available with either liquid or powder carriers for the agent. These munitions are a 2.5 in. 12-Gauge round deploying .025 oz. of active agent.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$10 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Ferret 12-gauge powder barricade round, CS 3092	
Description	Tear Gas

Quantity	10
Capability	Can be launched via a 12 gauge shotgun
Life Span	5 years
Manufacturer's Description	The Ferret® 12-Gauge Powder CS non pyrotechnic properties also eliminate the fire hazard common with other products. The Ferret round is available with either liquid or powder carriers for the agent. The powder carrier improves barricade penetration potential.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$10 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Ferret 12-gauge powder barricade round, OC 3090	
Description	Tear Gas
Quantity	10
Capability	Can be launched via a 12 gauge shotgun
Life Span	5 years
Manufacturer's Description	The Ferret® 12-Gauge Powder OC non pyrotechnical properties also eliminate the fire hazard common with other products. The Ferret® round is available with either liquid or powder carriers for the agent. These munitions are a 2.5 in. 12-Gauge round deploying .002 oz. of active agent.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT

Costs	\$8 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Defense Technology Ferret 12-gauge liquid barricade round, OC 3010		
Description	Tear Gas	
Quantity	10	
Capability	Can be launched via a 12 gauge shotgun	
Life Span	5 years	
Manufacturer's Description	The Ferret® 12-Gauge Liquid OC non pyrotechnical properties also eliminate the fire hazard common with other products. The Ferret round is available with either liquid or powder carriers for the agent. These munitions are a 2.5 in. 12-Gauge round deploying .015 oz. of active agent.	
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations	
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT	
Costs	\$10 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Defense Technology 12-gauge barricade projectile, CS 23		
Description	Tear Gas	
Quantity	10	
Capability	Can be launched via a 12 gauge shotgun	

Life Span	5 years
Manufacturer's Description	
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$10 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Smith & Wesson 12-gauge barricade projectile, CS	
Description	Tear Gas
Quantity	4
Capability	Can be launched via a 12 gauge shotgun
Life Span	5 years
Manufacturer's Description	Non-pyrotechnical 12-Gauge barricade round with a small CS charge.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$10 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Aerosol OC/CS grenade 1050

Description	Tear Gas
Quantity	3
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years
Manufacturer's Description	Designed for indoor use, this grenade contains no CFCs, is not a fire hazard and requires minimal decontamination by comparison to smoke, powders, or liquids. The Aerosol Grenade is most commonly used in tactical situations by Law Enforcement and Corrections and was designed with indoor operations in mind when a non fire-producing delivery system is desired. It is most effective when used in confined areas and close to the target area. Used to minimize the risks to all parties through pain compliance, temporary discomfort and/or incapacitation of potentially violent or dangerous subjects. The Aerosol Grenade is ideal for cell extractions or barricade situations where the use of pyrotechnic, powder, or liquid devices is not practical or desired. The OC and CS combination provide sufficient effects in confined areas of up to 1,500 square feet. The Aerosol Grenade is not recommended for outdoor use.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$35 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Spede-Heat continuous discharge chemical grenade, OC 1070	
Description	Tear Gas
Quantity	8
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years

Manufacturer's Description	The Spede-Heat™ OC Grenade is a high volume, continuous burn it expels its payload in approximately 20-40 seconds. The payload is discharged through four gas ports on top of the canister, three on the side and one on the bottom. This launchable grenade is 6.12 in. by 2.62 in. and holds approximately 1.09 oz. of active agent.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$ anticipated yearly maintenance cost \$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Riot control continuous discharge grenade, OC 1080	
Description	Tear Gas
Quantity	5
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years
Manufacturer's Description	The Riot Control OC Grenade is designed specifically for outdoor use in crowd control situations with a high volume continuous burn that expels its payload in approximately 20-40 seconds through four gas ports located on the top of the canister. This grenade can be used to conceal tactical movement or to route a crowd. The volume of smoke and agent is vast and obtrusive. This launchable grenade is 6.0 in. by 2.35 in. and holds approximately 0.88 oz. of active agent.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT

