

CITY OF MERCER ISLAND **REVISED 6/8**

CITY COUNCIL SPECIAL VIDEO MEETING

Tuesday, June 9, 2020 at 5:00 PM

COUNCIL MEMBERS:

Mayor Benson Wong, Deputy Mayor Wendy Weiker,
Councilmembers: Lisa Anderl, Jake Jacobson,
Salim Nice, Craig Reynolds, David Rosenbaum

LOCATION & CONTACT:

Mercer Island City Hall - Council Chambers
9611 SE 36th Street | Mercer Island, WA 98040
Phone: 206.275.7793 | www.mercergov.org

In compliance with the Americans with Disabilities Act, those requiring accommodation for Council meetings should notify the City Clerk's Office at least 24 hours prior to the meeting at 206.275.7793.

VIRTUAL MEETING NOTICE

The virtual meeting will be broadcast live on MITV Channel 21 and live streamed on the City's YouTube Channel at <https://www.youtube.com/c/mercerislandcouncil>

A Note About Registering to Speak: Individuals wishing to speak live during Appearances will need to register their request with the City Clerk at 206.275.7793 or email deb.estrada@mercergov.org and leave a message before 4 p.m. on the day of the Council meeting. Please reference "Appearances for June 9 Council Meeting" on your correspondence. The City Clerk will call on you by name or telephone number when it is your turn to speak.

Join by Telephone at 5:00 PM: To listen to the meeting or speak live under Appearances and/or the Public Hearing via telephone, please call **253.215.8782** and enter Webinar ID **819 7079 6501** when prompted.

Join by Internet at 5:00 PM: To watch the meeting over the internet or speak live under Appearances and/or the Public Hearing, via your computer microphone, follow these steps:

- 1) Click [this link](#)
- 2) If the Zoom app is not installed on your computer, you will be prompted to download it.
- 3) If prompted for Webinar ID, enter **819 7079 6501**
- 4) Enter Password **851646**

Submitting Written Comments: Written comments may be submitted at the Mercer Island [Lets Talk Council Connects](#) page. Written comments received by 4pm on June 9, 2020 will be forwarded to all Councilmembers and a brief summary of the comments will be included in the minutes of the meeting.

For the safety and wellbeing of the public and staff, the City strongly recommends that people attend the meeting by viewing the live feed of the video conference on the City's [YouTube Channel](#), or on [MI-TV Channel 21](#).

CALL TO ORDER & ROLL CALL, 5:00 PM

PLEDGE OF ALLEGIANCE

AGENDA APPROVAL

SPECIAL BUSINESS

1. AB 5703: Renewed Commitment to Diversity, Equity, and Inclusion Proclamation No. 252

Recommended Action: Proclaim the City Council's continuing commitment to be an inclusive community that rejects stigma and bias against individuals because of race, ethnicity, place of origin, physical ability, socio-economic status, gender identity, sexual orientation, age or religion, and urge all members and residents of our community to treat each other with respect and work together to overcome all expressions of hate and bigotry.

SUMMARY

The inhumane treatment and tragic death of George Floyd in Minneapolis, Minnesota provides yet another example of the work remaining to be done across the country in the area of combating racism. While the City recognizes that this tragedy highlights law enforcement, we also recognize that such issues go far beyond the criminal justice system.

In light of the recent protests, the City Council joins with those who wish to make meaningful changes, and to proclaim a renewed commitment to diversity, equity and inclusion in Mercer island. Conduct that inflicts emotional, mental or physical harm against individuals because of their race, ethnicity, place of origin, physical ability, socio-economic status, gender identity, sexual orientation, age, or religion, has no place in our community and country. The Council recognizes that a more diverse community makes Mercer Island a stronger and healthier community.

While Mercer Island recently was named the “Fourth Safest City in Washington State” by SafeWise, and while we appreciate all the continued efforts of the Police and Fire personnel to keep the City safe, the Council and City are committed to ensuring that all members of the community feel this safety in equal measure.

The Council also acknowledges the anger and frustration that many feel over recent incidents and support the rights of citizens for peaceful protest as a means of advocating for change. Council, staff and law enforcement personnel in particular are committed to law enforcement practices and regular training that respect the life and rights of every individual. We are committed to exploring additional ways to make Mercer Island a more diverse and inclusive environment in which everyone feels welcome and respected.

The City of Mercer Island Proclamation joins many neighboring cities in rejecting racially-based bias, harassment, and hate crimes, avows that the City will not tolerate discrimination of any kind, and denounces all COVID-19 related misnaming, blaming and harassment based on race (the FBI recently reported a surge nationally in hate crimes against Asian Americans and over 30% of Americans state in a recent poll that they have witnessed some form of COVID-19 related bias against Asians).

Community members who observe or are experiencing incidents of discrimination, harassment, or hate crimes are encouraged to call 911 in emergency circumstances, and/or to report the incident to the Washington State Human Rights Commission (Toll-free 1-800-233-3247) or the King County Office of Civil Rights at (206) 684-4500.

RECOMMENDATION

Proclaim the City Council’s continuing commitment to be an inclusive community that rejects stigma and bias against individuals because of race, ethnicity, place of origin, physical ability, socio-economic status, gender identity, sexual orientation, age or religion, and urge all members and residents of our community to treat each other with respect and work together to overcome all expressions of hate and bigotry.

The City of Mercer Island, Washington

Proclamation

RENEWED COMMITMENT TO DIVERSITY, EQUITY AND INCLUSION

WHEREAS, the City of Mercer Island has declared a commitment to diversity, equity and inclusion as a community priority by Proclamation No. 201 on November 21, 2016; and

WHEREAS, the inhumane treatment and tragic death of George Floyd in Minneapolis, Minnesota, provides yet another example of the work remaining to be done as a country in the area of combating racism, and while we recognize that this tragedy highlights law enforcement, we also recognize that such issues go far beyond the criminal justice system; and

WHEREAS, since the outbreak of COVID-19, immigrant and refugee community leaders and civil rights organizations have reported a regional and national increase in bias, harassment, and hate crimes, particularly against Asian American and Pacific Islander, Black and African American, Hispanic and Latino, and other marginalized communities; and

WHEREAS, conduct directed to inflict emotional, mental or physical harm against individuals because of their race, ethnicity, place of origin, physical ability, socio-economic status, gender identity, sexual orientation, age or religion, including the propagation of misinformation of COVID-19, has no place in our community and country; and

WHEREAS, the City of Mercer Island expressly rejects such conduct and acts; and

WHEREAS, each of us can and should promote inclusiveness, celebrate diversity, support all fellow community members, prevent the spread of misinformation, and reject hate and bias in all forms which will make Mercer Island a stronger and healthier community; and

WHEREAS, we ask community members who observe or are experiencing incidents of discrimination, harassment, or hate crimes to call 911 in emergency circumstances, and/or to report the incident to the Washington State Human Rights Commission (Toll-free 1-800-233-3247) or the King County Office of Civil Rights at (206) 684-4500;

NOW, THEREFORE, I, Benson Wong, Mayor of the City of Mercer Island, Washington, and on behalf of its City Council, do hereby proclaim:

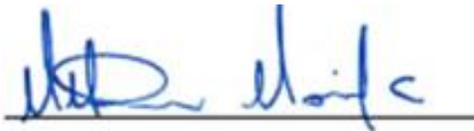

Our continuing commitment to be an inclusive community that rejects stigma and bias against individuals because of race, ethnicity, place of origin, physical ability, socio-economic status, gender identity, sexual orientation, age or religion, and we urge all our members and residents of our community to treat each other with respect and work together to overcome all expressions of hate and bigotry.

APPROVED, this 9th day of June 2020

Benson Wong, Mayor
Proclamation No. 252

CERTIFICATION OF CLAIMS

I, the undersigned, do hereby certify under penalty of perjury that the materials have been furnished, the services rendered, or the labor performed as described herein, that any advance payment is due and payable pursuant to a contract or is available as an option for full or partial fulfillment of a contractual obligation, and that the claim is a just, due and unpaid obligation against the City of Mercer Island, and that I am authorized to authenticate and certify to said claim.

Finance Director

I, the undersigned, do hereby certify that the City Council has reviewed the documentation supporting claims paid and approved all checks or warrants issued in payment of claims.

Mayor

I, the undersigned, do hereby certify under penalty of perjury that the materials have been furnished, the services rendered or the labor performed as described herein, that any advance payment is due and payable pursuant to a contract or is available as an option for full or partial fulfillment of a contractual obligation, and that the claim is a just, due and unpaid obligation against the City of Mercer Island, and that I am authorized to authenticate and certify to said claim.

 Finance Director

I, the undersigned, do hereby certify that the City Council has reviewed the documentation supporting claims paid and approved all checks or warrants issued in payment of claims.

 Mayor Date

CITY COUNCIL MINUTES SPECIAL VIDEO MEETING (EXECUTIVE SESSION) MAY 27, 2020

CALL TO ORDER & ROLL CALL

Mayor Benson Wong called the Special Meeting to order at 4:30 pm from a remote location.

Mayor Benson Wong, Deputy Mayor Wendy Weiker and Councilmembers Lisa Anderl, Jake Jacobson, Salim Nice, Craig Reynolds, and David Rosenbaum participated remotely using the teleconferencing platform Microsoft Teams.

City Attorney Bio Park participated in the executive session from a remote location using Microsoft Teams.

City Manager Jessi Bon participated from City Hall using Microsoft Teams.

EXECUTIVE SESSION

At 4:30 pm, Mayor Wong convened an Executive Session for approximately 30 minutes to discuss with legal counsel litigation or potential litigation pursuant to RCW 42.30.110(1)(i).

At 4:58 pm, Mayor Wong adjourned the Executive Session.

ADJOURNMENT

The Special Meeting adjourned at 4:58 pm.

Benson Wong, Mayor

Attest:

Deborah Estrada, City Clerk

CITY COUNCIL MINUTES SPECIAL VIDEO MEETING MAY 27, 2020

CALL TO ORDER & ROLL CALL

Mayor Benson Wong called the Special Meeting to order at 5:01 pm from a remote location.

Mayor Benson Wong, Deputy Mayor Wendy Weiker and Councilmembers Lisa Anderl, Jake Jacobson, Salim Nice, Craig Reynolds, and David Rosenbaum participated remotely using the teleconferencing platform Zoom.

City Attorney Bio Park participated in the executive session from a remote location using Zoom.

City Manager Jessi Bon participated from City Hall using Zoom.

SPECIAL BUSINESS

Discuss and take action on communications related to Sound Transit's 60% design plans for their Bus/Rail Interchange.

City Council discussed the draft letter related to Sound Transit's 60% design plans for the Bus/Rail Interchange and made small changes where needed.

It was moved by Nice; seconded by Reynolds to:

Approve the City Council letter in substantially the form presented.

A roll call vote was conducted, and the results were as follows:

Passed 7-0

FOR: 7 (Anderl, Jacobson, Nice, Reynolds, Rosenbaum, Weiker and Wong)

ADJOURNMENT

The Special Meeting adjourned at 5:17 pm.

Benson Wong, Mayor

Attest:

Deborah Estrada, City Clerk

SUMMARY

This is the final step in a multi-step review and approval process to adopt the King County Hazard Mitigation Plan.

BACKGROUND

Summary of the review and approval steps to date:

- On September 17, 2019, the Mercer Island City Council approved the Mercer Island Annex to the King County 2020 Regional Hazard Mitigation Plan (RHMP).
- The Mercer Island Annex was then approved by the King County Council in October of 2019.
- The complete King County 2020 Regional Hazard Mitigation Plan (RHMP), along with all of the city annexes, was submitted to FEMA in December 2019 for review and approval. FEMA approved the plan in April of 2020.
- King County is now asking all local jurisdictions to adopt the final FEMA approved Hazard Mitigation Plan.

The Disaster Mitigation Act of 2000 (Public Law 106-390), requires applicants seeking funding through the federal Hazard Mitigation Grant Program to have an approved Hazard Mitigation Plan. The City of Mercer

Island's first plan was created in 2004, an update was adopted in 2011, and the last update was approved March 16, 2015. Plans must be updated every five years to remain eligible for funding.

In January 2013, a partnership of King County cities and special purpose districts embarked on a planning process to prepare for and lessen the impacts and costs of each jurisdiction having to pay for and update individual plans. The partnership was formed to pool resources and to create a uniform hazard mitigation strategy that can be consistently applied to the defined planning area and used to ensure eligibility for specified grant funding success.

This effort represents the second comprehensive update to the initial hazard mitigation plan, approved by the Federal Emergency Management Agency (FEMA) in November of 2004, as well as a return to a truly regional effort following the shortened 2009 planning process. The planning area for the hazard mitigation plan was defined as all incorporated and unincorporated areas of King County, as well as the incorporated areas of cities that cross County boundaries: Auburn, Bothell, Milton and Pacific. The result of the organizational effort will be a FEMA and State Emergency Management Agency (WAEMD) approved multi-jurisdictional, multi-hazard mitigation plan.

Mitigation is defined in this context as any sustained action taken to reduce or eliminate long-term risk to life and property from a hazard event. Mitigation planning is the systematic process of learning about the hazards that can affect the community, setting clear goals, identifying appropriate actions and following through with an effective mitigation strategy. Mitigation encourages long-term reduction of hazard vulnerability and can reduce the enormous cost of disasters to property owners and all levels of government. Mitigation can also protect critical community facilities, reduce exposure to liability, and minimize post-disaster community disruption.

Identification and profiling in the plan addresses includes the following hazards of concern:

1. Earthquake
2. Flood
3. Landslide
4. Severe weather (drought, heat)
5. Severe winter weather
6. Tsunami/Seiche
7. Volcano
8. Fire

The King County Office of Emergency Management is the lead agency in developing the Hazard Mitigation Plan. All participating jurisdictions are responsible for the development of their respective annexes. These annexes include identifying the natural hazards, risks, factors and the mitigation action strategies for their respective jurisdictions and organizations. The Plan represents the accumulated information in a unified framework to ensure a comprehensive and coordinated plan covering the entire King County planning area. Each jurisdiction is responsible for the review and approval of their individual sections of the Plan.

The Plan was prepared in accordance with the guidelines established by the Washington Military Department Emergency Management Division and is aligned with the goals, objectives, and priorities of the State's multi-hazard mitigation plan.

A Steering Committee composed of representative stakeholders was formed early in the planning process to guide the development of the Plan. In addition, residents were asked to contribute by sharing local knowledge of their individual area's vulnerability to natural hazards. Public involvement was solicited via a multi-media campaign that included two public comment periods, an emergency preparedness fair on June 22 at Luther Burbank Park and a web-based interactive survey which solicited feedback on the prioritization of the hazard mitigation projects identified by city staff.

MITIGATION DISCUSSION

The Mercer Island Annex to the Plan has 7 main goals:

1. Identify Mercer Island Hazards.
2. Update Mercer Island Hazard Maps.
3. Identify Mercer Island assets that could be at risk from these identified hazards.
4. Establish mitigation strategies (projects) that address the asset risk.
5. Integrate equity and social justice into understanding of risk, vulnerability, and development of mitigation strategies. (June 22 EM Prep day we asked the public for input on listing what equity and social justice factors were affected in the specific mitigation project)
6. Prioritize the mitigation projects using public feedback.
7. Discuss funding options, knowing that Mercer Island currently cannot use grant match funding.

BOTTOM-LINE BENEFITS

This plan was approved by FEMA in April 2020, therefore the City is able to compete for both mitigation project funding and reimbursement following a declared disaster. In a declared disaster, the State of Washington and FEMA can reimburse the City up to 87.5% (75% FEMA and 12.5% State) of the cost of incurred damages as long as the City is in compliance with state and federal guidelines, including having an approved Hazard Mitigation Plan and City Emergency Management Plan.

Mercer Island has sought and received FEMA funding several times over the years. The most notable example is a landslide in 2017 that caused over \$540,000 worth of damage, where the City was awarded a grant to cover 82% of the costs. Currently, we intend to seek funding for costs and damages associated with the COVID-19 declared emergency.

COST OF THE PLAN UPDATE

In 2004, the cost to the City to contract out drafting the Mercer Island Hazard Mitigation Plan was \$50,000. In 2011, the estimated cost of the update to the Mercer Island Hazard Mitigation Plan was \$30,000 and the City was awarded a federal grant that paid 75% of the 30K cost. In 2014, King County decided to create a regional plan to offset the cost for local jurisdictions. In 2014 and in 2020, the Regional Hazard Mitigation Plan was funded solely by King County through an awarded grant, culminating in no cost to the City of Mercer Island.

RECOMMENDATION

Adopt King County 2020 Regional Hazard Mitigation Plan (RHMP) to include the Mercer Island Annex.

Executive Summary

The King County Hazard Regional Hazard Mitigation Plan promotes programs and projects that partner with communities to build a foundation of resilience before, during, and after disasters. Hazard mitigation is the mission area of emergency management that argues *life safety is not good enough*. Disasters are not foregone conclusions. Incidents will always occur, but their impact is within our ability to change if we target investments in areas that will reinforce those areas most critical to our community, thereby making us all more resilient.

For the 2020 Plan, we identify investments and opportunities to strengthen 14 determinants¹ of equity and social justice, areas the whole community has identified as necessary for residents to live healthy, happy, productive, meaningful lives.

1. Access to Affordable, Healthy Food
2. Access to Health and Human Services
3. Access to Parks and Natural Resources
4. Access to Safe and Efficient Transportation
5. Affordable, Safe, Quality Housing
6. Community and Public Safety
7. Early Childhood Development
8. Economic Development
9. Equitable Law and Justice System
10. Equity in Government Practices
11. Family Wage Jobs and Job Training
12. Healthy Built and Natural Environments
13. Quality Education
14. Strong, Vibrant Neighborhoods

We can strengthen and support each of these areas through investments in better land use practices, stronger infrastructure, healthy habitats and systems, improved accessibility, and individual and family resilience. The hazard mitigation strategies contained in this plan will each be reported on biannually to help provide updates on areas where investments would be most critical.

In addition to hazard mitigation strategies, this plan includes risk profiles designed to provide an overview of the key priorities, vulnerabilities, and potential impacts of natural and human-caused hazards. We examine risk in terms of property, the economy, natural systems, infrastructure systems, government operations, and populations, with a focus on populations more likely to suffer losses or long recovery times from a disaster.

¹ King County Office of Equity and Social Justice. 2016. Equity and Social Justice Strategic Plan. Accessed online on 11/13/19 from <https://kingcounty.gov/elected/executive/equity-social-justice/strategic-plan.aspx>.

Finally, this plan lays out a process to identify and prioritize hazard mitigation projects over the long term and to increase investment in communities that are more vulnerable to disasters. We do this by taking a holistic approach to prioritization.

This plan was developed through the partnership of many county staff and local jurisdictions. The work is a result of their commitment and input throughout the planning process.

Introduction

The King County Regional Hazard Mitigation Plan promotes programs and projects that partner with communities to build a foundation of resilience before, during, and after disasters. This plan update reassesses risks and vulnerabilities to eight natural and seven human-caused hazards and develops strategies to reduce risk from those hazards. In addition to a base plan covering King County as a whole, each participating jurisdiction developed an annex that independently meets most FEMA planning requirements. Each annex, plus this base plan, meets the planning requirements outlined in *44 CFR 201.6*. In addition to King County, over 60 cities and special purpose districts developed plan annexes.

Mitigation Plan Priorities:

King County Regional Hazard Mitigation Plan Steering Committee (Steering Committee) set the following priorities for the 2018 plan update process.

<p>Break down planning silos and establish new partnerships</p>	<p>Collaborate with jurisdictions to build integrated hazard mitigation strategies, including around risk management, floodplain management, comprehensive planning, equity and social justice, and climate change.</p>
<p>Provide more education and training to partners to prepare for FEMA DRRRA grants in 2020</p>	<p>In preparation for a tripling of federal grants for natural hazard mitigation through the Disaster Recovery Reform Act, beginning in 2020, work with planning partners and county agencies to identify projects and project champions. Build capacity among planning partners to identify vulnerability, craft a mitigation strategy, communicate project benefits, and successfully pursue hazard mitigation grant funding.</p>
<p>Conduct a robust public outreach process involving all planning partners.</p>	<p>Implement a proactive outreach strategy focused hazard mitigation success stories and hands-on demonstrations of effective mitigation projects, working with the media to follow-up on stories highlighting Washington’s need for more hazard preparedness and resilience.</p>
<p>Develop quality hazard mitigation strategies and a method to prioritize and track them.</p>	<p>Work with planning partners to craft comprehensive hazard mitigation strategies that are measurable, actionable, trackable, and identify specific funding sources. Prioritize strategies in accordance with opportunity to reduce risk and further county priorities.</p>
<p>Integrate equity and social justice into our understanding of risk and vulnerability.</p>	<p>Work with King County departments to identify an appropriate way to address population vulnerability. Include this information in the plan in a way that is operationally meaningful and can support mitigation strategies that will reduce risk to these populations.</p>

Integrate mitigation planning and climate preparedness	Fully integrate with the update process for the Strategic Climate Action Plan. Integration includes participation in workgroups and shared strategies that increase climate and hazard resilience.
--	--

Timeline

February-May 2019: Begin planning process	Meet with each of the 60+ jurisdictions participating in this plan update. Convene the steering committee. Draft plan format and begin GIS analysis. Begin outreach strategy. Develop first drafts of the risk assessment.
June-September: Conduct public outreach	Work with partners on community outreach; conduct media outreach; conduct mitigation strategy development workshops with planning partners.
October-December	Review the plan and submit to FEMA.
January-April, 2020	Complete revisions and adopt the plan prior to expiration on April 30, 2020.

Revisions from 2015 Edition

The 2020 plan was fully rewritten and reformatted to reflect updated priorities and a greater emphasis on hazard mitigation strategies. The most substantive change is to those strategies, which are formatted in an action-plan style, consistent with the Washington State Enhanced Hazard Mitigation Plan. With the change to mitigation strategies, the method of reporting has also been updated.

The risk assessments in this edition have been shortened and refocused to better support the intended audience - emergency managers who are called upon to plan for and respond to these hazards. The information is largely taken from the 2016 Hazard Inventory and Risk Assessment and the 2018 FEMA RiskMAP Risk Report.

The capabilities assessment in this edition has been modified to focus on the relationship between programs, plans, and policies that could support mitigation and the hazard mitigation plan and program. This change will help the plan better reflect how each capability supports mitigation instead of just listing potential capabilities. A similar process was used to document potential sources of funding.

This plan is written to meet or exceed the relevant elements of the Emergency Management Standard (ANSI standard) by the Emergency Management Accreditation Program (EMAP).

The number of participating jurisdictions increased from the 2015 update. In 2015, 53 jurisdictions participated in the plan. For this update, over 60 jurisdictions participated in the planning process and at least 50 are expected to submit complete annexes for FEMA approval.

Regional Hazard Mitigation Plan Chapters

The base plan satisfies all requirements for King County plus many of the planning requirements for local planning partners. The plan is organized as follows.

Planning Process: The planning process section corresponds roughly to Element A in the FEMA Mitigation Plan Review Guide and includes information on the planning process, including public outreach, meetings, and the planning timeline.

Capabilities Assessment and King County Hazard Mitigation Program: The capabilities chapter meets requirements associated with coordinating the hazard mitigation program with other entities as well as information on available funding.

Risk Assessment: The risk assessment chapters include profiles of each profiled natural and human-caused hazard. These profiles are brief and are designed to provide an overview to emergency managers and other users of this plan. This section meets the requirements of Element B in the FEMA Mitigation Plan Review Guide.

Hazard Mitigation Strategies: Hazard mitigation strategies are the key deliverable of this plan and include information on how strategies are identified, developed, and prioritized. This section meets most of the requirements in Element C of the FEMA Mitigation Plan Review Guide.

Hazard Mitigation Planning Process

King County’s 2019 Regional Hazard Mitigation Plan (RHMP) was developed with input of a multi-agency, multi-jurisdictional steering committee. The Steering Committee supervised the writing of the plan and was consulted for final decisions made by the King County Emergency Management Planning Team. The process was led by King County Emergency Management, which facilitated both the internal county process and supported individual city planning efforts. Individual departments developed their own strategies internally and then socialized the strategies with the other county participants.

The team met monthly to review progress and make key decisions about the direction of the planning effort. These meetings were hosted by King County Emergency Management.

Steering Committee Meeting Topics

Month	Topic
February 2019	Outline proposed planning process and timeline and approve plan and plan annex templates.
March	Identify public outreach sites and strategy
April	Integrating equity and social justice into the mitigation plan.
May	Integrating equity and social justice into the mitigation plan.
June	Establish plan goals, priorities, and strategy prioritization method
July	Workshop 2 – hazard mitigation strategies.
August	Review capabilities assessment
September	Review risk assessment

October	Long-term mitigation plan monitoring and implementation strategy
November	Review draft base plan and King County hazard mitigation strategies
January 2020	Planning after action review
March 2020	Final plan adoption celebration

In addition to the multi-jurisdictional steering committee, the King County Emergency Management Coordinating Committee (EMCC) contributed to the plan update as the steering committee for the King County-specific hazard mitigation strategies. This committee consists of every King County department as well as representatives from the King County Executive’s Office and the King County Council. A list of all EMCC members is available in the Capabilities chapter. The EMCC meets monthly.

Individual jurisdiction annexes were developed in partnership with King County, but with separate internal steering committees. The members of each jurisdiction’s steering committee are documented in each annex.

Mitigation Planning Partner Engagement

The King County portion of this plan focuses on unincorporated areas of the county. These areas border, or are served by, cities, tribes, and special purpose districts, all of whom were invited to participate in this plan update. For the purpose of interjurisdictional coordination, King County defined ‘neighboring jurisdictions’ as these partners since they are the entities most critical to effective implementation of multi-jurisdictional mitigation projects and since many city residents receive county services and visa-versa. In addition to coordination with these jurisdictions, King County maintains a high level of engagement with neighboring counties, especially Pierce and Snohomish. The planning team invited counterparts in Pierce and Snohomish to attend each of the planning workshops described below. There are also multiple other concurrent planning efforts involving these counties, including the Close Coordinated Terrorist Attack (CCTA) program and the Regional Catastrophic Planning (RCPG) effort.

The planning process kicked off in November 2018 with a meeting and workshop to which all planning partners were invited. At this workshop, participants learned about the process, expectations, and were asked to provide commitment letters with billing rates to meet federal grant match requirements.

To support the more-than-60 planning partners, the planning team met individually or in small groups with each jurisdiction to discuss the planning process and go over the planning requirements. These meetings took place between February and May.

To supplement these meetings, King County hosted a webinar and two in-person planning workshops in June 2019 (June 3, 10, and 27). During these workshops, the planning team presented updated information on public outreach, plan integration, risk assessments, and strategy prioritization.

In addition to planning assistance workshops, King County partnered with FEMA RiskMAP and Washington State to offer three workshops on the identification of threats and hazards, the development of mitigation strategies, and the process to successfully fund those strategies. The workshops were held

on December 13, 2018, July 25, 2019, and August 22, 2019. Approximately 70 attendees were recorded at each. Invitees included representatives from all King County departments, all cities, most special purpose districts, and other agencies and organizations such as the Port of Seattle and the Northwest Healthcare Response Network.

Following the submission of the base plan in December 2019, King County will begin a second stage of outreach targeting those jurisdictions who missed the original submission deadline and those who were not previously involved. Among the second group, school districts will be proactively engaged and offered assistance in developing annexes to the hazard mitigation plan.

Sign-in sheets for all outreach events are available upon request.

Jurisdiction Plan Annex Process

Jurisdictions may join the regional hazard mitigation plan at any time by submitting a letter of intent to King County Emergency Management and completing the planning process and plan template. Each plan can be unique, and jurisdictions may do more than what is required in the template; however, this template is designed to help walk communities through the planning process in an accessible way. Further details on how to conduct the process are available in the King County Regional Hazard Mitigation Plan. King County staff will provide technical assistance to planning partners, whenever possible.

Review and Incorporation of Reports and Studies

In addition to the data sources outlined in the Risk Assessment section of this plan, the planning team leveraged a number of existing and ongoing planning processes and other documents. More information can be found in the Program Capabilities chapter of this plan.

- The Strategic Climate Action Plan (SCAP) is a plan designed to assess the impacts of climate change on King County and develop strategies to both reduce risk from climate impacts and reduce King County’s contribution to climate change. The planning team for the RHMP included the lead for the SCAP and participated in the SCAP.
- The State Enhanced Hazard Mitigation Plan was used for data on hazards and for identifying capabilities. Another contribution from that plan is the hazard mitigation strategy format, which was copied and modified for use in the King County plan.
- The Equity and Social Justice Strategic Plan was integral to establishing the hazard mitigation plan goals and the process by which mitigation projects are prioritized.
- Puget Sound Regional Council’s Vision 2050 lays out planning policies and guidelines for the King-Pierce-Kitsap-Snohomish county area and is undergoing an update in 2019 and 2020. The mitigation planning team reviewed and contributed to the planning process for Vision 2050.
- The King County Floodplain Management Plan is being updated and data from that planning effort is included in sections of this plan referring to the NFIP, flood risk, and flood mitigation strategies.
- The Washington, DC Hazard Mitigation Plan (draft) was a source for inspiration for the method of prioritizing mitigation strategies and conducting the risk assessment for vulnerable populations.

- The 2018-2019 FEMA RiskMAP Risk Report for King County was reviewed for data and mapping purposes as well as for information on historic disasters and potential mitigation strategies.
- The 2019 King County Dam Inventory from the Washington State Department of Ecology and guidance from the King County Dam Safety Program.
- The Clean Water and Health Habitat Initiative, uniting departments involved in health and environmental resilience, was convened by the King County Executive and includes the hazard mitigation program.
- The draft Regional Resiliency Assessment Program report for transportation for Western Washington.

King County Plan Update Timeline

The following is a timeline of significant events and milestones for King County in the Regional Hazard Mitigation Plan Update.

Plan Update Timeline

PLANNING ACTIVITY	DATE	SUMMARY	ATTENDEES
Plan Kickoff	11/28/18	Conducted a kickoff meeting for the planning process, including discussions of expectations and the project timeline.	Designated county, city, and special district staff who are leading local plan updates
Risk Assessment Workshop	12/13/18	First workshop with FEMA RiskMAP staff to socialize hazard data and develop problem statements.	Approximately 80 attendees including GIS staff, county departments, city emergency managers, and other program managers with interest in mitigation
Steering Committee Meeting Kickoff	2/19/19	Outline proposed planning process and timeline and approve plan and plan annex templates.	Steering committee
Outreach Strategy Meeting	2/22/19	Meet with staff to identify outreach strategy	OEM Director, Outreach Team, Coordination Team
Steering Committee Meeting	3/12/19	Identify public outreach sites and strategy	Steering committee
Steering Committee Meeting	4/30/19	Integrating equity and social justice into the mitigation plan.	Steering committee

EMCC Meeting	5/1/19	Discuss planning process, DRRRA funding, and mitigation strategies	County departments
Steering Committee Meeting	5/14/19	Integrating equity and social justice into the mitigation plan.	Steering committee
Mitigation Technical Webinar	6/3/19	Reviewed planning process and helped local partners on mitigation planning questions	local jurisdiction partners
EMCC Meeting	6/5/19	Mitigation strategy meeting discussions and identify points of contact in each agency	County departments
Mitigation Technical Workshop	6/10/19	Reviewed planning process and helped local partners on mitigation planning questions	local jurisdiction partners
Steering Committee Meeting	6/11/19	Establish plan goals, priorities, and strategy prioritization method	Steering committee
CSA Town Hall Outreach Event	6/18/19	Comments received included concerns about mitigation of solid waste facilities, whether or not earthquake insurance makes sense, and need for snow mitigation following February snowstorm.	Residents from central King County and the Issaquah/Hobart/Maple Valley areas. Approximately 100 attendees.
CSA Town Hall Outreach Event	6/25/19	Discussed concerns about impacts to Enumclaw area from a lahar/Mt. Rainier	Residents from southeast King County, predominately from Enumclaw and nearby unincorporated areas. Approximately 100 attendees.
Mitigation Technical Workshop	6/27/19	Reviewed planning process and helped local partners on mitigation planning questions	local jurisdiction partners
Mitigation Strategy Meetings	7/9/19	Met with internal planning partners (county departments) to develop mitigation strategies.	DES, FMD and KC International Airport
Mitigation Strategy Meetings	7/11/19	Met with internal planning partners (county departments) to develop mitigation strategies.	DNRP

Mitigation Strategy Meetings	7/11/19	Met with internal planning partners (county departments) to develop mitigation strategies.	Local Services (Roads)
Mitigation Strategy Meetings	7/15/19	Met with internal planning partners (county departments) to develop mitigation strategies.	Local Services (Permitting)
Hazard Mitigation Workshop	7/25/19	Worked through the entire strategy development process from risk identification to mitigation projects.	County and local partners, approximately 75 attendees
Steering Committee Meeting	8/20/19	Review mitigation capabilities	Steering committee
Mitigation Funding Workshop	8/22/19	Worked through process of developing a successful hazard mitigation grant application	County and local partners. Approximately 60 attendees.
Clean Water Healthy Habitat Initiative Workshop	9/4/19	Participated in a process to coordinate mitigation planning efforts with other environmental quality, climate change, and hazard reduction programs in the county.	60-100 attendees from multiple county departments, especially DNRP.
Steering Committee Meeting	9/16/19	Review risk and vulnerability assessments	Steering committee
CSA Town Hall Outreach Event	9/10/19	Residents looked at the hazard information and discussed strategies for protecting their community from an earthquake. A major concern is the likelihood that the area will be isolated by an earthquake due to liquefaction.	Dozens of residents from the areas of White Center, Highline, Skyway, and Burien.
Critical Transportation Workgroup	9/17/19	Discussed the establishment and mitigation of lifeline transportation routes for a post-Cascadia scenario.	County departments, local jurisdictions, and state agencies participated in the workshop.
Steering Committee Meeting	10/8/19	Review base plan and King County mitigation strategies	Steering committee
CSA Town Hall Outreach Event	10/17/19	Discussed flooding in the Snoqualmie-Carnation-Duvall areas.	Residents from the northeastern portion of the county, especially in

			Snoqualmie, Carnation, and Duvall
County Departments Strategy Coordination	11/14/19	Meet with King County departments to go over all the mitigation strategies, eliminate gaps, and ensure consistent priorities.	County departments, including OEM, FMD, DNRP, PHSKC, KCIT, DES.
Steering Committee Meeting	11/12/19	Review draft base plan	Steering committee
Submit to WA EMD and FEMA	12/15/19	Submit full mitigation plan to FEMA for review	Planning Team

Support for Community Rating System (CRS) Communities

The hazard mitigation plan update process was also closely linked to the update for King County’s Flood Hazard Management Plan. To receive credit, participating jurisdictions must follow the CRS process outlined in the current version of the CRS Coordinators Manual, element 510. At a minimum, jurisdictions wanting to receive CRS planning credit must have at least two participants in one of the planning teams.

As such, a separate, parallel process was led by the King County River and Floodplain Management Section. This process was integrated into the planning effort for the overall hazard mitigation plan. Three meetings were held in addition to the regular mitigation planning meetings. The flood portion steering committee consisted of the following members:

Committee Member	Organization	Key Role
Gwyn Berry	City of Snoqualmie	Floodplain Manager/Planner
Bob Freitag	UW Institute for Hazard Mitigation Planning & Research	Director
Elissa Ostergaard	Snoqualmie Watershed Forum	Salmon Recovery Manager
Scott Smith	King County Permitting Division	Senior Engineer
Monica Walker	King County River & Floodplain Management Section	Program Manager, White-Cedar-Sammamish Basin
Ken Zweig	King County River & Floodplain Management Section	Program Manager, Countywide Policy and Planning Unit

Plan Update Timeline

PLANNING ACTIVITY	DATE	SUMMARY	ATTENDEES
Planning Meeting 1	10/10/19	Discussed the flood hazard assessment.	Representatives from cities, county departments, academia, and the public.
Planning Meeting 2	10/30/19	Developed flood hazard mitigation strategies.	Representatives from cities, county departments, academia, and the public.
Planning Meeting 3	11/6/19	Prioritize hazard mitigation strategies and review draft risk assessment.	Representatives from cities, county departments, academia, and the public.

Public Outreach Process

Public outreach during the plan update process is considered to be a critical part of hazard mitigation planning. For this update, participating jurisdictions are asked to conduct two outreach events. One of these events should be a meeting-style event and the other could be any event desired by the jurisdiction, including workshops, fairs, neighborhood meetings, etc. Jurisdictions were encouraged to make the meetings valuable to the community. Holding a separate, stand-alone meeting for the sole purpose of this plan update *was NOT required*, especially if using an existing event, like a commissioner’s meeting, could help expand public engagement and engage elected officials simultaneously. Jurisdictions were also encouraged to partner with neighbors or special purpose districts serving their area for more effective public outreach events.

To count as outreach for the hazard mitigation plan, meetings had to meet the following requirements.

1. Be advertised to the general public. You do NOT have to publish an ad in the paper. You can use your newsletters, social media, press releases, and other mechanisms to conduct outreach.
2. Promote two-way communication between the public and the planning team.
3. Focus on hazard mitigation, resilience, risk-reduction, etc., for some significant part of the event. The focus does not have to be solely on mitigation, and you do not have to refer to the event as related to “mitigation planning;” however, the concepts of resilience, risk-reduction, etc., should be discussed.
4. Be documented. This is very important. Please summarize both who attends and what they contribute and make sure to include it in the plan.

County public outreach partnered with the Department of Local Services and other local jurisdictions to ensure that events occurred throughout unincorporated areas as well as in incorporated areas served by some county services. The unincorporated area events were part of Community Service Area (CSA) Town Halls. These events are well-attended and well-advertised, with 60-100 attendees per meeting. This

outreach model, partnering with existing meetings and services, is designed to help put emergency management and hazard mitigation in context. The work done in hazard mitigation is almost exclusively carried out by non-emergency management entities. By partnering with other departments and using outreach mechanisms where they would all be present, it may be possible to help demonstrate the role of emergency management in the community and the partnerships that good hazard mitigation requires. The following is an excerpt from the King County Department of Local Services newsletter that goes out to nearly 8000 residents.

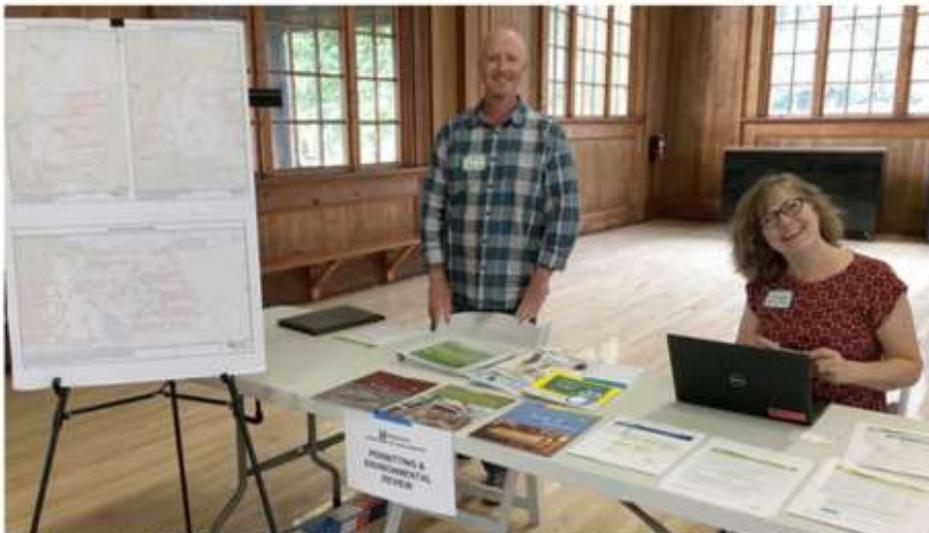

King County holds first four 2019 town halls

King County Councilmember Reagan Dunn and the King County Department of Local Services co-hosted the county's first four 2019 Community Service Areas Program Town Hall events in June.

The evening events—in the Greater Maple Valley/Cedar River, Four Creeks/Tiger Mountain, Southeast King County, and Fairwood areas—gave participants an opportunity to meet county officials, learn about services, and talk about issues that affect them and their communities.

Each meeting was attended by 60-100 people. Residents heard from Dunn, their elected representative (*shown at right*), as well as leaders of the Department of Local Services, which aims to serve as a "virtual city hall" for residents of unincorporated King County. These included Local Services Director John Taylor, Road Services Division Director Rick Brater, and Permitting Division Director Jim Chan.

Staff members Ty Peterson and Kim Layman from the King County Permitting Division greet community members at the Southeast King County town hall in Enumclaw.

Other county departments that serve the unincorporated areas were also represented, including the Sheriff's Office (Major Troy Olmsted), Natural Resources and Parks (Director Christie True), Water and Land Resources (Division Director Josh Baldi), and Elections (Director Julie Wise).

Each event started with an open house where participants connected with both county and non-county service providers, including the Assessor's Office, Public Health – Seattle and King County, Metro Transit, Elections, Emergency Management, and Animal Services.

Local Services will host another round of town halls for the remaining Community Service Areas in the fall. Learn more on [King County's Community Service Areas website](#).

King County Public Meetings

Date	Location	Summary	Attendees
6/18/19	Greater Maple Valley CSA	Comments received included concerns about mitigation of solid waste facilities, whether or not earthquake insurance makes sense, and need for snow mitigation following February snowstorm.	Residents from central King County and the Issaquah/Hobart/Maple Valley areas. Approximately 100 attendees.
6/25/19	Enumclaw/Southeast King County CSA	Discussed concerns about impacts to Enumclaw area from a lahar/Mt. Rainier	Residents from southeast King County, predominately from Enumclaw and nearby unincorporated areas. Approximately 100 attendees.
9/12/19	White Center CSA	Residents looked at the hazard information and discussed strategies for protecting their community from an earthquake. A major concern is the likelihood that the area will be isolated by an earthquake due to liquefaction.	Dozens of residents from the areas of White Center, Highline, Skyway, and Burien.
10/17/19	Snoqualmie/Carnation/Duvall CSA	Discussed flooding in the Snoqualmie-Carnation-Duvall areas.	Residents from the northeastern portion of the county, especially in Snoqualmie, Carnation, and Duvall

The Des Moines Farmers Market public outreach event hosted by the City of Des Moines and including King County Emergency Management and Valley regional Fire Authority.

Help Identify Good Risk-Reduction Projects

The key deliverable of a successful planning process is a prioritized list of risk reduction strategies. These strategies are identified by each participating jurisdiction through an asset-based process. We would love to hear from you! Please consider these questions and either fill out the form below or email me at dliebent@kingcounty.gov.

1. **What makes your community great?** What are the assets, features, and value, that you cannot live without? These can be both physical assets like fire stations, community assets like the business district, and intangible assets like the peace and tranquility of the community.

2. **What hazards potentially threaten those assets and values?**

3. **How susceptible or vulnerable are those assets to hazards?**

4. **What happens if you lose those assets?** What is the impact on your community? What is the impact from the asset's failure or loss?

5. **Are these assets redundant?** Can I afford to live without it? Does another asset serve a similar purpose?

6. **What can I do to reduce or eliminate the risk to this asset from hazards?**

The following is a questionnaire handed out at these events. Major topics of discussion, and any comments or feedback on the plan and planning process, are included in the summary table for the public meetings.

King County Emergency Management also joined several locally-led events. For this, the planning team developed a table-sized 3D-printed topographic map of the county with an aerial image printed on it. The interactive, 3D physical map was used to talk about the county's history of hazards, flooding, climate change, landslides, lahar zones, liquefaction areas, and more.

The model was available for use by local jurisdictions both with and without county staff so that it

could be used to support a wider range of outreach activities.

Finally, in addition to in-person outreach, King County Emergency Management developed a website, <https://www.kingcounty.gov/hazardplan>. The website explains the purpose of mitigation and provides an overview of key hazards and examples of effective hazard mitigation. This website will be kept up for at least the duration of the plan review.

Joint Public Meetings

Date	Location	Summary	Attendees
7/16/19	City of Medina	Presented to the City of Medina Emergency Management Committee and other local residents and led a discussion afterward. The primary interest was on how residents could contribute to mitigation and resilience goals for their city. Residents in Medina will serve as the steering committee for the mitigation plan update and will help identify and prioritize mitigation strategies based on at-risk, high-priority community assets.	Community members, elected officials, and members of Medina EMC. Approximately 20 people attended.
7/24/19	City of North Bend	World Café workshop at the North Bend Public Library	No attendees were recorded at this event.

8/21/19	City of Kenmore	Presentation and hazard mitigation booth with 3D map at a Kenmore Town Square movie night. Spoke with approximately 25 people. The main focus of questions were around which areas of the community were at higher risk. Also collected feedback from community members on their ranking of Kenmore’s mitigation strategies.	Lots of children plus community members attended. Over 100 attendees estimated.
8/27/19	Cities of Tukwila, Kent, Covington and SeaTac	Presented on county hazard mitigation efforts and discussed countywide risks at a joint public meeting at Fire Station 74 in Kent. Major comments included questions about how cities and the county are prioritizing mitigation investments, comments on the risk of fire from homes built very close together, and questions about the restoration of water in areas with unstable soils.	10-12 attendees, mostly from Kent, spoke with staff from their cities and King County Emergency Management
	City of Des Moines	Hosted a booth at Des Moines Farmers Market. Discussed the possibility of Des Moines becoming an island after a major earthquake. Discussed the vulnerability of the waterfront relative to the lower-vulnerability of the rest of the city. The City of Des Moines and Valley Regional Fire Authority were also present and completed surveys for their mitigation plan annexes.	The booth was occupied continuously by residents from 10AM until 2PM.
9/28/19	Cities of Maple Valley, Covington, and Black Diamond	Annual preparedness fair 3D map booth and presentation. Spoke with dozens of residents and several elected officials and shared information on hazard risk and ways to address hazard risk. Major comments were related to length of time needed to reach residents in far-flung areas following an earthquake, especially given the response times during the February 2019 winter storms.	Hundreds of residents from the area and cities around Maple Valley. Dozens stopped by the booth.

Residents examining the 3D hazard map at a North City Water public outreach event (Source: Diane Pottinger, North City Water)

Continued Public Participation

King County and its partner cities already maintains substantial public outreach capabilities, focusing on personal preparedness and education. Information on ongoing progress in implementing the hazard mitigation plan will be integrated into public outreach efforts. The Community Service Area Town Hall events led by the Department of Local Services are scheduled annually and provide a unique opportunity to highlight mitigation successes. This will provide King County residents, already engaged in personal preparedness efforts, with context and the opportunity to provide feedback on the county’s progress and priorities in large-scale mitigation. In the vertical integration of risk-reduction activities from personal to local to state and federal, it is important that the public understand how its activities support, and are supported by, larger-scale efforts.

The outreach and mitigation teams will also continue to work with media and other agency partners to publicize mitigation success stories and help explain how vulnerabilities are being fixed. When possible, public tours of successfully-completed mitigation projects will be organized to allow community members to see successful mitigation in action.

King County Regional Hazard Mitigation Program Capabilities

King County includes 39 cities, over 129 special purpose districts, and large unincorporated areas. While each city and special purpose district is responsible for its own hazard mitigation efforts, King County supports these jurisdictions through region-wide services and planning coordination, including efforts associated with land use, emergency management, and floodplain management. County departments involved in hazard mitigation efforts include Executive Services (facilities management, emergency management), local services (permitting, roads), Natural Resources and Parks (wastewater, landslides, floodplain management, climate change), and the Office of the Executive (planning).

As the lead agency for hazard mitigation, King County Emergency Management (KC EM) engages partners to promote and/or support mitigation activities. KC EM also publicizes Hazard Mitigation Assistance grant opportunities and provides technical support to develop applications and administer awards. KC EM also serves on interagency workgroups such as comprehensive planning, climate adaptation, and transportation as a way of promoting consistency in risk assessment and reduction priorities.

The focus of King County Emergency Management’s hazard mitigation program is integration, including plan integration, program integration, and departmental/jurisdictional integration. Plan integration helps ensure partners use the best available data and that plan outcomes are supportive of a resilient future. Program integration helps partners find fund sources and support outside of their departments or programs. Department and jurisdiction integration builds on the role the county EOC serves for response, engaging resources to promote and implement the most effective, highest-priority hazard mitigation opportunities. In a large county with dozens of partners, a jurisdiction-by-jurisdiction approach is less effective at building resilience. KC EM’s approach is to unify partners behind the vision of resilience laid out in this plan.

Plan Integration

When plans and planning processes are more integrated, it is possible to achieve greater impact through clearer definition, smarter investment, partnerships, and innovation. Successful integration requires

Hazard Mitigation Program

Hazard mitigation is most effective when implemented through a systematic program that establishes priorities and understands that resilience requires system-wide investments in mitigation.

Cohesive, comprehensive strategies and the establishment of partnerships are the core elements of a program. Individual projects matter, but are made more effective by systematic, strategic implementation.

In order to support this program, King County Emergency Management convenes multi-agency committees, offers technical assistance on federal mitigation grants, supports partners in planning and mitigation projects, and maintains and updates the King County Regional Hazard Mitigation Plan.

coordination between planning efforts and, especially, cross-participation in planning processes. The goals of plan integration are to:

- Ensure consistency with jurisdiction priorities across all planning processes
- Leverage opportunities to further multi-benefit initiatives that are supported by multiple planning processes
- Achieve common measures of success for outcomes

The hazard mitigation plan can benefit from integration with planning processes that:

- Prioritize and invest in infrastructure
- Regulate development
- Set strategic direction for programs

To other planning processes, the hazard mitigation plan brings risk and vulnerability information to help prioritize projects and set development standards or regulations. The mitigation plan also comes with potential funding for investments in cost-effective risk-reduction projects. On the other hand, the mitigation plan depends on other plans and processes to implement many strategies. Since the mitigation plan is not itself a regulatory or budgetary document, strategies identified in the mitigation plan are often best implemented through those processes or programs.

There are many plans and planning processes within King County that impact hazard risk. These include strategic plans, long-range plans, resource plans, and capital plans.

TITLE	DESCRIPTION	LEAD	INTEGRATION STRATEGY
Capital Facilities Plans	Capital facilities plans identify and prioritize large-scale projects. Entities involved in this include the King County Facilities Management Division and the King County Flood Control District.	Various	<ul style="list-style-type: none"> • Integrate mitigation strategies from capital plans • Encourage the use of hazard information to prioritize capital improvements • Support county departments with funding gaps in accessing Hazard Mitigation Assistance to complete or expand projects that are identified as important but are unfunded or partially funded.

<p>Clean Water and Health Habitat Strategic Plan</p>	<p>The CWHH Strategic Plan seeks to establish a strategic alignment across all plans that impact clean water and healthy habitat in order to achieve “greater impact through clearer definition, smarter investment, partnerships, and innovation.” This process is just starting, and it includes over 20 separate plans and programs.</p>	<p>Department of Natural Resources and Parks</p>	<ul style="list-style-type: none"> • Participate in plan development. • Align outcome measures and program prioritization methods • Work through this process to help align mitigation planning with other planning in the natural resource sector, such as forest health, solid waste, and salmon recovery.
<p>Comprehensive Plan</p>	<p>The King County Comprehensive Plan is the long-range guiding policy document for all land use and development regulations in unincorporated King County, and for regional services throughout the County including transit, sewers, parks, trails and open space.</p>	<p>Executive’s Office</p>	<ul style="list-style-type: none"> • Encourage updates to the critical areas ordinance • Provide feedback and comments on the plan
<p>Comprehensive Emergency Management Plan (CEMP)</p>	<p>The CEMP is for use by elected and appointed County officials, and King County government department directors, managers and staff in mitigating, preparing for, responding to, and recovering from disasters.</p> <p>This plan is a product of coordinated planning efforts between King County Emergency Management, County departments, emergency management representatives from various political jurisdictions, and selected private and nonprofit sector interests. It meets the requirements of WAC 118-30 and the Federal Emergency Management Agency's (FEMA) planning guidance for the National Response Framework and</p>	<p>Emergency Management</p>	<ul style="list-style-type: none"> • The Hazard Mitigation Plan provides the risk profiles that support the development of the CEMP. • The Hazard Mitigation Plan is also a component (the mitigation component) of the CEMP.

	the National Incident Management System (NIMS) compliance.		
Equity and Social Justice Strategic Plan	The Equity and Social Justice Strategic Plan is a blueprint for action and change that will guide the county’s pro-equity policy direction, decision-making, planning, operations and services, and workplace practices in order to advance equity and social justice within County government and in partnership with communities.	Executive’s Office	<ul style="list-style-type: none"> Follow guidance in the ESJ plan for the prioritization of strategies Develop information on populations vulnerable to hazards and share with ESJ planning teams
Flood Hazard Management Plan	The current (2013) King County Flood Hazard Management Plan is a functional annex of the comprehensive plan. It outlines the County’s approach to comprehensive floodplain management including land use planning, flood mitigation efforts, and flood protection facilities management.	Department of Natural Resources and Parks	<ul style="list-style-type: none"> Work with department responsible for floodplain management to write the flood risk assessment. Work with local CRS coordinators to ensure the mitigation plan is worth the maximum number of points.
Strategic Climate Action Plan	King County’s Strategic Climate Action Plan (SCAP) is a five-year blueprint for County action to confront climate change, integrating climate change into all areas of County operations and its work in the community. The SCAP is King County’s blueprint for climate action and provides a “one-stop-shop” for county decision-makers, employees, and the general public to learn about the County’s climate change goals, priorities and commitments.	Department of Natural Resources and Parks	<ul style="list-style-type: none"> Inter-workgroup participation Integrated mitigation strategies Consistent risk assessments
Strategic Plan for Road Services	The Road Services Strategic Plan lays out system needs and anticipated service levels and an asset management approach to road maintenance and improvement.	Department of Local Services	<ul style="list-style-type: none"> Integrate mitigation strategies

Program and Policy Capabilities

With over 15,000 employees and dozens of departments and offices, King County has a tremendous capability to implement mitigation projects. Mitigation efforts are underway throughout the county, including such organizations as the Rivers and Floodplain Management Section of DNRP and the Wastewater Treatment Division of DNRP.

The hazard mitigation planning process has engaged participants from across these program and policy areas in order to establish a common assessment of hazards, identify potential mitigation strategies, partnerships for future projects, and to assess county capabilities to implement mitigation projects. The list below identifies King County policies and programs that support and implement hazard mitigation and assesses the effectiveness of each. For state-level policies and programs that support hazard mitigation, such as the Growth Management Act, please see the Washington State Enhanced Hazard Mitigation Plan.²

The following table identifies the programs and organizations contributing regularly to hazard mitigation.

PROGRAM/POLICY	MITIGATION ACTIVITIES	LEAD
Building and Development Codes	Building and development codes are adopted and modified from the 2015 IBC by Washington State Building Code Council and King County. These codes help ensure that new construction and substantial improvements meet international standards, accounting for our hazard risk.	Department of Local Services, Permitting
Building and Development Code Enforcement	The Department of Local Services, Permitting Division is the agency that provides land use, building and fire regulatory and operating permits, code enforcement and a limited number of business licenses for unincorporated areas of King County. Other local jurisdictions provide similar services within incorporated areas. The Code Enforcement Section investigates complaints regarding violations of King County Codes (KCC) related to zoning, building, property maintenance, shorelines and critical areas in unincorporated King County.	Department of Local Services, Permitting
Community Rating System	The CRS program rewards communities that have established exceptional floodplain management programs and undertaken certain activities to reduce flood risk. King County is one of the highest rated communities in the country. The program provides NFIP policyholders in floodplains with a discount of up to 40% on their insurance.	DNRP DLS KCEM

² Washington State Enhanced Hazard Mitigation Plan. 2018. "Potential Sources of Funding and Mitigation Capability." Accessed online on 7/12/19 from <https://mil.wa.gov/enhanced-hazard-mitigation-plan>.

Critical Areas Ordinance	The critical areas ordinance requires the identification of geologically-hazardous and frequently-flooded areas. These areas must either be protected from development or any development in these areas must be designed to account for hazard risk.	Department of Local Services
Equity and Social Justice	King County has deep and persistent inequities – especially by race and place—that in many cases are getting worse and threaten our collective prosperity. Launched by King County Executive Ron Sims in 2008 and formalized by Executive Dow Constantine and the Metropolitan King County Council via ordinance in 2010, Equity and Social Justice (ESJ) is an integrated part of the County’s work and is supported by the Office of Equity and Social Justice since it was established in early 2015.	King County Executive’s Office, Office of Equity and Social Justice
Facilities Management Division	The Facilities Management Division (FMD) oversees and maintains King County’s real estate assets. The Major Projects and Capital Planning section is tasked with efficiently and effectively delivering large-scale projects in alignment with the policy directives of King County government, the facility needs of employees and the public, and for overall service to the community. Part of this includes the development of hazard-resilient facilities.	Department of Executive Services, FMD
GIS	King County GIS provides analysis support, mapping, and other data to all King County departments. This data is valuable for hazard mitigation planning activities.	KCIT
Hazard Mitigation	<p>The hazard mitigation program works with partners across county departments and local jurisdictions to coordinate and promote hazard mitigation projects.</p> <p>The program also coordinates applications to federal Hazard Mitigation Assistance grant programs and conducts hazard mitigation planning for the county in partnership with local jurisdictions and special-purpose districts.</p>	KC Emergency Management
King County Conservation District	The King County Conservation District is an independent special purpose district with separately-elected commissioners. It promotes water, land, soil, and forest conservation and preservation and conducts wildfire risk reduction activities.	King County Conservation District
King County IT	KCIT leads the county’s response to, and preparedness for, cyber incidents. KCIT has helped local cities recover from ransomware and other attacks.	King County Information Technology (KCIT)

King County Flood Control District	<p>In 2007, the King County Flood Control District was established to provide a proactive, regional approach to flooding as well as funding to improve the county's nearly 500 aging and inadequate flood protection facilities.</p> <p>Funding for the Flood Control District comes from a county-wide property levy of 12.9 cents per \$1,000 assessed value. This amounts to \$54 per year on a \$416,000 home. The levy raises roughly \$54.5 million a year. This funding dramatically increases the number of projects that can be completed each year. The additional local funding also enhances the District's ability to receive federal and state matching funds.</p> <p>The King County Flood Control District is a separate special purpose district.</p>	King County Flood Control District
Landslide Hazards	The Landslide Hazards program conducts mapping and outreach associated with landslide risk.	DNRP Water and Land Resources Division
Land Use Planning and Zoning	Land use planning and zoning establishes growth and land use patterns that are consistent with long-range plans and supported by infrastructure.	King County Executive's Office
National Flood Insurance Program	Communities that participate in the National Flood Insurance Program adopt a floodplain management code in exchange for FEMA making flood insurance available to residents and businesses.	DNRP, DLS – Permitting Division
Office of Risk Management Services	<p>Risk Management investigates and resolves claims against King County in a fair and expeditious manner, and also provides internal services to King County agencies, including:</p> <ul style="list-style-type: none"> • Insurance: King County administers a self-insurance program and purchases a variety of other insurance policies and related services consistent with good risk management practices and the needs of the County. • Contracts: Risk Management advises King County agencies on insurance requirements, indemnification, release, and hold harmless provisions in all types of contracts. Risk Management actively negotiates these provisions and, together with the Prosecuting Attorney's Office, assists agencies in pursuing and tendering claims arising out of contractual relations. • Recovery Services: The recovery section of Risk Management is charged with seeking compensation for 	Department of Executive Services

	<p>damages caused to King County property or injury to King County employees by negligent third parties.</p> <ul style="list-style-type: none"> Loss Control Program: The Loss Control Manager works with King County agencies to identify areas of potential loss and recommend strategies to reduce exposure to liability. The Loss Control Program also administers continuing workplace training and education for King County employees. <p>Part of this work includes the development and maintenance of a risk register of events and information on how those events can impact King County.</p>	
Public Health	<p>Public Health — Seattle & King County (Public Health) works to protect and improve the health and well-being of all people in King County as measured by increasing the number of healthy years that people live and eliminating health disparities.</p> <p>Public Health is the one of the largest metropolitan health departments in the United States with 1,400 employees, 40 sites, and a biennial budget of \$686 million. The department serves a resident population of nearly 2.2 million people in an environment of great complexity and scale, with 19 acute care hospitals and over 7,000 medical professionals. Over 100 languages are spoken here, and King County is an international destination welcoming nearly 40 million visitors annually.</p> <p>Public Health protects the public from threats to their health, promotes better health, and helps to assure that people are provided with accessible, quality health care.</p> <p>Health protection functions include disease control, such as tuberculosis, HIV, communicable disease epidemiology and immunizations, and ensuring that the air is safe to breathe, and water and food are safe to consume.</p> <p>Health promotion functions include preventing behaviors that lead to disease, averting injuries and managing chronic health conditions.</p> <p>Health provision functions include convening and leading system-wide efforts to improve access and quality, advocating for access to quality health care for all, forming partnerships with service providers and directly providing individual health services when there is a public health need.</p>	Public Health Seattle-King County

Road Services Division	Road services builds and maintains over 2000 miles of road and 200 bridges. They are responsible for many mitigation activities, including those related to culvert replacement, pavement preservation, and bridge retrofits.	Department of Local Services
Shoreline Master Program	King County has nearly 2,000 miles of shoreline along major lakes and rivers and Vashon-Maury Island. These shorelines provide habitat for fish and wildlife, places for public enjoyment and space for wide-ranging waterfront land uses. The Shoreline Master Program helps preserve these spaces and uses, thereby reducing risk to hazards including sea-level rise.	DLS – Permitting Division
Wastewater Treatment Division	Invest in upgrades to pipe and water treatment facilities to make them more resilient to earthquakes, severe weather, flooding, and climate-change.	DNRP

Integration with Departments and other Jurisdictions

Beyond departmental integration, King County works with local jurisdictions, special purpose districts, and tribes to support effective risk reduction. King County coordinates activities related to emergency management and hazard mitigation through two bodies, the Emergency Management Coordinating Committee (EMCC) and the Emergency Management Advisory Committee (EMAC), which are each described in greater detail in the table below.

King County Stakeholder Integration Capabilities

ORGANIZATION	DESCRIPTION	MEMBERSHIP
Clean Water / Healthy Habitat Initiative	An initiative convened by the county executive to help streamline projects, increase collaboration, and improve results for the work accomplished through the spending of \$6 Billion over the next decade on clean water and habitat protection in King County.	All county agencies
King County Community Rating System Users Group	King County and the cities who are part of CRS meet to coordinate efforts and provide technical assistance to each other on maintaining and improving CRS ratings.	<ul style="list-style-type: none"> • Auburn • Bellevue • Issaquah • Kent • North Bend • Renton • Snoqualmie • Carnation

Potential Sources of Hazard Mitigation Funding

Hazard mitigation projects are most often completed with funding from capital budgets as part of the normal building and maintenance processes that occur in any jurisdiction. There is also source and use-specific funding, such as that provided by the King County Flood Control District that is part of regular program funding and is highlighted in the program section above. Beyond regular capital funding, there are dedicated mitigation programs operated by state, county, and federal agencies.

Potential Sources of Hazard Mitigation Funding

PROGRAM	LEAD AGENCY	DESCRIPTION	PROJECT TYPES
BUILD Grants	US Department of Transportation (USDOT)	Grants support investments in surface transportation infrastructure and are to be awarded on a competitive basis for projects that will have a significant local/regional impact.	Transportation and related infrastructure retrofits, including stormwater projects
Building Blocks for Sustainable Communities	U.S. Environmental	This EPA program provides targeted, technical assistance to communities to	Planning and feasibility studies

	Protection Agency (EPA)	develop resilience plans, development plans, sustainability strategies, etc.	
Building Resilient Infrastructure in Communities (BRIC)	Federal Emergency Management Agency (FEMA)	New annual mitigation grant program that is expected to replace PDM. Will focus more on large-scale infrastructure projects that reduce risk to natural hazards.	Most long-term risk-reduction projects that protect against fire, flood, earthquake, and other natural hazards.
Community Development Block Grants	U.S. Department of Housing and Urban Development (HUD)	CDBG funds comprehensive plans, limited infrastructure planning/construction, feasibility studies, community action plans. Income and population restrictions apply.	Housing and infrastructure retrofits, feasibility studies, planning
Community Economic Revitalization Board	WA Department of Commerce	CERB provides loan funding to local jurisdictions for public infrastructure to support private business growth and expansion.	Infrastructure retrofits, public-private partnerships
Combined Water Quality Funding Program	WA Department of Ecology	Fund sources for projects associated with publicly-owned wastewater and stormwater facilities. The integrated program also funds nonpoint source pollution control activities.	Drinking-water system improvements, feasibility studies, source-water protection, infrastructure retrofits
Cooperating Technical Partnership Program	FEMA	The program creates partnerships between FEMA and qualified local and state partners to create, maintain, and publicize up-to-date flood and other hazard maps and data.	Planning, outreach, feasibility studies
Drinking Water State Revolving Fund	WA Department of Health	The Drinking Water State Revolving Fund (DWSRF) provides loans to drinking water systems to pay for infrastructure improvements. In some cases, partial loan forgiveness is offered.	Infrastructure retrofits, source-water protection, planning, drinking-water system improvements
Emergency Watershed Protection Program	Natural Resource Conservation Service (NRCS)	Emergency recovery measures for runoff retardation and erosion prevention to relieve imminent hazards created by a natural disaster.	Infrastructure retrofits, slope stabilization, source-water protection, flood risk reduction, erosion prevention
Estuary and Salmon	Department of Fish and	ESRP provides funding restoration and protection efforts in Puget Sound,	Acquisitions, slope stabilization, flood risk

Restoration Program	Wildlife (DFW)	including projects such as flood storage, erosion control, and climate resilience measures.	reduction projects, ecosystem restoration
FireWise Fuel Mitigation Grant Program	WA Department of Natural Resources	The Fuel Mitigation Grant provides a cost share for communities engaged in defensible space and fuels reduction projects.	Wildfire fuels reduction, defensible space
Floodplains by Design	WA Department of Ecology	Floodplains by Design is the primary grant program for projects that reduce flood hazards while restoring the natural functions that Washington rivers and floodplains provide.	Slope stabilization, ecosystem recovery, flood-risk recovery
Flood Mitigation Assistance Grant Program	FEMA	FMA provides funding to local jurisdictions and states for projects and planning that reduces or eliminates long-term risk of flood damage to structures insured under the NFIP.	Flood risk reduction projects that benefit the NFIP, including acquisitions, elevations, and some structural mitigation such as local risk reduction structures and dry floodproofing.
Hazard Mitigation Grant Program	FEMA	HMGP is authorized statewide after a disaster declaration and is the most flexible of FEMA's three mitigation programs. Jurisdictions must have an approved hazard mitigation plan and projects must be cost effective.	Most long-term risk-reduction projects that protect against fire, flood, earthquake, and other natural hazards.
King County Flood Control District Flood Reduction Grants	King County Flood Control District	The Flood Reduction Grants target medium and small local flood reduction projects including projects where the control of stormwater will have a direct benefit in reducing flooding. Eligible applicants include homeowners, special districts, tribes, cities, and county agencies.	Projects can address either existing or potential flooding and proposals should show that the flooding has current or potential economic impacts.
King County Budget	King County	The two-year King County budget for 2019-2020 was approximately \$11.6 billion dollars. Approximately 15% of this money makes up the general fund. Major Expenditures are: Metro Transit (21%), Wastewater (14%), Health & Human Services (13%), and Law, Safety, & Justice (12%). There are ~15,000 full-time-equivalent (FTE)	Various

		county employees with most employed in Transit (35%), Criminal Justice (25%), and Public Health (9%).	
King County Loss Control Fund	Office of Risk Management	The Loss Control Fund is for internal county projects and is limited to emergent risks where advance planning and budgeting were unavailable. \$2M has been appropriated for the 2019-2020 biennium.	Emergent risks, to include likely infrastructure failure
King County Parks Levy	King County	Revenue generated by the parks levy goes to fund open space protection, new parks, trails, and other assets. This funding could theoretically be used for the acquisition of threatened properties for preservation as open space.	Acquisition of high-hazard properties for preservation as open space
Post-Fire Hazard Mitigation Grant Program	U.S. EPA	Program authorized following a Fire Management Assistance Grant (FMAG) declaration. Program focuses on wildfire risk and post-fire risk mitigation, including fuels reduction and post-fire flood control projects. Program prioritizes the county receiving the FMAG declaration.	Fire-related mitigation, including defensible space, generators, and post-fire flood risk reduction, planning, feasibility studies
Pre-Disaster Mitigation Grant Program	FEMA	Annual program for cost-effective mitigation projects and plans. Jurisdiction must have a current mitigation plan to be eligible. Following the 2019 grant round, this program will be replaced by BRIC.	Most long-term risk-reduction projects that protect against fire, flood, earthquake, and other natural hazards.
Public Works Board	WA Department of Commerce	Low-interest loans for pre-construction or new construction for replacement/repair of infrastructure for stormwater, solid waste, road, or bridge projects. Emergency loans are available for public projects made necessary by a disaster or imminent threat to public health and safety.	Utility and infrastructure retrofits
Rural Community Assistance Corporation	Rural Community Assistance Corporation	Water, wastewater, stormwater, and solid waste planning; environmental work; to assist in developing an application for infrastructure	Planning, feasibility studies

		improvements for small, rural communities.	
Rural Water Revolving Loan Fund	National Rural Water Association	The RWLF provides low-cost loans for short-term repair costs, small capital projects, or pre-development costs associated with larger projects to small, rural communities.	Source-water protection, drinking water system improvements, other retrofits
Source Water Protection Grant Program	WA Department of Health	Projects and studies to identify solutions to source water protection problems, implement protection plans, or update data that directly benefits source water protection.	Source-water protection, drinking water system improvements, other retrofits, feasibility studies
Washington Transportation Improvement Board	Transportation Improvement Board	TIB makes and manages street construction and maintenance grants to 320 cities and urban counties.	Infrastructure retrofits, flood risk reduction
Urban and Community Forest Program	U.S. Department of Agriculture	Program provides technical, financial, research and educational services to local jurisdictions and organizations for the preservation, protection, and restoration of forestlands.	Natural resource protection, public information, planning

King County Hazard Mitigation Grant Assistance Program

A major initiative launching as part of this plan update is the King County Hazard Mitigation Grant Assistance Program. Led by KC EM, this program seeks to lower the barriers to applying for FEMA grants, especially given the new opportunities associated with the Disaster Recovery Reform Act of 2018.

King County will support jurisdictions by ensuring the mitigation projects are identified in the regional plan, offering technical assistance in developing applications, and, when requested, by administering grants on behalf of communities that lack internal grant management capabilities. This program reflects KC EM’s focus on end-to-end emergency management, supporting partners across all mission areas from mitigation to recovery.

Participation in the National Flood Insurance Program

The National Flood Insurance Program (NFIP) provides federally backed flood insurance in exchange for communities enacting floodplain regulations. Participation and good standing under NFIP are prerequisites to grant funding eligibility under the Robert T. Stafford Act. The County and most of the partner cities for this plan participate in the NFIP and have adopted regulations that meet the NFIP requirements.

King County and 34 of the 39 incorporated areas in the County are participants in NFIP; all are currently in good standing with the provisions of the NFIP. The five jurisdictions that do not currently participate in NFIP are Beaux Arts Village, Hunts Point, Maple Valley, Newcastle and Yarrow Point. Except for Newcastle, these communities have no special flood hazard areas.

Participants in the NFIP must, at a minimum, regulate development in floodplain areas in accordance with NFIP criteria. Communities participating in the NFIP may adopt regulations that are more stringent than those contained in 44 CFR 60.3, but not less stringent. The Washington State Building Code Act requires new construction to be elevated to 1 foot above the base flood elevation or to the design flood elevation, whichever is higher. Some communities in King County have adopted more stringent standards. For example, a 3-foot freeboard (height above the 100-year flood elevation) is standard for most structures in unincorporated King County.

Additionally, in the Puget Sound watershed, communities are required to regulate development in floodplains in a way that doesn't cause habitat loss or negative impacts to Chinook, coho, and steelhead salmon species. This is part of the FEMA/NOAA Biological Opinion related to communities' participation in the National Flood Insurance Program.

New Flood Insurance Rate Maps (FIRMs) are currently in a preliminary stage and are scheduled to be published in mid-2020.

In Washington State, the Department of Ecology is the coordinating agency for floodplain management. Ecology works with FEMA and local governments by providing grants and technical assistance, evaluating community floodplain management programs, reviewing local floodplain ordinances, and participating in statewide flood hazard mitigation planning. Compliance is monitored by FEMA regional staff and by Ecology. Maintaining compliance under the NFIP is an important component of flood risk reduction. All planning partners that participate in the NFIP have identified initiatives to maintain their compliance and good standing. Planning partners who do not currently participate have identified initiatives to consider enrollment in the program.

Participation in CRS

The CRS is a voluntary program within the NFIP that encourages floodplain management activities that exceed the minimum NFIP requirements. Flood insurance premiums are discounted to reflect the reduced flood risk resulting from community actions meeting the following three goals of the CRS:

- Reduce flood losses.
- Facilitate accurate insurance rating.
- Promote awareness of flood insurance.

For participating communities, flood insurance premium rates are discounted in increments of 5 percent. For example, a Class 1 community receives a 45-percent premium discount, and a Class 9 community receives a 5-percent discount. (Class 10 communities are those that do not participate in the CRS; they receive no discount.) The CRS classes are based on 18 creditable activities in the following categories:

- Public information
- Mapping and regulations
- Flood damage reduction

- Flood preparedness

As of this writing, there are 10 CRS-rated communities in King County.

Community Name	Class	% Discount in SFHA	% Discount in non-SFHA
Auburn	5	25	10
Bellevue	5	25	10
Issaquah	5	25	10
Kent	5	25	10
North Bend	5	25	10
Renton	5	25	10
Snoqualmie	5	25	10
Carnation	7	15	5
Redmond	5	25	10
King County	2	40	10

Regional Risk and Probability Summaries

While most of the risk and probability of future occurrence for hazards is similar for all jurisdictions in King County, some are at greater risk due to specific geographic features including proximity to floodplain (increases flood probability and risk from earthquakes due to liquefaction). For natural hazards, the relative probability of occurrence within 25-50 years (**High**, **Medium**, or **Low**) and relative risk as described in each jurisdiction’s annex are identified in the table below.

The table below does not include Avalanche risk (high annual probability of occurrence, but only in unincorporated areas) nor tsunamis (low probability of occurrence for all areas, exposure is currently only mapped for the cities of Des Moines and Seattle. Acronyms: WSD = Water and Sewer District, WD = Water District, SD = School District, RFA = Regional Fire Authority, UD = Utility District.

Risk Assessment Overview

The King County Regional Hazard Mitigation Plan Risk Assessment covers 8 natural and 6 human-caused hazards.

- Avalanche
- Earthquake
- Tsunami
- Volcano
- Landslide
- Wildfire
- Flood
- Severe Weather
- Hazardous Materials
- Health Incident
- Terrorism
- Civil Disturbance
- Cyber Incident
- Dam Failure

These assessments were developed using the best available data from sources including:

- Washington State Fusion Center (Terrorism, Civil Disturbance)
- King County Dam Safety Program (Dam Failure)
- King County IT (Cyber Incident)
- Public Health Seattle-King County (Health Incident)
- Washington State Emergency Management LEPC Program (Hazardous Materials)
- King County Flood Control District (Flood)
- Washington State Emergency Management Geologic Hazards Program (Tsunami, Earthquake, Volcano)
- King County Strategic Climate Action Plan (Wildfire, Severe Weather)
- Washington State Department of Transportation (Avalanche)
- King County Department of Natural Resources and Parks (Landslide)
- King County Department of Permitting (Structure Fire)
- Washington State Enhanced Hazard Mitigation Plan
- Washington State Department of Natural Resources (Landslide, Earthquake, Tsunami, Volcano, Wildfire)
- King County Facilities Management Division
- King County Hazard Inventory and Risk Assessment, 2016
- FEMA RiskMAP Program, King County Risk Report (Earthquake, Landslide, Volcano, Flood)

Data sources are cited with footnotes throughout the plan. In addition to using data and report information from the above sources, many also contributed time and expertise to the review and development of the individual risk assessment chapters.

Methodology

This risk assessment is intended to provide a robust overview containing key details, vulnerabilities, and considerations to enable emergency managers to plan for disasters. The profiles are designed to be brief, and yet also comprehensive enough, to be useful during a disaster response to help provide information on potential impacts and priority vulnerabilities.

This assessment focuses on examining impacts (consequences) from hazards on 10 different topic areas. These areas reflect best practices as identified by the Emergency Management Accreditation Program (EMAP) plus priority areas identified by King County.

- King County residents – all residents in King County
- Vulnerable populations – populations more likely to experience losses and recover more slowly from an incident. Different vulnerable populations may be highlighted depending on the incident type. For example, wildfire in King County is overwhelmingly a problem of smoke and smoke impact people with respiratory vulnerabilities most severely.
- Property – private property
- The economy – economic functions and assets
- The environment – natural resources, wildfire, fish, plants, and natural systems
- Health systems – hospitals, pharmacies, and the ability for people to find and receive care
- Government operations (continuity of operations) – King County government operations
- Responders – fire, police, EMS, and related services
- Lifeline infrastructure – power, water/wastewater, transportation, communications
- Public confidence in jurisdiction’s governance and capabilities

Each profile also looks at priority vulnerabilities in order to identify those areas requiring immediate focus before, during, and after an incident.

Data

GIS data was taken from a variety of King County, Washington State, and federal sources. The data was sourced via King County GIS, including layers owned by both GIS and by other entities. Some of the GIS data analyzed in completing this risk assessment include:

TITLE	DESCRIPTION	SOURCE
Active Faults	Known active faults in the Puget Sound region	WA State Department of Natural Resources (DNR)

Wastewater Systems	King County wastewater treatment and conveyance systems	King County Department of Natural Resources and Parks Water Treatment Division (DNRP)
Water Supply Facilities	Seattle water supply facilities and conveyance systems. These are used to supply Seattle as well as many cities.	City of Seattle Public Utilities
Bridges	King County-maintained bridges	King County Roads
Rail Routes	All rail routes, including BNSF and Sound Transit	King County GIS
Transit Routes	Metro transit routes	King County Metro
Arterials	Arterial streets	King County Roads
Levees and Revetments	County-maintained flood protection structures.	DNRP, King County Flood Control District
BPA Transmission Lines	Bonneville Power Administration power transmission systems	Bonneville Power Administration
Historic Buildings	Designated historic buildings	King County GIS
Schools	School facilities	King County GIS
Government Buildings	King County government buildings	King County GIS, Facilities Management Division
Hospitals and Medic Units	Hospitals and medic unit locations	King County GIS
Pharmacies	Pharmacy locations	King County GIS
First Responder Facilities	Locations of fire, police, and EMS	King County GIS
City Boundaries	City jurisdictional boundaries	King County GIS
Rivers and Lakes	Waterbodies	King County GIS
Building Address Points	Building address points and age	King County Assessor
Building Age	Building address points and age	King County Assessor

Volcanic Hazard Areas	Lahar, lava flow, and lahar sediment areas	WA DNR, U.S. Geological Survey
Landslide Hazard Areas	Historic, deep landslide risk areas	WA DNR
Preliminary 100-year Floodplain	1% annual chance, special flood hazard area as mapped by FEMA. Will take effect as the regulatory floodplain in 2020.	FEMA, King County Flood Control District
Floodways	The regulatory areas including the channel and adjacent land areas that must be preserved in order to discharge the base flood without increasing the water surface elevation by more than a designated height.	FEMA, King County Flood Control District
Liquefaction Potential	Areas of NEHRP soil classes D, E, and F.	WA DNR
Landslide Buffer Areas	Buffers of 50 feet around known landslide areas.	King County GIS
Statewide Roads	State and federal highways	King County GIS
Health Insurance Coverage	Individuals with health insurance, by Census Tract	US Census, American Community Survey (ACS)
Travel Time to Work	Travel time to work on average by Census Tract	US Census, ACS
Means of Transportation to Work	Means of transportation to work, by percent, by Census Tract	US Census, ACS
Race	Self-identified race	US Census, ACS
Ethnicity	Self-identified ethnicity	US Census, ACS
Income	Income (range)	US Census, ACS
Languages	Languages other than English spoken at home	US Census, ACS
Disability Status	Counts of disabled persons	King County GIS
Education	Educational attainment by years, by Census Tract	US Census, ACS

Tenure	Housing tenure (ownership) status	King County GIS
HAZUS for earthquake (Seattle Fault, Cascadia Subduction Zone)	HAZUS runs for Seattle Fault 7.1 and Cascadia Subduction Zone 9.0 scenarios	FEMA RiskMAP

This and any additional data can be viewed on the ArcGIS online hazard map. This map will be available at least during the plan review and adoption phase and may be made available permanently: <http://kingcounty.maps.arcgis.com/apps/View/index.html?appid=41abdeae1bf44907a9c14b98a2e5fb92>.