Costs	\$35 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Defense Technology Instantaneous blast CS grenade 1042		
Description	Tear Gas	
Quantity	4	
Capability	Can be hand thrown, launched, or placed into a munitions Pole	
Life Span	5 years	
Manufacturer's Description	The Instantaneous Blast CS Grenade is designed for indoor or outdoor use; this grenade's powder is expelled upon initiation of a small internal detonator that has sufficient force to split the canister at six machined groves on the outside surface. this device is well suited for affecting numerous subjects grouped within a contained portion of a prison yard or area, using wind to the advantage. This 6.12 in. by 2.62 in. grenade will deliver approximately 1.5 oz. of active agent.	
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations	
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT	
Costs	\$35 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Defense Technology Spede-Heat continuous discharge chemical grenade, CS 1072		
Description	Tear Gas	

Quantity	4
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years
Manufacturer's Description	The Spede-Heat™ CS Grenade is a high volume, continuous burn it expels its payload in approximately 20-40 seconds. The payload is discharged through four gas ports on top of the canister, three on the side and one on the bottom. This launchable grenade is 6.12 in. by 2.62 in. and holds approximately 2.9 oz. of active agent.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$35 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Flameless tri-chamber CS grenade 1032	
Description	Tear Gas
Quantity	2
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years

Manufacturer's Description	The design of the Tri-Chamber Flameless CS Grenade allows the contents to burn within an internal can and disperse the agent safely with reduced risk of fire. The grenade is designed primarily for indoor tactical situations to detect and/or dislodge a barricaded subject. This grenade will deliver approximately .70 oz. of agent during its 20-25 seconds burn time. The Tri-Chamber Flameless Grenade can be used in crowd control as well as tactical deployment situations by Law Enforcement and Corrections, but was designed with the barricade situation in mind. Its applications in tactical situations are primarily to detect and/or dislodge barricaded subjects. The purpose of the Tri-Chamber Flameless Grenade is to minimize the risks to all parties through pain compliance, temporary discomfort, and/or incapacitation of potentially violent or dangerous subjects. The Tri-Chamber Flameless Grenade provides the option of delivering a pyrotechnic chemical device indoors, maximizing the chemicals' effectiveness via heat and vaporization, while minimizing or negating the chance of fire to the structure.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$35 anticipated yearly maintenance cost \$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Flameless tri-chamber OC grenade 1030	
Description	Tear Gas
Quantity	3
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years

Manufacturer's Description	Designed for law enforcement and corrections, the OC Flameless Tri-Chamber Pyrotechnic Grenade combines the effectiveness of Oleoresin Capsicum (OC) as an incapacitating agent with the flexible delivery methods, range and area coverage of pyrotechnic munitions. The OC Flameless Tri-Chamber Grenade can be used in crowd control, or barricade situations, as a less lethal solution to incapacitate subjects through temporary respiratory discomfort, while reducing or negating the chance of fire to structures. The Tri-Chamber Flameless Grenade can be used in crowd control as well as tactical deployment situations by Law Enforcement and Corrections, but was designed with the barricade situation in mind. Its applications in tactical situations are primarily to detect and/or dislodge barricaded subjects. The purpose of the Tri-Chamber Flameless Grenade is to minimize the risks to all parties through pain compliance, temporary discomfort, and/or incapacitation of potentially violent or dangerous subjects. The Tri-Chamber Flameless Grenade provides the option of delivering a pyrotechnic chemical device indoors, maximizing the chemicals' effectiveness via heat and vaporization, while minimizing or negating the chance of fire to the structure.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$35 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Riot control continuous discharge grenade, CS 1082	
Description	Tear Gas
Quantity	14
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years