Vulnerable Populations and Population-Based Vulnerability

Population vulnerability (or social vulnerability) measures factors that theoretically increase the likelihood of a population to suffer more losses during disasters or recover more slowly after being impacted. There is a growing body of work on this kind of vulnerability; however, how the data is reported can obscure the root causes of vulnerability when converted into an index or score. Knowing the root causes of vulnerability and how those vulnerabilities contribute to losses during disasters is critical for hazard mitigation professionals since each cause may require a unique strategy to address. For example, if the vulnerability results from language differences, then this can be addressed with robust translation and outreach services.

Communities that consider population-based vulnerability and social justice, often do it as an overlay – examining the impacts of a proposed project on vulnerable populations, for example, after the project has already been prioritized or mapping the location of vulnerable populations in accordance with some composite score and institutionally-defined definition of vulnerability. It is unclear if mapping alone, if awareness alone, has had much impact on where the bulk of resources are directed.

For this analysis, we examine the best available data of factors that have been found to lead to increased losses or recovery times following hazard events. This is to establish areas with different kinds of heightened vulnerability. We then overlay data on race, ethnicity, and income. This is to establish where equity may be a concern, where causes of vulnerability overlap with historically underrepresented minority populations.

Determinants of Population Vulnerability

Good data at the appropriate scale was not available for all the below factors. However, these are factors that were identified through research and by the planning team as critical determinants of vulnerability. Maps of a selection of these factors, along with priority hazard areas, follow the list of variables.

Population factors (population-based measures)

1. Home Ownership Status (Renter)
2. Age (old or young)

3. Unemployment
4. Income
5. Wealth
6. Access and Functional Needs/Disability
7. Dependence on public transportation
8. Language other than English spoken at home
9. No health insurance
10. Hazard insurance coverage
11. Minimum wage employment/service sector employment
12. Families with dependents
13. Living in poverty
14. Crime rate
15. Years of schooling completed (HS, BA, MA, etc.)

Accessibility and capital factors (access/infrastructure measures/social capital)

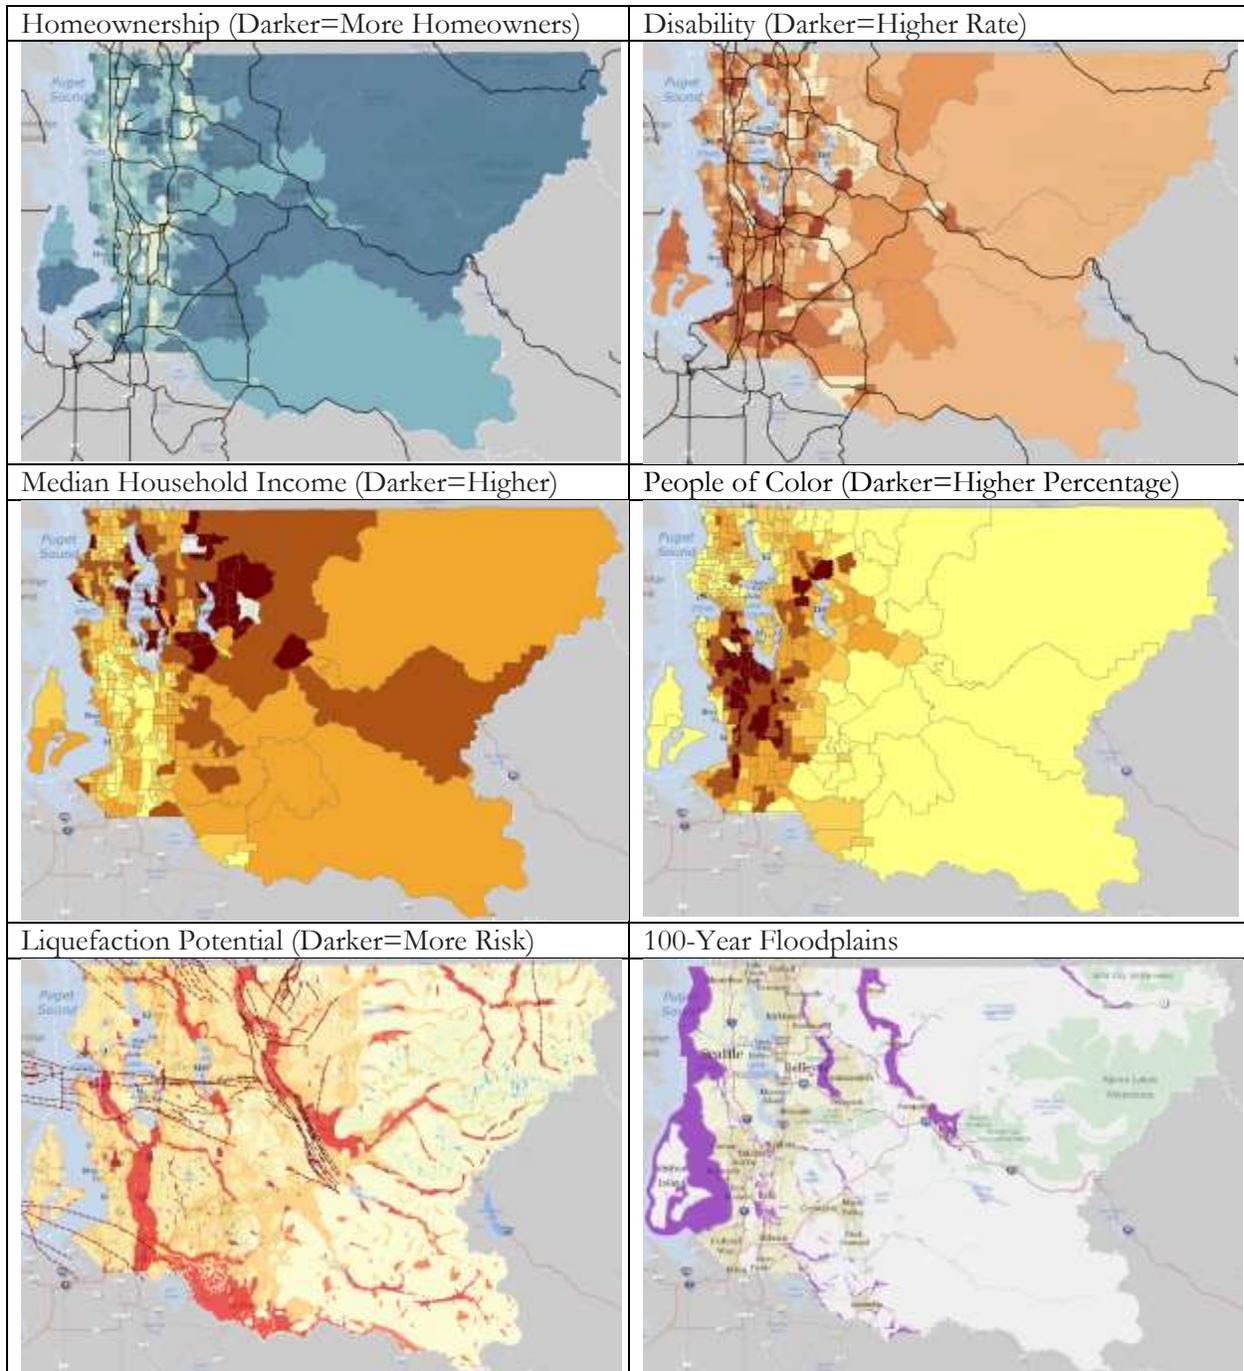

- Access to services (schools, libraries, community centers, county/city facilities)
- Quality of public facilities (public facility effective age)
- Quality of schools
- Access to hospitals or health clinics
- Quality of hospitals/health clinics
- Access to phone and internet
- Average age of housing
- Average commute time/distance to work
- Per capita government spending
- Neighborhood engagement (civic engagement, neighborhood association, something else?)

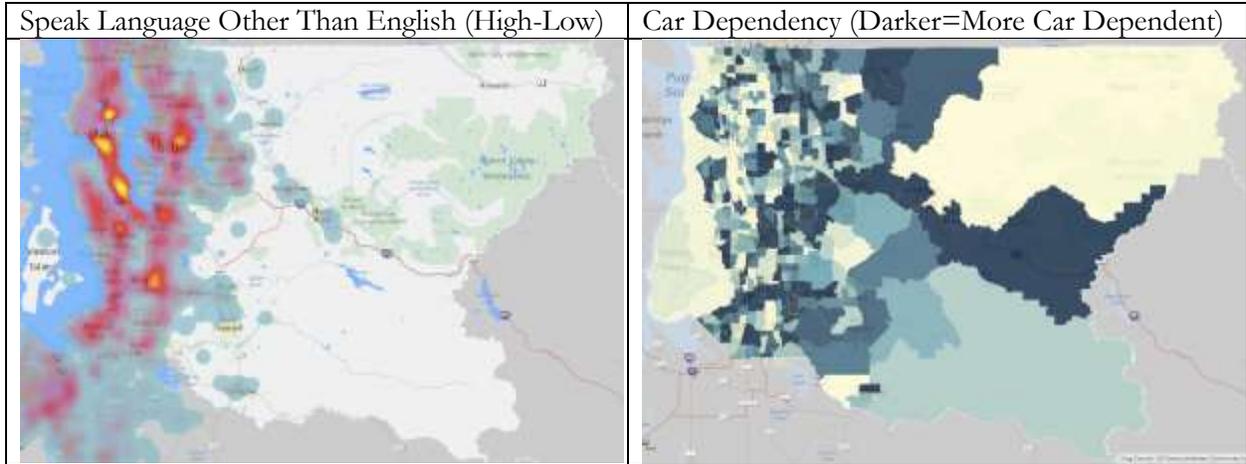

Meta-factors (determinants of equity)

- Race/ethnicity
- Age
- Income
- Immigrant/refugee status

The results from this analysis will be used to promote more effective, equitable disaster mitigation, response, and recovery by identifying key vulnerabilities and areas that may require additional investment. Also, this analysis will help identify areas where public infrastructure is older or less resilient, or where hazard risk is greater, so that additional investments can be targeted in those areas.

The following maps illustrate several of the above variables associated with greater hazard risk along with high hazard areas and non-white populations. This is just a selection of potential variables and illustrates how high-hazard areas, factors associated with hazard risk, and communities of color or with higher rates of disability may overlap. The highest population-risk areas in King County tend to be areas south of Seattle in the Green River Valley. These areas also are areas with the highest hazard risk. Investments that target critical public infrastructure and support structures in these communities would likely have the best cost-benefit ratio. Investments in these areas would have the added benefit of also promoting more equitable access to high-quality infrastructure and services for populations historically underserved by public investment.

Jurisdiction-Specific Risk Assessments

In addition to this countywide risk assessment, each planning partner completed a risk assessment focusing on the priority hazards, vulnerabilities, and consequences. These assessments are contained in each planning partner annex. These assessments will have much more detail about individual jurisdiction risks and should supplement the wider lens of the risk profiles contained in the core plan.

To complete their assessments, jurisdictions were provided with GIS data and an ArcGIS online map containing relevant data on hazards and impacts. The data is the same as that used in the base plan risk assessments, but jurisdictions were asked to focus on impacts specific to their assets and boundaries. Jurisdictions assessed risk in two ways.

First, jurisdictions looked at hazards that could impact them, how susceptible/vulnerable they are to those hazards, and the consequences/impacts of a hazard event. The task was to develop “risk elevator pitches” that summarize the key elements of hazard risk in a way accessible to elected officials and the public.

Second, jurisdictions were asked to consider an asset-based approach, looking at their priority assets, the hazards that threaten those assets, and the consequences of losing the asset. All jurisdictions were encouraged to complete this process, but only special purpose districts were required to complete it. The goal of this approach was to identify assets that needed mitigation.

In addition to these risk summaries, a map showing the spatially discrete hazards (flood, liquefaction potential, steep slopes) was developed for cities.

In developing their risk assessments, jurisdictions held internal meetings to select the list of hazards that would be included and to assess the relative risk of each hazard. Most used a high-medium-low approach for impact, where high impact is a debilitating event and moderate impacts are serious events that disrupt operations for multiple days. For those that also considered probability separately from the base plan, a high probability event is likely to occur on an annual basis. These jurisdiction-specific risk assessments are not designed to be exhaustive but should give a much clearer picture of risk and vulnerability than is normally available from countywide assessments.

King County Development Trends and Risk Trajectory

From 2010 to 2018 King County has grown at a rate of 13.4% per year.³ This population growth has coincided with a near doubling of total assessed property values in the county from \$340 billion in 2014 to \$606 billion in 2019.⁴ Over \$44 billion worth of new construction was assessed from 2014-2018. Property values stabilized in most of the county in 2018, although many unincorporated areas, especially in the northeast of the county around Carnation and Duvall, continued to grow at double-digit rates.

The huge growth in property values and development of new lands has also coincided with a growth in diversity. In 2018, the total population identifying as white declined by nearly 5000 persons while the non-white population grew dramatically. While this is a small change, it indicates that the future of King County will be more diverse and more populous.

Also, since 2015 the available science on risk has improved markedly. King County has new landslide hazard data from Washington State Department of Natural Resources (WA DNR). There is also updated tsunami data indicating far greater risk than previously recognized in the coastal areas. New climate change data is available in the Puget Sound State of Knowledge Report.⁵ Finally, WA DNR is expected to publish a draft wildland-urban interface fire risk map by the end of 2019, helping to show the extent of fire risk, much of it spurred by the growth indicated above.

As development has occurred, jurisdictions have invested in risk reduction measures such as the installation of ductile iron pipe to replace cast iron pipe in water systems. While this work is critical, in most jurisdictions it is unlikely to be complete for 20-30 years. Other work has included bridge retrofits, wastewater system improvements, flood risk reduction projects, and risk assessments and planning. Nevertheless, there are dozens to hundreds of bridges in need of upgrades to keep the transportation system functioning in the event of a major earthquake.

New science showing more risk and a dramatic increase in population, especially in areas not previously developed, indicates that the county trajectory is toward more exposure and vulnerability. While there is ongoing work to reduce risk, it is not keeping up with existing needs, much less the needs of a larger, more diverse population living across a larger area.

ESTIMATED CHANGES IN RISK 2015-2020		
SECTOR	RISK CHANGE (Increased -, Decreased +, No Change =)	EXPLANATION

⁵ Climate Impacts Group. 2015. Puget Sound State of Knowledge Report. Accessed online on 8/28/19 from http://ceses.washington.edu/picea/mauger/ps-sok/ps-sok_cover_and_execsumm_2015.pdf.

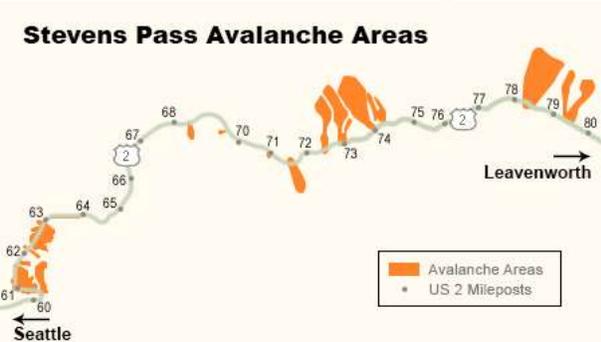

King County Residents		With a larger population that is likely no more prepared, risk to King County residents is estimated to have increased.
Vulnerable Populations		While there has been a large increase in median income, there is more income inequality and housing insecurity due to housing costs and other issues. There are also many new immigrants who may not be reached by disaster messaging or be familiar with the region’s hazards. Overall risk to vulnerable populations has increased as these populations have grown.
Property		While the construction boom is reducing risk in some areas, some construction patterns, such as building homes close together, is increasing risk from fire. Also, the new development, some of it in marginal areas is increasing risk. This is especially acute in areas in the wildland-urban interface, near floodplains, or on unstable soils.
The Economy		The economy has grown but is also susceptible to a shock caused by a disaster that could permanently displace the major companies that make this region so competitive. Many of these companies are highly mobile and a disaster that destroys the region’s infrastructure could devastate the economy.
The Environment		With heightened climate change and more development, the environment is more threatened by hazards including wildfire and flooding.
Health Systems		Health systems have seen modest improvement in overall risk as hospitals are upgraded to higher seismic standards.

Government Operations		<p>No increase or decrease in risk to government operations is identified. While there continues to be some modest investment in the resilience of public facilities, there is still significant risk of disruption of services during a major incident, as demonstrated during the 2019 snow event. A seismic event would still threaten the ability of King County government to provide services and many buildings may not be useable.</p>
Responders		<p>No change in the risk to responders is identified.</p>
Infrastructure Systems		<p>Although not sufficient to meet the need, investments in infrastructure have modestly reduced risk.</p>
Public Confidence	Mixed	<p>Public confidence in the jurisdictions' capabilities is estimated to be mixed. On one hand, emergency management and county government are delivering services on a huge scale and received relatively positive feedback from the February 2019 storms. On the other, there has been little movement to systematically improve earthquake resilience, something frequently reported by the media.</p>

Regional Risk Profile: Avalanche

Hazard Description

Avalanche hazards in the Northwest are associated with winter storms in the Cascade and Olympic Mountain ranges. Avalanches occur when a snow pack loses its grip on a slope and slides downhill. Typically, slopes of between 20 to 30 degrees and snow packs of 34 inches or more may produce avalanches. Most natural avalanches occur in back country little used by humans during such weather conditions. This tends to minimize exposure to avalanche impacts. Most vulnerable are travelers and

Stevens Pass WSDOT avalanche control areas

winter recreation enthusiasts using Stevens Pass in northeastern King County, Snoqualmie Pass in central-eastern King County, and Crystal Mountain Ski Area near Chinook and Cayuse passes in just outside of southeastern King County.⁶

Regionally, severe winter weather in the form of snowfall in the Cascade Mountains results in a snowpack that – when conditions are right – can lead to a natural or man-made/induced avalanche.

Avalanches can result in impacts to transportation through mountain passes and injuries or death to people using the mountain backcountry recreationally. Avalanche danger in King County is highest during severe winter weather from October through March annually. When moist air from the Pacific rises to climb the Cascade Mountains and meets the colder air of the U.S. interior, precipitation often falls as snow from late October through March or April each year.

Avalanches can result in impacts to transportation

The most frequent impact from avalanche is from pass closures, especially along Snoqualmie Pass on I-90. In particularly severe events, both Snoqualmie and Stevens pass may close for days at a time, effectively cutting the state in half. The other routes that cross the cascades, US 12, US 20, SR 410, and SR 14, are not suitable for large traffic volumes and large trucks and are often closed when I-90 and US 2 are closed. This occurred most recently during the February 2019 snowstorm. In that event, all the east-west highways were closed, limiting King County’s road salt supply from the east side of the state. The snowfall totals at the pass exceeded normal, with 118 total inches in February alone (average accumulation in February is 73.9 inches). February 12, 2019 broke the 24-hour snowfall record, with 31.5 inches recorded

Snoqualmie Pass WSDOT avalanche control areas.

⁶ Washington State Department of Transportation, Prediction of Snow and Avalanches in Maritime Climates: Final Report, WA-RD 203.1, December 1989, p.3.

by Washington State Department of Transportation (WSDOT) crews recorded at the summit. During this event, I-90 was closed beginning Monday afternoon, February 11, reopening on Thursday morning due to avalanche danger.

Avalanche impact areas are mapped for Snoqualmie and Stevens passes, which are maintained throughout the winter by WSDOT crews. Chinook and Cayuse passes are closed during the winter due to avalanche danger and difficulty of maintaining a clear roadway.

In addition to the roadway risk, two of the state’s three cross-state railways pass through the Cascades. These railroads travel along a route similar to the major highways and are similarly susceptible to avalanche. Major snowfall and avalanche danger can disrupt rail freight traffic across the state, with significant economic impacts.

Vulnerability Characteristics and Previous Occurrences

Recreational areas that support snowshoeing, alpine and cross-country skiing, snowmobile areas, and winter hikers and campers are most at risk from avalanche incidents. Typically, injuries to recreational hikers, skiers, snow boarders, and climbers occur outside managed areas. Several stretches of Interstate 90 and Highway 2 in King County are vulnerable to avalanches between October and April each year, depending on snow packs and weather conditions. Both Snoqualmie and Stevens Pass are significant commercial routes. Cargos are carried between the Ports of Tacoma and Seattle, and eastern Washington. When Stevens and Snoqualmie Passes are closed, I-84 in Oregon or air travel are the only practical ways to travel between Spokane and Seattle.

The popular backcountry skiing areas around Stevens and Snoqualmie passes are high-hazard zones where avalanche fatalities are relatively common. WSDOT posts signs, though these warnings are frequently ignored. People engaged in snow sports in these areas are often among the most experienced enthusiasts; however, even with safety equipment, they may trigger or fall victim to avalanches. There are, on average, one to three fatalities in avalanches statewide each year. Hundreds of avalanches are thought to occur around the Cascades each winter, though most without any human cause or impact.

There are twelve common factors that contribute to avalanche danger, including old snow depth, old snow surface, new snow depth, new snow type, snow density, snow fall intensity, precipitation intensity, settlement, wind direction and wind speed, temperature, subsurface snow crystal structure, and tidal effect.⁷ Research done at Snoqualmie Pass indicates that most natural avalanches occur within one hour after the onset of rain over a weakened snow pack.⁸ Large amounts of new snow accumulation also increases avalanche risk, especially when coupled with wide temperature swings.

2019	None	None

⁹ Northwest Avalanche Center, Accident Reports. Accessed online on 5/13/19 from <https://www.nwac.us/accidents/accident-reports/>

Scenario Drivers

There are two kinds of avalanches, loose and slab. Loose avalanches occur when light-grained snow exceeds its “angle of repose”, collapses a snow drift or bank and fans out as it slides downhill. A slab avalanche occurs when heavy or melting snow resting on top of looser snow breaks away from the slope and moves in a mass. The latter often occurs when rains soak the top layer of snow on moderately sloped terrain.

Priority Vulnerabilities

Back-country recreationists	Snowmobilers, hikers, and skiers in back-country and off-trail environments are at the highest risk from avalanche.
Transportation networks	I-90 and US-2 are the most vulnerable routes to avalanche. Disruptions to both are common during the winter, though most are for a short duration. A long-duration disruption could have significant economic consequences.
Public safety officers and volunteers	Search and Rescue regularly travel on search missions for missing recreationists, putting them at risk from avalanche as well.

Priority Impact Areas

King County residents	<p>Avalanche conditions can cause closure of ski areas like: Alpentel, Hyak (Summit East), Ski Acres (Summit Central), Stevens Pass, and/or Crystal Mountain. The recreational skiers and the people who are seasonally employed can be impacted when these conditions close ski areas. People who ski “out of bounds” take exceptional risks in locations where avalanche control does not maintain safe conditions and search and rescue operations may be hampered.</p> <p>Pass closures may inconvenience people by causing them to either take commercial flights between eastern and western Washington or cause them to take wide routes around the mountain area through the Columbia Gorge between Washington and Oregon.</p> <p>There are no major populations in King County that are exposed to avalanche terrain. The King County community closest to avalanche country is Skykomish. It has not experienced an avalanche in recent memory.</p>
Vulnerable populations	No specific impacts are expected to vulnerable populations for this hazard.
Property	Property exposed to avalanches include ski area lifts and equipment, small clusters of seasonal vacation homes and utilities supporting ski areas, ski lodges, ski area support operations, and those vacation properties.

The economy	<p>Closure of ski areas from avalanche danger usually lasts only a short time. While revenue to one or more ski areas may be reduced, no long-term economic impacts can be expected from avalanche issues.</p> <p>Heavy snows and avalanche danger may close Stevens and/or Snoqualmie Pass for extended periods. These pass closures can impede transportation of goods between eastern/western Washington, impact the Port of Seattle and port/countries around the/Pacific Rim.</p> <p>Avalanche closure of King County passes may cause motorists and truckers to reroute through Interstate 84 in Portland.</p> <p>The most significant avalanche event in Washington State, and the deadliest in US history, occurred in 1910 near Stevens Pass. Two trains carrying passengers were hit by an avalanche killing 96 people. Economic impacts are also substantial. A WSDOT study claimed that a four-day closure at Snoqualmie Pass in the winter of 2007/2008 cost the state \$27.9M in economic output, 170 jobs, and \$1.42M in state revenue (2008 dollars).¹⁰</p>
The environment	Avalanches are natural events; however, they kill wildlife and trees and can reshape the landscape.
Health systems	There are no known healthcare facilities or systems exposed to avalanches.
Government operations (continuity of operations)	<p>Avalanche areas are remote to most King County operations. Where avalanches may occur, King County Sheriff's Office Search and Rescue, Ski patrols, and volunteers may be involved. This may include BARK, a group that provides K-9 search capability for avalanche victims. Support may also be required from the aviation unit of the King County Sheriff's Office and from Emergency Medical Service units.</p> <p>Support personnel for avalanche control are provided by Washington State Department of Transportation.</p>
Responders	When avalanches bury or injury skiers and backcountry hikers, the King County Sheriff's Office Search and Rescue team(s) may be deployed along with trained volunteers and specially trained volunteer K-9 units like BARK (Backcountry Avalanche Rescue K-9). Most search missions occur in or around the off-trail perimeter of ski areas like Snoqualmie Acres, Hyak,

¹⁰ Ripley, Richard, "Four-day Snoqualmie Pass closure cost \$27.9 million," Spokane Journal, 11/20/2008. Accessed online: <https://www.spokanejournal.com/local-news/four-day-snoqualmie-pass-closure-cost-279-million/>

	Alpental, Crystal Mountain, and Steven’s Pass. Buried skiers are often severely injured or may be killed from their injuries or suffocation under large amounts of snow in areas difficult to reach.
Infrastructure systems	There are no critical facilities located in areas of the county subject to avalanches. Critical infrastructure that may be impacted includes the BNSF railway (also used by Amtrak) and the east west highways, US 2 (Stevens Pass) and I-90 (Snoqualmie Pass). Chinook Pass usually closes from October through May.
Public confidence in jurisdiction’s governance and capabilities	The public at risk has a good understanding of the risks from avalanche. Warnings are regularly posted and announced to skiers and back country hikers during the winter months.

Regional Risk Profile: Civil Disorder

Hazard Description

Civil Disorder and civil disturbances can range from minor to significant events that can disrupt the functioning of a community for a few days, weeks or months. A worst case-scenario for a King County civil disorder would be an incident that takes place in a large urban environment and lasts for an extended period of time. An example of a worst-case scenario was the 1999 Seattle World Trade Organization rioting which significantly impacted the City and led to numerous injuries and arrests. The rioting raised Seattle's cost of handling the conference to \$9 million from an earlier estimated city cost of \$6 million surpassing worst-case projections¹¹. In addition, downtown Seattle businesses lost an estimated \$20 million in property damage and lost sales during the WTO conference.

Title 18 of the United States Code defines civil disorder and lists the crimes associated with civil disorder. In Section 231 of Chapter 12, defines civil disorder as: “any public disturbance involving acts of violence by assemblages of three or more persons, which causes an immediate danger of or results in damage or injury to the property or person of any other individual... (a)(1)...use, application or making of any firearm, or explosive or incendiary device, or technique capable of causing injury or death to persons...or... (a)(2)...transports or manufactures for transportation in commerce any firearm, or explosive or incendiary device, knowing or having reason to know or intending that the same will be used unlawfully in furtherance of a civil disorder...or... (a)(3)...commit any act to obstruct, impede, or interfere with any fireman or law enforcement officer lawfully engaged in the lawful performance of official duties incident to and during the commission of a civil disorder...”.¹²

The term civil disobedience in contrast is a non-violent form of protest or resistance to obeying certain laws, demands and commands of a government or of an occupying power. Civil disobedience has been promoted by nationalist movements in Africa and India, the civil rights movement of the U.S., and labor and anti-war movements in many countries. Civil disobedience is sometimes equated with protests or non-violent resistance. Acts of civil disobedience can start peacefully but can lead to violence. In this context, civil disorder arising from civil disobedience in which participants turn violent and antagonistic toward public safety and civil authority is illegal. Washington state law defines civil disorder as “any public disturbance involving acts of violence that is intended to cause an immediate danger of, or to result in, significant injury to property or the person of any other individual.” Under Revised Code of Washington 9A.48.120, civil disorder training “as (1)...a person is guilty of civil disorder training if he or she teaches or demonstrates to any other person the use, application, or making of any device or technique capable of causing significant bodily injury or death to persons, knowing, or having reason to

¹¹ CBC News. January 6, 2000. WTO protests hit Seattle in the pocketbook. Accessed online on 8/26/19 from <https://www.cbc.ca/news/world/wto-protests-hit-seattle-in-the-pocketbook-1.245428>.

¹² Office of the Law Revision Council. 18 USC Ch. 12: Civil Disorders. Accessed online on 8/26/19 from <https://uscode.house.gov/view.xhtml?path=/prelim@title18/part1/chapter12&edition=prelim>.

know or intending that same will be unlawfully employed for use in, or in furtherance of, a civil disorder”...and (2) classifies it as a “class B felony.”

Vulnerability Characteristics and Previous Occurrences

Civil disorder may result from many situations and encompass a broad spectrum of civil action that ranges from peaceful events to other forms of disturbance caused by a group of people. The severity of such disturbances often reflects the degree of public displeasure or expression of discontent. Examples of civil disorder include, but are not necessarily limited to: violent demonstrations and other forms of obstructions, riots, sabotage, and other forms of crime. Civil disorder can be a dangerous condition that can become increasingly chaotic and volatile.

Laws have evolved that govern civil disorder and peacefully resolve conflict. In the United States, gathering in a crowd is constitutionally protected under “the right of the people to peacefully assemble.” However, assemblies that are not peaceable are generally not protected. The laws that deal with disruptive conduct are generally grouped into offenses that disturb the public peace. They range from misdemeanors, such as blocking sidewalks or challenging another to fight, to felonies, such as looting and rioting.¹³

The circumstances surrounding civil disorder may be spontaneous or may result from escalating tensions as was demonstrated during 1999 Seattle World Trade Organization protests. Civil disorder can erupt anywhere but the most likely locations are those areas with large population groupings or gatherings.¹⁴ Sites that are attractive for political rallies should be viewed as potential locations for the epicenter of civil disorder events. Disruption of critical infrastructure may occur during very severe civil disorder events. Public services such as water, power, communication, and transportation may be temporarily unavailable.

Civil disorder can also occur in proximity to locations where a ‘trigger event’ occurred as was the case in January 2017 at University of Washington when demonstrators and counter-demonstrators gathered as a politically conservative commentator was scheduled to speak. Violent protests took place on campus and a person was shot.

The Seattle Mardi Gras riot occurred on February 27, 2001, when disturbances broke out in the Pioneer Square neighborhood during Mardi Gras celebrations. There were numerous random attacks on revelers over a period of about three and a half hours. There were reports of widespread brawling, vandalism, and weapons being brandished. Damage to local businesses exceeded \$100,000. About 70 people were

¹³ Revised Code of Washington Title 9A.

¹⁴ Mid-America Regional Council. 2015. Regional Multi-Hazard Mitigation Plan. Accessed online on 8/26/19 from https://www.marc.org/Emergency-Services-9-1-1/pdf/2015HMPdocs/HMP2015_Sec4-HAZ-CivilDisorder.aspx.

reported injured. Several women were sexually assaulted. One man, Kris Kime, died of injuries sustained during an attempt to assist a woman being brutalized.¹⁵

Civil disorder can also occur as a collective outburst from a causal factor or driver. For example, past May Day protests in Seattle have routinely exhibited violence or vandalism. A 2013 May Day protest in downtown Seattle turned violent with police responding to demonstrators throwing rocks, bottles, metal pipes, fireworks -- and even a skateboard. The clashes left eight officers with injuries, and police reporting the arrests of 17 people on various offenses including property destruction and assault. During the clashes, police deployed flash-bang grenades and tackled unruly protesters to the ground.¹⁶ In 2016 May Day protest in Seattle a peaceful march turned violent when protesters lit fireworks and threw rocks and Molotov cocktails at police. Nine people were arrested and five officers were injured in the clashes.

While May Day is not recognized as an official holiday, many treat it as a nationwide day of strike with thousands turning out for peaceable protests and marches in Seattle.¹⁷ Other groups, such as anti-capitalists, anti-fascists, radical environmentalists and anarchists plan May Day events too with chaos and violence often resulting in arrests, infrastructure damage and interruption to transportation services. These aren't the only groups to demonstrate on May Day. In the 1970s, anti-war protesters took to the streets of Seattle. Anti-police brutality activists joined anarchists in 2015.¹⁸

The ultimate severity of any civil disorder event will depend on the magnitude of the event and its location. The more widespread an event is, the greater the likelihood of excessive injury, loss of life and property damage. Additional factors, such as the ability of law enforcement to contain the event, are also critical in minimizing damages.

Against this backdrop and historical precedence, King County will continue to experience civil disorder stemming from civil disturbance in which participants turn violent and antagonistic toward civil authority in Seattle and other communities. However, based on King County's experience with such disturbances, the probability that such incidents will develop into mass violence of civil disorder remains low.

Scenario Drivers

Civil Disorder can arise from many situations and be triggered by a specific issue or by combination of causes. Instances of police violence have often been a scenario trigger for civil disorder (e.g. 2009 Oakland police shooting of Oscar Grant).¹⁹ In King County, the 2008 video of a King County deputy assaulting a teen girl in a holding cell was referenced in a Seattle 2010 ‘March Against Police Brutality’ flyer.²⁰ During the Capitol Hill demonstration Seattle police arrested five individuals for investigation of crimes ranging from trespassing to inciting a riot.

While demonstrations and protests can occur throughout King County, these civil actions often involve free speech rights in public places and do not evolve into chaos and violence. Civil disorder within King County remains centered in the Seattle area. For planning purposes, civil disorder occurs in areas of government buildings, military bases, schools/universities, city council meetings, state/city parks and within a downtown core.

The lines between civil disorder, civil disobedience, civil unrest and protest/demonstrations are often times blurred and encompass a wide range of actions from peaceful to violent, from legal to illegal and from spontaneous to highly planned. Further, while a group of people may organize and bring attention to a specific cause through peaceful protest/demonstrations, a smaller, separate group may engage in illegal tactics. This group of anarchists are seen as purveyors of violence and destruction.²¹ Typically, criminal anarchists employ a common mode of dress which is part of a tactic frequently called "Black Bloc." In the "Black Bloc" stratagem, throngs of criminal anarchists all dress in black clothing in an effort to appear as a unified assemblage, giving the appearance of solidarity for the particular cause at hand. This tactic is particularly troubling for law enforcement security forces, as no anarchist rioter can be distinguished from another, allowing virtual anonymity while conducting criminal acts as a group.

Black Bloc gained attention in the United States in 1999 after violent protests at a meeting of the World Trade Organization in Seattle, according to a 2001 history of the tactic on the anarchist news website, A-Infos. Hundreds of people were arrested in the Seattle riots, which involved anarchists vandalizing businesses.²²

Not every public protest or demonstration will attract an element of criminal anarchists. The types of demonstrations unlawful anarchists most commonly attend include those against environmentally harmful practices, those against gentrification, and anti-police rallies.

Priority Vulnerabilities

Government facilities	Civil disorder incidents often target government organizations or visible images of the government such as police vehicles, city halls, or court facilities.
Businesses	Businesses such as banks, businesses in downtown areas or along transportation routes, and other commercial establishments are often targeted during looting or may be targeted for political or racist reasons such as ownership by an immigrant group in the case of anti-immigration riots or because they are associated with an industry being targeted by the manifestation (banks, abortion clinics, oil company offices, etc.).
Minority and immigrant communities	There have been multiple incidents in recent years of white-supremacist organizations holding events that turn violent, including the Charlottesville, VA marches that resulted in the death of a woman at the hands of a white supremacist terrorist who drove his vehicle into a crowd.

Priority Impact Areas

King County residents	All King County residents can be impacted, though those who live or work in downtown areas tend to be more exposed and impacted by civil disorder incidents.
Vulnerable populations	Ethnic minority and immigrant communities are historically targeted by civil disorder events. While rare in our region, the United States has a long history of racially-motivated riots that burn and destroy minority-owned businesses and homes.
Property	Much of the impact from civil disorder is to property, secondary only to economic impacts. During the World Trade Organization protests in 2000, over \$20 million in damage was recorded by businesses and \$9 million in costs to the city.
The economy	Economic impacts caused by loss of business, destruction of businesses, and business interruption can exceed the property damage dollar figures by a factor of two or more. Lost sales and uninsured losses can permanently destroy many businesses. Areas can also become perceived as unsafe or unwelcoming for business, further hurting the economy.
The environment	Civil Disorder will have a minimum impact on the environment; unless, hazard material facilities such as petroleum, chemical, and recycling are targeted in arson fires or vandalism. The impact on the environment in such cases could be significant.
Health systems	Health systems can be overwhelmed by civil disorder incidents, such as when large numbers of demonstrators are brought to the hospital due to exposure to tear gas or due to clashes with counter-demonstrators or with police.

Government operations (continuity of operations)	Major incidents can bring government services to a standstill. In King County, with both City of Seattle and King County offices are in the same area, along with court facilities. A major incident in this area would prevent employees from getting to work or home. Furthermore, government buildings are often targeted and can be damaged or destroyed.
Responders	Responders are often on the front line of events. Responders can be targeted, causing injury to personnel, damage to facilities, and the loss of equipment. Responders are often injured during major incidents and, even when events are brought under control, may be seen as an enemy of the community causing long-term trust issues.
Infrastructure systems	<ul style="list-style-type: none"> • Energy: Pipelines carrying oil are a potential target for demonstrators. Oil trains have been targeted frequently in Washington; however, these protests do not tend to turn violent. • Water/Wastewater: Water systems are rarely the primary target of a demonstration and may only be peripherally impacted. • Transportation: One of the largest impacts from a major incident is disruption to transportation. Transit facilities and assets like busses may be destroyed. Roads can be closed for hours or days. • Communications: Communication systems are redundant and are unlikely to be severely impacted by a civil disorder incident.
Public confidence in jurisdiction's governance and capabilities	Major incidents can cause long-term damage to public confidence in the jurisdiction or, especially, public safety elements of jurisdiction governance. This can cause either alienation or, when response is proactive, help rebuild confidence and trust. To best preserve and grow confidence, a jurisdiction must respond quickly and effectively but without excessive force. The general public expects a quick restoration of order and protection of property while activists may demand accountability from officials and safety for peaceful demonstrators.

Regional Risk Profile: Cyber Incident

Hazard Description

Information technology has become embedded in the ways we conduct business, work and live. In a government context technology is fundamental to public services such as providing healthcare, public transportation, law enforcement, citizen engagement, public utilities, and supporting tax and rate payers.

A cyber-incident can have a severe impact on technology and therefore local government’s capability to deliver services and conduct daily operations.

A cyber incident is defined by the Department of Homeland Security (DHS) in the 2016 National Cyber Incident Response Plan as “an event occurring on or conducted through a computer network that actually or imminently jeopardizes the confidentiality, integrity or availability of computers, information on communication systems or networks, physical or virtual infrastructure controlled by computers or information systems, or information resident thereon²³.

- Confidentiality refers to the ability to preserve authorized restrictions on information access and disclosure, including means for protecting personal privacy and proprietary information.
- Integrity speaks to guarding against improper information modification or destruction and ensuring information non-repudiation and authenticity.
 - Data Integrity – The property that data has not been altered in an unauthorized manner. Data integrity covers data in storage, during processing, and while in transit.
 - System Integrity – The quality that a system has when it performs its intended function in an unimpaired manner, free from unauthorized manipulation of the system, whether intentional or accidental.
- Availability refers to the ability to ensure timely and reliable access to and use of information²⁴

The nature of a cyber-incident differs from other hazards such as a landslide or an earthquake because it often lacks physical presence or evidence. The Ponemon Institute estimates the average time to identify a data breach is 206 days. When the breach is discovered it has already occurred or is still ongoing.²⁵ The average time it takes to fully contain a breach, after it has been identified, is 73 days. Organizations have seen an increase in the identification and containment mean time over the last few years, which has been attributed to the increasing severity of criminal and malicious attacks.²⁶

Wherever information technologies exist and are used, cyber incidents can occur. As the County becomes more and more dependent on its IT infrastructure it also becomes more vulnerable to IT related disruptions. Most cyber incidents can be categorized as malicious attacks, human errors or as

²³ National Cyber Incident Response Plan, Department of Homeland Security, December 2016 p. 8
²⁴ <https://nvlpubs.nist.gov/nistpubs/SpecialPublications/NIST.SP.800-12r1.pdf> 10/14/19

²⁵ IBM 2019 Cost of a Data Breach Report: Global Overview. p 50

²⁶ IBM 2019 Cost of a Data Breach Report: Global Overview. p 50

system glitches. More than 50% of the incidents are estimated to be caused by malicious or criminal attackers.²⁷

Cyber incidents based on actors with malicious intent can be driven by criminal motives for profit, extortion, and theft or to damage, destroy or interfere with infrastructure systems. Organizations worldwide experience malicious attacks on a daily basis. Most of the attacks are unstructured with little to no organization behind them such as a phishing attack or malware hidden in a downloaded file. Attacks are carried out with tools aiming to take advantage of well-known flaws and are often detected by security tools such as antivirus programs before they cause harm. However, an undetected attack can cause significant harm to an organization before it's detected and fully contained. More sophisticated attacks with a specific target are less common, harder to detect and take longer to contain. These attacks are more likely to have a catastrophic impact on an organization causing disruptions over some or all of the network. Over the last few years attackers have been targeting organizations using sophisticated ransomware, which encrypts the organizations' data and demands a ransom to decrypt it. Other attacks include cyber terrorism, aiming to cause sufficient destruction or disruption, to generate fear or undermine entities such as an organization, a region, a sector or a country.

Cyber incidents due to human errors or system glitches can occur because of negligence, lack of implemented policies and/or process, unclear roles and responsibilities, insufficient training, misconfigurations etc. Such incidents are often identified and contained faster than disruptions caused by malicious actors²⁸. Human errors and system glitches can expose confidential data, decrease availability and put data integrity at risk.

Data centers, physical IT infrastructure and hardware are vulnerable to other hazards such as long lasting power outages, flooding, earthquakes and fires. In the event of such hazards it is likely that the disruption to information technology will slow down the recovery time of critical communication systems, essential services and hardware.

Unshielded electronic and electrical equipment is sensitive to electromagnetic pulses (EMP). An EMP is an intense burst of electromagnetic energy resulting from natural (e.g. solar storms or space weather) or man-made (e.g. nuclear or pulse-power device). An EMP can temporarily affect or permanently damage electronic equipment. Solar storms which affects electronic equipment are rare but have occurred in the past impacting GPS satellite systems and signals sent to ground-based receivers²⁹.

The impact of a cyber-incident ranges from minimal to catastrophic depending on factors such as; magnitude of internal and external impact, affected systems, length of the incident, the nature of the data and so on. A small earthquake, a misconfiguration which was discovered early without any implications or a stolen encrypted laptop without sensitive data could have a minimal impact on the County. Whereas a ransomware attack which encrypts all or most of the County's data could have a

²⁷ IBM 2018 Cost of a Data Breach Report: Global Overview. p 6

²⁸ IBM 2018 Cost of a Data Breach Report: Global Overview. p 9

²⁹ NASA Solar Flares, https://www.nasa.gov/mission_pages/sunearth/news/X-class-flares.html 2019-10-14

catastrophic impact on the organization leading to loss of County operational capability, economic and reputational loss as well as life, health and safety risks and financial loss for individuals who live, work or visit the region.

Vulnerability Characteristics and Previous Occurrences

Regardless of the nature of the cyber incident, any area where an IT system supports the County services can be vulnerable. In order to reduce the risk of cyber incidents it is important to manage threats and vulnerabilities, have established backup systems, incident response plans and exercises, disaster recovery and continuity of operations. The magnitude of a cyber-incident varies greatly based on the extent and duration of the impact. The extent varies based on which specific system or data is affected, possible warning time, the ability to preempt the incident and activate a well-known and effective incident response plan.

Minor cyber incidents which are identified early and are recoverable may have some impact on daily operations before fully contained but won't have any significant effect on the County. A significant incident can have a major impact not only to the County but the region. Such incidents may result in safety and health risks, financial losses for the County and the region, reputational damage and inability to comply with regulatory requirements including penalties and fines. It may also affect the County's ability to achieve critical strategic objectives and fulfill Executive priorities.

The County's business essential services are critical to support life, health and safety in the region. Cyber incidents affecting those systems and services can have catastrophic impact on people who live, work or visit the region if they're not available within 0-72 hours after the initial disruption. The business essential services also include functions with legal requirements.

The County manages public, sensitive and confidential data on behalf of people who live, work and visit the region. Some of the data is regulated by federal law, Revised Code of Washington and national or global compliance regulations. Unauthorized, unanticipated, or unintentional disclosure of confidential data could result in loss of reputational damage, or legal action against the County and can, amongst other things result in identity theft or financial loss for impacted individuals. Personal Health Information (PHI) is more valuable on the black market than regular Personally Identifiable Information (PII). Therefore, there is a higher incentive for malicious attackers to target PHI than sensitive data such as PII. Loss of critical system or data availability, functionality and operational effectiveness, for example, may result in loss of productivity, thus impeding the end users' performance of their functions in supporting the County's operations. If hardware, computer systems, networks, servers and backups are damaged due to other hazards or accidental or deliberate damage, it can cause additional delays. System and data integrity is lost if unauthorized changes are made to the data or IT system by either intentional or accidental acts. If the loss of system or data integrity is not corrected, continued use of the contaminated system or corrupted data could result in inaccuracy, fraud, or erroneous decisions.

King County has services relying on SCADA (Supervisory Control And Data Acquisition) systems. SCADA systems are industry control systems which are used to control infrastructure and facility based

processes such as wastewater treatment and airports. Cyber incidents affecting those type of services can have severe impact on areas such as the environment, health, safety and financial consequences for the region.

Not all IT systems utilized by the County are owned or managed by the County. The County relies on numerous third party vendors and partners who are also exposed to cyber incidents and can therefore be vulnerable to cyber disruptions in other organizations.

Cyber incidents occur daily across the globe. The quantity of information being stolen by malicious attackers, destroyed or exposed as a result of a human error or made unavailable due to a system glitch is growing each year. King County is the recipient of a constant variety of attacks ranging from scans for weaknesses in our defenses, malware, phishing, and internet based attacks, as well as insider threats. The timeline below comprises state, national and international events and exemplifies consequences of a cyber-incidents.

Year	Location	Description
2006	United States	Geomagnetic storms and solar flares disabled the Global Positioning System (GPS) signal acquisition over the United States.
2007	Estonia	Dispute regarding movement of a Russian statue led to a cyber-attack that crippled websites for government services, banks, media outlets etc.
2008	Turkey	Hackers disabled communications, alarms, and caused a crude oil refinery the Turkish pipeline to explode, destroying operations and facilities.
2013	United States	Hackers stole credit card information from over 40 million Target customers.
2014	Washington State	Washington State experienced a six hour long 911 system outage due to human error.
2014	United States	280 000 AT&T accounts was breached by insiders who accessed user information with malicious intent.
2015	United States	The Office of Personal Management experienced a malicious attack result in over 20 million compromised personnel records.
2016	Global	Over 1 billion Yahoo user accounts were compromised in 2013 and was discovered and communicated in 2016.
2017	Global	Geomagnetic storm affected power grids and radios.
2017	Sweden	Due to human error the National Transport Agency exposed its entire database including military secrets and personal identifiable information of individuals in the witness protection program, military personnel, and police officers.

2017	Global	WannaCry, a ransomware virus affected over 200 000 computers across 150 countries.
2017	Washington State	The University of Washington suffered a HIPAA data breach exposing information of nearly 1 million patients due to human error.
2018	United States	The City of Atlanta, Georgia and the Colorado Department of transportation suffered a ransomware attack named SamSam.
2018	United states	The City of Valdez in Alaska was targeted by a ransomware attack that remained dormant for weeks before doing any damage.
2019	Washington State	The City of Sammamish was targeted by a ransomware attack that shut down many city online services, requiring the city manager to declare an emergency and request support from law enforcement and King County IT and hire a tech company to help resolve the crisis.

Scenario Drivers

<p>Cyber incidents can occur at any time, with or without previous warnings. Cyber incidents based on an actors malicious intent can be driven by criminal motives for profit, extortion, and theft or to damage, destroy or interfere with infrastructure systems. Cyber incidents due to human errors or system glitches can occur because of negligence, lack of policy and/or process, unclear roles and responsibilities, insufficient training, misconfigurations etc.</p>	
Advanced Persistent Threat (APT)	An attack in which the attacker gains access to a network and remains undetected. APT attacks are designed to steal data instead of cause damage.
Adware	A form of software that displays advertising content in a manner that is potentially unexpected and unwanted by users, which may also include various user-tracking functions (similar to spyware).
Denial-of-Service Attack (DoS)	Attacks that focus on disrupting service to a network in which attackers send high volumes of data until the network becomes overloaded and can no longer function.
Drive-by Downloads	Malware is downloaded unknowingly by the victims when they visit an infected site.
Electro Magnetic Pulse (EMP)	Intense burst of electromagnetic energy resulting from natural (e.g. solar storms or space weather) or man-made (e.g. nuclear or pulse-power device) which can temporarily affect or permanently damage electronic equipment.

Hazards	Earthquakes, flooding and extreme weather can cause a verity of cyber incidents including loss of data and system availability and communications.
Malvertising	Malware downloaded when the victim clicks on an affected ad.
Malware	Software that can destroy data, affect computer performance, cause a crash, or even allow spammers to send email through an account.
Man-in-the-Middle	MITM attacks mirror victims and endpoints for online information exchange. In this type of attack, the MITM communicates with the victim who believes is interacting with the legitimate endpoint website. The MITM is also communicating with the actual endpoint website by impersonating the victim. As the process goes through, the MITM obtains entered and received information from both the victim and endpoint
Password Attacks	Third party attempts to crack a user’s password and subsequently gain access to a system. Password attacks do not typically require malware, but rather stem from software applications on the attacker’s system. These applications may use a variety of methods to gain access, including generating large numbers of generated guesses, or dictionary attacks, in which passwords are systematically tested against all of the words in a dictionary. Due to users reusing the same password for different systems a password attack targeting an unrelated system can give the attacker access to a more sought after system.
Pharming	Arranging for a web’s site traffic to be redirected to a different, fraudulent site, either through a vulnerability in an agency’s server software or through the use of malware on a user’s computer system.
Phishing	Malicious email messages that ask users to click a link or download a program. Phishing attacks may appear as legitimate emails from trusted third parties.
Physical damage	Intentional or unintentional damage to physical infrastructure such as data center, hardware, power grids etc.
Ransomware	Malware that locks a person’s keyboard or computer to prevent them from accessing data until you pay a ransom, usually in Bitcoin. A

	popular variation of this is ransom crypto ware, which corrupts files using a private key that only the attacker possesses
Social Engineering	In the context of cyber-security, this refers to an effort to psychologically manipulate a person, especially through misrepresentation or deception, to gain access to information. The manipulation often relies on the trusting nature of most individuals, or makes use of many persons' natural reluctance to offend others or appear too mistrustful. The ruse may involve creating impressions that make things appear more benevolent, trustworthy, and reliable than they actually are. Some schemes are very complex, and involve several stages of manipulation over a substantial period of time.
Social Engineered Trojans	Programs designed to mimic legitimate processes (e.g. updating software, running fake antivirus software) with the end goal of human-interaction caused infection. When the victim runs the fake process, the Trojan is installed on the system.
Spear Phishing	A form of phishing that targets a specific individual, company, or agency, usually relying on an accumulation of information to make subsequent ruses more effective when further probing the target, until a successful security breach finally becomes possible.
Spoofing	Attempting to gain access to a system by posing as an authorized user, synonymous with impersonating, masquerading, or mimicking. Attempting to fool a network user into believing that a particular site was reached, when actually the user has been led to access a false site that has been designed to appear authentic, usually for the purpose of gaining valuable information, tricking the user into downloading harmful software, or providing funds to the fraudsters.
Spyware	Software that allows others to gain private information about a user, without that person's knowledge or consent, such as passwords, credit card numbers, social security numbers, or account information.
Structured Query Language injection (SQLi)	Attackers use malicious SQL code for backend database manipulation to access information that was not intended to be displayed.
Virus	A program or code that attaches itself to a legitimate, executable program, and then reproduces itself when that program is run.

Worm	A self-contained program (or set of programs) that is able to spread copies of itself to other computer systems, usually through network connections of email attachments
Zero-day exploit	An attack which occurs the same day a vulnerability is discovered in the software. The vulnerability is exploited by the attacker before it can be fixed by a patch or a permanent solution.

Priority Vulnerabilities

Essential Services	The County has identified a number of essential services which are critical to support life, health, safety and legal requirements in the region.
Critical SCADA Systems	Industrial control systems which are used to control infrastructure and facility based processes such as wastewater treatment and airports.
Critical facilities	Facilities such as data centers and incident response facilities.
Critical devices	Smart devices paired to essential services such as medical devices.
Communication system	Although separate communication systems can be utilized in the event of a severe incident the County still relies on its communications systems for daily operations.

Priority Impact Areas

King County residents	Anyone who is present in King County during a cyber-incident can be impacted. Impact on residents may include: delayed services such as transportation, impaired or cancelled healthcare services, decreased or no availability of public services, information, and financial loss and exposed or lost information.
Vulnerable populations	Individuals who have a direct dependency on King County for health and safety reasons are vulnerable to cyber incidents impacting their needed services. Other vulnerable populations include individuals and organizations who depend on an income from the County if payments can't be processed, who are dependent on critical public services or County provided transportation.
Property	Cyber incidents can cause physical damage if property such as facilities, devices, infrastructure, or end consumers are affected by the disruption. An incident including utilities, life support devices, transportation or telecommunications may lead to extensive property damages.

<p>The economy</p>	<p>The financial impact of a cyber-incident ranges from little or minimal to significant depending upon duration, scale, affected systems, devices and users. A significant, extended cyber incident affecting most or all of the County’s operations would likely impact the local and possibly regional economy for some time. An incident of that magnitude would likely creates significant, potentially long-term or ongoing challenges to the County's ability to fund essential services and activities related to Executive priorities.</p> <p>Organizations who experiences cyber incidents which leads to data breaches of sensitive or confidential information can be subjects to legal fines and financial penalties if, for example, Personal Healthcare Information (PHI) is lost or exposed or personal identifiable information including social security numbers, credit card information or driver’s license information is breached. Organizations who fail to meet regulatory and contractual obligations due to a cyber-incident may have significant cost for legal fees, settlements and fines.</p>
<p>The environment</p>	<p>The loss of control or availability of the County’s SCADA systems could potentially impact the environment in the region if, for example, it causes the release of hazardous materials or improper disposal of waste water.</p>
<p>Health systems</p>	<p>Last years’ cyber incidents including ransomware attacks, distributed denial of service attacks, system glitches and human error in healthcare systems all demonstrate that cyber incidents, are capable of triggering emergencies that impact patient care and public health. If an agency cannot access its own EHR, patient care could be delayed or hindered. Furthermore if other critical healthcare related systems and devices can’t be accessed or data integrity guaranteed patient safety will be at risk.</p>
<p>Government operations (continuity of operations)</p>	<p>Minor cyber incidents which are identified early and are recoverable may have some impact on daily operations before fully contained but won’t lead to significant loss of operations. A significant incident impacting one or more functions and businesses can severely affect the County’s capability to perform critical operations. However, not all daily operations are critical. The County has defined its essential services, which need to become operational within 0-72 hours after disruption to ensure the organizations capability to maintain critical healthcare, safety and legal and regulatory needs.</p>

	<p>In the event of a cyber-incident which render a non-critical service unavailable the County may lose revenue, experience loss of productivity and risks losing data over time.</p>
<p>Responders</p>	<p>Emergency responders may not be able to access their mission critical system, experience delays or performance issues. If data confidentiality is lost the public may lose their trust in organization and system. If data integrity is lost it may put patients and first responders at risk. King County may experience a prolonged incident response if the disruption is long lasting, complexed and exhausting internal resources.</p>
<p>Infrastructure systems</p>	<ul style="list-style-type: none"> • Energy – Information technology has a direct dependency to energy. A hazard impacting the power system can therefore have a secondary effect on the County and lead to a cyber-incident due to loss of power to devices rendering systems and data unavailable, loss of power to cooling systems which can cause overheating and fires in server rooms and data centers. Critical infrastructure have backup generators. Ensuring fuel delivery during long lasting power outages for the generators is critical. A cyber incident impacting King County and no other organization should not have an effect on the energy system. • Water/Wastewater – Both water and wastewater facilities and infrastructure are vulnerable to cyber incidents on their SCADA systems, which can result in the release of hazardous material and malfunctioning systems. Such scenarios can result in environmental impact and create health and safety risks in the region. • Transportation – Transportation systems are vulnerable to attacks on their SCADA systems, which may result in trains and vehicles not operating as planned, airport functionality issues, delays, cancellations which can result in a secondary economic impact in the region due to loss of productive if people can't access public transportation to and from work. • Communications – The County relies on different types of technology based communications methods such as its website, VOIP and email to conduct its daily operations. A cyber incident impacting the VOIP or email system would quickly result in a loss of productivity, a negative consumer experience and could potentially halt or delay some of the County's operations.
<p>Public confidence in jurisdiction's governance and capabilities</p>	<p>Recent cyber-incidents involving government agencies such as the ransomware attack on the City of Atlanta shows that such large scale disruption generate National media interest; third party actions; jeopardizes perceptions of effective operations, Executive priorities, and public confidence.</p>

Regional Risk Profile: Dam Failure

Hazard Description

Dam failure is an uncontrolled, oftentimes, rapid release of water from an impoundment.³⁰ The impact of failure varies on factors such as impoundment size, steepness, land use downstream of the dam, and speed of failure. For larger dams, failure is characterized by a flood wave with high velocities. Smaller dams may only raise water levels slightly and slowly. The result of a dam failure can result in loss of life, property, infrastructure damage, public health impacts, safe drinking water, and environmental degradation within the inundation zone, but may have secondary effects on populations outside of the flooded area.

The Washington State Department of Ecology Dam Safety Office is the regulating body over non-federal dams that impound at least 10-acre feet of water in the State of Washington. The DSO permits all new dam construction, inspects all high and significant hazard dams every 5 years, and requires that all deficiencies be remedied.

³⁰ Tetra Tech. 2017. King County Dam Safety Emergency Planning Gap Analysis Report. Page 10.

Dams serve the County in a variety of ways, agriculture, hydroelectric power generation, flood control, and recreation. King County has 127 dams located in the County. All but eleven of these dams are embankment-type dams. Contrary to the popular images of dams like Hoover, these dams are smaller and are typically made of a mixture of compacted materials such as soil, clay, and rock. A semi-pervious outer covering with a dense impervious core gives embankment dams their ability to resist seepage and water pressure. The other dams are made of concrete.

While there are 127 dams in King County, there are 21 other dams situated in neighboring counties that impact the County if they were to fail. Out of the 147 total dams, 94 threaten human life. A full list of dams that impact King County can be found at the end of this section.

Hazard Class	Number
1A = High – Greater than 300 lives at risk	10
1B = High – 31 to 300 lives at risk	18
1C = High – 7 to 30 lives at risk	42
2* = Significant – 1 to 6 lives at risk	17
2D = Significant – 1 to 6 lives at risk	7
2E = Significant – Environmental or economic impact	3
3 = Low – No lives at risk	50

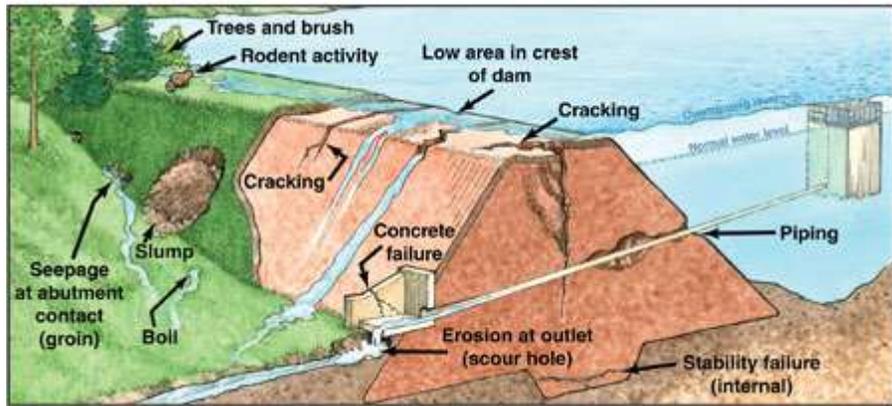

* Legacy classification, parsing all 2's into 2D's and 2E's ³¹

Dams fail for a variety of reasons, but the four most common are:³²

- Overtopping, 34% - caused by the reservoir reaching capacity and water spilling over the top of a dam
- Foundation defects, 30% - caused by settlement and slope instability
- Piping and seepage, 20% - when water travels through the dam and causes internal erosion
- Conduits and valves, 10% - Piping of embankment material into the conduit through joints or cracks

³¹ Washington State Department of Ecology - Water Resources Program - Dam Safety Office. 2019. Inventory of Dams Report.

³² Washington State Department of Ecology – Water Resource Program – Dam Safety Office. Accessed 8/28/2019. <https://ecology.wa.gov/Water-Shorelines/Water-supply/Dams/Emergency-planning-response/Incidents-failures>.

33

Dam failure events are infrequent and may coincide with other events, such as earthquakes, landslides, excessive rainfall, wildfires, lahars and snowmelt. The average age of dams in King County is 47. As infrastructure ages, increased spending is needed to maintain its integrity.

Following are a selection of events that may cause a dam to fail.

Earthquake³⁴

Earthquakes can result in damage or failure of a dam. Earthquake effects on dams mainly depend on dam types. For example, the 2011 Tohoku Earthquake damaged 48 dams, causing one embankment type dam to fail³⁵. Safety concerns for embankment dams subjected to earthquakes involve either the loss of stability due to a loss of strength of the embankment and foundation materials or deformations such as slumping, settlement, cracking and planer or rotational slope failures. Dams are engineered to withstand the Maximum Considered Earthquake, but older dams may have been engineered before we fully understood the earthquake risk in the region.

Climate Change³⁶

While dam failure probabilities are low. The chance of flooding associated with changes of dam operation in response to weather patterns is higher. Dam designs and operations are developed in part from hydrographs and historical records. If weather patterns experience significant changes over time due to the impacts of climate change, the dam design and operations may no longer be valid for the changed condition. Release rates and impound thresholds may have

³³ Washington State Department of Ecology – Water Resource Program – Dam Safety Office. 2018. Status of High and Significant Hazard Dams. Page 6.

³⁶ Climate Impacts Group - University of Washington. 2018. New Projections of Changing Heavy Precipitation in King County. Page 40.

to be changed. This would result in increased discharges downstream, thus increasing the probability and severity of flooding.

Landslides³⁷

The integrity of a dam or reservoir can be affected by a landslide if they fail or move. Landslides can be triggered by heavy rainfall, snowmelt, reservoir drawdown, or earthquakes. Landslides can occur upstream in the reservoir, in a canyon downstream of a dam, or within the abutment of a dam. A landslide into the reservoir can generate a wave large enough to overtop a dam. Sloshing back and forth in the reservoir can result in multiple waves overtopping the dam. If the waves are large enough, there could be downstream consequences can just from a wave overtopping the dam even if it doesn't fail. If enough large waves overtop an embankment dam or a concrete dam with erodible abutments, a failure could potentially result³⁸. Some dams in the County have been built abutting a landslide. Often, these are ancient landslides that have stopped moving or are moving very slowly. However, if a landslide moves far enough, it can crack the core of an embankment dam, resulting in pathways for internal erosion to initiate, or disrupting the abutment support of a dam, resulting in failure.³⁹

Wildfires⁴⁰

Many of the County's highest hazard dams lie within wildfire-prone areas. Wildfires can damage dams, such as Eightmile dam near Leavenworth, directly by burning the surface of the dam or spillway and damaging other facilities at the dam. But the main threat from wildfires is how the surrounding watershed behaves. Heavy rains in a burned area can create:

- More and faster runoff from rainfall events, especially high-intensity storms.
- Large amounts of sediment, which may reduce storage capacity in a reservoir.
- Debris flows (mudslides) or downed timber, which may obstruct access to the dam.
- Debris flows from hill slopes near spillways, which may obstruct spillways.
- More floating debris (dead trees, branches, sticks) in a reservoir, which may obstruct spillways⁴¹

⁴¹ Washington State Department of Ecology - Water Resources Program - Dam Safety Office. 2015. Focus on Dams and Wildfires. Page 1.

Additionally, new development, outside of the 100 year flood plain, continues in dam inundation zones, meaning the population-at-risk from dam failure will continue to rise. Below shows development outside of the floodplain, but within a dam failure inundation area.

Vulnerability Characteristics and Previous Occurrences

King County has high hazard 1A dams that sit on the Green, White, Cedar, and Tolt Rivers. Additionally, Culmback dam in Snohomish County would flood parts of the Lower Snoqualmie Valley. The Green, White and Lower Snoqualmie Valleys are the areas of greatest concern for dam failure. Smaller privately owned and government dams are also a concern, as they may not have access to funding streams that other larger municipal governments do.

Four dam failure incidents have occurred in King County; they account for all lives lost due to dam failure in Washington State:⁴²

- December 1918 - Masonry Dam near North Bend had excessive seepage, which caused a mudflow, destroyed a railroad line and damaged the village of Eastwick; no lives lost.
- February 1932 - Eastwick railroad fill failed. A slide caused railroad fill to back up and fail, destroyed a railroad line and damaged the village of Eastwick; 7 lives were lost.
- July 1976 - Increased discharge from Mud Mountain Dam caused a surge in flow killing two children playing in the White River near Auburn.
- January 1997 - N. Boeing Creek Dam in Shoreline failed due to excessive seepage, poor hydraulics, and no emergency spillway during a large storm event; no lives were lost.

Other notable dam incidents in King County:

- In January 2009 two depressions were discovered in the right abutment of the United States Army Corps of Engineers’ Howard Hanson Dam. While repairs were being conducted, there

⁴² Washington State Department of Ecology - Water Resources Program - Dam Safety Office. 2019. Washington State Notable Dam Failures and Incidents.

was a 1 in 3 chance of a 25,000 cfs release down the Green River which would have caused significant flooding. The USACE was able to fully fix the dam by 2011 before a substantial flood ensued. King County and local jurisdictions spent \$30 million on flood protection that wasn't reimbursed by FEMA.⁴³

- In January 2009, Mud Mountain Dam, owned and operated by the USACE, released a higher than usual flow down the White River during a heavy rain event. As a result, 100 homes were flooded. Since then, King County Flood Control District, Washington State, and Pierce County jointly funded a levee setback to reduce the risk of flooding and increase habitat restoration⁴⁴.

Scenario Drivers

Howard A Hanson	<p>Howard Hanson, constructed in 1961, is a federally owned and operated dam by the United States Army Corps of Engineers. Its primary purpose is to provide flood control in the winter and fish enhancement in the summer. It dramatically reduced the amount of flooding that the Green River Valley experienced before its construction.</p> <p>The right abutment of the dam is the toe of a large landslide. Seepage problems can occur for dams built into landslides. As mentioned previously, landslide activity can pose a serious risk to dams. Many mitigation actions have been taken to reduce risk at the dam, such as a gravel blanket and additional vertical and horizontal drains in the drainage tunnel have all drastically improved the safety of the dam. If preventative actions are not taken, internal erosion could fail the dam.</p>
South Fork Tolt Dam	<p>The South Fork Tolt Dam is owned and operated by the City of Seattle. It is a hydroelectric dam that also provides drinking water for 30% of 1.3 million people across the greater Seattle area. South Fork Tolt Dam is a large embankment type dam, equipped with a morning glory spillway.</p> <p>The Tolt dam has known landslide hazards below the dam, and above the reservoir. If a slide were to occur below the dam, the slide may create a dam of its own. Engineers would need to evaluate what action should be taken. The Tolt Dam would have to lower the amount of flow downstream why the risk is being assessed. Additionally, if a slide were to occur in the reservoir, an overtopping wave may be generated that could cause the dam to fail or send a flood wave downstream.</p>
Mud Mountain Dam	<p>Mud Mountain Dam is a United States Army Corps of Engineer owned and operated dam on the White River. Its primary purpose is to provide flood control for nearly</p>

⁴³ Seattle Times. 2011. FEMA won't pick up \$30 million tab to prepare for flooding. <https://www.seattletimes.com/seattle-news/fema-wont-pick-up-30-million-tab-to-prepare-for-flooding/>

⁴⁴ King County Department of Natural Resources and Parks – Water and Land Resource Division. 2018. Lower White River Countyline Levee Setback Project. <https://www.kingcounty.gov/depts/dnrr/wlr/sections-programs/river-floodplain-section/capital-projects/lower-white-river-countyline-a-street.aspx>

400,000 residents in King and Pierce Counties. Typically, there isn't a reservoir being impounded by the dam. During heavy rains or times of snowmelt, engineers will impound the water and slowly release it downstream to avoid flooding residents.

The White River is a glacial river fed by Mt. Rainier. This leaves the possibility that a lahar, triggered by an earthquake, volcanic activity, or heavy rains could cause a debris flow that would block the intake structure on the dam. Such an event would decrease the storage capacity of the reservoir and cause flows to travel over the spillway. The loss in flood control capabilities on the White River would leave the Green, White, and Puyallup River Valleys susceptible to flooding.

Situated in Snohomish County, but inundating a portion of the King County's Lower Snoqualmie Valley, the Culmback Dam is owned and operated by Snohomish Public Utility District One. Culmback offers hydroelectric power generation, flood control, drinking water, and recreational benefits to the region.

Culmback Dam

Culmback's morning glory spillway is designed to maintain adequate levels of freeboard in maximum probable flood events. Changes in hydrology affect the amount of water a dam would need to convey downstream to keep it from failing. Culmback Dam's watershed lies within a densely forested area that slows the speed in which water enters the reservoir, prevents sediment from entering the reservoir, and prevents debris flows. A wildfire around the dam would increase the hydrologic strain on the dam. An increased flow could be compensated with larger releases from the dam, but would result in flooding of the Town of Sultan. If not enough water could be discharged, an overtopping scenario at the dam would prove very dangerous.

Lake Tapps is a reservoir that sits in Pierce County made up of a system of dikes. If particular dikes were to fail, they would inundate Auburn and portions of the Green and White River Valley. Lake Tapps was built by Puget Sound Energy in 1911 and ran a hydroelectric program until 2004. Lake Tapps was purchased by Cascade Water Alliance in 2009 who currently owns and operates the reservoir. Its primary function is to provide drinking water to a group of contracting King County cities and water districts.

Lake Tapps

In addition to providing drinking water, Lake Tapps is also a residential community, many of whom use the Lake for recreational purposes. While residents are instructed to stay off the dikes, there is no physical security to keep individuals from accessing the structure. Many dikes have publically accessible roads. Acts of terrorism or sabotage could provide a serious threat to the integrity of the levees.

<p>Madsen Creek Flow and Water Control Pond</p>	<p>Madsen Creek Pond is a King County-owned dam. Constructed in 2008, its primary purpose is to provide flood control in extreme rainfall events. There is oftentimes no impoundment behind the dam in summer months when there isn't consistent rainfall.</p> <p>Madsen Creek Pond is designed to store runoff from a 100-year 24-hour storm and still maintain freeboard necessary to prevent flooding downstream. While the dam is comparatively very young as climate patterns become more unpredictable, Madsen Creek Pond and other dams may need to be retrofitted to accommodate the change in probable maximum precipitation. If actions were not taken to adjust to the new hydrology, chances of failure from an overtopping situation or an uncontrolled release would become higher.</p>
<p>Cedar Falls Project Masonry Dam</p>	<p>The Masonry Dam within the Cedar Falls Project is one of the oldest dams in the County. It was built in 1914 and currently is owned and operated by the City of Seattle. The dam serves two purposes, hydroelectric power generation and water supply. The dam is a concrete gravity dam with an emergency spillway, service spillway, power tunnel intake, and a low-level outlet.</p> <p>While there have been fewer failures of concrete dams than earthen dams in general⁴⁵, this doesn't mean that failure is unrealistic. The Masonry dam sits near the Rattlesnake Mountain Fault. While concrete dams have escaped failure in earthquake scenarios, minor damage has been observed. The Masonry Dam would need to be assessed for damage after an earthquake for cracking or other deficiencies in the structure or supporting structures. If deficiencies are noted, action must be taken to ensure that the dam doesn't fail. Earthquakes can also trigger landslides around the dam. Finally, large earthquakes can devastate communities, created a resource-scarce environment, potentially making it more difficult to find resources.</p>

Priority Vulnerabilities

<p>Small Local Government and Privately Owned Dams</p>	<p>These dams may not have access to funding, or have employees dedicated to dam safety. This means that there is a higher chance that maintenance and deficiencies go unmediated. Thus, leading to a higher chance of dam failure.</p>
<p>Lack of Public Knowledge</p>	<p>Most dams use a "For Official Use Only" designation on their inundation maps. This means that inundation maps only be shared on a need to know basis. A lack of public knowledge about dams, their presence in the community, and their failure potential creates an added challenge in creating a resilient community.</p>

⁴⁵ Association of State Dam Safety Officials. 1989. Failure of Concrete Dams. Page 4.

Out of Date or Missing Emergency Action Plans | High and significant dams are required to have Emergency Action Plans in Washington State. Missing EAPs and out of date EAPs pose a risk if owners are unequipped to deal with an emergency at their dam.

Poor and Unsatisfactory Dams | Any dam that is designated as “poor” or “unsatisfactory” by the Washington State Dam Safety Office should be brought to a higher standard.

Priority Impact Areas

With all the dams in the county, only a small amount of information can be shared here due to “For Official Use Only Designation”. Another reason is that there is a lack of in-depth study done on dam failure impacts to King County. The best and most available estimates for dam failure damages/impacts are from the potential high release scenario at Howard Hanson Dam in 2009. Examples provided here relate to those studies.

King County residents	Dam Name	Estimated Impacted King County Population (Full Pool Failure)	Estimated Impacted King County Population (Sunny Day Failure)*
	Mud Mountain	24,480	2,031
	Howard Hanson	20,845	6,235
	South Fork Tolt	2,291	N/A
	Lake Youngs	2,744	2,139
	Culmback	145	N/A
	Other Dams Combined (Estimate)**	5,295	N/A

⁴⁶

*Sunny day failure assumes a regular pool

**Hazard class median reach of range

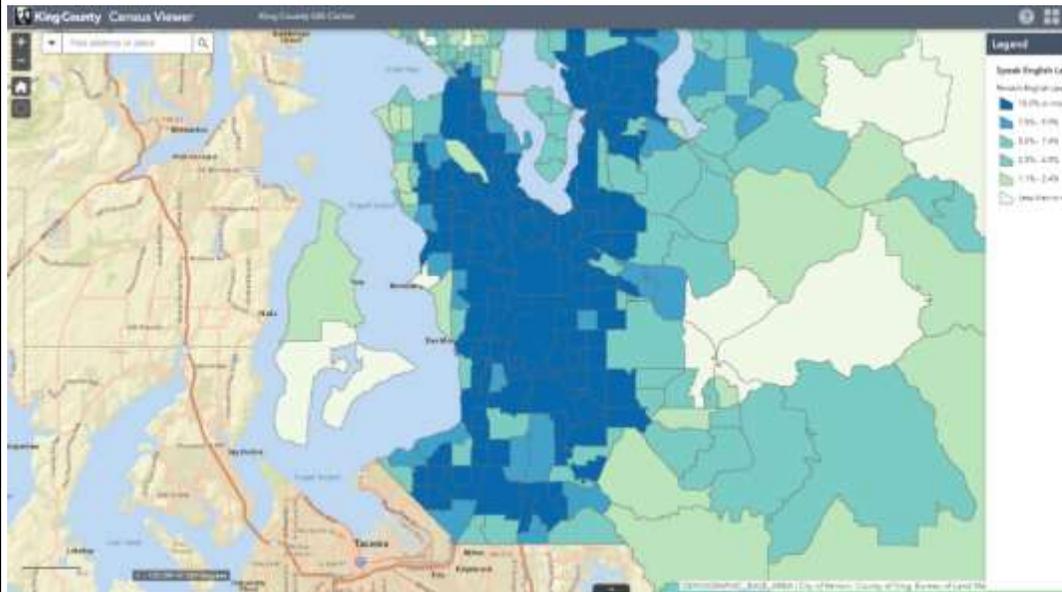

Populations are based on census data. Areas such as the Green River Valley experience drastic differences in day time/night time population being an economic hub. The

⁴⁶ Tetra Tech. 2017. King County Dam Safety Emergency Planning Gap Analysis Report. Page 27.

number of people that would need to be evacuated could drastically differ from the numbers identified in the hazard classification. An estimate in 2009 put a 25,000 cfs release from Howard Hanson triggering an evacuation on the scale of 200,000 to 300,000 people.⁴⁷

Vulnerable populations

Dam inundation areas consist of some of the highest Limited English Proficiency populations in the County. Spanish, Vietnamese, African Languages, and Mandarin are all spoken in high percentages in dam inundation areas.

Auburn, Kent, and Riverview School District, as well as private schools, have locations that are vulnerable to dam failure. Riverview school district practices an evacuation of Carnation Elementary School and Tolt Middle School every September in the City of Carnation. Both of these schools would need to be evacuated if the South Fork Tolt Dam failed.

Preliminary studies indicate that there are at least 15 assisted living facilities within dam inundation areas.⁴⁸ Evacuation will take longer for this population than most.

A 2019 report indicates that there 11,199 individuals experiencing homelessness in the County.⁴⁹ Alert and warning can be especially challenging for this population as they may not be tied to a geo-coded database.

⁴⁷ Seattlepi. 2019. 300,000 might have to evacuate if Green River Floods. <https://www.seattlepi.com/seattlenews/article/300-000-might-have-to-evacuate-if-Green-River-889468.php>
⁴⁸ FEMA Region X. 2009. HAZUS Analysis for the Green River Valley. Page 168.
⁴⁹ All Home. 2019. Seattle/King County Point-In-Time County of Persons Experiencing Homelessness.

Property	Dam Name	Residential Buildings Impacted in King County (Full Pool Failure)	Estimated Impacted in King County (Sunny Day Failure)*
	Mud Mountain	9,992	829
	Howard Hanson	8,508	2,545
	South Fork Tolt	935	N/A
	Lake Youngs	1,120	873
	Culmback	59	N/A
	Other Dams Combined (Estimate)	N/A	N/A

⁵⁰

*Sunny day failure assumes a regular pool

2009 modelling of a high release from Howard Hanson.

Structures impacted	Lower Green	In 17,000 cfs impact area	In 25,000 cfs impact area
Residential	3,486	1,743	1,937
Commercial	16,798	12,245	13,667
Industrial	7,839	6,549	6,644

⁵¹

The economy	The Green River Valley is an economic powerhouse in the region. Flood damage prevented in the valley by Howard Hanson Dam since the January 2009 flood is
-------------	---

⁵⁰ Tetra Tech. 2017. King County Dam Safety Emergency Planning Gap Analysis Report. Page 168.

⁵¹ FEMA Region X. 2009. HAZUS Analysis for the Green River Valley. Page 166.

	<p>estimated at \$6 billion alone⁵². The economic impact of a failure would devastate the region. With large employers, such as Boeing, and economic centers like the South Center Mall, in the Valley, a dam failure would leave the local economy crippled. Commutes, roadways, and rail lines would all be impacted by a high release from Howard Hanson. Unemployment may follow after areas that experience a dam failure.</p> <p>2009 Hazus modeling for a high release from the Howard Hanson Dam show impacts:⁵³</p> <ul style="list-style-type: none"> • At 17,600 cfs flows from a dam failure: - \$1.34 billion in economic losses • At 19,000 cfs flows from dam failure: - \$1.97 billion in economic losses • At 25,000 cfs flows from dam failure: - \$3.75 billion in economic losses <p>An economic analysis is needed to quantify how much impact a complete failure would have on the local economy.</p>
The environment	<p>The primary environmental impact from dam failure is natural and manmade debris from the inundation. Silt, wood, rocks and gravel, hazardous materials, construction debris, vehicles, dead animals may be carried by inundation waters to locations that may be spawning areas for local fish, wetlands for birds and reptiles, or inhabited areas that the County has invested in heavily. While recovery and impact will vary with each inundation area.</p> <ul style="list-style-type: none"> • At 17,600 cfs – 84,000 tons of debris • At 19,000 cfs – 208,000 tons of debris • At 25,000 cfs – 280,000 tons of debris ⁵⁴ <p>Isolating the potential environmental impact of dam failure is obscured by the likelihood that another hazard, like an earthquake, may have triggered the dam failure.</p>
Health systems	<p>MultiCare Auburn Medical Center lies within a dam failure inundation area, but further study is needed to fully understand the impacts on health systems from dam failure.</p>
Government operations (continuity of operations)	<p>Auburn, Kent, Tukwila, Carnation, Pacific, and Algona all have city halls within inundation areas. Courts, the County Elections office, King County Regional Justice Center in Kent where Superior Courts, Adult Detention, and other county agencies are located within dam failure inundation areas as well.</p>
Responders	<p>Kent, Pacific, Seattle, Renton Regional Fire Authority, Valley Regional Fire Authority, and Eastside Fire and Rescue all have fires stations within dam inundation areas.</p>

⁵² USACE. Howard A. Hanson Dam. Accessed 8/28/2019. <https://www.nws.usace.army.mil/Missions/Civil-Works/Locks-and-Dams/Howard-Hanson-Dam/>

⁵³ FEMA Region X. 2009. HAZUS Analysis for the Green River Valley. Page 166.

⁵⁴ FEMA Region X. 2009. HAZUS Analysis for the Green River Valley. Page 169.

	Auburn, Algona, Pacific, Kent, Seattle, State Patrol Crime Lab, and King County Sherriff all have stations in dam failure inundations.
Infrastructure systems	<p>Infrastructure impacts vary dramatically based on the individual dam and type of failure.</p> <ul style="list-style-type: none"> • Energy- While there are dams that generate power in the County, they provide a relatively small amount of power. The Cedar, Snoqualmie, Twin Falls and, Tolt projects account for only 126 max MW output⁵⁵. Power outages may be long term in areas where there has been a failure. • Water/Wastewater – Drinking water availability would be drastically impacted by a failure of the Masonry, Lake Tapps, Lake Youngs, and Howard Hanson Dams. A failure of one of the many of the reservoirs around the County would also challenge water systems. The King County South Treatment Plant also lies within a dam failure inundation area. • Transportation- Rail lines (commercial and commuter), LINK Light Rail, bus routes, numerous state highways, and numerous bridges can be impacted by dam failure.
Public confidence in jurisdiction governance and capabilities	A dam failure may cause the public to lose confidence in dam owners to manage local dams. Depending on the success of the response, the public may also lose confidence in first responders.

⁵⁶ Washington State Department of Ecology Dam Safety Office. 2019. Inventory of Dams Report.

Regional Risk Profile: Earthquake

Hazard Description

Puget Sound has a high risk of experiencing damaging earthquakes. The most common damaging quake is deep M6+ event, six of which occurred over the past ~100 years. In comparison, the Seattle Fault has been active three-four times in the past 3000 years and a subduction zone quake occurs approximately every 200-600 years, with a 10-20% chance it will rupture in the next 50 years, according to the Pacific Northwest Seismic Network (PNSN). With many potentially active faults in the area, Earthquake impacts can occur anywhere in King County, with earthquake risk focused near faults and in areas with less stable soils. Washington has the second-highest earthquake risk in the United States, after California. According to the USGS, there is a 5% chance of a Seattle Fault and a 10-15% chance of a Cascadia Subduction Zone earthquake striking the region by 2055. This equates to an up to 20% chance of a major earthquake striking King County with potentially catastrophic damages in the next 35 years.⁵⁷

Earthquakes can last from a few seconds to over five minutes. Earthquakes may also be accompanied by a series of foreshocks, or aftershocks in the weeks to months leading up to and following the earthquake, which can cause additional damage and injury. The actual movement of the ground in an earthquake is seldom the direct cause of injury or death. Casualties generally result from falling objects and debris as the shaking damages or demolishes buildings and other structures. Disruption of communications, electrical power supplies and gas, sewer and water lines, and transportation routes should be expected. Earthquakes may cause, or lead to fires, dam failures, landslides, tsunamis, or releases of hazardous materials, compounding their disastrous effects. An earthquake on the Cascadia Subduction represents the largest potential risk to the entire Pacific Northwest. However, local sources such as faults immediately beneath King County may have a much more intense shaking over a shorter period of time leading to focused damage on the area. The earthquake hazard presents the greatest regional potential for damages, casualties, economic, and social impacts.

Vulnerability Characteristics and Previous Occurrences

The impact of an earthquake on structures and infrastructure is largely a function of ground shaking and secondary impacts. Ground shaking, or earthquake intensity, measured by the modified Mercalli scale, depends on distance from the source of the quake, and the soil type. A shallow earthquake that is relatively small, but nearer to populated areas with a hypocenter closer to the surface, is potentially more damaging than a much larger earthquake that is farther away. Even when an earthquake is distant, unconsolidated soils, such as sands, clays, or gravels, found in many floodplains or river valleys, amplify shaking, leading to more potential damage.

Secondary impacts of earthquake shaking include things like soil liquefaction and landslides. Liquefaction is a secondary effect of an earthquake in which soils lose their shear strength and flow or

⁵⁷ LaForge, Gordon. 2019. Critical but Not Urgent: Seattle Prepares for the Big One. Innovations for Successful Societies, Princeton University.

behave as liquid, thereby damaging structures that derive their support from the soil. Liquefaction generally occurs in soft sedimentary soils. Landslides, or ground failures, are also a common hazard that can occur with ground shaking, ranging from singular rocks falling down a hill, to mass movements of land large enough to dam rivers. Landslides falling into bodies of water, can potentially generate tsunamis, as occurred in the Tacoma Narrows during the 1949 Puget Sound Earthquake.

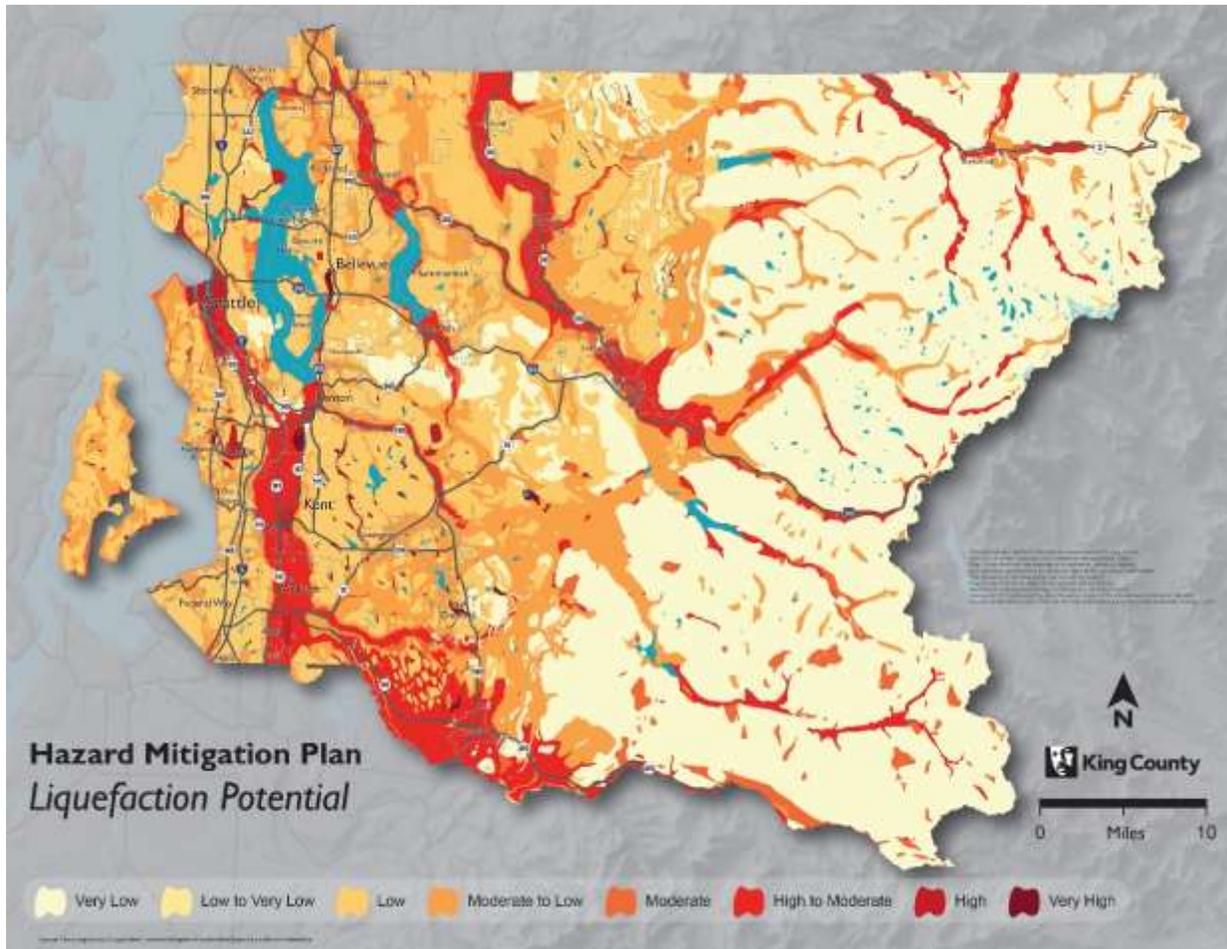

Earthquakes on the Cascadia Subduction Zone, and on the Seattle Fault are also capable of producing Tsunamis. Tsunamis are a destructive movement of the ocean involving at least one ‘wave’, and strong currents. Even a relatively ‘small’ tsunami could be devastating to port and maritime infrastructure within Puget Sound.⁵⁸ There is evidence that an earthquake on the Seattle Fault that occurred around 900 AD produced a 16-foot tsunami. The National Oceanic and Atmospheric Administration (NOAA) recreated this tsunami using a model.

Soil type impacts ground Shaking. The National Earthquake Hazard Reduction Program (NEHRP) creates maps based on soil characteristics to help identify locations subject to amplification and liquefaction during earthquakes. . Areas with NEHRP soils classes D, E and F are prone to shaking amplification, and structures in these areas experience greater damage during earthquake shaking. These also tend to be more susceptible to liquefaction.

NEHRP Soil Classification System

NEHRP SOIL TYPE	DESCRIPTION	MEAN SHEAR VELOCITY IN METERS PER SECOND
A	Hard Rock	1500
B	Firm to Hard Rock	760-1500
C	Dense Soil / Soft Rock	360-760
D	Stiff Soil	180-360
E	Soft Clay	<180
F	Special Study Soils (liquefiable soils, sensitive clays, organic soils, soft clays > 36 meters thick)	

⁵⁸ Seattle Office of Emergency Management. Tsunamis and Seiches. Accessed online on 11/12/19 from <https://www.seattle.gov/emergency-management/hazards/tsunamis-and-seiches>.

King County has a long history of documented earthquake activity. The most recent significant activity was the Nisqually Earthquake – February 28, 2001. This earthquake, with an epicenter 10 miles northeast of Olympia in Thurston County (over 40 miles from Seattle), resulted in statewide losses exceeding \$2 billion and injured 700 people, many in King County.⁵⁹ A slide in King County generated from the 2001 Nisqually Earthquake partially blocked the Cedar River – flooding several homes.

The 6.8 magnitude Nisqually earthquake was centered under Anderson Island in south Puget Sound. The most extensive damage occurred along the Interstate-5 corridor, where river sediments led to shaking amplification and liquefaction impacts. Some damage was experienced in 300,000 households, many from settling foundations. Buildings built prior to 1950 located in the south downtown area and Pioneer Square in Seattle were the most impacted; structural damage to chimneys, walls, foundations and nonstructural elements accounted for two-thirds of all damage reported.⁶⁰ Insured losses were

⁵⁹ EQE International – Seattle Nisqually Washington Earthquake Feb 28, 2001; <http://www.propertyrisk.com/refcentr/seattleeq.pdf>

⁶⁰ Hazard Mitigation Survey Team Report, Nisqually Earthquake, February 28, 2001, DR-1361-WA, Federal Emergency Management Agency and Washington Military Department, Emergency Management Division.

recorded as \$305M with \$2B in losses overall. Of those impacted, 21% had earthquake insurance but did not meet the deductible. 75% of retail businesses in Seattle that were impacted closed for some period for cleanup or repairs. The average closure was 4.8 days in Pioneer Square. Of those businesses impacted, 50% were financially threatened with closure. Harbor Island saw 69 businesses impacted for an average of \$30,900.

The Nisqually Earthquake led to a new emphasis in Washington, and King County especially, on the importance of retrofitting historic, unreinforced masonry buildings that were the most serious casualties of the event. The loss of historic buildings is not only costly in financial terms but can alter the social fabric of a community and fundamentally change its feel and sense of place.

Seattle-Tacoma Earthquake – April 1965⁶¹ At magnitude 6.5, the earthquake killed seven people and caused \$12.5 Million in damage (1965 dollars). Severe shaking was felt in Seattle and as far as Issaquah and beyond. Most damage was in the Pioneer Square area and waterfront. Older masonry buildings were most impacted. Damage patterns experienced in 1949 were repeated. Eight schools were closed for inspections and repairs; two were severely damaged. Areas along the Duwamish River experienced severe settling. Three water mains failed in Seattle.

Olympia Earthquake – April 1949⁶² The 7.1 magnitude earthquake was centered along the southern edge of Puget Sound. Eight people were killed and property damage in Olympia-Tacoma-Seattle amounted to about \$25 Million in 1949 dollars. In Seattle, a sixty-inch water main ruptured, a radio tower collapsed, power lines and gas lines were broken in over 100 places. Three damaged schools needed to be demolished and one rebuilt.

Scenario Drivers⁶³

The Juan de Fuca plate is moving northeastward with respect to the North American plate at a rate of 3 to 4 centimeters per year.⁶⁴ The boundary where these two plates converge, the Cascadia Subduction Zone, lies approximately 50 miles offshore and extends nearly 700 miles from Northern Vancouver Island in British Columbia to northern California. The collision of these two tectonic plates produces three types of earthquakes: Subduction Zone Earthquakes, Deep/Benioff Zone Earthquakes, and Shallow Crustal Earthquakes.⁶⁵

- Active crustal fault
- Active plate boundary

*figure modified from USGS Cascadia earthquake graphics at <http://geomaps.wr.usgs.gov/pacnw/pacnweq/index.html>

Cascadia Subduction Zone Earthquakes	<p>A subduction zone earthquake would originate from the Cascadia Subduction zone off the coast of Washington and Oregon. Such earthquakes typically have minutes of strong ground shaking and are quickly followed by damaging tsunamis and numerous large aftershocks. The potential exists for large earthquakes along the Cascadia Subduction Zone, up to an earthquake measuring Magnitude 9 or greater on the Richter scale. This would produce a tsunami all along the fault line from British Columbia to Mendocino, California. Such an earthquake would last several minutes and produce catastrophic damage locally from the earthquake and distantly from the generated tsunami.</p>
--------------------------------------	--

<p>Benioff Zone (Deep) Earthquakes (e.g. Nisqually Earthquake)</p>	<p>Deep, or Benioff Zone earthquakes are the most frequent damaging earthquakes occurring within the Puget Sound area. They occur within the Juan De Fuca plate as it sinks into the mantle. These earthquakes occur, 16 to 60 miles in depth. Due to their depth, aftershocks are typically not felt in association with these earthquakes. These earthquakes are caused by mineral changes as the plate moves deeper into the mantle. Minerals that make up the plates are altered to denser, more stable forms as temperature and pressure increase. This compression results in a decrease in the size of the plate, and stresses build up that pull the plate apart. Deep earthquakes generally last 20 to 30 seconds and have the potential of reaching 7.5 on the Richter scale. The last major one in the Puget Sound region was the 6.8 magnitude Nisqually Earthquake on February 28, 2001.</p>
<p>Shallow (Crustal) Earthquakes (e.g. Seattle Fault Earthquake)</p>	<p>Shallow crustal earthquakes occur within the North America plate at depths of 18 miles or fewer. Shallow earthquakes within the North America plate account for most of the earthquakes in the Puget Sound region, though most are small and not felt. The potential exists for major shallow earthquakes as well. Generally, these earthquakes are expected to have magnitudes less than 8 and last from 20 to 60 seconds. Of the three types of earthquake, the timelines and recurrence intervals of crustal events are the least understood. Ongoing research suggests that Magnitude 7 or greater events have occurred on at least eight faults in the Puget Sound basin. FEMA estimates using HAZUS show that events on these faults have the potential to cause greater loss of life and property in King County than any other disaster likely to affect the area. Evidence of a fault running east-west through south Seattle (the Seattle Fault) suggests that a major earthquake with a magnitude of 7 or greater affected the Seattle area about 1,100 years ago.</p>

Priority Vulnerabilities

<p>Unreinforced buildings, especially those built during pre or low-code eras (pre 1973)</p>	<p>Brick and masonry buildings that characterize areas like Pioneer Square in Seattle are extremely susceptible to even minor earthquakes. Unreinforced masonry buildings are likely to collapse or partially collapse and be a leading source of fatalities due to falling debris.</p>
<p>Structures, including roads and bridges, structures, built on vulnerable soils.</p>	<p>Structures on vulnerable or less stable soils are more likely to buckle or collapse. High risk areas cover the region, but are especially common in historic river valleys where sediment has been deposited over time.</p>
<p>Public facilities built to “life safety” codes that</p>	<p>Public facilities, such as city halls, schools, etc. are not required to be built to “immediate occupancy” standards. A major earthquake would render many of these facilities inoperable, leading to difficulties in organizing the recovery in affected jurisdictions.</p>

will be unusable after a major earthquake	
Structures and populations on or near steep slopes	Steep slopes greater than 40% grade are likely to fail in an earthquake. This likelihood increases when the ground is saturated. Buildings on or below these slopes will be damaged or destroyed in these events.
Dams, especially older, less regulated dams	Dams are responsible for most of the region's electricity and are extremely important to any future recovery. A major event may damage these dams and require repair before they can resume electricity generation. Total failure of the major dams is unlikely. In addition to the large dams, however, there are many lower-priority dams that nevertheless meet the standards of high-hazard. These dams are scattered throughout King County and may not even be recognized by the jurisdictions in which they are located. A failure of some of these dams would likely result in numerous fatalities and the inundation of property and infrastructure.
Hazardous materials sites, especially those in aging warehouses or with weakened containment systems	Hazardous materials, or Hazmat, sites dot the region and FEMA has recognized hazardous materials as a community lifeline due to experiences dealing with recovery after recent disasters. Hazmat releases are likely to occur at industrial facilities, on pipelines, and elsewhere around the region. The cocktail of potential contaminants is likely to threaten the public, responders, and the environment, and to delay recovery in parts of the region for years.
Port facilities built on unstable soils	Ports, are almost always built on fill and other extremely unstable soils. Major earthquakes will damage and potentially destroy port facilities. Any seiche or tsunami will also have a greater impact on port facilities than inland facilities.
Rail systems	Rail systems require tracks to be perfectly aligned and will fail during an earthquake as the ground shifts and buckles. Landslides may also deposit material on the tracks. Trains traveling at high speeds during an earthquake have a significantly greater chance of de-railing, potentially injuring passengers, or spilling cargo, which may cause additional hazardous material incidents.
Water and sewer transmission lines, especially those built of cast iron, concrete, or wood	Water lines throughout the region are currently being replaced by ductile iron. Nevertheless, most special purpose districts undertaking this work are decades from completing it. Water systems will likely fail throughout the region and will be difficult to restore due to limitations in transportation

	capacity. Even systems able to complete conversion to ductile iron will experience failures, especially in areas of unstable soils.
Populations without the means to care for themselves over multiple weeks, especially those with Access and Functional Needs	The response and initial recovery following a catastrophic earthquake will take weeks. Homebound populations, those requiring medications, the chronically ill, or others with access and functional needs may need to sustain themselves for an estimated two weeks in some places.
Populations without insurance, especially those without renters insurance or homeowner insurance earthquake riders.	<p>According to the Office of the Insurance Commissioner, which conducted a major earthquake insurance study in 2017, residential earthquake coverage in western Washington is 13.8%. Commercial coverage rates are much higher than residential, with 43.2% of insurance policies having some sort of earthquake coverage. A key finding is that, for both residential and commercial customers, insured properties have a much higher assessed value than uninsured properties, indicating that it is higher-income people that are, in general, purchasing earthquake insurance coverage.</p> <p>Earthquake insurance coverage rates are a good measure of resilience because insurance is the primary source of disaster recovery funding after an earthquake. Low levels of insurance coverage have stymied recovery efforts in major disasters, such as hurricanes, where hazard coverage is not automatically included in homeowner’s policies.</p>
Populations communicating in languages other than English	Information from responders, notifications, and other information will likely be communicated predominately in English. Special care will need to be taken to ensure that non-English speakers have access to relief supplies from established points of distribution.
Levees, dikes, and other flood control structures	Flood control structures are usually earthen and built on highly unstable soils. An earthquake during the winter months when these systems are running close to capacity could cause major failures and widespread flooding.

Priority Impact Areas

The severity of an earthquake is different depending on the conditions under which it occurs. Also, different sectors of the population, economy, or government will have different levels of exposure and vulnerability that impact their susceptibility to an earthquake. This risk assessment looks at impacts of various earthquake scenarios to a series of critical sectors. The impact data for physical structures is generated using the Hazus-MH tool for three different Seattle Fault M7.0 scenarios, a Tacoma Fault M 7.1 scenario, and a Cascadia M9.0 scenario. These scenarios are chosen based on their probability and

potential impact. This earthquake model also includes information on liquefaction potential of soils and the age of buildings (as an instrument for building code levels).

This assessment considers impacts to physical and human elements of each of 11 impact areas. For example, for health systems, the locations of key facilities identified by Public Health Seattle – King County will be assessed against data on high hazard areas. The impacts to first the health system overall, including employees and existing patients, will also be examined.

The HAZUS scenarios used in this section were generated by the FEMA RiskMAP team for the 2018 King County Risk Report.⁶⁶

<p>King County residents</p>	<p>The entire population of King County is potentially exposed to the direct and indirect impacts from earthquakes. The degree of exposure is dependent on many factors, including the age and construction type of residence, the soil type homes are constructed on, the proximity to the fault, etc. Business interruption could keep people from working, road closures could isolate populations, and loss of utilities could impact populations where no direct damage was experienced.</p> <p>Hazus estimates there are over 600,000 people living in 250,000 households on NEHRP Class D or E soils locally. This represents about 30% of the county population. The population over 65 and the population are the most vulnerable because of their concentration in areas with Class D and E soils.</p> <p>Impacts to the population are not restricted to displacement and sheltering. People may be injured, lose their jobs, schools may be closed from their own damages, government services may be interrupted, health facilities and care may also be interrupted or be completely unavailable. Family members may be separated, including children, institutionalized elderly and the infirm, may be moved to alternate facilities – and unaccounted for. Deaths of homeless and unidentified people may require burial before family can claim their remains.</p> <p>Following the 1995 Kobe, Japan earthquake, the total city population took over 10 years to recover. The population count of New Orleans following Hurricane Katrina still has not recovered to pre-storm levels. King County’s population is extremely mobile and many are relatively recent arrivals, drawn by the booming economy. A large earthquake may reverse this growth trend as people lose jobs, face housing recovery costs without insurance, and seek less hazard-prone areas after the trauma of a large earthquake.</p>
------------------------------	---

⁶⁶ Federal Emergency Management Agency, 2018. King County Risk Report. https://fortress.wa.gov/ecy/gispublic/AppResources/SEA/RiskMAP/King/KingCounty_RiskReport.pdf

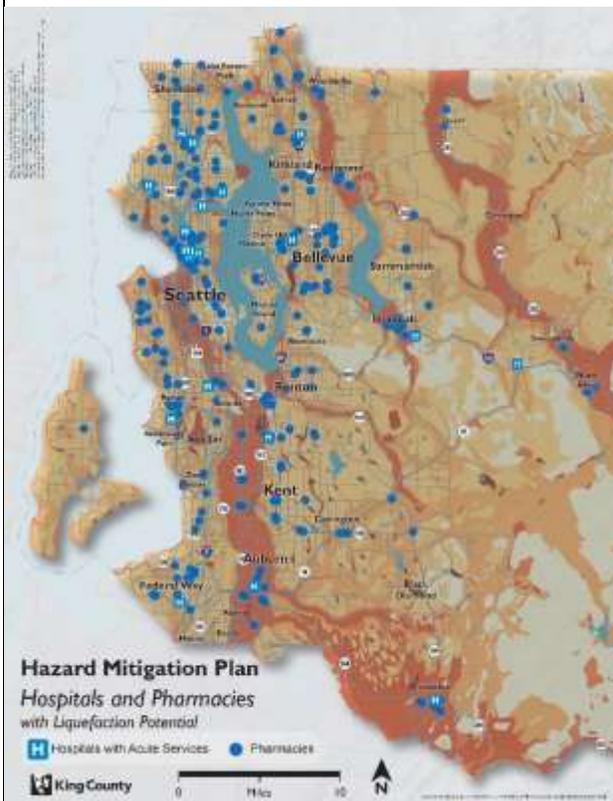

<p>Vulnerable populations</p>	<p>Vulnerable populations are more likely to suffer losses during an earthquake and are likely to take longer to recover after. Factors influencing likelihood of damage include living in higher hazard areas, living in older buildings, being less likely to have emergency supplies, and having a higher rate of persons with disabilities. Slower recovery is exacerbated by poorer populations likelihood of not having access to institutions leading recovery, not having insurance, not having a stable job, wealth, or savings, being more likely to be renters who are ineligible for many federal recovery programs, and having a lower-level of education on average, making it more difficult to find a new job and to navigate the complex post-disaster system.</p> <p>In many catastrophic disasters, most notably Hurricane Katrina, poor communities may never recover.</p>
<p>Property</p>	<p>Lack of damage to structures built since the 1949 and 1965 earthquakes have demonstrated the value of building standards that resist earthquake damages. Overwhelmingly, damages in the Nisqually Earthquake of 2001 were to unreinforced masonry and buildings built before the 1949 earthquake. This held equally true for damages to roads and bridges. The FEMA project team completed an analysis to identify how many buildings were built to specific building codes. In the table below, “pre-code” refers to buildings built before 1950, low-code is 1951-1974, moderate is 1975-2003, and high is after 2003.</p> <p>Countywide, nearly 50% of buildings were built to pre or low code standards. This level of vulnerability is significant, especially for more intense earthquakes, such as the Seattle Fault M7.2.</p>
<p>The economy</p>	<p>King County alone contributes around 50% of Washington’s gross domestic product. The county has a diverse economy, which has made it especially resilient to other forms of disruption but is heavily dependent on a high degree of global interconnectedness. Losses to lifeline infrastructure, especially port facilities, communications hubs, and major highway corridors would be crippling if the loss was total and links could not be quickly restored. Some of western Washington’s key industries, such as Amazon and Microsoft, may be insulated somewhat from damage due to the highly global nature of their work and redundancy in their systems, while others such as Boeing would be severely impacted as rail and highway routes necessary for the transport of materials is restored. I-5, for example, suffers from limited redundancy and carries over 233,000 vehicles through Seattle, a number that has been steadily growing.</p> <p>Economic risk from a major earthquake is multi-faceted. Economic impacts from an earthquake include immediate loss of facilities and inventories, ongoing loss of</p>

	<p>employees and customers, and loss of businesses. Ongoing impacts will depend on the speed of infrastructure restoration, levels of insurance coverage, international economic conditions, and the ability of jurisdictions to develop and implement a long-term recovery strategy.</p>
<p>The environment</p>	<p>Impacts to the environment from an earthquake include the creation and disposal of large quantities of debris, releases of hazardous materials, the disruption of environmental conservation programs, and the relaxing of environmental programs during the cleanup and recovery. The greatest potential for environmental damage is from hazardous materials releases as fuel and waste pipelines rupture, underground fuel storage tanks fail, trains, including oil trains, may derail, port facilities are damaged by any tsunami or seiche, and other chemicals, including household items, are spilled. The multi-source nature of materials releases, the scale of potential releases, and the lack of resources for cleanup all complicate the scenario.</p> <p>While most common after rain and wind event hazards (approximately 75% of all disaster-triggered releases), hazmat releases after earthquakes are responsible for large releases over a wide area.⁶⁷ Earthquake-triggered hazmat releases have included hundreds of gas line ruptures and pipeline breaks, and releases of ammonia, chlorine, and sulfuric acid during the Northridge and Loma Prieta earthquakes.⁶⁸</p>

Health systems

Health system impacts from a major disaster include disruptions to emergency services, community health clinics, pharmacies, and hospitals. While new hospitals are required to meet criteria for seismic resilience and may engage in supply-chain and patient evacuation planning, much of the rest of the network is likely to be shut down after a disaster. This is an especially high threat to populations needing regular medical services, such as kidney dialysis and insulin injections (which require refrigeration). In Hurricane Maria in 2017, Puerto Rico was left without power for months and the majority of fatalities

recorded due to the storm were from the elevated death rate among medically-fragile populations.

In order to function, hospitals require significant infrastructure inputs, including power and water that are likely to be disrupted after an earthquake. Backup services are available; however, may be insufficient to meet the need if infrastructure recovery takes too long.

Health system impacts therefore include large-scale disruptions to supply chains, disruptions to ongoing care regimens for certain medically-vulnerable populations, disruption of community care networks of pharmacies and local clinics, loss of trained staff, and potential damage to hospitals or loss of hospital functionality due to infrastructure damage.

<p>Government operations (continuity of operations)</p>	<p>Any damaging earthquake has the potential to impact delivery of essential government services in the days, weeks, months, and even years following the earthquake. The damages to infrastructure and residential or business locations may curtail or even prevent government employees from reaching their work locations or may prevent services from reaching populations in need scattered around the county. Even after initial short term repairs have been made, the impact on the taxable value of properties in the county may cause a revenue shortfall that reduces available services from budgetary impacts. Collection of available tax revenue, the revaluation process (including documentation), and appeals process might produce a further burden on already stretched government obligations.</p> <p>Earthquakes have the possibility of damaging any fixed facility at which services are provided. This may include: adult and juvenile detention facilities, waste water treatment facilities, solid waste disposal systems and facilities, the court system, health and medical institutions and clinics, fire and police stations or equipment, public transportation, schools, and libraries.</p> 
<p>Responders</p>	<p>First responders experience personal and professional impacts from an earthquake. Since responders are also local residents, they will be personally impacted by the disaster. Professionally, emergency services will be called upon to help with life safety operations while also seeking to restore day-to-day services.</p>

	<p>Hazard Mitigation Plan <i>First Responder Facilities</i> <i>with Liquefaction Potential</i></p> <p> Fire Stations Medic Units Police Stations </p> <p>King County 0 Miles 10</p>
<p>Infrastructure systems</p>	<p>Energy: Dams are the primary source of electricity generation for the region and may be impacted by a major earthquake, even if failure is relatively unlikely. Pipelines cross the region carrying fuel and are susceptible to earthquakes. Since Washington is home to the Northwest’s only refineries, damage to this conveyance system will have far reaching, regional consequences. A major concern for maintaining power in facilities while the power grid is down after an earthquake is fuel distribution. With transportation networks seriously impacted, it will be difficult to ensure a supply of fuel is distributed to hospitals, public facilities, and communications centers. Without this fuel, systems are likely to fail after a few days of operation.</p>

Water/Wastewater: Water and wastewater systems are among the most vulnerable to an earthquake of all lifeline infrastructure. Pipelines, especially those over NEHRP class D, E, and F soils, are vulnerable to rupture. King County maintains a wastewater treatment system that is connected to dozens of smaller systems and operates multiple water treatment plants. There are also many separate water systems that operate their own conveyance systems and reservoirs.

Transportation: Transportation lifelines are both state and local responsibility. According to a Regional Resiliency Assessment Program (RRAP) report published by DHS,

WSDOT has operated a seismic retrofit program since 1991 and has been steadily retrofitting bridges through a three-stage process of stabilizing the bridge superstructure, strengthening single-column bridge supports, and reinforcing multi-column piers. In response to the 2012 Resilient Washington State report, WSDOT began a program to completely retrofit three identified lifeline routes for a total cost in excess of \$1B (2015 dollars). As of 2019, there are 17 state-responsibility bridges in King County that are in poor condition.

Bridge Seismic Lifeline Routes (green) (WSDOT, 2015)

King County has 177 bridges in its bridge program. At least every two years, those bridges are inspected and recommendations are made for their repair or replacement. Between 2006 and 2016, 32 bridges were replaced and many more repaired. In 2008, the bridge program concluded a 14-year seismic retrofit, improving 115 bridges for \$22 million. This retrofiting has substantially improved the survivability (likelihood of collapse) of bridges in the King County inventory.

One category of bridges is fracture critical truss bridges. The average age of these bridges in unincorporated King County is 42 years. Of the 11 bridges in this group, the Miller River Bridge was closed from damages in the January 2011 flood event and the Alvord “T” was closed June 2013. The Stossel Bridge is the lowest rated of those remaining in the inventory. Each carries thousands of vehicles daily.

Bridges, however, are only part of the transportation puzzle. Bridge approaches, and pavement crossing unstable soils, are major threats. The WSDOT Seismic Lifeline route discussed above is only considering bridges, not pavement or approaches.

Railways are another highly-vulnerable piece of transportation infrastructure. Tracks can become misaligned and require repair before train travel is possible. Even in the relatively small 2001 Nisqually Earthquake, rail travel was disrupted for several days.

Port facilities are seriously threatened by a major earthquake due to liquefaction potential of port areas and tsunami threats. It is likely a major earthquake would completely destroy port facilities, requiring years of investment to completely recover. As with the 1995 Kobe, Japan earthquake, port operations may never again reach pre-disaster levels.

Airports are also vulnerable to earthquakes. In the 2001 Nisqually Earthquake, the air traffic control tower at Seattle-Tacoma International Airport was damaged, drastically reducing takeoff and landing capacity. Runway damage is also common as the ground shifts and would require repair before large jets could land. While the region has a number of airports, many of them will also be critical facilities for disaster response, medical patient evacuation, and food and fuel deliveries.

	 <p>Hazard Mitigation Plan Transportation—Major Roads with Liquefaction Potential</p> <p>Highways</p> <p>King County</p> <p>0 Miles 10</p>
<p>Public confidence in jurisdiction’s governance and capabilities</p>	<p>Communications: While the public sector maintains critical radio communications networks, the networks on which most residents depend is privately owned. While cell towers are equipped with backup generators, these generators may only have enough fuel for a few days of continuous operation.</p> <p>Disasters of the magnitude we can expect from a damaging earthquake have the potential to shake public confidence in government’s ability to maintain law and order, provide essential services, repair or replace needed infrastructure for employment, processing of building permits and inspections, clearing of debris and other needs. Restoration efforts may well take longer than the public is willing to accept. Amendments to zoning and building standards may not be embraced by those seeking to rebuild. If rapid restoration is not possible, the area may lose employers and the population may relocate to other areas of the country in search of employment.</p> <p>Earthquake hazards specifically have been the subject of significant reporting in recent years. Articles in the Seattle Times, the New Yorker, and on local television have argued that the Pacific Northwest is unprepared for the level of destruction</p>

	expected following a Cascadia Subduction Zone 9.0 event. ⁶⁹ These articles have led to both stepped-up state and local action on earthquake preparedness and to more public awareness.

Regional Risk Profile: Flood

Hazard Description

Flooding is King County’s most persistent and recurrent natural hazard. Flooding affects tens of thousands of families and properties owners in communities across the county, with life safety, economic, and workplace impacts on tens of thousands more. The communities within King County take flooding seriously; the King County Flood Control District was established in 2007 to regionally manage flood hazards and reduce risk, in partnership with the Department of Natural Resources and Parks’ River and Floodplain Management Section. The King County Flood Hazard Management Plan drives much of the work that both the District and King County do to reduce flood risk and manage flood-related hazards.

Flooding is the inundation of normally dry areas by overflowing rivers, increased coastal waves, or other accumulation of surface waters. A number of conditions can cause flooding from too much rainfall in a river’s watershed to sustained offshore wind driving a high tide inland, but flooding can also be caused by events such as liquefaction of levees during an earthquake that release water the levees hold back. Other causes of flooding include dam failure, landscape changes after wildfires that exacerbate flooding, rapid snowmelt, channel migration, and debris in streams causing water to backup.

Figure 2. Flooding along the Snoqualmie River in 2015

Typically, King County sees at least minor flooding ever year in the fall and winter and big events are often driven by atmospheric river where moisture is picked up from the Pacific Ocean and brought by the jet stream to drop as prolonged heavy precipitation in western Washington.

A variety of factors affect how flooding occurs and its severity. One main factor for riverine flooding is the “hydrology,” which includes

how much rain falls, how fast it falls, how fast it reaches the stream, and the amount of water already in the stream. The second main factor for riverine flooding is the “hydraulics” of the watershed, which includes characteristics like the topography, stream channel dynamics, and the overall slope of areas of the watershed.

Flooding is a natural phenomenon and many ecosystems thrive because of the natural floodplain functions that rivers and coastlines provide. Flooding is considered a “problem” when humans construct buildings and infrastructure in the path of floodwater. The many aspects of natural floodplain functions help reduce impacts, slow floodwaters down, and preserve important habitat for endangered species.

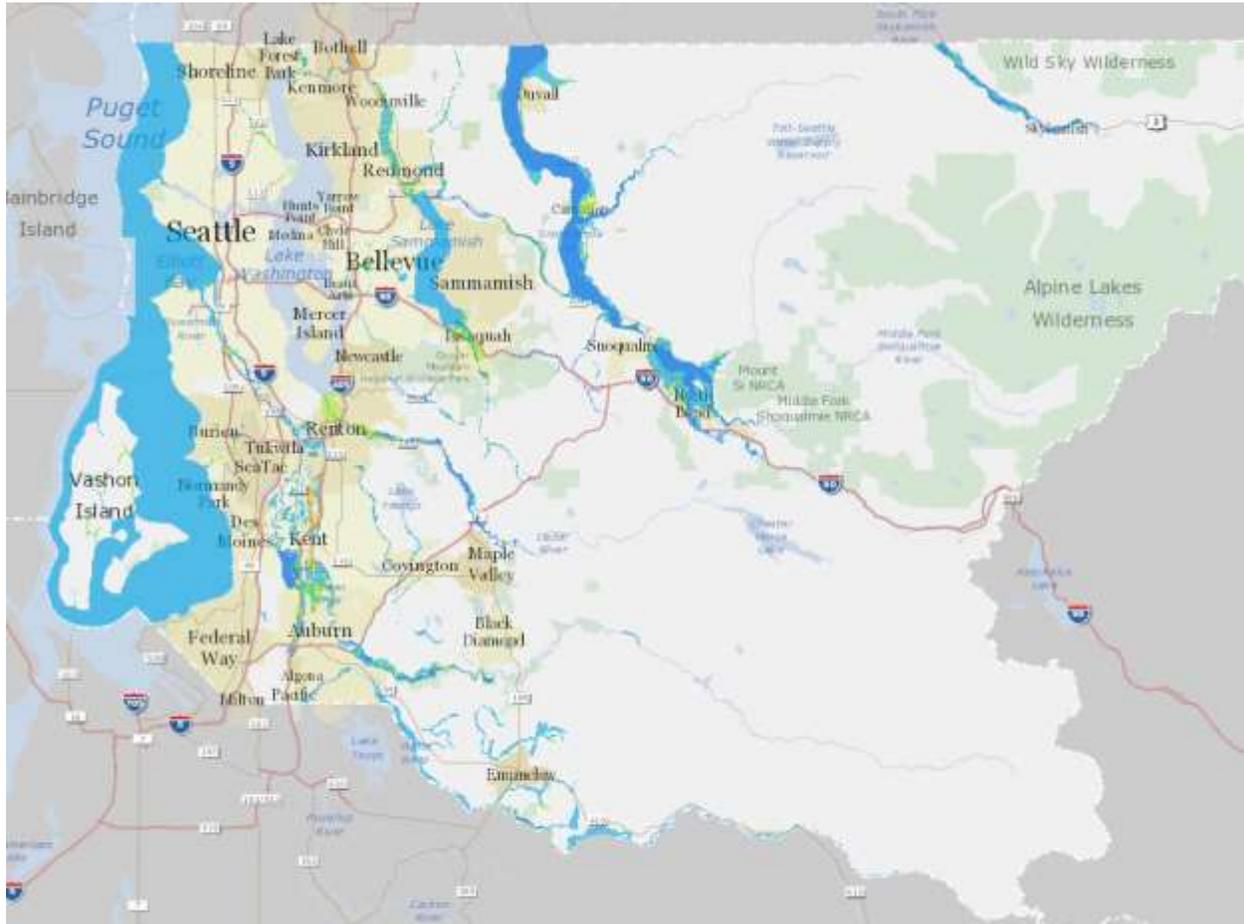

Figure 3. Map showing mapped 1% annual chance floodplains and floodways. Note that Lake Washington does not have an identified floodplain because its levels are controlled by the US Army Corps of Engineers operated Chittenden Locks.

Vulnerability Characteristics and Previous Occurrences

Flooding, no matter the source, causes widespread and long-lasting damage. The force of moving floodwaters can tear homes from their foundations, sweep cars off the road, and destroy public infrastructure. Houses and businesses damaged by flooding can take many months to repair and are often unsuitable to live in during the repairs. Certain types of flooding can leave buildings inundated for several days, which can further worsen property damage. Flood-damaged buildings can pose health risks including mold, contaminated food and drinking water, and mental health stresses from the traumatic experience.

The velocity, depth, and amount of floodwaters impact how dangerous riverine flooding can be. A floodplain where the velocity is more than 3 feet per second and the depth is more than 3 feet is an area dangerous for people to be living or working since those flood conditions can be fatal to someone walking through floodwaters. King County code, for example, prohibits buildings in unincorporated areas to be built in fast-flowing and deep floodplains. Rivers in King County also carry substantial debris, from fallen trees to boulders and sediment, and debris impacts can add to the severity of flooding.

Rivers are dynamic systems and can shift significantly during high flow events or gradually through erosion of streambanks. This risk is called “channel migration hazards,” and is a prevalent feature in northwest river systems. The scale of channel migration depends on the severity of the high flow event, geology of the banks and streambed, and characteristics of the surrounding land. King County regularly maps channel migration zones and has applicable development standards for proposals within these zones.

Figure 4. House destroyed due to channel migration along the Raging River.

In coastal floodplains, wave action is the most dangerous aspect of flooding. Buildings are required to be specially designed to withstand powerful wave actions and can only be built on open foundation systems, like piers or posts.

King County covers six large drainage basins and coastal flood hazard areas.

1. The South Fork Skykomish River basin lies primarily in the northeast portion of King County and flows into neighboring Snohomish County. The basin drains 234 square miles of mountainous terrain within King County and includes major tributaries such as the Foss, Tye, Miller, and Beckler Rivers. The cities of Skykomish, Baring, and Gold Bar as well as many unincorporated area neighborhoods are located near or on the banks of the rivers and frequently experience impacts from flooding. The basin features steep slopes in the upper portion, so significant runoff can cause major flooding relatively quickly. The rivers in the basin are also very prone to channel migration and it is a significant hazard that communities are focused on.
2. The Snoqualmie River basin drains much of the northeast and north-central part of King County and is typically divided into two areas: the Upper Snoqualmie and the Lower Snoqualmie, above and below Snoqualmie Falls, respectively. The basin also encompasses tributaries such as the Tolt River, the Raging River, Tokul Creek, Griffin Creek, Harris Creek, Patterson Creek, among others. The Upper Snoqualmie River and some of the major tributaries are characterized by steep gradient headwater systems and some lower gradient floodplains near the incorporated communities of North Bend and Snoqualmie. The Lower Snoqualmie River

features wide floodplains along the low gradient channel. The cities of Carnation and Duvall and the unincorporated community of Fall City all lie within the broad Lower Snoqualmie Valley.

3. The Sammamish River basin originates at Lake Sammamish and drains a 240 square mile watershed, including the tributaries of Bear, Little Bear, North, and Swamp Creek basins. The river has been channelized since the construction of the Lake Washington Ship Canal and is partially regulated by a weird outlet downstream of the mouth of the lake, which reduces frequency and severity of flooding.
4. The Cedar River basin stretches from the Cascade Mountains to Lake Washington, where the Cedar River terminates. The basin has been heavily altered from its natural condition, with major projects constructed including Masonry Dam and the Landsburg Diversion, both to serve as water supply infrastructure. Along the Cedar River are many unincorporated community neighborhoods as well as cities like Maple Valley and Renton. Naturally-occurring large wood is a prevalent hazard in the basin.
5. The Green River originates in the Cascade Mountains at an elevation of 4,500 feet and flows through many cities including Auburn, Kent, Renton, Tukwila, and Seattle. The basin is divided into four major sub-basins: the upper watershed above the Howard Hanson Dam, the middle Green below the dam and upstream of Auburn, the lower Green that flows through the incorporated cities, and the Duwamish estuary. The Green River basin features many large structural elements including Howard Hanson Dam, which provides flood control, and large levee and revetment systems on the lower Green River.
6. The White River originates in glaciers on the northeast face of Mount Rainier. The White River drains an area of about 490 square miles, approximately one third of which lies within King County. Major tributaries join the White River along its path like the Greenwater River and Boise Creek. Over one hundred years ago, the White River was diverted to flow into the Puyallup River in Pierce County. Mud Mountain Dam is a major flood control dam that has a significant effect on reducing flooding in the basin. Additionally, water is diverted from the river for hydropower generation near Lake Tapps. Along the river are a number of small unincorporated neighborhoods in addition to the Muckleshoot Indian Tribe Reservation and portions of the city of Auburn.
7. Coastal flood hazard areas pose potential risks to approximately 100 miles of shoreline, about half of which is on Vashon Island in unincorporated King County and the other half is the incorporated shoreline through the cities of Shoreline, Seattle, Burien, Des Moines, and Federal Way. Storm surge and wave action are significant flood hazards facing development along shorelines. Coastal erosion also is a prevalent hazard, including along the steep bluff areas around the shoreline in King County. Many miles of shoreline are variably armored by bulkheads and other structures. Coastal flooding will be exacerbated by sea level rise and other impacts of climate change.

Flooding is a prevalent threat during the fall and winter months due to atmospheric rivers, heavy rain, and king tides. Major floods occur on average every two to five years. Major river flooding has typically not caused fatalities, but rather significant property damage. Flooding along multiple rivers in 2006 and 2009 were the most recent major floods to cause many millions of dollars in damage. Flooding in 1990 is considered the largest flood of record for most of the county except for the Lower Snoqualmie and Tolt Rivers. There have been 28 flooding events since 1965 that have resulted in federal disaster declarations. At least minor flooding occurs every winter. Climate change is likely to have a significant effect in changing the patterns of flooding in the river basins.

Scenario Drivers

Most types of flooding caused by extreme weather are cyclical and are measured by their probability of occurrence in a given year based on the factors that drive flooding. The larger a flood event, the less likely it is to happen in a year. A flood with a 10% chance of occurring in a year is sometimes called a “10-year flood,” and that flood event will have less river flow and likely fewer impacts than a 1% annual chance flood event, or a “100-year flood.” These flood events can be modeled and maps created to show their extents.

The 1% annual chance flood, or 100-year flood, is the most important scenario because floodplain regulations and federal flood insurance are based on this flood event. This flood event represents the mapped floodplain on FEMA Flood Insurance Rate Maps and forms the basis for community regulations for participating communities in the National Flood Insurance Program. In King County communities, all new or substantially improved buildings must be constructed with their lowest floor at least one foot higher than the expected elevation of the 1% annual chance flood.

While the 1% annual chance flood is scenario most often discussed, the 10%, 2%, and 0.2% annual chance floods are often used for planning and certain regulatory purposes. The extents of the flood events are not consistently mapped throughout the county, but engineering data in flood models can be used in project planning or regulatory compliance.

Typically the recurrence interval floods are driven by cyclical natural factors like atmospheric rivers bringing heavy rain or severe winter storms and king tides. Other factors can drive flooding scenarios in different ways. For example, levee or dam failures may happen due to problems caused by inadequate maintenance. Flooding damage from earthquakes will likely only be seen if an earthquake damages a levee, for example, during times of high water.

King County has a long-established Flood Warning Program that has been monitoring river systems for over 50 years. The King County Department of Natural Resources and Parks’ River and Floodplain Management Section operates a Flood Warning Center that opens 24 hours a day when flooding occurs on any of the river systems with gages. For the Flood Warning Program, the rivers are measured by a “flood phase” system based on real-time flow information. When a river reaches flood phase 2, the Center opens, coordinates with local, state, and federal agencies, and accepts calls from the public requesting information about flooding. When a river reaches flood phase 3, patrol teams are sent out to monitor flood protection facilities and any potential flooding impacts. When a river reaches flood phase 4, additional staff are brought in to the Flood Warning Center, sent on flood patrols, and begin to collect damage information in case of a disaster declaration.

FLOOD WARNING PHASE THRESHOLDS

PHASE	SOUTH FORK SKYKOMISH RIVER (at Skykomish)	TOLT RIVER (near Carnation)	SNOQUALMIE (Sum of Forks)	ISSAQUAH CREEK (near Hobart)	CEDAR RIVER (near Landsburg)	GREEN RIVER (Actual or expected flow near Auburn)	WHITE RIVER (Actual or expected flow release from Mud Mountain Dam)
1	6,000 cfs	2,500 cfs	6,000 cfs	6.5 ft	1,800 cfs	5,000 cfs	4,000 cfs
2	10,000 cfs	3,500 cfs	12,000 cfs	7.5 ft	2,800 cfs	7,000 cfs	5,000 cfs
3	18,000 cfs	5,000 cfs	20,000 cfs	8.5 ft	4,200 cfs	9,000 cfs	7,000 cfs
4	27,000 cfs	8,500 cfs	38,000 cfs	9.0 ft	5,000 cfs	12,000 cfs	9,000 cfs

Heavy rain and atmospheric rivers
 Most riverine and urban flooding is caused by heavy rain and atmospheric rivers that drive significant weather systems into the Pacific Northwest. Intense rainfall can overwhelm rivers' ability to carry flows in their banks and cause inundation of the adjacent floodplains. These factors not only drive riverine flooding, but also urban flooding issues that can overwhelm local stormwater infrastructure and can cause flood damage.

Severe winter storm, storm surge, king tides
 Severe winter storms that have strong winds combined with king tides can cause significant coastal flooding, as seen in the 1982 king tide event that battered much of the shoreline in King County. Intense coastal storms and high tides can cause damage to coastal properties and damage infrastructure like roads and ferry docks.

Sea level rise
 As sea level rises in Puget Sound, the stillwater elevation level, or the water level without effect of waves, rises and pushes more water inland during times of severe storms. While the actual increase in flood risk will differ based on the localized geography and wind patterns, sea level rise is certain to worsen flooding along the coastlines in King County.

Channel migration
 Rivers natural erode banks and soils due to the energy of moving water. This erosion causes rivers to migrate or move laterally across a floodplain.

	<p>A channel can also move abruptly over a large distance in a single flood event. This can threaten development located in channel migration zones, some of which are mapped.</p>
<p>Dam failure and overtopping</p>	<p>If dams fail, the water held back will rush out quickly, potentially causing catastrophic flooding downstream. Dams both large and small can pose significant impacts. The potential for Howard Hanson Dam’s failure in 2009 brought to light the incredible flooding, loss of life, and property damage that could happen if dams fail. Smaller structures that might be in a neighborhood can also lead to deaths and significant property damage. Dam failure can be caused by too much water for a structure to handle or by lack of maintenance that causes the dam to fail.</p>
<p>Levee failure and overtopping</p>	<p>Levees act as flood protection facilities, but only offer protection to a certain recurrence interval. They also are manmade earthen structures that require maintenance. Flooding can exceed a levee system’s capacity or flaws in the structure can cause it to fail, and both would cause rapid inundation behind the levee. Water can seep through levees and cause weaknesses that lead to collapse.</p>
<p>Landslide and mudflow</p>	<p>Landslides can rapidly fill in rivers, causing a blockage in the river and immediate overflowing. This threat is particularly present on the Cedar River. Landslides can also add significant material to a river, causing a mudflow and rapid damage to property, similar to the Oso Landslide event in 2014 in Snohomish County.</p>
<p>Earthquake</p>	<p>Earthen levee systems are prone to liquefaction in an earthquake, which can cause major failure of the levee structures. If floodwaters are being held back at the time of an earthquake, the levees can fail and flooding could occur very quickly.</p>
<p>Volcanic eruption</p>	<p>In the event that Mt. Rainier erupts, lahars can fill river valleys and drastically change the course of rivers, streams, and shorelines. The amount of materials brought downstream in a lahar would affect the severity of impacts in future flooding.</p>
<p>Tsunami</p>	<p>Tsunamis are powerful waves that are caused by an earthquake or displacement of water from an underwater land feature collapse. Specific scenarios are outlined in the Tsunami and Seiche Risk Assessment. A tsunami that affects King County would cause significant wave action and likely major damage to properties on the coast.</p>

Humanmade watershed changes	One major factor in understanding flood risk is the underlying land that floodwaters flow over. Harder and more impervious surfaces carry floodwater faster, so as humans continue to build buildings, roads, sidewalks, and other impervious features, floodwaters travel faster to streams, which can increase the severity of flooding.
Climate change	While climate change has an effect and influence on many of the factors already identified, it is a specific scenario driver because of the potential to change flooding in King County. Research is currently ongoing to better analyze, quantify, and understand the effect of certain emissions scenarios that could drive flooding in multiple ways. King County is likely to experience higher intensity rainfall events, which have the potential to cause more impactful flooding.

Priority Vulnerabilities

Families living in floodprone areas	Families with limited budgets are the top concern for flooding. Because flood damage can be very expensive and disruptive, families have a difficult time recovering from the effects of flooding. Without flood insurance, families must take money from savings; and even with flood insurance, flood damaged homes may not be livable for many months. Renters are particularly vulnerable since they often are lower income and do not have flood insurance. Additionally, families that don't speak English as a primary language can be more vulnerable to flooding because most flood warning systems are in English and much of the flood insurance, floodplain regulations, and any mitigation programs are made up of materials in English.
Major roads and sole-access roads	The many bridges, major roads, cross-valley roads, and sole-access neighborhood roads that cross floodplains are a top priority during flooding. Many people in Duvall, Carnation, and other communities in the Snoqualmie valley can be entirely cut off during major flooding since SR 203 and the cross-valley roads are often underwater. During high tide flooding events on Vashon Island, many coastal roads are underwater as well and can limit access via Vashon Highway.
Critical facilities	Schools, hospitals, nursing homes, hazardous materials storage facilities, and other critical facilities operations are threatened during flooding. Schools will be inaccessible and hospital operations and access routes vulnerable. Facilities like nursing homes house populations that cannot easily leave floodprone areas. And hazardous waste, sewage, or animal waste storage facilities threaten water quality and pose health risks during flooding.

Farms	<p>There are many agricultural operations in King County’s floodplains including major production areas in the Snoqualmie Valley, Green River Valley, Sammamish River Valley, and parts of the Enumclaw Plateau. Flooding can particularly affect harvest time in October and November as well as making it difficult to start planting in the spring. Farms with livestock faced significant losses in the 1990 floods, but now many dairy or other livestock operations have farm pads that offer refuge for animals in times of flooding.</p>
Linear infrastructure	<p>Linear infrastructure such as water and natural gas pipelines, sewage systems, and utility transmission lines cross rivers, streams, and floodplains. Significant water pipelines take water from protected watersheds down to Seattle, Renton, and other cities and often are threatened by flooding. A major capital project completed in 2019 added flood protection for the Tolt Pipeline, which is part of Seattle’s water supply. Additionally, as sea levels rise and worsen coastal flooding,</p>
Flood protection facilities	<p>Levees and revetments are part of the flood protection facility systems in King County. During flood events, levees and revetments are tested by the force of floodwater. Revetments are intended to protect against channel migration, but if the flood is too large, they can fail and rivers can avulse. Levees similarly are put under serious pressure during flood events and a number of issues from seepage to sloughing can undermine levees and cause them to fail.</p>

Priority Impact Areas

King County residents	<p>Flooding can affect anyone who lives in or near floodplains. Most flood hazards are mapped and families living in these mapped 1% annual chance floodplains can expect at least a 26% chance of seeing floodwaters over 30 years, the length of a typical mortgage. Flooding can threaten lives, particular in areas where flooding can happen quickly and with little warning, in addition to those driving on flooded roads. Most deaths occur from people driving through floodwaters and being swept away in their cars.</p> <p>Flooding also causes significant property damage and, on average, one foot of water in an average size home can cause over \$50,000 in damage. Without flood insurance, this level of damage can overwhelm a family’s finances. And those without many financial resources will be severely impacted by flood damage to their home and/or belongings.</p> <p>Flooding also affects those who work in floodplains or commute through them. Many farmworkers are employed on farms in the Snoqualmie or Sammamish Valleys and when flooding inundates or ruins crops, farmworkers can find themselves without jobs. Businesses in floodplains also will shut down during flooding, particularly if buildings and</p>
-----------------------	---

	<p>access roads are damaged. After the 1993 Midwest Flooding, FEMA found that over 40% of small businesses don't reopen after being flooded.</p>																				
<p>Vulnerable populations</p>	<p>Flooding is a complicated hazard to understand and accessing flood warning, flood insurance, and other information often requires command of English, understanding of government bureaucracy, and access to financial resources. Populations that don't speak English, don't have access to government resources, and those that cannot afford or don't have flood insurance are particularly vulnerable to the long-term impacts of flooding.</p> <p>Renters can be particularly vulnerable to the impacts of flooding. Families that rent make up over 50% of the households in the floodplain, whereas they make up approximately 37% of households in the entire County. Renters are more often vulnerable because they're far less likely to have a flood insurance policy. Out of the many thousands of families that rent, there are less than 300 renters flood insurance policies, according to data from FEMA, and some of those may be business properties that the data cannot distinguish. Renters often have less wealth or savings to draw from to pay for uninsured losses.</p>																				
<p>Property</p>	<p>Flooding particularly impacts property and often causes many millions of dollars in property damage in major flooding events. Even a small amount of water inside a building can cause significant property damage and leave building owners with large repair bills. For families, damage to homes may mean difficult financial decisions, displacement for weeks, and lost belongings. For business owners, flood damage may mean lost economic output from shutdowns, destroyed inventory, and inability to pay employees.</p> <p>Throughout King County, there is at least \$5 billion of building value in floodplains.</p> <p>Federal flood insurance through the National Flood Insurance Program is the primary way building owners financially protect their property in floodprone areas. As of June 2019, flood insurance policies cover over \$2 billion worth of property throughout King County. Many larger commercial or industrial facilities are insured through private contracts, the value of which is not available to government agencies.</p> <table border="1" data-bbox="360 1465 896 1875"> <thead> <tr> <th>Community</th> <th>Repetitive Loss Properties</th> </tr> </thead> <tbody> <tr> <td>Auburn</td> <td>0</td> </tr> <tr> <td>Bellevue</td> <td>3</td> </tr> <tr> <td>Burien</td> <td>6</td> </tr> <tr> <td>Carnation</td> <td>0</td> </tr> <tr> <td>Duvall</td> <td>2</td> </tr> <tr> <td>Issaquah</td> <td>14</td> </tr> <tr> <td>Kent</td> <td>2</td> </tr> <tr> <td>King County</td> <td>108</td> </tr> <tr> <td>Kirkland</td> <td>1</td> </tr> </tbody> </table>	Community	Repetitive Loss Properties	Auburn	0	Bellevue	3	Burien	6	Carnation	0	Duvall	2	Issaquah	14	Kent	2	King County	108	Kirkland	1

Renton	0
Skykomish	4
Snoqualmie	134
Woodinville	2

Most of these structures are residential. King County attempted to assess the use type of these properties; however, none of the available data sources on RL/SRL properties from the CRS or FEMA contained use types. Even the property-specific forms required to evaluate under CRS did not include use.

The economy

In 2007, an economic study was conducted to understanding the economic impact of flooding. The study found that 6% of the region’s jobs are located in the floodplain and nearly 7% of the county’s wages and salaries are generated in the floodplain (\$3.7 billion). 20% of the county’s manufacturing employment and 30% of the county’s aerospace employment are found in floodplains. A major flood that would shut-down economic activity in floodplains would result in at least \$46 million per day in lost economic output.

Flooding will affect certain industries like agriculture, aerospace, manufacturing, and distribution more heavily because of their presence and reliance on floodplain locations. In the lower Snoqualmie valley, there are nearly 200 farms that produce a wide range of products from dairy to herbs and row crop vegetables. The Sammamish River valley supports a number of wineries and other small farms. And the Green River valley hosts many large fields of row crops as well as a large County-owned farm leased out by a diverse group of farmers. Flooding can negatively impact these operations, particularly if it occurs before harvest or late into the spring planting season. Farmers cannot sell food products from flood-damaged fields. Flooding, however, also provides nutrients to the soil that supports productive agriculture.

While some agricultural sectors are dependent on natural floodplain functions, other economic sectors have located in the floodplain over decades for other reasons. Large warehouses in the Green River valley, many in the floodplain, make the region one of the largest logistics hubs in the nation. But, the square footage of warehouse and aerospace facilities means that billions of dollars are at risk of flooding every year as well as thousands of jobs.

The environment

Flooding is a natural process and supports unique ecosystems and habitats. Many riparian and aquatic ecosystems depend upon some amount of regular flooding or high water events. Various salmonid species use high water events to seek refuge as juveniles or

	<p>access more favorable habitats, which makes flooding an important part of recovery for the endangered salmon species in Puget Sound.</p> <p>Natural floodplain functions typically result in slower-moving floodwaters with less intense flood height peaks. When upland forest areas are logged or burned, rain and snowmelt reach streams faster, which can cause flooding to be more intense and push water through the floodplain more quickly.</p> <p>King County often incorporates natural functions into the design of projects, which helps reduce flood risk as well as protect and restore ecosystems. Reconnecting rivers and coastlines to their historic floodplains through levee setbacks, creating side channels, and removing obstructions help restore natural functions and bring flood risk reduction benefits as well. The large Countyline project near Auburn restored 121 acres of floodplain along the White River and reduce flood risk for over 200 residential properties.</p>
<p>Health systems</p>	<p>Of the 127 medical facilities throughout King County, only 5 are located in the 0.2% annual chance floodplain (which includes the 1% annual chance floodplain) and of those, only 1 is located in the 1% annual chance floodplain. No hospitals are located in the 0.2% annual chance floodplain. While these 5 facilities are certainly at risk, the risk from flooding to the overall healthcare and medical system is low.</p> <p>One area of concern is the ability of residents in certain areas of the County, in particular sole-access neighborhoods and the lower Snoqualmie Valley, to evacuate for medical reasons during times of flooding. Neighborhoods with roads that are inaccessible during flooding are particularly vulnerable. The lower Snoqualmie Valley can also be isolated when the river reaches beyond a flood phase 4 level.</p>
<p>Government operations (continuity of operations)</p>	<p>Because few government facilities are located in floodprone areas, flooding does not pose a substantial risk to the continuity of government operations. Certain city buildings in Snoqualmie, North Bend, and Carnation are in floodprone areas, but some are elevated and others are outside floodprone areas.</p>
<p>Responders</p>	<p>Police, firefighters, and paramedics play key roles in the response to flooding. Police officers often help shut roads down to prevent people from driving through floodwaters; firefighters often rescue people trapped by flooding; and paramedics transport people hurt by flooding, often from hypothermia or other causes. If any of these first responders' buildings are in the 0.2% annual chance floodplain, their ability to respond is seriously threatened.</p> <p>Of the 64 police stations in King County, 3 are located in the 0.2% annual chance floodplain (in Skykomish, Redmond, and Issaquah).</p> <p>Of the 161 fire stations in King County, 6 are located in the 0.2% annual chance floodplain (in Skykomish, Seattle, North Bend, Renton, Issaquah, and near Enumclaw).</p>

	<p>Additionally, neighborhoods with roads that are inaccessible during flooding pose challenges to first responders. They may not be able to drive to homes and may require helicopters or boats to access.</p>
<p>Infrastructure systems</p>	<ul style="list-style-type: none"> • Energy systems: most overhead powerlines are not susceptible to impacts from flooding unless the power poles are not resistant to flooding. Buried cables typically aren't affected by flooding very often. • Water/Wastewater: flooding, particularly from king tides and coastal storm systems can damage wastewater infrastructure such as the County's West Point Treatment Plant. Some city wastewater treatment plants are also located in floodprone riverine areas. Where these linear systems cross rivers, flooding can pose issues. The Tolt Pipeline, a water supply line for Seattle, was at risk from the Snoqualmie River migrating further toward its alignment. In 2019, a project was completed to provide some protection from that risk. • Transportation: roads through the Snoqualmie Valley are particularly susceptible to flooding and close regularly during high water events. Valley residents are often isolated. King County Road Services Division closes roads and will be working on an effort to study the impacts of flooding on various county roads. • Communications: most communications infrastructure is not vulnerable to flooding.
<p>Public confidence in jurisdiction's governance and capabilities</p>	<p>Flooding occurs frequently enough in King County that residents often turn to the King County River & Floodplain Management Section for help and information during flooding events. Confidence is high in the government's ability to respond to flooding events. The multiple iterations of the Flood Hazard Management Plan have featured robust stakeholder involvement processes, which has inspired confidence in King County's ability to manage floodplains with higher regulatory standards and other programs to keep people and property safe from flooding.</p>

Regional Risk Profile: Hazardous Materials

Hazard Description

Hazardous materials releases are one of the most common incident types. They can occur due to an accident or also be secondary to other primary hazards like: terrorist attack, earthquake and volcanic activity, severe flooding, and fires. Hazardous materials releases occur from leaking containers or pipelines when corrosion or a puncture occurs, accidental overflow of vessels when being transferred, loading dock and warehouse accidents, careless handling, illegal activities like drug labs, and traffic accidents. The person who dumps paint down a sewer is releasing a hazardous material. The illegal drug lab is using hazardous materials and leaving hazardous waste. The car accident that leaves a pool of fuel, oil, and anti-freeze has left hazardous materials to clean up. A growing source of materials releases is from electronic waste dumping, releasing chemicals like lead, zinc, nickel, flame retardants, barium, and chromium into the environment.

There are nine classes of hazardous materials.

1. Explosives
2. Gases
3. Flammable Liquid and Combustible Liquid
4. Flammable Solid, Spontaneously Combustible, and Dangerous When Wet
5. Oxidizer and Organic Peroxide
6. Poison (Toxic) and Poison Inhalation Hazard
7. Radioactive
8. Corrosive
9. Miscellaneous

Examples of common hazardous materials include anhydrous ammonia (used as a refrigerant), gasoline and diesel (used as transportation fuels), paints and dyes (for homes and clothing), and many corrosives (used in the local aircraft manufacturing industry).⁷⁰ Pipelines and rail lines transport crude oil to refineries and finished fuels to homes (natural gas) and retail fueling stations for vehicles.

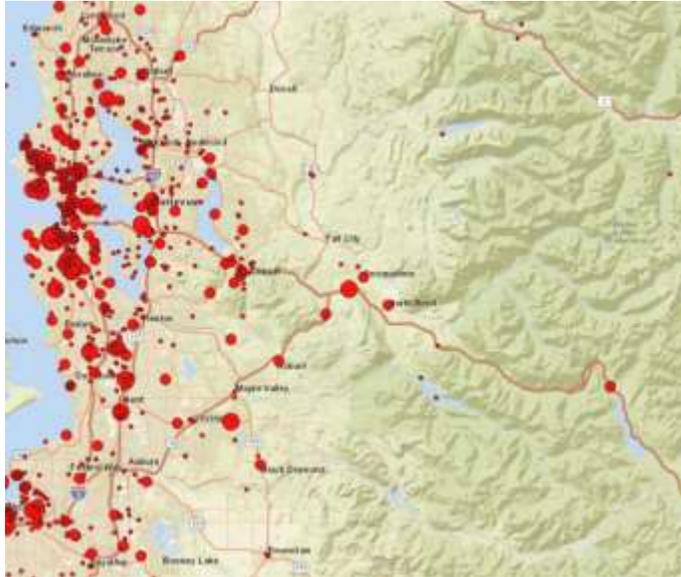

The risk of a CBRNe event (an attack using chemical, biological, radiological, or nerve agent) is low, if one were to occur this would have widespread impacts. There is little known day-to-day risk of an event, though this is a major focus of federal, state, and local counterterrorism planners. More information on hazardous materials in terrorist events will be provided in the terrorism hazard profile.

Although the likelihood of large numbers of fatalities from a single materials release is low, the effects can be devastating to impacted communities, the economy and the environment. A major oil spill in Puget Sound would destroy the fishery, including \$4.5 billion in commercial fishing, plus tourism, and sport fishing. The Puget Sound is also a culturally-sacred and environmentally-critical resource that

⁷⁰ Federal Motor Carrier Safety Administration. Nine Classes of Hazardous Materials. Accessed online on 7/2/19 from https://www.fmcsa.dot.gov/sites/fmcsa.dot.gov/files/docs/Nine_Classes_of_Hazardous_Materials-4-2013_508CLN.pdf.

cannot be replaced or valued in dollars. In this way, the hazardous materials incident hazard is one of the most complex. It includes frequent spills and releases from day to day human activities, a threat of a major release from a massive spill or accident, and the threat of an intentional release from an attack. The impacts from hazardous materials are also complex, including slow-acting releases that kill people

and the environment over years and catastrophes that kill thousands, such as in Bhopal, India in 1984.

Class 1, 3, and 4 Spills Program-Regulated Facilities (WA ECY)

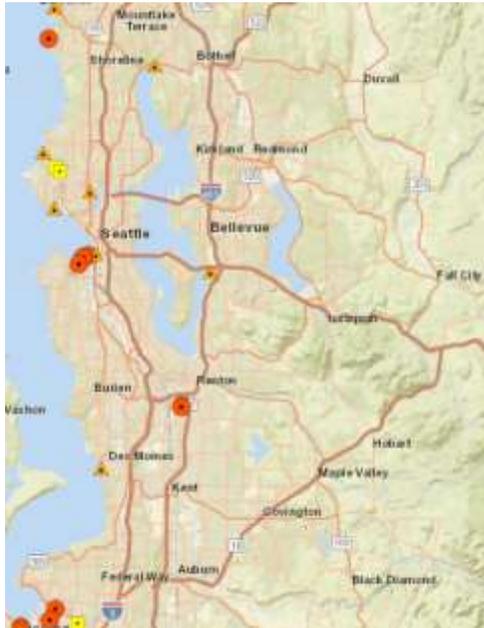

of fluids dripping onto the pavement from parked vehicles is an oil spill.⁷¹

Between July 1, 2015 and March 31 2019 Washington State Department of Ecology received 748 reports of oil spills of one gallon or more reaching a water source, including both running into storm drains and running directly into a waterway. This only includes reported spills and only includes oil spills. This does not include the uncountable quantity of micro-spills that occur and are later washed into waterways by rain. For example, the rough spot of pavement in a parking lot that is the result

In Washington, the state Department of Ecology is the lead agency for hazardous materials. Local response is led by fire services.

⁷¹ Washington State Department of Ecology. Coastal Atlas. Accessed online on 7/2/19 from https://fortress.wa.gov/ecy/coastalatl原因/storymaps/spills/spills_sm.html.

Vulnerability Characteristics and Previous Occurrences

King County hosts a variety of unique transportation and geographic conditions, including one of the largest deep water seaports on the west coast, an International Airport in SeaTac that handles cargo from all over the world, as well as fuel pipelines running south from Whatcom County through King County and down into Portland carrying jet fuels, diesel, gasoline, etc. An estimated 18,833 oil tank cars travel through King County each quarter.⁷² Additionally, local highways like Interstate-5, Interstate-90, Interstate 405, US Highway 2, State Route (SR) 18, SR 516, SR 167, US Highway 99 and others transport hazardous materials throughout the region.

In the City of Seattle alone there are thousands of facilities with hazardous materials regulated under the fire code.⁷³ Other areas with high concentrations of hazardous materials usage include Auburn, Redmond and the Kent Valley.

Business types that commonly use hazardous materials include: hospitals, schools and universities, metal plating and finishing, the aircraft industry, public utilities, cold storage companies, the fuel industries, the communication industry, chemical distributors, research, and high technology firms. Each of these facilities is required to maintain plans for warning, notification, evacuation and site security under various regulations.

While the majority of incidents tend to involve petroleum products, a significant number involve extremely hazardous materials. Extremely hazardous materials include chemicals like chlorine, ammonia, sulfuric acid, nitric acid, some pesticides (EHS is a technical designation, so not pesticides- although the chemistries used as pesticides might be on the EHS list), and other chemicals that can cause immediate death or injury when inhaled, ingested, or come in contact with skin. Approximately 200 local facilities with extremely hazardous materials report to the county under Community Right to Know Act provisions. (plug with time and description of LEPC Seattle and King) These sites report their inventories annually with records being retained in databases in multiple locations.⁷⁴

Though they occur every day, many spills are not reported or go undetected. Some industrial spills from the 1970's and 1980's are still being cleaned up in the Kent Valley, Harbor Island, Duwamish corridor,

⁷² Washington State Department of Ecology. Coastal Atlas. Accessed online on 7/2/19 from https://fortress.wa.gov/ecy/coastalAtlas/storymaps/spills/spills_sm.html.

⁷³ National Fire Protection Association. Materials Management Codes and Standards. Accessed online on 6/25/19 from <https://www.nfpa.org/codes-and-standards/all-codes-and-standards/list-of-codes-and-standards?mode=code&code=400>.

⁷⁴ King County Local Emergency Management Planning Committee. 2015. Tier II Reports.

and Seattle/South Park as federal Superfund cleanup sites. There are currently 10 active Superfund cleanup sites in King County.⁷⁵ At least five other Superfund sites have completed cleanup and have been closed since the program began. Currently active sites include:

1. Harbor Island – groundwater contains benzene, ethyl benzene, xylene, mercury, cadmium, lead and zinc with poly chlorinated bi-phenols (PCB) sediments. 18
2. Lockheed West Seattle – heavy metal contaminants: arsenic, chromium, copper, lead, silver, and zinc with butyl tins and PCBs.
3. Lower Duwamish Waterway – River sediments are contaminated with mercury, arsenic, PCBs, dioxins, furans, and phthalates.
4. Midway Landfill – Ground water contaminated with heavy metals and volatile organics.
5. Pacific Car and Foundry – Soil is contaminated with heavy metals, PCBs and solvents. Approximately 37,000 obtain drinking water from wells within three miles.
6. Pacific Sound Resources – Soil and ground water contaminated by PCBs and heavy metals from former wood treatment operations.
7. Queen City Farms – the site is a former landfill. Ground water, surface water, and sludge contaminated by volatile organic compounds. Soil contaminated with PCBs and metals.
8. Quendall Terminals – Soil and ground water contaminated with benzene and creosote from former manufacturing plant. Contaminants release to Lake Washington.
9. Seattle Municipal Landfill (Kent Highlands) – Landfill contains volatile organic compounds like toluene, xylene, vinyl chloride, and others – plus heavy metals.
10. Western Processing – former industrial processing facility ground water and sediment contains volatile organic compounds, PCBs, phenols, and heavy metals

An example of the cleanup costs for a Superfund site is illustrated by the Harbor Island Cleanup. The former owner, RSR Corporation agreed to pay \$8.5 million in fines toward the cleanup that will cost (when completed) over \$32 million.⁷⁶ The cost to cleanup an illegal drug lab (in a home) can cost between \$5,000 and \$100,000 depending on the size of the home. Often the occupants vacate or abandon the sites – leaving a bank or credit union holding the mortgage and cleanup costs.⁷⁷

Scenario Drivers

<p>It is difficult to find a home, school, hospital or place of business that isn't without chemicals, solvents, pesticides, lawn chemicals, cleaners and/or paints.</p>	
<p>Pipeline rupture</p>	<p>Washington State hosts the only oil refineries in the Northwest. Multiple pipelines traverse the state, such as the Olympic Pipeline. Failures or shutdowns in the pipeline can cause fuel shortages and price increases. An explosion on the Olympic Pipeline in 1999 killed three people and cost over \$58 million in property damage.</p>

⁷⁷ Dewan, Shaila and Robbie Brown. July 25, 2009. When an ex-meth lab is home. *The Seattle Times*. Accessed online on 6/25/19 from <https://www.seattletimes.com/business/real-estate/when-an-ex-meth-lab-is-a-home/>.

Chemical/oil train derailment	An oil spill in 2016 in Moser, Oregon along the Columbia River very nearly caused the destruction of the entire town and an ecological catastrophe in the river. The community was saved by luck of the weather and because most of the oil that spilled flowed into a water treatment plan, where it was safely contained.
Oil tanker spill	An oil tanker spill in the Puget Sound would devastate marine life and potentially cause a permanent shut-down in oil tanker traffic due to public outcry. A major spill would close the fishery economy leading to \$4.5 billion in losses for Washington alone and permanent, incalculable damage to tribal cultural resources.
Storage facility failure in a populated area	A facility failure, including an explosion or release of chemicals, could endanger or kill many people. In Waco, Texas in 2013, an ammonium nitrate explosion occurred at a distribution facility, leveling a neighborhood and killing 15 people. A train derailment in 2013 in Lac Megantic in Quebec, Canada killed 60 people and destroyed much of the town.
Vehicle accident on a major roadway	Vehicle accidents that release fuel and oil occur every day on Washington roads. A major incident, especially at an interchange, such as the I-5 and I-405 interchange in Tukwila/Renton would potentially close both freeways for an extended period while cleanup occurs.
CBRNe Attack	Another lower-risk, but high-intensity hazardous materials event is from a chemical, biological, radiological, or nerve agent (CBRNe) attack.

Priority Vulnerabilities

Low-income communities in or around industrial facilities	Low-income communities are more likely to be impacted from major releases due to the proximity of affordable housing to industrial areas and historic environmental injustices.
Individuals with respiratory issues	Individuals with respiratory issues are more likely to succumb quickly to an airborne release of a chemical.
Major transportation facilities such as the Port of Seattle	Major transportation facilities store huge amounts of chemicals and fuel in depots. A failure or fire at one of these facilities could damage or destroy these assets.
Rail facilities	Rail facilities transport chemicals and fuels, including highly combustible crude oil. There have been multiple derailments and spills. In Moser, Oregon

	in 2016, a train derailed causing a fire that nearly destroyed the town and the fuel was prevented from leaking in large quantities into the Columbia River by luck.
Interstate highways	Interstate highways are a major artery carrying chemicals. Accidents happen every day and major chemical spills can shut down a roadway for an extended period of time. (oil slicks contribute to traffic injuries and fatalities when it rains)
Oil tankers in Puget Sound	Oil tankers are expected to traverse Puget Sound in growing numbers due to Canada’s approval of a major pipeline and terminal in Vancouver, BC. When this occurs, it will significantly raise the risk a spill that could destroy much of the aquatic life in Puget Sound.

Priority Impact Areas

King County residents	Potential Impacts to the public from a hazardous materials spill can vary widely. Temporary or even permanent displacement through evacuation from an unsafe area can result in relocation/displacement of populations. Employment disruption, school closure, impacts to private and community wellheads and other impacts can change whole communities. Long term exposure to toxic chemicals can cause birth defects and temporary or permanent health problems – especially for the young, old and infirm. ⁷⁸
Vulnerable populations	Vulnerable populations often live in closer proximity to facilities with the risk of hazardous materials release. In King County, this includes residences near the Duwamish industrial area, in Kent, Renton, and south Seattle. These are also the locations of the superfund sites in the region. In cases of major releases or system failures, the most impacted populations are frequently lower-income, often ethnic minority communities that live nearby. Populations with respiratory issues are also at a heightened risk of impacts due to an airborne release of chemicals.
Property	Spills of hazardous materials to soil or buildings can result in extensive and costly cleanup efforts. Cleanup standards are established by federal (U.S. EPA), state (Washington State Department of Ecology), and local standards (fire agencies and environmental agencies). Until a site is cleaned up to those standards, residential or business occupancy can be denied under the Health Code. The responsible party (property owner) may be required to pay for the cleanup. Often this can lead to bankruptcy and clean up by state or federal agencies and contractors. Contaminated property can drastically reduce the value of the property and the King County subsequent property taxes available to local and state

⁷⁸ U.S. Centers for Disease Control. Health Effects of Chemical Exposure. Accessed online on 6/25/19 from <https://www.atsdr.cdc.gov/emes/public/docs/Health%20Effects%20of%20Chemical%20Exposure%20FS.pdf>.

	government. Similar impacts can be expected for transportation accidents with hazardous material spills.
The economy	Small spills can close businesses and rather large impact on employment and land use including the properties of neighbors not responsible for the chemical release. Superfund sites can impact a community for decades until they are cleaned up. The large salmon and fishing fleet that calls King County home may be impacted when some of a year's fish stock – or even the entire run is impacted.
The environment	Any chemical spill on or along rails, roads, pipelines, fixed industrial facilities or illegal drug labs/dumping may impact the natural environment. Wetlands, streams and rivers, lakes, and reservoirs may all be damaged from chemical spills. In some cases these damages may injure the plant and animal life irreparably. Birds, reptiles, amphibians, fish, and mammals may all be impacted. Air pollutants may impact human inhabitants as well as the natural environment. Recreational areas can be closed until a suitable solution can be found to recover the natural environment.
Health systems	Hospitals can be overwhelmed by major releases of hazardous materials as populations, both those exposed and those who feel they may have been, check in at emergency rooms. Hospitals and pharmacies are also sources of hazardous materials, including some radioactive materials such as those associated with cancer treatment.
Government operations (continuity of operations)	King County is the operator of several facilities that are vulnerable to hazardous materials spills. The county has three waste water operations (South Plant, West Point Treatment Plant, and Brightwater). These expensive facilities are vulnerable to the introduction of chemicals (when in large volumes) to the sanitary sewer system. The county also has solid waste (garbage) transfer stations and a major landfill operation at Cedar Hills. While contaminants are avoided, some material may make its way into the landfill and the ground water table. Drinking water facilities including private and community well heads and reservoirs may also be vulnerable to introduction of chemical or biological contaminants. Any chemical spill that impacts a major roadway or rail line may impact public transit routes in the county.
Responders	Hazardous materials make response and recovery activities in all disasters a threat to the health and safety of responders. During local events, such as house fires, stores of chemicals can catch fire and explode, injuring responders. During larger events such as earthquakes, large-scale releases can surprise and overwhelm responders without proper equipment. It can also be extremely difficult to determine the chemical or chemicals that have been released from a given spill, adding to first responder danger.
Infrastructure systems	With hazardous materials being everywhere in our modern community, it is possible to impact almost any critical facility in the county. Any roadway or rail line is vulnerable to the many chemicals transported over them daily. Spills to soils and surface water sources

	<p>can impact drinking water and the environment. Materials dumped into sanitary sewers can contaminate waste water treatment plants. Airborne chemicals can cause the evacuation of the area downwind of the spill, including critical facilities. Damage to road surfaces from chemical spills may require the removal and replacement of the entire road surface and foundational road bed. Transformers used in power transmission contain chemicals called PCB (Poly chlorinated bi-phenols) that can be released during wind storms or lightning strikes and traffic accidents. The impacts to business from interrupted commute/road or railroads closures can last for hours, days, weeks, or longer. White powder incidents have closed postal facilities and government buildings until the substance was identified and removed</p>
<p>Public confidence in jurisdiction's governance and capabilities</p>	<p>The Community Right to Know Act, and other related legislation, resulted from serious breaches in public confidence following massive releases, explosions, or other failures in hazardous materials systems. Any major incident in and of itself seems to offer proof to the public of a regulatory failure. Maintaining Local Emergency Planning Committees and a regular structure to report and analyze hazardous materials releases is critical to maintaining public confidence.</p>

Regional Risk Profile: Health Incident⁷⁹

Hazard Description

Disease has been one of the most influential factors in human history. On many occasions, disease has shaped civilizations and altered the course of history. Throughout the 20th century great strides in medicine have produced many treatments and cures for the deadliest diseases. Many of these medical advances have given us a false sense of security that all diseases can be treated or cured in a timely manner, even though the potential for a devastating disease outbreak continues to threaten our community.