Manufacturer's Description	The Riot Control CS Grenade is designed specifically for outdoor use in crowd control situations with a high volume continuous burn that expels its payload in approximately 20-40 seconds through four gas ports located on the top of the canister. This grenade can be used to conceal tactical movement or to route a crowd. The volume of smoke and agent is vast and obtrusive. This launchable grenade is 6.0 in. by 2.35 in. and holds approximately 2.7 oz. of active agent.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$35 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Pocket tactical grenade, CS 1016	
Description	Tear Gas
Quantity	11
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years
Manufacturer's Description	The Pocket Tactical CS Grenade is small, and lightweight. The 0.9 oz. of active agent will burn approximately 20-40 seconds. At 4.75 in. by 1.4 inches in size, it easily fits in most tactical pouches. This is a launchable grenade; however it is normally used as a signaling or covering device. Though this device is slightly over four inches in length, it produces a smoke cloud so fast it appears to be an enveloping screen produced by a full size tactical grenade.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT

Costs	\$35 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Defense Technology Pocket tactical grenade, OC 1019		
Description	Tear Gas	
Quantity	15	
Capability	Can be hand thrown, launched, or placed into a munitions Pole	
Life Span	5 years	
Manufacturer's Description	The Pocket Tactical OC Grenade is a quick burning, reduced volume, continuous discharge grenade. Pelletized chemical agent is discharged through one (1) gas port located on the bottom of the canister. The Pocket Tactical Grenade is a small, lightweight, easily carried device that provides a medium volume of chemical agent or smoke for certain situations. It was designed with the tactical team in mind for distraction, concealment, rescue, or signaling. The pocket grenade is not specifically intended as a crowd management device; however, it can be used in chemical configurations in conjunction with larger smoke canisters to “piggy back” chemical agent into a predominately smoke environment. This device should be deployed utilizing wind advantage.	
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations	
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT	
Costs	\$35 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	

Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.
------------------------------	---

Defense Technology Muzzle blast 40 mm round, OC 6040	
Description	Tear Gas
Quantity	10
Capability	Can be launched via a 40mm launcher
Life Span	5 years
Manufacturer's Description	The 40 mm Muzzle Blast OC Round is widely used as a crowd management tool for the immediate and close deployment of chemical agent. It can also be employed in tactical operations such as barricaded subjects for area denial, area contamination, and a means of contaminating crawl spaces and attics. As a pain compliance round it is an excellent device for deploying chemical-laden OC powder at close ranges for indoor or outdoor operations. It has a maximum effective range of 30 feet /9.1 meters.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$35 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Muzzle blast 40 mm round, CS 6042	
Description	Tear Gas
Quantity	16
Capability	Can be launched via a 40mm launcher
Life Span	5 years

Manufacturer's Description	The 40 mm Muzzle Blast CS Round is widely used as a crowd management tool for the immediate and close deployment. It can also be employed in tactical operations such as barricaded subjects, room clearing, area denial, and for small space contamination, and a means of contaminating crawl spaces and attics. As a pain compliance round it is an excellent device for deploying chemical-laden CS powder at close ranges for indoor or outdoor operations. The cloud of agent is very effective in filling holes in dispersals lines or engaging crowds at close distances.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$35 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology Smoke Maximum HC Smoke 1083	
Description	Smoke
Quantity	10
Capability	Can be hand thrown, launched, or placed into a munitions Pole
Life Span	5 years
Manufacturer's Description	The Military-Style Maximum Smoke Grenade comes from the Defense Technology® #3 smoke grenade. It is a slow burning, high volume, continuous discharge grenade designed for outdoor use in crowd management situations. Emits grey-white smoke only for approximately 1.5 to 2 minutes.
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations
Authorized Usage	