The impact of these diseases varies based on the virulence of the disease, duration of the illness, susceptibility of the population to the disease, and spread within the community.

An outbreak can be characterized by the extent of spread of the disease. Epidemic refers to an increase, often sudden, in the number of cases of a disease above what is normally expected in that population in that area. Pandemic refers to an epidemic that has spread over several countries or continents, usually affecting a large number of people. More common diseases are classified as endemic, as they are at baseline levels within a community. New or emerging diseases can quickly become an epidemic/pandemic if there is little or no immunity in the population.

Common disease outbreaks include influenza, norovirus, pertussis, hepatitis A, *Salmonella*, and *E. coli*. Novel strains of influenza are a great risk to King County, because of lack of immunity to a new influenza virus stain, the potential for severe illness, and the high degree of transmissibility from person to person.

For King County, the Communicable Disease Epidemiology & Immunization Section within Public Health – Seattle & King County investigates and coordinates the surveillance of communicable disease cases and outbreaks.

The impact of a disease can be tracked and characterized using several different indicators. These indicators can help Public Health assess and respond to potential disease outbreaks.

- *Incubation period:* The stage of subclinical disease extending from the time of exposure to onset of disease symptoms.
- *Contagious period:* The duration after infection during which the person can transmit the infection to others.
- *Infectivity:* The proportion of exposed persons who become infected.
- *Pathogenicity:* The proportion of infected persons who develop clinically apparent disease.
- *Virulence:* The proportion of clinically apparent cases that are severe or fatal.

⁷⁹ This risk profile was developed for the Seattle and King County Hazard Mitigation Plans by Public Health Seattle & King County.

Vulnerability Characteristics and Previous Occurrences

Epidemics directly affect the health of people who live, work, and visit a community. They have the potential to be one of the deadliest hazards a community can face. Sickness is the most visible consequence of an epidemic, but outbreaks can also severely impact the community as schools, businesses, government agencies and non-profit organizations curtail operations due to employee illness or as countermeasures. The effects of these curtailments grow the longer the disease persists.

In many epidemic and pandemic situations, disease spreads quickly throughout a community. There are many factors that can increase King County’s vulnerability to disease spread:

- Rapid population growth, such as is occurring in King County, increases the potential for acquisition and spread of infectious diseases.
- King County’s large international air and seaports (including an active cruise ship industry) increase the number of visitors to our area and the risk for importation of infectious diseases. Diseases that are not endemic to Washington have the potential for introduction and spread among our residents. Vaccine preventable diseases (e.g., acute viral hepatitis, measles, and influenza) are significant contributors to morbidity and potential mortality in international travelers and can cause local outbreaks among susceptible persons.
- Persons experiencing homelessness often also have limited access to medical care, so many people living homeless and with health problems have difficulty getting prompt treatment. Living conditions – like crowding and fewer opportunities for personal hygiene – can contribute to the spread of disease. If someone has an underlying medical condition, alcohol or drug use, or weakened immune system, they are even more susceptible. In 2017 and 2018, CD-Imms responded to increases in several infectious diseases among persons experiencing homelessness; new infections and outbreaks in this population continue to be reported and might continue to rise given the increase in persons experiencing homelessness in King County.

Disease often affects those most vulnerable in our communities. Young children, the elderly, the poor and those with underlying health conditions are often the hardest hit by disease.

King County has a large concentration of healthcare resources, but in an epidemic or pandemic these resources can be stretched or overwhelmed by the outbreak situation. The area also provides specialized medical care for a large geographic area, including one of the area’s only pediatric hospitals and the only Level 1 Trauma center for Washington, Idaho, Montana, and Alaska. In addition, Airlift Northwest located at Boeing Field is the only life-flight agency serving the same four-state region.

Other resources, such as food and water, are also a concern when planning for disease outbreaks. King County has many open reservoirs that provide water to the city. These reservoirs could become contaminated and be a source of infection for area residents. Food sources can become contaminated by improper food handling practices or ill food workers. Public Health conducts ongoing surveillance for food- and waterborne illnesses to identify and quickly control outbreaks.

Although it is impossible to predict the next disease outbreak, history has shown that outbreaks are not uncommon and can produce devastating effects on a community. While the revolution in medicine in the past century has increased our ability to counteract disease, increases in the number of people without adequate healthcare, the evolution of antibiotic resistant bacteria and globalization help make

outbreaks spread more quickly and increase their magnitude. Disease outbreaks not only cause increased morbidity and mortality in the community, but also put a greater strain on the healthcare and infrastructure system that could prevent the operation of critical services.

Throughout the 20th century several epidemics and pandemics have affected our community.

Influenza. 1918-1919: The influenza pandemic of 1918 was especially virulent, killing a large number of young, otherwise healthy adults. The pandemic caused more than 500,000 deaths in the United States and more than 40 million deaths around the world. The 1918 pandemic first arrived in Seattle in October 1918; over the next six months the virus claimed 1,600 lives.

Influenza. 1957-1958: The influenza pandemic of 1957 was less severe than the 1918 pandemic and caused a total of 70,000 fatalities nation-wide.

Influenza. 1968-1969: The influenza pandemic caused more than 34,000 deaths in the U.S. and cause severe morbidity and mortality around the world.

***E. coli.* 1993:** *E. coli*-contaminated hamburger meat from a local Jack in the Box caused illness in 400 people and led to the death of two people within one month in the Washington area. Cases were seen in California, Idaho, and Nevada as well.

Pertussis. 2002-2005: Between 2002 and 2003 Public Health reported an 82% increase in the number of Pertussis infections in infants, and a three-fold increase in the number of cases in children <6 months. The occurrence of Pertussis in adolescents and adults has been on the rise since 1990, culminating in a national epidemic in 2005 when 25,616 reported cases nation-wide. Outbreaks within healthcare facilities can occur quickly because the bacterial infection is highly contagious.

Influenza. 2009: Like the 1918 pandemic, the H1N1 outbreak of 2009 affected the young and healthy populations as well as those with chronic diseases. This increase in morbidity caused strain on the local healthcare system. Although the H1N1 virus was not as virulent and there were not nearly as many fatalities as previous pandemics, the outbreak caused a larger than usual amount of disease in the community than seasonal influenza virus does.

Scenario Drivers

The most likely scenario that activates the region’s emergency management system would be a disease outbreak that just exceeds our public health system’s capacity. We have chosen hepatitis A outbreak for the Most Likely Scenario. In 2017, several state and local health departments responded to hepatitis A outbreaks, spread through person to person contact, that occurred primarily among persons who use injection and non-injection drugs, and/or person who experienced homelessness and their close contacts. Multistate outbreaks of hepatitis A infections have also been linked to food products (i.e.

strawberries in 2016 and pomegranate seeds in 2013).⁸⁰ A large outbreak centered in Seattle would cause a strain on the public health system and potentially have strong impacts on local businesses, especially any that the public perceives as responsible for the outbreak.

Hepatitis A Outbreak
 Seattle is the center of a hepatitis A outbreak that kills 20 people and makes hundreds severely ill, including hundreds of hospitalizations. The emergency is complicated, and infections are spreading among people who are living homeless who have limited access to adequate hygiene and prompt medical care.

Pandemic Flu
 The most severe disease outbreaks would involve pathogens that would infect a large percentage of an exposed population and hospitalize or kill many people. Pandemic influenza has the potential to cause this great a disaster. It poses a great threat to the health of our local community as well as the national/international community. In addition to human morbidity and mortality, pandemic influenza can have many socio-economic consequences. Cancellations of schools, work and public gatherings may be enacted to attempt to halt the spread of disease. Staff absenteeism can create a strain on government and healthcare systems causing limitations of services and care. The 2009 H1N1 flu outbreak showed how potentially easy it is to overwhelm the healthcare system, even though, as it happened, H1N1 was an influenza that caused less severe disease than a typical seasonal flu. A pandemic influenza that caused moderate or severe disease would have a much larger impact on the community. The following table outlines expected disease rates based on Center for Disease Control modeling.

Characteristic	Moderate (1958/68 - like)		Severe (1918 - like)	
	US	King County	US	King county
Illness	90 million	540,000	90 million	540,000
Outpatient Care	45 million	270,000	45 million	270,000
ICU Care	128,750	733	1,485,000	8,910
Mechanical Ventilation	64,875	389	742,500	4,455
Deaths	209,000	1,254	1,903,000	11,418

⁸⁰ Centers for Disease Control. Hepatitis A Outbreaks in the United States. Accessed online on 6/28/19 from <https://www.cdc.gov/hepatitis/outbreaks/hepatitisaoutbreaks.htm>.

Bioterrorism	Bioterrorism is another potential cause of a catastrophic disease outbreak. The maximum bioterrorism scenario is estimated by Public Health – Seattle & King County to have impacts similar to the pandemic flu scenario identified above.
--------------	--

Priority Vulnerabilities

Old and young people	People who are either old or young have weaker immune systems and are usually more likely to succumb during an outbreak.
Healthcare staff	Healthcare staff come into regular contact with sick patients and are likely to be exposed both before the illness is identified and during treatment.
People with compromised immune systems	People with compromised immune systems are most likely to become infected and succumb from a serious disease.
People without health insurance	People without health insurance are more likely to delay getting care, allowing the disease to spread farther before it is identified.
Health system	The health system is likely to be overwhelmed in any serious epidemic. In especially serious outbreaks, it may be inadvisable for patients to even come to the hospital and treatment may have to occur outside of hospital facilities.

Priority Impact Areas

King County residents	As many as 11,418 deaths are estimated to occur during the most severe pandemic scenario. Thousands more would be hospitalized, and hundreds of thousands sickened. As of May 4, 2019, there were 45 influenza fatalities in the 2018-2019 flu season.
Vulnerable populations	In 2017-2018 flu season, there were nearly 1,000,000 hospitalizations and 79,400 deaths. The most at-risk group is adults over 65 years of age (70% of hospitalizations). ⁸¹ Older adults account for nearly 90% of deaths. During a serious epidemic, older adults, individuals with compromised immune systems, children, people without health insurance, people who speak a language other than English, and people who are recent immigrants to the country are likely to be the most at-risk and suffer the worst impacts.
Property	There are no direct impacts to property.
The economy	The economy may come to a virtual standstill for weeks on end during severe outbreaks as people avoid public places. Many small businesses may lose too much revenue and be

⁸¹ Centers for Disease Control. Estimated Influenza Illnesses, Medical visits, Hospitalizations, and Deaths in the United States — 2017–2018 influenza season. Accessed online on 6/28/19 from <https://www.cdc.gov/flu/about/burden/2017-2018.htm>.

	forced to close. Nationally, the economic impact of seasonal influenza has been estimated as high as \$166 billion (2012 dollars). ⁸²
The environment	There are no expected impacts to the environment.
Health systems	Health systems will be overwhelmed and many nurses and doctors potentially sickened. As facilities become unable to take additional patients, it may be possible to treat people in outpatient facilities. During the worst-credible scenario, nearly 300,000 residents of King County would require treatment. This would be far beyond the capacity of the public health system.
Government operations (continuity of operations)	Many government operations may cease to function on a normal basis during the most severe outbreaks. Agencies may have to adopt work from home policies and take other steps to protect employees. Due to employee illness, many non-essential functions may have to be curtailed.
Responders	Emergency services would be severely impacted during a serious outbreak because they are likely to be exposed early due to public contact. As responders become sick, response times and capabilities would be severely limited.
Infrastructure systems	<ul style="list-style-type: none"> • Energy: There are no direct impacts, outside of employee absenteeism, to the energy sector. • Water/Wastewater: There are no direct impacts to the water and wastewater system from most outbreaks, although this system is a potential target of bioterrorist activities. • Transportation: A disease would not cause any direct damage to the transportation system, but high absenteeism would affect it. Public transit, shipping, and other services may only function at 50% during especially severe outbreaks. • Communications: There are no direct impacts, outside of employee absenteeism, to the communications sector.
Public confidence in jurisdiction's governance and capabilities	The public understands that an outbreak is a severe natural event; however, restrictions on public gatherings are not popular and create frustration. Some people may believe they are not getting enough attention from the medical community. Others may begin to doubt the efficacy of treatment options if the disease worsens. In the most extreme cases, confidence in the medical system can be shaken.

Regional Risk Profile: Landslide

Hazard Description

The term “landslide” covers a range of geomorphic processes in which masses of soil, rock, debris (a mixture of soil and rock) become detached and move downslope. This mass is usually wet, saturated, or suspended in water. This movement can happen quickly or slowly; displaced material can remain solid or move as a liquid. Landslides can range in size from a few cubic yards to millions of cubic yards. The detailed character of movement is referred to herein as the landslide style. The style of landsliding depends on the local geology, topography, and hydrology in the vicinity of the failure. Five general styles of landslide phenomenon have been identified in King County:⁸³

- Deep-seated landslides (including rotational slides, liquefaction spreads, debris flowslides, debris avalanches, and rock compound slides),
- Shallow debris slides,
- Processes that build depositional fans (including debris flows and debris floods),
- Rock fall, and
- Rock avalanches.

Landslides are usually a secondary hazard, typically driven by precipitation. Smaller and shallower landslides are often triggered by storm events lasting hours or days. Large deep-seated slides may be triggered by wetter than normal conditions that persist for months. Historical records and geologic evidence also show that large earthquakes, while relatively infrequent can be significant landslide triggers. Landslides can also be triggered by ill-advised clearing, grading, or stormwater discharge. Landslides tend to happen in areas where there is a history of previous occurrences. Another major determinant of landslide risk is local geology. King County’s landscape is very young and is largely a product of multiple glacial advances over the last two million years, with the most recent advance approximately 14,000 years ago. Landslides are most common where post-glacial erosion has created steep slopes in glacial deposits, primarily along beach bluffs, ravine slopes, and river valley walls. In addition to areas of steep slope some areas of lower slope are actually old, deep-seated landslides which may be at risk of reactivation. Characteristics of landslide hazard areas include:⁸⁴⁸⁵

- A slope greater than 40 percent
- Landslide activity or movement in the last 10,000 years
- Stream or wave action with erosion or bank undercutting

⁸³ King County. 2016. Mapping of Potential Landslide Hazards along the River Corridors of King County, Washington. Prepared by River and Floodplain Management Section, Water and Land Resources Division, Department of Natural Resources and Parks. Seattle, WA. August.

⁸⁴ Federal Emergency Management Agency. 2018. King County Risk Report: Landslide Exposure Assessment. Page 52.

⁸⁵ Washington State Emergency Management Division. 2018. Washington State Enhanced Hazard Mitigation Plan Risk Assessment. Page 308.

- The presence of a depositional fan that may indicate a history of debris flows, debris floods, or rockfall
- The presence of impermeable soils, such as silt or clay, which are mixed with granular soils such as sand and gravel

Landslides are dangerous and unpredictable. Some landslides may show indications of impending or incipient movement; others may happen suddenly without any warning signs. Warning signs of a potential or impending landslide include:⁸⁶

- Rapidly growing cracks in the ground; downslope movement of rock, soil, or vegetation.
- Sudden changes in creek water levels, sometimes with increased sediment, especially during or right after large or protracted storm events
- Sounds of cracking wood, knocking boulders, groaning of the ground, or other unusual sounds, especially if the sound increases
- A hillside that has increased spring and (or) seep activity, or newly saturated ground, especially if it was previously dry
- Formation of cracks or tilting of trees on a hillside
- New or developing cracks, mounds, or bulges in the ground
- Sagging or taut utility lines; leaning telephone poles, deformed fences, or bent trees
- Sticking windows or doors; new and (or) growing cracks in walls, ceilings, or foundations
- Broken or leaking utilities, such as water, septic, or sewer lines
- Separation of structures from their foundation; movement of soil away from foundations
- Changes in water well levels or water wells that suddenly run dry

Vulnerability Characteristics and Previous Occurrences

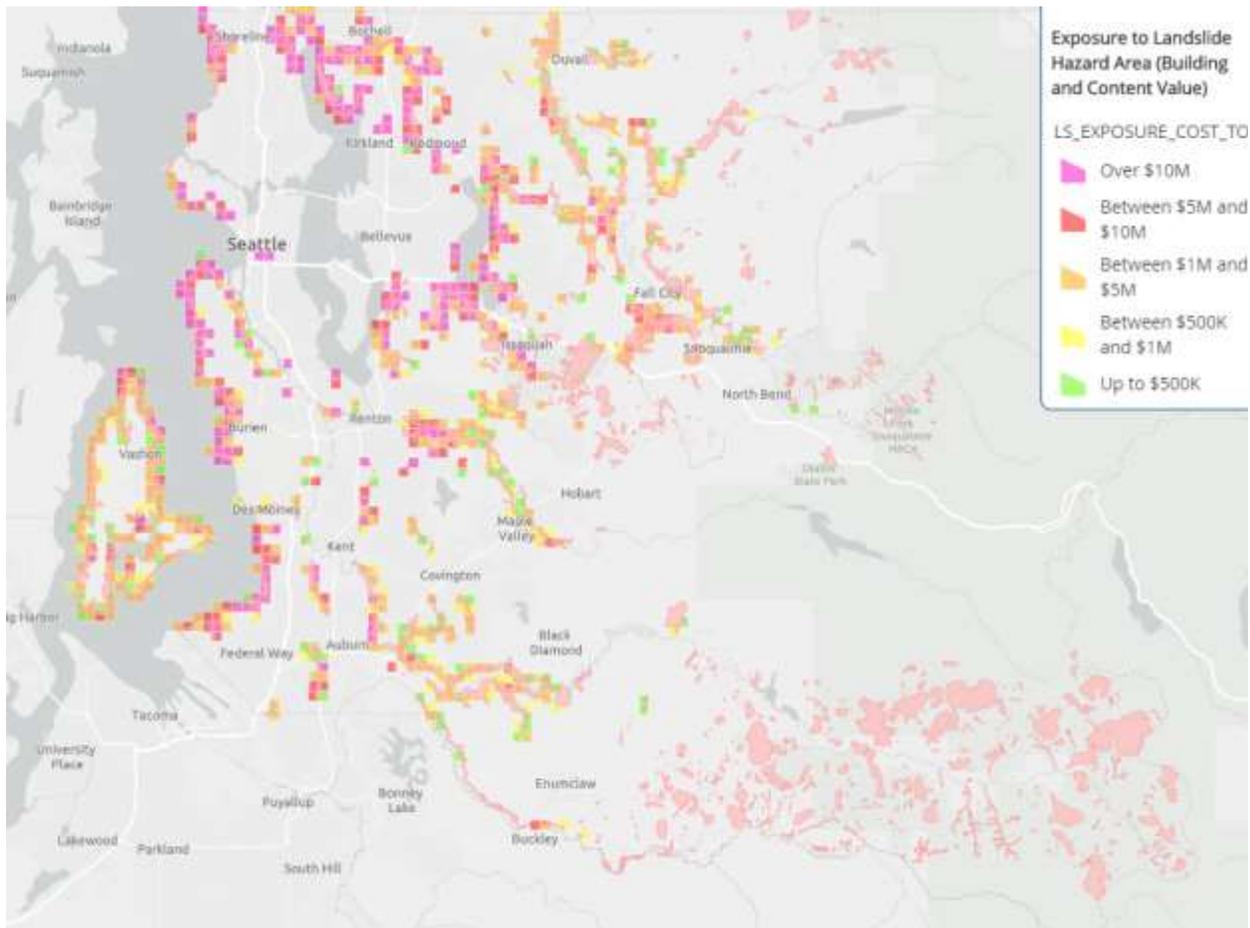

The most significant landslide risk in King County is during the rainy season from November through January.

Areas in the County most at risk from landsliding include those on or near coastal bluffs, ravine and valley slopes, and in steep mountainous topography. Parcels on slopes greater than 40 percent are at an elevated risk of landsliding compared with more level sites. The landslide risk assessment used WA DNR Landslides and Landforms digital data identifying historic landslide areas, potentially unstable to intermediate-sloped areas, and potential deep-seated landslide areas.

Since 2006, there have been seven disaster declarations impacting the county, including DR-4168 for the SR 530 (Oso) landslide in Snohomish County. Landslides occur during virtually every major storm event and earthquake. Landslides are especially likely in areas where they have been recorded before. A good method of assessing likelihood of a future landslide is to know if the area has had a history of landslides.

⁸⁶ Washington State Department of Natural Resources. 2017. Landslide Hazards in Washington State. Accessed online on 6/7/19 from https://www.dnr.wa.gov/publications/ger_fs_landslide_hazards.pdf?h283k.

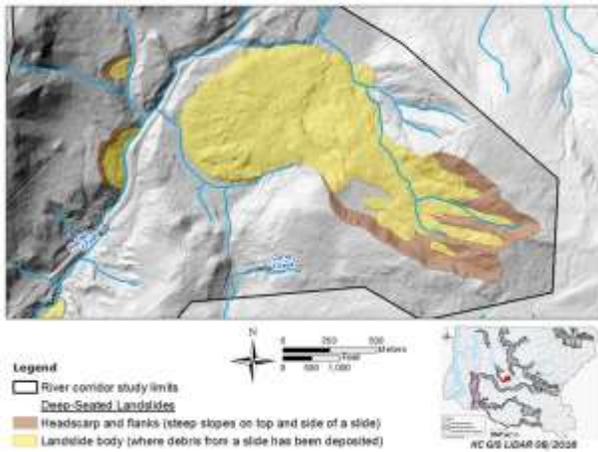

- 2001 – DR1361 – Nisqually Earthquake triggers landslides around the state. \$66.7M in Public Assistance was authorized.
- 2006 - DR-1737 – Severe storms trigger flooding and landslides. \$29.5M in Public Assistance (statewide) was authorized along with \$5.4M in Individual Assistance.
- 2007 – DR-1734 – Severe winter storms trigger landslides. \$61.3M in Public Assistance was authorized along with \$21.2M in Individual Assistance.
- 2009 – DR-1817 – Sever winter storms trigger flooding and landslide.
- 2011 – DR-1963 – Severe winter storms trigger flooding and landslides.
- 2014 – DR-4168 – A slope along SR 530 in Snohomish County fails, bringing with it an entire neighborhood and killing 43 people. This is one of the deadliest disasters in Washington State History. There is a long history of landslides in this area and the tragedy leads the state to invest in a new landslide mapping program.
- 2012 – DR-4056 – Severe winter storms trigger flooding and landslides. \$30.1M in Public Assistance was authorized.
- 2017 – DR-4309 – Severe winter storms trigger flooding and landslides. \$12.5M in Public Assistance was authorized.

Scenario Drivers⁸⁷⁸⁸

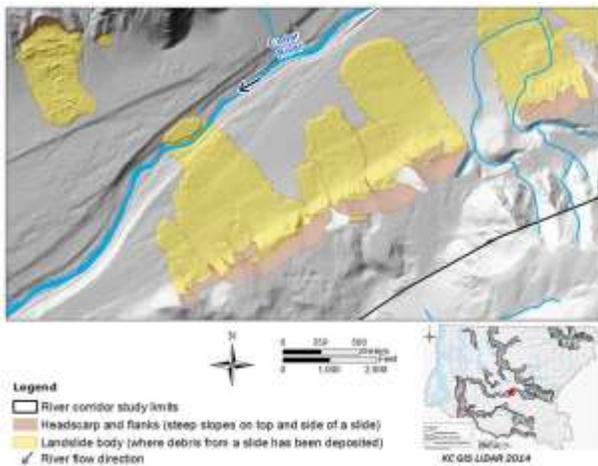

For planning purposes, King County looks at three common or particularly deadly landslides. These usually result after major weather events or due to human activities or other disturbances such as a major wildfire.

Deep Landslide

Deep-seated landslides are those that fail below the rooting depth of trees and vegetation. They are often slow moving but can also move rapidly. Deep-seated landslides can cover large areas and devastate infrastructure and housing developments. These landslides usually occur as translational slides, rotational slides, or large block slides. Deep-seated landslides are typically much larger than shallow landslides, in terms of both surface area and volume. A deep-seated landslide may appear stable for years, decades, or even centuries. These long-lived features can be partially or entirely reactivated for a variety of reasons.

Debris Flows

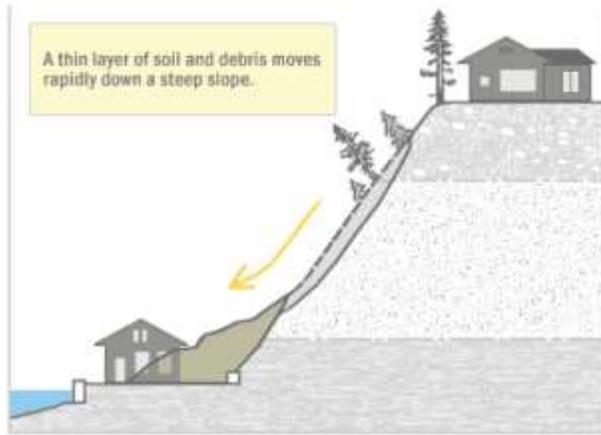

Debris flows usually occur in steep gullies, move very rapidly, and can travel for many miles. Slopes where vegetation has been removed are at greater risk for debris flows and many other types of landslides. The figure shows a series of flows located in the Cedar River Watershed. The ages of these slides are unknown, but they are geologically very young as they overlap (and therefore post-date) the entire suite of river terraces present here. The exact trigger for this assemblage of large, closely spaced landslides is unclear.

⁸⁷ King County Department of Natural Resources and Parks. Landslide Hazards Program website. Accessed online on 6/7/19 from <https://www.kingcounty.gov/services/environment/water-and-land/flooding/maps/river-landslide-hazards/landslide-types.aspx#Debris>.

⁸⁸ Washington State Geologic Survey. Landslide Hazards Program website. Accessed online on 6/7/19 from <https://www.dnr.wa.gov/programs-and-services/geology/geologic-hazards/landslides#types-of-landslides.8>

Shallow Landslides

Shallow debris slides (also known as shallow landslides) are a common style of slope movement both in the Puget Lowland and Cascade Mountains. Shallow debris slides are characterized by failure of a relatively shallow layer of soil typically sliding on a surface of more competent material, either bedrock or dense glacial sediments. Shallow debris slides are typically 3 to 6 feet (1 to 2 meters) and translational. Shallow colluvial soils on slopes are formed through a variety of processes, including breaking up of the underlying in-place substrate (either bedrock or Quaternary sediments) by freeze/thaw, wetting/drying, bioturbation, and chemical weathering. Soils on steep slopes in King County vary significantly with respect to soil thickness, soil strength, and hydraulic properties; this variability presents the central challenge in assessing their stability across a landscape.

Priority Vulnerabilities

Homes built above, on, or below bluffs or slopes

Homes built on bluffs or other slopes apply additional weight to a slope and increase the likelihood of slope failure. Homes built below bluffs have also been destroyed by slope failure.

Transportation corridors, including on I-90 and Seattle-Everett BNSF rail line

Transportation routes are often cut through steep areas or travel through valleys with a history of landslides.

Debris flows after vegetation removal

Vegetation removal due to logging, land development, view clearing, or wildfire reduces the root strength that often anchors and reinforces shallow soils. Shallow landslides often increase following vegetation removal and if debris from such a slide enters a hillside swale it may transition into a debris flow that can have devastating impacts far below and distant from the initial failure.

Coseismic Landsliding

This Risk Profile addresses primarily landsliding for which our region has significant collective experience. This includes landslides triggered by weather events and human disturbance. Geologic evidence is clear that this region is subject to earthquakes from several sources larger than those that have been well documented in the historical record. Widespread landsliding

is likely to be a secondary but significant and potentially catastrophic consequence of a future occurrence of such a large earthquake ^{xx}.

Priority Impact Areas

King County residents	While the total number of people exposed to landslides is relatively small, and the risk of a rapid slope failure has tended to be low, many homeowners do not carry insurance to cover losses from landslide hazards. The total number of people exposed to the landslide hazard is unknown since landslide hazards are spatially limited and do not align with population information in Census data.
Vulnerable populations	No additional impacts to vulnerable populations are expected from this hazard.
Property	<p>In total, 2.6 percent of structures in King County are identified as being within a landslide hazard area, resulting in an estimated \$9.8 billion in exposed value. The City of Lake Forest Park has the highest percentage of structures exposed in a landslide hazard area at 16.4 percent. The cities of Bellevue and Seattle and unincorporated King County are estimated to each have over \$1 billion of estimated exposed value within landslide hazard areas.⁸⁹ The slopes of Magnolia, West Seattle, Burien, Des Moines, Vashon Island, Newcastle, Federal Way and many areas of Bellevue have long been developed for their magnificent views of</p> <p>Mount Rainier, the Cascade and Olympic Mountains, and Puget Sound. Homes with vistas of the Olympic Mountains provide sunsets that are breathe taking – and expose a risk of land movement damages to property build on poor soils.</p>
The economy	There have been direct and indirect impacts to the greater King County community from landslide activity. Residential housing in the greater Puget Sound area that have been built to enjoy the spectacular mountain of the Olympics and Cascade ranges and water views of Lake Washington, Lake Sammamish, and Puget Sound are vulnerable to land movement. Loss of transportation can also have economic impacts. In November 2008, State Road 410 was closed as the result of a debris flow east of Enumclaw. A landslide caused damage to the Green River Bridge on State Route 169 that resulted in the bridge being closed for repairs for eight months. These incidents resulted in SBA loans to

^{xx} A scenario study of seismically induced landsliding in Seattle using broadband synthetic seismograms

Allstadt, K., Vidale, J.E., and Frankel, A., 2013, A scenario study of seismically induced landsliding in Seattle using broadband synthetic seismograms, Bull. Seism. Soc. Am., 103(6), 2971-2992

	<p>impacted businesses. The SR 530 Oso landslide caused a complete reroute of the main highway between Everett and Darrington, devastating the local economy and forcing residents to commute several hours longer to work each day.</p>
<p>The environment</p>	<p>Landslides that fall into streams may significantly impact fish and wildlife habitat, as well as affecting water quality. Hillsides that provide wildlife habitat can be lost for prolonged periods of time due to landslides. However, landslides also provide integral resources for many ecosystems. They contribute needed gravel and sediment or wood for building complex in-stream habitats, estuarine marshes, and beaches that are important for fisheries, wildlife and recreation. The Cedar River was partially dammed by slide debris from the Nisqually Earthquake in 2001. Similarly, in March of 2004, a landslide near Renton partially dammed the Cedar River again. All major rivers in King County support salmon and/or steelhead spawning populations.</p>
<p>Health systems</p>	<p>No special impacts to health systems are expected from this hazard.</p>
<p>Government operations (continuity of operations)</p>	<p>Most impacts to King County delivery of essential services are indirect. Roadways closed may impede the county work force from reaching work locations. Transfer stations for solid waste management and sewer lines and lift stations feeding the Metro South Plan, West Point Treatment facility or Brightwater facility may be impacted by slide activity. Only a small number of bus routes use roadways with the potential for impacts by slide activity. Slide activity has resulted in first responder access issues and diverted road and infrastructure maintenance resources. Resulting detours have also impacted the commute of essential workers to their normal work locations. Some slide activity has caused temporary access issues for solid waste transfer stations and to the Cedar Hills Landfill locations.</p>
<p>Responders</p>	<p>Most commonly, homes are isolated and ready access to communities by first responders is impeded by slide activity. Access to schools, businesses, and public services may be impeded by road blockages from slide activity. While no recent deaths or injuries have been reported in King County from land movement, the incident in Snohomish County referred to as the SR 530 Slide or the Oso Slide, 43 people were killed (2014).</p>
<p>Infrastructure systems</p>	<ul style="list-style-type: none"> • Power: Landslides pose some risk to transmission lines that cross unstable slopes. Otherwise, landslides are not a primary concern for this sector. • Water/Wastewater: Landslides or debris flows in and around reservoirs or waterbodies that support water systems can cause disruptions in water services and the loss of infrastructure. Water supply pipelines may cross unstable areas and be damaged by slope movement. Even if not directly impacted by earth movement, systems that pull water directly from impacted waterbodies will have to deal with increased turbidity or a loss of supply if the water is temporarily cut off by earth damming or rerouting a river. Finally, failures in water system transmission mains can actually saturate a slope and trigger landslides.

	<ul style="list-style-type: none"> • Transportation: Transportation routes can be closed for long periods by landslides and rockslides. The following are some documented incidents. In November 2008, State Road 410 was closed as the result of a debris flow east of Enumclaw. A landslide caused damage to the Green River Bridge on State Route 169 that resulted in the bridge being closed for repairs for eight months. These incidents resulted in SBA loans to impacted businesses. In May 2005, 11 homes were isolated after a small slide on Mercer Island. That September, two lanes of I-90 west of Snoqualmie Pass were closed after a rockslide. A January 15, 1997 slide at Woodward in southern Snohomish County derailed five cars of a freight train. Passenger and cargo rail traffic was interrupted for nine days. Cargo traffic resumed first. Amtrak remained concerned for passenger safety and did not travel on this section of track for several weeks. This type incident can happen almost annually and sometime more than once each year. • Communications: There is limited risk to communications systems as a whole from landslides. Given the redundancy in systems and proliferation of cell towers, which tend to be less vulnerable, landslides are not a primary concern.
<p>Public confidence in jurisdiction's governance and capabilities</p>	<p>The 2014 SR 530 Oso landslide demonstrated some of the major weaknesses in emergency management capabilities. It also demonstrated a lack of regulation and foresight on the part of government in the permitting of development in the area, which was a known slide area. Local critical areas ordinances do require mitigation for construction in slide hazard areas, but in the Oso slide, this proved to be inadequate. A failure by developers, the government, and residents to properly account for slide risk and protect people from it led to multiple lawsuits and a general lowering of public confidence in government's ability to properly regulate land development.</p>

Regional Risk Profile: Severe Weather

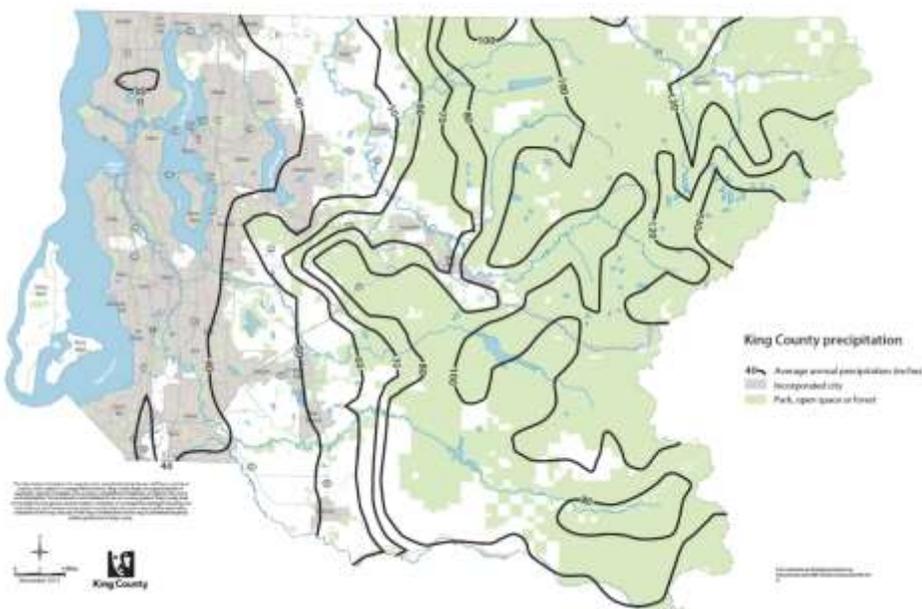

Hazard Description

Severe weather events occur annually in King County, especially between October and April. Severe weather can include heavy rain, snow, and ice; drought; extreme heat and cold; and high winds. Secondary effects of severe weather can include avalanche, flooding, landslides, power outages, and increased demand on medical services such as during extreme heat events. Many of these events are expected to increase in frequency, duration, and/or intensity as the climate changes, and new weather hazards are growing in importance, especially heat and drought. The most frequent impacts from severe weather events are in the rural or suburban parts of the county, where it can take days or weeks to clear roads or restore power; however, events such as extreme cold or heat have a greater impact on urban parts of the county, where there are large unsheltered populations.

The most common source of damaging/severe weather is the Pineapple Express or atmospheric river event. This phenomenon results from moisture picked up by the jet stream over warm areas of the Pacific Ocean that drops as intense precipitation when the moisture-laden air rises over the Olympic and Cascade Mountains. Atmospheric river events are a significant contributor to river flooding in King County.

Vulnerability Characteristics and Previous Occurrences

Though known for being wet, the Seattle metro area has around the same average annual precipitation as Dallas, Texas, and much less than New York City, Houston, Atlanta, or New Orleans. Higher amounts of rainfall occur as you move closer to the Cascades. King County owes its mild climate to the influence of Puget Sound and the Pacific Ocean, which moderate the climate, and to the protective barrier of the Cascade mountain range, which blocks cold air from the interior.

Given the rarity of extreme snow events, King County maintains a relatively low budget for snow removal services. When major incidents do occur, vehicles and drivers can be stranded almost anywhere in the county. Impacts from unusually heavy snowfalls and severe winter weather in King County tend to be short-lived, although there are exceptions. A well-known example is the 2008 winter storm, the largest event since 1996. In the 2008 ‘Seattle Snowpack,’ snow blanketed Seattle and much of King County and remained on the ground from December 13 to December 27 due to a prolonged period of cold temperatures. At the time, Seattle did not use salt to clear roadways, due to environmental concerns. This decision was reversed after the storm event.

Climate change is a major concern for King County. Climate change is projected to lead to drier, hotter summers and more heavy rain events. The consequences of these events can include floods, landslides, avalanches, droughts, and wildfires. The economic consequences can be serious since communities generally are not prepared for extreme weather events, and some events (such as flooding and wildfire) can have widespread impacts on public and private infrastructure. Extreme weather can also affect public health. For example, some climate scenarios project that hundreds of Seattleites could die in each extreme heat event if global temperatures rise 5.4 degrees Fahrenheit over pre-industrial levels.⁹⁰

The majority of disaster declarations in King County are from severe weather events. Disasters are usually declared for a combination of severe storms or winter storms, mudslides, heavy rains, and straight-line winds. The primary impacts and costs triggering these declarations include emergency protective measures for, and damage to, utilities, roads, and bridges, and for costs associated with debris removal.

Major Weather Disaster Declarations Including King County

King County Drought Declarations

YEAR	DESCRIPTION	DESCRIPTION
1919	Water Shortage	Dry summer
1928-30	Statewide drought	Rainfall was 20% of normal
1952-53	Water shortage	Lack of winter precipitation
1977	Severe to Extreme Drought	Low Precipitation
1965-66	Water shortage	Dry throughout state
1967	Water shortage	Dry summer
2001	Moderate to Severe Drought; statewide	Low Precipitation
2005	Water shortage, March – King Co Drought Response Plan Activated	Record Low Precipitation, low snow pack, low river levels

2015	Water shortage record low snowpack	Snow pack at 0 in central Puget Sound by mid-May
-------------	------------------------------------	--

Scenario Drivers

<p>Severe weather can occur in any season. This may include: rain, wind, tornados and funnels clouds, ice, snow, hail, extreme heat, or extreme cold. Climate change is expected to affect extreme weather incidents by changing the frequency, intensity, and/or severity of events.</p>	
Rain and Snow Precipitation	<p>The geographical location of northwestern Washington subjects it to several natural climatic controls: the effects of terrain, the Pacific Ocean, and semi-permanent high- and low-pressure regions located over the North Pacific Ocean combine to produce significantly different weather conditions within short distances. Rainfall in King County varies widely from city to city and area to area. The City of Seattle has an average of 37 inches annually, while Enumclaw has an annual average of 57.9 inches and Snoqualmie/North Bend has 61+ inches of precipitation. The majority of this precipitation occurs as rain in the lowlands between October and early May with substantial snow pack in the Cascades during the same time frames. Precipitation on Snoqualmie Pass in the unincorporated community of Hyak (2800 feet) average 410 inches of snowfall from October to May.</p> <p>Snow accumulations in King County at elevations below 2,000 feet are uncommon. On average, Seattle will have one or two snow storms during a winter season with appreciable accumulations. Snow accumulation rarely remains two days after such a storm. Heavy local snows and associated cold conditions have resulted in power outages, transportation system impacts, school closures, and adverse impacts to the regional economy.</p>
Wind	<p>High wind events in King County are fairly common and are usually experienced as part of a winter weather pattern. Annually, wind gusts of 40-45 miles per hour are recorded locally (NOAA) with severe wind incidents recording speeds of 90 miles per hour and greater. Winter wind incidents often include: widespread power outages, road and bridge closures, tree damage, airport closures/re-routing, hospitalizations or fatalities related to carbon monoxide poisoning, and injuries to utility workers, first responders, and the public. One of the best known wind events was the Inaugural Day Windstorm on January 19, 1993. Winds began mid-morning, lasted five hours and reached over 90 miles per hour in downtown Seattle. The Hanukkah Eve Windstorm of December 15, 2006 heavily damaged the Seattle area power grid, affecting hundreds of thousands in the subsequent weeks. Usually, these damaging winter winds are from the south.</p>

Tornado	King County and the Puget Sound region do experience tornado activity. Tornadoes have reached F3 designation within the region, but the slower F0 and F1 class tornadoes are more common. In September of 2009 the Enumclaw area experienced a class F1 tornado. Though wind speeds of up to 110 mph were estimated, the most substantive damage recorded was the uprooting of trees and damage to roofs, much of which could be attributed to the preceding storm. Tornadoes are a result of strong weather systems and often times accompany serve wind, rain, and hail. It is not unusual to have funnel clouds spotted during the winter season.
Extreme Cold and Ice	King County’s marine climate results in very few extreme cold/ice events. Regionally, temperatures below freezing occur for extended periods for 10-14 consecutive days in January or February each winter. Transportation impacts to buses, trains, roads, bridges include snow routes, shelter needs, and power outages. The December 26, 1996 storm lasted 11 days. Multiple consecutive freezing days can threaten the lives of unsheltered and lower-income individuals, requiring the opening of additional shelter beds or more heating assistance funding.
Extreme Heat	Climate change is expected to lead to warmer winters and hotter summers. Health sensitivity to heat events is higher in the Puget Sound region due to the lack of air conditioning in our region. Public Health Seattle-King County will activate cooling centers and public messaging for multiple days in the mid-80s.
Drought	With the anticipation that higher winter temperatures reduce our snowpack, drought conditions in the summer following low snowpack rises dramatically. Lower snow pack and drier summers can result in lower reservoirs and increased calls for water conservation, reduced water availability and higher mortality for salmon and steelhead runs (due to high water temperature and low river flows), impacts on local crops and livestock, and increased emergency room visits due to heat stress. Some degree of drought conditions exists where precipitation is less than 75% of normal. Drought has become a growing concern in the Northwest both because of variable rainfall patterns and because of observed increases in temperature in the summer. With a higher risk of drought and hotter temperatures, wildfire has become a higher risk for King County.

Priority Vulnerabilities

Unsheltered populations	Populations needing shelter are especially exposed during heat and cold events. Since King County has a moderate climate, many of these populations are unprepared. Cold events may require opening additional shelter spaces and canvassing areas to offer shelter services.
Rural transportation corridors	Rural transportation routes are lower priority and may not even be cleared at all during a snow event.

Immigrant populations and those with limited English proficiency	Populations with limited English proficiency or who are inexperienced with Northwestern climate are more likely to take risky actions, like operating a generator or grill indoors for heat. These populations are also less likely to receive information and warnings about weather systems and to know where to go for help.
Power transmission systems	Power transmission systems, especially power lines, are frequently damaged during storms with high winds by falling trees. During major wind events, it is not uncommon to have hundreds of thousands of residents without power.
Low-income and minimum-wage populations	Populations working in low-wage professions such as extractive industries and service industries can be severely impacted from multi-day weather events that impact transportation systems. These events can trigger a long-term decline in living standards or even homelessness in these populations.
Service industry during peak periods	Many service businesses, especially retail, are heavily dependent on income earned during certain months of the year. A major event around the Christmas holidays, for example, can threaten the viability of many businesses.
People dependent on public transportation	Public transit moved to the most restrictive routes ever recorded during the February 2019 snowstorm. These cutbacks had apparent disproportionate impacts on underserved areas, including some areas with populations dependent on transit. When transit services are cut, it can be impossible for these populations to get to work or appointments.
People with chronic medical conditions	People requiring regular care from doctors are negatively impacted by severe weather events. During heatwaves, people with chronic illnesses, especially heart and respiratory conditions, are also disproportionately impacted.
All residents during multi-day events	Although campaigns recommend having two weeks of food and supplies available, few residents follow this guidance, regardless of income. After more than a few days, many residents will run out of food for themselves and any pets.
Residents down private roads	Private roads are not eligible to be cleared by public snow removal services. Many homeowner’s associations contract with the same set of snow removal companies. These companies may become overwhelmed during long-running events.

Water and wastewater systems facilities	Damage to water and wastewater facilities can occur due to a secondary hazard, flooding and tidal surge. These facilities are often built in low-lying areas. The severe damage and release of untreated water that occurred at King County’s West Point Treatment Plan occurred during a severe weather event.
Buildings on slopes of greater than 40% grade	Landslides are a major secondary hazard of severe precipitation events. Buildings on or near slopes of greater than 40% grade are most at-risk.
Travelers at airport facilities	Airport facilities are frequently impacted by severe weather events, but often have plans and procedures to contain disruption. During multi-day events, however, passengers can be stranded and there can be a shortage of hotel rooms since many airlines contract with the same hotels.
Waste Management	Garbage pickup can be delayed for weeks. This causes significant public frustration.

Priority Impact Areas

King County residents	<p>Anyone present in King County at the time of a weather incident is subject to the potential impacts of severe weather incidents. While the likelihood of a winter weather incident is high, the likely of direct and significant impacts is Moderate.</p> <p>Impacts to residents may include: personal property damages, interruption of sports and recreation, extension of the daily business commute, impacts to daycare and school closures, injuries, and sheltering needs from power outages. Avalanche control may be needed to reduce the impact to alpine and cross-country skiing enterprises. Injuries and deaths do occur from avalanche impacts to recreational skiers. Impacts from drought take time to materialize as water shortage cause restrictions to water usage and issue of burn bans to reduce the threat of wildfires, especially in suburban areas. Only the most severe weather incidents have an impact on local employment.</p>
Vulnerable populations	Severe weather events, while usually concentrating impacts on infrastructure and agriculture, can seriously threaten the lives of vulnerable people. Cold and hot weather events can lead to an increase in fatalities among the elderly and homeless populations. Immigrant and low-income populations also have been known to succumb by carbon monoxide poisoning that can occur when generators or grills are lit indoors and without proper ventilation. Snow can trap people indoors for days, something especially threatening for people with food insecurity or chronic health conditions that require access to medical services. Any disruption to the economy is also especially threatening to those who are low-income or who work in hourly work or in the service

	<p>sector. When those jobs are not open, they frequently do not pay wages, which can threaten the entire livelihood of a low-income family.</p>
<p>Property</p>	<p>All structures in the county are subject to the direct impacts of severe weather incidents. These same structures are subject to flood impacts where they may be in the flood plain. Structures along the coastline (seawalls) may be eroded. Local urban flooding also occurs from storm debris clogged sewers.</p> <p>High winds that accompany winter weather fronts often cause infrastructure damages, power outages, and communications interruptions. Rain saturated soils may cause mudslides that close roadways, damage bridges, and buried rail service interruptions</p> <p>Private property damages to homes and vehicles from floods, trees downed from wind and saturated soils are regular occurrences. Private property experiencing repeated flood damages may require elevation of the structure or offers of buy outs (mitigation efforts).</p> <p>High winds, snow, and icy conditions can close airports or cause flight delays and rerouting. Mountain pass conditions may be so severe that they are closed to all traffic for days at a time. The floating bridges over Lake Washington (I-90 and SR 520) experience closures for sustained winds over 45 miles per hour. These closures extend the business commute with increased traffic on surface streets and routes around Lake Washington.</p> <p>Impacts to emergency medical services from impacts to the roadways of the county can delay response times, restrict emergency room staff and supplies, and result in under staffing EMS and hospitals during severe weather emergencies.</p>
<p>The economy</p>	<p>There are several local ski areas important to King County: Crystal Mountain (Chinook Pass); Alpental, Hyak, and Ski Acres (Snoqualmie Pass); and Steven’s Pass (Steven’s Pass). Ski area closures can occur from both large snowfalls and where snow is too light or melts off. This can impact seasonal employment at the ski areas.</p> <p>Also associated with the passes, as outlined in the avalanche chapter, a WSDOT study claimed that a four-day closure at Snoqualmie Pass in the winter of 2007/2008 cost the state \$27.9M in economic output, 170 jobs, and \$1.42M in state revenue (2008 dollars).</p> <p>Businesses can be severely impacted when weather events impede mobility during high seasons, such as around the holidays. Since a large percentage of</p>

	<p>annual personal spending is spent during the November-December season, negative weather limits access to stores and can cause stores to close.</p> <p>Drought conditions can impact the regional agricultural output of fruits, vegetables, and flowers grown in all the major river basin areas of King County. Regional drought conditions can impact generation of hydroelectric power and drive up electric rates as well as increase usage during hot summers.</p> <p>The most serious and longest-lasting impacts may be to low-income individuals and families who may lose jobs or days of wages due to snow closures. Debt traps caused by missed bills due to lost wages can damage a family for months or years.</p>
The environment	<p>Severe weather can have impacts to the environment through flooding and floodplain damages to salmon and steelhead habitat, wetland impacts to amphibians and reptiles, and bird sanctuaries. Oddly, this can occur from both too much water (flooding or dam failure) or too little snow pack and resulting drought conditions. Hillside destabilization can occur where soil geology and saturation of soils occur.</p> <p>The moisture content of vegetation drops throughout the summer. Dry conditions can result in an increase in the threat of wildfires from lightning strikes, unattended campfires, fireworks, sparks from automobiles, cigarettes thrown from cars on roadways and other heat sources.</p> <p>The dilemma of drought conditions is the balance between human water needs and the protection of the environment including plants, wildlife, and fish that require minimum stream flows to support their annual spawning migrations. Dry conditions also contribute to higher water temperatures, which causes increased salmon mortality.</p>
Health systems	<p>Severe weather disrupts the regular schedule of patient visits and regularly-scheduled appointments for chronic care. Severe weather also can cause more demand on the health system as people are injured or are unable to leave the hospital to return home. Any disruptions to electricity and water supply also can be a threat, though hospitals generally maintain backup generators.</p> <p>During severe cold or warm spells, public health may be required to provide additional patient transport services and to canvass for homeless populations that may be in need of shelter. During the February 2019 snowstorm, hospitals suffered major staffing shortages as doctors and nurses were unable</p>

	<p>to get to work. Staff had to work longer than normal hours and potentially stay temporarily at or near the hospital.</p> <p>Although both requiring the expansion of sheltering services, heat and cold differ because older and less health populations are especially at risk to hot temperatures. One of the most famous examples is the 1995 Chicago heat wave, during with 739 people lost their lives, with the city unprepared to provide support to residents who may be home bound or offer sufficient cooling centers to support residents. In Seattle, where few residents have air conditioners, deaths from heat events is a growing threat.</p>
<p>Government operations (continuity of operations)</p>	<p>During the February 2019 snowstorm, King County took the unprecedented step of closing many government offices to protect employee safety. After two days, due to the growing amount of snow and the need to resume services, offices were reopened. Even with the reopening, many employees chose to telework due to safety concerns. An earlier activation of the EOC for the 1996 snow/ice storm saw activations for 11 days – 2 shifts per day when 16 inches of snow came and stayed for weeks. During that time frame, buses were on snow routes, up to 40% of the employees for King County government were either unable to get to work or arrived very late. A major improvement from 1996 to 2019 is that it is now much easier to telework, meaning that non-public-facing positions can work remotely for days.</p> <p>Hospitals, courts, detention facilities, businesses, law enforcement, fire and emergency medical services were all severely impacted. Search and Rescue volunteers transported medical personnel, emergency management staff, and other essential employees to work and between hospitals for the duration of the incident. During the February 2019 snowstorm, busses were on the most restrictive service routes ever seen. These routes were established in response to previous snow events. Similar impacts were observed for the January 2011 snow storm that impaired King County government operations for 8 days. Some damages were experienced at crucial facilities around the county. See FEMA Disasters 1079 and 1817 above. The recent February 2019 snowstorm did not receive a disaster declaration.</p> <p>During that time frame, most regional public services were impacted by absenteeism, access restrictions to critical facilities, and damage to vehicles like buses, police cruisers, and aid units. Busses and other vehicles that use tire chains are especially vulnerable to breaking down, which can delay a return to full service, even once the snow has melted.</p>
<p>Responders</p>	<p>Portions of the population may be stranded or isolated from the results of severe weather, like roads blocked by trees and power lines, snow- and ice-</p>

	<p>covered roads, water or slides over roadways. Closure of the mountain passes for heavy snow conditions or avalanche control is a fairly common occurrence.</p> <p>Excessive heat that extends over days or weeks or cold conditions for similar timeframes may result in the need for cooling or warming shelters. These especially impact the poor, elderly, young, and infirmed.</p> <p>First responders will be impacted by limited road access, impacts of heat and cold on operations. Conditions will require monitoring efforts during incident response.</p>
<p>Infrastructure systems</p>	<ul style="list-style-type: none"> • Power: Downed trees caused by high winds and rain saturated soils can damage transmission lines and cause power outages in local areas for hours to days when multiple occurrences are experienced. Utility crews from Puget Sound Energy, Bonneville Power and Seattle City Light work around the clock to restore services. The Inaugural Day Windstorm left 750,000 customers without power. The Hanukkah Eve Windstorm winds and subsequent heavy rains cut electricity to more than 1.8 million customers, hundreds of thousand remained without power for days. Downed power lines pose an electrocution hazard to motorists, pedestrians and any unsuspecting by-standers. During extremely hot temperatures, demands on the power system can increase, especially as more residents install air conditioning. As a winter-peaking system, however, this power demand will still likely be lower than current winter demand. • Water/Wastewater: Water and wastewater systems are vulnerable to a multi-day loss of power as well as to serious flooding. In February 2017, as a result of heavy rains, high tides, and other severe weather, an equipment failure at King County’s West Point Wastewater Treatment Plan led to the dumping of over 235 million gallons of untreated wastewater into Puget Sound. Drought can also impact water systems as water levels in reservoirs and groundwater wells drop. • Transportation: Events that impact transportation can include severe snow, ice, wind, and rain. Storms may cause downed trees and snow or ice that temporarily blocks roadways or can cause large floods that can wash out or undermine roads and bridges. For many parts of the state and county, such as around the town of Skykomish, the loss of a single route due flooding can completely cut the community off from the rest of the county. This is especially a problem in the eastern parts of the county that are more rural and have fewer transportation route options. • Communications systems can be knocked out by high winds or loss of power transmission. While the move to cell phones has reduced the vulnerability of telephone lines to outage caused by trees, a multi-day loss of power can still shut down a cell transmission site. Furthermore, high winds can damage or destroy critical equipment

	<p>on cell towers. Most equipment is built to withstand inclement weather; however, especially severe conditions could still lead to outages.</p>
<p>Public confidence in jurisdiction's governance and capabilities</p>	<p>The 2008 and 2011 snow storms highlighted the shortage of snowplows and the management of the general response to the snow incident in the City of Seattle. Considerable political fallout from the incidents resulted in Mayor Nickels losing his re-election bid.</p> <p>The February 2019 event can be regarded by many as much more successful on the public perception front. Successful coordination of a regional call center in the EOC to support other county departments and take snow plowing requests helped ensure the public always had someone to call. The county also maintained substantial engagement with media outlets. The County Executive was fully involved as well, helping to boost awareness and public perception that county government was engaged in the storm recovery effort.</p>

Regional Risk Profile: Terrorism

Hazard Description

Title 18 of the United States Code defines terrorism and lists the crimes associated with terrorism. In Section 2331 of Chapter 113(B), defines terrorism as: “...activities that involve violent... or life-threatening acts... that are a violation of the criminal laws of the United States or of any State and... appear to be intended (i) to intimidate or coerce a civilian population; (ii) to influence the policy of a government by intimidation or coercion; or (iii) to affect the conduct of a government by mass destruction, assassination, or kidnapping; and...(C) occur primarily within the territorial jurisdiction of the United States...” . Within the government, combating terrorism is the Federal Bureau of Investigation’s top investigative priority. The FBI further defines terrorism as either domestic or international:

- Domestic terrorism: Perpetrated by individuals and/or groups inspired by or associated with primarily U.S.-based movements that espouse extremist ideologies of a political, religious, social, racial, or environmental nature.
- International terrorism: Perpetrated by individuals and/or groups inspired by or associated with designated foreign terrorist organizations or nations (state-sponsored).

The terrorism threat has evolved significantly since the September 11, 2001 series of coordinated attacks by the Islamist terrorist group al-Qaeda against the United States. The threat landscape (referring to identified threats, trends observed, and threat actors) has expanded considerably. Three factors have contributed to the evolution and expansion of the terrorism threat landscape:⁹¹

- Internet: International and domestic threat actors have developed an extensive presence on the Internet through messaging platforms and online images, videos, and publications, which facilitate the groups’ ability to radicalize and recruit individuals receptive to extremist messaging.
- Social Media: Social media has allowed both international and domestic terrorists to gain unprecedented, virtual access to people living in the US in an effort to enable homeland attacks. Islamic State of Iraq and Syria (ISIS), in particular, encourages sympathizers to carry out simple attacks where they are located against targets—in particular, soft targets. This message has resonated with supporters in the US and abroad. Several recent attackers have claimed to be acting on ISIS’ behalf.
- Homegrown Violent Extremists (HVEs): The FBI defines HVEs as global-jihad-inspired individuals who are based in the US, have been radicalized primarily in the US, and are not directly collaborating with a foreign terrorist organization (FTO). HVEs may assemble in groups but typically act independently in attacks or other acts of violence.

⁹¹ Federal Bureau of Investigation. 2019. Terrorism Webpage. Accessed online on 8/26/19 from <https://www.fbi.gov/investigate/terrorism>.

Domestic terrorists can be ‘right-wing’ or ‘left-wing’ extremists such as white supremacists, anti-government militias or anarchists. Domestic terrorists can also be ‘single-issue’ groups such as animal rights or environmental rights extremists. And, domestic terrorists can also be ‘lone wolves’ with a personal agenda or grievance and prepares, commits violent acts alone outside of any group support.

According to FBI Director Senate testimony in July 2019, the bureau has recorded about 100 domestic terrorism arrests since December 2018 compared to about 100 international terrorism arrests.⁹² The FBI, according to the director’s testimony, is most concerned with “lone offender attacks, primarily shootings.” Earlier, at a congressional hearing in May 2018, the head of the FBI counterterrorism division testified that the bureau was investigating 850 domestic terrorism cases and of that approximately 350 of the cases involved racially motivated violent extremists⁹³. Most in that group, he said, were white supremacists.

In 2015, the Seattle division of the FBI revealed 70-100 active cases possibly linked to terrorism across the state.⁹⁴ In the years since revealing the breadth of terrorism investigations in Washington State, domestic terrorism arrests outpaced jihad-inspired terrorism arrests nationwide.⁹⁵ The US government acknowledged the problem in its October 2018 ‘National Strategy for Counterterrorism’. "Notably, domestic terrorism in the United States is on the rise, with an increasing number of fatalities and violent nonlethal acts committed by domestic terrorists against people and property," the strategy paper says.⁹⁶

Vulnerability Characteristics and Previous Occurrences

Terrorism events can be distinguished from other types of man-made hazards by three important considerations:⁹⁷

⁹² Zapotosky, Matt. July 23, 2019. Wray says FBI has recorded about 100 domestic terrorism arrests in fiscal 2019 and many investigations involve white supremacy. *The Washington Post*. - In the case of chemical, biological, and radioactive agents, their presence may not be immediately obvious, making it difficult to determine when and where they were released, who was exposed, and what danger is present for first responders.
- Terrorist events evoke very strong emotional reactions, ranging from anxiety, to fear to anger, to despair to depression.
- Even failed attacks have long-term economic impacts for the targeted government and critical infrastructure sector disproportionate to the cost of the attack itself.

The form and locations of many natural hazards are identifiable and, even in some cases, predictable; however, there is no defined geographic boundary for terrorism. Based on previous historical events, it is presumed that critical facilities, services, and large gatherings of people are at higher risk.

King County is the most populous county within Washington State and is ranked 12th most-populous in the US according to the US Census Bureau. King County is geographically diverse characterized by high-density urbanization along the shores of Puget Sound, suburban communities to the east, and rural communities to the southeast. King County is the largest labor market in the state. In 2018, nearly 42 percent of all nonfarm jobs in Washington State were reported from King County-located businesses. Within King County, the Washington State Fusion Center tracks over 800 annual large-gatherings that encompass public assembly and outdoor events. These events include a diverse range of sites that draw large crowds of people for shopping, business, entertainment, sports or lodging, as well as for fireworks, marathons, festivals and parades.

English-language terrorist media continues to identify similar gatherings as “soft targets” and promote them as potential attack sites. For example, Inspire #12 magazine published online by Al Qaeda, suggested targeting locations “flooded with individuals, e.g., sports events . . . election campaigns, festivals, and other gathering [sic]. The important thing is that you target people and not buildings.”⁹⁸ Attacks targeting these types of events will continue to present security challenges to public safety personnel, because attendees are anonymous and generally unscreened for prohibited items. Violent extremist propaganda continues to urge lone actors to attack soft targets using small arms, knives, and vehicles because they are simple and effective. Foreign terrorist organizations implore followers to kill with whatever means available “whether an explosive device, a bullet, a knife, a car, a rock, or even a boot or a fist.”⁹⁹

Prior to the attacks on September 11, 2001, there were less than a dozen major terrorist events in Washington State. Since then, violent extremism has become commonplace, on a global and national

⁹⁹ Farivar, Masood. July 18, 2016. New, Low-tech Terror Tactics Simple and Deadly. *Voice of America*. Accessed online on 8/26/19 from <https://www.voanews.com/europe/new-low-tech-terror-tactics-simple-and-deadly>.

scale, and the number of local terrorism and violent extremism cases continue to rise.¹⁰⁰ Some of the most notorious terror cases in Washington State include the arrest of Ahmed Ressam, the “Millennium Bomber,” in December 1999, the Earth Liberation Front (ELF) firebombing of University of Washington’s (UW) horticulture center in May 2001, and the foiled Seattle Military Entrance Processing Station attack plot in 2011.

- On March 26, 2018, Thanh Cong Phan from Everett was arrested after mailing at least 11 suspicious packages to multiple military and government facilities in the Washington, D.C. metropolitan area, which contained potential destructive devices. He was charged with shipping of explosive materials, after the packages were found to contain small amounts of black explosive powder.¹⁰¹
- On March 31, 2017, Muna Osman Jama of Reston VA and Hinda Osman Dhirane of Kent WA were sentenced to 12 years and 11 years respectively, after being found guilty of conspiracy to provide material support to al-Shabaab. The two reportedly organized an all-female fundraising group, called the “Group of Fifteen,” who provided monthly payments to al-Shabaab; facilitating and tracking money sent through conduits in Kenya and Somalia.¹⁰²
- On August 25, 2017, Melvin Neifert from Selah was arrested and charged with receiving incendiary explosive device materials—specifically, potassium nitrate and other materials to make a potassium nitrate-sugar bomb—that were to be used in connection with the 2016 May Day events. Federal authorities seized evidence and questioned Neifert on May 1, the same day anti-capitalist demonstrations took place in Seattle.¹⁰³
- On September 4, 2016, a fire was intentionally set at the Planned Parenthood clinic in Pullman, WA. Authorities recovered a video from inside the clinic showing a flammable object had been thrown through the window. While no injuries were reported, and no suspects identified, there is a history of domestic terrorism against the Pullman clinic.¹⁰⁴
- On April 9, 2015, Blake Heger was arrested after attempting to place two shrapnel-laden pipe bombs near a high foot-traffic area outside a hardware store in Puyallup, WA. Police were called after a concerned citizen saw him sharpening large knives in the parking lot. He was found with

two additional pipe-bombs, four large knives, and a screwdriver that he had sharpened into a dagger.¹⁰⁵

- On January 1, 2014, Musab Masmari attempted to set fire to a gay nightclub on Capitol Hill in Seattle, WA by spilling gasoline down a set of stairs and lighting it, while 750 people packed the club's New Year's Eve event. According to investigative documents, Masmari told a friend that "homosexuals should be exterminated." In July 2014, he was sentenced to ten years in federal prison for arson.¹⁰⁶
- On July 18, 2014, Ali Muhammad Brown was arrested after killing four people in WA and a college student in NJ, as part of a personal vengeance against the U.S. government for its actions in the Middle East. In 2004, he was arrested and prosecuted for his role in a bank fraud scheme to finance fighters traveling abroad, and had known links to a disrupted terror cell in Seattle, WA and Bly, OR in 1999.¹⁰⁷
- On October 27, 2012, Abdisalan Hussein Ali, a 22-year old born in Somalia but raised in Seattle and Minnesota, was the third American killed as an al-Shabaab suicide bomber in Mogadishu. Ali was reportedly one of two bombers in an attack that killed "scores of African Union peacekeepers." He arrived in Seattle in 2000 and moved to Minneapolis before being recruited into al-Shabaab and travelling to Somalia in 2008.¹⁰⁸
- On September 8, 2011, Michael McCright was arrested and charged with second-degree assault for a July 2011 incident where he intentionally swerved his vehicle at a government-plated vehicle occupied by two U.S. Marines in Seattle. Known on the Internet as "Mikhail Jihad," McCright had ties to Abu Khalid Abdul-Latif, a man convicted of plotting to kill federal employees and military recruits in Seattle, WA.¹⁰⁹
- On June 22, 2011, Abu Khalid Abdul-Latif and Walli Mujahidh were arrested for planning to attack the Military Entrance Processing Station (MEPS) in Seattle with machine guns and grenades after previously planning, but discounting, an attack at Joint Base Lewis McChord (JBLM). According to FBI investigators, "Abdul-Latif said that 'jihad' in America should be a 'physical jihad,' and not just 'media jihad'."¹¹⁰
- On May 11, 2011, Joseph Brice of Clarkston WA was arrested for assembling, practicing, and detonating explosive devices after an incident that occurred on April 18, 2010, when an

explosive device he made prematurely ignited, causing him significant injuries. He had a YouTube channel called “Strength of Allah,” where he posted the videos in an attempt to support terrorism.¹¹¹

- On January 17, 2011, Kevin Harpham, an admitted white supremacist, placed a remote-controlled backpack improvised explosive device (IED), with rat-poison coated shrapnel, at a park bench near the marching route on the morning of the Martin Luther King Jr. Day Parade in Spokane, WA. Prosecutors said the device was “constructed with a clear, lethal purpose,” and Harpham said it was intended to protest social concepts, such as unity and multiculturalism.¹¹²

Scenario Drivers

Terrorist attacks continue to take place at open-access events, mass gatherings, and outside the perimeter of secured events, possibly because of a perceived lack of security, the availability of publicized schedules, and largely unrestricted admittance. Examples of open-access events include marathons, parades, protests, rallies, festivals, fireworks displays, farmers markets, and high-profile funerals and vigils or memorials. Terrorists could also target gatherings located close to ticketed events, such as tailgating adjacent to major sporting events or concerts¹¹³. Judging from previous terrorist plots and attacks, terrorists will likely remain interested in conducting opportunistic attacks against civilian targets, most notably mass gatherings. Techniques used in recent terror attacks have included the use of vehicles as weapons, edged weapons, small arms, and improvised explosive devices (IEDs).

Coordinated
Domestic
Extremist
Attack on
Seattle

The radicalization of Pacific Northwest extremist groups has recently been promoted by other national terrorism movements which have called for violent resistance to destroy human life and disable critical infrastructure. Radicalization starts to build in the Winter of 2018. Over the next six months there is an increase in expression of on-line animosity towards the U.S. Government which calls for action on June 24. In recent weeks there has been an increase via social media of on-line extremist groups indicating an intense animosity and a belief of injustice by the U.S. Government. These local online indicators show lone actors, inspired by extremist ideology, have been able to circumvent security measures to take up small arms, make vehicle borne and rudimentary standalone improvised explosive devices (IEDs) with the stated intent to attack the Region. In addition, there are calls for “Leaderless Resistance” making it difficult to locate, mitigate, or prevent their stated intent. Within the Seattle Region, there is increasing concern about a number of these groups starting to influence public opinion, which may lead to violent actions. The on-line information promotes and warms of the need for longer and ongoing

acts of violence to achieve superiority over current government authority. On July 3, there are several online attacks which a precursor to the July 4th physical attacks on an iconic building are, multiple active shooter events, vehicle borne violence and IEDs, and unattended small items across the City of Seattle and surrounding areas.

Priority Vulnerabilities

Public events	Terrorists have increasingly targeted mass-gatherings in densely populated or high profile areas. Consequently any major urban area in Washington State could be considered at-risk as well as any crowded or high profile critical infrastructure. The specific motivations of terrorists will largely dictate target selection.
Terror tactics used by non-terrorists	A new challenge that is emerging is the increasing use of terror tactics by non-terrorists. A number of evolved weapons, tactics, and targets have emerged through the sheer volume of attacks within the last decade. This normalization of violence has been further exacerbated by extensive media coverage and the ease by which detailed instruction manuals, ‘how-to’ videos, and online forums dedicated to weapons, explosives, and tactics. It is “essentially shared community content, easily accessible for extremists of all stripes to consume and put into action” including those with no affiliation to foreign or domestic extremism ideologies. ¹¹⁴ Lessons learned from past attempts continue to shape the means by which attackers develop plots—the push for using small arms, edged-weapons and vehicle ramming against soft targets—instead of the often failed large-scale attacks.
Critical infrastructure	Infrastructure systems such as dams, water systems, bridges, and public buildings are high-value targets to terrorists that both stand for government order and, when lost, can cause significant regional harm to people, property, and the economy.

Priority Impact Areas

King County residents	Any King County resident attending a public event could be a victim of a terrorist attack.
Vulnerable populations	Some populations are more likely to be targeted by extremists than others. Terrorist attacks and attempted attacks in the northwest have been motivated by white supremacy (targeting non-white populations), xenophobia (targeting immigrants), homophobia/transphobia (targeting gathering places of gay, lesbian, and transgendered people), and anti-religious attacks against Muslims, Jews, Christians, or other religious groups.

¹¹⁴ Johnson, Bridget. March 21, 2018. The Austin bomber and our new age of open-source terrorism: How Mark Anthony Conditt likely benefited from Al Qaeda tutorials. *The New York Daily News*. Accessed online on 8/26/19 from <http://www.nydailynews.com/opinion/austin-bomber-new-age-open-source-terrorism-article-1.3888244>.

Property	Property, including commercial buildings, venues, vehicles, places of worship, or other areas are often damaged or destroyed during terror incidents. Trauma from the incident can prevent the rebuilding of the facility in the same place.
The economy	In addition to the economic costs of stepped-up security, attacks can have a huge impact on a region’s economy. Places seen as less safe are less attractive to investors or visitors. Often, terrorist attacks attempt to destroy part of the economy by killing tourists or destroying an important piece of infrastructure.
The environment	A major attack can pollute the environment and poison water and food sources. This can have far-reaching, long-term consequences and damage animal and plant life as well as people.
Health systems	Health systems can be impacted as a target for attacks, by being overwhelmed with patients in the aftermath of attacks, and by personnel being injured or killed from secondary attacks or due to exposure to chemical or biological agents used in the attack.
Government operations (continuity of operations)	Government facilities and employees are a common target for anti-government extremists. These attacks can disrupt day-to-day operations for long periods of time and require additional security measures to protect facilities and employees.
Responders	Responders are often the first on the scene of an incident and therefore can be injured or killed in shootings or due to exposure of chemical or biological agents. Responder facilities, such as police stations, are also potential terrorist targets.
Infrastructure systems	<ul style="list-style-type: none"> • Energy: Energy facilities, including fuel pipelines, are common targets for terrorists and saboteurs around the world. Many power facilities, such as neighborhood substations, are relatively unguarded and, if lost, can have immediate impacts on people and property in an area. Cyber-attacks are one area where a large-scale attack on the energy system could cause widespread disruption. • Water/Wastewater: Water systems are considered a high-impact potential target. A chemical attack on a water system, if not immediately detected, could injure or kill thousands, depending on the size of the water-system targeted. • Transportation: transportation systems, especially public transit, have been targets around the world, such as in the Madrid Train Bombings or the London Subway Bombings. Attacks on busses are also common. These incidents can cause a loss in public confidence in the transit system. Furthermore, an attack on a tunnel, such as the I-90 tunnel across Lake Washington, can impede mobility in our region over the long-term. • Communications: Communications infrastructure, such as cell towers, are relatively redundant and so somewhat less vulnerable to terrorist attacks. There is a huge vulnerability, however, to cyber-terrorism, which can take multiple facilities offline quickly.

Public confidence in jurisdiction's governance and capabilities

A failure to protect the public from a terrorist attack, even one that is thwarted at the last moment, can cause a total failure in public confidence in government. As seen after 9/11/2001 or after attacks by white supremacists against African-American or Jewish congregations, groups begin to feel isolated, threatened, and isolated from the community. This is especially true in cases where government fails to quickly reassure impacted communities and support them morally and with security resources.

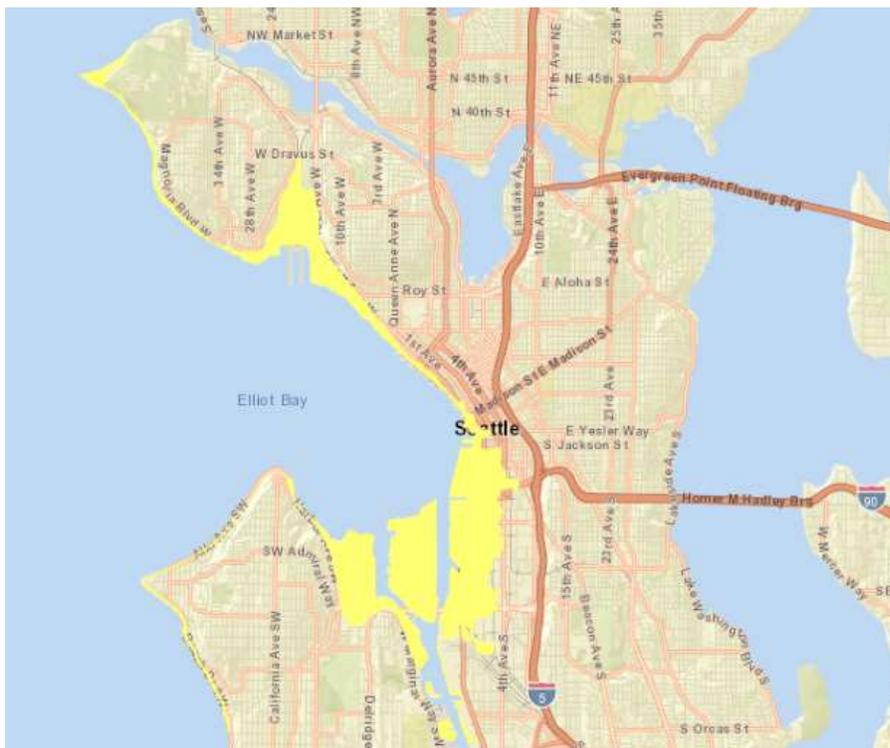

Regional Risk Profile: Tsunami and Seiche

Hazard Description

A tsunami is a series of fast, powerful, and destructive waves that radiate outward in all directions from the source. Tsunamis are usually caused by a displacement of the ocean floor from an earthquake or the collapse of an underwater land feature. Seiches are waves that form in any enclosed or semi-enclosed body of water (i.e. lakes, bays, and rivers) from wind, atmospheric pressure, or seismic waves. Seiche action can also affect harbors and canals.

The primary tsunami threat in King County is from a Seattle fault earthquake, or other events originating in the Puget Sound Lowlands (such as big landslides into the water and possibly other faults). Not all of King County has been modeled for tsunami hazards but scientists are actively working on it. The tsunami inundation (flooding) impacts from a magnitude 7.3 Seattle fault event are shown below in yellow:¹¹⁵ In addition to the Seattle fault, a Pacific ocean sourced tsunami, like a Cascadia Subduction Zone event, can still affect King County. Wave arrival times for a Seattle fault and Cascadia-derived tsunami are extremely different. In a Seattle fault event, the first wave arrives within minutes, where in a Cascadia event, the first wave will arrive in approximately 2 hours and 20 minutes. In both cases, wave action will persist for multiple hours. An earthquake on the Seattle Fault could generate a seiche in Lake

Washington or Lake Sammamish that could impact cities including Sammamish, Kenmore, and Kirkland.

There can also be significant maritime hazard along the western United States' coastlines associated with smaller tsunamis. A tsunami from a local Seattle fault event would cause major damage to port infrastructure and navigational terminals. Additionally, powerful distant tsunamis generated across the Pacific Ocean

¹¹⁵ Washington Geologic Survey. Geologic Hazards Information Portal. Accessed online on 6/11/19 from <https://geologyportal.dnr.wa.gov/>.

can cause maritime hazards in the Puget Sound. Although these distant-sourced events generate relatively smaller tsunamis than local-sourced events, their waves can still cause damage to boats, docks, piers, and aids to navigation (e.g. channel markers, lighthouses, warehouses and port terminals used for loading and unloading cargo ships). Moored boats and vessels underway in the harbor may also be impacted by smaller distant-sourced tsunamis. For example, the 2011 earthquake off the coast of Japan caused a relatively small eight-foot tsunami in Crescent City, California, which led to one hundred million dollars in damaged boats and infrastructure. Anything near the shoreline that has the potential to float or be moved by the wall of water can be carried away – ramming into other structures.

Vulnerability Characteristics and Previous Occurrences

King County includes the deep-water Port of Seattle and several cities that border Puget Sound, including Shoreline, Seattle, Burien, Des Moines, and Federal Way. Together with Vashon Island, unincorporated King County includes a great deal of industry, import/export activity, and commercial and residential real estate that border bodies of water. These key waterfront areas are vulnerable to a tsunami or seiche generated from an earthquake up to hundreds, if not thousands of miles distant from King County.

The most significant documented risks are to port transportation and industrial facilities in the Seattle waterfront and Magnolia. It is likely a tsunami would impact docks, harbors, and other water-dependent facilities in communities such as Des Moines and Burien too. The consequences of a tsunami to the Port of Seattle would likely be catastrophic, causing permanent to semi-permanent harm to the region’s economy. As described in the earthquake chapter, damage from the Kobe, Japan earthquake in 1995 led to a permanent reduction in the scale and importance of that port.

The table below summarizes the identified tsunami hazard area, the City of Seattle, following a magnitude 7.3 Seattle fault earthquake. Approximately 0.6 percent of structures within the city are exposed to a Seattle fault earthquake-induced tsunami, totaling an estimated value of \$5.1 billion (3.5 percent of the total building value within the city).¹¹⁶ The modeling to show potential impacts from a Seattle fault tsunami or a Cascadia tsunami for the remaining communities in King County is not yet complete.

City of Seattle Tsunami Exposure Assessment – Seattle Fault Scenario

STRUCTURES EXPOSED	EXPOSED BUILDING AND CONTENT VALUE	PERCENT OF EXPOSED VALUE
969	\$5.1 Billion	3.5%

Geologic evidence of previous shallow crustal fault-induced tsunami events has been recorded in the Puget Sound at Cultus Bay on Whidbey Island and at West Point in Seattle.¹¹⁷ This evidence suggests the last tsunami occurred around 900 AD when the local Seattle fault raised some landmasses around

¹¹⁶ Federal Emergency Management Agency. 2018. King County Risk Report: Tsunami Exposure Assessment. Page 58.

¹¹⁷ Moore, Andrew. Looking for paleotsunami evidence: an example from Cultus Bay, Washington. Accessed online on 6/11/19 from https://serc.carleton.edu/integrate/workshops/risk_resilience/activities/82019.html.

the Puget Sound shoreline by as much as 26 feet. A scientific study focused on seismic activity on the Seattle fault within the last 8,000 years found evidence for an additional earthquake that occurred ~6,900 years ago. This suggests a low probability of a large earthquake to occur on the Seattle fault as the recurrence interval could be thousands of years. Since 900 AD, tsunami waves in King County have been less than 18 inches in height and caused little damage to boats and shoreline property.¹¹⁸ Additional verbal accounts among the Snohomish Tribe reported by Colin Tweddell in 1953 described a great landslide-induced wave caused by the collapse of Camano Head at the south end of Camano Island around the 1820s.¹¹⁹ No injuries have been reported since the settlement of Seattle in the 18th century. The value and density of property along the waterfront suggests a potential for moderate impacts from such an event.

Multiple seiches have been generated in King County from various local and distant seismic events. Seiche events in the King County have been noted in the following years: 1) In 1891 two earthquakes near Port Angeles caused water in the Puget Sound to surge onto beaches two feet above the high-water mark and an eight-foot seiche in Lake Washington. 2) In 1906 the magnitude 7.9 San Francisco earthquake caused agitated wave activity on the west shore of Lake Washington “so violently that house boats, floats and bathhouses were jammed and tossed about like leaves on the water,” reported by the Seattle Post-Intelligencer (4/19/1906). 3) In 1949, a magnitude-7.1 deep earthquake occurred in Olympia that caused seiches within Lake Union and Lake Washington, but no damages were reported. 4) The magnitude 9.2 Great Alaska earthquake of 1964 created global seiches, including in Lake Union that damaged houseboats, buckled moorings, and broke water and sewer lines. 5) In 1965, a magnitude 6.5 deep earthquake occurred in the Puget Sound which caused a seiche where water “sloshing back and forth like soup in a shallow bowl” was observed at Green Lake, North Seattle (reported by the Seattle Times, 4/30/1965). 6) Lastly, in 2002 a magnitude 7.9 Denali earthquake caused seiches in Lake Union that damaged houseboats, buckled moorings, and broke water and sewer lines.

Tsunamis generated along the Pacific Rim have a hard time reaching Puget Sound with any destructive force. The tsunamis generated by the 2011 magnitude 9.0 earthquake in Japan and the 1964 magnitude 9.2 earthquake in Alaska did reach Puget Sound, but the maximum wave height recorded was only 0.04 meters (~2 inches) and 0.12 meters, respectively in (~5 inches) in King County.

¹¹⁹ Koshimura, Shunichi and Harold O. Mofjeld. 2001. Inundation modeling of local tsunamis in Puget Sound, Washington due to potential earthquakes. ITS 2001 Proceedings, Session 7, Number 7-18. Accessed online on 6/11/19 from https://www.pmel.noaa.gov/pubs/docs/ITS2001/7-18_Koshimura.pdf.

Tsunami Scenario Drivers¹²⁰¹²¹

There are four likely triggers for a tsunami in King County. These include an earthquake on the Seattle Fault, an earthquake on the Cascadia Subduction Zone, a tsunami caused by a major landslide into Puget Sound or another major body of water, and an earthquake on the Alaska-Aleutian Subduction Zone.

Seattle Fault Tsunami	<p>A tsunami triggered by a rupture of the Seattle Fault would compound damage caused by the initial earthquake. It would devastate low-lying areas of Puget Sound, but especially the port and industrial facilities around the Port of Seattle and Magnolia. Preliminary modeling suggests the first wave arrives within 2 and a half minutes after the earthquake starts at the Magnolia Bluff area of Seattle and all coastlines within Elliott Bay experience an average of 20 feet (6 meters) of inundation above Mean High Water during the first 10 minutes. Harbor Island also experiences major flooding with at least 13 feet (4 meters) of flow depth above the ground level. South of Elliott Bay has milder flooding compared to Seattle, but strong currents are prevalent at Portage Bay.</p>
Cascadia Subduction Zone Tsunami	<p>A Cascadia Subduction Zone tsunami would devastate the outer coast and seriously impact low-lying areas around Everett and the San Juan Islands. The islands and the strait of Juan de Fuca protect King County from the worst flooding impacts. Preliminary modeling suggests that little inundation would occur along the coastline of South King county, though some flooding may be expected in areas of Seattle SODO and Port. The worst flooding is expected to occur at Portage Bay with estimated wave amplitudes up to 13 feet (4 meters) above Mean High Water. Strong currents are also estimated at Portage Bay near spits of land and in the narrows, which can be hazardous to the maritime community. The first wave is expected to reach Seattle at approximately 2 hours and 20 minutes. Statewide, this tsunami is expected to cause over 15,000 fatalities, primarily in coastal communities in the outer coast counties.</p>
Landslide Tsunami	<p>Verbal accounts among the Snohomish Tribe reported by Colin Tweddell in 1953 describe a great landslide-induced wave caused by the collapse of Camano Head at the south end of Camano Island around the 1820s. The slide itself is said to have buried a small village, and the resulting tsunami drowned people who were clamming on Hat</p>

¹²⁰ King County Department of Natural Resources and Parks. Landslide Hazards Program website. Accessed online on 6/7/19 from <https://www.kingcounty.gov/services/environment/water-and-land/flooding/maps/river-landslide-hazards/landslide-types.aspx#Debris>.

¹²¹ King County Department of Natural Resources and Parks. Landslide Hazards Program website. Accessed online on 6/7/19 from <https://www.kingcounty.gov/services/environment/water-and-land/flooding/maps/river-landslide-hazards/landslide-types.aspx#Debris>.

<p>Alaska-Aleutian Distant Source Tsunami</p>	<p>(Gedney) Island, 2 miles to the south. Bathymetry between Camano Head and Hat Island could have contributed to the size and destructive power of the wave.¹²²</p> <p>An Alaskan-Aleutian subduction zone earthquake can be as large as a magnitude 9.2 event, as experienced in 1964. A tsunami generated from Alaska is a distant-sourced tsunami for Washington state. The preliminary tsunami modeling results for a potential worst-case scenario magnitude 9.2 Alaska earthquake to King County is estimated to be somewhat similar to the Cascadia Subduction Zone event, but half as strong. The highest wave amplitudes can be up to 7 feet (2 meters) and predicted to occur inside Portage Bay, but not predicted to overtop the northern spit. Additionally, it is probable for some unsafe currents for the maritime community to occur, with the highest risk being at Portage Bay. The first wave is expected to reach Seattle’s coastline approximately 6 hours after the earthquake.</p>
<p>Lake Washington or Lake Sammamish Seiche</p>	<p>A Seattle Fault earthquake could generate a seiche on Lake Washington that would impact low-lying areas of cities along the lake, including Sammamish, Kenmore, Kirkland, and others.</p>

Priority Vulnerabilities

<p>Port and harbor facilities</p>	<p>Tsunamis are expected to devastate near-shore port infrastructure, boats, and piers. This is the largest economic consequence of a tsunami.</p>
<p>Low-lying and waterfront homes and businesses</p>	<p>Homes and businesses along the many waterfronts would be damaged or destroyed by a mid-sized tsunami and devastated by a local crustal earthquake and tsunami.</p>
<p>Wastewater treatment facilities</p>	<p>West Point treatment plan is in the inundation zone for a Seattle Fault tsunami. Historical records also suggest tsunamis have impacted this area before.</p>

Priority Impact Areas

<p>King County residents</p>	<p>While it would take a rather sizable tsunami along the shoreline of King County, precautionary evacuations from houseboats, live aboard pleasure craft, cruise ships, and property immediately adjacent to waterfronts of Puget Sound and lakes Washington, Sammamish, and lake Union may be recommended.</p>
------------------------------	--

¹²² Koshimura, Shunichi and Harold O. Mofjeld. 2001. Inundation modeling of local tsunamis in Puget Sound, Washington due to potential earthquakes. ITS 2001 Proceedings, Session 7, Number 7-18. Accessed online on 6/11/19 from https://www.pmel.noaa.gov/pubs/docs/ITS2001/7-18_Koshimura.pdf.

Vulnerable populations	There are no additional anticipated direct impacts from tsunami to vulnerable populations. As always, any disruption to services, the economy, and infrastructure would cause more harm to lower-income and marginalized communities.
Property	Tsunami and seiche threats were not defined until recently. Most of the early 19th and 20th century structures located near the water were probably not engineered to withstand impacts from a tsunami, seiche, or earthquake. The properties along the entire Seattle Waterfront and those in Shoreline, Des Moines, Federal Way, and Vashon Island are at risk from tsunami activity.
The economy	A tsunami or seiche that impacts port facilities, such as one triggered by the Seattle Fault would have any sizable impact on the economy of the region. Damage would run potentially in the billions and have far-reaching consequences for Washington’s export-based economy.
The environment	It is possible for a tsunami or seiche to have an impact on the natural environment immediately adjacent to Puget Sound through the release of fuels and hazardous materials or their storage facilities around the waterfront. This may include fish habitat or natural and farmed shellfish beds, wetlands, estuaries, and marsh areas.
Health systems	There are no major health centers located in the mapped tsunami inundation areas.
Government operations (continuity of operations)	It is possible that Sounder traffic between Everett and Seattle or Tacoma and Seattle could be impacted by any large tsunami in Puget Sound. Otherwise, it is unlikely that King County governmental operations would be directly impacted by a tsunami or seiche.
Responders	Along the shoreline of King County, precautionary evacuations from houseboats, live aboard pleasure crafts, cruise ships, and property immediately adjacent to waterfronts of Puget Sound and lakes Washington, Sammamish, and Lake Union would cause impacts to the public. The volume of search and rescue efforts along waterfronts affected from the tsunami may pose potential issues to first responders (police, fire, EMS). There are only small number of scenarios where this is a likely issue.
Infrastructure systems	<ul style="list-style-type: none"> • Power: Little to no impact directly from tsunami is expected. • Water/Wastewater: Tsunami may impact the West Point treatment plant. The damage would depend on the height of the tsunami and a significant event would be required. If such an event were to occur, the plan would be rendered inoperable. • Transportation: damage to port facilities and ferry terminals are the primary threat to infrastructure from a tsunami. Even relatively small tsunami surges, such as the aforementioned example from Crescent City, have caused tens of millions

	<p>of dollars. Damage to low-lying rail and roads is also likely, but less of a concern since it would not impact primary transportation routes.</p> <ul style="list-style-type: none"> • Communications: There is limited risk to communications systems as a whole from tsunami.
<p>Public confidence in jurisdiction's governance and capabilities</p>	<p>Coverage from major news outlets, including the Seattle Times and the New Yorker magazine, have argued that Washington is highly underprepared for a major seismic event large enough to generate a tsunami. Both media coverage and reports from state emergency management has led Washington's governor to convene a Resilient Washington Subcommittee to look into mitigation actions out of concern for the apparent low-level of public confidence in state and local ability to manage major disasters. Data is available from Japan and New Zealand that clearly demonstrate that policy level decisions and direct communication to the public will greatly influence the public confidence in King County government.</p>

Regional Risk Profile: Volcano

Hazard Description

Volcanic eruptions are the result of geological activity, and may include lava, rock fragments, gases, and ash ejected from a vent on the surface. Deposits of rock, lava, and ash create the structures we call volcanoes. Washington State has five active volcanoes, four of which have been classified as “Very high” threat by the U.S. Geological Survey, and one considered “High” threat. Mount Rainier would cause the most significant local disruptions in the event of an eruption, but any of them could cause major disruptions due to ash or impacts on the transportation system.

Volcanoes can lie dormant for hundreds or thousands of years between eruptions. Hazards from eruptions are typically divided into near-volcano hazards, those which impact areas immediately on the slopes of the volcano, and distant hazards, which can put areas miles away from the volcano at risk. Near-volcano hazards include pyroclastic flows (hot avalanches of gas, ash, and rock fragments), lava flows, rock (tephra), debris flows, and landslides. Distant hazards, include Lahars – volcanic mudflows,

and volcanic ash. Lahars may travel tens of miles down river valleys, picking up debris and inundating floodplains, and leave a cement-like deposit of sediment where they stop. They are a hazard at all five of Washington’s volcanoes, and the only personal protective action available to avoid a lahar is evacuation to higher ground. Volcanic ash – made up of tiny particles of glass – may be extremely widespread, as it travels in the direction of the wind. The fine particles may travel hundreds of miles or more downwind. Even in tiny quantities, volcanic ash can be very disruptive, as it lowers air quality, makes roads slippery to drive on, is abrasive, poses risks to aircraft, motor vehicles and electronics, and is extremely difficult to clean up, as it easily remobilizes into the air. Volcanic ash is also dense, and quite heavy when wet – 4 inches of wet volcanic ash is heavy enough to collapse most roofs.

Vulnerability Characteristics and Previous Occurrences

There are multiple hazards from a volcano, including lahars that could impact communities in the south of the county to ash that could impact the entire region and come from any of Washington’s five active volcanoes.

Lahars, mudflows that can have the consistency of wet cement, are historically the most damaging element of a volcanic eruption. These flows pick up large and small debris like trees, houses, boulders – anything in its path. Lahars can move 20-40 miles per hour down slopes. They slow down once they reach floodplains, but are still an unstoppable mass of mud and debris, often pushing a flow of water ahead of it. While the lahar risk to King County is limited to a major eruption of Mt. Rainier and impacts primarily the cities of Algona, Pacific, and Auburn, the regional impacts would include a complete disruption of regional transportation routes, including through airport closures, damage to I-5, and damage to the Port of Tacoma.

The best examples of potential local damages from volcanic activity are from the Mt. St. Helens eruption in 1980. This eruption had significant ash-fall over eastern Washington, Oregon, Idaho, and Montana, with trace amounts falling over the Dakotas, Wyoming, Nebraska, Colorado, Oklahoma, and Minnesota as well as Canadian provinces. A long history of volcanic eruptions in the cascades is recorded by the Native Americans in the area. Volcanic activity occurs in geological timelines these events are spaced over hundreds if not thousands of years, during which time the number of exposed inhabitants and inventory of infrastructure has changed greatly. Even the difference between 1980 and today (39 years) has seen a marked increase in population and infrastructure in the possible impact area for volcanic activity. The Mt. St. Helens eruption in 1980 damaged or destroyed 200 buildings, ruined 44 bridges, and buried 17 miles of railway along with 125 miles of roadway. Community water supplies and sewer systems were disabled and reservoirs partly filled with silt and debris.

Mt. Rainier, however, is much closer (60 miles to Seattle) and poses a much more direct threat. Modern Mount Rainier started erupting 500,000 years ago and has had numerous eruptions and mudflows since then. About 5,600 years ago, an eruption created a massive debris avalanche, called the Osceola Mudflow, poured down from the summit of Mount Rainier, picking up sediment and anything else in its path as it traveled down the White River valley and into the Puget Sound. The mudflow filled valleys with up to ~400 feet of sediment and moved at speeds of 40 to 50 miles an hour. Following the Osceola Mudflow, many smaller volcanic eruptions and lahars occurred as the volcano continued to show signs of unrest. The most recent major mudflow, called the Electron Mudflow, began as a part of a crater

collapse and traveled down the Puyallup River into Sumner in ~1502. It is estimated that Mount Rainier has generated about 60 of these lahars in the last 10,000 years, with about 10 large enough to reach the Puget Sound. Many communities, including Orting, Puyallup, and Auburn, between Mount Rainier and the Puget Sound are built on top of these deposits.¹²³

An eruption of Mt. Rainier, or any other Cascade volcano, is likely to be preceded by warning signs, such as series of earthquakes, and deformation of the volcano. This volcanic “unrest” may last for days before an eruption, or possibly for weeks, to months, to years or more. Monitoring networks are in place to provide advanced warning. This advance warning is critical to communities downstream from the volcanoes, because Even a relatively small eruption could melt glaciers significantly, generating lahars that will reach heavily populated areas.¹²⁴

A lahar should not be seen as a singular event, but a mass movement of sediment requiring significant time to recover from. Deposition of feet to tens of feet of sediment through a watershed and over a floodplain creates long-term changes to the river environment. After a lahar, mitigation measures may be necessary to prevent continued sedimentation over the decades following the eruption, such as the sediment retention structure built following the Mt. St. Helens 1980 eruption. In lieu of this solution, dredging may be required to prevent shipping channels from filling with sediment. Deposition of a large amount of sediment within a floodplain may also change floodplains to a point where floods now occur in areas which were previously safe from flooding.

¹²³ Washington State Emergency Management. 2018. Enhanced Hazard Mitigation Plan: Volcano Risk Assessment, page 470-472.

¹²⁴ United States Geologic Survey. 2018. USGS Volcano Hazards Program website. Accessed online on 6/12/19 from https://volcanoes.usgs.gov/volcanoes/mount_rainier/geo_hist_future_eruptions.html.

Summary of Hazard Effects

Major types of volcanic hazard, their effects and extents are listed in the table below. The occurrence and scale of volcanic hazards are inversely related, with small events occurring more frequently (10-20 a month), and larger events occurring every hundred years or so.¹²⁵

Hazard	Threat to Life	Threat to Property	Areas Affected
<i>Ash and tephra fall</i>	Low except near vent; high for aviation	Depends on size of particles and amount of ash; can lead to roof collapse, bomb damage, fire	Local, Regional, National, International
<i>Pyroclastic flows</i>	Very high – Near vent and on slopes; low in King County	Very high	Local, Regional, National,
<i>Lava flows</i>	Low except near vent.	Very High	Local
<i>Lahars</i>	High to moderate	High	Local, Regional
<i>Flooding (post-lahar)</i>	Moderate	High	Regional
<i>Gases/ acid rain</i>	Low to moderate	Moderate	Local, Regional

Priority Vulnerabilities¹²⁶

Communities in the path of lahar hazards	Communities in the vicinity of Rainier, including the King County communities of Algona, Pacific, and Auburn, are most vulnerable from a large lahar generated by an eruption of Mt. Rainier.
Populations vulnerable to respiratory distress brought on by ash	Ash from any volcanic eruption can lead to disruption of daily life and is a major threat to people with medical vulnerabilities.

¹²⁵ Washington State Emergency Management. 2018. Enhanced Hazard Mitigation Plan: Volcano Risk Assessment, page 463

¹²⁶ Clark County Emergency Management. 2007. 2006 Volcanic Ashfall Exercise After Action Report / Improvement Plan.

Populations in the immediate vicinity of a volcano	Populations that use Mt. Rainier National Park or work in the area around the mountain are most susceptible to the immediate impacts. Although advanced warning is likely, it will be impossible to predict the exact moment of eruption. Residents from the town of Orting have approximately 45-minutes to evacuate following activation of their lahar sirens.
Roof collapse caused by ash fall	Buildings can collapse following large ash accumulation.
Electrical systems and the energy sector	Electrical systems may short out due to ashfall and power generation can be curtailed as generation systems are shut off to protect sensitive components.
Communications equipment	Communications equipment has the same vulnerability as general electrical systems and is subject to failure due to ash damage.
Air travel	Airports would likely be closed for the duration of major ash dispersal.
Roads and transportation systems	Traffic signals would likely short out during ashfall. Ash is also creates a very slippery driving surface. Ash can also damage vehicle engines, and scratch windshields when wipers are being used – Driving is not recommended during heavy ashfall.

Priority Impact Areas

King County residents	Cities in the south of the county, including Algona, Pacific, Auburn, and Kent all may be impacted by a lahar. The sedimentation zone spreads throughout the Green River Valley. This area includes some of the largest and fastest-growing cities in the county. The distance from Mt. Rainier makes direct impact of eruption from a pyroclastic event extremely unlikely. Prevailing winds make ash fall in the county unlikely or at least minor. Lava flows and landslide activity would impact Pierce County but are unlikely to reach any portion of inhabited King County. Indirect impacts from a major eruption might include a cooling climate from atmospheric suspended ash clouds but this too is unlikely. Fine ash may cause regional health impacts – especially respiratory for the duration of ash fall. Impact to vehicles and air handling systems in homes and work places may have an employment impact to the King County population.
Vulnerable populations	Impacts to individuals with access and functional needs will be extremely serious. Transportation will be impacted, resulting in difficulty accessing appointments. Individuals with chronic respiratory vulnerabilities will be most negatively impacted by ash. While there are limited numbers of King County residents in the path of the lahar, the communities that are most impacted have higher rates of disability and poverty than the statewide average.

Property	<p>The cities of Algona and Pacific are the most at risk from a Mt. Rainier lahar event, with over 90 percent of their structures exposed to the lahar. While the percentage of structures is not as high, the City of Auburn has the highest potential dollar-value losses. Other damages would include the loss of HVAC and air filtration systems, electrical systems shorting out, and the danger of roof collapse from ash accumulation since ash is heavier than snow. Furthermore, following rains, ash hardens to a concrete-like consistency, which can clog gutters and drains and cause them to fail or collapse. Businesses that operate electronic systems will require decontamination rooms to prevent ash from getting inside and damaging electrical equipment.</p>
The economy	<p>Many of the impacts from a Mt. Rainier eruption to humans and the environment would also impact the economy of King County. Aviation interruption would likely occur from airborne ash. A lahar event would impact rail and port service from direct damages to infrastructure like bridges, rails, and roadways, or from inaccessibility to ports. Ash would cause interruption of all internal combustion engines or vehicles that require filters would impact the workforce and movement of food and supplies as well as repair crews. Abrasion from fine ash on all mechanical parts would cause longer term damages to industrial operations and the ports. Health and respiratory issues would make both indoor and outdoor professions difficult. Medical facilities and the patients that rely on them would have difficulty operating. The cost of debris removal following a lahar would be enormous, even similar to efforts from a major earthquake.</p>
The environment	<p>Any significant volcanic activity on Mt. Rainier would have an impact to the environment. Lava flows, tephra, ash, and lahar activity would directly impact birds, fish, mammals, reptiles, amphibians, trees, and vegetation. Sediment deposition would impact rivers that support salmon and steelhead spawning. Debris and lahar may change the course of rivers entirely. Lahars may cause hazardous materials releases that harm birds, fish and other wildlife. Recreational use of ski areas and hiking trails would also be impacted. It has been four decades, and Mt. St. Helens timber and wildlife have not yet returned to pre-1980 levels.</p>
Health systems	<p>Health systems would be impacted by an expected dramatic rise in demand for services as ash causes people to seek care for respiratory distress. Health systems would also be hindered by transportation system impacts. First responder vehicles should have air filters changed every 35 miles during volcano ash events and there are not enough air filters on hand to meet this requirement.</p>
Government operations (continuity of operations)	<p>Potential impacts to county delivery of services from a Mt. Rainier eruption would be the result of damages to infrastructure, equipment including machinery and vehicles, inaccessibility to service areas, impedance to transportation routes used by the county workforce, and health impacts to residents and the workforce. County services that might be interrupted might include: Medic One response, King County Sheriff's Office services</p>

	<p>like 9-1-1 dispatch, search and rescue and marine or aviation unit response, adult detention, solid waste and waste water services. Services provided by other government agencies and basic service providers might include interruption of: power, phone and cell phone service, emergency medical service, fire and law enforcement, water systems, and health/medical facilities.</p>
<p>Responders</p>	<p>Responder vehicles need regular air filter changes during ashfall. Air filters in the quantity required are likely not available. Responders will also be taxed by high numbers of calls and dangerous roads caused by slick ash.</p>
<p>Infrastructure systems</p>	<ul style="list-style-type: none"> • Power: Ash can short out electrical systems and cause widespread power failure. Ash accumulation may also cause issues with power generation dams. Generation facilities may be shut down to prevent damage to sensitive components. • Water/Wastewater: Water systems, including reservoirs, could quickly clog with ash, potentially polluting water supply. • Transportation: volcanic ash is very slick and roadways would become treacherous. Vehicles would need regular air filter replacements and there are not sufficient air filters in the region to offset the need. Airports in the region would have to close, potentially for months. Any lahar could potentially destroy major transportation routes, including I-5. Traffic signal systems and communications systems could short out due to ashfall.¹²⁷ • Communications: Electrical and communication impact can be severely impacted during ashfall. Ash getting into electrical systems can cause systems to short out.
<p>Public confidence in jurisdiction's governance and capabilities</p>	<p>The 1980 Mt. St. Helens eruption revealed that even heavy monitoring of a volcano, while effective, cannot predict exactly how the volcano will behave. Since that time, investments and public information have created confidence that USGS and local emergency management is capable of providing public warnings and evacuations in time to save lives. Continued investment in risk assessment and warning systems, for example, around Orting, WA, continue to build public confidence. An event could either undermine or strengthen this confidence, depending on losses and the speed of warning.</p> <p>A potential public confidence issue is from false positives that trigger evacuations. There have been numerous cases outside of the US where communities are evacuated, only for the volcano not to erupt at that time. Communities can become inured to warnings. When this happens, and an event does occur, there are much higher losses. A false alert is unlikely in the USGS monitoring system for Mt. Rainier as the danger of a false alert has been a central consideration in the design of the system.</p>

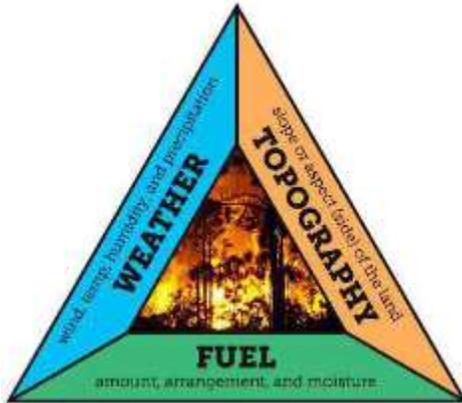

¹²⁷ Clark County Emergency Management. 2007. 2006 Volcanic Ashfall Exercise After Action Report / Improvement Plan.

A period of unrest, leading to heightened monitoring and public awareness could last days or years before anything (or nothing) happens. Sharing information with the public on the uncertainty of volcanoes and the potential for long-term monitoring is important. Additionally, in the event of unrest and a potential lahar, the local jurisdiction are the only ones who can actually order the evacuation and so much be prepared to assess risk, inform the public, and act when needed.

Regional Risk Profile: Wildfire

Hazard Description

King County and Western Washington in general have historically been at a low risk from major wildland and wildland-urban interface fires. The historic return period for the heavily forested areas of the slopes of the Cascades in eastern King County is between 200 and 300 years. Western Washington fires are not unheard of, however – in 1902, dozens of wildfires burned nearly 239,000 acres in what is

now the Yacolt Burn State Forest, causing 38 deaths. This occurred after an extended period of hot, dry weather, high wind, and an over-accumulation of timber harvest slash.¹²⁸ Climate change is shortening this interval, though it is still unknown by how much. By 2040, a four-fold increase in the annual area burned by fires in Washington is projected.¹²⁹ Of a more immediate concern is the amount of new development in areas close to the wildland-urban interface. This new exposure is the primary driver of risk in the short and medium term.

Wildfires can occur when the necessary combination of weather (low humidity, low precipitation, high temperatures, high wind), topography (steeper slopes, gulches, canyons, and ridges), and fuel (higher amounts, higher concentration, continuous across the landscape, low in moisture) are brought together with an ignition source (lightening or human-caused). In the western United States, we have seen an increase in large wildfires due to more than a century of fire prevention efforts, rising temperatures, declining forest health, and increased development.

Wildfires can spread quickly when burning in areas with dense, dry, uninterrupted fuels. This is particularly true in areas with steep slopes and ridges and in windy weather with high temperatures and low humidity. This mix of requirements has meant that there have been very few serious fires in King County.

The wildland fire season in Washington usually runs from July through September. Drought, low snow pack, and local weather conditions can lengthen the fire season. Many of the worst fire years on record have occurred in the past decade. Suppression costs alone cost \$60 million for the Carlton Complex fire. Economic costs were estimated at \$98 million for that fire.¹³⁰

¹²⁸ Washington State Department of Natural Resources. Yacolt Burn State Forest website. Accessed online on 6/19/19 from <https://www.dnr.wa.gov/Yacolt>.

¹²⁹ King County. 2018. King County Strategic Climate Action Plan 2018 Biennial Report.

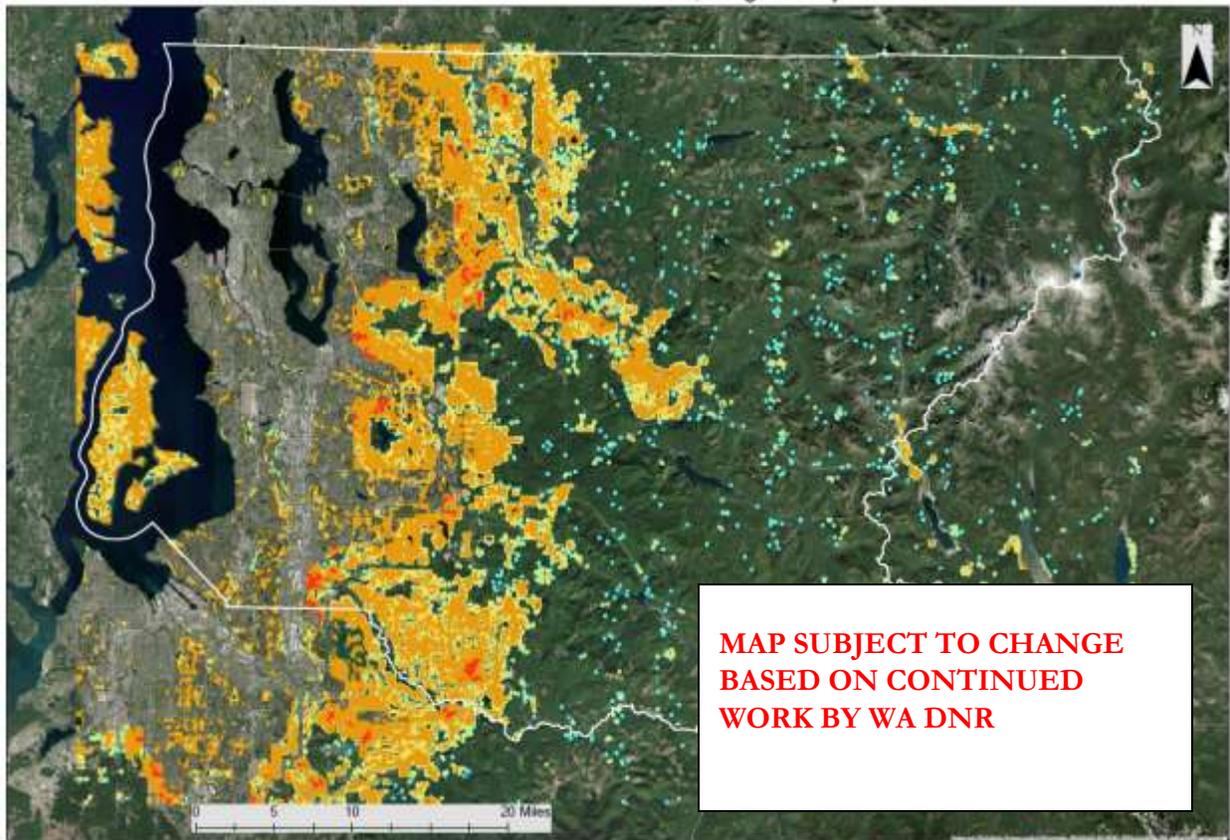

¹³⁰ Washington State Emergency Management. 2018. Washington State Enhanced Hazard Mitigation Plan Risk Assessment. Pp. 493-495.

Washington State Department of Natural Resources lays out the scale of the problem in the new, 10-year strategic plan.¹³¹ “In 2018, wildland fires burned more than 350,000 acres in Washington state and cost more than \$112 million dollars to suppress—all before the end of August...Yet, 2018 was not the state’s worst for fire. In recent years, hotter, drier summers and longer fire seasons have led to a trend in increased fire starts and area burned. Fires in 2014 and 2015 burned approximately 425,300 and 1,064,100 acres and cost state and federal agencies nearly \$182 million and \$345 million in firefighting expenses, respectively. In addition to the significant structural and economic losses, three firefighter lives were lost in 2015.”

The largest fires in Washington State are usually sparked by lightning in wilderness areas. Small fires (often ignited due to human activity) can also be damaging, however. For example, a small 400-acre fire in Thurston County in 2017 led to the evacuation of nearly 100 homes and the loss of four homes. Human-caused ignition sources may include chains dragging behind trucks, cigarettes, arson, or the loss of control of fires set for recreational purposes.

Washington State Department of Natural Resources is leading an effort including King County to complete a statewide map of all wildland-urban interface areas. Once the mapping is complete, RCW 19.27.560 will take effect, adopting the ICC’s 2018 International WUI Code. The following map is a draft map developed using United States Forest Service land cover data and King County parcel data. Interface areas are at the boundary of urban and vegetated areas. Intermix areas are areas where structures and vegetation are mingled.

¹³¹ Washington State Department of Natural Resources. 2018. Washington State Wildland Fire Protection 10-Year Strategic Plan. Accessed online on 8/26/19 from https://www.dnr.wa.gov/publications/rp_wildfire_strategic_plan.pdf?ivvzxs.

Draft Wildland-Urban Interface Areas: red = interface/intermix areas with high structure density (Source: DNR WUI Mapping Program, 2018)

Wildfire hazards include the fire itself, but also smoke and post-wildfire erosion and flooding. Wildfire smoke is made up of particulate matter, carbon monoxide and other harmful pollutants from burning trees, plant materials, and combustion of plastics and other chemicals released from burning structures and furnishings. Exposure to fine particulate matter (2.5 micrometers and smaller) is a significant health concern, because the small size of the particle allows people to inhale it deep in the lungs where the particles can directly enter the blood stream. The effects of smoke exposure range from eye and respiratory tract irritation to more serious health problems including reduced lung function, bronchitis, and exacerbation of asthma, heart failure, and premature death. People with existing heart and lung diseases, older adults, children and pregnant women are especially at risk of smoke-related health problems.¹³²

Post-wildfire flooding, landslides, and mudslides is a deadly secondary hazard to extreme wildfires in areas with steep slopes. Soils in areas burned by fire not only lose their stabilizing vegetation but can also become hydrophobic (water repelling), leading to massive water runoff that carries debris down slopes and into nearby waterways. In Montecito, CA more than 17 people died, 100 homes were destroyed, and hundreds of people were rescued from a series of mudslides and mudflows that hit following heavy rains that drenched areas burned over earlier that summer.¹³³ Mudslides were a serious

threat in Eastern Washington following the 2014 and 2015 wildfires, and destroyed irrigation systems, roads, and bridges.

One aspect of post-fire flooding is that it can be predicted. King County would likely have weeks to months to prepare and plan for flooding events resulting from a major fire. The Department of Ecology maintains a post-fire flooding calculator to estimate runoff and prepare communities for flooding. In Montecito, for example, emergency managers had already evacuated thousands of people and it was those who chose to not heed the warnings that were most likely to be impacted by the mudslides.

Vulnerability Characteristics and Previous Occurrences

King County communities are rarely threatened by major wildfires, though roadside brush fires can still threaten even the most urbanized areas.¹³⁴¹³⁵ This has meant that land use and building codes in King County are not adapted to current and future wildfire risk. As the climate changes, there is a greater likelihood that high temperature and dry conditions will be present along with the already-existing topographic, wind, and fuel conditions necessary to support a large fire

Smoke has received the bulk of recent attention in King County due to multiple years of wildfire smoke in the Puget Sound region from wildfires in British Columbia, Oregon, and Eastern Washington. Air quality deteriorated to hazardous conditions in some parts of King County in 2017 and 2018. Recent studies of wildfire smoke exposure in Washington found a significant relationship between exposure to PM2.5 from wildfire smoke and an increase in emergency room and outpatient visits for asthma. Especially impacted were those with pediatric asthma and other childhood respiratory and chest symptoms, as well as Chronic Obstructive Pulmonary Disease across all age groups, and all respiratory outcomes.¹³⁶ Smoke will likely be an ongoing concern for the region and may represent a “new normal” though it will not occur every year.

Post-fire flooding is a serious threat to King County. A fire in one of the foothills communities could cause major mudflows and devastating flooding in communities in the watershed impacted by the fire and through which rivers and creeks pass. Communities with existing flood risk, such as along the Snoqualmie River, are especially vulnerable. Damage to homes caused by debris flows is typically not covered by regular homeowner’s insurance.

W., B. Ford, W. Lassman, G. Pfister, A. Vaidyanathan, E. Fischer, J. Volckens, J. R.

Scenario Drivers¹³⁷¹³⁸

Wildland-Urban Interface Fire

Although fires are currently rare in Western Washington, they are not unheard of and are expected to increase as climate change leads to warmer temperatures. Prolonged summer heat, combined with high density forests and areas of poor forest health, is increasing fire risk at the same time that people are building more and more into the wildland-urban interface. The building patterns in these areas are not in accordance with FireWise principles and many communities have limited ingress and egress routes.

Smoke

In 2017, and especially 2018, smoke from wildfires inundated Seattle, causing unhealthy air quality. This was due to wind patterns that blew smoke from fires in British Columbia, Oregon, and Eastern Washington. Warmer summers will increase the number of fires and with more fires, more smoky days are likely.¹³⁹

Post-fire flooding and debris flows

Wildfires burn vegetation on steep slopes, not only destabilizing the slopes but also making the soil hydrophobic in high-intensity fires. This can lead to large debris flows and mudslides when heavy rains occur that damage infrastructure and communities downstream for several years after a fire. USGS can conduct assessments on burned areas to determine the likelihood of major debris flows from a burned area.¹⁴⁰

Priority Vulnerabilities

Structures built in interface or intermix areas	Structures built in interface or intermix areas are more susceptible to fires, including from spotting and embers ahead of a fire. This is especially true for buildings with less than 100 feet of defensible space.
Foothills and interface communities	Communities in or around areas at a higher risk of fire, such as those in the foothills of the Cascades, are more susceptible to fire.
Communities in or near the floodplain, downstream of potential burn areas	Major wildfires can cause the soil to become hydrophobic. When rains come, large quantities of water and debris and rush down hillsides and destroy homes and infrastructure while causing flooding in downstream communities.
Communities built without multiple ingress and egress routes	Communities with a single ingress and egress route are much more difficult to protect and evacuate. Roads that are less than 24 feet wide, especially those less than 20 feet wide, and those driveways without a turnaround are highest risk.
Buildings built with flammable materials and with vegetation close to the structure	Buildings not meeting FireWise principles, including defensible space, are most at risk to wildfire. This includes proximity of dense brush or timber, flammable composition of structure roof, and siding.
Communities on slopes or hills	Fires tend to burn up slopes and ridges, endangering structures in those areas. Buildings less than 30 feet from a slope of greater than 30% grade are most vulnerable.

¹⁴⁰ USGS. 2018. Miriam Fire Preliminary Hazard Assessment. Accessed online on 6/19/19 from https://landslides.usgs.gov/hazards/postfire_debrisflow/detail.php?objectid=224.

Areas with more frequent severe fire weather days and winds	Fire weather, including low humidity and wind, is a major predictor for when ignitions, which are common, will spread and become a major fire. Areas prone to this weather are expected to expand due to climate change.
Areas greater than five miles from a fire station and with limited water source availability	Buildings more than five miles away from fire services and with limited pressurized fire hydrant access are more vulnerable.

Priority Impact Areas

King County residents	King County residents are most likely to experience fire impacts from smoke. Smoke can cause respiratory issues and prevent people from taking part in outdoor activities. There are limited populations exposed to wildfire hazard in interface areas, though this risk is growing due to climate change and new development.
Vulnerable populations	Populations suffering from respiratory ailments are at the greatest risk from wildfire since smoke from fire. People with existing heart and lung diseases, older adults, children and pregnant women are especially at risk of smoke-related health problems.
Property	The level of exposure of property and potential impacts to property from wildfire is not yet known in detail. The communities with the highest levels of exposure include Snoqualmie, North Bend, and unincorporated areas of the county in the foothills of the Cascades. King County is working on a better estimate of overall risk to property and will update this plan with that information when it is available. Likely impacts to property include smoke damage to total loss of facilities. Communities built with many homes close together and constructed of flammable materials can be completely burned in a short time, as seen in Fort McMurray, Canada, Paradise California, and Santa Rosa, California.
The economy	At present, there is relatively little economic impact from wildfires in most of King County. The fires are predominately a risk in the more rural parts of the county. There is some impact from smoke and fire to transportation systems; however, it is likely to be limited and temporary. The largest impacts are likely to be indirect, including losses in work days because of poor air quality, loss of capital required for suppression efforts, interrupted access, and losses in tourist income.
The environment	While fires are often beneficial to the landscape when regular and not intense, a major wildfire can be damaging in the near term. Fires can pollute water systems and destroy old growth habitat. They can burn over springs and increase evaporation. Following extreme fires, hydrophobic soils make it difficult for plants to regrow in and the runoff over these soils increases the turbidity of local streams, endangering fish and other water animal populations.

Health systems	Exposure to fine particulate matter (parts per million 2.5) is a significant health concern, because the small size of the particle allows people to inhale it deep in the lungs where the particles can directly enter the blood stream. The effects of smoke exposure range from eye and respiratory tract irritation to more serious health problems including reduced lung function, bronchitis, exacerbation of asthma and heart failure, and premature death. ¹⁴¹ During extreme smoke pollution events, public health systems are likely to be overburdened by populations suffering respiratory distress.
Government operations (continuity of operations)	Most King County operations and facilities are in the more urban areas of the county and unlikely to be directly impacted by wildfires. Smoke, however, can cause an increase in employee absenteeism as employees may need to stay home to avoid smoke exposure. Another risk is that a wildfire might occupy most of the region’s firefighting capabilities, leaving less capability to continue regular structure fire and emergency medical missions.
Responders	Growing numbers of wildfires will increase risk to firefighters. Firefighters in the Puget Sound mostly respond to structure fires. With an increase in wildland or WUI fires, firefighting becomes more complex and dangerous. Also, communities without proper ingress/egress routes further increase risk to firefighters who may be called upon to attempt evacuations in such communities. According to the Washington State Enhanced Hazard Mitigation Plan, there are less than five first responder facilities exposed to wildfire. ¹⁴²
Infrastructure systems	<ul style="list-style-type: none"> • Energy: Washington’s transmission lines run through wildland areas. Wildfires in King County could damage or destroy these systems, although brush is usually kept clear of the largest transmission facilities. Rural and other interface power lines would be burned in any fire, as has been seen in numerous communities in Eastern Washington. Utilities in California are increasingly powering down transmission systems during “red flag” fire conditions, affecting energy customers. • Water/Wastewater: Many water reservoirs are in forested areas and could be impacted by wildfire that may burn power supplies to pump stations or the pump stations themselves. Furthermore, post-fire flooding could damage or pollute reservoirs. • Transportation: Fire can cause road closures due to visibility concerns. A greater risk, however, is post-fire flooding and debris flows that can damage or destroy roads and bridges downstream or downslope from a burned area after a rain. Additionally, SeaTac Airport was forced to cancel flights in 2018 due to poor visibility during smoke events.

¹⁴¹ Washington State Emergency Management. 2018. Washington State Enhanced Hazard Mitigation Plan Risk Assessment. Pp. 493-495.

¹⁴² Washington State Emergency Management. 2018. Washington State Enhanced Hazard Mitigation Plan: Wildfire Risk Assessment. Page 533.

	<ul style="list-style-type: none"> • Communications: Cellular communications sites can lose power or be damaged by wildfire. During these events, it may be necessary to deploy cellular on wheels capabilities.
Public confidence in jurisdiction's governance and capabilities	Wildfire hazards have gained renewed importance in recent years due to the smoke problems of 2017 and 2018. Numerous articles in the Seattle Times and other media describe a "new normal" of smoke and fire danger in the Northwest. State and local jurisdictions have been working to prepare public information messaging due to health concerns and public interest. Government will need to be proactive in managing this hazard in order to maintain public confidence.

Hazard Mitigation Strategies

The primary focus of this plan update was the development of comprehensive, operationally viable hazard mitigation strategies and the establishment of a capability to supervise and promote their implementation. Plan strategies were developed using the following structure:

Hazard mitigation strategies were developed by each participating jurisdiction, supported by a series of workshops, described in the planning partner engagement section of the introduction. The workshops were hosted by King County Emergency Management and included state and FEMA staff associated with the RiskMAP program.

The half-day workshop series took participants from developing risk problem statements (December 2018), through identifying community assets and strategies to protect those assets (July 2019), to funding projects (August 2019). Using problem statements developed in the first workshop, participants identified assets and then developed strategies that could protect their assets in workshop 2. Participants were also guided through a strategy prioritization exercise using the King County method described below. They left the second workshop with a list of strategies drafted and prioritized. For the third workshop, participants learned about potential funding sources and how to seek funding for high-priority strategies and eligible projects that they could not fund internally.

For those unable to attend workshops in-person, the planning team provided handouts and met in-person over through Skype to walk jurisdictions through the same process. Unless indicated otherwise, this is the method planning partners used to develop and prioritize hazard mitigation strategies.

Each planning partner also convened those internal stakeholders who were responsible for projects or programs that supported or implemented mitigation along with those stakeholders with funding available or funding needs. In King County, the primary hazard mitigation agencies include:

- Department of Natural Resources and Parks – Water and Land Resources
- Department of Natural Resources and Parks – Wastewater Treatment
- Department of Local Services – Permitting
- Department of Local Services – Roads
- King County Information Technology
- Department of Executive Services - King County International Airport
- Department of Executive Services – Facilities Management Division
- Public Health Seattle – King County

The planning team met with each department individually, with each developing and submitting a list of potential hazard mitigation strategies and projects.

Departments attended the July Mitigation Strategy Workshop and August Mitigation Funding Workshop along with the local jurisdiction partners.

Mitigation Plan Goals:

Goals are broad policy statements of the community’s vision for the future. They help describe the contribution each strategy makes toward major objectives that reach beyond any individual department or discipline. In alignment of this and with the Plan’s purpose, King County’s Regional Hazard Mitigation Steering Committee adopted King County’s Determinants of Equity¹⁴³ as Mitigation Plan Goals:

Mitigation Plan Goals - 14 Determinants of Equity

1. Access to Affordable, Healthy Food
2. Access to Health and Human Services
3. Access to Parks and Natural Resources
4. Access to Safe and Efficient Transportation
5. Affordable, Safe, Quality Housing
6. Community and Public Safety
7. Early Childhood Development
8. Economic Development
9. Equitable Law and Justice System
10. Equity in Government Practices
11. Family Wage Jobs and Job Training
12. Healthy Built and Natural Environments
13. Quality Education

¹⁴³ Office of the King County Executive. 2016. Equity and Social Justice Strategic Plan. Accessed online on 7/24/19 from <https://kingcounty.gov/elected/executive/equity-social-justice/strategic-plan.aspx>.

14. Strong, Vibrant Neighborhoods

Supplemental Goals:

- 15. Resilient and safe high and significant-hazard dams
- 16. Proactive and innovative floodplain management to reduce Repetitive Loss and Severe Repetitive Loss properties

Mitigation strategies will be categorized according to these 16 factors.

Mitigation Plan Strategies

Mitigation Plan Strategies will be developed based on threats to essential assets and capabilities from hazards within cities and unincorporated areas of King County. In the past these have included strategies for risks such as land movement and flood impacts and projects such as bridge seismic retrofits and generators for critical facilities. For this plan, hazard mitigation strategies are sets of coordinated actions that, taken together, address a risk or vulnerability. They are comprehensive, long-term, and designed to be regularly updated as actions are completed.

The updated strategy format will be used going forward in order to better support long-term tracking of mitigation actions and strategies. The updated strategy template is displayed below.

Lead Points of Contact (Title)	Partner Points of Contact (Title) <i>Who else outside your jurisdiction benefits from the strategy or will help implement the strategy?</i>	Hazards Mitigated / Goals Addressed	Funding Sources and Estimated Costs
<p>Strategy Vision/Objective</p> <p><i>Long-term objective and vision for the strategy</i></p>			
<p>Mitigation Strategy</p> <p><i>Describe the program/proposed program</i></p>			
2-Year Objectives	5-Year Objectives		Long-Term Objectives

<p>Implementation Plan/ Actions</p> <p><i>This can provide a timeline, indicate partners, discuss implementation stages, etc. Use this to discuss how the strategy/program will be implemented over the long term.</i></p>
<p>Performance Measures</p>

This template will be built into a database where strategies can be entered, updated, and projects can be prioritized consistently and effectively. The goal is for strategies to remain in place through future plan updates, while implementation plan actions are changed.

Mitigation Plan Projects

Mitigation Plan Projects represent the specific work to be done and actions to be taken to mitigate a risk or hazard. Candidate projects will be developed and considered for and by each participating jurisdiction, with a process to engage the public in the prioritization of projects. Projects will be prioritized using the scoring method established by the Steering Committee to ensure alignment with the Plan Strategies and Goals and in keeping with the following values:

- Equity, Social Justice, and Vulnerability
- Collaborative
- Adaptation and Sustainability
- Multiple-Benefit
- Effectiveness
- Urgent
- Shovel-Ready

Prioritizing Hazard Mitigation Projects

King County developed a prioritization process based on criteria taken from national best practices¹⁴⁴ and priorities identified by the King County Executive. These criteria are used to prioritize projects within strategies. Strategies are also prioritized in this way to identify those areas of emphasis for KCEM and the mitigation steering committee, though this may not impact which strategies are implemented since many depend on exclusive funding sources. The below criteria will be used to establish priorities. These priorities will be applied to projects annually for submission to the FEMA BRIC program.

¹⁴⁴ Washington, District of Columbia Homeland Security and Emergency Management Agency. 2018. District Hazard Mitigation Plan, Discussion Draft.

King County uses the below matrix, scoring each factor from 0 (unsatisfactory) to 4 (outstanding) with the option of a score of -4 (actively harms the factor). Identifying projects that harm, and giving harmful factors more weight in the formula, is designed to encourage project proponents to modify their proposed design to better resolve any issues.

- -4 Project actively harms or is detrimental to this factor.
- 0 Unsatisfactory for this factor
- 1 Minimal level of standards for this factor
- 2 Satisfactory level of standards for this factor
- 3 High level of standards for this factor
- 4 Outstanding or beyond expectations for this factor.

Strategy:				
Factors for Consideration	Project 1	Project 2	Project 3	Project 4
Equity, Social Justice, and Vulnerability (project is designed to benefit, account for, and include vulnerable populations, especially those in the community most likely to suffer harm from a disaster and those likely to take longest to recover after a disaster)				
Collaborative (project is supported by multiple jurisdictions or agencies)				
Multiple-Benefit (project has benefits beyond hazard risk reduction, including environmental, social, or economic benefits)				
Adaptation and Sustainability (project helps people, property, and the environment become more resilient to the effects of climate change, regional growth, and development)				
Effectiveness (project is designed to attain the best-possible benefit-cost ratio)				

Urgent (project is urgently needed to reduce risk to lives and property)				
Shovel-Ready (project is largely ready to go, with few remaining roadblocks that could derail it)				
Total Scores				

Process Note: Once a jurisdiction has prioritized projects within that jurisdiction, those projects will be advanced to the regional plan. If ever there is competition between projects advanced from different jurisdictions, the RHMP Steering Committee, consisting of representatives from county departments and jurisdiction partners, will establish the order of priorities based on the values identified above. The Steering Committee will also organize priority projects with corresponding strategies. It should be noted that while prioritized projects will be included in the plan, they may not all receive funding. The Steering Committee may also seek to promote a diversity of projects so that all plan goals receive some benefits. In the case of a tie between projects during scoring, the higher prioritization may go to the less-represented mitigation strategy.

In addition to regular ranking of mitigation projects, the steering committee ranked mitigation strategies using the above tool to identify the highest priority strategy within each department and then the highest priority strategies for the county overall. These priorities are reported in the mitigation strategy section of this plan.

Crosswalk with the Strategic Climate Action Plan

Several strategies appear in some form in both the SCAP and this plan. This was done to ensure multiple avenues of implementation and monitoring and to help relevant actions gain a higher profile with other departments. Below are strategies that appear in some form in both plans.

Regional Hazard Mitigation Plan Strategy	Strategic Climate Action Plan Action
Wildfire Preparedness and Risk Reduction	Wildfire Preparedness and Risk Reduction
Accelerate Floodplain Acquisitions	Accelerate Floodplain Acquisitions
Public Information Flood Activities	Increase Technical Assistance to Property Owners for Flood Risk Reduction
Flood Risk Mapping	Flood Risk Mapping

Reduce Flood Impacts to King County Roads	Maintain Quick Response Budget for Emergency Repairs
Stormwater and Surface Water Risk Reduction	Stormwater and Surface Water Risk Reduction
Climate Integration Training	Engage Partners on Climate Preparedness Opportunities
Sea-Level Rise Resilience in Wastewater Facilities	Sea-Level Rise Resilience in Wastewater Facilities

Ongoing Plan Maintenance and Strategy Updates

King County leads the mitigation plan monitoring and update process and schedules annual plan check-ins and bi-annual mitigation strategy updates. Updates on mitigation projects are solicited by the county for inclusion in the countywide annual report. As part of participating in the 2020 update to the Regional Hazard Mitigation Plan, every jurisdiction agrees to convene their internal planning team at least annually. Partners will convene at least biannually to update hazard mitigation strategies. For the 2020 plan, progress updates will be due in 2022 and 2024, in advance of plan expiration in 2025.

In addition to the biannual strategy updates and annual planning check-ins, mitigation strategies that address flooding will be reviewed, revised, and updated annually. Special focus is warranted for flood hazards since flooding has historically been the most damaging hazard and the majority of Federal Disaster Declarations including the county are due to flooding.

Given the emphasis on plan integration described in the introduction, plan check-ins for all planning partners will include updates on integrating comprehensive, capital improvement, and other local and regional plans with hazard mitigation plans and data. This effort is already beginning with the integration of hazard risk and vulnerability information into the 2020 update of the countywide planning processes.

As part of leading a countywide planning effort, King County Emergency Management will send to planning partner any federal notices of funding opportunity for the Hazard Mitigation Assistance Grant Program. Proposals from partners will be assessed according the prioritization process identified in this plan and the county will, where possible, support those partners submitting grant proposals. This will be a key strategy to implement the plan.

The next plan update is expected to be due in April 2025. All jurisdictions will submit letters of intent by 2023, at least two years prior to plan expiration. The county will lead the next regional planning effort, beginning at least 18 months before the expiration of the 2020 plan.

To update and maintain the mitigation strategies, KC EM has worked with the King County Risk Management Services department to develop a reporting tool that will allow for easier updates on 2 and 5-year objective progress. These updates will be collected electronically and feed into a program that can track progress over time for each mitigation strategy. The strategy progress can then be reported out.

Alternatively, progress made on strategies can be organized according to mitigation plan goals. This will be done to show how projects undertaken by agencies and jurisdictions are supporting the 14 Determinants of Equity. Data parsed both in terms of the mitigation plan goals and by strategy will be reported to the County Executive and Council biannually in the annual report of the department.

In addition to the updates for mitigation strategies, the expected publication of data from several programs may trigger an update.

- Publication of the Department of Homeland Security Regional Resiliency Assessment Program report
- Publication of the countywide landslide susceptibility map from Washington Department of Natural Resources
- Publication of the Wildland Urban Interface wildfire risk map from Washington Department of Natural Resources
- Publication of tsunami inundation data from Washington Department of Natural Resources

Assessment

Equity, social justice, and vulnerability	Designed to benefit, account for, and include vulnerable populations, especially those in the community most likely to suffer harm from a disaster and those likely to take longest to recover after a disaster
Collaboration	Supported by multiple jurisdictions, agencies, or the impacted community
Multiple-benefit	Benefits beyond hazard risk reduction, including environmental, social, or economic benefits
Adaptability and sustainability	Helps people, property, and the environment become more resilient to the effects of climate change, regional growth, and development
Effectiveness	Designed to attain the best-possible benefit-cost ratio
Urgency	Urgently needed to reduce risk to lives and property
Shovel-readiness	Largely ready to go, with few remaining roadblocks that could derail it

Scoring		Score
Determination	Meaning	
Outstanding	Outstanding or beyond expectations for this factor	4
High	High level of standards for this factor	3
Satisfactory	Satisfactory level of standards for this factor	2
Minimal	Minimal level of standards for this factor	1
Unsatisfactory	Unsatisfactory for this factor	0
Detrimental	Project actively harms or is detrimental to this factor	-4

Total score:

Plan Approval and Adoption

The King County Regional Hazard Mitigation Plan is submitted first to Washington State Emergency Management for review and then to FEMA for final review and preliminary approval. Each jurisdiction, along with the base plan, must meet all FEMA requirements outlined in the FEMA Local Hazard Mitigation Plan Review Guide. If requirements are found to not be met, the jurisdiction involved must revise the plan and resubmit. Once preliminary approval is secured, FEMA will send a notice of Approval – Pending Adoption.

The RHMP is adopted by each participating jurisdiction, primarily through a resolution passed by the council or commission responsible. The King County Council adopted this plan on **DATE**, following notice of approval, pending adoption from FEMA and Washington State Emergency Management. This plan is effective 5/1/2020. It will expire on 4/30/2025.

Mitigation Strategy Status Updates from the 2015 Plan

The format for hazard mitigation strategies has been completely changed in the 2020 plan update. All actions previously identified have been removed and/or incorporated into new mitigation strategies. The updated strategy format will better support tracking and implementation of mitigation strategies and their constituent actions. Strategies that are preparedness focused have been removed, as well as those that are ongoing in nature and do not have specific targets or responsible entities.

The following tables are taken from the 2018 annual progress report for the 2015 King County Regional Hazard Mitigation Plan. This list only includes strategies submitted by King County departments and countywide strategies. Individual jurisdiction action progress reports are included in each annex. The new statuses for strategies include:

- Removed – Strategy is not carried forward into the new plan
- Complete – Strategy is complete and not carried forward into the new plan
- Updated – Strategy is updated and carried forward into the new mitigation plan.

CURRENT PROGRESS ON 2015 ACTION PLAN INITIATIVES				
Progress (Yes/No)	Update Timeline	Status	Comment (Describe progress or changed priority)	2018 Status
CW-1—Continue to participate in and support the “Resilient King County” initiative.				
Yes	Long-Term	Removed	King County is continuing work towards developing a Regional Recovery Framework. Recent efforts to vet content with King County’s Department Directors and Executive Office have been made to start to formulate a governance structure.	Ongoing
CW-2—Continue to maintain a website that will house the regional hazard mitigation plan, its progress reports and all components of the plan’s maintenance strategy to provide the planning partners and public ongoing access to the plan and its implementation.				
Yes	Long Term	Removed	King County’s Regional Hazard Mitigation plan and all updated documents will continue to be posted to the website.	Ongoing
CW-3—Continue to leverage/support/enhance ongoing, regional public education and awareness programs (such as “Take Winter by Storm” and “Make it Through”) as a method to educate the public on risk, risk reduction and community resilience.				
Yes	Long Term	Removed	We continue to enhance public education campaigns and have now added climate resilience as part of our educational presentations.	Ongoing
CW-4—Continue to support the use, development and enhancement of a regional alert and notification system.				
Yes	Short Term	Removed	King County deployed a new Regional Alert and Notification System. Many King County departments and cities have signed on.	Complete
CW-5—Strive to capture time-sensitive, perishable data—such as high-water marks, extent and location of hazard, and loss information—following hazard events to support future updates to the risk assessment.				
Yes	Long Term	Removed	KC DNRP has updated landslide hazard maps (see DNRP – WLR 3 & DNRP – WLR 4)	Ongoing
CW-6—Encourage signatories for the regional coordination framework for disasters and planned events.				
Yes	Long Term	Removed	New signatories were added in 2016.	Ongoing
CW-7—Continue ongoing communication and coordination in the implementation of the King County Regional Hazard Mitigation Plan and the 2013 King County Flood Hazard Management Plan.				

Yes	Long Term	Removed	Ongoing communication and coordination was completed through the linkage process of Lake Forest Park and Kenmore, grants coordination for various applications, and ongoing communication for progress reporting.	Ongoing
DNRP-SWD-1—Seismic Design Standards. Continue to design and build facilities to meet or exceed seismic standards, including redundant essential equipment. Apply current seismic standards to all renovation or replacement of existing facilities and/or equipment.				
Yes	Short-term	Removed	Design standards exist and we will continue to design and build facilities to meet or exceed seismic standards, including redundant essential equipment. Apply current seismic standards to all renovation or replacement of existing facilities and/or equipment.	Complete
DNRP-SWD-2—Vulnerability Assessment of Cedar Hills Landfills Structures. Conduct a vulnerability assessment of buildings at the Cedar Hills Landfill to ascertain readiness.				
Yes	Long-term	Removed	Structural integrity to be addressed through seismic design standards; to be removed as part of standard work. Additional work completed to reduce vulnerability at the landfill includes: completed Emergency Action Plan, Dam Break Analysis, Potential Inundation Area Mapping for the Contaminated Stormwater (CSW) Pond dam and the SW Stormwater Pond dam (both state registered dams at Cedar Hills Regional Landfill). The SCADA system is being updated to monitor and automate operation adjustments for pumping at the CSW facility. The area 8 stockpile slope was regraded Q3 2018 in response to a Q4 2017 slope failure (a.k.a., landslide or land movement) and to mitigate future failure prior to the rainy season. Coordination between SWD and OEM enhanced, including use of mass notification system for incident response, support and community notification.	Complete
DNRP-WLR-1—Flood Insurance Program. Continue to maintain compliance and good standing under the National Flood Insurance Program. This will be accomplished through the implementation of floodplain management programs, at a minimum, will meet the minimum requirements of the NFIP, which include the following: <ul style="list-style-type: none"> • Enforcing the adopted flood damage prevention ordinance. • Participating in floodplain identification and mapping updates. • Providing public assistance and information on floodplain requirements and impacts. 				
Yes	Long-term	Removed	Met minimum requirements of the NFIP by providing public assistance and information on	Ongoing

<p>floodplain requirements, enforcing the adopted flood damage reduction ordinance and participating in floodplain mapping updates. Maintain a CRS Class 2 rating, which verifies that King County meets and exceeds FEMA NFIP minimum requirements.</p>			
<p>DNRP-WLR-2—Landslide Hazard Coordination. Form an interdepartmental landslide hazard committee that includes DNRP, DPER, DOT, and OEM. The committee will address broad policy issues, including capital projects, communication, code changes, etc.</p>			
No	Long-term	Updated	Ongoing
<p>Form an interdepartmental landslide hazard committee that includes DNRP, DPER, DOT and OEM. The committee will address broad policy issues, including capital projects, communication, code changes, etc.</p>			
<p>DNRP-WLR-3—Proposed Hazard Mapping Phase I. Update the current landslide hazard map with information that has been collected to date.</p>			
Yes	Short-term	Removed	Complete
<p>Low priority now that map is complete.</p> <p>Status: Complete for areas within major river corridors and Vashon-Maury Island.</p> <p>Comment: A Phase 1 map was completed in October 2014. Phase I mapping along river corridors was completed by Water Land Resources Division as the service provider to the King County Flood Control District and Phase 1 mapping for Vashon-Maury Island was provided by KC DPER. Areas outside of major river corridors were not included in this map.</p>			
<p>DNRP-WLR-4—Proposed Hazard Mapping Phase II. Create a geo-database with detailed information on landslide types, run out, landslide dams, etc. Database will be searchable and updatable as new information is acquired.</p>			
Yes	Short-term	Removed	Complete
<p>Phase II mapping along river corridors was completed by Water Land Resources Division as the service provider to the King County Flood Control District (KCFCD). Areas outside of the major river corridors (including Vashon-Maury Island) are not included in the geo-database. This mapping along river corridors includes five general landslide types, each of these were mapped separately to illustrate potential hazard areas. This mapping has been completed along with a supporting technical report, database and a user-</p>			

friendly web tool. It is anticipated that this mapping will be publicly available in August 2016. This mapping will be available in a GIS format. No suitable methodology was identified to predict future landslide runout beyond area of current landslide debris deposition. Therefore, neither such landslide runout, nor the resulting formation of landslide dams was mapped. At this time funding has not been secured for ongoing database management or further updates to the river corridor landslide mapping information.

DPER completed a separate landslide hazard mapping project covering unincorporated King County largely outside of the forest production zone. This was an expansion of the Phase 1 mapping and was needed to identify areas for further geotechnical investigation during building and land use permit application reviews. This mapping does not distinguish between different landslide processes. The DPER mapping is complete to current specifications and is presently undergoing internal review. DPER’s map of potential landslide hazards will be available in a GIS format. It will be updated at appropriate intervals as needed following receipt of new data.

Landslide hazards in incorporated areas outside of major river corridors are not included in the Phase I or Phase II products. At this time no work is funded or planned to conduct landslide hazard mapping for incorporated areas that are outside of the major river corridors.

DNRP-WLR-5—Flood Protection Facility Maintenance. Maintain and repair damaged structural elements for King County’s extensive inventory of flood protection facilities.

Yes	Long-term	Updated	<p>County staff completed 421 inspections on 332 levees and revetments during the reporting period. Of these, 143 were routine inspections and 279 were post-flood inspections following the 2015-2016 flood season.</p> <p>Resulting in identification of damages to flood protection facilities and repairs or emergency management plan.</p>	Ongoing
-----	-----------	---------	---	---------

Maintenance of more than 70 sites included irrigation, signage, hazard tree mitigation, debris removal, planting, mulching, mowing and installation of a device to prevent beavers from blocking two large culverts which could result in flooding homes and roads in the North Bend area.

Resulting in reduced potential for flooding.

DNRP-WLR-6—River Corridor Restoration. Remove, slope back, or set back County-owned flood protection facilities and other structural features to allow for improved riparian habitat, greater channel diversity and migration, reclaimed flood storage and enhanced open space or recreational/ interpretive uses.

Yes	Long-term	Updated	Completed projects allowing for river corridor restoration include the Sinnema Quaale Revetment project on the Snoqualmie River. This revetment repair was completed in the summer of 2016 and has significantly decreased the risks to the Snoqualmie Valley Trail, regionally significant fiber optic lines and SR203. The Countyline to A Street levee setback on the White River is currently under construction. Additional setback projects are planned for construction in 2017.	Ongoing
-----	-----------	---------	---	---------

DNRP-WLR-7—Flood Hazard Mitigation. Acquire repetitively damaged homes, purchase underdeveloped land to prevent future development in flood prone areas, and, where cost-effective and feasible, elevate residential homes that sustain recurring deep, low-velocity flooding.

Yes	Long-term	Updated	Non-structural mitigation efforts are ongoing in flood prone areas. Eleven at-risk homes were elevated in the Snoqualmie basin during the reporting period; another 13 home elevations are underway. Elevating homes eliminates flood damage to living space, resulting in a more resilient community. Acquisition of the last at-risk parcel in the San Souci neighborhood along the Tolt River completed 20 years of effort to acquire 18 parcels from willing landowners. These actions have completely eliminated flood risks to the entire neighborhood and eliminated emergency monitoring and response to the neighborhood.	Ongoing
-----	-----------	---------	--	---------

DNRP-WLR-8—Critical Facility Retrofit. Retrofit the Black River Pump Station by updating the fuel pumps to meet seismic requirements. Currently, the fuel supply tanks for King County flood facilities cannot withstand a moderate to major quake.

Yes	Long-term	Updated	<p>Recent improvements include:</p> <ul style="list-style-type: none"> • Replacing the single-walled fuel system with double-walled tanks and lines to handle all diesel fuel in accordance with current code requirements • Replacing the pumphouse roof • Installing safety rails on the roof <p>Sediment had accumulated in the pump inlet bays, hindering operation of pump screen systems. Accumulated sediment was emptied from the bays and inlet apron in 2016 to allow continued operation of the screens and pumps. This improves the certainty of flood protection the station provides too much of Renton and parts of Tukwila and Kent.</p> <p>Staff have completed update of Emergency Action Plans for 10 state registered dams in compliance with Washington Dam Safety Office. Improvements to these plans include automated notification applying King County Alert and King County Inform emergency notification platforms; upgrades to dam break analysis and Potential Inundation Area mapping; and enhanced coordination between operations and emergency planning.</p>	Ongoing
-----	-----------	---------	--	---------

DNRP-WLR-9—Flood Hazard Reduction Programs. Conduct activities that are vital to the mitigation of the natural hazards impacting King County, such as hazard identification, warning, information dissemination and public outreach.

Yes	Long-term	Updated	<p>Expansion of the King County Flood Warning System to include the South Fork Skykomish River. A four-phase warning system is being developed in time for the 2016–2017 flood season, following review and approval by the District. This system is expected to provide flood warnings to people who live, work or travel through the town of Skykomish and the surrounding area.</p>	Ongoing
-----	-----------	---------	--	---------

In October, the annual flood warning brochure was mailed to 19,222 addresses in the King County river floodplain.

Significant outreach efforts during the reporting period include preparation for flood season, outreach about multiple construction projects, as well as outreach about floodplain planning, technical studies and maps, and other public engagement efforts.

DNRP-WLR-10—Critical Facility Upgrade. Continue to update flood warning telemetry and gauging, computers, software applications, emergency power, and other response facilities.

Yes	Long-term	Updated	Updates to the King County Flood App for iOS, Android, and Windows phones were completed for release by October 2015. All King County websites were migrated to a new "mobile responsive" template which adapts to a wide range of screen sizes, from small smartphone displays to big screen desktop displays. In addition, improvements were made to the back-end systems that manage the flood data used on the websites, apps and automated phone systems.	Ongoing
-----	-----------	---------	--	---------

DNRP-WTD-1— Seismic Design Standards. Continue to design and build facilities to meet or exceed seismic standards, including essential equipment. Apply current seismic standards to all renovation or replacement of existing facilities and/or equipment.

Yes	Long-term	Updated	This is an ongoing process- we apply current seismic standards to all renovation and/or replacement of existing facilities or equipment.	Ongoing
-----	-----------	---------	--	---------

<p>DNRP-WTD-2—Vulnerability Assessments. Conduct vulnerability assessments of WTD treatment plant facilities and conveyance system structures for flooding, earthquakes, large-scale power outages, and hazardous material spills into the conveyance system (accidental or deliberate, i.e. terrorist action). The assessments should include the following:</p> <ul style="list-style-type: none"> • Review existing earthquake vulnerability assessments and identify facilities and structures that need further assessments. • Review existing emergency power generation capacities at treatment plants, offsite facilities and interceptors (pipelines) to identify vulnerabilities and response & restoration protocol enhancements. • Review existing spill response procedures and protocols for hazardous materials spills (both accidental and intentional releases) that impact flows into the WTD system. Update and coordinate emergency procedures with key fire departments and the Office of Emergency Management. 				
Yes	Short-term	Removed	Request for Proposal issued on 7/12/2016	Ongoing
<p>DNRP-WTD-3—Modification of Existing Facilities. Use the data gathered by the earthquake vulnerability assessments to identify capital projects that increase the resistance of the division’s structures and conveyances to damage or that allow a rapid recovery from damage. Projects may include seismic bracing of equipment and piping, removal of z-beam structures, access road reinforcement for the West Point Treatment Plant, or seismic upgrade of underwater interceptors.</p>				
No	Long-term	Updated	This task is driven by the results of the above vulnerability assessments which have yet to be conducted. See item 2 above	Ongoing
<p>DNRP-WTD-4—Sea Level Rise Vulnerability Assessments. Implement cost-effective measures to address, through capital improvement and asset management programs, the vulnerability of 20 facilities at risk of saltwater inflow. The facilities were identified by a WTD analysis of the wastewater system to identify facilities at risk for saltwater inflow from future sea level rise, existing and predicted high tides, and storm surges.</p>				
Yes	Long-term	Updated		Ongoing
<p>DNRP-WTD-5—Control System/ Cyber Security Vulnerability Assessment and Procedure Audit. Implement the Ovation project—a multi-year, multi-million-dollar upgrade of the Wastewater Treatment Division’s legacy control systems. WTD is in the process of updating its control systems. Vulnerability assessments are designed into the Ovation project. When the system is operational, a security audit would be conducted to ensure that policies and procedures are in place to protect the system.</p>				
No	Long-term	Updated	This assessment will be conducted when the system is operational	Ongoing

DNRP-WTD-6—Emergency Communications Vulnerability Assessment. Perform an assessment to determine the number of radios necessary to support operational readiness in the event of a widespread telecommunications failure. Currently all key operational facilities and offsite operation and maintenance vehicles are equipped with 800 MHz radios, constituting WTD’s core emergency communications method. The analog equipment currently deployed is first generation and is being sunsetted as the system is converted to a digital format. All the division’s analog radios will need to be replaced in the next 3 to 5 years. Perform a further assessment of the reliability and deployment of other communications devices: cell phones, smart phones, iPads, text messaging, and the emergency notification system (MyState/AlertSense).

No Long-term Updated Ongoing

DNRP-WTD-7—GIS Emergency Response Mapping and Real-Time Flow Data. Update the WTD/DNRP Emergency Response map with the current priority roads, bridges, earthquake liquefaction, inundation and landslide zones and gas/petroleum pipelines, under-laid with WTD facilities and conveyance lines and emergency outfalls to facilitate emergency response and continuity of operations. Make this information available through a password-protected website for select users. Explore connecting the map to real-time flow data.

Yes Short-term Updated A GIS emergency mapping site is now operational on the WTD intranet that shows facilities and conveyance system. Working on moving it to an internet site so that it can be accessed 24/7 by off duty personnel. Ongoing

DNRP-WTD-8—Emergency Event Management System. Determine the best method for WTD to manage and share emergency response and continuity of operations activities across the division’s five treatment plants and the division headquarters in the King Street Center. Determine if the Regional Information System can fulfill this function and, if not, what alternative systems are available (WebEOC, CodeRed, etc.).

No Long-term Updated Tested the KC OEM SharePoint site during the CSZ exercise. Assessing the need for a separate WTD system Ongoing

DNRP-WTD-9—Emergency Response/ Damage Assessment/FEMA Cost Tracking. To ensure maximum FEMA reimbursement for disaster repair/mitigation, implement a system to capture and track emergency response activities and expenses from the beginning of incidents through damage assessment and restoration. Use this tracking system for all out-of-the-ordinary emergency events. Include labor, equipment, mileage, supplies, expendables, and outside contracting associated with response and repair.

No Short-term Updated Ongoing

<p>DOT-1—Updated response plans to address terrorism preparedness, including the following:</p> <ul style="list-style-type: none"> • Improve existing systems to address new technologies that are available for early weapons-of-mass-destruction detection. • Leverage existing resources and partnerships (Securitas, King County Sheriff’s Office, Seattle Police Department, Seattle Fire Department) to train and exercise together for continuity during real-world events. 				
Yes	Long-term	Removed		Ongoing
<p>DOT-2—Update messaging, response plans, and procedures to address winter weather, including the following:</p> <ul style="list-style-type: none"> • Outreach to vulnerable and at-risk populations for transportation for individuals who need to get to life-saving medical appointments (dialysis, chemotherapy). • Coordination with healthcare and transportation partners to ensure access to medical care. 				
Yes	Long-term	Removed		Complete
<p>DOT-3—Update and improve plans to address continuity of transportation services, provision of medical care, and infrastructure resiliency, including the following:</p> <ul style="list-style-type: none"> • Plans and procedures for workforce continuity and service provision. • Coordination with local partners on evacuation and responder routes, lifeline routes, and transportation routes. • Technical systems and IT infrastructure (e.g. computer programs, SCADA systems). 				
Yes	Long-term	Removed		Ongoing
<p>DOT-4—Install security cameras on public buses to deter crime associated with civil unrest and terrorist acts.</p>				
Yes	Short-term	Removed	Metro will have at or near 100% of their fleet equipped with cameras by the end of 2018.	Complete
<p>DPER-1—Continue inspection of existing and new construction.</p>				
Yes	Long-term	Updated	Inspection to ensure code compliance of both new and existing building and sites are conducted for all permit work.	Ongoing
<p>DPER-2—Provide plan reviews for noted construction.</p>				
Yes	Long-term	Updated	Inspection to ensure code compliance of both new and existing building and sites are conducted for all permit work.	Ongoing
<p>DPER-3—Work with schools and fire service public educators to deliver public safety messages.</p>				
Yes	Long-term	Updated	Operational (annual) fire safety inspection of schools was initiated this past year after several years of inaction.	Ongoing

FMD-1—Replace Alder Tower, Alder Wing and Youth Detention Facility with a new modern juvenile justice center meeting all seismic standards. Planning is underway for the new, voter-approved \$210 million Children and Family Justice Center. Completion of the new facility is expected in 2019.				
Yes	Long-term	Removed	New facility is now expected in 2019 rather than 2018. Complete	
FMD-2—Mitigate structural damage at King County Facilities. This initiative also involves training to determine structural damage during and after hazard events.				
Yes	Long-term	Updated	The Facilities Management Division has undertaken replacement of some fire protection systems which as a result, will reduce fire damage during hazard events.	Ongoing
FMD-3—Mitigate non-structural facility damage at King County facilities. This initiative also involves training to determine non-structural damage during and after hazard events.				
Was an action taken?	Short-term	Updated	The Facilities Management Division recently received a report about serious deficiencies at the King County Courthouse. We will be updating the response to this issue outside of the cycle of this report.	Ongoing
KCIT-1—Enterprise Server Optimization Project. Implement a standard virtual environment at the King County Data Center to set the foundation for the King County Public Cloud Services to expand infrastructure service offerings.				
Yes	Short-term	Removed		Complete
KCIT-2—King County TV High-Definition Upgrade. Replace obsolete station infrastructure with industry standard high-definition and digital equipment, allowing for delivery of the highest level of service to the citizens of King County.				
Yes	Short-term	Removed		Complete
KCIT-3—Countywide Telephone System Replacement. Replace obsolete telephony infrastructure and telephone systems with a modern and feature-rich communications solution.				
Yes	Short-term	Removed	Complete by end of 2010.	Ongoing
KCIT-4—Business Empowerment and User Mobility. Improve the King County wide area network to meet business requirements and provide a solid foundation for growth within a resilient and stable network.				
Yes	Short-term	Removed		Complete
KCIT-5—Administration Building Rewire. Upgrade network cabling in King County Administration Building to meet infrastructure standards, provide a more robust network connectivity to the services provided at the facility, and take advantage of technological advancements.				