Costs	\$38 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Defense Technology Triple-Chaser separating canister, SAF-Smoke 1027		
Description	Smoke	
Quantity	10	
Capability	Can be hand thrown, launched, or placed into a munitions Pole	
Life Span	5 years	
Manufacturer's Description	The Triple-Chaser® Saf-Smoke™ consists three separate canisters pressed together with separating charges between each. When deployed, the canisters separate and land approximately 20 feet apart allowing increased area coverage in a short period of time. This grenade can be hand thrown or launched from a fired delivery system and is an effective way to quickly deploy a wide blanket of agent. The grenade is 6.5 in. by 2.7 in. and delivers Saf-Smoke™. It has an approximate burn time of 20 seconds.	
Purpose	To safely resolve critical situations such as violent civil unrest and high-risk tactical operations	
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT	
Costs	\$38 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing chemical agents are trained by POST certified chemical agent instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize chemical agents only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Defense Technology 8933 Low Roll Distraction Device	
Description	Diversionsary Device (Flash Bang)
Quantity	35
Capability	This intermediate less lethal specialty munition allows for light sound diversion during tactical operations which allows for tactical advantage during high-risk situations.
Life Span	Reusable 25 times
Manufacturer's Description	The Non-Reloadable Distraction Device® unit incorporates an M201A1 type fuze with hex design gun steel body. This is compact version of the 8933 Low Roll® body Distraction Device is the newest version of the first reusable non-bursting canister that limits movement and rolling once deployed. The compact Distraction Device fits safely in your hand and packs all the power of the full-size Distraction Device. This is a smaller, lighter device with the same output.
Purpose	To safely resolve critical situations during high-risk tactical operations.
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$30 \$0 anticipated yearly maintenance cost
Required Training	Prior to use, officers must attend inhouse training conducted by POST certified instructors or attend POST certified training.
Authority for Authorized Use	Use is established under FPD Policy 300. It is the policy of the FPD to utilize diversion devices only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology 8908CI Command Initiated Distraction Device	
Description	Diversionsary Device (Flash Bang)
Quantity	8
Capability	This intermediate less lethal specialty munition allows for light sound diversion during tactical operations which allows for tactical advantage during high-risk situations.
Life Span	One time use

Manufacturer's Description	The Command Initiated Reload can be initiated on command from a remote point alleviating initiation delay when instantaneous results are desired. It is ideal for operations utilizing bang poles, deterring retreat and achieving space denial from predetermined areas. 12" of thermo tubing is included with the reload. Some assembly and accessories are required.	
Purpose	To safely resolve critical situations during high-risk tactical operations.	
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT	
Costs	\$35 anticipated yearly maintenance cost	\$0
Required Training	Prior to use, officers must attend inhouse training conducted by POST certified instructors or attend POST certified training.	
Authority for Authorized Use	Use is established under FPD Policy 300. It is the policy of the FPD to utilize diversion devices only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Remington 870 Pump Action Shotgun – Less Lethal	
Description	Less Lethal Shotgun
Quantity	10
Capability	Deploying 12 gauge less lethal flexible baton munitions (Super sock)
Life Span	15-20 years
Manufacturer's Description	The Remington 870 barrel has a fixed cylinder choke for optimum performance with buckshot and slugs at close range. A myriad of aftermarket Remington 870 accessories enables owners to customize the 870 Express for specific purposes. 870 Remington is a receiver milled from a solid billet of steel for maximum strength, and twin action bars
Purpose	Deploys 12 gauge less lethal flexible baton (Super sock) as impact munitions.
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT and Patrol.
Costs	\$500 \$50 anticipated yearly maintenance cost
Required Training	Sworn members utilizing less lethal shotguns are trained by POST certified instructors for 2 hours.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize impact munitions only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology 37MM Tactical Single Launcher	
Description	37 MM Projectile Launcher
Quantity	2
Capability	Deploying 40mm less lethal impact projectiles and 40mm chemical agent rounds
Life Span	25 years
Manufacturer's Description	The 37LMTS is a tactical 37mm single shot launcher. The Ambidextrous Lateral Sling Mount (LSM) and QD mounting systems allow both a single and two point sling attachment. The 37LMTS will fire standard 37/38mm Less Lethal ammunition, up to 8 inches in cartridge length. The Picatinny Rail Mounting System will accept a wide array of enhanced optics/sighting systems.

Purpose	Deploying 40mm less lethal impact projectiles and 40mm chemical agent rounds
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$300 anticipated yearly maintenance cost \$0
Required Training	Sworn members utilizing munitions launchers are trained by POST certified chemical agent instructors and POST certified less lethal instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4, and Policy 311. It is the policy of the FPD to utilize projectile launchers only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology 1440 40MM Tactical 4-Shot Launcher	
Description	40 MM Projectile Launcher
Quantity	2
Capability	Deploying 40mm less lethal impact projectiles and 40mm chemical agent rounds
Life Span	15 years
Manufacturer's Description	Designed for riot and tactical situations, the Defense Technology® 1440 40mm Tactical 4-Shot Launcher is low-profile and lightweight, providing multi-shot capability in an easy to carry launcher. It features the Rogers Super Stoc™ expandable gun stock, an adjustable Picatinny mounted front grip, and a unique direct-drive system to advance the magazine cylinder.
Purpose	Deploying 40mm less lethal impact projectiles and 40mm chemical agent rounds
Authorized Usage	De-escalation tool not likely to inflict serious injury Used by SWAT
Costs	\$300 anticipated yearly maintenance cost \$0
Required Training	Sworn members utilizing munitions launchers are trained by POST certified chemical agents instructors and POST certified less lethal instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4, and Policy 311. It is the policy of the FPD to utilize projectile launchers only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Penn Arms L637-1 37MM Projectile Launcher	
Description	37 MM Projectile Launcher
Quantity	1
Capability	Deploying 37mm less lethal impact projectiles
Life Span	25 years
Manufacturer's Description	A spring-advance magazine drum launcher with a six-shot capacity and a smooth barrel.
Purpose	Deploying 37mm less lethal impact projectiles
Authorized Usage	De-escalation tool not likely to inflict serious injury. Used by SWAT and patrol
Costs	\$300 \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing munitions launchers are trained by POST certified chemical agents instructors and POST certified less lethal instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4, and Policy 311. It is the policy of the FPD to utilize projectile launchers only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Sage KO1/S Impact Baton 37MM Projectile	
Description	37 MM Projectile
Quantity	17
Capability	37mm launcher
Life Span	25 years
Manufacturer's Description	The KO1 is a direct fire modular impact baton round that is designed to be used in situations where kinetic energy is preferred for the incapacitation of hostile and/or non-compliant individuals.
Purpose	To safely resolve critical situations such as high-risk tactical operations. These are necessary because there is no reasonable alternative that can achieve the same objective of officer and civilian safety/will safeguard the public's welfare, safety, civil rights, and civil liberties.
Authorized Usage	De-escalation tool not likely to inflict serious injury. Used by SWAT and patrol.

Costs	\$30 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing munitions launchers are trained by POST certified chemical agents instructors and POST certified less lethal instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize impact munitions only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Sage K03OC/S OC Impact Baton 37MM Projectile		
Description	37 MM Projectile	
Quantity	6	
Capability	37mm launcher	
Life Span	25 years	
Manufacturer's Description	The KO3 is a direct fire crush nose chemical impact baton round that is designed to be used in situations where a combination of kinetic energy and chemical agents is preferred for the incapacitation of hostile and/or non-compliant individuals.	
Purpose	To safely resolve critical situations such as high-risk tactical operations. These are necessary because there is no reasonable alternative that can achieve the same objective of officer and civilian safety/will safeguard the public's welfare, safety, civil rights, and civil liberties.	
Authorized Usage	De-escalation tool not likely to inflict serious injury. Used by SWAT and patrol.	
Costs	\$30 anticipated yearly maintenance cost	\$0
Required Training	Sworn members utilizing munitions launchers are trained by POST certified chemical agents instructors and POST certified less lethal instructors.	
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize impact munitions only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.	

Winchester Lake Erie Chemical Launcher Attachment	
Description	12 Gauge Projectile Launcher
Quantity	1