Yes	Short-term	Removed		Complete
<p>PH-1— Inform the public on risk-reduction techniques for a communicable disease event. “Stop Germs, Stay Healthy” public education campaign increases awareness of healthy behaviors, including hand washing and “cover your cough”.</p>				
Yes	Short-term	Removed	<p>Public Health promotes infection control prevention every day as well as during outbreaks and flu season. Current focus is on fact sheets with pictograms for outbreaks such as hepatitis A and measles as well as guidelines for encampments and homeless service providers. Also actively using social media and blogs to promote messages.</p>	Ongoing
<p>PH-2—Update response plans to address emerging infectious disease outbreaks, including the following:</p> <ul style="list-style-type: none"> • The allocation of resources (antivirals, vaccine, personal protective equipment) from the strategic national stockpile. • Improvements to surveillance systems to address new technologies • Leverage existing private and public partnerships (CBO, healthcare, pharmacies) to serve as medication centers and increasing access to medications for hard-to-reach communities. • Risk communications and messaging, including use of social media. 				
Yes	Short-term	Removed	<p>A number of response plans were updated including medical countermeasures, equity response plan, risk communication plan, and workforce mobilization plan. Tested new systems for surveillance and plans during hepatitis A and measles outbreaks, including easy to understand visual display of cases and vaccination efforts.</p>	Completed
<p>PH-3—Update response plans and procedures to address winter weather, extreme heat, and other climate-related events including the following:</p> <ul style="list-style-type: none"> • Outreach to vulnerable and at-risk populations for carbon monoxide poisoning prevention. • Transportation for individuals who need to get to life-saving medical appointments (dialysis, chemotherapy). • Coordination with healthcare providers and NW Healthcare Response Network to ensure access to medical care. • Coordination with shelter providers for first aid teams and access for people to re-charge medical equipment. 				
Yes	Short-term	Removed	<p>Consolidated weather events into one extreme weather plan, updated winter weather transportation plan and added wildfire smoke protocols. Tested winter weather plans, including medical appointment protocol during 2019 snow events.</p>	Completed

<p>OEM-1—Inform the public on personal and community preparedness actions they can take to lessen their need for immediate response following a disaster. “Take Winter by Storm” and “What to Do to Make It Through” are two outreach campaigns designed to get the message across to the whole community. These campaigns include trainings, presentations, and tools to facilitate increased community preparedness.</p>				
Yes	Long-term	Removed	Strategy is ongoing by nature and preparedness-focused. Removed.	Ongoing
<p>OEM-2—Create a program to facilitate training for small businesses to increase their resilience to all hazards. Training content would include employee preparedness, business continuity, and recovery planning. Methods of training would include workshops, tools, and one-on-one help.</p>				
Yes	Short-term	Removed	Initial steps to create Business EOC and conduct pilot test were taken in June during Cascadia Rising. As a result of early coordination with Seattle and King County, 7 companies representing more than 150,000 employees participated and were able to make faster operational decisions that could protect company resources and staff in a real event. Examples include early evacuation notifications, avoiding traffic disruptions, and setting up alternate modes of communication. Continuing to work with City of Seattle, WAEMD, and FEMA on building a Regional BEOC model.	Ongoing
<p>OEM-3—Manage and facilitate the Resilient King County initiative, a countywide planning process for crafting a comprehensive long-term recovery strategy following an earthquake or major catastrophe. Develop the Resilient King County final report and the long-term recovery plan.</p>				
Yes	Short-term	Updated	Conducted facilitated discussion with Executive Leadership Team as part of Cascadia Rising Exercise. Will vet plan content over summer and fall 2016.	Ongoing
<p>OEM-4—Take advantage of technological and procedural improvements in regional alert and warning systems to provide the most effective, efficient, and cost-effective messaging to residents, businesses, and government, especially during emergencies.</p>				
Yes	Short-term	Removed	Completed launch for new Alert & Notification system in May 2016. As a result, King County not only has the ability to provide alerts to all 2.1 million residents but also, 16 new cities have signed up and have direct ability to message their residents for local events. This allows a reduction in hazard impact as people will have more time to prepare themselves and their property by receiving alerts during an emergency.	Complete

OEM-5—Continue to update and improve the Comprehensive Emergency Management Plan (CEMP) and the Continuity of Operations Plan.				
Yes	Short-term	Removed	The CEMP has been updated in 2018/2019.	Complete
OEM-6—Integrate the hazard mitigation plan into other plans, ordinances or programs to dictate land uses within the jurisdiction.				
Yes	Short-term	Updated	Regional Hazard Mitigation Plan has been incorporated into the King County Strategic Climate Action Plan. Will also serve as a reference for recovery.	Ongoing
OEM-7—Continue to support the countywide initiatives in this plan.				
Yes	Short-term	Removed		Ongoing
OEM-8—Coordinate and actively participate in the plan maintenance strategy of this plan.				
Yes	Short-term	Updated	County is implementing additional support for grant administration and outreach to promote mitigation.	Ongoing
OEM-9—Continue to encourage community participation in incentive-based programs such as CRS, FireWise, and StormReady.				
Yes	Short-term	Removed		Ongoing

2020 King County Hazard Mitigation Strategies

King County identified the following strategies through meetings among county departments. These strategies were scored by each department using the prioritization criteria outlined earlier in this section. The highest priority from each department is highlighted below. From the list of top priorities for each department the highest countywide priorities were selected. These are:

- Integrate equity and social justice into planning, outreach, mitigation, response, and recovery
- Integrate hazards and vulnerability information into comprehensive planning
- Establish a resilient seismic transportation lifeline

STRATEGY	PRIORITY (SCORE)	LEAD AGENCY	KEY OUTCOMES
Reduce Flood Impacts to Unincorporated King County Road System	18	DLS - Roads	Lower road damage from repeated flooding, especially in the Snoqualmie Valley.

Increase Seismic Resilience of Bridges in Unincorporated King County	16	DLS - Roads	Seismic retrofits to King County bridges, especially those supporting the transportation seismic lifeline.
Stormwater Outfall Erosion Hazard Inventory	18	DNRP	Hazard inventory of stormwater outfalls and mapping of those areas in GIS.
Resilience in Design and Build of Critical Water Treatment and Conveyance Facilities	23	DNRP	Improvements, retrofits, and new construction of water treatment facilities that meets seismic resilience needs.
Landslide, Erosion, and Sedimentation Event Mapping	19	DNRP	Mapping of hazard areas and establishment of GIS layers.
Sea Level Rise Resilience in Wastewater Facilities	18	DNRP	Measures to move or reduce risk to wastewater facilities in areas projected to be impacted by sea-level rise.
Stormwater and Surface Water Risk Reduction	18	DNRP	Retrofits to endangered stormwater facilities. Focus on those areas at greatest risk of failure.
Control System Security and Performance	16	DNRP	Protection of wastewater system from cyber-attacks.
GIS Emergency Response Mapping and Real-Time Flow Data	15	DNRP	Real time GIS updates to critical facility information.
Emergency Communications Enhancements	12	DNRP	Improvements to, and resilience of, emergency communications tools.
Emergency Event Management System	12	DNRP	Improvements to WebEOC, including training on it.
Flood Warning Program	18	DNRP - Flood	Flood warning, including public information about warning system.
Post-Flood Recovery Efforts	19	DNRP - Flood	Resilient rebuilding following a flood disaster.

Home Elevations	18	DNRP - Flood	Elevations of homes out of base flood elevation when acquisition is not feasible.
Home Acquisitions and Relocations	19	DNRP - Flood	Prioritize acquisition as a tool of risk reduction and take advantage of post-disaster acquisition opportunities.
Protect and Restore Natural Floodplain Functions	17	DNRP - Flood	Take advantage of natural systems to reduce flood risk and restore flood risk areas to their natural state.
Flood Risk Mapping	16	DNRP - Flood	Improve and update flood risk maps, accounting for climate change.
Public Information Flood Activities	16	DNRP - Flood	Conduct outreach around flood hazard information.
Flood Insurance Promotion	16	DNRP - Flood	Promote flood insurance to all homeowners, renters, and business owners.
Enforce Higher Floodplain Management Regulations	13	DNRP - Flood	Enforce King County's higher standards to prevent the creation of new flood risk.
Manage Flood Protection Facilities	4	DNRP - Flood	Manage flood protection facilities to ensure they will not fail during a major flood or earthquake.
Seismic Evaluation of King County Courthouse and Maleng Regional Justice Center	16	FMD	Evaluate the vulnerability of major King County justice facilities and develop a strategy to address deficiencies.
Integrate ESJ into Mitigation, Response, and Recovery Activities	25	KCEM	Fully account for equity and social justice in all planning and activities to help ensure that disasters do not increase inequity.
Seismic Lifeline Route Resilience	23	KCEM	Establish transportation seismic lifelines and begin retrofitting vulnerable segments to a standard that will enable effective response

			and recovery following an earthquake.
Integrate Hazard Mitigation and Comprehensive Planning	21	KCEM	Integrate hazards and vulnerability information into comprehensive planning policies, mapping, and related activities to prevent the creation of new risk through development in high hazard areas.
Engage Community Organizations in Emergency Management	20	KCEM	Leverage existing community capabilities and engage with communities to promote emergency preparedness and catalogue potential needs.
Climate Integration Training	18	KCEM	Train local jurisdictions on how to integrate climate change information into planning, projects, and emergency management.
Disaster Skills Risk Reduction Training	18	KCEM	Train communities on what to do in a disaster and how to protect themselves and their families.
Dam Failure Risk and Impact Reduction	16	KCEM	Identify and remove or rehabilitate high hazard dams and conduct outreach on dam safety for good condition dams that will not be removed.
Wildfire Preparedness and Risk Reduction	15	KCEM	Convene partners engaged in wildfire planning activities to coordinate community outreach and reactions to new mapping and potential building codes.
Hazard Mitigation Assistance Grant Support	15	KCEM	Support local jurisdictions who have little experience in developing applications for FEMA HMA.
Public Assistance Grant Support	15	KCEM	Support local jurisdictions and county agencies with PA following a disaster declaration and expand the use of PA Mitigation funds.
Language Accessible Video Emergency Messaging	26	PHSKC	Develop video and other emergency messaging that is accessible to non-English speakers

			and those who are blind or hearing impaired.
King County Facilities Indoor Air Quality Monitoring Network	16	PHSKC	Monitor and mitigate air quality in King County facilities.
Medical Gas Seismic Detection & Emergency Shut Off	10	PHSKC	Install automatic gas detection and shutoff systems for hospitals and medical centers.

Reduce Flood Impacts to the Unincorporated King County Road System

Lead Jennifer Knauer, King County Department of Local Services, Road Services Division	Partners King County Flood Control District Cities	Hazards Mitigated / Goals Addressed Flood Goal 4, 6	Funding Sources and Estimated Costs \$500,000 (Snoqualmie Valley study) Additional design, construction costs TBD
Vision Reduce the impacts of major river flooding to the unincorporated King County Road system within the Snoqualmie Valley and other major river valleys			
Description The Snoqualmie Valley is located approximately 8-10 miles east of Seattle, Washington and chronic localized and larger-scale flooding regularly impacts and closes roads within the floodplain. During major flood events, King County has identified that countywide, eleven roads are frequently closed, of which ten are located in the Snoqualmie River Basin. During major flood events, cross-Snoqualmie Valley routes are not passable and approximately 15,000+ residents are cut off from emergency services and accessing other critical destinations during a flood event. When cross-valley road closures occur, they impact over 25,000 drivers per day. There is a need for a permanent flood tolerant cross-valley route, in part due to growth in eastern King County cities and increasing traffic volumes on unincorporated King County roads. In addition to selecting, designing and constructing one cross-valley flood tolerant route, there is a vital need for improved resiliency across other unincorporated King County roads in flood prone portions of the Snoqualmie Valley, as well as other unincorporated King County floodplain locations. A joint study is proposed to be completed by the King County Road Services Division and the King County Flood Control District. The purpose of the study is to evaluate a subset of primary cross-valley routes for the purpose of identifying a cost-effective option that can be built to withstand major flood events and provide east-west access across the valley during major flood events. Improving the flood resiliency of existing county roads, as well as designing and constructing a flood tolerant cross-Snoqualmie Valley route will be complex and costly. King County Road Services Division continues to struggle to meet its preservation service goals for unincorporated King County roads and bridges, due to current and future forecast financial constraints. The activities identified through this strategy are unfunded needs and a funding strategy will need to be prepared and successfully implemented.			
2-Year Objectives <ul style="list-style-type: none"> • Fund cross-valley study • Scope cross-valley study 	5-Year Objectives <ul style="list-style-type: none"> • Complete cross-valley study • Complete planning level cost estimates for study • Pursue grant opportunities 	Long-Term Objectives <ul style="list-style-type: none"> • Obtain grant funds to design and build a flood tolerant cross-valley route • Construct the route 	
Implementation Plan/Actions <ul style="list-style-type: none"> • Fund study to evaluate options to assess which major roadway across the Snoqualmie River Valley may be improved to withstand chronic river flooding. • Initiate and complete the study 			
Performance Measure <ul style="list-style-type: none"> • Study completion • Route selected, as informed by the study 			

Increase Seismic Resilience of Bridges in Unincorporated King County

Lead Jennifer Knauer, King County Department of Local Services, Roads Division	Partners Cities KC EM WSDOT PHSKC	Hazards Mitigated / Goals Addressed Earthquake Goal 4, 6	Funding Sources and Estimated Costs \$500,000 (study costs) TBD design and construction costs FEMA BRIC Grants
Vision Improved seismic stability for unincorporated King County lifeline route bridges			
Description Evaluate the seismic stability of unincorporated King County lifeline route bridges and complete seismic retrofits as informed by the results of the study. Seismic improvements to unincorporated King County lifeline route bridges were completed from 1995 through 2008, to retrofit these bridges to level 2 standards, the standard adopted by the King County Council that reflected the contemporary standards of that time. Subsequent to completion of these retrofits, seismic evaluation standards have changed. This strategy involves evaluating all unincorporated King County lifeline bridge routes to a retrofit level 3 (highest level), which reflects the current evaluation standard. Bridges retrofitted to a seismic level 3 would likely withstand a seismic event and still be in serviceable status. Outcomes from this strategy includes a prioritized list of lifeline bridge seismic retrofit needs and total program cost estimates. This strategy also involves securing the funding and completing the seismic retrofits identified within the prioritized needs list. King County Road Services Division continues to struggle to meet its preservation service goals for unincorporated King County roads and bridges due to current and future forecast funding constraints. The activities identified through this strategy are unfunded needs and a funding strategy will need to be prepared and successfully implemented.			
2-Year Objectives <ul style="list-style-type: none"> • Fund UKC bridge seismic assessment study • Complete seismic assessment study 	5-Year Objectives <ul style="list-style-type: none"> • Secure capital funds 	Long-Term Objectives <ul style="list-style-type: none"> • Complete seismic upgrades to UKC lifeline route bridges 	
Implementation Plan/Actions <ul style="list-style-type: none"> • Secure funds for the study • Complete the study and produce prioritized list of lifeline route bridge seismic retrofit needs and costs • Prepare funding strategy • Secure capital funds in support of seismic retrofits • Complete seismic retrofits 			
Performance Measure <ul style="list-style-type: none"> • Study completed • Funding strategy prepared and successfully implemented • Bridge seismic retrofits completed 			

Stormwater Outfall Erosion Hazard Inventory

Lead	Partners	Hazards Mitigated / Goals Addressed	Funding Sources and Estimated Costs
DNRP Water and Land Resources Division	N/A	Goal 6 Goal 12	SWM Fee; FCD Grant; FEMA Hazard Mitigation
<p>Vision</p> <p>To minimize risk to public safety, properties, and water quality/aquatic health associated with landslides, severe erosion, and sediment deposition caused or threatened by discharges from stormwater system outfalls, both public and private. There are hundreds of stormwater system outfalls throughout unincorporated King County that discharge onto slopes or into ravines that are prone to landslides or severe erosion, or where sediment deposition is a hazard downstream. Many of these are known from past events but are not inventoried in any organized way. Many others are not known without an inventory effort to identify them.</p>			
<p>Description</p> <ol style="list-style-type: none"> 1. Establish a GIS mapping layer/database to inventory locations where the discharges from stormwater system outfalls have caused or pose a risk of causing landslides, severe erosion, and/or sediment deposition impacts downstream. Include in the inventory a description of the landslide and erosion processes at play if known or determined through geotechnical evaluation. Include potential causal agents such as slope, soil composition, drainage area, and discharge rates. Include descriptions of observed or potential impacts to structures, facilities, roads, driveways, water quality, and fish habitat. Include a description of the potential mitigation improvement (e.g., tightline, channel stabilization, settling facility, etc.) and its approximate cost. 2. Populate the GIS database with known incidents of erosive problems downstream of outfalls. If additional information is needed on an incident, conduct a field investigation to collect it. In addition to known incidents, review existing stormwater system maps, landslide hazard area maps, erosion hazard area maps, and steep slope hazard area maps to identify outfalls that are potentially at risk of causing erosive problems downstream. Conduct field investigations of these outfalls and their drainage path downstream to determine the nature of any hazards that might exist. If hazards do exist, inventory the location and record the information mentioned above in the GIS database. 3. Use the GIS inventory information to identify and prioritize hazard mitigation projects for feasibility analysis to determine an updated cost and other information needed for ranking against other competing projects. This information can also be used to provide technical assistance to affected property owners if funding is not readily available for a mitigation project. In addition, the information would be beneficial to setting mitigation requirements during the County's permit review of new development projects upstream of problematic outfalls. <p>At this time, funding has not been appropriated for a program that would implement this mitigation strategy. WLRD Stormwater Services is currently developing a strategic plan that will consider this along with other along with other program ideas for minimizing risk and optimizing stormwater management.</p>			
<p>2-Year Objectives</p> <ul style="list-style-type: none"> • Complete Stormwater Services strategic plan to determine support for this program. 	<p>5-Year Objectives</p> <p>If there is support for the program in the strategic plan, seek funding for its implementation.</p>	<p>Long-Term Objectives</p> <ul style="list-style-type: none"> • N/A 	

Implementation Plan/Actions

- Establish GIS database as described under mitigation strategy.
- Populate GIS database with outfall locations known to be a problem based on past incidents.
- Populate database with outfall locations that could be a problem based on hazards that exist downstream either mapped or determined in the field.
- Use the GIS database to identify and prioritize mitigation projects for feasibility analysis to determine an updated cost and other information needed for ranking the project against other competing projects.
- Implement the highest priority projects as funding becomes available. Until funding becomes available, implement stop gap measures (e.g., sandbagging) if needed to minimize severity of hazard.
- Where funding is not readily available for a mitigation project, offer technical assistance to affected property owners.

Performance Measure

- Number of problematic outfalls inventoried
- Number of problematic outfalls fixed
- Number of property owners to which technical assistance was provided for private solutions

Resilience in Design and Build of Critical Water Treatment and Conveyance Facilities

Lead DNRP Water Treatment Division	Partners Strategic Climate Action Plan	Hazards Mitigated / Goals Addressed Earthquake Goal 12	Funding Sources and Estimated Costs Capital Budget, Revenue Backed.
Vision WTD Treatment Plant Facilities and Conveyance system structures are protected against identified potential vulnerabilities, including but not limited to flooding, earthquakes, large-scale power outages and hazardous materials spills into the conveyance system (whether those spills are accidental or deliberate, e.g. terrorist action).			
Description Design, build, and retrofit facilities to meet or exceed seismic standards, including essential equipment. Apply current seismic standards to all renovation or replacement of existing facilities and/or equipment. In April 2018 the division completed a Resiliency and Vulnerability Review of its entire conveyance system to identify critical structures and facilities. The project which was conducted by an engineering consultant conducted initial structural earthquake assessments of the key facilities. The report included recommendations for mitigation projects in order of priority. Work is underway on multiple projects.			
2-Year Objectives <ul style="list-style-type: none"> • Vulnerability assessment review. • Emergency power systems review. • Complete retrofit of 3 facilities identified as most critical/vulnerable. 	5-Year Objectives <ul style="list-style-type: none"> • Implement changes identified in the reviews conducted in the 2-year window. • Update to spill response procedures is completed. • Complete retrofit of 6 additional facilities in order of priority/vulnerability. 	Long-Term Objectives <ul style="list-style-type: none"> • Facilities that are resilient and able to withstand damage from earthquakes or other hazards 	
Implementation Plan/Actions <ul style="list-style-type: none"> • Review existing earthquake vulnerability assessments and identify facilities and structures that need further assessments. • Review existing emergency power generation capacities at treatment plants, offsite facilities and interceptors (pipelines) to identify vulnerabilities and response & restoration protocol enhancements. • Review existing spill response procedures and protocols for hazardous materials spills (both accidental and intentional releases) that impact flows into the WTD system. Update and coordinate emergency procedures with key fire departments and the Office of Emergency Management. 			
Performance Measure <ul style="list-style-type: none"> • % of buildings, pipelines and equipment that are built to seismic resilience standards. • % of identified vulnerabilities and plan priorities addressed with improvements and resolutions. • % of retrofit projects planned that are completed. 			

Landslide, Erosion, and Sedimentation Event Mapping

Lead DNRP Water and Land Resources Division	Partners Cooperating agencies	Hazards Mitigated / Goals Addressed Goal 4 Goal 6 Goal 12	Funding Sources and Estimated Costs SWM Fee; FCD Grant; FEMA Hazard Mitigation
<p>Vision Develop a GIS mapping layer to establish a record of observed landslide, erosion, and sedimentation events. Include in the record a description of landslide and erosion processes if available from geotechnical evaluation. Identify landslide, erosion, and sedimentation events caused by stormwater discharge. Use this information to identify and prioritize corrections and mitigations to reduce events. These corrections and mitigations would be prioritized as part of the overall WLRD Stormwater Services strategic plan (currently development) to ensure the highest risk areas are addressed first. At this time, funding has not been secured for implementation of a corrective program for stormwater discharges that cause or contribute to landslides, erosion, and sedimentation events.</p>			
<p>Description Mapping of landslide, and high erosion areas and sedimentation events provides current information for development review and infrastructure planning, and utility protection measures to be implemented. Reconnaissance has identified multiple sites of stream ravine slope destabilization due to stormwater discharge from both public and private stormwater conveyance systems. Multiple measures are readily available to relocate discharge outfall, dissipate flow erosion potential, and implement flow control measures to reduce landslide risk and channel erosion. Sediment discharge and debris flow incidences cause increasing cost of sediment management and property damage and environmental impact to receiving stream habitat. This effort will also reduce inform the business risk exposure of assets that drain to locations impacted by past events. This could result in and identify proper use of different maintenance techniques, effective inspection/maintenance intervals, and the priority of improvement projects needed seek to avoid emergency repairs.</p>			
<p>2-Year Objectives</p> <ul style="list-style-type: none"> Develop mapping to include landslide prone areas, event tracking and include highly erosive process. Identify impact areas and vulnerability to stormwater discharges. 		<p>5-Year Objectives</p> <ul style="list-style-type: none"> Develop program to correct stormwater discharges causing landside activation and high erosion processes. Provide assistance to private system owners to correct stormwater discharges to unstable slopes in high impact areas 	<p>Long-Term Objectives</p> <ul style="list-style-type: none"> Reduce progressive degradation of streams, wetlands and lake habitats and reduced conveyance and flood protection capacity resulting from sediment deposition.
<p>Implementation Plan/Actions</p> <ul style="list-style-type: none"> Establish ArcGIS mapping of landslide and erosion hazard areas that identify documented incidences, type of landslide or erosion processes and impact zones. Prioritize local systems with high impacts to community, public infrastructure, and environment. Identify corrective actions and mitigation strategies to reduce impacts and emergency response services provided by King County. These actions present opportunities to improve system resilience and capacity buffering from the impacts of climate change variability. 			

Performance Measure

- Mapping area completed in relation to unincorporated area.
- Identification and prioritization of problematic outfalls
- Strategy to address individual sites.
- Technical assistance to citizens to implement corrective actions

Stormwater and Surface Water Infrastructure Risk Reduction

Lead DNRP Water and Land Resources Division	Partners N/A	Hazards Mitigated / Goals Addressed Goal 6 Goal 12	Funding Sources and Estimated Costs SWM Fee; FCD Grant; FEMA Hazard Mitigation
<p>Vision</p> <p>To minimize risk to public safety, properties, and water quality/aquatic health resulting from:</p> <ol style="list-style-type: none"> 1) The failure of existing stormwater and surface water infrastructure due to aging. Growing numbers of stormwater and surface water infrastructure assets operated by or under the purview of the Water and Land Resources Division (WLRD) are at or approaching the end of their effective life where structural failure could cause flooding, erosion, sedimentation, and/or fish habitat damage. 2) More frequent overflow or functional impairment of existing stormwater and surface water infrastructure due to expected increases in rainfall intensities over the next 50 years from climate change. This too could cause flooding, erosion, sedimentation, and/or habitat damage. 3) The lack of stormwater control infrastructure for managing runoff from lands that were developed before stormwater controls were required on new developments. Over two thirds of the developed landscape in King County was built before modern stormwater controls were required on new developments. This lack of runoff quantity and quality control has been linked to degraded water quality and aquatic health in numerous streams and other water bodies throughout King County as documented by a network of monitoring stations. It may also contribute to existing flooding, erosion, sedimentation, and/or habitat damage. 			
<p>Description</p> <p>WLRD is planning to do the following to achieve the vision/objective stated above:</p> <ol style="list-style-type: none"> 1) Proactively manage existing infrastructure through inspections, maintenance, risk assessments, and repair/replacement of the highest risk infrastructure components before they fail to avoid the high cost of emergency repairs and the damages or injuries that can result from component failure. This proactive management program is already in place for WLRD-operated infrastructure assets but needs further policy development for assets managed by private parties. WLRD Stormwater Services is currently developing a strategic plan that should address this policy development need. 2) Develop a methodology and standards for predicting and designing to future runoff quantities that will be generated by the increased rainfall intensities expected from climate change. To ensure new infrastructure is resilient, this methodology and standards will be incorporated into the County's stormwater regulations for new development and redevelopment. It will also be used by the County to assess the need for and design of future infrastructure improvements to reduce risk. Development of this methodology and standards is a priority of the County's Strategic Climate Action Plan (SCAP) and has been started but additional funding will be needed to finish it. 3) Build new and modify existing stormwater control infrastructure to mitigate for the lack of runoff quantity and quality controls on older developed lands. Projects that do this are called "stormwater retrofits" and several pilot projects are currently underway at various locations across King County. WLRD Stormwater Services is currently developing a strategic plan and retrofit prioritization framework that will give direction to future planning and implementation of stormwater retrofits. A formal planning program to identify, prioritize, and steward future retrofits is currently unfunded. 			

2-Year Objectives <ul style="list-style-type: none"> Implement actions to reduce risk on 48 high risk facility assets and continue inspections, maintenance, and risk assessments on remaining inventory of WLRD facility assets. Complete Stormwater Services strategic plan to identify policy direction for assets managed by private parties. Seek funding to develop methodology/standards 	5-Year Objectives <ul style="list-style-type: none"> Implement actions to reduce risk on 120 high risk facility assets and continue inspections, maintenance, and risk assessments on remaining inventory of facility assets. Develop methodology/standards 	Long-Term Objectives <ul style="list-style-type: none"> Implement actions to reduce risk on 192 high risk facility assets by 2027 and continue inspections, maintenance, and risk assessments on remaining inventory of facility assets. Implement actions to reduce risk on any newly identified high risk facility assets. Incorporate new standards into stormwater regulation.
Implementation Plan/Actions <ul style="list-style-type: none"> Implement actions to reduce risk on high risk facility assets. Seek funding to further develop a methodology and standards for predicting and designing to future runoff quantities generated by the increased rainfall intensities expected from climate change. Continue progress on existing pilot projects to inform future stormwater retrofits. Complete the Stormwater Services strategic plan and retrofit prioritization framework. Complete development of the methodology and standards described at left and vet with elected officials and community stakeholders (e.g., developers, NGOs, tribes, etc.) Obtain funding for and begin implementing a formal planning program to identify, prioritize, and steward future retrofits. Incorporate the new methodology and standards into the County’s stormwater regulations for new development and redevelopment. Conduct planning efforts to identify and prioritize predicted infrastructure problems using the new methodology and standards. This can and should be merged with the planning program described below for stormwater retrofits. Implement highest priority projects to address predicted infrastructure problems. Conduct planning efforts to identify, prioritize, and steward stormwater retrofits. This can and should be merged with the efforts mentioned above for addressing predicted infrastructure problems resulting from climate change. Implement highest priority retrofits. 		
Performance Measure <ul style="list-style-type: none"> High risk facility assets mitigated. Climate change infrastructure problems solved Acres of developed land retrofitted with stormwater controls 		

Sea Level Rise Resilience in Wastewater Facilities

Lead DNRP WTD	Partners PHSKC	Hazards Mitigated / Goals Addressed Sea Level Rise (Flooding) Goal 4, 12	Funding Sources and Estimated Costs Capital Budget
Vision Waterfront wastewater treatment facilities and road networks that will be affected by the rise of sea level due to global warming are built and enhanced to improve system resilience to these impacts.			
Description Developing and implementing adaptation strategies for cost-effective measures to address, through capital improvement and asset management programs, the vulnerability of 24 major and 380 minor facilities and 52 miles of conveyance at risk of saltwater inflow and/or inundation. The facilities were identified by a recent update to the WTD analysis of the wastewater system to identify facilities at risk for saltwater inflow and inundation from future sea level rise, existing and predicted high tides, and storm surges. This update was based on recent (2018) local and probabilistic sea level rise projections developed by network of governmental and non-governmental organizations and universities. A parallel effort is necessary for roadways in unincorporated King County, especially on Vashon Island and with ferry docks that service the islands. This will be addressed through the KC Roads strategy.			
2-Year Objectives <ul style="list-style-type: none"> Work is ongoing 	5-Year Objectives <ul style="list-style-type: none"> Work is ongoing 	Long-Term Objectives <ul style="list-style-type: none"> Facilities that are resilient and able to remain operational as the sea level rises 	
Implementation Plan/Actions <ul style="list-style-type: none"> The facilities were identified by a recent update to the WTD analysis of the wastewater system to identify facilities at risk for saltwater inflow and inundation from future sea level rise, existing and predicted high tides, and storm surges. 			
Performance Measure <ul style="list-style-type: none"> % of identified projects to improve resilience to sea-level rise completed. 			

Stormwater and Surface Water Infrastructure Risk Reduction

Lead DNRP Water and Land Resources Division	Partners N/A	Hazards Mitigated / Goals Addressed Goal 6 Goal 12	Funding Sources and Estimated Costs SWM Fee; FCD Grant; FEMA Hazard Mitigation
<p>Vision</p> <p>To minimize risk to public safety, properties, and water quality/aquatic health resulting from:</p> <ol style="list-style-type: none"> 4) The failure of existing stormwater and surface water infrastructure due to aging. Growing numbers of stormwater and surface water infrastructure assets operated by or under the purview of the Water and Land Resources Division (WLRD) are at or approaching the end of their effective life where structural failure could cause flooding, erosion, sedimentation, and/or fish habitat damage. 5) More frequent overflow or functional impairment of existing stormwater and surface water infrastructure due to expected increases in rainfall intensities over the next 50 years from climate change. This too could cause flooding, erosion, sedimentation, and/or habitat damage. 6) The lack of stormwater control infrastructure for managing runoff from lands that were developed before stormwater controls were required on new developments. Over two thirds of the developed landscape in King County was built before modern stormwater controls were required on new developments. This lack of runoff quantity and quality control has been linked to degraded water quality and aquatic health in numerous streams and other water bodies throughout King County as documented by a network of monitoring stations. It may also contribute to existing flooding, erosion, sedimentation, and/or habitat damage. 			
<p>Description</p> <p>WLRD is planning to do the following to achieve the vision/objective stated above:</p> <ol style="list-style-type: none"> 4) Proactively manage existing infrastructure through inspections, maintenance, risk assessments, and repair/replacement of the highest risk infrastructure components before they fail to avoid the high cost of emergency repairs and the damages or injuries that can result from component failure. This proactive management program is already in place for WLRD-operated infrastructure assets but needs further policy development for assets managed by private parties. WLRD Stormwater Services is currently developing a strategic plan that should address this policy development need. 5) Develop a methodology and standards for predicting and designing to future runoff quantities that will be generated by the increased rainfall intensities expected from climate change. To ensure new infrastructure is resilient, this methodology and standards will be incorporated into the County’s stormwater regulations for new development and redevelopment. It will also be used by the County to assess the need for and design of future infrastructure improvements to reduce risk. Development of this methodology and standards is a priority of the County’s Strategic Climate Action Plan (SCAP) and has been started but additional funding will be needed to finish it. 6) Build new and modify existing stormwater control infrastructure to mitigate for the lack of runoff quantity and quality controls on older developed lands. Projects that do this are called “stormwater retrofits” and several pilot projects are currently underway at various locations across King County. WLRD Stormwater Services is currently developing a strategic plan and retrofit prioritization framework that will give direction to future planning and implementation of stormwater retrofits. A formal planning program to identify, prioritize, and steward future retrofits is currently unfunded. 			

2-Year Objectives	5-Year Objectives	Long-Term Objectives
<ul style="list-style-type: none"> Implement actions to reduce risk on 48 high risk facility assets and continue inspections, maintenance, and risk assessments on remaining inventory of WLRD facility assets. Complete Stormwater Services strategic plan to identify policy direction for assets managed by private parties. Seek funding to develop methodology/standards 	<ul style="list-style-type: none"> Implement actions to reduce risk on 120 high risk facility assets and continue inspections, maintenance, and risk assessments on remaining inventory of facility assets. Develop methodology/standards 	<ul style="list-style-type: none"> Implement actions to reduce risk on 192 high risk facility assets by 2027 and continue inspections, maintenance, and risk assessments on remaining inventory of facility assets. Implement actions to reduce risk on any newly identified high risk facility assets. Incorporate new standards into stormwater regulation.
Implementation Plan/Actions		
<ul style="list-style-type: none"> Implement actions to reduce risk on high risk facility assets. Seek funding to further develop a methodology and standards for predicting and designing to future runoff quantities generated by the increased rainfall intensities expected from climate change. Continue progress on existing pilot projects to inform future stormwater retrofits. Complete the Stormwater Services strategic plan and retrofit prioritization framework. Complete development of the methodology and standards described at left and vet with elected officials and community stakeholders (e.g., developers, NGOs, tribes, etc.) Obtain funding for and begin implementing a formal planning program to identify, prioritize, and steward future retrofits. Incorporate the new methodology and standards into the County’s stormwater regulations for new development and redevelopment. Conduct planning efforts to identify and prioritize predicted infrastructure problems using the new methodology and standards. This can and should be merged with the planning program described below for stormwater retrofits. Implement highest priority projects to address predicted infrastructure problems. Conduct planning efforts to identify, prioritize, and steward stormwater retrofits. This can and should be merged with the efforts mentioned above for addressing predicted infrastructure problems resulting from climate change. Implement highest priority retrofits. 		
Performance Measure		
<ul style="list-style-type: none"> High risk facility assets mitigated. Climate change infrastructure problems solved Acres of developed land retrofitted with stormwater controls 		

Control System Security and Performance

Lead DNRP Water Treatment Division	Partners N/A	Hazards Mitigated / Goals Addressed Cyber Incident Goal 12	Funding Sources and Estimated Costs Capital Budget General Fund
Vision The operational control system for Wastewater Treatment Operations is secure from cyber-attack or system failure.			
Description The wastewater treatment system is operated from three control centers which monitor the facilities and conveyance system that flows to the treatment plants. The Ovation project is a multi-year, multi-million-dollar upgrade of the Wastewater Treatment Division’s legacy control systems. WTD is in the process of updating its control systems. Vulnerability assessments are designed into the Ovation project. When the system is operational, a security audit would be conducted to ensure that policies and procedures are in place to protect the system			
2-Year Objectives <ul style="list-style-type: none"> Project is staged to include in the 2-year timeframe upgrades to system controls in order of priority based on assessed vulnerability. Upgraded systems will be tested in this time frame. 	5-Year Objectives <ul style="list-style-type: none"> All control systems are upgraded and have passed security testing. Completion of project. 	Long-Term Objectives <ul style="list-style-type: none"> A secure system. 	
Implementation Plan/Actions <ul style="list-style-type: none"> This is a multi-year multi-million-dollar project that is being staged by addressing the most vulnerable systems first and working through the system. 			
Performance Measure <ul style="list-style-type: none"> % of QA/QC system security tests passed. 			

GIS Emergency Response Mapping and Real-Time Flow Data

Lead DNRP Water Treatment Division	Partners KCIT-Geographic Information Systems (GIS) King County Roads Services Division King County Office of Emergency Management Public Health SKC	Hazards Mitigated / Goals Addressed All Goal 6	Funding Sources and Estimated Costs Operating Budget
Vision Critical information conveyed in the WTD/DNRP Emergency response map is available and updated in real time.			
Description Update the King County facilities Emergency Response maps with the current priority roads, bridges, earthquake liquefaction, inundation and landslide zones and gas/petroleum pipelines, under-laid with King County facilities and conveyance lines and emergency outfalls to facilitate emergency response and continuity of operations. Make this information available through a password-protected website for select users. Explore connecting the map to real-time flow data. A GIS emergency mapping site is now operational on the WTD intranet that shows facilities and conveyance system. Working on moving it to an internet site so that it can be accessed 24/7 by off duty personnel.			
2-Year Objectives <ul style="list-style-type: none"> Fully deploy the system where it can be accessed remotely without having to log into the KC computer system. 	5-Year Objectives <ul style="list-style-type: none"> System is tested and use in activations. Necessary modifications are made. Project completion 	Long-Term Objectives <ul style="list-style-type: none"> Emergency mapping is reliable and accessible. 	
Implementation Plan/Actions <ul style="list-style-type: none"> Work is ongoing and includes: Work with KCIT to consider improvements that include integration with real-time flow data, integration with Roads Emergency updates and migration of mapping tool from intranet to password secured Internet site. Testing to ensure access and timeliness and accuracy of information conveyed. Use in emergency activations. Socialize process and tools with partners such as Public Health Seattle and King County to aid in environmental health emergency response. 			
Performance Measure <ul style="list-style-type: none"> % of successful attempts to securely access the mapping tool. Ratio of accuracy and timeliness as compared to real life in real time. 			

Emergency Communications Enhancements

Lead Allen Alston	Partners PSERN Project King County Radio Services/KCIT	Hazards Mitigated / Goals Addressed All Goal 6	Funding Sources and Estimated Costs Operating Budget
Vision Ability to effectively communicate in large scale emergency situations where the telecommunications may be disrupted.			
Description The division performed an assessment to determine the number of KC 800 MHz radios necessary to support operational readiness in the event of a widespread telecommunications failure. Currently all key operational facilities and offsite operation and maintenance vehicles are equipped with 800 MHz radios, constituting WTD’s core emergency communications method. A regional replacement project is underway to replace the entire 800 MHz system. It is managed by a regional agency Puget Sound Emergency Radio Network. Inventories have been provided to PSERN. The King County Office of Emergency Management has deployed a communications tool called KCInform. It has been incorporated into the division’s operational procedures			
2-Year Objectives <ul style="list-style-type: none"> Deploy the new radios. Train and test the radios and other emergency communications. Analyze benefits and costs of FirstNet 		5-Year Objectives <ul style="list-style-type: none"> Continue training and testing of communications to ensure maximum communications reliability in emergencies. 	
Long-Term Objectives <ul style="list-style-type: none"> Redundant emergency communications are reliable. 			
Implementation Plan/Actions <ul style="list-style-type: none"> Deploy the new radio equipment and incorporate into the day to day communications protocols. Regularly test radios and other emergency communications methods, including KCInform and FirstNet (if used). 			
Performance Measure <ul style="list-style-type: none"> % of successful communications systems tests. 			

Emergency Event Management System

Lead DNRP Water Treatment Division	Partners King County Office of Emergency Management King County Information Technology (KCIT)	Hazards Mitigated / Goals Addressed All Goal 6	Funding Sources and Estimated Costs Operating Budget
Vision WTD manages and shares emergency response and continuity of operations activities across the division's five treatment plants and the division headquarters in the King Street Center using WEBEOC and other systems as necessary.			
Description Assess WEBEOC's ability to manage information and communication within the division and with its 34 component agencies, and especially the discrete tracking of multiple incidents. Continue working with the WEBEOC team, KCIT and others as necessary to explore alternative or additional solutions if WEBEOC can't meet all requirements.			
2-Year Objectives <ul style="list-style-type: none"> • Test current system for a variety of scenarios. • Identify and work through questions and gaps identified. • Consider alternatives where WEBEOC doesn't fulfill requirements. 	5-Year Objectives <ul style="list-style-type: none"> • Deploy an operational system or systems. • Document, train to and test the system(s). 	Long-Term Objectives <ul style="list-style-type: none"> • There is a single system or integrated systems (whether manual or not) sufficient to manage emergency events. 	
Implementation Plan/Actions <ul style="list-style-type: none"> • Test use of WEBEOC for a variety of scenarios with multiple contributors. • Identify and work through questions and gaps. • Consider alternatives where WEBEOC doesn't fulfill requirements. • Document progress and final systems approach. • Communicate systems approach to users and stakeholders. • Develop and deliver trainings on the use of the system(s). • Test the system(s). • Continuously improve the system(s). 			
Performance Measure <ul style="list-style-type: none"> • Post-test system performance ratings. • Post use (activations) system performance ratings. 			

Flood Warning Program

Lead Points of Contact King County River & Floodplain Management Section, Office of Emergency Management	Partner Points of Contact Cities and special purpose districts, US Army Corps of Engineers, NOAA, FEMA Region 10	Hazards Mitigated / Goals Addressed Flood Goal 5, 6	Funding Sources and Estimated Costs Existing resources
Strategy Vision/Objective When flooding is imminent, having a robust notification system helps people who live, work, or travel through floodprone areas prepare themselves and their property for the impacts of flooding. It can also mean fewer flood losses and less damage.			
Mitigation Strategy The River and Floodplain Management Section operates the Flood Warning Program, which includes a Flood Warning Center that opens when river systems reach specified flows or heights. The Flood Warning Center gives people that live, work, or travel through floodprone areas early notifications and the opportunity to call in and receive information about ongoing flooding issues. The Center also coordinates with local first responders, the Office of Emergency Management, the US Army Corps of Engineers, and other stakeholders to ensure the region is as ready as possible to respond to flooding problems.			
2-Year Objectives <ul style="list-style-type: none"> Improved outreach efforts. 	5-Year Objectives <ul style="list-style-type: none"> Annual exercises are conducted to prepare the region for flooding. 	Long-Term Objectives <ul style="list-style-type: none"> Smooth operation of the Flood Warning Program and integration with local communities' programs. 	
Implementation Plan/Actions Implementation Plan/Actions <ol style="list-style-type: none"> Continue monitoring the status of streamgages to ensure they are collecting data accurately. Streamgages provide the underlying data that are used as the basis for Flood Alert notifications and openings of the Flood Warning Center. Review on an annual basis the various components of the Flood Warning Program and make improvements where necessary. Conduct an annual flood response exercise with other agencies to ensure the region is prepared for flood response and recovery actions necessary. Write up an after-action report. Improve public outreach materials such as flood inundation maps and online interactive map applications that show the inundation areas of the four flood phases. 			
Performance Measure <ul style="list-style-type: none"> Subscribers to the Flood Alert app. CRS points for Activity 610. 			

Post-Flood Recovery Efforts

Lead Points of Contact DNRP Water and Land Resources Division; King County Office of Emergency Management; King County Permitting Division	Partner Points of Contact King County Flood Control District; FEMA Region 10; Washington Department of Ecology; Washington Division of Emergency Management	Hazards Mitigated / Goals Addressed Flood Goal 3, 5, 12, 14	Funding Sources and Estimated Costs King County Flood Control District; FEMA Hazard Mitigation Assistance Grants; Increased Cost of Compliance; FEMA Public Assistance Section 406 Mitigation
Strategy Vision/Objective After a major flood event, there are many opportunities to rebuild in a more resilient way. Being prepared to rapidly address them is key to realizing those opportunities. Many mitigation grants, including the FEMA Hazard Mitigation Assistance grants, can take over 5 years from obligation to a property owner having their house acquired. King County is uniquely positioned to utilize local resources to complete mitigation projects much quicker to help property owners with flood-damaged property.			
Mitigation Strategy While many other flood mitigation strategies referenced in the Hazard Mitigation Plan will be used to reduce future flood risk, a separate mitigation strategy for post-flood actions is necessary. Property owners are often more willing to sell and consider mitigation efforts after a flood. Additionally, conducting substantial damage determinations quickly is important for flood insurance policyholders to be able to access Increased Cost of Compliance coverage funds for rebuilding. King County needs to be prepared before a flood occurs to move mitigation efforts forward quickly. This strategy should also consider the permitting environment after a major flood and consider short-term rebuilding moratoriums, permit assistance, and substantial damage letters for Increased Cost of Compliance claims. Additionally, an update to the comprehensive plan may be needed to address long-term recovery efforts.			
2-Year Objectives <ul style="list-style-type: none"> Communications plan prepared. Substantial damage strategy prepared and deployable. 	5-Year Objectives <ul style="list-style-type: none"> Substantial damage assessments have either taken place or have been practiced. Communication plan reviewed. 	Long-Term Objectives <ul style="list-style-type: none"> Successful mitigation efforts occur after major flood events. 	
Implementation Plan/Actions <ol style="list-style-type: none"> 1. Prepare communications plan prior to a flood event for reaching affected property owner to inform them of mitigation grant opportunities to purchase their damaged property or elevate their home. 2. Ready a set of funds to deploy quickly after a major flood event. 3. Create a deployable substantial damage inspection strategy and team, and prepare the team to rapidly conduct substantial damage determinations after a flood event or other wide-spread natural disaster. 4. Inspect flood protection facilities and other public infrastructure to ensure public safety is protected and to also identify opportunities for applying for FEMA Public Assistance Section 406 mitigation funding. 			
Performance Measures <ul style="list-style-type: none"> Property owners engaged after flood event. Employees trained on substantial damage assessments. 			

Home Elevations

Lead Points of Contact King County River & Floodplain Management Section; Permitting Division	Partner Points of Contact King County Flood Control District, FEMA Region 10; Washington Department of Ecology, Washington Division of Emergency Management	Hazards Mitigated / Goals Addressed Flood Goal 5, 6	Funding Sources and Estimated Costs King County Flood Control District; FEMA Hazard Mitigation Assistance grants
Vision Elevating floodprone homes is an important tool in making buildings safer from flooding. The buildings will be better able to withstand inundation and a family's, or occupant's belongings will be well above the expected level of the 1% annual chance flood. The result will be less risk to people, pets, and property as floodwater remains below the finished floor of elevated homes.			
Description Home elevations are appropriate in areas where floodwaters are slow moving and relatively shallow, offer significant warning time, and are not subject to channel migration hazards. In areas of flash floods, fast-moving floodwaters, and channel migration, the most appropriate mitigation strategy is acquisition. King County and the King County Flood Control District have a robust home elevation grant program for properties in the Snoqualmie River basin that has elevated nearly 80 homes. Elevation projects, however, are complex and require significant public investments from the County, Flood Control District, or FEMA. Typically, home elevations cost over \$200,000. Current standards require homes to be elevated to the higher of 3 feet above the 1% annual chance flood elevation and 1 foot above the 0.2% annual chance flood elevation. Most homeowners prefer to elevate on enclosed foundations like a crawlspace or full story enclosure. This technique, when done with proper flood openings, can be a safe alternative, but can lead to negative consequences such as future owners converting the lower level to finished living space, thus reducing the benefit of the home elevation. Elevating on post or piling foundation techniques lessens the likelihood of lower level conversion, although to some, results in a visually less desirable home. There is a balance that the public elevation grant program needs to weigh between producing homes that people think look nice and homes that are likely to remain safe from flooding for 50 years.			
2-Year Objectives <ul style="list-style-type: none"> Have code compliance strategy implemented. 	5-Year Objectives <ul style="list-style-type: none"> Home elevations grants are awarded outside of the Snoqualmie Valley. 	Long-Term Objectives <ul style="list-style-type: none"> All homes in shallow and slow-moving floodplains are elevated at least 3 feet above the 1% annual chance flood elevation. 	

Implementation Plan/Actions

1. Continue requiring home elevations to have the lowest floor elevated to 3 feet above the 1% annual chance flood elevation or 1 foot above the 0.2% annual chance flood elevation. Continue requiring a nonconversion agreement to protect the lower enclosed levels from being converted to living space.
2. Create a strategy to address potential code compliance issues that make elevated structures more dangerous, including addressing:
 - a. Potential to convert enclosed lower level into living space.
 - b. Potential to install noncompliant utilities in lower level.
 - c. Potential to block flood openings.
 - d. Potential to rent out lower level.
3. Complete home elevations in appropriate floodprone areas outside of the Snoqualmie Valley, including in coastal floodplain areas.
4. Encourage grantees to elevate using post or piling foundation techniques rather than full story enclosures.

Performance Measure

- Repetitive loss properties elevated.
- Reduced flood insurance claims.
- Number of homes successfully and compliantly elevated.

Home Acquisitions and Relocations

Lead Points of Contact King County River & Floodplain Management Section; Ecological Restoration and Engineering Services Section	Partner Points of Contact Snoqualmie Watershed Forum, Snohomish Basin Salmon Recovery Forum, WRIA 9 Watershed Ecosystem Forum, WRIA 8 Salmon Recovery Council, Puget Sound Partnership, King County Flood Control District	Hazards Mitigated / Goals Addressed Flood Goal 5, 6	Funding Sources and Estimated Costs King County Flood Control District, FEMA Hazard Mitigation Assistance grants, Salmon Recovery Board Grants, Floodplains by Design
Strategy Vision/Objective Acquiring floodprone properties, removing buildings, and restoring the property to a natural state is the most effective strategy to reduce flood risk in perpetuity. Fewer families living in floodprone areas and fewer businesses operating in floodprone areas so the region recovers quicker after a major flood.			
Mitigation Strategy Property acquisitions have been a tool that King County has employed for many decades to reduce flood risk. Acquisitions are done on a willing seller basis and result in the demolition or removal of the building from the property. Sometimes the seller moves the house to a location outside of the floodplain. Acquisitions are mostly fee simple purchases. While acquisition is the most effective tool to eliminate flood risk, many people perceive downsides, including that acquisitions mean lost tax revenue and that a checkerboard approach leaves neighborhood with missing pieces. Wherever possible, a neighborhood or area-specific strategy is the best approach. Acquisitions also offer many additional benefits including enhanced natural floodplain functions, floodwater storage, and recreation potential. Because of multiple benefits, acquisitions can be done by various agencies for different primary purposes. Some are done for ecological restoration or salmon habitat protection while others are done primarily for flood risk reduction. An area of new opportunity for flood risk reduction acquisitions is along the unincorporated coast on Vashon-Maury Island. Very few have been completed for flood risk reduction purposes, but as sea levels rise and coastal flooding worsens, King County needs to be prepared for coastal shoreline acquisitions.			
2-Year Objectives <ul style="list-style-type: none"> Develop prioritized acquisition list. 	5-Year Objectives <ul style="list-style-type: none"> Complete acquisitions in coastal areas. 	Long-Term Objectives <ul style="list-style-type: none"> Acquire as many floodprone properties as possible. 	
Implementation Plan/Actions <ol style="list-style-type: none"> Continue proactively purchasing floodprone properties for the purpose of flood risk reduction. Accelerate coastal floodplain acquisitions. Create and maintain a prioritized acquisition list so that properties can be purchased whenever the opportunity arises. Consider other tools to purchase land over time or future development rights, such as a program where a property owner receives an upfront payment with an agreement that the County will fully purchase the property if it's flooded or the owner seeks to sell. Purchase and remove infrastructure as part of neighborhood-level acquisitions. 			
Performance Measures Acquisitions per year. Flood hazard areas owned by private landowners with buildings. <ul style="list-style-type: none"> Repetitive loss properties mitigated. 			

Protect and Restore Natural Floodplain Functions

Lead Points of Contact DNRP Water and Land Resources Division	Partner Points of Contact Snoqualmie Watershed Forum, Snohomish Basin Salmon Recovery Forum, WRIA 9 Watershed Ecosystem Forum, WRIA 8 Salmon Recovery Council, Puget Sound Partnership, King County Flood Control District	Hazards Mitigated / Goals Addressed Flood Goal 3, 12	Funding Sources and Estimated Costs FEMA Hazard Mitigation Assistance Grants, Floodplains by Design, King County Flood Control District
Vision Flooding is a natural process. Rivers and coastlines evolve and change because of flooding. Encouraging the protection and restoration of natural functions of floodplains is key in creating healthy and resilient systems.			
Description The natural functions of floodplains include storing floodwater and lowering flood heights and velocities, all of which reduces flood risk. Natural coastlines attenuate waves distribute sediment and large wood on beaches, and allow coastal erosion, all of which reduce coastal wave energy on properties in the floodplain. King County has a robust focus on protecting and restoring natural floodplain functions, but progress still needs to be made to accelerate progress and connect restoration projects to flood risk reduction projects. Additionally, upland forested areas provide a source of natural functions that reduces fast runoff, manages sediment flow, and protects water quality. These upland areas should be considered vital parts of natural floodplain functions.			
2-Year Objectives <ul style="list-style-type: none"> Incorporate floodplain connectivity and aquatic habitat improvements in majority of flood risk reduction projects in the county. 	5-Year Objectives <ul style="list-style-type: none"> Double the amount of spending on floodplain restoration and protection by leveraging local funding to obtain state and federal grants. 	Long-Term Objectives <ul style="list-style-type: none"> Every floodplain project achieves multiple benefits such as endangered species habitat, salmon rearing habitat, water quality improvements, climate resilience, agricultural resilience, and flood risk reduction. 	

Implementation Plan/Actions

1. Proactively acquire floodprone properties to utilize for future restoration projects.
2. Complete restoration projects that reconnect rivers to their floodplains, remove bank armoring, create side channels, reconnect oxbows, and encourage natural features such as beaver dams and large wood in channels for increased flood storage and fish habitat. These projects will create places for flood storage, which will reduce downstream flood heights and provide habitat for endangered species.
3. Restore coastal shorelines by removing bulkheads wherever possible, creating pocket estuary habitats, and allowing erosion to nourish beaches. Softening shorelines and creating estuaries will result in reduced wave energy and fewer negative coastal flooding impacts.
4. Incorporate beaver habitat in restoration projects to provide flood storage and keep instream water cooler.
5. Continue enforcing regulations that stop negative impacts on habitat and encourage net ecological benefit. Shoreline management, critical area, and floodplain management regulations that adhere to FEMA's Biological Opinion are among the regulations that seek to improve natural floodplain functions.

Performance Measure

- Acres of floodplain reconnected and/or restored.
- Large wood per mile in large rivers.
- Linear feet of bulkhead removed; and coastal shoreline restored
- Demonstrated losses avoided by increasing flood storage
- Chinook, coho, and steelhead population numbers, including annual adult spawner returns and juvenile outmigrants.

Flood Risk Mapping

Lead Points of Contact DNRP Water & Land Resources Division; DLS Permitting Division	Partner Points of Contact FEMA Region X, Washington Department of Ecology, US Army Corps of Engineers	Hazards Mitigated / Goals Addressed Flood, Dam Failure Goal 3, 5, 6, 12, 14	Funding Sources and Estimated Costs FEMA Cooperating Technical Partners Program; King County Flood Control District
Vision Having updated flood risk data helps government agencies, property owners, and other stakeholders make better risk-informed decisions. High quality flood data also more accurately ties regulations to reducing flood risk.			
Mitigation Strategy While updating flood risk maps is an ongoing activity to take into account landscape and hydrology changes, there are many flood hazards that need robust data and maps: <ol style="list-style-type: none"> 1. Floodplain maps – update the Flood Insurance Rate Maps used for regulatory and mitigation planning purposes, including updating the South Fork Skykomish River and various streams that only have approximate Zone A flood zones with no base flood elevation information. Additionally, King County should work with incorporated urban communities to better study, understand, and map urban flood risk. 2. Climate-influenced flood risk maps – King County and the University of Washington have been collaborating on downscaling global climate models to generate river-basin scale hydrology data based on the effects of climate change scenarios. King County can also evaluate other climate-influenced changes in hydrology such as low summer flows, less snowpack, and other effects to incorporate into maps showing climate-influenced flood risk. These data will be used to generate maps of predicted changes in flood risk that can be used for planning and regulatory purposes. 3. Sea level rise flood risk maps – as part of the coastal flood hazard study, maps were produced showing the effect on base flood elevation of a 2-foot rise in sea level around Vashon-Maury Island. This study shows the broader effects of sea level rise on flood risk. These maps should be updated with different sea level rise scenarios and also the resulting increased flood risk landward of the edge of the 1% annual chance mapped floodplain should be considered. 4. Channel migration zone maps – currently 8 river sections have been mapped on the South Fork Skykomish, Tolt, Cedar, South Fork Snoqualmie, Middle Fork Snoqualmie, North Fork Snoqualmie, Green, and Raging Rivers. In addition to continually updating these maps, new river sections need to be studied and mapped, including the Lower Snoqualmie. Channel migration zone maps will help property owners best understand the risk from channel avulsion and help keep more development safe. 5. Dam failure maps – every owner of a high hazard dam with the potential in a dam failure for loss of life or structures must develop a dam inundation map as part of the Emergency Action Plan. However, many of these inundation maps are out of date and are not accessible to the public. Levee failure maps – King County will, where possible, study levee failure impacts and produce maps that show areas of levee failure risk. The data and maps should be made available to the public so people who live and work behind levees have an understanding of their flood risk.			
2-Year Objectives <ul style="list-style-type: none"> • Complete detailed flood study on streams with approximate Zone A floodplains. • Complete levee breach analysis. 	5-Year Objectives <ul style="list-style-type: none"> • Identify a timeline for updated Flood Insurance Rate Maps with FEMA Region 10. 	Long-Term Objectives <ul style="list-style-type: none"> • Flood Insurance Rate Map and other regulatory flood data 	

<ul style="list-style-type: none"> • Create plan for integrating flood maps and downscaled climate model data. • Begin sea level rise scenario mapping for coastal shorelines. 	<ul style="list-style-type: none"> • Establish plan for using climate-influenced flood risk data for planning and regulatory purposes. 	<p>will be updated on a regular basis.</p> <ul style="list-style-type: none"> • Highest quality flood risk data that incorporates effects of climate change.
<p>Implementation Plan/Actions</p> <ol style="list-style-type: none"> 1. Update Flood Insurance Rate Maps to utilize better flood risk data, including the South Fork Skykomish River and streams with Zone A maps. Also identify a strategy and timeline for updating other streams/rivers that need updated flood risk data. 2. Create climate-influenced flood risk maps that can be used for planning purposes. 3. Create sea level rise flood risk maps for various sea level rise scenarios to be used for planning and regulatory purposes. 4. Continue updating channel migration zone maps. 5. Release dam failure maps where appropriate and provide technical assistance to high hazard dam owners to complete updated inundation maps. 6. Complete levee failure maps and release them to the public where appropriate. 		
<p>Performance Measures</p> <ul style="list-style-type: none"> • Stream miles and linear feet of shoreline with updated flood risk, channel migration, and climate-influenced flood risk data. • Properties covered by updated flood risk, channel migration, and climate-influenced flood risk data. • Number of dams with updated inundation maps that are publicly available. • Linear feet of levees with failure analyses publicly available. 		

Public Information Flood Activities

Lead Points of Contact King County River & Floodplain Management Section, Office of Emergency Management	Partner Points of Contact FEMA Region 10; Washington Department of Ecology; Washington Division of Emergency Management; King County Flood Control District	Hazards Mitigated / Goals Addressed Flood Goal 5, 6	Funding Sources and Estimated Costs Existing resources
Vision Flooding is a complicated hazard to understand and a responsibility of floodplain management agencies is to help people understand it well enough to prepare themselves. A more informed public means property owners who make decisions based on flood risk and fewer unexpected losses during flooding.			
Description Effective outreach efforts are a key piece of comprehensive floodplain management. Letters sent annually, outreach events, project-specific meetings, and providing technical assistance are all components of effective outreach. Repetition of messages and continued outreach activities are also important to ensuring that messages are delivered. Engaging as many types of communication mediums as possible will also ensure that outreach efforts are effective.			
2-Year Objectives <ul style="list-style-type: none"> New initiatives are implemented. 	5-Year Objectives <ul style="list-style-type: none"> Documentation that more floodprone residents are engaged. 	Long-Term Objectives <ul style="list-style-type: none"> An informed public that is prepared for the effects of major flooding. 	
Implementation Plan/Actions The following activities should be conducted on an annual basis as a way to make the public more aware of flood hazards and risks: <ol style="list-style-type: none"> Flood brochure – sent to every property owner in the floodplain. Repetitive loss letter – sent to properties with known repeated losses. Realtor, insurance agent, and other stakeholder outreach – workshops, meetings, or other outreach to professionals who need flood risk information. News media outreach – coordinated effort to share stories about flood risk with the news media. Annual event – separate or coordinated event every year that focuses on flood risk . The following activities are not annual occurrences, but should be maintained to help facilitate the availability of flood risk information: <ol style="list-style-type: none"> Videos demonstrating flood risk, flood preparedness, and property protection measures that can be taken. Technical assistance to property owners on reducing flood risk on their property, including home elevation support and small actions to reduce localized flood risk. Maintaining a robust website, including an interactive map, with flood preparedness, mitigation, regulation, and other flood risk information. The website will be updated at least annually and the interactive map will incorporate new data when available. <ul style="list-style-type: none"> Floodplain management permitting bulletins will be created to help permit applicants understand the regulations and their purpose. 			
Performance Measures <ul style="list-style-type: none"> Number of stakeholder groups reached CRS points for outreach and public information activities 			

Flood Insurance Promotion

Lead Points of Contact King County River & Floodplain Management Section	Partner Points of Contact Floodprone cities; FEMA Region 10, insurance agents, landlords, realtors, mortgage lenders	Hazards Mitigated / Goals Addressed Flood Goal 5, 12, 14	Funding Sources and Estimated Costs Existing sources
Strategy Vision/Objective Flood insurance is the most important financial protection tool for a family against flood damage. Promoting flood insurance is important to help property owners and renters be prepared for flooding and reduce their financial risk.			
Mitigation Strategy Since homeowners and renter’s insurance policies do not cover flood damage, helping people understand that flood insurance is the best financial protection tool is an important strategy. Homeowners with a federally-backed mortgage are required to have flood insurance, so those who are required most likely have a policy. Renters and those who own their houses free and clear are far less likely to actively purchase a flood insurance policy. If their homes and apartments are flooded, they may have to drain savings to pay for the damage. Of all of the families that live in floodplains in King County, over 50% are renters, 14% own their house without a mortgage, and 35% own with a mortgage. Families living in floodplains are much more likely to be renters than those outside of the floodplain (only 40% of families outside of floodplains rent). Additionally, people of color living in the floodplain are even more likely to rent. Census data shows that 83% of African American families and 90% of Native Hawaiian or Pacific Islander families living in the floodplain are renters. So, promoting flood insurance should be primarily targeted toward renters and those who own their house outright. The strategy should also strive to incorporate concepts of equity and social justice in the approach and content of outreach.			
2-Year Objectives <ul style="list-style-type: none"> • Outreach plan developed via stakeholder committee. • Technical assistance contact identified. 	2-Year Objectives <ul style="list-style-type: none"> • Outreach plan developed via stakeholder committee. • Technical assistance contact identified. 	2-Year Objectives <ul style="list-style-type: none"> • Outreach plan developed via stakeholder committee. • Technical assistance contact identified. 	
Implementation Plan/Actions <ol style="list-style-type: none"> 1. Identify and convene stakeholder committee to help assess problem and create strategy for promoting flood insurance. 2. Develop and implement outreach plan that targets renters/tenants and those who own their home with no mortgage. 3. Identify a flood insurance technical assistance contact for King County residents and businesses to be able to ask questions. 			
Performance Measures <ul style="list-style-type: none"> • Number of flood insurance policies in force and percentage of covered buildings. • CRS points for Activity 370. 			

Enforce Higher Floodplain Management Regulations

Lead Points of Contact DLS Permitting Division; DNRP Water & Land Resources Division	Partner Points of Contact FEMA Region X, Washington Department of Ecology	Hazards Mitigated / Goals Addressed Flood Goal 5, 12, 14	Funding Sources and Estimated Costs Minimal, on-going <ul style="list-style-type: none"> Permit fees Existing resources
Vision Higher floodplain management regulations play an important role in ensuring future development in floodplains is as safe from flood risk as possible. For example, requiring that new buildings have their lowest floor elevated 3 feet above the 1% annual chance flood elevation means fewer flood losses and safer buildings. While instituting a regulation prohibiting development in floodprone areas would ultimately reduce future flood risk potential, the flood portion stakeholder committee decided not to include a development prohibition mitigation action due to likely political and community opposition.			
Description The King County Comprehensive Plan sets out a policy that regulations should follow the concept of “no adverse impact,” such that any particular development must not cause any effect to worsen flooding on another property owner. The key higher standards that do this include a requirement that all development in the entire floodplain meet a zero-rise requirement and a compensatory storage requirement for fill and other materials. This approach reduces any potential flood risk from new development. King County also has higher regulations that protect new or substantially improved buildings, including a requirement that the lowest floor be elevated to 3 feet above the 1% annual chance flood elevation.			
2-Year Objectives <ul style="list-style-type: none"> Demonstrate that King County is enforcing its higher standards by showing full compliance with the FEMA floodplain management audit. Establish stakeholder committee to review potential higher standards to include in King County Code. 	5-Year Objectives <ul style="list-style-type: none"> Submit to King County Council flood code amendments that include other higher standards. 	Long-Term Objectives <ul style="list-style-type: none"> Ensuring all potential development in floodplains meet flood-safe standards. 	
Implementation Plan/Actions <ul style="list-style-type: none"> King County agencies will continue to fully enforce the higher regulations currently in King County Code. King County will consider the following higher standards in future updates of the King County Code and will establish a stakeholder committee to evaluate the following: <ul style="list-style-type: none"> Prohibiting hazardous materials storage in the regulated flood hazard area to lessen potential health impacts from flooding. Requiring non-conversion agreement for structures built on crawlspaces or full-story enclosures to ensure fewer structures converted to unsafe and noncompliant conditions. Requiring building restriction agreements for properties that are removed from the floodplain via a Letter of Map Amendment to ensure freeboard standards are extended to properties surrounded by or close to the edge of the mapped floodplain. 			

- Establishing a cumulative or lower substantial improvement requirement to encourage more homes to be elevated.
 - Extending 1% annual chance flood requirements to the edges of the 0.2% annual chance floodplain to account for higher flooding events and the potential for increasing flood risks due to climate change.
 - Adopting standards to regulate development in areas likely to face increasing flood risks due to sea level rise to protect against future flood risk.
 - Establishing coastal high hazard area regulations that require permit applicants to demonstrate that their proposed action will not cause adverse impacts on other property owners, including the potential for wave energy reflection on to neighboring shoreline properties.
- The Floodplain Management Plan update will consider higher regulatory standards.
 - Adopt the latest version of the International Building Codes.

Performance Measure

- Fewer and less extensive flood damage during a major flooding event.
- More points in the FEMA Community Rating System category for higher regulatory standards.

Manage Flood Protection Facilities

Lead Points of Contact DNRP Water and Land Resources Division; King County Flood Control District	Partner Points of Contact US Army Corps of Engineers, local governments, levee and dam owners	Hazards Mitigated / Goals Addressed Flood, Earthquake Goal 5, 12	Funding Sources and Estimated Costs King County Flood Control District; Floodplains by Design
Strategy Vision/Objective Flood protection facilities should be managed in a way that foremostly considers residual flood risk. Alternative management practices should also incorporate improving natural floodplain functions.			
Mitigation Strategy Flood protection facilities include levees and revetments that provide some degree of flood and erosion protection depending on their design and maintenance. All flood protection facilities leave residual risk behind them and above their protection level. In certain areas of King County, flood protection facilities have reduced flood damage, but they have also facilitated growth in homes, warehouses, and businesses built behind them. The expanded neighborhoods and business activities are then more at risk of a 0.2% annual chance flood event or flooding from a levee failure, and if climate change increases the severity of flooding events, then the flood risk will grow. Thus, it is important for existing flood protection facilities to be managed well to protect property owners, but also for King County to where possible reduce areas that need to be protected with expensive flood protection facilities.			
2-Year Objectives <ul style="list-style-type: none"> Updated Floodplain Management Plan that reflects these priorities. 	5-Year Objectives <ul style="list-style-type: none"> Flood protection facilities are managed in way that considers multiple benefits. Fewer people face residual flood risk from being behind a flood protection facility. 	Long-Term Objectives <ul style="list-style-type: none"> Flood protection facilities are minimally needed for communities to be resilient. 	
Implementation Plan/Actions The following are strategies supported by the King County Flood Hazard Management Plan that should continue: <ol style="list-style-type: none"> 1. Where possible, King County should remove flood protection facilities and allow rivers to reconnect to their floodplains. 2. If flood protection facilities cannot be removed, King County should consider setting the facilities back to allow floodplain storage. 3. Utilize bioengineering in repairs, enhancements, or temporary measures. Bioengineering incorporates live plants and large wood in an effort to reduce flood velocities while protecting aspects of flood protection facilities. 4. Create criteria for when these flood protection facility alternatives would be utilized. 5. Create criteria based on King County Code and the Flood Hazard Management Plan for the conditions to construct a new flood protection facility or a new dam. 6. Ensure levees and dams are designed for earthquakes and are inspected immediately one. Flood protection facilities should also be continually managed considering seismic risks. 			
Performance Measures <ul style="list-style-type: none"> Number of properties and buildings in the levee-protected areas. Linear feet of flood protection facilities set back or removed. Flood protection facilities damaged by earthquakes. 			

Seismic Evaluation of King County Courthouse and Maleng Regional Justice Center

Lead Aaron Bert, Deputy Director Jim Burt, Capital Projects Section Manager	Partners N/A	Hazards Mitigated / Goals Addressed Goal 6 Goal 9	Funding Sources and Estimated Costs FEMA PDM, KC Capital Budget, \$200,000
Vision Seismic evaluation of the King County Courthouse and Maleng Regional Justice Center, per the current standards of FEMA-178 and ASCE 41-13, Seismic Evaluation and Retrofit of Existing Buildings. An updated assessment of building risks is needed for further seismic hazard mitigation planning and seismic retrofit, to protect and mitigate against potential loss of life, loss of asset, and loss of essential function capabilities during and immediately after an earthquake event.			
Description King County last completed a seismic hazard assessment of its essential facilities in 1993, based on building codes and seismic hazard protection data available at that time. Since then, earthquakes have produced unexpected and major infrastructure damage and loss of life from relatively small seismic events and have contributed to new data supporting major revisions to seismic mitigation strategies and building codes. An ASCE 41-13 seismic evaluation is the first step toward earthquake hazard mitigation. Evaluation findings will be used to plan, design, fund and construct needed seismic retrofit projects.			
2-Year Objectives <ul style="list-style-type: none"> Seismic evaluations, per the current standards of FEMA-178 and ASCE 41-13, Seismic Evaluation and Retrofit of Existing Buildings. 	5-Year Objectives <ul style="list-style-type: none"> Identify funding for planning, design and construction of all needed seismic retrofit measures. 	Long-Term Objectives <ul style="list-style-type: none"> Seismic retrofit to meet or exceed current standards of protection. 	
Implementation Plan/Actions <ul style="list-style-type: none"> Pre-Application submitted to Washington Emergency Management Division for a 2020 FEMA Pre-Disaster Mitigation grant for Advance Assistance. Draft and release RFP for complete building seismic evaluation. Based on evaluation findings and available funding, plan and budget building retrofit work and/or apply for future FEMA Building Resilient Infrastructure & Communities to fund seismic retrofit. 			
Performance Measure <ul style="list-style-type: none"> Achievement of Pre-Disaster Mitigation Advance Assistance grant, or feedback from WA EMD on strength of application, achievement of assessment in 2 years, achievement of retrofit project funding in 5 years. 			

Integrate ESJ into Mitigation, Response, and Recovery Activities

Lead Preparedness Senior Manager	Partners Office of Equity and Social Justice, Public Health SKC	Hazards Mitigated / Goals Addressed All Hazards Goal 2, 6, 10, 14	Funding Sources and Estimated Costs Existing Funding
Vision King County Emergency Management considers impacts and benefits to populations more likely to suffer damage or long recovery times during disaster mitigation, response, and recovery activities.			
Description Vulnerable populations, defined here as those more likely to suffer losses during disasters and recover more slowly afterward, should be a primary focus of an emergency management program. This is fully consistent with our charge of identifying and addressing the greatest sources of vulnerability. As part of this strategy, King County Emergency Management will identify vulnerable areas and develop action plans to ensure that populations more likely to suffer damage are prioritized in accordance with need. This includes prioritized mitigation projects to reduce risks, identification and prioritization of resources during response, and additional support and assistance to increase resilience and reduce recovery times after a disaster.			
2-Year Objectives <ul style="list-style-type: none"> • Develop a geospatial tool to ensure that resources are distributed equitably and according to need. 	5-Year Objectives <ul style="list-style-type: none"> • Implement prioritized mitigation strategies benefitting populations more vulnerable to hazards. 	Long-Term Objectives <ul style="list-style-type: none"> • Emergency management activities are prioritized according to a comprehensive understanding of vulnerability and need. 	
Implementation Plan/Actions <ul style="list-style-type: none"> • Expand identification sources of population vulnerability and likely impacts to vulnerable populations from different hazards. • Use identified priority languages to expand outreach and notification capabilities. • Compile a database of infrastructure vulnerability/inequity for use in mitigation, response, and recovery planning activities by working with KC GIS. • Increase outreach in priority areas with vulnerable populations by engaging with community partners through the preparedness program. Potentially mimic Seattle’s Ambassadors program. • Include insurance information in preparedness outreach. • Build a geospatial tool to track impacts and resource delivery during disaster response activities and develop ESJ objectives for EOC operations. • Develop SOPs for use during activations that ensure staff consider population vulnerability with or without requests from communities. Consider creating an ESJ-specific position or ESJ-specific position responsibilities for work within the EOC. • Work with county agency partners to prioritize projects that reduce risk in areas with vulnerable populations (as defined in this plan), including through planning efforts such as subarea plans. • Develop an infrastructure equity map. • Develop a hazard vulnerability component map to use in comprehensive planning. • Crosswalk climate risk and population vulnerability with SCAP actions. 			

Performance Measure

- # mitigation projects specifically benefitting vulnerable communities/populations
- KCEM did/did not identify potential needs in vulnerable communities, regardless of resource requests received from those communities.

Seismic Lifeline Route Resilience

Lead KC EM	Partners DLS PHSKC FMD DNRP	Hazards Mitigated / Goals Addressed Earthquake / Goal 4	Funding Sources and Estimated Costs Capital Budget FEMA HMA General Fund
Vision King County is able to conduct life-safety response and recovery operations throughout the county following a catastrophic Cascadia Subduction Zone or Seattle Fault earthquake.			
Description Following a major earthquake, at least three-quarters of all state-managed bridges will be inoperable for at least one-three months. This threatens the ability of responders to conduct life safety operations, for life saving resources to be distributed, and for communities to begin to transition to recovery. This strategy will build on state and federal assessments of transportation vulnerability to identify regional lifeline routes for King County and prioritize vulnerable segments for mitigation investments.			
2-Year Objectives <ul style="list-style-type: none"> • Convene a multiagency committee to develop a strategy • Identify potential lifeline routes and route vulnerabilities. 	5-Year Objectives <ul style="list-style-type: none"> • Develop a prioritized list of lifeline routes and submit to the Executive and Council 	Long-Term Objectives <ul style="list-style-type: none"> • Develop, maintain, and expand the resilient transportation lifeline. 	
Implementation Plan/Actions <ul style="list-style-type: none"> • KC EM will work with WSDOT, DLS, and others to review the completed RRAP for critical transportation and to identify potential seismic lifeline routes. Work with UW to verify RRAP results. • Based on identified lifeline routes, identify necessary mitigation to protect and expand those routes. • Prioritize investments based in part on population vulnerability and likelihood of self-sustaining for a longer period of time. • Continue this effort through the strategy identified by King County Roads to retrofit seismically-vulnerable bridges. 			
Performance Measure <ul style="list-style-type: none"> • Lifeline routes are identified • # projects completed to strengthen the seismic lifeline routes 			

Integrate Hazard Mitigation and Comprehensive Planning

Lead KC EM	Partners Office of the Executive DLS PSRC	Hazards Mitigated / Goals Addressed All / Goal 12 Goal 14	Funding Sources and Estimated Costs FEMA HMA Grants
Vision Comprehensive planning and regional initiatives like Vision 2050 account for hazard risk and the role that development patterns and climate change play in increasing hazard risk. These plans adopt policies and land use patterns designed to limit hazard risk.			
Description The most cost-effective mitigation measures are those that prevent the creation of risk through codes and development standards. At present, hazards are barely mentioned in most countywide/region wide planning documents. This strategy seeks to increase the integration between mitigation, response, and recovery concerns and major land-use policies and plans, including the Growth Management Act, PSRC Visions, and the Comprehensive Plan.			
2-Year Objectives <ul style="list-style-type: none"> • Provide comments on Vision 2050 updates. • Provide feedback on 2020 Comp Plan policies 	5-Year Objectives <ul style="list-style-type: none"> • Fully participate in the next major update of the comprehensive plan, ensuring hazard risk and risk reduction is represented throughout. 	Long-Term Objectives <ul style="list-style-type: none"> • Integrate hazards into desired planning and development outcomes. 	
Implementation Plan/Actions <ul style="list-style-type: none"> • Work with planning agencies to identify a list of areas where hazard information would be helpful in designing good policies. • Socialize the concept of integrating hazard mitigation and comprehensive planning by attending regional meetings around the GMA and Comprehensive Plan as well as of City Manager and Planning Director groups. • Look into developing a land-use tool platform similar to Colorado’s planningforhazards.com page and that identifies tools that can be used to reduce hazard risk, such as purchase of development rights. • Add hazard mitigation policies and strategies to the King County countywide planning policies to be updated in 2020. • Integrate concepts of social vulnerability into comprehensive planning efforts in order to promote the use of comprehensive planning to both reduce hazard risk and build equity. • Participate in WA Commerce and FEMA-led activities on how to consider hazards in comprehensive planning. 			
Performance Measure <ul style="list-style-type: none"> • # of countywide planning policies addressing natural and manmade hazards. 			

Engage Community Organizations in Emergency Management

Lead KC EM	Partners Public Health SKC	Hazards Mitigated / Goals Addressed All / Goal 12 Goal 14	Funding Sources and Estimated Costs FEMA HMA Grants
Vision Increase the participation of communities to identify local preparedness priorities and opportunities to do hazard mitigation, risk prevention, and community preparedness activities through the creation of “community resiliency networks” using a model similar to the Public Health community health networks. Use feedback from these community groups to influence response planning and prioritization, including for catastrophic response and recovery planning.			
Description Emergency planning typically underutilizes existing community capabilities and undervalues the resilience built into many communities, especially those that are marginally represented or of lower-income. Examples from around the country point out that a partnership with individuals and organizations from these communities can result in better emergency management, reduced risk, aid in more rapid recovery, and even improve day-to-day quality of life indicators. King County Emergency Management will partner with other agencies to work more closely with communities to identify opportunities to strengthen the 14 Determinants of Equity through mitigation, establish response needs, recovery priorities, and account for community capabilities that can be valuable during disasters.			
2-Year Objectives <ul style="list-style-type: none"> • Bring together agencies to identify potential community partners for emergency management. • Complete a community capability map. • Complete an infrastructure equity map. 	5-Year Objectives <ul style="list-style-type: none"> • Establish community priorities for each mission area and ensure those priorities are executed through plans and actions. 	Long-Term Objectives <ul style="list-style-type: none"> • Sustain a community equity in emergency management coalition. 	
Implementation Plan/Actions <ul style="list-style-type: none"> • Develop tools to identify areas of inequity in emergency management, including for outreach, language support, and the quality of public infrastructure and services that may be damaged during a disaster. • Investigate developing a community equity committee for emergency management similar to those used by King County Parks and Metro. • Work with Public Health SKC and other agency partners to expand the Trusted Partners Network identify potential community organization partners with whom KC EM could engage to learn more about capabilities and gaps. • Record community-identified mitigation and preparedness priorities and invest in them. 			
Performance Measure <ul style="list-style-type: none"> • King County Emergency Management has prioritized/carried out # of community-identified actions. 			