Capability	These launching cups attach to 12 gauge less lethal shotguns and allow us to launch canisters of chemical agents or smoke.
Life Span	25 years
Manufacturer's Description	
Purpose	These launching cups attach to 12 gauge less lethal shotguns and allow us to launch canisters of chemical agents or smoke.
Authorized Usage	De-escalation tool not likely to inflict serious injury. Used by SWAT.
Costs	\$500 anticipated yearly maintenance cost
Required Training	Sworn members utilizing munitions launchers are trained by POST certified chemical agents instructors and POST certified less lethal instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize impact munitions only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Defense Technology 1370 12-Gauge TkO/ Launching Cup	
Description	12 Gauge Projectile Launcher
Quantity	1
Capability	These launching cups attach to 12 gauge less lethal shotguns and allow us to launch canisters of chemical agents or smoke.
Life Span	25 years
Manufacturer's Description	The launching cup will project the Pocket Tactical Grenade beyond the normal throwing distance. This will extended the ability and safety of the officers involved. Removable shotgun forend to ensure proper stand-off when using breaching rounds.
Purpose	To limit the escalation of conflict where employment of lethal force is prohibited or undesirable.
Authorized Usage	De-escalation tool not likely to inflict serious injury. Used by SWAT.
Costs	\$40 anticipated yearly maintenance cost
Required Training	Sworn members utilizing munitions launchers are trained by POST certified chemical agents instructors and POST certified less lethal instructors.

Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.4. It is the policy of the FPD to utilize impact munitions only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.
------------------------------	--

Defense Technology Drag Stabilized 12 gauge Bean Bag Round- 3027	
Description	Less lethal munitions
Quantity	120 rounds
Capability	This intermediate less lethal specialty munition allows for direct impact from a minimum range and a maximum effective range of 75ft
Life Span	Indefinite
Manufacturer's Description	The Drag Stabilized™ 12-Gauge Round is a translucent 12-Gauge shell loaded with a 40-Gram tear shaped bag made from a cotton and ballistic material blend and filled with #9 shot. This design utilizes four stabilizing tails and utilizes smokeless powder as the propellant. The 12-Gauge Drag Stabilized Round has secured its place as the Law Enforcement Communities' number one choice for specialty impact munitions. This round has a velocity of 270 fps with a maximum effective range of 75 feet.
Purpose	To safely resolve critical situations such as crowd control during riotous situations and high-risk tactical operations. These are necessary because there is no reasonable alternative that can achieve the same objective of officer and civilian safety/will safeguard the public's welfare, safety, civil rights, and civil liberties.
Authorized Usage	De-escalation tool not likely to inflict serious injury. Used by SWAT and patrol.
Costs	\$5 approx. \$0 anticipated yearly maintenance cost
Required Training	Sworn members utilizing munitions launchers are trained by POST certified less lethal instructors.
Authority for Authorized Use	Use is established under the FPD Policy 300, subsection 308.7, and Policy 311. It is the policy of the FPD to utilize less lethal munition only for official law enforcement purposes, and pursuant to State and Federal law regarding the use of force.

Long Range Acoustic Device (LRAD)	
Description	American Tech Cord 500
Quantity	1
Capability	Used to send messages over long range
Life Span	25 years
Manufacturer's Description	LRAD systems deliver live or recorded voice messages with exceptional clarity for any operational scenario. Optimized to the primary range of hearing, LRAD's Advanced Driver and Waveguide Technology ensure every broadcast is clearly heard and understood, even above crowd, engine, and background noise.
Purpose	Device used for public announcements.
Authorized Usage	Any critical situation to make public announcements: Critical incidents, civil unrest, search and rescue, public safety.
Costs	\$1,000 anticipated yearly maintenance cost \$0
Required Training	All operators receive training prior to operating the LRAD in the field.
Authority for Authorized Use	Use is established under FPD Policy 312. It is the policy of the FPD to utilize the LRAD only for official law enforcement purposes, and pursuant to State and Federal law.

Meridian Rapid Defense Group Archer 1200	
Description	Anti-vehicle Barrier
Quantity	16 barriers, 1 trailer, 2 haulers
Capability	<p>The Archer 1200 Anti-Vehicle Barrier is a portable barrier which can protect closed areas from vehicle-ramming attacks. These barriers replace wooden, and water filled barricades during special events and are easily deployed when there is an increase in the level of threat to a specific location or crowded area. They allow for pedestrians to move between them but can stop vehicles from entering closed areas. These barriers will be used during special events and critical incidents where pedestrian safety is a concern.</p> <p>The Folsom Police Department has applied for a grant to obtain 16 barriers but have not taken possession yet.</p>
Life Span	10 years
Manufacturer's Description	An unanchored, "drop-and-stop" barrier for a VSM (Vehicle Safety Mitigation) solution deployment on any surface. Archer 1200 barriers has the shortest stopping distance in its class, modular design, no heavy equipment required for deployment
Purpose	To be used based on the specific circumstances of a given critical incident, large event, natural disaster or community event that is taking place.
Authorized Usage	Authorized for use would include but not be limited to critical incidents, emergencies, and community events.
Costs	<p>\$150,000 approx.</p> <p>\$0 anticipated yearly maintenance cost</p>
Required Training	All officers deploying the vehicle barriers will receive training on how to properly load, unload, move, and deploy the barriers in the field.
Authority for Authorized Use	It will be the policy of the Department to use the vehicle barriers for official law enforcement purposes including road closures, and special events

Folsom City Council Staff Report

MEETING DATE:	5/10/2022
AGENDA SECTION:	New Business
SUBJECT:	Consideration of Letter in Response to Demand Letter Received from Scott Rafferty Regarding Alleged Non-Compliance with the Brown Act
FROM:	City Attorney's Office

RECOMMENDATION / CITY COUNCIL ACTION

Staff recommends that the City Council consider and approve the attached reply to Scott Rafferty (Attachment 1) providing an unconditional commitment to continue to comply with the Brown Act.

BACKGROUND / ISSUE

On April 20, 2022, the City received a cease and desist letter from Scott Rafferty (Attachment 2) alleging the following violations of the Brown Act on March 22, 2022:

1. The failure to permit public comment before the adoption of the consent agenda, which included the enactment of Ordinance No. 1324, as required by 54954.2(a) and 54953(a)(3);
2. The failure to recognize members of the public who raised their hands in accordance with previous instructions on how to comment prior to council action, as required by the same section; and
3. Multiple failures to announce in advance the “give notice of the means by which members of the public may access the meeting and offer public comment,” i.e., that there would be no ability to offer public comment, in violation of 54953(e)(2)(B).

While staff disagrees with the alleged non-compliance, the Brown Act provides a process for issues such as these to be resolved without further legal action. To that end, the Brown Act provides a prescribed form letter that the City Council may consider approving and sending in response to Mr. Rafferty's correspondence.

POLICY / RULE

The Brown Act provides that a response to the cease and desist letter shall be in substantially the form provided in Government Code section 54960.2(c)(1). The fact that the City Council provides an unconditional commitment shall not be construed or admissible as evidence of violation of the Brown Act. Government Code section 54960.2(c)(4).

ANALYSIS

Government Code section 54960.2 allows any interested person to submit a "cease and desist" letter to the City as a prerequisite to filing a lawsuit over alleged past non-compliance with the Brown Act. Pursuant to Section 54960.2(b), the City Council may respond to the "cease and desist" letter within thirty (30) days by providing an "unconditional commitment" not to repeat any or all of the actions challenged. By law, an "unconditional commitment" **does not** constitute admission of a violation, but it does bar a potential plaintiff from pursuing litigation and collecting attorneys' fees with respect to past non-compliance related to the specific action the City has "unconditionally committed" not to repeat.

The City Council's reply must be approved in open session as a separate item of business, not under the "Consent" portion of the agenda, and in substantially the form as prescribed by the Brown Act. Once approved, the Brown Act prohibits legal action by the potential plaintiff; however, if such an action is nonetheless filed, the court is required to dismiss the lawsuit with prejudice if it finds that the City Council has provided an unconditional commitment pursuant to the Brown Act.

FINANCIAL IMPACT

There is no legal expense associated with this item as the City Council has always complied with the Brown Act. In addition, providing the attached reply may reduce the chance of litigation and any associated legal costs.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(c)(3)), or is otherwise not considered a project as defined by Public Resources Code §21065 and CEQA Guidelines §15060(c)(3) and §15378. The City Council's consideration of a reply to the Brown Act cease and desist letter meets the above criteria and is not subject to CEQA. No environmental review is required.