Climate Integration Training

Lead KC EM	Partners DNRP Local Jurisdictions	Hazards Mitigated / Goals Addressed All Hazards	Funding Sources and Estimated Costs Existing Staff Time
Vision All jurisdictions consider climate and climate-induced hazard impacts in their planning.			
Description The King County Hazard Regional Hazard Mitigation Plan provides a framework for local and regional action to reduce the impacts of natural and human-caused hazards in King County. Many of the natural hazards covered in the Plan, including flooding, wildfire, and landslides, are exacerbated by climate change. Building from work initiated in the 2019-20 Plan update, the Office of Emergency Management will host trainings with partner jurisdictions on incorporating climate change into hazard mitigation. The trainings will include information on how climate change affects natural hazards in King County; how to evaluate and adjust hazard mitigation strategies to account for climate impacts, including the potential for disproportionate impacts on frontline communities; and best practices for sharing information about climate risks with the public.			
2-Year Objectives <ul style="list-style-type: none"> Develop training plan/curriculum Conduct training 	5-Year Objectives <ul style="list-style-type: none"> Host periodic trainings and integrate climate considerations into classes or seminars on wildfires, severe weather, and planning. 	Long-Term Objectives <ul style="list-style-type: none"> N/A 	
Implementation Plan/Actions <ul style="list-style-type: none"> Work with SCAP team to develop climate planning training curriculum. Identify and schedule opportunities to host climate trainings for King County and constituent jurisdictions. Host trainings during mitigation plan update meetings, winter weather seminars, wildfire seminars, and other related opportunities that bring local and county staff together to discuss hazards that are impacted by climate change. 			
Performance Measure <ul style="list-style-type: none"> # trainings hosted 			

Disaster Skills Risk Reduction Training

Lead KCEM Public Outreach Program Manager	Partners Community Outreach Workgroup Zone Coordinators King County Libraries PHSKC	Hazards Mitigated / Goals Addressed All Hazards Goal 6 Goal 14	Funding Sources and Estimated Costs EMPG, UASI, SHSP
Vision King County Emergency Management delivers the county’s disaster education, and provides year-round free training and education to county employees, residents, and organizations/businesses via several programs and activities aimed at promoting personal and community risk reduction.			
Description Disaster Skills Risk Reduction Training will provide education on natural and man-made hazards that are present and could occur in King County and ways to mitigate and reduce impacts in addition to increase community disaster preparedness, self-sufficiency, and protection of property.			
2-Year Objectives <ul style="list-style-type: none"> Complete one Basic Disaster Skills Trainings (General Preparedness/Risk Reduction) within each jurisdictions/unincorporated area in King County. Train at least 1,500 residents through Basic Disaster Skills Trainings and MYN Facilitator Trainings. 	5-Year Objectives <ul style="list-style-type: none"> Complete Advanced Disaster Skills Trainings (Fire Safety & Bleeding Control) within each jurisdictions/unincorporated area in King County. Train at least 2,500 residents in advanced skills such as fire extinguisher and bleeding control Train at least 50 individuals to serve as instructors for their respective organization, community, department, or jurisdiction. 	Long-Term Objectives <ul style="list-style-type: none"> Maintain consistent outreach to high-risk communities. Maintain consistent advanced disaster skills risk reduction trainings. 	
Implementation Plan/Actions <ul style="list-style-type: none"> Hold two trainings a month at the King County Libraries or with local jurisdictions Connect with the Seattle King County Public Health Ethnic-centric boards and ESJ newsletter for trusted partners to support sharing events and training opportunities. Hold four quarterly workshops for public educators to provide continuing education for community engagement specialists and public education and outreach coordinators. Modify outreach efforts to mirror need so that 80% of outreach goes to the 20% of the population at highest risk. Look into partnering with public health to teach post-disaster environmental health risk reduction skills, including emergency drinking water, toxin exposure reduction, etc. 			
Performance Measure <ul style="list-style-type: none"> Using sign-in sheets, keep track of how many individuals are attending Basic and Advanced trainings Social Media hits Ethnic social media connections 			

Dam Failure Risk and Impact Reduction

Lead KC EM Dam Safety Program Coordinator	Partners DNRP, WLRD DNRP, Rivers WA Dept of Ecology, Dam Safety Office WRIA 8 WRIA 7 Salmon Recovery Funding Board Tribes Local Jurisdictions	Hazards Mitigated / Goals Addressed Dam Failure / Goal 5 Goal 6 Goal 12 Goal 14 Supplemental Goal 15	Funding Sources and Estimated Costs FEMA Rehabilitation of High Hazard Potential Dam Grant Program King County Flood Control District FMA PDM Various Salmon & Environment Recovery Grants
Vision Lower the risk and impacts of dam failure in King County.			
Description Washington State Dam Safety Office will identify high and significant hazard dams that are in poor condition. King County will gather information from other sources about low hazard dams of interest. King County will assist in seeking alternative funding structures to lower the risk of failure. Additionally, King County will seek alternative funding structures to decommission identified dams that threaten environmental resources. Lastly, resources will be sought to strengthen the integrity and security of high and significant hazard dams in the County that are not feasible to remove.			
2-Year Objectives Identify dams in King County that are assessed to be in poor condition by the Washington State DSO and identify funding structures to mitigate their risk. Begin dam removal projects.	5-Year Objectives Eliminate the risk associated with all dams in the County assessed to be in poor condition by the Washington State DSO.	Long-Term Objectives Decommission dams that have outlived their functional use, but still remain operational and pose a threat to the County.	
Implementation Plan/Actions <ul style="list-style-type: none"> Washington State DSO will identify poor condition dams in the County and rely them to KCEM. KCEM will work with DNRP, local jurisdictions, and tribes to identify potential funding/mitigation strategies. Ensure vulnerable populations are accounted for in outreach and risk assessments. Where applicable, KCEM will assist in grant application development and administration. 			
Performance Measure <ul style="list-style-type: none"> Number of mitigation actions for high hazard and significant dams that are in poor condition dams. Number of dams removed. Number of dams with lowered hazard classification through mitigation actions. 			

Wildfire Preparedness and Risk Reduction

Lead KC EM, Hazard Mitigation	Partners DNRP, WLRD, DNRP, Parks, DLS, Permitting KC Fire Districts, WA DNR, King Conservation District, Tribes, USFS, KC Climate Preparedness Public Health Seattle-KC	Hazards Mitigated / Goals Addressed Wildfire / Goal 3 Goal 5 Goal 12	Funding Sources and Estimated Costs Existing Resources
Vision As King County grows, and awareness of climate change-driven wildfire risk grows, King County has a coordinated strategy to support individuals and local jurisdictions in identifying and managing wildfire risk, including risk to property and public health.			
Description Partner with King County communities, fire districts, and other organizations to develop an integrated King County strategy for wildfire. The strategy will review current efforts to address wildfire risk in King County and develop recommendations for addressing identified gaps and opportunities. These recommendations will be carried out through a coordinated Firewise technical assistance program, likely led by DNRP. This effort will be coordinated with a SCAP action seeking a similar outcome. This strategy will be based in part on the results of WA DNR effort to map the Wildland Urban Interface in King County.			
2-Year Objectives <ul style="list-style-type: none"> • Convene a multiagency committee to develop a strategy • Request funding for outreach 	5-Year Objectives <ul style="list-style-type: none"> • Implement the strategy through coordinated technical assistance between the county and local communities 	Long-Term Objectives <ul style="list-style-type: none"> • Maintain consistent outreach to potentially-impacted communities. 	
Implementation Plan/Actions <ul style="list-style-type: none"> • KC EM will work with DNRP, WLRD and the Climate Preparedness team to identify partners. • Continue to partner with WA DNR and DLS to map WUI areas – ultimately use this map to target strategy priorities. • Socialize results of WUI mapping efforts with comprehensive plan staff and look into planning policies that could limit density or development in fire-prone areas. • Convene multiagency committee once WA DNR WUI maps are closer to being finalized • Identify existing preparedness actions and gaps, including areas that are/are not receiving Firewise outreach and support. • Develop wildfire preparedness and mitigation coordination strategy and socialize it. • DNRP to request \$150k funding for an additional FTE to support Firewise efforts. • Look into model codes, ordinances, or other strategies to promote in addition to Firewise. • Host an annual tabletop at the wildfire workshop held each year by KCEM. 			
Performance Measure <ul style="list-style-type: none"> • KC EM was successful/not successful in convening <i>all</i> the necessary partners to establish a unified strategy for community wildfire preparedness and risk reduction. 			

Hazard Mitigation Assistance Grant Support

Lead KC EM	Partners WA EMD Local Jurisdictions	Hazards Mitigated / Goals Addressed All / Goal 10	Funding Sources and Estimated Costs FEMA HMA Grants
Vision Hazard Mitigation Assistance grants go to the communities and projects most needed and more effective at reducing risk, regardless of a community’s internal capacity to administer federal grants.			
Description With the passage of the Disaster Recovery Reform Act (DRRA) in 2018, the amount of federal grant funding for hazard mitigation will top \$300-700 million annually, at least a 3-fold increase over historical averages. For 2019, grants of up to \$4 million, federal cost-share, will be available. The experience-barrier to seeking these grants has prevented jurisdictions and county departments from applying. King County Emergency Management is establishing a grant assistance program to lower these barriers by providing support in administering FEMA grants. To pay for this service, King County will leverage local management costs, provided to grant recipients.			
2-Year Objectives <ul style="list-style-type: none"> Publish assistance guidelines and implement at least one test case. 	5-Year Objectives <ul style="list-style-type: none"> Expand local capacity to administer grants. Expand KC EM capacity to support on application development 	Long-Term Objectives <ul style="list-style-type: none"> Communities that need grants consistently are able to seek them, regardless of internal capacity. 	
Implementation Plan/Actions <ul style="list-style-type: none"> Administer FEMA grants - King County will administer grants, to include submitting reimbursements and documentation, completing quarterly reports, and managing grant kickoff and closeout. Provide application technical assistance - King County will, as time allows, provide support and technical assistance in developing applications. Jurisdictions will take the lead in application development. King County may provide more support in the future. Establish a process to collect documentation and reimburse expenditures - King County will establish a process to identify and track expenditures, and collect documentation necessary for submission to FEMA and the State. King County will work with partners to ensure this process is clear and straightforward. Develop an interlocal agreement process - King County will develop and establish an internal sub-award agreement process that lays out expectations for both parties in successfully administering the grants and completing mitigation projects. Look into other fund sources post-disaster and accelerate projects like flooded home buyouts before rebuilding occurs. 			
Performance Measure <ul style="list-style-type: none"> # Grants administered on behalf of other agencies/communities. 			

Public Assistance Grant Support

Lead KCEM Business & Finance Officer	Partners King County Public Assistance Team membership	Hazards Mitigated / Goals Addressed All	Funding Sources and Estimated Costs FEMA 406 Mitigation
Vision Post-Disaster Recovery following a Presidentially Declared Disaster will include taking full advantage of the utilization of 406 Hazard Mitigation funding made available exclusively to eligible agencies within a qualifying jurisdiction.			
Description The federal Public Assistance (PA) Disaster Recovery Grant Program supports governmental and government-type agencies recovery from major disaster declared by the President. While billions of PA grants are provided and provide significant support to recovering agencies; mitigating future occurrences of similar nature supports and strengthens resiliency on a long-term basis. The recognition of this is carried out through the provision of 406 Hazard Mitigation funds which are only available to agencies to mitigate damages suffered from a Presidentially Declared Disaster. These funds are added to Project Worksheets for PA Grant funds. King County Emergency Management serves as the County’s Applicant Agent for PA and oversees the disaster financial recovery efforts for King County government agencies. This strategy seeks to increase the number of 406 Hazard Mitigation projects added to Public Worksheets to increase King County government resilience in all county agencies.			
2-Year Objectives <ul style="list-style-type: none"> • Provide the KC PA Team (KCPAT) education and outreach on the 406 Hazard Mitigation Grant Program. • 50% of all impacted eligible KC government agencies will identify at least one mitigation project for each PA PWs to mitigate/prevent/eliminate future damage directly attributable to the declared disaster. 	5-Year Objectives <ul style="list-style-type: none"> • 75% of all impacted eligible KC government agencies will identify at least one mitigation project for each PA Project Worksheet to mitigate/prevent/eliminate future damage directly attributable to the declared disaster. 	Long-Term Objectives <ul style="list-style-type: none"> • 95% of all impacted eligible KC government agencies will identify at least one mitigation project for each PA Project Worksheet to mitigate/prevent/eliminate the damage directly attributable to the declared disaster. 	
Implementation Plan/Actions <ul style="list-style-type: none"> • Prepare training materials on 406 Hazard Mitigation Program • Conduct trainings for the King County Public Assistance Team • DNRP will train operations and engineering staff in the assessment of earthquake damaged facilities. A WTD specific ATC- 20 class will be conducted in early 2020 for operations and engineering staff. Response guides and ATC-20 placards for post-earthquake inspection and FEMA cost tracking forms are being placed in all offsite facilities. • Develop a KCPAT Disaster Recovery Financial Management Plan • Develop KCPAT Disaster Recovery Profiles • Represent and support each KCPAT agency during post-disaster recovery process 			

- Work with each impacted agency during a declared disaster to identify eligible 406 HM project(s)

Performance Measure

- # of KCPAT members receiving training/outreach
- # of 406 Hazard Mitigation Projects funded
- % of Impacted King County government agencies receiving a 406 Hazard Mitigation Project
- Identify local cost-share opportunities, including the flood control district.

Language Accessible Video Emergency Messaging

Lead Risk Communications Specialist Public Health Seattle & King County, Office of the Director	Partners King County OEM	Hazards Mitigated / Goals Addressed All-Hazards Goal 6	Funding Sources and Estimated Costs \$100,000 +
Vision Increase the inventory of pre-scripted and translated language accessible materials for public health emergencies to aid in the rapid dissemination of public information and warning for all-hazards. Using audio-video media, increase the reach of emergency messaging for individuals with English as a second-language and persons who use American Sign Language (ASL).			
Description 28.5% of King County citizens are speakers of a non-English language and in some local language communities, there is also a low rate of literacy in the spoken language. This mitigation strategy aims to develop language accessible materials in an audio-video format to assist in public information and warning for known hazards within King County. By providing emergency messaging in an audio-video format, King County will be able to provide equitable access to culturally appropriate emergency messaging for individuals who do not read (in English or in their spoken language) and individuals with language access needs (including individuals who speak American Sign Language). This mitigation strategy will aid in the rapid dissemination via web and social media of critical life-safety/risk reduction emergency messaging to all persons present in King County in the event of an emergency.			
2-Year Objectives <ul style="list-style-type: none"> Secure videographer Secure and train ASL interpreter service and spokespeople from language communities Develop language accessible emergency messaging using audio-video format Conduct trial runs for language accessible emergency messaging 	5-Year Objectives <ul style="list-style-type: none"> Implement language accessible emergency messaging for public use Conduct public awareness campaign to socialize language accessible emergency messaging 	Long-Term Objectives <ul style="list-style-type: none"> Reduce delays in issuing language accessible/translated emergency messaging 	
Implementation Plan/Actions <ul style="list-style-type: none"> Identify, script, and translate/transcreate emergency messaging for key hazards Issue request for proposals for content videographer and interpreter services (including American Sign Language) Film and produce language accessible emergency messaging content Engage communities in review and testing of language accessible emergency messaging Implement language accessible emergency messaging for public use and dissemination Conduct public awareness campaign to socialize language accessible emergency messaging Develop a social media strategy to support the accessible video tools. 			
Performance Measure <ul style="list-style-type: none"> Time for issuance/public broadcasting of language accessible emergency messaging during emergency activation(s) 			

King County Facilities Indoor Air Quality Monitoring Network

Lead Environmental Health Emergency Response Planner Public Health – Seattle & King County	Partners King County Facilities Maintenance Division	Hazards Mitigated / Goals Addressed Wildfire Smoke Goal 2, 12	Funding Sources and Estimated Costs \$100,000
Vision Develop and implement network of indoor air quality monitoring devices in King County operated facilities to ensure the health and safety of King County employees during periods of poor air quality due to wildfire smoke inundation.			
Description Procure and deploy 280 Dylos DC1100 true laser particle counters (indoor air quality monitors) across 28 facilities owned and/or managed by King County to aid in continuity of operation decision making during periods of poor air quality during wildfire smoke events. Indoor air quality network would enable the county to make informed decisions regarding the health and safety of employees working in county owned/managed facilities and base facility closure decisions along established state recommended action thresholds for PM2.5 levels. The Dylos DC1100 systems are portable units that run at an estimated cost of \$260.99 per unit and have the capability of relaying recorded PM levels to a central computer for active indoor air quality monitoring via integrated system telemetry.			
2-Year Objectives <ul style="list-style-type: none"> • Procurement of Dylos DC1100 indoor air quality monitors • Deployment of Dylos DC 1100 indoor air quality monitors across 28 king county owned/managed facilities • Establishment of centralized computer telemetry system for active monitoring of indoor air quality network • Increase situational awareness regarding indoor air quality of King County facilities during wildfire smoke events 	5-Year Objectives <ul style="list-style-type: none"> • Assess indoor air quality performance of King County facilities during wildfire smoke events • Identify mitigation strategies to further improve indoor air quality of King County facilities during wildfire smoke events • Improve the overall indoor air quality performance of King County facilities during wildfire smoke events 	Long-Term Objectives <ul style="list-style-type: none"> • Increase situational awareness regarding indoor air quality of King County facilities during wildfire smoke events • Increase the overall air quality performance of King County facilities during wildfire smoke events to aid in maintaining continuity of operations during periods of poor air quality 	

Implementation Plan/Actions

- Procurement of Dylos DC1100 indoor air quality monitors
- Deployment of Dylos DC1100 indoor air quality monitors across 28 King County Facilities
- Establish centralized computer telemetry system for active monitoring of indoor air quality monitoring network
- Assess the performance of each King County facility during periods of poor air quality due to wildfire smoke
- Determine if facility closures are warranted based upon state recommended air quality action thresholds during periods of wildfire smoke inundation
- Identify subsequent indoor air quality mitigation recommendations for improving facility performance during wildfire smoke events

Performance Measure

- Prioritization of facilities warranting further indoor air quality mitigation actions to improve performance during periods of poor outdoor air quality
- Development of indoor air quality mitigation recommendations for prioritized facilities

Medical Gas Seismic Detection & Emergency Shut Off

Lead PHSKC – Environmental Health Services Division, Community Environmental Health Section	Partners Harborview Medical Center	Hazards Mitigated / Goals Addressed Earthquake Goal 2, 12	Funding Sources and Estimated Costs ≤\$500,000
Vision Reduce the disruption to level 1 trauma centers in King County following the event of a large earthquake by retrofitting level 1 trauma centers with medical gas seismic detection and emergency shut off systems.			
Description Harborview Medical Center is the only level 1 trauma center within King County and the State of Washington. In the event of a large earthquake impacting the Puget Sound region, disruptions to medical gas piping and delivery systems can significantly increase the recovery time to resume operations. This strategy proposes retrofitting the medical gas piping and delivery systems with early warning seismic detection and emergency shut off valves in order to increase the capability of rapid restoration of medical services following the event of a large earthquake in order to expedite the restoration of life saving operational capacity.			
2-Year Objectives <ul style="list-style-type: none"> Fund feasibility study Select consultants to complete study 	5-Year Objectives <ul style="list-style-type: none"> Update medical gas piping and plumbing code to require seismic detection and emergency shut off valves for Level 1 trauma centers. 	Long-Term Objectives <ul style="list-style-type: none"> Expedite the restoration of critical life-saving operational capacity for trauma centers with a level 1 designation. 	
Implementation Plan/Actions <ul style="list-style-type: none"> Allocate funding to conduct a feasibility study for seismic detection and emergency shut off valve upgrades for level 1 trauma centers in King County Issue Request for Proposal to contract conduct of feasibility study Based upon findings of feasibility study, update medical gas piping and plumbing code to require seismic detection and emergency shut off valves for medical gases for level 1 trauma centers. 			
Performance Measure <ul style="list-style-type: none"> Completion of a feasibility study assessing cost-benefit outcome for seismic detection and emergency shut off valve system upgrades Update medical gas piping and plumbing code to require seismic detection and emergency shut off valves for level 1 trauma centers. 			

City of Mercer Island Jurisdiction Plan Annex

Introduction

The following is a summary of key information about the jurisdiction and its history:

- **Location and Description** - Mercer Island is just over five miles long and two miles wide and lies in the southern section of Lake Washington east of the City of Seattle and west of the City of Bellevue. The Island is 6.2 square miles of land area. There are several exits from I-90 to Mercer Island with four main roads on the island. Island Crest Way runs north/south down the middle of the island. West Mercer Way follows the shoreline from the north/south on the west side of the island with steep slopes, ravines and gullies. East Mercer Way follows the shoreline from the north/south on the east side of the island. North Mercer Way follows the shoreline from the east/west on the north side of the island. The Town Center (Central Business District) is centered on the north end of the island south of I-90, and a smaller business district is on the south end. The Town Center is a 76-acre bowl-shaped area that includes the Island's main post office, the main Fire Station (Station 91), medical and dental offices, drug stores, restaurants and coffee shops, apartment houses and condos, service stations, a bookstore, several retirement homes, two supermarkets, office buildings, and banks. The South End Village is just across the road from Pioneer Park with 120 acres of woods and trails, including horse trails. The Village includes several businesses: a post office, gasoline station, retail and service businesses. It also includes a Park 'n Ride for metro bus commuters. Abutting the Village is Mercer Island's second fire station: Fire Station 92 (South Fire Station). Mercer Island boasts 467 acres of parklands and open spaces that feature ball fields, extensive bike trails and picnic areas. In addition, there are more than 150 miles of marked walking trails. The bridge linking Mercer Island to Seattle is the renowned multi-lane Mercer Island Floating Bridge. The East Channel Bridge links the island to Bellevue, the State's third most populous city.

- **Brief History** - Settlement of the Island by non-Native Americans began in the late 1870s. The Island is named after one of the three pioneering Mercer brothers from Illinois, all of whom had great influence in the Seattle area. Although none of the brothers lived on Mercer Island, they would often hunt in and explore throughout the island's secluded forests. The early settlers traveled by rowboats to the neighboring community of Seattle to pick up necessities. An occasional tramp steamer would drop off items that were too large to transport by rowboat. Because of the inconveniences of island living, settlement lagged until C.C. Calkins platted the town of East Seattle, having purchased 160 acres; nearly three percent (3%) of the island's total acreage. In 1891 he built a luxurious resort on the western side of the island, which spurred the building of a ferry dock, and small steamers

Jurisdiction Profile

The city of Mercer Island...

- **Date of Incorporation**
July 5, 1960
- **Full-Service City**
Police, Fire, Parks & Recreation, Water, Sewer & Stormwater Utilities, & Youth & Family Services
- **Location**
Between Seattle and Bellevue in Lake Washington
- **Area**
Just over five miles long and two miles wide
- **Parks & Open Space**
Over 35 parks and open space areas boasting over 400 acres and trails in excess of 50 miles
- **Current Population**
25,261 as of 2017
- **Population Growth**
Population increased from 22,699 residents in 2010 to 25,261 in 2017.

began to make regular trips. This availability of transportation attracted more residents. Ferry travel continued until July 2, 1940 when the floating bridge from Mercer Island to Seattle was opened.

- **Climate** - Mercer Island enjoys the mild climate prominent in the Puget Sound Region. The average winter temperature is 40 degrees Fahrenheit and the average summer temperature is 70 degrees Fahrenheit. The average annual rainfall is 35 inches with half typically falling within the months of October and January.
- **Governing Body Format** - The City of Mercer Island has a Council-Manager form of government with seven City Councilmembers, who are all elected at large for staggered four-year terms. The Council elects the Mayor from its members. The City Manager is appointed by, reports directly to, and serves at the pleasure of the City Council. . The City Manager, who serves as the chief executive officer, is responsible for implementing the policies and goals of the City Council and provides leadership, coordination and development of 10 City departments: Police, Fire, Public Works, Human Resources, City Attorney’s Office, City Manager’s Office, Community Planning & Development, Youth and Family Services, Finance and Parks and Recreation. The City of Mercer Island City Council assumes responsibility for the adoption of this plan; the Emergency Manager will oversee its implementation.
- **Development Trends** – Population has changed minimally in the past two decades due mainly to the geographic limitations of the Island. The risks have also remained the same with science showing Mercer Island still situated on the Seattle Fault. Risks from earthquake damage, severe winter storms, volcano eruptions, landslides and wildfires are still a concern and planned for by the city. Anticipated development levels for Mercer Island include low to moderate development consisting primarily of residential units. The majority of recent development has been mixed-use, low rises with retail shops located on the ground level and residential units above. There has been minimal infill development. The City of Mercer Island’s City Emergency Management Plan was updated and approved by Washington State Emergency Management Division and FEMA March of 2018. City actions, such as those relating to land use allocations, zoning subdivision and design review, redevelopment, and capital improvements, must be consistent with such a plan.

City of Mercer Island Risk Summary

Hazard Risk and Vulnerability Summary

HAZARD	ASSET RISK	VULNERABILITY	IMPACT ON COMMUNITY
Earthquake	1. Station 91 Fire Door	Unable to open	Fire Apparatus cannot respond to emergencies
	2. MICEC generator	Not able to support shelter site and back up City Hall	Unable to shelter residents or maintain city operations
	3. Roadway damage	Roadways impassable	Emergency Vehicles unable to respond
	4. City Hall Columns	May collapse, cause damage to west wing of City Hall & EOC entrance to be blocked	City Hall function limited and EOC may be inaccessible
	5. Luther Burbank Boiler chimney	Chimney is not to code and may collapse	Risk to public from falling brick
	6. City-owned docks	May be unusable from damage	Marine Patrol limited in response/supplies unable to be offloaded
	7. City's fiber infrastructure	Unable to link critical facilities and provide failover communications	City operations affected
	8. Water and Sewer lines	May fail in earthquake – need redundant lines	Community water and sewer impacted
	9. Drinking water	No current Emergency Well on South end of Mercer Island	Drinking water availability for South Island residents limited
	10. Stormwater pipe	Damage may cause stormwater pipes to fail	Urban flooding for residents
Severe Winter Weather	2. MICEC generator	May not be able to support shelter site and back up City Hall	Unable to shelter residents or maintain city operations
	3. Roadway damage	Roadways impassable	Emergency Vehicles unable to respond
Landslide	3. Roadway damage	Roadways impassable	Emergency Vehicles unable to respond
Severe Weather (non-winter)	2. MICEC generator	May not be able to support shelter site and back up City Hall	Unable to shelter residents or maintain city operations
Wildfire			
Seiche	6. City-owned docks	May be unusable from damage	Marine Patrol limited in response/supplies unable to be offloaded
	8. Water and Sewer lines	May fail in earthquake – need redundant lines	Community water and sewer impacted
Volcano

Assets at Risk

ASSET	VALUE (\$)	RISK SUMMARY	VULNERABILITY SUMMARY	IMPACT - HISTORICAL
1. Station 91 Fire Doors	400K	Unable to open	Fire Apparatus cannot respond to emergencies	Public may not be served in emergency
2. MICEC generator	500K	May not be able to support city operations if needed as back up city hall – needed as shelter site as well	Unable to maintain city operations and shelter site	City government may be compromised
3. Roadway Damage	15M	Roadways impassable	Emergency Vehicles unable to respond	Public may not be served in emergency
4. City Hall Columns	30K	May collapse, cause damage to west wing of city hall and EOC entrance to be blocked	City hall function limited and EOC may be inaccessible	Unable to manage disasters
5. Luther Burbank Boiler chimney	250K	Chimney is not to code and may collapse	Risk to public from falling brick	Public may be injured
6. City owned docks	7M	May be unusable from damage	Marine Patrol limited in response/supplies unable to be offloaded	Limited water response
7. City's fiber infrastructure	1.4M	Unable to link critical facilities and provide failover communications	City operations affected	limited communications
8. Water and Sewer lines	15M	May fail in earthquake – need redundant lines	Community water and sewer impacted	Limited or no water/sewer
9. Drinking water	4.2M	No current Emergency Well on South end of Mercer Island	Drinking water availability for South Island residents limited	Limited water to south end of MI
10. Stormwater pipe	2.5M	Damage may cause stormwater pipes to fail	Urban flooding for residents	Homes/streets may see urban flooding

Plan Update Process

The City of Mercer Island participated in the multi-jurisdictional planning process led by King County by participating in the HMP steering committee that met monthly. Additionally, the MI planning team met in person, over email and phone the hazards, mitigation strategies and projects that could most benefit Mercer Island. Once this information was compiled it was presented to the public for comment. Two events listed below were used to capture public comment. Once that information was compiled it was incorporated into the Mercer Island HMP Annex. Each team member below provided a mitigation strategy to address a known hazard. This annex once compiled was review by city staff and King County for accuracy.

Jurisdiction Planning Team

NAME	TITLE	ORGANIZATION	CONTRIBUTION
Jennifer Franklin	Emergency Manager	MI Police	Write Plan
Jason Kintner	Public Works Director	MI Public Works	HM Strategy
Evan Maxim/Don Cole	CPD Director/Inspector	MI DSG	HM Strategy
Ali Spietz	Asst. to the City Mgr.	MI CM	HM Strategy
Steve Heitman	MI Fire Chief	MI Fire	HM Strategy
Ryan Daly	MI Parks Director	MI Parks	HM Strategy
Alfredo Moreno	MI Senior Systems Mgr.	MI IGS	HM Strategy
Marcy Olson	Facilities Manager	MI Finance	HM Strategy

Plan Update Timeline

PLANNING ACTIVITY	DATE	SUMMARY	ATTENDEES
Start Up meeting with KC	03/11/2019	KC and region met to discuss plan agenda and goals	EM's, King County and special purpose districts
Meeting with Leadership Team	04/03/2019	Went over Plan schedule and expectations with strategies and outreach	Jennifer Franklin, Jason Kintner, Ali Spietz, Mike Mandella, Alfredo Moreno, Jessi Bon, Ed Holmes
First public outreach	06/22/2019	June 22 at EM Fair, where strategies were presented for public comment	Jennifer Franklin, Ed Holmes, Emergency Volunteers, Public
Second Public outreach	07/08-8/26/2019	On line survey that reached 600 people	Anonymous – 36 comments
Strategy Forms Completed	08/19/2019	Key staff completed strategy forms	Staff listed in Planning Team
Draft Plan to Directors for review	09/09/2019	Draft Plan was sent to Ali, Jessi and Ed for review	Ali Spietz, Jessi Bon and Ed Holmes
Draft Plan Presented to City Council	09/17/2019	Presented draft plan to city council	Jennifer Franklin, City Council, Jessi Bon, Ed Holmes, Ali Spietz, Public
Draft Plan to King County for review	09/30/2019	Sent to King County for review	Derrick Hiebert
Final Plan Presented to City Council	April of 2020	Final Plan will be presented at City Council Meeting for approval	Jennifer Franklin, City Council, City Staff

Public Outreach Events

EVENT	DATE	SUMMARY	ATTENDEES
Booth at EM Prep Day	Sat. June 22, 2019	Public Input on most vulnerable hazards and effected assets	All
“Let’s Talk” community engagement	July 8-August 26	Input from community on prioritization of mitigation projects previously identified by staff to be focused on over the next 5 years	All

Two engagement opportunities for public comment on identified risks and mitigation projects.

- **June 22** - Emergency Preparedness Fair which asked for public to comment on the below document; identifying which “Factors” were supported by the proposed project idea and then rank the project based on the public’s view of its priority. (13 comments from public)
- **July 8 - August 26** - Online Survey that again asked the public to rank the mitigation project based on what they considered the highest priority. (36 comments from public) The HMP page is the second highest project on Let’s Talk for engaged participants. The HMP survey has the most contributors of all surveys on Let’s Talk.

Tool Used to Prioritize Mitigation Projects. For both events the public was asked using the factors below to prioritize the project from 1 (being highest) to 10 (being lowest) and only using a number once what project they believed should be addressed first.

MERCER ISLAND HAZARD MITIGATION PLAN 2020 UPDATE PUBLIC COMMENT TO PRIORITIZE MITIGATION PROJECTS				
MERCER ISLAND NATURAL HAZARDS:				
Earthquake Severe Winter Weather Severe Non-Winter Weather Landslide Wildfire Volcano Tsunami/Seiche				
FACTORS FOR CONSIDERATION:				
<ol style="list-style-type: none"> 1. Equity, Social Justice, and Vulnerability - to benefit, account for, and include vulnerable populations 2. Collaborative - supported by multiple jurisdictions or agencies 3. Multiple-Benefit - has benefits beyond hazard risk reduction, including environmental, social, or economic 4. Adaptation and Sustainability - helps people, property, and the environment become resilient to the effects of climate change, regional growth, and development 5. Effectiveness - best-possible benefit-cost ratio 6. Urgent - is urgently needed to reduce risk to lives and property 7. Shovel-ready - project is largely ready to go, with few remaining roadblocks that could derail it 				
PROJECT DESCRIPTION	COST (Approx.)	TIMELINE	FACTORS List factor number (above) attributed to project	PRIORITY RANK (1-10) 1 = highest priority
1. Fire Doors at Station 91 will not open after an earthquake.	\$400K	2 years	1,2,3,5,6	
2. Upgrading MICEC Generator for use as shelter site and back up for City Hall.	\$500K	Long-term	1,2,3,5,6,7	
3. Reinforce roadways to withstand landslide damage.	\$15M	Long-term	1,2,3,4,5,6	
4. City Hall columns need retrofitting.	\$30K	2 years	1,2,3,4,5,6,7	
5. Luther Burbank Boiler Building chimney needs to be replaced to code.	\$250K	2 years	4,5,7	
6. City owned docks need to be replaced and rebuilt to withstand seiches.	\$7M	Long-term	1,2,3,4,6,7	
7. Upgrade City's fiber infrastructure to link critical facilities and deliver failover communications.	\$1.4M	Long-term	1,2,3,4,5,6	
8. Water lines and sewer lines will fail in an earthquake; redundant lines are needed.	\$15M	Long-term	1,2,3,4,5,6	
9. Second Emergency Well for drinking water and fire flow.	\$4.2M	Long-term	1,2,3,5,6	
10. Stormwater pipe replacement to mitigate failures due to landslides.	\$2.5M	Long-term	1,2,3,4,5,6

ENGAGEMENT TOOL: SURVEY TOOL

Prioritizing Hazard Mitigation Projects

VISITORS	232	CONTRIBUTORS	36	CONTRIBUTIONS	36
----------	-----	--------------	----	---------------	----

Rank the following hazard mitigation projects from highest priority (1) to lowest (10).

Question options

- Build second Emergency Well for drinking water and fire flow (\$4M)
- Upgrade MICEC Generator - MICEC will serve as a community shelter and back up for City Hall (\$200k)
- Install secondary / backup water and sewer lines to mitigate failures caused by earthquakes (\$15M)
- Upgrade Station 91 Fire Doors - current doors will not open after an earthquake (\$400k)
- Upgrade City fiber infrastructure to link critical facilities and deliver failover communications (\$7.25M)
- Reinforce roadways to withstand landslide damage (\$15M)
- Replace stormwater pipe to mitigate failures caused by landslides (\$2.5M)
- Retrofit City Hall columns (\$30k)
- Rebuild City owned docks to withstand seiches / large tsunami-like waves caused by earthquakes (\$7M)
- Replace and bring Luther Burbank Boiler Building chimney up to code (\$250k)

Jurisdiction Hazard Mitigation Program

Every 5 years FEMA requires jurisdictions to update their Hazard Mitigation Plan (HMP). The HMP will reassess the risks and vulnerabilities of the jurisdiction's natural hazards and develop strategies to reduce the risk to those hazards. In the past jurisdictions have had to pay private consultants to update their Hazard Mitigation Plans. In 2015 King County was able to alleviate this burden for its jurisdictions and write a regional hazard mitigation plan that the represented cities could annex to. The plan is a requirement for receiving federal Hazard Mitigation Assistance grants.

Hazard mitigation strategies were developed through a two-step process. Each jurisdiction met with an internal planning team to identify a comprehensive range of mitigation strategies. These strategies were then prioritized using a process established at the county level and documented in the base plan.

Plan Monitoring, Implementation, and Future Updates

King County leads the mitigation plan monitoring and update process and schedules the annual plan check-ins and bi-annual mitigation strategy updates. Updates on mitigation projects are solicited by the county for inclusion in the countywide annual report. As part of participating in the 2020 update to the Regional Hazard Mitigation Plan, every jurisdiction agrees to convene their internal planning team at least annually to review their progress on hazard mitigation strategies and to update the plan based on new data or recent disasters.

As part of leading a countywide planning effort, King County Emergency Management will send to planning partner any federal notices of funding opportunity for the Hazard Mitigation Assistance Grant Program. Proposals from partners will be assessed according to the prioritization process identified in this plan and the county will, where possible, support those partners submitting grant proposals. This will be a key strategy to implement the plan.

The next plan update is expected to be due in April 2025. All jurisdictions will submit letters of intent by 2023, at least two years prior to plan expiration. The county will lead the next regional planning effort, beginning at least 18 months before the expiration of the 2020 plan.

Continued Public Participation

King County and its partner cities already maintains substantial public outreach capabilities, focusing on personal preparedness and education. Information on ongoing progress in implementing the hazard mitigation plan will be integrated into public outreach efforts. This will provide Mercer Island residents, already engaged in personal preparedness efforts, with context and the opportunity to provide feedback on the city's progress and priorities in

Plan Goals

1. Identify Mercer Island Hazards. (Natural)
2. Update Mercer Island Hazard Maps.
3. Identify Mercer Island assets that could be at risk from these identified hazards.
4. Establish mitigation strategies (projects) that address the asset risk.
5. Integrate equity and social justice into understanding of risk, vulnerability, and development of mitigation strategies.
6. Prioritize the mitigation projects using public feedback.
7. Discuss funding options, knowing that Mercer Island currently cannot use grant match funding.
8. Mitigation projects may have to wait until a funding source can be identified.

large-scale mitigation. In the vertical integration of risk-reduction activities from personal to local to state and federal, it is important that the public understand how its activities support, and are supported by, larger-scale efforts. The outreach and mitigation teams will also continue to work with media and other agency partners to publicize mitigation success stories and help explain how vulnerabilities are being fixed.

Hazard Mitigation Authorities, Responsibilities, and Capabilities

Plan Integration

Hazard mitigation is most effective when implemented through a systematic program that establishes priorities and understands that resilience requires system-wide investments in mitigation. Cohesive, comprehensive strategies and the establishment of partnerships are the core elements of a program.

When plans and planning processes are more integrated, it is possible to achieve greater impact through clearer definition, smarter investment, partnerships, and innovation. Successful integration requires coordination between planning efforts and, especially, cross-participation in planning processes. The goals of plan integration are to:

- Ensure consistency within all department priorities and across all planning processes
- Leverage opportunities to further multi-benefit initiatives that are supported by multiple planning processes
- Achieve common measures of success for outcomes
- The hazard mitigation plan can benefit from integration with planning processes that:
 - Prioritize and invest in infrastructure
 - Regulate development
 - Set strategic direction for programs

To other planning processes, the hazard mitigation plan brings risk and vulnerability information to help prioritize projects and set development standards or regulations. The mitigation plan also comes with potential funding for investments in cost-effective risk-reduction projects. On the other hand, the mitigation plan depends on other plans and processes to implement many strategies. Since the mitigation plan is not itself a regulatory or budgetary document, strategies identified in the mitigation plan are often best implemented through those processes or programs.

There are various plans and planning processes within the City of Mercer Island that impact hazard risk. These include strategic plans, long-range plans, resource plans, and capital plans listed in the table below. These have not been integrated in the past.

Plans

PLAN TITLE	RESPONSIBLE AGENCY	POINT OF CONTACT	RELATIONSHIP TO HAZARD MITIGATION PLAN
Comprehensive Emergency Management Plan: to include Continuity of Operation Plans, Pandemic Plan, Terrorism response Plan and Threat and Hazard Identification and Risk Assessment, Debris Management Plan, Volunteer Operations Plan, Shelter Plan	City of Mercer Island – Emergency Management	Jennifer Franklin	Guides planning, operations and recovery efforts
Comprehensive Plan	City of Mercer Island – Community Planning Development	Evan Maxim	Provides policies for Land Use, Housing, Transportation, Utilities, Capital Facilities, and designated Environments.
Capital Improvement Plan	City of Mercer Island – City Manager’s Office	Ali Spietz	City Facilities, Pedestrian and Bicycle Facilities, Parks, Streets and Right of Way, Storm and Surface Water Drainage, Water System, Sanitary Sewer System and Schools
Shoreline Management Plan	City of Mercer Island – Community Planning Development	Evan Maxim	Provides development regulations generally within 200 feet of the shoreline of Lake Washington.
Transportation Improvement Plan	City of Mercer Island – Public Works	Jason Kintner	Guides future planning for roadway, pedestrian and bicycle projects.
Pedestrian and Bicycle Facilities Plan	City of Mercer Island – Public Works	Jason Kintner	Guides investments and other actions relating to pedestrian and bicycle facilities such as trails, crosswalks, bike lanes, and sidewalks.
Floodplain or Basin Plan	City of Mercer Island – Public Works	Jason Kintner	Assists with urban flood control
Stormwater Plan	City of Mercer Island – Public Works	Jason Kintner	Conforms to Puget Sound Water Quality Plan

Programs, Policies, and Processes

PROGRAM/POLICY	RESPONSIBLE AGENCY	POINT OF CONTACT	RELATIONSHIP TO HAZARD MITIGATION PLAN
<p>Construction Codes Including: site plan review,</p>	<p>City of Mercer Island – Community Planning Development</p>	<p>Evan Maxim</p>	<p>Hazards and mitigation opportunities are reviewed when new versions of construction codes are adopted. All construction work conducted under a hazard mitigation project is subject to the current or vested construction codes at the time of permit application.</p>
<p>Development Code Including: zoning, critical areas, watercourses, wetlands, subdivisions, trees, Town Center development, and design standards.</p>	<p>City of Mercer Island – Community Planning Development</p>	<p>Evan Maxim</p>	<p>Hazards and mitigation opportunities are reviewed when extensive code amendments are made to the development code. Development for a hazard mitigation project is subject to the current or vested development regulations at the time of permit application.</p>
<p>Stormwater Management Program</p>	<p>City of Mercer Island – Public Works</p>	<p>Jason Kintner</p>	<p>Hazards and mitigation opportunities are reviewed when changes are made to the Stormwater Management Program.</p>
<p>Growth Management</p>	<p>City of Mercer Island – Community Planning Development</p>	<p>Evan Maxim</p>	<p>New policies adopted for growth management are reviewed for hazards or mitigation opportunities to protect the people and property on Mercer Island.</p>
<p>Public Health and Safety</p>	<p>Police and Fire Departments Seattle-King County Public Health</p>	<p>Steve Heitman</p>	<p>Hazards and mitigation opportunities are reviewed when changes to public health and</p>

			safety policies and procedures occur
Emergency Management Program Including Personal Preparedness Outreach	City of Mercer Island – Emergency Management	Jennifer Franklin	Hazards and mitigation opportunities are routinely reviewed as part of the Emergency Management Program including informing the public of the hazards.

Entities Responsible for Hazard Mitigation

AGENCY/ORGANIZATION	POINT OF CONTACT	RESPONSIBILITY(S)
Public Works Department	Jason Kintner	Director
Community Planning and Development Department	Evan Maxim	Director
City Manager’s Office	Ali Spietz	Assistant to the City Manager

National Flood Insurance Program

National Flood Insurance Program Compliance

What department is responsible for floodplain management in your community?	Public Works
Who is your community’s floodplain administrator? (title/position)	Public Works Director
What is the date of adoption of your flood damage prevention ordinance?	June 30, 1997 FEMA classified Mercer Island as a Zone C (minimal Flood Hazard) However, Mercer Island Participates in the NFIP
When was the most recent Community Assistance Visit or Community Assistance Contact?	None
Does your community have any outstanding NFIP compliance violations that need to be addressed? If so, please state what they are?	No
Do your flood hazard maps adequately address the flood risk within your community? If so, please state why.	Yes
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of training/assistance is needed?	No
Does your community participate in the Community Rating System (CRS)? If so, what is your CRS Classification and are you seeing to improve your rating? If not, is your community interested in joining CRS?	No
How many Severe Repetitive Loss (SRL) and Repetitive Loss (RL) properties are located in your jurisdiction?	SRL: None RL: None
Has your community ever conducted an elevation or buy out of a flood-prone property? If so, what fund source did you use? If not, are you interested in pursuing buyouts of flood prone properties?	No

2015 HAZARD MITIGATION ACTION PLAN MATRIX
CURRENT PROGRESS ON ACTION INITIATIVES
all projects are still ongoing as of Sept. 2019

Action Taken	Timeline	Priority Change	Comment (Describe progress)	Status
City of Mercer Island Annex Update				
MI-1 —Continue to maintain compliance and good standing under the National Flood Insurance Program. This will be accomplished through the implementation of floodplain management programs, at a minimum, will meet the minimum requirements of the NFIP, which include the following: <ul style="list-style-type: none"> • Participating in floodplain identification and mapping updates. • Providing public assistance and information on floodplain requirements and impacts 				
No	Long-term	Has the priority changed?	___No___	Ongoing
MI-2 —Rehabilitate Damage Storm Culverts.				
No	Long-term	Has the priority changed?	___No___	Ongoing
MI-3 —Small ravine watercourse projects.				
No	Long-term	Has the priority changed?	___No___	Ongoing
MI-4 —Replacing aging water mains.				
No	Long-term	Has the priority changed?	___No___	Ongoing
MI-5 —Sewer generator replacement program.				
No	Long-term	Has the priority changed?	___No___	Ongoing
MI-6 —Sewer rehab/replace.				
No	Long-term	Has the priority changed?	___No___	Ongoing
MI-7 —Emergency Program.				
Yes	Long-term	Has the priority changed?	___No___	Ongoing

MI-8—IT System Continuity.				
No	Long-term	Has the priority changed?	<input type="checkbox"/> No <input type="checkbox"/>	Ongoing
MI-9—Firewise.				
No	Long-term	Has the priority changed?	<input type="checkbox"/> No <input type="checkbox"/>	Ongoing
MI-10—Where appropriate, support retrofitting, purchase, or relocation of structures located in hazard-prone areas to protect structures from future damage, with properties with exposure to repetitive losses as a priority.				
No	Long-term	Has the priority changed?	<input type="checkbox"/> No <input type="checkbox"/>	Ongoing
MI-11-Continue to support the county-wide initiatives identified in this plan.				
No	Long-term	Has the priority changed?	<input type="checkbox"/> No <input type="checkbox"/>	Ongoing
MI-12—Actively participate in the maintenance strategy identified in this plan.				
No	Long-term	Has the priority changed?	<input type="checkbox"/> No <input type="checkbox"/>	Ongoing

The above 2015

2020 Hazard Mitigation Strategies

Developmental Changes have both increased and decreased our hazard risk and vulnerability, which is stated below in our identified projects.

Project 1. Fire Doors

Lead Points of Contact MIFD DC Mike Mandella	Partner Points of Contact MI Finance-Chip Corder MI Facilities-Marcy Olson	Hazards Mitigated / Goals Addressed Earthquake	Funding Sources and Estimated Costs ~400K/Grants or Capital Budget
Strategy Vision/Objective Station 91 has 5 bays with electric roll-up doors that need to be replaced with doors similar to those at Station 92. Station 92 has bi-fold doors which are fast opening and manually operable if damaged by an earthquake shifting the building.			
Mitigation Strategy An earthquake impacting the ability to move fire apparatus out of the station will hinder emergency life-saving response following an earthquake. Bi-fold doors with the ability to manually open will assist with emergency response. The current fire doors at Station 91 have the potential for structural damage which may not allow the doors to be manually opened thus necessitating the need to drive the fire apparatus through the doors, damaging the vehicle as well as destroying the doors, and causing a security risk at station 91.			
2-Year Objectives <ul style="list-style-type: none"> Secure the funding source/s Structural review for bi-fold doors Publish RFP Select vendor Make changes required to install bi-fold doors Install doors 	5-Year Objectives	Long-Term Objectives	
Implementation Plan/Actions <ul style="list-style-type: none"> Secure the funding source/s – Apply for FEMA Hazard Mitigation Assistance grant – if that is not an option include in study in 2021 to 2026 CIP – Allocate capital funding to design and implement projects Structural review for bi-fold doors Publish RFP Select vendor Make changes required to install bi-fold doors Install doors 			
Performance Measures Research has shown that bi-fold doors withstand earthquake damage better than overhead opening doors. Structural damage from the necessity of driving through the doors could prevent a return to the apparatus bay by apparatus preventing the apparatus from hooking up to air and battery chargers that keep them in service.			

Project 2. MICEC Generator

Lead Points of Contact Ryan Daly	Partner Points of Contact Zach Houvener Marcy Olson	Hazards Mitigated / Goals Addressed Earthquake/Loss of Power to Critical Facilities	Funding Sources and Estimated Costs 500K Capital / Grant
Strategy Vision/Objective Provide continuous power to MICEC to operate as an Emergency Shelter as well as back up operations for City Hall			
Mitigation Strategy The MICEC has a diesel generator on site that powers critical areas of the building (full use of kitchen, restrooms, gymnasium (dormitory), and emergency lighting that enables it to operate as a Red Cross Emergency Shelter. The current generator however is not able to provide enough power should the facility be necessary as a back-up City Hall. To mitigate this risk a larger 400K generator would need to be installed close to the existing electrical panel which is located on the east side of the community center. This would involve mitigating issues with hill slide sloping concerns, new wiring, ground excavation.			
2-Year Objectives: <ul style="list-style-type: none"> Begin outreach to public on critical facilities and capabilities Research sloping concerns and costs 	5-Year Objectives: <ul style="list-style-type: none"> Determine funding amount and implementation timetable Provide funding outline for system implementation 	Long-Term Objectives: <ul style="list-style-type: none"> Continue to use the MICEC as an Emergency Shelter with the potential for being a backup city hall even with limited power 	
Implementation Plan/Actions: <ul style="list-style-type: none"> Begin outreach to public on critical facilities and capabilities Research sloping concerns and costs Determine funding amount and implementation timetable Secure the funding source/s – Apply for FEMA Hazard Mitigation Assistance grant – if that is not an option include in study in 2021 to 2026 CIP – Allocate capital funding to design and implement projects RFP for project Select vendors Install generator/wiring 			
Performance Measures Quarterly tests with generators to confirm capabilities. Annual drills on shelter plan as well as back up city hall operations.			

Project 3. Road Damage

Lead Points of Contact Public Works Jason Kintner	Partner Points of Contact <ul style="list-style-type: none"> • Dept of Fish and Wildlife • Army Corp of Engineers • Department of Transportation 	Hazards Mitigated / Goals Addressed <ul style="list-style-type: none"> • Mitigate roadway failures due to landslides • Stabilize arterials and city roads • Protect infrastructure/private property. • Provide for public safety access • Environmental protection 	Funding Sources and Estimated Costs \$15M Design Construction Monitor
Strategy Vision/Objective <p>Historically, the Residential Street Preservation program has consisted of hot mix asphalt (HMA) overlays on an average of 1.0 to 1.5 miles of residential streets annually. The Residential Street Preservation Program improves about one substandard street per biennium, as the need arises.</p> <p>The City’s pavement condition data is an integral part of determining the locations and schedule of future residential street asphalt overlays and chip seal work. Pavement Condition Index (PCI) data was collected in 2013 and 2016 and will be collected again in 2019. When PCI falls below a score of 70, staff considers a roadway for resurfacing. For roadways with resurfacing needs that also have pending utility work (storm drainage, new water main, etc.), these roadways are typically scheduled for paving in the years following completion of that major utility work. The timing and limits of residential street resurfacing work in future TIPs may change, as determined by updated pavement condition information.</p> <p>In a catastrophic event, roads will fail. Identifying risks for failure will improve accessibility. Maintaining critical infrastructure is essential to providing routes for essential public safety.</p>			
Mitigation Strategy <p>The City must ensure that access is maintained for public safety. Located in Lake Washington, Mercer Island is a largely residential community bisected by I90. As such, during a catastrophic event, transportation to and from mercer Island may be significantly impacted. Maintaining access for public safety is critical.</p> <p>During a catastrophic event, the City’s road network will most likely be severely damaged and access will likely be significantly impacted. Identifying ageing infrastructure and replacing critical infrastructure will mitigate future risk. Completing the PCI study and identifying future street improvement projects will help the City prioritize replacement. Other considerations in identifying mitigation/prioritization of projects include:</p> <ul style="list-style-type: none"> • Stormwater conveyance and existing infrastructure condition • Topography and soil composition issues • Cut/fill roadway construction (East/West Mercer Ways) • Identify primary public safety routes 			
2-Year Objectives: <ul style="list-style-type: none"> • Complete stormwater conveyance assessment • Complete Pavement Condition Inventory • Identify primary public safety routes • Identify proximity to slopes 	5-Year Objectives: <ul style="list-style-type: none"> • Identify projects for inclusion of ongoing tip. • Allocate funding in the capital budget/street for construction 	Long-Term Objectives: <ul style="list-style-type: none"> • Stabilize all slopes 	

Implementation Plan/Actions:

- Complete stormwater assessment of which may be improved to prevent future slides.
 - Apply for an Advanced Assistance grant from FEMA Hazard Mitigation Assistance through DR 4418 in 2019 and PDM 2019 (only if city can match funds 75/25 match)
- If FEMA grant applications are unsuccessful, include study in 2021 to 2026 CIP
- Allocate capital funding to design and implement the projects

Performance Measures

Successfully identify an option to reduce impacted roadways and limit access for public safety to provide efficient services.

Project 4. City Hall Columns

Lead Points of Contact Don Cole Building Inspector	Partner Points of Contact Marcy Olson Facilities Manager	Hazards Mitigated / Goals Addressed Earthquake	Funding Sources and Estimated Costs 30K Capital/Grant
Strategy Vision/Objective Reinforce columns under City Planning Department to ensure integrity of the west wing of city hall and the entrance/ egress into and out of the Emergency Operation Center.			
Mitigation Strategy Most city owned buildings were constructed to recent codes. The City Hall facility was constructed to older codes, but its construction techniques do not hinder effective mitigation except for two columns beneath the CPD wing (near the EOC entry doors) that should be retrofitted at a cost of approximately \$30,000.			
2-Year Objectives: <ul style="list-style-type: none"> • Design/Construction • Fund through capital program • Construction • Complete operation plan 	5-Year Objectives:	Long-Term Objectives:	
Implementation Plan/Actions: <ul style="list-style-type: none"> • Apply for an Advanced Assistance grant for design and construction from FEMA Hazard Mitigation Assistance through DR 4418 in 2019 and PDM 2019 <ul style="list-style-type: none"> ○ If FEMA grant applications are unsuccessful, include in 2021-2026 CIP • Construct & complete operation plan 			
Performance Measures Successful design and construction			

Project 5. Luther Burbank Boiler Chimney

Lead Points of Contact Don Cole Building Inspector	Partner Points of Contact Marcy Olson Facilities Manager	Hazards Mitigated / Goals Addressed Earthquake	Funding Sources and Estimated Costs 250K Capital / Grant
Strategy Vision/Objective The chimney structure at the Luther Burbank Boiler (near the dock) appears to be under-reinforced when compared to today’s codes and should be assessed/mitigated or potentially removed due to risk of falling debris during an earthquake.			
Mitigation Strategy Dismantle unstable Chimney to prevent risk to public.			
2-Year Objectives <ul style="list-style-type: none"> Design/Construction Fund through capital program Construction Complete operation plan 	5-Year Objectives	Long-Term Objectives	
Implementation Plan/Actions <ul style="list-style-type: none"> Apply for an Advanced Assistance grant for design and construction from FEMA Hazard Mitigation Assistance through DR 4418 in 2019 and PDM 2019 <ul style="list-style-type: none"> If FEMA grant applications are unsuccessful, include in 2021-2026 CIP Construct & complete operation plan 			
Performance Measures If it doesn’t fall down in an earthquake			

Project 6. City Docks

Lead Points of Contact Don Cole – City Inspector	Partner Points of Contact <ul style="list-style-type: none"> Seattle Public Utilities Department of Health Department of Ecology Department of Fish and Wildlife Army Corp of Engineers 	Hazards Mitigated / Goals Addressed Earthquake/Seiche	Funding Sources and Estimated Costs Approx. 7M Capital/Grant
Strategy Vision/Objective The city-owned docks at Luther Burbank Park, Groveland Park, Clarke Beach and the Boat Launch are susceptible to damage from seiches. Without these docks our Marine Patrol will be limited in function. Additionally, supplies arriving by boat may not be able to be offloaded without the use of these docks. Several of these structures are nearing the end of their useful life and are in need of either substantial repairs or complete replacement.			
Mitigation Strategy <ul style="list-style-type: none"> Identify repair/replacement needed for each dock. Contact partners for permitting Determine actual cost for repair/replacement Find Funding source for repair/replacement Begin design and construction Complete design and construction 			
2-Year Objectives	5-Year Objectives	Long-Term Objectives <ul style="list-style-type: none"> Design/Construction Fund through capital program Construction Complete operation plan 	
Implementation Plan/Actions <ul style="list-style-type: none"> Apply for an Advanced Assistance grant for design and construction from FEMA Hazard Mitigation Assistance through DR 4418 in 2019 and PDM 2019 <ul style="list-style-type: none"> If FEMA grant applications are unsuccessful, include in 2021-2026 CIP Construct & complete operation plan 			
Performance Measures –			

Project 7. City’s Fiber Infrastructure

Lead Points of Contact (Title) Alfredo Moreno Sr. Systems Administrator	Partner Points of Contact (Title) Chip Corder Finance Director	Hazards Mitigated / Goals Addressed 1,2,3,4,5,6	Funding Sources and Estimated Costs 1.4M
Strategy Vision/Objective: <ul style="list-style-type: none"> • City network is critical infrastructure, supporting all departments, functions, and services. • Buildings, devices, vehicles, sensors, employees, other government agencies, Internet, telephony, 911, etc. all connect via fiber, copper, satellite, and cellular connections owned or leased by the City. • The City’s continuous improvement goal has been to design and maintain a network that is: <ul style="list-style-type: none"> ○ Responsive – Fast and adequate bandwidth for City service delivery. ○ Resilient – Capable of both automated disaster recovery and enables business continuity ○ Cost Effective – Achieve the first two within reason, best practices, and available resources. 			
Mitigation Strategy: <ul style="list-style-type: none"> • Continued long-term investments in City’s fiber infrastructure to link Critical Facilities: <ul style="list-style-type: none"> ○ City Hall ○ Mercer Island Community and Event Center ○ Mercer Island Fire Department Station 91 and Station 92 ○ Public Works (Main Facility, Reservoir, 1st Hill Booster Station, Pump Stations) • Redundant Fiber Ring <ul style="list-style-type: none"> ○ Opportunistic ○ Cost Effective ○ City Owned • Failover Communications <ul style="list-style-type: none"> ○ Fiber Ring ○ Cellular 			
2-Year Objectives Ingress/egress primary communications failover/hot standby on secondary disaster recovery site. Critical City facilities have failover/hot standby connection at the <i>site</i> level.	5-Year Objectives All City facilities have at least one failover/hot standby connection at the <i>site</i> level.	Long-Term Objectives Fiber ring deployed, allowing default redundancy to all City facilities.	
Implementation Plan/Actions: <ul style="list-style-type: none"> • Continue to develop, improve, and act on the City’s communication strategy. • Submit funding requests – Through FEMA grants and/or CIP • Conduct education, training, and outreach to decision makers • Continue to seek out opportunities to partner/liason with other agencies where long-term goals align. 			
Performance Measures Completion of project objectives.			

Project 8. Redundant Water and Sewer Service

Lead Points of Contact (Title)	Partner Points of Contact (Title)	Hazards Mitigated / Goals Addressed	Funding Sources and Estimated Costs
Utility Engineer City engineer	<ul style="list-style-type: none"> Seattle Public Utilities Department of Health Department of Ecology Department of Fish and Wildlife Army Corp of Engineers 	<ul style="list-style-type: none"> Environmental Safety Provide water as a resource Fire suppression Ensuring utility service in an emergency Protect infrastructure & private property 	\$15M <ul style="list-style-type: none"> Feasibility Permitting Design Construction Operations

Strategy Vision/Objective:

In an earthquake, waterlines and sewer lines will fail. Identifying aging infrastructure and replacing pipes with a greater risk of failure will mitigate future risk of failure.

Mitigation Strategy

During a catastrophic event, the City’s water system will most likely be severely damaged and the water supply delivery to the customers will be disrupted. The City’s sanitary sewer system will also likely be severely damaged. The City is also continuing public education to emphasize the importance of water conservation during normal and unusual situations and identify aging infrastructure that is at greater risk of failure and prioritize replacements.

The sanitary collection system consists of approximately 2,400 manholes and 105 miles of pipe. The majority of the system was originally constructed by the Mercer Island Sewer District through three Utility Local Improvement Districts (ULIDs) in the late 1950s and early 1960s. In the coming decades, the City will need to make decisions between continuing maintenance, repairing, or replacing its aging infrastructure. The Remaining Useful Life analyses found that approximately 500,000 ft (95 miles) of pipe will reach the end of its useable life by 2029. This would require R&R of approximately 39,000 ft (7.3 miles) of pipe per year through 2029.

The City obtains all of its water supply from SPU. The City purchases and distributes all of the water consumed on the Island under a long-term contract that guarantees an adequate supply through the year 2062. The majority of the water supplied by SPU to the City originates in the Cedar River Watershed, although occasionally the City is supplied from the Tolt River supply system. The water is delivered through the Cedar East Side Supply Line (CESSL) to the 30-inch Mercer Island supply line at Factoria. The 30-inch supply line along I-90 reduces to a 20-inch line at the Bellevue side of the Lake Washington East Channel and then crosses beneath the Lake to the island. A second 16-inch supply line parallels the 20-inch line and is attached to the I-90 Freeway East Channel Bridge structure. The SPU supply lines feed directly into the reservoirs with no service connections along the way. The existing system is comprised of the following elements: Two 4 million-gallon storage tanks for a total of 8 million gallons of water storage; Two independent transmission line routes to fill the reservoirs; Two pump stations; 115 miles of watermains, ranging in size from 2-inch to 30-inch; 85 pressure reducing valves.

The majority of the distribution system was constructed between 1956 and 1960 by utility local improvement districts (ULID). There were major improvements made at the north end of the system around 1984 in conjunction with the I-90 freeway construction. The majority of the distribution system consists of 6- and 8-

inch mains, which account for about 67% of the total pipe linear-footage in the system, however many 4-inch mains still remain. Larger diameter pipes ranging in size from 10 to 30 inches serve as major feed lines or transmission mains to various parts of the system.

Implementation of the recommendations from the General Sewer Plan, the City’s Water System Plan, and the 2004 Seismic Vulnerability Assessment Study, including: isolation valves, structural stabilization of the reservoir tank anchors, non-structural stabilization of building and components, flexible hoses, and continued public education. Grants and other public funding sources will be pursued to supplement funding

2-Year Objectives
Identify and prioritize critical projects

5-Year Objectives

- Fund through capital program
- Design/construct

Long-Term Objectives

- Continue
- Updated water/sewer system plans

Implementation Plan/Actions:

- Identify and prioritize critical projects and timing strategy for implementation
- Apply for an Advanced Assistance grant from FEMA Hazard Mitigation Assistance through DR 4418 in 2019 and PDM 2019
 - If FEMA grant applications are unsuccessful,
- Include project design and construction of future Capital Improvement Program
- Identify funding mechanism through water utility
- Construct & complete operation plan.
- Include in future updates to Water System Plan & General Sewer System Plan

Performance Measures

Successful design, construction and operation of water & sewer lines

Project 9. Second Emergency Well / South End

Lead POC Utility Engineer City engineer	Partner Points of Contact: <ul style="list-style-type: none"> • Seattle Public Utilities (SPU) • Department of Health • King County • Department of Ecology • Department of Fish and Wildlife • Army Corp of Engineers 	Hazards Mitigated / Goals Addressed: <ul style="list-style-type: none"> • Environmental Safety • Provide water as a resource • Fire suppression • Ensuring utility service in an emergency • Protect infrastructure both public and private property 	Funding Sources / Estimated Costs \$4.2M: <ul style="list-style-type: none"> • Feasibility • Design • Permitting • Construction • Operations
Strategy Vision/Objective The City must ensure adequate water is secured for existing and future needs. The North Emergency Well can supply 1 gallon of potable water a day per resident during emergency events. The City also plans to construct a second emergency source well by 2022 on the south end of the island.			
Mitigation Strategy The City must ensure adequate water is secured for existing and future needs. In 2006 the City filed a water right application with the Washington State Department of Ecology to permit and develop two stand-alone emergency source supply wells one located in the north, and one located in the south of the Island. That would be installed on a phased basis. The City’s decision to pursue the emergency supply wells was based on its assessment that the City’s water system, as well as its water supply from SPU, was at significant risk of damage and disruption in the event of a major seismic event. The City proposed that the emergency supply wells be accessible on a temporary, walk-up basis by residents and requested a combined instantaneous quantity (Qi) of 400 gpm and annual quantity (Qa) of 66.3 aft. The purpose of requesting the (above) amounts was to ensure an emergency supply capable of providing up to 1 gallon per day (gpd) for City residents and visitors over a period of 7 to 90 days. A permit to install and operate the two emergency wells for “Standby-Reserve use only” was issued by Department of Ecology in December 2009. The permit authorized the requested quantities and a well development. Subsequently in March 2015, Department of Ecology granted its approval to the City to extend the timeline for construction of the second well to July 2022. A second well will provide a redundancy to ensure residents have access to water. The second well will be in a different location, providing two sources of emergency water should roads and access be significantly restricted.			
2-Year Objectives: <ul style="list-style-type: none"> • Complete feasibility 	5-Year Objectives: <ul style="list-style-type: none"> • Design/Construction • Fund through capital program 	Long-Term Objectives: <ul style="list-style-type: none"> • Secure Funding • Construction • Complete operation plan 	

Implementation Plan/Actions:

- Fund feasibility study to evaluate options to assess location.
- Apply for an Advanced Assistance grant for design and construction from FEMA Hazard Mitigation Assistance through DR 4418 in 2019 and PDM 2019
 - If FEMA grant applications are unsuccessful
- Include project design /construction in future City Capital Improvement Plan (CIP)
- Identify funding mechanism through water utility
- Construct & complete operation plan
- Include in future updates to Water System Plan

Performance Measures

- Successful design, construction and operation of second emergency well on the south end of the Island.

Project 10. Stormwater Pipe

Lead Points of Contact (Title) Utility Engineer City engineer	Partner Points of Contact (Title) <ul style="list-style-type: none"> • Department of Fish and Wildlife • Army Corp of Engineers 	Hazards Mitigated / Goals Addressed <ul style="list-style-type: none"> • Mitigate failures due to landslides • Stabilize hillside • Protect infrastructure/private property • Environmental protection • Ensuring utility service in an emergency 	Funding Sources and Estimated Costs \$2.5M: <ul style="list-style-type: none"> • Design • Construction • Monitor
<p>Strategy Vision/Objective:</p> <p>Mercer Island’s stormwater system serves a complex network of 87 drainage basins. The system relies heavily on “natural” conveyances. There are more than 13 miles of ravine watercourses that carry stormwater and 20 miles of open drainage ditches. 40 percent of the ravine watercourses are privately owned, while roughly 70 percent of the drainage ditches are on public property. Mercer Island has no known locations where stormwater recharges an aquifer or feeds any other source used for drinking water.</p> <p>The artificial components of the system include 117 miles of stormwater pipes and more than 5300 catch basins. These components function to convey stormwater into Lake Washington and help prevent localized flooding and landslides. System inspections and timely repairs are required to maintain the integrity of the stormwater utility and prevent landslides.</p> <p>The overall objective is to ensure the City complies with all applicable federal and state stormwater requirements, Western Washington Phase II Municipal (NPDES) Permit issued by the Washington State Department of Ecology. Mercer Island is urban/residential in nature and all the Island’s stormwater eventually flows into Lake Washington. The prevention of nonpoint pollution is a major priority.</p>			
<p>Mitigation Strategy</p> <p>The City must ensure the stormwater is collected and discharged properly. Mercer Island’s stormwater system services a complex network and relies heavily on “natural” conveyances. During a catastrophic event, the City’s stormwater system will most likely be severely damaged and the conveyance of stormwater will likely be significantly impacted.</p> <p>Identifying ageing infrastructure and replacing infrastructure with a higher risk of failure will mitigate future risk. Completing a comprehensive stormwater conveyance system assessment that includes known topography and soil composition issues, and identification of future stormwater reinvestment needs will help the City prioritize replacement to minimize risk and unintended landslides.</p>			
2-Year Objectives Complete stormwater conveyance assessment	5-Year Objectives <ul style="list-style-type: none"> • Identify and select alternatives for stormwater improvements. • Allocate funding in the capital budget to fund 	Long-Term Objectives Identify and repair critical infrastructure to prevent future unintended landslides	

Implementation Plan/Actions:

- Complete stormwater assessment of which may be improved to prevent future slides.
 - Apply for an Advanced Assistance grant from FEMA Hazard Mitigation Assistance through DR 4418 in 2019 and PDM 2019 (Only if city can match grant funds 75/25)
- If FEMA grant applications are unsuccessful, include study in 2021 to 2026 CIP
- Allocate capital funding to design and implement the projects

Performance Measures

Successfully identify, design, and construct (repair or replace) stormwater improvements that will prevent localized flooding and landslides.

**BUSINESS OF THE CITY COUNCIL

Consent Calendar**

AGENDA BILL INFORMATION

TITLE:	AB 5712: Retroactive suspension of Council Rules of Procedure 6.3 for adopting Ord. No. 20-08	<input type="checkbox"/> Discussion Only
RECOMMENDED ACTION:	Authorize a retroactive suspension of City Council Rules of Procedure 6.3, requiring a second reading for Ordinance No. 20-08.	<input checked="" type="checkbox"/> Action Needed: <input checked="" type="checkbox"/> Motion <input type="checkbox"/> Ordinance <input type="checkbox"/> Resolution

DEPARTMENT:	City Manager
STAFF:	Deborah Estrada, City Clerk
COUNCIL LIAISON:	n/a
EXHIBITS:	1. Ordinance No. 20-08
CITY COUNCIL PRIORITY:	n/a

AMOUNT OF EXPENDITURE	\$ n/a
AMOUNT BUDGETED	\$ n/a
APPROPRIATION REQUIRED	\$ n/a

SUMMARY

At the June 2, 2020 City Council Regular meeting, City Council unanimously adopted Ordinance No. 20-08 amending the 2020 General Fund adopted budget to:

1. Memorialize Phase 1 and Phase 2 cost saving measures
2. Appropriate Contingency Funds to support ongoing emergency operations thru August 31, 2020
3. Authorize use of Contingency Funds to establish an Unemployment Reserve
4. Authorize use of the Compensated Absences Reserve for one-time accrued benefit cash-outs

To adopt an ordinance after its first reading, City Council Rules of Procedure Section 6.3(C) requires that the City Council suspends this Rule pursuant to Section 10 before adopting the ordinance. This motion was missed, and staff is requesting that Council approve a retroactive suspension of the rule.

RECOMMENDATION

Authorize a retroactive suspension of the City Council Rules of Procedure 6.3 providing for the adoption of Ordinance No. 20-08 on its first reading.

**CITY OF MERCER ISLAND
ORDINANCE NO. 20-08**

**AN ORDINANCE OF THE CITY OF MERCER ISLAND, WASHINGTON,
INCORPORATING CERTAIN BUDGET REVISIONS
TO THE 2019-2020 BIENNIAL BUDGET AND
AMENDING ORDINANCE NOS. 18-18, 19-08, 19-09, 19-12, 19-17 AND 20-06**

WHEREAS, the City Council adopted the 2019-2020 Budget by Ordinance No. 18-18 on December 4, 2018, representing the total for the biennium of estimated resources and expenditures for each of the separate funds of the City; and

WHEREAS, budget adjustments are needed that have been previously approved by the City Council, as noted in the following table;

Fund	Department	Description	Agenda Bill	Budget Year	Expenditure Adjustment	Revenue Adj / Funding Source
General Fund	Parks & Recreation	Phase 1 Expenditure Reductions	AB5687 5/05/2020	2020	\$ (1,150,000)	
General Fund	Parks & Recreation	Phase 2 Expenditure Reductions	AB5687 5/05/2020	2020	\$ (1,635,600)	
General Fund	Parks & Recreation	Reduce Recreation & Facility Rental Revenue	AB5687 5/05/2020	2020		\$ (1,384,000)
General Fund	Non-Departmental	Reduce General Fund revenue estimates	AB5687 5/05/2020			\$ (1,401,600)
General Fund	Non-Departmental	Cash out of leave accrual balances at separation	AB5687 5/05/2020	2020	\$ 300,000	Appropriate use of Compensated Absence Reserve
General Fund	Non-Departmental	Emergency Operations COVID 19 Response (May 2, 2020 through August 31, 2020)	AB5687 5/05/2020	2020	\$ 496,000	Transfer from Contingency Fund
Contingency Fund	Non-Departmental	Transfer to General Fund to support emergency operations COVID 19 response (May 2, 2020 through August 31, 2020)	AB5687 5/05/2020	2020	\$ 496,000	Contingency Reserve

WHEREAS, budget adjustments are needed that have not been previously approved by the City Council, as noted in the following table;

Fund	Department	Description	Budget Year	Amount	Funding Source
General Fund	Non-Departmental	2020 Unemployment costs resulting from workforce reductions.	2020	\$300,000	Transfer from Contingency Fund
Contingency Fund	Non-Departmental	Transfer to General Fund creating an unemployment funding reserve	2020	\$300,000	Contingency Reserve

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF MERCER ISLAND, WASHINGTON, DOES ORDAIN AS FOLLOWS:

Section 1. Amending the 2019-2020 Budget

The 2019-2020 Budget for the City of Mercer Island, as adopted in Ordinance No. 18-18 and amended by Ordinance Nos. 19-08, 19-09, 19-12, 19-17 and 20-06, is hereby amended to incorporate increases and decreases in resources and expenditures in the following funds for the 2019-2020 biennium:

Fund	Fund Name	Resources	Expenditures
001	General Fund	\$ (1,689,600)	\$ (1,689,600)
130	Contingency Fund	\$ 796,000	\$ 796,000
Total		\$ (893,600)	\$ (893,600)

Section 2. Amending Previously Adopted Budget Ordinances

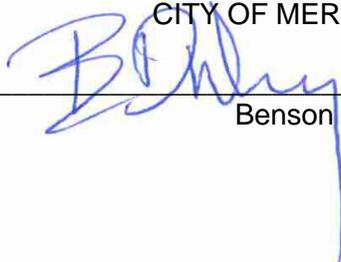

City Ordinance Nos. 18-18, 19-08, 19-09, 19-12, 19-17 and 20-06, as previously adopted and as hereby amended, are hereby ratified, confirmed, and continued in full force and effect.

Section 3. Effective Date

This Ordinance shall take effect and be in force 5 days after passage and publication.

ADOPTED BY THE CITY COUNCIL OF THE CITY OF MERCER ISLAND, WASHINGTON, AT ITS MEETING ON THE 2nd DAY OF JUNE, 2020.

EXHIBITS:	1. ARCH Fall 2019 Housing Trust Fund Recommendations
CITY COUNCIL PRIORITY:	n/a

AMOUNT OF EXPENDITURE	\$ n/a
AMOUNT BUDGETED	\$ n/a
APPROPRIATION REQUIRED	\$ n/a

SUMMARY

The purpose of this agenda bill is to provide an overview of the six projects recommended by the ARCH Executive Board for funding from Mercer Island’s contributions to the ARCH Housing Trust Fund (HTF). Approval of funding for these projects will allocate funds contributed to the HTF in 2018 and 2019, totaling \$106,950.

BACKGROUND

ARCH was established in 1993 by an Interlocal Agreement to create and preserve affordable housing throughout the greater East King County community. Member jurisdictions include Beaux Arts Village, Bellevue, Bothell, Clyde Hill, Hunts Point, Issaquah, Kenmore, King County, Kirkland, Medina, Mercer Island, Newcastle, Redmond, Sammamish, Woodinville, and Yarrow Point. By participating in ARCH, member cities are part of a joint and cooperative undertaking to collectively plan for and provide affordable housing in East King County communities. ARCH staff serves as additional housing staff to each member city, and coordinates with member city staff in various housing-related projects, plans and services.

Like other local government members, Mercer Island contributes annually to ARCH in order to provide administrative support for the organization’s housing activities and capital support for the creation and

preservation of affordable housing. The coordinated approach used by ARCH provides for an efficient use of resources in fulfilling each member city's obligations under the Washington State Growth Management Act (GMA) to make adequate provisions for the existing and projected housing needs of all economic segments of the population (RCW 36.70A.070(2)), as well as sharing resources with regional partners in the provision and administration of affordable housing.

ARCH HOUSING TRUST FUND

The ARCH Housing Trust Fund (HTF) was created by ARCH member cities in 1993 as a way to directly assist the development and preservation of affordable housing in East King County. The HTF enables ARCH members to capitalize a joint housing development fund and directly control the use of their housing funds through ARCH's funding recommendation process. The HTF is the primary means by which ARCH members assist in creating and preserving housing opportunities for low- and moderate-income households. The HTF awards loans and grants to Eastside developments that include below-market rate housing. HTF projects typically create housing that is affordable for households earning 60% area median income or less. Between 1993 and 2018, ARCH invested over \$62 million to create 3,645 units of East King County housing for families, seniors, homeless, and persons with special needs.

Mercer Island's contributions to the ARCH HTF come from the City's General Fund, designated to ARCH for the purpose of creating affordable housing. The City contributed \$64,000 in 2017, \$96,000 in 2018, \$50,000 in 2019 and is budgeted to contribute \$33,768 in 2020. Funds contributed to the HTF are held in a centralized account at the City of Bellevue and earn interest. Housing projects are identified for funding via a competitive process each fall. ARCH staff, member city liaisons, the ARCH Citizen's Advisory Board (CAB) and the ARCH Executive Board review and recommend projects for HTF funding. Allocation of HTF funds contributed by Mercer Island to specific projects must be approved by the City Council, per the terms of the [ARCH Interlocal Agreement](#).

2019 PROJECT FUNDING RECOMMENDATIONS

The 2019 ARCH HTF funding round had a record of nine applications representing requests for nearly \$20 million in local funds. Typically, the ARCH members invest \$1.5 to \$2 million of HTF funds in projects each year. However, no funds were invested in projects in 2018, and the Executive Board is recommending allocation of funds from both the 2018 and 2019 Trust Fund contributions, Community Development Block Grant (CDGB) funding, and interest and revenue accrued in cities' accounts. Even with higher than typical available funding, the Executive Board had to make some difficult choices as to which projects to fund.

The ARCH Executive Board, in concurrence with the ARCH CAB, is recommending a total funding allocation of \$5,001,000 for six new projects and one supplemental award to a previously funded project. These recommendations advance projects that meet urgent local priorities, including the expansion of year-round emergency shelter on the Eastside, construction of permanent housing with services for homeless families, workforce housing for low and moderate income wage earners, affordable senior housing and special needs housing. Details on the Executive Board's rationale for recommending each project is included in Exhibit 1.

The ARCH Executive Board recommends that Mercer Island support the six projects listed at the top of the next page, with funds for the Imagine Housing project coming from the Northeast subregion of King County's CDGB allocation and the other 5 projects drawing on up to \$106,950 from the City's contributions to the ARCH Housing Trust Fund:

- Imagine Housing Samma Senior Apartments (CDGB Funds)
- Congregations for the Homeless East King County Men’s Permanent Shelter (\$13,120)
- Inland Group Polaris at Eastgate Apartments (\$15,090)
- Inland Group/Horizon Housing Alliance Together Center Redevelopment (\$72,150)
- Community Homes Shared Living 1 (\$2,640)
- Community Homes Adult Family Home 8 (\$3,950)

The 2019 balance in the Mercer Island HTF account was \$228,033. Of this amount \$65,944 is committed to previously funded projects that are now in development. If the \$106,950 for the recommended projects listed above is approved, \$55,139 will remain in Mercer Island’s HTF account. These funds will be held in an interest-bearing account, and together with the 2020 contribution (plus interest earned and any loan repayments) will be available to award to new projects in the Fall 2020 funding round. The ARCH Executive Board recommended holding \$2 million of the funds available in the 2019 funding round in reserve for a transit-oriented development project in Bellevue; thus a significant portion of Mercer Island’s remaining balance will be recommended for funding allocation as a part of the 2020 funding round.

Exhibit 1 is the ARCH Fall 2019 Housing Trust Fund Recommendations memo, detailing the projects recommended for funding by the ARCH Executive Board, and the following supporting documents:

1. Attachment 1: Recommended Projects and Funding Sources provides a funding chart showing how proposed ARCH funding is distributed among ARCH cities (page 21).
2. Attachment 2: Economic Summaries of Recommended Projects provides economic summaries of the recommended projects showing sources of funding and project expenses (pages 22-28).
3. Attachment 3: Past Projects Funded Through the ARCH Trust Fund provides a summary of ARCH projects funded from 1993-2018 (pages 29-30).

RECOMMENDATION

Approve the use of \$106,950 from the City’s contributions to the ARCH Housing Trust Fund as recommended by the ARCH Executive Board and authorize execution of any related agreements and documents.

FROM: Kurt Triplett, ARCH Executive Board Chair

DATE: December 27, 2019

RE: Fall 2019 Housing Trust Fund (HTF) Recommendations

The 2019 ARCH Housing Trust Fund round demonstrated historic levels of demand for funding to support affordable housing development in East King County, with nine applications representing requests for nearly \$20 million in local funds to develop close to 1,000 units or beds. After careful deliberation, the ARCH Executive Board concurred with the recommendations of the ARCH Citizen Advisory Board (CAB), and is recommending funding of \$5,001,000 for six new projects and one supplemental award to a previously funded project as shown in **Attachment 1: Recommended Projects and Funding Sources**.

These recommendations advance a significant number of projects that meet urgent local priorities, including the expansion of year-round emergency shelter on the Eastside, construction of permanent housing with services for homeless families, workforce housing for low and moderate income wage earners, affordable senior housing and special needs housing. Supporting these projects will result in meaningful progress toward our collective housing goals. As members of ARCH, we continue to value the coordination of local resources to leverage other public and private funding and meet local needs.

Because no projects were recommended in the 2018 round, the funding recommended this year represents the allocation of both 2018 and 2019 Trust Fund contributions, CDBG funding, and interest and revenue accrued in cities' accounts. Even with higher than typical available funding, the Executive Board had to make some difficult choices as to which projects to fund and which to invite back in future rounds. In some cases, a partial award is recommended to demonstrate local support to a project to allow it to advance in a future funding round.

Following is a description of the applications received, the Executive Board recommendation and rationale, and proposed contract conditions for the six proposals recommended for funding at this time. Also enclosed is an economic summary for the six projects recommended for funding, and a summary of past projects funded through the Trust Fund to date.

1. Imagine Housing Samma Senior Apartments

Funding Request: \$2,413,853 (Deferred, Contingent Loan)
54 affordable rental units

Exec Bd Recommendation: \$750,000 (Deferred, Contingent Loan – CDBG funds) for site acquisition

Project Summary:

Imagine Housing (IH), is proposing a 54-unit affordable senior rental project utilizing either 4% tax credits and tax-exempt bond financing or 9% tax credits. The project includes set asides of units for disabled persons and homeless veterans. Imagine hopes to secure Veterans Affairs Supportive Housing (VASH) rental vouchers to help pay down the rent for the Veteran units.