ATTACHMENTS

1. Proposed reply from the City Council
2. Cease and desist letter dated April 20, 2022

Respectfully submitted,

Steven Wang, City Attorney

Re: Brown Act Cease and Desist Letter

To Mr. Rafferty:

The Folsom City Council has received your cease-and-desist letter dated April 20, 2022, alleging that the following described past action of the legislative body violates the Ralph M. Brown Act:

1. The failure to permit public comment before the adoption of the consent agenda, which included the enactment of Ordinance No. 1324, as required by 54954.2(a) and 54953(a)(3);
2. The failure to recognize members of the public who raised their hands in accordance with previous instructions on how to comment prior to council action, as required by the same section; and
3. Multiple failures to announce in advance the “give notice of the means by which members of the public may access the meeting and offer public comment,” i.e., that there would be no ability to offer public comment, in violation of 54953(e)(2)(B).

While the Folsom City Council strongly disputes and denies those allegations because the City has at all times complied with the Brown Act and hence there is no violation to cure or correct with respect to your demand, in order to avoid unnecessary litigation and without admitting any violation of the Ralph M. Brown Act, the Folsom City Council hereby unconditionally commits that it will cease, desist from, and not repeat the challenged past action as described above.

The Folsom City Council may rescind this commitment only by a majority vote of its membership taken in open session at a regular meeting and noticed on its posted agenda as "Rescission of Brown Act Commitment." You will be provided with written notice, sent by any means or media you provide in response to this message, to whatever address or addresses you specify, of any intention to consider rescinding this commitment at least 30 days before any such regular meeting. In the event that this commitment is rescinded, you will have the right to commence legal action pursuant to subdivision (a) of Section 54960 of the Government Code. That notice will be delivered to you by the same means as this commitment or may be mailed to an address that you have designated in writing.

Very truly yours,

Kerri Howell, Mayor

SCOTT J. RAFFERTY

ATTORNEY AT LAW

1913 WHITECLIFF COURT
WALNUT CREEK CA 94596

(202)-380-5525
RAFFERTY@GMAIL.COM

April 20, 2022

Ms. Christa Freemantle
Clerk, City of Folsom
50 E. Natoma Street
Folsom CA 95630

by electronic and postal mail
cc: Mayor Kerri Howell, members of
the City Council, City Attorney

Dear Ms. Freemantle:

This letter constitutes a demand specified by Section¹ 54960.2(a)(1) that the City of Folsom cease and desist from violations of the Brown Act committed in connection with the public hearing the Council conducted on March 22, 2022. This letter also satisfies the requirement of Section 54960.2 and enables my clients to file an additional action to determine that the actions specified herein were taken in violation of the Brown Act. To the extent set forth herein, the City of Folsom may respond to the cease and desist demand by making an unconditional commitment to cease and desist from the challenged practices. This letter further constitutes a demand, pursuant to 54960.1(b) that the Council cure and correct the violation.

The violations are (1) the failure to permit public comment before the adoption of the consent agenda, which included the enactment of Ordinance No. 1324, as required by 54954.2(a) and 54953(a)(3); (2) the failure to recognize members of the public who raised their hands in accordance with previous instructions on how to comment prior to council action, as required by the same sections and (3) multiple failures to announce in advance the "give notice of the means by which members of the public may access the meeting and offer public comment," i.e., that there would be no ability to offer public comment, in violation of 54953(e)(2)(B)

On April 13, 2022, Mayor Kerri Howell signed an unconditional commitment to cease and desist from violations of 54953(e)(2)(B). My clients intend to enforce the violation of that commitment.

This letter demands that you, as City Clerk, announce that Ordinance No. 1324 is null and void.

¹ "Section" refers to the Government Code, except as noted.

Rafferty to Freemantle, Brown Act Demand Letter, April 20, 2022, page 2

Thank you from your prompt action to recognize the invalidity of this action and to remove any reference or effect of the purported statute from the municipal code or other public records of the city.

Sincerely,

A handwritten signature in black ink that reads "Scott Rafferty". The signature is written in a cursive, slightly slanted style.

Scott J. Rafferty