The project would be built on land to be acquired from the City of Bothell at a reduced price. The site is located on the Bus Rapid Transit corridor which is being expanded with ST3 funding. The City has indicated its strong support for the project.

The proposed affordable building is five levels of wood construction. Imagine is pursuing an Ultra High Energy Efficiency (UHEE) rating for this building. The design envisions around 40 surface parking spaces.

Funding Rationale:

The Executive Board sees merit in this application and recommends partially funding to allow acquisition of the site with conditions listed below for the following reasons:

- The City of Bothell is excited to support this affordable project through discounting land and working collaboratively to address land use issues.
- The project would increase affordability within the revitalized Bothell Landing.
- The project is sited at an excellent location for senior housing, with proximity to a major senior center, planned bus rapid transit, parks and trails, and shopping.
- The project aims to serve a range of lower income senior households including set asides for homeless and disabled, however the proposed services model relies on the creation or re-allocation of ongoing human services funding to support case management and resident services.
- The project is somewhat early in the development process; there appear to be opportunities for improving the design, and additional information about the environmental and geotechnical conditions of the site is needed to inform ultimate design and costs.
- The project as proposed exceeds cost limits set out by the Washington State Housing Finance Commission. There may be significant opportunities for reducing estimated project costs.
- CAB is interested in exploring other ways to layout the site.
- The project is competitive for King County funds but did not score as competitively for State Housing Trust Fund dollars this round.
- The scale of project fits developer’s past track record and capabilities.

Proposed Conditions:

Standard Conditions: Refer to list of standard conditions found at end of this memo

Special Conditions:

1. Funds shall be used by the Agency for acquisition of the site. Prior to accessing funds, the Agency must complete the following:
 - Conduct additional environmental, geotechnical and any other necessary investigation to determine that the project is developable on the property.
 - Provide an updated site plan maximizing the site, and schematic drawings showing unit reasonable layouts supportive of the needs of seniors.
 - Provide updated cost estimates demonstrating feasibility of proposed financing, taking into consideration Total Development Cost limits established by the Washington State Housing Finance Commission (WSHFC) cost limits.
2. Project must meet requirements associated with federal CDBG dollars. A purchase agreement cannot be entered into until the completion of the HUD required Environmental Assessment. The Agency may enter into an option agreement with language that addresses federal funds' "choice-limiting" restrictions. The portion of CDBG funds recommended from the 2020 HUD grant are estimated; funding is conditioned on a final grant agreement with HUD.
3. The Agency must re-submit a revised project proposal to ARCH and other funders in the 2020 funding round. Additional funding conditions will apply to any additional funds awarded.
4. ARCH's funding commitment shall continue for twelve (12) months from the date of Council approval and shall expire thereafter if all conditions are not satisfied. An extension may be requested to ARCH staff no later than sixty (60) days prior to the expiration date. At that time, the applicant will provide a status report on progress to date. ARCH staff will consider up to a 12-month extension only on the basis of documented, meaningful progress in bringing the project to readiness or completion. At a minimum, the applicant will demonstrate all capital funding is likely to be secured within a reasonable period of time.
3. Funds will be in the form of a deferred, contingent loan. Loan terms will account for various factors, including loan terms from other fund sources and available cash flow. Final loan terms shall be determined prior to release of funds and must be approved by ARCH Staff. The terms are expected to include a provision for the Agency to defer payment if certain conditions are met (e.g., low cash flow due to unexpected costs).
4. The Agency must demonstrate the City of Bothell's approval and satisfaction of all zoning requirements including parking, setbacks, curb cuts, and view corridors.
5. A covenant is recorded ensuring affordability for at least 50 years, with affordability generally as shown in the following table. (Note that changes to the matrix may be considered based on additional site investigation and revised financing assumptions that are presented for review and approval in the 2020 funding round.)

Affordability	Studio	1 BR	2BR	Total
40%	4	4		8
50%	16	14		30
60%	9	6	1	16
Total	29	24	1	54

* The 60% AMI 2 BR unit is a manager's unit

2. Congregations for the Homeless East King County Men's Permanent Shelter

Funding Request: \$500,000 additional (Secured Grant)
100 beds

Exec Bd Recommendation: \$500,000 additional (Secured Grant)

Project Summary:

Congregations for the Homeless (CFH) is applying to ARCH for the acquisition and development of a permanent winter shelter and day center for men. The project was originally funded in the 2014 round as a 50-bed shelter proposal. Since then, the need has grown to 100 beds, and site selection activities have culminated in identifying a King County-owned site at Eastgate. CFH has operated the men's emergency winter shelter during that time at non-permanent locations, usually churches or civic buildings, in addition to their regular rotating men's shelter, drop in center, outreach and leased housing program. The permanent shelter is a low barrier shelter with few requirements on shelter guests other than to ensure they don't pose a danger to other guests. The objective of the permanent shelter is to get the homeless out from under the weather and connect them to services to start a pathway out of homelessness. The emergency shelter started out being open only on severe winter nights but moved to being open all nights and is currently located in a building scheduled for demolition in 2022.

The proposed shelter is now sized to provide sleeping accommodations for 100 men and serve 125 persons during the day. The proposed site is owned by King County Solid Waste, surplus from the creation of a waste transfer station off Eastgate Drive. The County is requiring fair market price for the property, with a final price to be determined based on necessary environmental remediation and other site constraints and requirements for the 10-acre site. Due to the size of the site and scope of predevelopment work needed, CFH has entered into a partnership with a development team that is proposing a larger residential development on the remainder of the site.

Funding Rationale:

The Executive Board recommends funding this application for the following reasons:

- The creation of a permanent men's shelter on the Eastside is a longstanding priority for ARCH and its member jurisdictions, particularly the City of Bellevue and King County.
- The project realizes a regional agreement to locate a men's shelter in Bellevue. It is the last of three planned Eastside shelter projects to get realized.
- The current location hosting the men's shelter must be vacated by 2022.
- CFH has successfully initiated outreach with nearby neighbors; no residential neighbors immediately abut the current site.
- Operating costs are known; cities are engaged in work to align human services funding.

The Executive Board does recognize the following weaknesses with the proposal and has addressed them in the funding conditions associated with the project:

- The site does not have an agreed upon purchase price and was last appraised at \$28 million (not taking into account potential deductions for site conditions).
- King County requires the purchase of the site to transact by the end of 2020.
- The entire site must be purchased and other uses funded and developed concurrently, requiring CFH to rely on other entities to help realize the project.
- While the acquisition price will be reduced by estimated cost of remediation; the current agreement with King County does not provide relief if the actual costs of remediation exceed estimated costs.
- Large amounts of public capital and operating/services funding will be required; no revenue can ever be expected from shelter users.
- There is a possibility of neighborhood opposition, given opposition for siting up the street.
- The proposed entitlement timeline appears optimistic.
- Budgets are speculative, costs may vary significantly from pro forma provided.

Proposed Conditions:

Standard Conditions: Refer to list of standard conditions found at end of this memo

Special Conditions: (Note these conditions replace those of the 2014 Funding Round award)

1. By March 31, 2020, a final purchase price for the property must be determined, with updated budgets provided demonstrating a reasonable financing proposal to acquire the site by the date required by King County. An extension may be approved if both CFH and King County indicate a strong commitment to resolving all outstanding issues toward completion of the acquisition.
2. The funding commitment shall last for twelve (12) months from the date of Council approval and shall expire thereafter if all conditions are not satisfied. An extension may be requested to ARCH staff no later than sixty (60) days prior to the expiration date. ARCH staff will approve an extension only on the basis of documented, meaningful progress in bringing the project to readiness or completion.
3. Funds shall be used by CFH toward design, developer fee and construction costs. Funds may not be used for any other purpose unless ARCH staff has given written authorization for the alternate use.
4. Funds will be in the form of a secured grant with no repayment, so long as affordability and target population is maintained, and the service funds necessary to provide services to this population are available.
5. A covenant is recorded ensuring affordability for one hundred (100) beds for at least fifty (50) years for homeless men without specificity to AMI.
6. CFH shall submit quarterly updates to ARCH on the progress of the Capital Campaign demonstrating active solicitation and amounts pledged and secured against campaign targets.

7. Prior to the execution of funding contract, an outreach plan will be submitted to ARCH staff for review and approval. The outreach plan will include provisions such as:
 - Provide written notification to neighbors upon identification of a suitable site to include description of the project, and information regarding CFH that will include the website and contact number;
 - Send out invitations and provide an opportunity for neighbors to individually and/or as a group to meet with CFH in an Open House or other format regarding the project. Provide contact information for Congregations and information about what to do in case something out of the ordinary occurs.

8. Prior to release of funds, CFH shall submit to ARCH staff for review and approval drafts of all documents related to the provision of services to residents and management of the property, including any licensing-related management and service provider plans. These documents shall at a minimum address: management procedures to address tenant needs; services provided for or required of tenants; management and operation of the premises; community and neighbor relations procedures; a summary of ARCH’s affordability requirements as well as annual monitoring procedure requirements.

9. In the event that any operating support funding levels will be reduced, the Agency shall inform ARCH Staff about the impacts the proposed reduction will have on the budget and plan for services to clients, and what steps shall be taken to address the impacts. A new budget or services plan must be approved by the ARCH.

10. Because of interest in the sustainability of the project and shortfalls in public subsidies, agency shall provide ARCH Staff (to be shared with the Citizen Advisory Board) historic, current and projected operating cost shortfalls bridged through fundraising, fundraising goals for those periods and the results of those fundraising efforts.

3. Inland Group Polaris at Eastgate Apartments

Funding Request: \$5,000,000 (Deferred Loan)
298 affordable units; 2 unregulated units

Exec Bd Recommendation: Partial funding of 575,000 (Deferred Loan)

Project Summary:

The Polaris at Eastgate project is a joint development between Inland Group and Congregations for the Homeless (CFH) to enable acquisition and development of a large 10-acre property with both a year-round shelter and rental housing. This partnership was created in order to accomplish the acquisition of the site in its entirety, which has both significant up-front predevelopment costs as well as an anticipated fair market purchase price that exceeds CFH’s resources and capacity to carry.

Inland Group, along with another development partner, Horizon Housing Alliance, agreed to join the team and carry the costs of site investigation and entitlement process, provided a reasonable path to permanent financing of the residential component is defined in 2020. In addition to providing technical and financial support to carry the development of the shelter through initial phases, the project provides a benefit by creating a more comprehensive community surrounding the shelter. Absent full development of the site, the location of the shelter would be more isolated.

The Project is proposed to be new construction of a 300-unit workforce housing community for families earning up to 60% of AMI. The unit mix including studios, one-bedroom, two-bedrooms and three-bedroom units is planned, accommodating a variety of households from singles through large families. In addition to the 60% AMI income and rent set-aside, 20% of the units will also be set-aside for households where one or more members is also disabled. This unit mix will be provided in two 5-story, elevator-serviced buildings over a subterranean parking garage.

Unit amenities within each building include full size washer and dryer in every apartment, fully equipped kitchens including microwave hoods, shaker style cabinets & laminate countertops in kitchen and bath, vinyl plank faux wood flooring in entry, kitchen, bath and hallways and carpet in bedrooms and living rooms. Common area amenity spaces are planned with a diverse resident mix in mind, and will include a business center, tutoring center, fitness center, resident lounge, theater, and multi-purpose room with kitchen. An internal courtyard with outdoor amenity space will offer a BBQ area, seating and significant landscaping.

The site of this building is separated by a grade change from the shelter. A third pad site with housing for homeless households is anticipated to be proposed in a future funding round.

Funding Rationale:

The Executive Board supported this application and recommends partially funding with conditions listed below for the following reasons:

- The project is necessary to realize the shelter at this location.
- The project creates 298 units of needed affordable rental units within a high opportunity area.
- The project estimates a relatively low per unit development cost compared to other recent projects.
- The project provides significant financial leverage of local resources.
- The applicant is an experienced developer with a strong track record of developing comparably scaled projects with similar financing.
- Site has convenient access to transit, shopping, and services.
- While available resources are not sufficient to fully fund the project, an initial commitment provides funding for predevelopment activities and demonstrates local commitment that increases the chance of securing other public resources.

The Executive Board recognizes the following weaknesses with the proposal which are addressed in the funding conditions:

- The site does not have an agreed upon purchase price and was last appraised at \$28 million (not taking into account potential deductions for site conditions).
- The proposed funding relies on an additional \$4 million in capital funds from King County, however the proposal was not prepared in time to meet King County application deadlines for the 2019 funding round.
- King County has required the purchase of the site to transact by the end of 2020; absent this deadline, the project could benefit from additional time to conduct due diligence and submit full funding applications.
- While the acquisition price will be reduced by estimated cost of remediation; the current agreement with King County does not provide relief if the actual costs of remediation exceed estimated costs.
- The entitlement timeline appears optimistic

Proposed Conditions:

Standard Conditions: Refer to list of standard conditions found at end of this memo

Special Conditions:

1. The funding commitment shall continue for eighteen (18) months from the date of Council approval and shall expire thereafter if all conditions are not satisfied. An extension may be requested to ARCH staff no later than sixty (60) days prior to the expiration date. ARCH staff will grant up to a 12-month extension.
2. Funds may be used by the Agency towards construction or other eligible uses approved by ARCH staff. Funds will be released only after all proposed financing has been assembled for the Project. A waiver may be considered by ARCH to allow for earlier release of funds for acquisition if the Agency has demonstrated a clear plan for assembling all needed acquisition and permanent project financing.
3. Funds will be in the form of a deferred, contingent loan. Loan terms will account for various factors, including loan terms from other fund sources and available cash flow. Final loan terms shall be determined prior to release of funds and must be approved by ARCH Staff. It is anticipated that loan payments will be based on a set repayment schedule and begin after repayment of deferred developer fee with 1% interest. The terms will also include a provision for the Agency to a deferment of a payment if certain conditions are met (e.g., low cash flow due to unexpected costs). Any requested deferment of loan payment is subject to approval by City or ARCH Staff, and any deferred payment would be repaid from future cash flow or at the end of the amortization period.
4. A covenant is recorded ensuring affordability for at least 50 years, with affordability as shown in the following table. Limited changes to the proposed unit mix may be made subject to ARCH approval.

Area Median Income/Unit Size	Studio	1BR	2BR	3BR	Total
60%	30	160	80	28	298
Unregulated					2
Total	30	160	80	30	300

5. The net developer fee shall be established at the time of finalizing the Contract Budget and will follow the ARCH Net Developer Fee Schedule.
6. If there is a charge for parking, then that amount shall be deducted from the maximum rents. A waiver of this requirement may be considered by ARCH staff if justified by requirements to achieve parking reductions.

4. Inland Group/Horizon Housing Alliance Together Center Redevelopment

Funding Request: \$6,000,000 (Deferred, Contingent Loan)
80 affordable rental units in 9% deal and 204 affordable units in 4% deal

Exec Bd Recommendation: \$2,750,000 (Deferred, Contingent Loan)

Project Summary:

The Together Center is a nonprofit that has operated around a model of providing affordable commercial space for human service-related nonprofit organizations since 1991. In early 2019, after a long process of planning and visioning, the Together Center released a Request for Interest to solicit development proposals that would re-imagine the existing Together Center and take advantage of the development capacity on the property to provide affordable housing. Horizon Housing Alliance, along with its development partner, Inland Group, were selected in the summer of 2019 and have since been working steadily through the pre-development process.

The proposed project is two buildings on a single site with two separate programs. The existing Building A will be 204 studio, one, two, and three bedroom units affordable at 60% AMI called Polaris at Together Center. The existing Building B, called Horizon Housing at Together Center, will be 80 units of studio, one, two, and three-bedroom units affordable to households at 30% and 50% AMI, with 60 of the units set aside for those exiting homelessness. The residential units will be on floors two through five in both buildings. The ground floor of the buildings will be a condo owned by Together Center, a nonprofit that operates affordable office space for human service nonprofit organizations. Parking will be below grade in a structured parking garage. The collective project is called the Together Center Redevelopment.

The project is built around the vision of co-location of housing along with various behavioral health, physical health, and other resources to create a vibrant community and help families break the cycle of intergenerational poverty. Residents of Horizon Housing at Together Center will have access to social and health services in the commercial space with providers including HealthPoint, Ikron, and Sound Health all operating as tenants. The proposed population is intended to include homeless residents be referred by rapid rehousing providers including Catholic Community Services, as well as other transitional housing and shelter programs, rather than the through Coordinated Entry system. This is intended to provide a better balance within the building, as well as allow for prioritization of homeless populations in East King County.

Horizon Housing at Together Center will partner with Hopelink to provide service coordination and case management services on site. The project cashflow will contribute \$110,000 annually towards services. Hopelink and Horizon will apply for available service dollars to fund the remaining services for the families exiting homelessness. Horizon Housing at Together Center can refer tenants to the physical and behavioral health providers, including HealthPoint, who will be tenants in the ground floor commercial space on site. These “off-site” services will be paid through existing revenue streams with the providing agencies.

Funding Rationale:

The Executive Board recommends funding this application with partial funding at a minimum to advance the 9% portion of the project with conditions listed below for the following reasons:

- The project helps to realize the redevelopment of the Together Center, a valued community asset that provides critical social services for people across the EKC region.
- Services at the Together Center will provide ongoing benefits to residents of the housing.
- Project will ultimately create 284 units of affordable housing; 60 of which are set aside for households exiting homelessness
- The initial funding commitment allows the project to secure highly competitive 9% tax credit resources for East King County while securing funding for the remainder of the project.
- Project maximizes utilization of the site per zoning.

Proposed Conditions:

Standard Conditions: Refer to list of standard conditions found at end of this memo

Special Conditions:

1. The funding commitment shall continue for eighteen (18) months from the date of Council approval and shall expire thereafter if all conditions are not satisfied. An extension may be requested to ARCH staff no later than sixty (60) days prior to the expiration date. ARCH staff will grant up to a 12-month extension.
2. Funds shall be used by the Agency towards construction. Funds may not be used for any other purpose unless ARCH staff has given written authorization for the alternate use.
3. Funds will be in the form of a deferred, contingent loan. Loan terms will account for various factors, including loan terms from other fund sources and available cash flow. Final loan terms shall be determined prior to release of funds and must be approved by ARCH Staff. It is anticipated that loan payments will be based on a set repayment schedule and begin after repayment of deferred developer fee with 1% interest. The terms will also include a provision for the Agency to a deferment of a payment if certain conditions are met (e.g. low cash flow due to unexpected costs). Any requested deferment of loan payment is subject to approval by ARCH Staff, and any deferred payment would be repaid from future cash flow or at the end of the amortization period.
5. The net developer fee shall be established at the time of finalizing the Contract Budget, and will follow the ARCH Net Developer Fee Schedule.
6. A covenant is recorded ensuring affordability for at least 50 years, with affordability generally as shown in the following table. (Note that limited changes to the matrix may be considered based on reasonable justification as approved by ARCH staff.)

9% Project:

Affordability	Studio	1 BR	2BR	3BR	Total
30%		8	20	12	40
50%		8	20	12	40
Total		16	40	24	80

4% Project:

Affordability	Studio	1 BR	2BR	3BR	Total
60%	20	80	84	20	204
Total	20	80	84	20	204

7. Submit for City or ARCH staff approval a management and services plan which includes coordination of services with outside providers and parking management.
8. Agency shall submit a marketing plan for approval by ARCH staff. The plan should include how the Agency will do local targeted marketing outreach to local, media business and community organizations.
10. If there is a charge for parking, then that amount shall be deducted from the maximum rents. A waiver of this requirement may be considered by ARCH staff if justified by requirements to achieve parking reductions.

5. Community Homes Shared Living 1

Funding Request: \$100,500 (Secured Grant)
3 Beds

Exec Bd Recommendation: \$100,500 (Secured Grant)

Project Summary:

Community Homes, Inc. (CHI) is proposing to acquire a home that will serve three (3) low-income adults with developmental disabilities. The proposed setting accommodates both the DD residents and their care provider in a shared living arrangement. Each tenant will have their own bedroom. Residents will share living spaces with the care provider but will have a separate bathroom. CHI has a purchase and sales agreement on a suitable property in Newcastle.

Funding Rationale:

The Executive Board recommends funding this application for the following reasons:

- The project has site control and is able to move forward quickly.
- The project serves very low income developmentally disabled individuals.
- The project provides housing for a population (Special Needs housing) that currently is below long-term ARCH Trust goals.
- The residents will benefit from a live-in care provider who is directly funded by Development Disabilities Administration; the live-in care model provides greater stability of care and retention of staff compared to other models.
- Developer has a 24-year track record and good reputation with funders and the Department of Developmental Disabilities.
- The lower number of residents in the home allows the project to come online faster and avoid the lengthy licensing process for homes with more residents.
- The project qualifies for funding set-asides in the State Housing Trust Fund round.

- Based on the proposed funding sources, ARCH funds would be leveraged with significant resources from King County and the State.

Proposed Conditions:

Standard Conditions: Refer to list of standard conditions found at end of this memo

Special / Revised Conditions:

1. The funding commitment shall continue for six (6) months from the date of Council approval and shall expire thereafter if all conditions are not satisfied. An extension may be requested to ARCH staff no later than sixty (60) days prior to the expiration date. At that time, the applicant will provide a status report on progress to date and expected schedule for start of construction and project completion. ARCH staff will consider an extension only on the basis of documented, meaningful progress in bringing the project to readiness or completion. At a minimum, the applicant will demonstrate that all capital funding has been secured or is likely to be secured within a reasonable period of time. ARCH staff will grant up to a 12-month extension. If necessary, a second extension of up to 6 months may be requested by following the same procedures as the first extension.
2. Funds shall be used by the Agency toward acquisition and related costs. Funds may not be used for any other purpose unless ARCH staff has given written authorization for the alternate use.
3. The Agency shall not proceed with searching for a home until all funding commitments have been received. The Agency shall only purchase unoccupied homes or owner-occupied homes in order to not trigger local and federal relocation regulations.
4. Prior to acquisition, the Agency shall submit an appraisal by a qualified appraiser. The appraisal shall be equal to or greater than the purchase price.
5. If federal sources are being provided by any funder, a purchase agreement cannot be entered into until the completion of the HUD required Environmental Assessment. The Agency may enter into an option agreement with language that addresses federal funds' "choice-limiting" restrictions.
6. Funds will be in the form of a secured grant with no repayment, so long as affordability and target population is maintained.
7. A covenant is recorded ensuring affordability for at least 50 years, with three beds for developmentally disabled individuals at or below 30% of area median income at move in.
8. Unless otherwise approved by ARCH staff, the development budget shall include:
 - Minimum of \$17,000 of private sources provided by the applicant.
 - Up to \$987,500 combined for acquisition and development. In the event total acquisition and development costs, including contingency, exceeds this amount, additional costs shall be covered by private sources from the applicant. If actual costs fall below this amount, the ARCH award may be adjusted downward accordingly.
 - Developer fee shall not exceed \$25,000.

9. Reserves will be funded out of operations at \$3,000 for the first year with an annual increase of 3.5% per year for replacement reserves and \$1,000 for the first year with an annual increase of 3.5% per year for operating reserves.
10. All cash flow after payment of operating expenses (including respite care) shall be placed into a project reserve account that can be used by the applicant for project related operating, maintenance or services expenses. Any other use of these reserves must be approved by ARCH staff.
11. In the event that any operating support funding levels will be reduced, the Agency shall inform ARCH Staff about the impacts the proposed reduction will have on the budget and plan for services to the DD clients, and what steps shall be taken to address the impacts. A new budget or services plan must be approved by ARCH.
12. The Agency will notify ARCH when they enter into an option or purchase and sale agreement for any home, providing information on the location of the home and terms for acquiring the home. No home considered for acquisition will be within two blocks of another home owned by Agency unless otherwise approved by ARCH staff.
13. Prior to closing on the home, an individualized outreach plan will be submitted to ARCH staff for review and approval. The outreach plan will include provisions such as:
 - Provide written notification to neighbors upon mutual acceptance of the Purchase and Sales Agreement to include CHI’s intention to purchase the house, description of the project, and information regarding CHI and the care provider that will include the website and contact number;
 - Provide an opportunity for neighbors to meet individually and/or as a group with CHI and the care provider regarding the project; such as having an Open House after the tenants move-in and include invitations to neighbors.
15. Once the home is selected the Agency shall include ARCH Staff in the inspection of the property and development of the final scope of work for the rehab. The final scope of work for the basic construction budget shall include, at a minimum, all work necessary for licensing of the home and correction of substandard health and safety conditions. Prior to start of construction, the Agency shall submit the final scope of work for ARCH Staff approval, along with evidence that construction costs have been confirmed by a qualified contractor and are within the basic construction budget. All uses of construction contingency funds must be approved by ARCH staff prior to authorization to proceed with such work.

6. Community Homes Adult Family Home 8

Funding Request: \$150,500 (Secured Grant)
5 Beds

Exec Bd Recommendation: \$150,500 (Secured Grant)

Project Summary:

Community Homes, Inc. (CHI) is proposing to acquire and remodel a home that will serve five (5) low-income adults with developmental disabilities. The community within the home allows them to live as

independently as possible. A specific home will be identified once funding is committed. Criteria for selecting the particular property includes a minimum size of 2,500 square feet, the physical layout and ease of renovation of the house as well as neighborhood amenities such as sidewalks, access to stores, public services, transportation and recreation.

The residents will live in a shared living arrangement, along with a live-in care provider. Each tenant will have their own bedroom. Residents will share two bathrooms and a resident community living area with kitchen. If necessary, as in the case of prior homes, the existing garage may be converted to living space.

Funding Rationale:

The Executive Board supports funding this project as described in the application and recommends funding this application for the following reasons:

- Serves very low income developmentally disabled individuals
- The project provides housing for a population (Special Needs housing) that currently is below long-term ARCH Trust goals
- Residents will benefit from a live-in care provider who is directly funded by Development Disabilities Administration; the live-in care model provides greater stability of care and retention of staff compared to other models
- Developer has a 24-year track record and good reputation with funders and the Department of Developmental Disabilities
- The project qualifies for funding set-asides in the State Housing Trust Fund round
- Based on the proposed funding sources, ARCH funds would be leveraged with significant resources from King County and the State

Proposed Conditions:

Standard Conditions: Refer to list of standard conditions found at end of this memo

Special / Revised Conditions:

1. The funding commitment shall continue for six (6) months from the date of Council approval and shall expire thereafter if all conditions are not satisfied. An extension may be requested to ARCH staff no later than sixty (60) days prior to the expiration date. At that time, the applicant will provide a status report on progress to date and expected schedule for start of construction and project completion. ARCH staff will consider an extension only on the basis of documented, meaningful progress in bringing the project to readiness or completion. At a minimum, the applicant will demonstrate that all capital funding has been secured or is likely to be secured within a reasonable period of time. ARCH staff will grant up to a 12-month extension. If necessary, a second extension of up to 6 months may be requested by following the same procedures as the first extension.
2. Funds shall be used by the Agency toward acquisition and construction costs. Funds may not be used for any other purpose unless ARCH staff has given written authorization for the alternate use.
3. The Agency shall not proceed with searching for a home until all funding commitments have been received. The Agency shall only purchase unoccupied homes or owner-occupied homes in order to not trigger local and federal relocation regulations.

4. Prior to acquisition, the Agency shall submit an appraisal by a qualified appraiser. The appraisal shall be equal to or greater than the purchase price.
5. If federal sources are being provided by any funder, a purchase agreement cannot be entered into until the completion of the HUD required Environmental Assessment. The Agency may enter into an option agreement with language that addresses federal funds' "choice-limiting" restrictions.
6. Funds will be in the form of a secured grant with no repayment, so long as affordability and target population is maintained, and the service/care providers have a contract with DDA for funds necessary to provide services to this population.
7. A covenant is recorded ensuring affordability for at least 50 years, with five beds for developmentally disabled individuals at or below 30% of area median income at move in.
8. Unless otherwise approved by ARCH staff, the development budget shall include:
 - Minimum of \$26,500 of private sources provided by the applicant.
 - Up to \$1,705,500 for combined cost of acquisition and development. In the event total acquisition and development costs, including contingency, exceeds this amount, additional costs shall be covered by private sources from the applicant. If actual costs fall below this amount, the ARCH award may be adjusted downward accordingly.
 - Developer fee shall not exceed \$50,000.
9. Reserves will be funded out of operations at \$4,000 for the first year with an annual increase of 3.5% per year for replacement reserves and \$2,000 for the first year with an annual increase of 3.5% per year for operating reserves.
10. Residents referred from DDA will not receive Section 8 assistance.
11. All cash flow after payment of operating expenses (including respite care) shall be placed into a project reserve account that can be used by the applicant for project related operating, maintenance or services expenses. Any other use of these reserves must be approved by ARCH staff.
12. In the event that any operating support funding levels will be reduced, the Agency shall inform ARCH Staff about the impacts the proposed reduction will have on the budget and plan for services to the DD clients, and what steps shall be taken to address the impacts. A new budget or services plan must be approved by ARCH.
13. The Agency will notify ARCH when they enter into an option or purchase and sale agreement for any home, providing information on the location of the home and terms for acquiring the home. No home considered for acquisition will be within two blocks of another home owned by Agency unless otherwise approved by ARCH staff.
14. Prior to closing on the home, an individualized outreach plan will be submitted to ARCH staff for review and approval. The outreach plan will include provisions such as:

- Provide written notification to neighbors upon mutual acceptance of the Purchase and Sales Agreement to include CHI’s intention to purchase the house, description of the project, and information regarding CHI and the care provider that will include the website and contact number;
- Provide an opportunity for neighbors to meet individually and/or as a group with CHI and the care provider regarding the project; such as having an Open House after the tenants move-in and include invitations to neighbors.

15. Once the home is selected the Agency shall include ARCH Staff in the inspection of the property and development of the final scope of work for the rehab. The final scope of work for the basic construction budget shall include, at a minimum, all work necessary for licensing of the home and correction of substandard health and safety conditions. Prior to start of construction, the Agency shall submit the final scope of work for ARCH Staff approval, along with evidence that construction costs have been confirmed by a qualified contractor and are within the basic construction budget. All uses of construction contingency funds must be approved by ARCH staff prior to authorization to proceed with such work.

7. Parkview Homes XV

Funding Request: \$225,450 (Secured Grant)
10 Beds

Exec Bd Recommendation: \$0

Project Summary:

Parkview Services, a Shoreline-based non-profit organization is proposing to develop three homes in East King County; one of those homes is in Kenmore, recently acquired by Parkview, the remainder are to yet be identified. The Kenmore Home is 4 beds and has short-term financing that must be taken out in the next year and a half. For the other two homes, they plan to acquire and remodel 1,600 square foot three-bedroom houses that will each serve three (3) low-income individuals with developmental disabilities referred by the Developmental Disabilities Administration. Specific homes will be identified once all funding is committed. Improvements will include remodeling to meet both Evergreen sustainability and ADA (Americans with Disabilities Act) accessibility standards.

Funding Rationale:

The Executive Board supports the concept of the Parkview proposal which serves the neediest of developmentally disabled persons but cannot recommend funding in the current round given the limited funding available. Parkview was awarded funding in 2014 for a similar project, whereas CHI has not received an award since 2012.

The current proposal’s acquisition and development budget appears too low to be feasible given the targeted area. Given the amount of requested funds versus what was available, the Executive Board encourages a proposal from Parkview in the next funding round addressing this possible issue.

8. Parkview Homes 9 Down Payment Assistance (DPA)

Funding Request: \$200,000 (Non-Recoverable Grant)
DPA for 6 Households

Executive Board Recommendation: \$0

Project Summary:

Since 2006, Parkview Services has created 131 new homeowners, including 12 households that transitioned from subsidies to public housing rental to homeownership. This project proposes to create first-time homebuyers using deferred down-payment assistance (DPA) loans from a combination of public and private funds to achieve affordability for 10 households (6 in East King County). The homebuyers will purchase in either King, Skagit or Snohomish counties at sites to be determined (TBD). Eligibility for the down-payment assistance loans will require that the household income is 80% or less of the area median income (AMI) and that household has a member who is a person with Intellectual and Developmental Disabilities (IDDs). All homebuyers will receive homebuyer education, one-on-one pre-purchase financial counseling, and follow-up services subsequent to the purchase of their home.

The project includes a partnership with HomeSight, which has applied to King County for funds to make DP loans. Parkview homebuyers who purchase in King County will be eligible to use HomeSight's KC DPA loan together with other Parkview Services DP loans. In turn, HomeSight homebuyers who purchase in east King County will be eligible to use Parkview Services ARCH DP loans. Parkview believes this collaborative funding model is the most effective way to create affordable homeownership opportunities for their target population. The collective layers of DPA result in \$150,000 in public assistance per household.

Funding Rationale:

The Executive Board potentially supports the concept of the Parkview proposal which serves households which have a disabled person in them, it does not recommend making a funding award at this time. ARCH has its own Down Payment Assistance program administered through the Washington State Housing Finance Commission which has had only limited activity in the past several years. Those DPA loans are available to all households, not just those with a disabled person. The Executive Board recommends that in the coming year it re-evaluate that program along with the Parkview proposal to determine why activity is limited, if changes to the ARCH program are warranted, and if a specialized program is more beneficial than ARCH's DPA program for the relative cost per household.

9. King County Housing Authority Preservation of Kirkland Heights and Juanita View

Funding Request: \$2,500,000 (Deferred, Unsecured)
137 affordable units; 135 market-rate rental units

Exec Bd Recommendation: \$0

Project Summary:

King County Housing Authority (KCHA) is proposing to refinance 272 units of Section 8 housing located in Kirkland which it acquired from the Machinists Union in July 2019. King County provided \$10 million earlier this year to facilitate the purchase of the two Kirkland properties. This is part of a larger 5 site

acquisition. Rents would remain as they are currently. No renovations or modernization is contemplated with the funding. At about the same time as making their application to ARCH it was announced that Microsoft had made available \$60 million to KCHA for this purpose. The Microsoft money comes in the form of a 15 year loan bearing interest.

Funding Rationale:

The Executive Board does not recommend funding for this project for the following reasons:

- There is a potential to increase rents on certain units without cost burdening residents. This would allow getting higher Section 8 subsidies and the ability to carry conventional debt
- No renovations are planned with this refinance.
- No additional affordability is created with ARCH funding.
- KCHA secured other sources to immediately acquire the property.
- KCHA does portfolio lending which precludes securing individual properties with Deeds of Trust.

The Executive Board sees opportunity in the proposal if re-envisioned to create greater affordability or significant improvements to the property. The Executive Board would welcome an application in the next round. In the event KCHA does provide an application to ARCH in the upcoming round, the application should address the following issues raised above.

Applicable to all funded projects:

Standard Conditions:

1. The Applicant shall provide revised development and operating budgets based upon actual funding commitments, which must be approved by ARCH staff. If the Applicant is unable to adhere to the budgets, City or Administering Agency must be immediately notified and (a) new budget(s) shall be submitted by the Applicant for the City's approval. The City shall not unreasonably withhold its approval to (a) revised budget(s), so long as such new budget(s) does not materially adversely change the Project. This shall be a continuing obligation of the Applicant. Failure to adhere to the budgets, either original or as amended may result in withdrawal of the City's commitment of funds.
2. The Applicant shall submit evidence of funding commitments from all proposed public sources. In the event commitment of funds identified in the application cannot be secured in the time frame identified in the application, the Applicant shall immediately notify City or Administering Agency, and describe the actions it will undertake to secure alternative funding and the timing of those actions subject to City or Administering Agency's review and approval.
3. In the event federal funds are used, and to the extent applicable, federal guidelines must be met, including but not limited to: contractor solicitation, bidding and selection; wage rates; and Endangered Species Act (ESA) requirements. CDBG funds may not be used to repay (bridge) acquisition finance costs.
4. The Applicant shall maintain documentation of any necessary land use approvals and permits required by the city where the projects are located.

- 5. Submit monitoring reports quarterly through completion of the project, and annually thereafter. Submit a final budget upon project completion. If applicable, submit initial tenant information as required by City or Administering Agency.

Supplemental Funding Request:

1. Catholic Community Services with Sophia Way, Women and Family Shelter

Funding Request: \$175,000 supplemental funding (Secured Grant) to the \$3,397,000 award made in the 2017 round

98 Beds (50 Family; 48 Unaccompanied Women)

Exec Bd Recommendation: up to \$175,000 (Secured Grant)

Project Summary:

The new development on the site required addressing storm water impact of the existing building which was constructed in 1952 with different requirements.

Funding Rationale:

The Executive Board supported the CAB recommendation for funding the additional request for the following reasons:

- Storm water detention was originally sized only for the new shelter building however regulations required the impact of the existing structure to also be addressed which was not budgeted for. Additionally, hazardous material was found on site and needed to be remediated.
- Agencies increased their capital campaign targets to match the public ask.
- The project is well underway and addresses an urgent public need.

Special / Revised Conditions:

- 1. Funds are an “up to” amount to be released only after ARCH staff review and approval of proposed construction change order.

ARCH Housing Trust Fund Project Approval

CITY COUNCIL | June 9, 2020

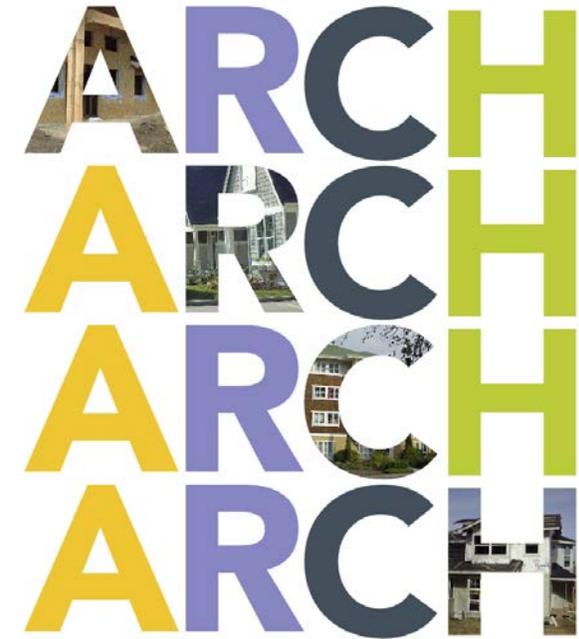

ARCH – A Regional Coalition for Housing

Interlocal Agency: A joint and cooperative undertaking of East King County communities established in 1993 via Interlocal Agreement

Purpose: To provide a framework for cities in East King County to cooperatively plan for and provide affordable housing

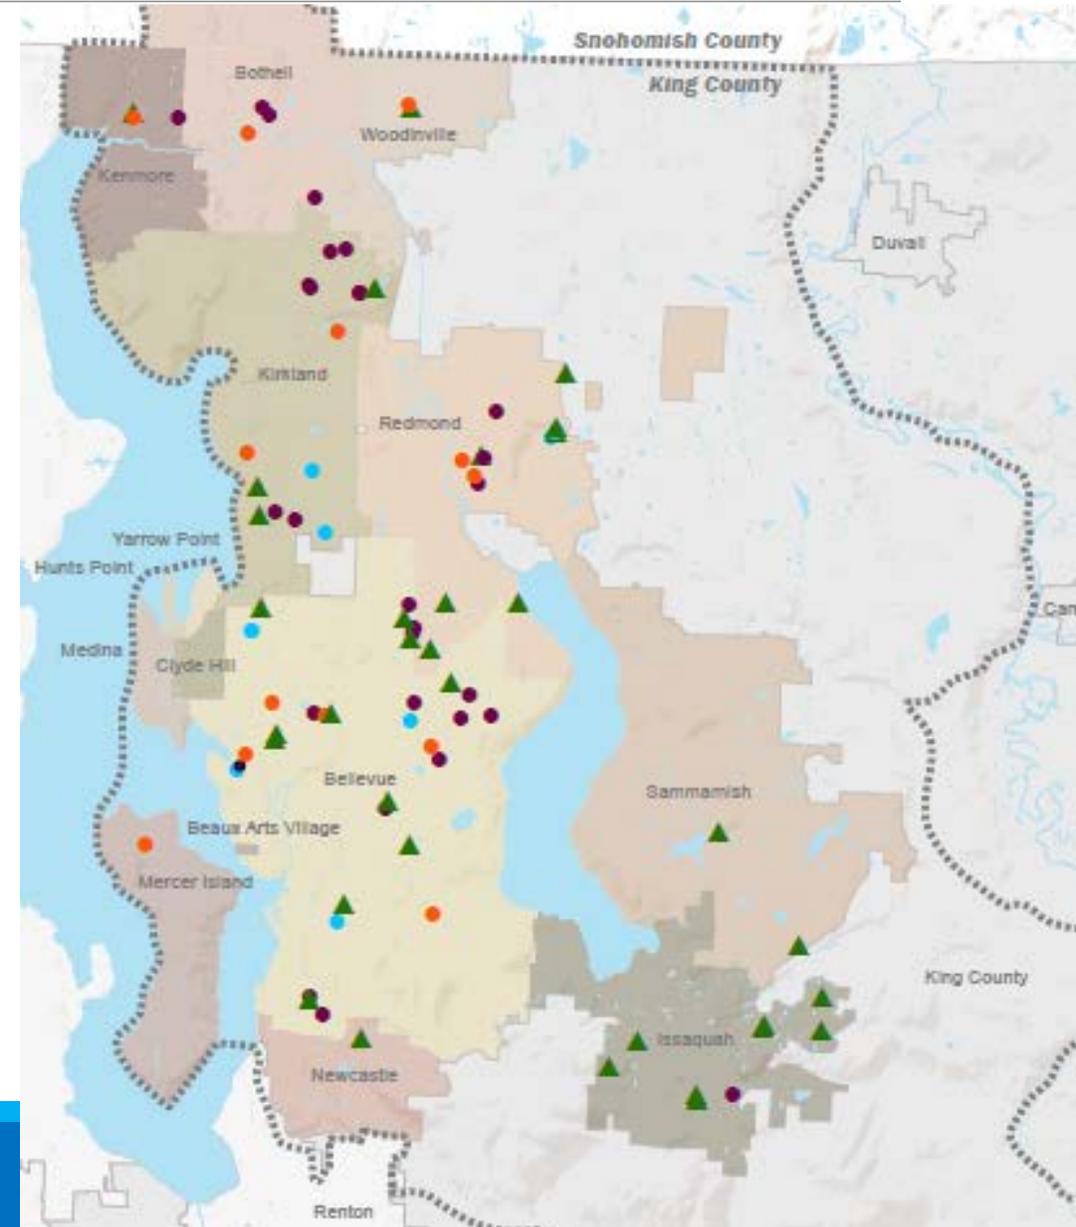

Members:

- | | | | |
|-------------|---------------|--------------|-------------|
| Beaux Arts | Bellevue | Bothell | Clyde Hill |
| Hunts Point | Issaquah | Kenmore | Kirkland |
| Medina | Mercer Island | Newcastle | Redmond |
| Sammamish | Woodinville | Yarrow Point | King County |

ARCH Housing Trust Fund

- Joint housing development fund capitalized by ARCH members
- Awards loans and grants to developments that include below-market-rate housing
- Helps create/preserve housing that is affordable for households earning 60% of area median income and below
- Since 1993, invested over \$64 million to create 3,778 units across East King County

HTF Project Selection Process

- ARCH announces funding availability each fall
- ARCH solicits interest from the development community and provides guidance to potential applicants
- Applications vetted by ARCH staff, city staff liaisons, Citizen Advisory Board
 - Criteria include quality of the project, financial leverage, geographic equity and alignment with local, county and state priorities
- ARCH Executive Board advances final recommendation to City Councils for approval
- HTF funds are combined with other funding sources to enable project development

Recommended Projects – MI Contribution

Item 7.

- Samma Senior Apartments – Bothell (CDBG funds)
- Eastside Men’s Shelter – Bellevue (\$13,120)
- Polaris at Eastgate – Bellevue (\$15,090)
- Together Center Redevelopment – Redmond (\$72,150)
- Shared Living Home 1 – TBD (\$2,640)
- Adult Family Home 8 – TBD (\$3,950)

TOTAL - \$106,950

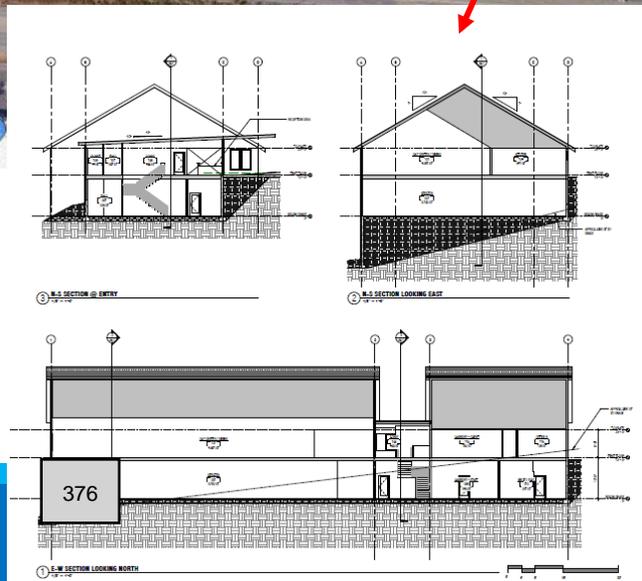

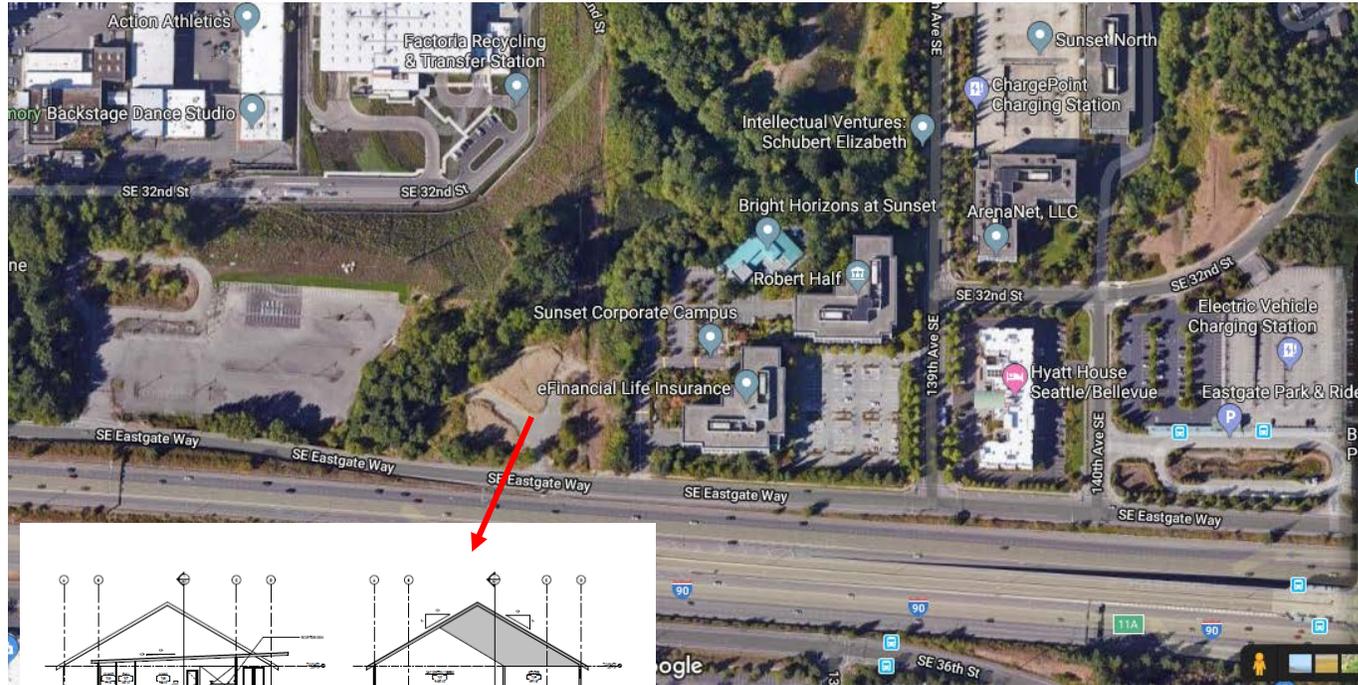

Samma Senior Apartments

Item 7.

- Location: 17816 Bothell Way NE, Bothell WA
- Applicant: Imagine Housing
- 54 affordable senior units (40-60% AMI)
- Set-asides: Veterans, homeless seniors
- Funding Recommended: \$750,000

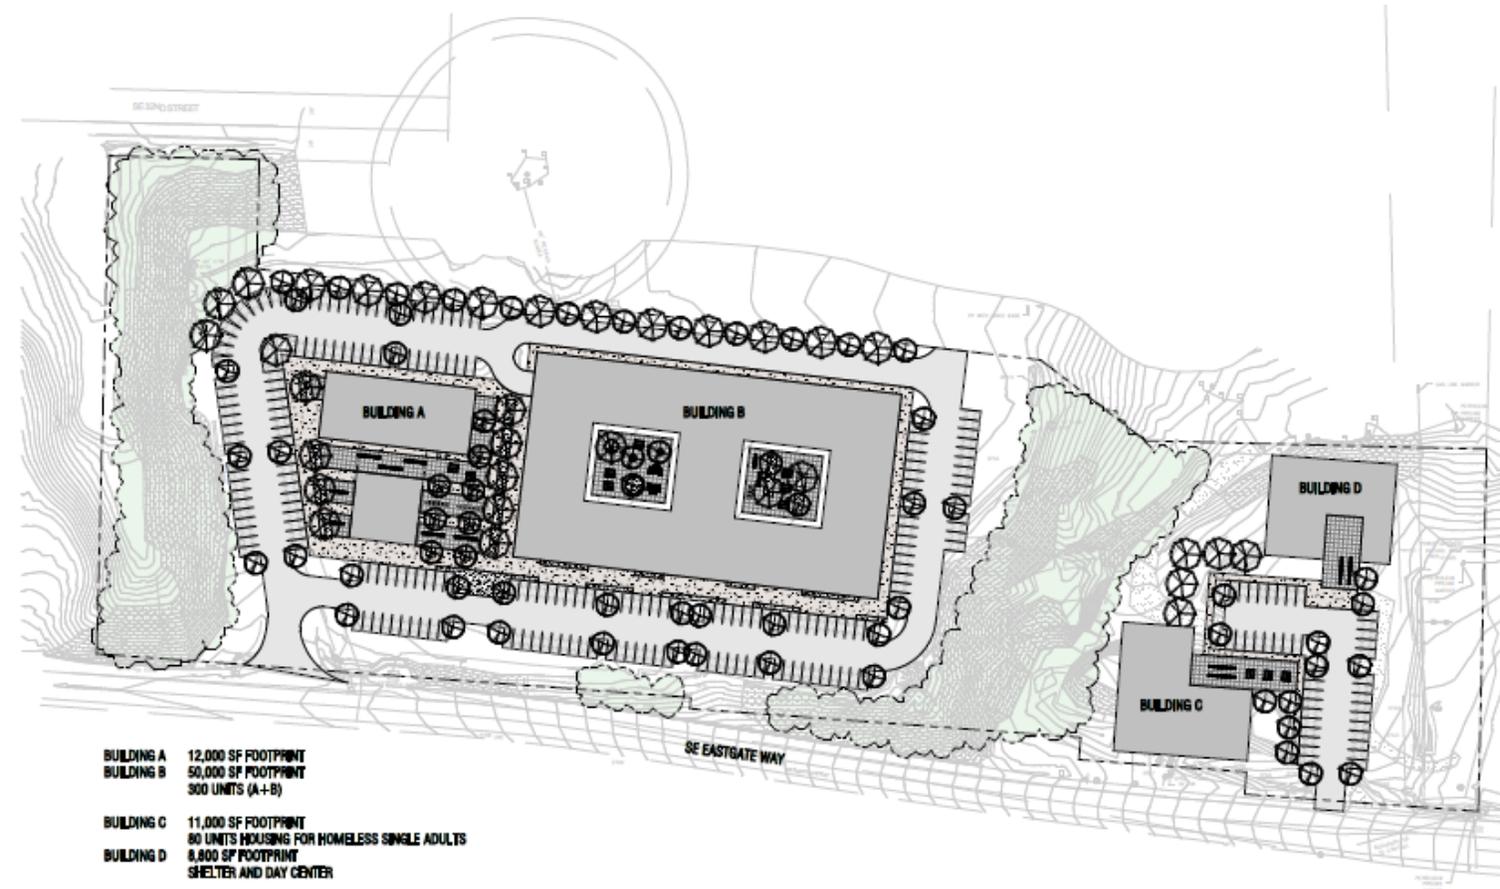

Eastside Men's Shelter

- Location: 13620 SE Eastgate Way, Bellevue, WA
- Applicant: Congregations for the Homeless
- Development Consultant: Horizon Housing Alliance
- 100 year-round shelter beds for homeless men
- Funding Recommended: \$500,000 additional

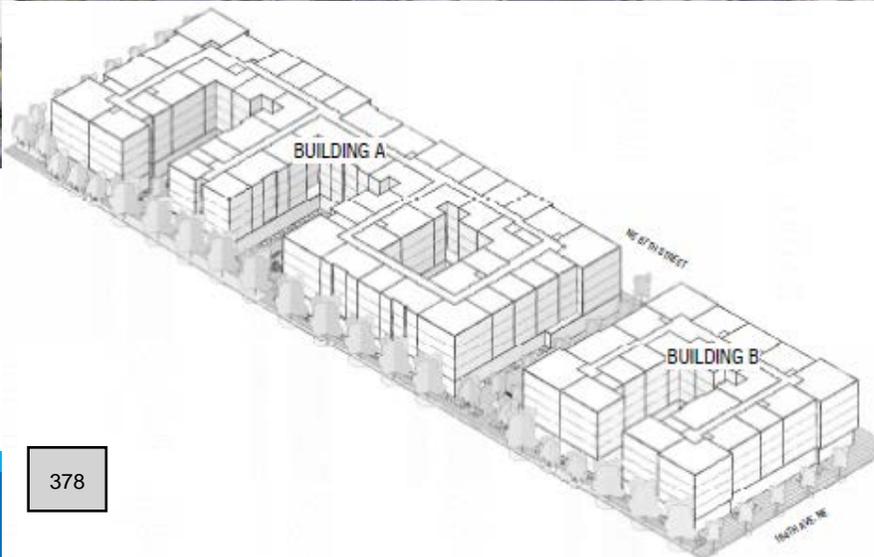

Polaris at Eastgate

Item 7.

- Location: 13620 SE Eastgate Way, Bellevue, WA
- Applicant: Inland Group
- 298 affordable rental housing units (60% AMI)
- Set-asides: Families with children, disabled
- Funding Recommended: \$575,000

Together Center Redevelopment

- Location: 16225 NE 87th St., Redmond WA
- Applicant: Housing Alliance and Inland Group
- Partners: Together Center, Hopelink
- 284 affordable rental housing units (30-60% AMI)
- Set-asides: Homeless families
- Funding Recommended: \$2.75 million

Shared Living Home 1 and Adult Family Home 8

Applicant: Community Homes, Inc.

Adult Family Home 8

- Location: TBD
- 5 beds (1 house) for developmentally disabled with live-in caretaker
- Funding Recommended: \$150,500

Shared Living Home 1

- Location: TBD, potentially Newcastle
- 3 Beds (1 house) for developmentally disabled with live-in caretaker
- Funding Recommended : \$100,500

Questions

Motion

Approve the use of \$106,950 from the City's contributions to the ARCH Housing Trust Fund as recommended by the ARCH Executive Board and authorize execution of any related agreements and documents.

Thank you

AGENDA BILL INFORMATION

TITLE:	AB 5701: COVID-19 Response: Financial Status Update and Phase 3 Cost Saving Measures	<input checked="" type="checkbox"/> Discussion Only <input type="checkbox"/> Action Needed:
RECOMMENDED ACTION:	Receive report and provide staff direction related to Phase 3 cost saving measures and next steps in the City’s COVID-19 response.	<input type="checkbox"/> Motion <input type="checkbox"/> Ordinance <input type="checkbox"/> Resolution

DEPARTMENT:	Finance
STAFF:	Matthew Mornick, Interim Finance Director
COUNCIL LIAISON:	n/a
EXHIBITS:	1. Financial Status Report: January thru April 30, 2020 2. Phase 3 General Fund Summary
CITY COUNCIL PRIORITY:	2. Articulate, confirm, and communicate a vision for effective and efficient city services. Stabilize the organization, optimize resources, and develop a long-term plan for fiscal sustainability.

AMOUNT OF EXPENDITURE	\$ n/a
AMOUNT BUDGETED	\$ n/a
APPROPRIATION REQUIRED	\$ n/a

SUMMARY

This agenda bill provides the City Council with a financial status report and detail on the \$1.2 million in Phase 3 cost saving measures to help address the remaining projected General Fund revenue shortfall.

On May 5, 2020, staff presented the City Council with a 2020 General Fund revenue projection based on the economic contraction created by the COVID-19 pandemic (“Pandemic”), which forecasted a \$4.7 million General Fund revenue shortfall (15%) in 2020. On June 2, staff returned to the City Council to memorialize Phase 1 and Phase 2 cost savings measures and reduce the 2020 Adopted Budget through a budget amending ordinance, establishing a new baseline budget. Collectively these efforts reduced the General Fund budget gap by \$2.8 million. Staff committed to return to the City Council with additional plans (Phase 3) to address the remaining General Fund revenue shortfall (\$1.9 million).

Exhibit 2 outlines the efforts to address the General Fund revenue shortfall to date, including cost saving measures from Phase 3. This includes a first quarter revenue adjustment to reflect utility tax receipts for cable T.V., garbage, and franchise fees that were due in March, yet were received and posted the beginning of May. These revenues were excluded in the May 5 General Fund Revenue projection. Taking these additional utility

tax revenues into account, the remaining projected General Fund revenue shortfall after Phase 1 and Phase 2 cost saving measures is \$1.57 million.

Note on Timing of Agenda Bills

On June 2, the City Council received agenda bill [5694](#) to amend the City's 2020 Adopted Budget, establishing a new baseline budget. This new baseline budget includes the cost saving measures from Phase 1 and Phase 2 of the City's response to the current Pandemic. Given the timing of AB 5694, the budget reductions adopted in Ordinance 20-08 are not reflected in the current financial status report.

FINANCIAL STATUS UPDATE

On May 5, agenda bill [5687](#) outlined in detail the guiding assumptions for each revenue stream in the General Fund, and how these revenues were being impacted by the Pandemic. In keeping with staff's efforts to provide the City Council with quarterly updates on the City's financial position, Exhibit 1 includes financial results for revenue and expenditure categories through April 30, 2020. The budget reflected in the financial status report includes budget amendments adopted by ordinance through April 30, 2020.

Based on the financial data through the month of April, the City has collected \$9.3 million in General Fund revenues, or 28.8 percent of the pre-pandemic revenue budget, and \$10.5 million in expenditures or 32.4 percent of budgeted expenditures. It is far too early to draw conclusions based on this data as it largely reflects activity occurring prior to the onset of the Pandemic.

The economy drastically changed in March 2020. Since March, staff has been working to monitor the City's fiscal health and make timely adjustments ahead of the dramatic revenue challenges expected through the end of the year and into 2021.

PHASE 3 COST SAVING MEASURES

Staff has identified an additional \$1.2 million in cost saving measures, as summarized in Exhibit 2 (Phase 3 General Fund Summary). Highlights of Phase 3 include:

- Reduced Transfer to the Equipment Rental Fund (\$277,200): The Equipment Rental Fund (503) is an internal service fund used to account for fleet services provided to City departments on a cost reimbursement basis. Fund 503 accounts for the cost of maintaining and replacing City vehicles and heavy equipment. Each department is charged two separate monthly fees for the use of these assets. First, the Operations and Maintenance fee pays for the current operating costs of the Fund including administration, fuel, parts, insurance, and mechanical support. The second fee is the vehicle replacement charge which contributes to a reserve within the Fund that accumulates the resources for the future replacement of vehicles and equipment that have reached the end of their useful life.

For 2020, the General Fund is slated to pay \$329,900 toward the future cost to replace vehicles and heavy equipment that will eventually meet the end of their useful life. Staff recommends deferring \$277,190 in equipment replacement contributions for 2020. The deferral amount does not include \$52,710 in replacement contributions tied to Police Patrol Cars. Patrol cars are currently on a four-year replacement cycle. Based on repair and maintenance experience for patrol cars, deferring their replacement would have significant negative impacts on safety and reliability of the vehicles.

Eliminating the 2020 equipment replacement contribution will lower the General Fund interfund transfer costs. Future impacts to the Equipment Rental Fund may include deferring the replacement

of aging assets, the need to increase capital replacement contributions in future years and the potential for increased maintenance costs over the life of assets.

- Departmental One-time Budget Savings (\$519,000): In early May, the staff Leadership Team reviewed the City's operating budget. Each department evaluated expenditure actuals through April and anticipated expenses through year-end. The table below summarizes recommended one-time expenditure reductions.

General Fund Phase 3 Non-Personnel (in thousands)				
Category	Adopted Budget	Reduction	Adjusted Budget	% Cut
Contractual Services	2,331	250	2,081	10.7%
Equipment Rental (Radio Repl)	1,547	25	1,522	1.6%
Insurance	840	108	732	12.9%
Intergovernmental	1,300	78	1,222	6.0%
Interfund Transfers	410	58	352	14.1%
TOTAL	\$6,427	\$519	\$5,909	8.1%

The \$519,000 in one-time savings includes the following reductions:

- \$250,000 in professional services budget carried forward from 2019 in support of the ADA Transition Plan. Work on this plan has been delayed to future years.
- \$25,000 in contributions toward the future replacement of 800 MHz radios for public safety. The replacement fund has adequate reserves to support anticipated regional updates to radio infrastructure and to replace existing radios as needed.
- \$108,000 in savings realized in the General Fund for liability and property insurance premiums in 2020.
- \$78,000 in savings realized for Police Dispatch services through Norcom in 2020.
- \$58,000 in interfund transfers from the General Fund to the Technology and Equipment Fund specific to a replacement reserve for equipment and furnishings for the Mercer Island Community and Events Center. Of the total, \$40,000 was budgeted based on MICEC revenues and the remaining \$18,0000 using property tax.

These one-time expenditure reductions offset the anticipated General Fund revenue shortfall, while also adjusting work plan priorities.

- Municipal Court Staffing Reductions (\$13,000): In March, the Mercer Island Municipal Court closed until April 24 in alignment with Governor Inslee's first Stay Home, Stay Healthy order. On May 5, 2020, Judge Stewart issued a second Administrative Order closing the Court until July 31, 2020. Although Court staff have been working since the closure of the Court, a decision was made to implement furloughs until July 31, 2020 to reduce Court expenses. This generates a savings of \$13,000 for the 75-day period (5/16-7/31).
- Community Planning and Development (CPD) Staffing Reductions (\$388,900): Several layoffs have been implemented in the CPD Department due to less than anticipated revenues. CPD's 2019 year-end revenues were 20% below budget estimates for the year. This downward trend continued into the first quarter of 2020. At present, a handful of large development projects are in the pipeline and may move forward, while routine permit applications have somewhat slowed. Staff anticipated this

recent downward trend to carry through 2020 and assumed a 30% decline in permit revenues through the end of 2020, which represents a \$1.2 million shortfall at year-end.

The positions eliminated within CPD are both represented and non-represented and include one contract employee. These reductions generate a savings of \$388,900 for the remainder of 2020.

CARES Act Funding from the State

The City will receive \$734,100 in CARES Act funding through the State of Washington to offset costs associated with the Pandemic. Though this funding cannot be used to offset the Pandemic-related revenue losses, it can be used to offset costs the City is incurring, including the cost of operating the Emergency Operations Center, unbudgeted staff time related to the City's Pandemic response efforts, and other unbudgeted City expenditures that have shifted away from normal day-to-day responsibilities to Pandemic-related activities.

Assuming the infusion of these CARES Act funds to the City's General Fund, the \$734,100 could be used to support these nonbudgeted costs through the end of 2020.

Under a federally declared disaster, the City would normally receive reimbursement of 75% of emergency response costs through FEMA, 12.5% through the State of Washington, and the remaining 12.5% of the costs are the responsibility of the City. Uncertainty remains about the ability of the State of Washington to fund their 12.5% share, given their projected revenue shortfalls.

Staff in the Emergency Operations Center are proactively seeking additional opportunities for FEMA relief funds. Efforts are underway with the application process to seek reimbursements through FEMA's Public Assistance Program. The initial portion of the City's application will be processed no later than the third week of July. The FEMA Public Assistance Program application process is a drawn-out endeavor that will continue through the end of the year. Assuming the City qualifies, and resources are available and extended to small Washington Cities, FEMA reimbursements are not expected until 2021 or later.

Unemployment Reserve

Staff estimates a fully burdened unemployment cost of \$133,600 associated with Phase 3 cost saving measures. This estimate is the maximum amount the City may be liable to pay, however, actual unemployment costs are highly unpredictable. Former employees who qualify for unemployment may not apply, may find other employment opportunities, or may not utilize the full extent of their benefits.

All unemployment costs will be charged to the unemployment reserve established at the June 2, 2020 City Council meeting. The reserve provides for cleaner cost tracking than the past practice of absorbing unemployment costs within Department vacancy savings. Should unemployment costs approach the \$300,000 reserve established by the City Council, staff will return to the City Council with detailed background information to request an additional appropriation.

The federal government agreed to reimburse 50 percent of unemployment benefit payments made by local governments between March 13 and December 31, 2020 through the CARES Act. The reimbursement mechanism is still being worked out by the State Employment Security Department and in the meantime the City must pay the full cost of unemployment. Once federal reimbursements are confirmed and received, staff will return to Council in 2021 (or sooner) to close out the Unemployment Reserve and seek City Council direction to rebalance the Contingency Fund.

Compensated Absences Reserve

Staff estimates \$28,000 in one-time accrued benefit cash-outs associated with Phase 3 cost saving measures. The June 2 budget amendment (Ord. [20-08](#)) authorized use of the Compensated Absences Reserve to pay accrued benefit cash-outs in 2020, not to exceed \$300,000. Phase 3 accrued benefit cash-outs will be charged to the Compensated Absences Reserve.

NEXT STEPS

With Phase 3 cost saving measures, a projected \$372,000 General Fund budget deficit remains. Staff is working to close the remaining General Fund gap with additional cost saving measures, future negotiations with the City's labor partners, and additional state and federal resources.

On June 16, 2020, staff will return to the City Council with analysis and recommendations regarding the Youth and Family Services Fund and future investments and operation opportunities for the Thrift Shop. Staff will include a revised forecast of other non-general government Funds impacted by the Pandemic. At the end of June, staff will be focusing on the 2021-2022 biennial budget process and will provide an overview of the anticipated budget review schedule in July.

RECOMMENDATION

Receive report and provide staff direction related to Phase 3 cost saving measures and next steps in the City's COVID-19 response.

INTRODUCTION

The Financial Status Report provides a summary budget to actual comparison of revenues and expenditures for the General Fund and all other Funds from January through April 2020. As such, the analysis below does not include the budget amending ordinances adopted by Council June 2, 2020.

This report is comprised of the following four sections:

- General Fund
- Utility Funds
- All Other Funds

It should be noted that, where significant, revenues are recognized when earned, regardless of when cash is received, and expenditures are recognized when a liability has been incurred or when resources have been transferred to another Fund. Finally, beginning Fund balance represents net excess resources from a prior year that have been appropriated to Fund budgeted expenditures in the current year.

JUNE 9, 2020

FINANCIAL STATUS REPORT

JANUARY 1 TO APRIL 30, 2020

Total General Fund 2020 Resources Budget
\$32.4 million

General Fund Actual Resources at April 30,
\$ 9.3 million (28.8%)

Total General Fund 2020 Expenditure Budget
\$32.3 million

General Fund Actual Expenditures at April 30,
\$10.5 million (32.4%)

Contingency Fund Balance at April 30, 2020
\$4.2 million

Quarterly Financial Status Report

GENERAL FUND

Revenues

Overall, General Fund revenues fell short of budget estimates at the end of April primarily due to the COVID-19 Pandemic (Pandemic). The table below lists the 2020 revenue budget, year to date actuals and a percentage of budget received. Prior year actuals are presented for comparative purposes. The budget and actual amounts are for the first four months of the calendar year, through the end of April. Additional detail regarding primary General Fund revenues and material variances from the amended budget is provided in the table below.

GENERAL FUND: Revenues As of April 30, 2020

Revenue Category	Prior Year to Date 4/30/2019	2020 Original Budget	2020 Budget as Amended	Year to Date 4/30/2020	% of Budget
Property Tax	\$ 4,578,564	12,717,185	12,717,185	4,149,040	32.6%
Sales Tax - General	1,419,664	4,348,797	4,348,797	1,482,091	34.1%
Sales Tax - Criminal Justice	241,528	750,052	750,052	229,102	30.5%
Utility Taxes	1,355,270	4,237,566	4,237,566	1,364,390	32.2%
B&O Taxes	113,121	662,171	662,171	52,939	8.0%
Shared Revenues	114,841	1,185,849	1,205,849	114,438	9.5%
Cost Allocation-Overhead	243,214	751,222	751,222	250,407	33.3%
EMS Revenues	407,047	1,391,867	1,399,367	416,360	29.8%
Parks & Recreation	398,927	1,619,800	1,592,900	230,597	14.5%
License, Permit & Zoning	1,098,684	3,690,402	3,768,937	781,076	20.7%
Municipal Court	103,194	346,604	346,604	61,492	17.7%
Miscellaneous Revenue	114,642	223,200	223,200	155,411	69.6%
Interest Earnings	93,643	25,604	25,604	46,325	180.9%
Transfer from Contingency Fund	1,035,704	0	0	0	N/A
Total Revenues	\$ 11,318,044	\$ 31,950,319	\$ 32,029,454	\$ 9,333,667	29.1%
Beginning Fund Balance	0	790,798	407,105	0	0.0%
Total Resources	\$ 11,318,044	\$ 32,741,117	\$ 32,436,559	\$ 9,333,667	28.8%

Property tax at 32.6 percent of budget is down \$429,524 from 2019 revenues. The difference is a direct result of collection dates being delayed from April 30 to June 1 due to the Pandemic. The May 5, 2020 Financial Forecast projected a modest 3% reduction in property tax revenues due to the increased potential for non-payment because of the Pandemic.

General sales tax is 34.1 percent of budget at the end of April. At the end of April actual revenues are expected to be one third (33%) of budgeted amounts, given this expectation actual sales tax revenues appear to be trending on track with budget estimates at this time. Because of the delay in receiving sales tax from the State, actual numbers are recognized one month later than they happen (i.e., April numbers are representative of March sales). Construction continues to be the largest component of

sales tax revenue. The following table compares sales tax revenue by business sector through April for 2019 and 2020.

2019-2020 Sales Tax Revenue by Business Sector

Business Sector	Year to Date 4/30/2019	Year to Date 4/30/2020	Increase / (Decrease)	% of Total	
				2019	2020
Construction	\$ 544,670	\$ 530,035	(\$14,635)	38.4%	35.8%
Retail & Wholesale Trade	417,863	467,235	\$49,372	29.4%	31.5%
Admin & Support Services	106,135	124,059	\$17,924	7.5%	8.4%
Food Services	74,197	65,849	(\$8,348)	5.2%	4.4%
Telecommunications	40,457	49,093	\$8,636	2.8%	3.3%
Finance/Insurance/Real Estate	50,849	60,186	\$9,337	3.6%	4.1%
Professional, Scientific & Tech Services	52,506	50,132	(\$2,374)	3.7%	3.4%
All Other Sectors	132,987	135,471	\$2,484	9.4%	9.1%
Total	\$ 1,419,664	\$ 1,482,060	\$62,396	100.0%	100.0%

Utility taxes are 32.2 percent of budget at the end of April. At the end of April actual revenues are expected to be one third (33%) of budgeted amounts, given this expectation actual utility tax revenues are trending below budget estimates primarily due to the utility tax on electricity and gas as well as the downward trend in the cellular utility tax. Electric and gas utility tax revenues are down due to PSE lowering residential energy rates and the effects of weather on heating and cooling needs. The decrease in cellular utility tax reflects the continued downward trend resulting from a highly competitive business environment, the popularity of texting over talking, and the exclusion of data plans from utility taxes.

Business & occupation (B&O) tax is 8.0 percent of budget at the end of April. This underage is normal because most of the City’s registered businesses file an annual, rather than quarterly, B&O tax return. Annual B&O tax payments for 2020 are due by April 15, 2021, a change implemented in late 2019 as a result of state legislation [HB 1059](#).

Shared revenues are 9.5 percent of budget at the end of the third quarter. Major revenue sources include State shared taxes; hazardous waste grants; the I-90 corridor landscape maintenance revenue from the Washington State Department of Transportation; vessel registration fees received from the state through King County; the marine patrol services contract revenue from the City of Renton; and financial support for the School Resource Officer received from the Mercer Island School District. Timing of these revenues is variable throughout the year, with most expected in the third and fourth quarters of 2020. All are within budget estimates at this point in the year.

Parks and Recreation revenues are 14.5 percent of budget at the end of April. The Pandemic caused the Mercer Island Community and Events Center (MICEC) to close along with most City facilities in mid-March.

License, permit, and zoning fees are 20.7 percent of budget at the end of April. This revenue category consists of fees related to development, business licenses, and a cable franchise. The Pandemic caused City Hall, the main processing center for permits and licenses, to close along with most City facilities on March 13, 2020. In addition, non-essential construction was ordered to stop beginning in March, which

Quarterly Financial Status Report

slowed revenue collections as project work was unable to progress. Total revenues are down \$317,608 from 2019.

Court fines are 17.7 percent of budget at the end of April. Revenues continue to fall below budget due to a decrease in court filings beginning in 2019 and carrying over into 2020. Additionally, the Pandemic caused the court to close along with all other city facilities in mid-March. The Court anticipates a re-open date of August 1, 2020.

Miscellaneous Revenue is 69.6 percent of budget due to higher than expected employee disability reimbursement monies, which were received from the Washington State Department of Labor and Industries.

Interest Earnings are budgeted in the General Fund as an estimate of earnings tied to the balance of the reserve for LEOFF 1 long term care. Per current budget policy, interest earnings are distributed to various Funds based on their relative cash balances at the end of each quarter. It is expected that the \$46,000 remaining in the General Fund at April 30 will be allocated, per policy, to other Funds at June 30, 2020. Overall, interest earnings are experiencing a decline when compared to 2019.

All other revenues are within expected norms through the first four months of the year.

Expenditures

Overall, General Fund expenditures are within budget estimates at the end of April. The table below lists the 2020 expenditure budget by department, year to date actuals and a percentage of budget spent. Prior year actuals are presented for comparative purposes. The budget and actual amounts are through the end of April. Additional detail of material variances from the amended budget are discussed following the table.

**GENERAL FUND: Expenditures
As of April 30, 2020**

General Fund Department	Year to Date 4/30/2019	2020 Original Budget	2020 Budget as Amended	Year to Date 4/30/2020	% of Budget
City Attorney's Office	\$ 242,752	\$ 812,503	\$ 787,496	\$ 177,684	22.6%
City Council	18,198	64,674	57,808	15,958	27.6%
City Manager's Office	432,344	1,107,682	1,066,248	333,694	31.3%
Community Planning & Development	1,045,677	3,501,508	3,406,561	1,130,921	33.2%
Finance	314,474	996,845	945,082	243,831	25.8%
Fire	2,296,385	6,655,407	6,846,833	2,479,967	36.2%
Human Resources	207,853	651,867	627,264	260,219	41.5%
Information & Geographic Services	51,232	133,256	129,248	51,683	40.0%
Municipal Court	151,575	492,393	479,457	149,015	31.1%
Non-Departmental	1,208,684	2,020,899	2,274,889	1,198,921	52.7%
Parks & Recreation	1,576,519	5,954,286	5,761,980	1,383,278	24.0%
Police	2,392,195	7,681,195	7,603,444	2,544,889	33.5%
Public Works	537,979	1,949,402	1,918,083	508,430	26.5%
Total Expenditures	\$ 10,475,865	\$ 32,021,917	\$ 31,904,393	\$10,478,489	32.8%
Interfund Transfers	165,500	719,200	410,200	-	0.0%
Total Expenditures + Interfund Transfers	\$ 10,641,365	\$ 32,741,117	\$ 32,314,593	\$10,478,489	32.4%

In reviewing expenditures by department, the following are noteworthy:

The Human Resources Department is at 41.5 percent of budget at the end of April. The higher than expected actual costs are the result of one-time expenditures associated with prior year corrections in employee retirement reporting.

The Fire Department has expended 36.2 percent of budget compared to an expected 33 percent expected at April 30th. Per the collective bargaining agreement, certain firefighter benefits are paid in January and cover the entire year – including the City’s match for medical deductibles and a wellness benefit.

Non-Departmental is at 52.7 percent of budget at the end of April. The largest line-item expenditure in non-departmental is the annual payment for liability and property insurance which is paid in full in January. The impact of one-time annual expenses will even out over the course of the year, and it is expected that Non-Departmental expenditures will remain under budget for the year.

All other expenditures are within expected norms through the end of April.

UTILITY FUNDS

At the end of April, all three utility Funds are within expected norms for operating revenues and expenditures.

Revenues

The table below lists the 2020 revenue budget, January through April actuals and a percentage of budget received. Prior year actuals are presented for comparative purposes. The budget and actual amounts are through the end of April. Additional detail of major variances is discussed following the table.

UTILITY FUND: Revenues
As of April 30, 2020

Revenue Category	Prior Year to Date 4/30/19	2020 Original Budget	2020 Budget as Amended	Year to Date 4/30/20	% of Budget
Operating Revenues					
Water Utility	2,006,678	7,889,090	8,034,090	2,130,639	26.5%
Sewer Utility	3,209,977	10,069,991	10,119,491	3,385,790	33.5%
Storm Water Utility	681,406	2,551,162	2,601,162	694,679	26.7%

Sewer Utility	33,296	71,181	71,181	25,859	36.3%
Storm Water Utility	24,493	50,600	50,600	20,525	40.6%
Total Revenues	\$ 6,025,307	\$ 20,806,024	\$ 21,050,524	\$ 6,323,228	30.0%

Water, Sewer, and Storm Water Utility operating revenues are within expected norms given the seasonality of utility revenues. Adopted rate increases that became effective January 1, 2020 result in the dollar increases as compared to 2019 revenues for the same period.

Interest earnings for all three utility Funds is higher than the 25 percent of budget expected at the end of the first quarter, but actual earnings are down from the same period in 2019. Given the decline in interest rates, Interest earnings are expected to continue to decline in 2020, as compared to 2019, through the end of the year.

Expenditures

The table below lists the 2020 expenditure budget by utility Fund and category, year to date actuals and a percentage of budget spent. Prior year actuals are presented for comparative purposes. The budget and actual amounts are through the end of April. Additional detail of major variances is discussed following the table.

UTILITY FUND: Expenditures
As of April 30, 2020

Category	Year to Date 4/30/19	2020 Original Budget	2020 Budget as Amended	Year to Date 4/30/20	% of Budget
Operating Expenditures					
Water Utility	1,166,886	5,131,018	5,301,818	1,244,317	23.5%
Sewer Utility	1,821,743	7,290,427	7,349,782	2,459,554	33.5%
Storm Water Utility	389,749	1,465,039	1,527,939	426,993	27.9%
Capital Projects					
Water Utility	199,237	5,935,948	5,760,318	178,459	3.1%
Sewer Utility	105,854	3,453,762	3,427,962	292,185	8.5%
Storm Water Utility	78,550	1,136,723	1,123,823	228,622	20.3%
Debt Service					
Water Utility	-	730,847	730,847	-	0.0%
Sewer Utility	-	1,337,720	1,337,720	-	0.0%
Storm Water Utility	-	-	-	-	N/A
Total Expenditures	\$ 3,762,019	\$ 26,481,484	\$ 26,560,208	\$ 4,830,131	18%

Operating expenditures are below the 33 percent threshold primarily due to:

- Water purchased for resale is at 12.7 percent of budget. Given the seasonality of water consumption this is consistent with expectations and prior year experience.
- All three utility Funds are experiencing service impacts due to the COVID 19 emergency which are resulting in lower than expected expenditures for consumable supplies as well as repair and maintenance services.

Capital projects continue to be below budget projections in 2020. The unspent budget allocation for the utility capital program is a result of staff spending a significant amount of time on the pre-construction phases of the SCADA System Upgrade and Meter Replacement projects, delaying work on other capital projects in 2020 and other workforce impacts related to the Pandemic.

Although these projects have minimal expenditures to date, projects are underway. Expenditures are trailing due to timing within the project schedule and biennium. Other projects, such as the General Sewer Improvements and Storm Pipe System Extension work are currently being scoped for construction in 2020.

The SCADA System Upgrade is also currently in design, but progress has been slowed due to system complexities and staff vacancies (Utilities Operations Manager and Assistant City Engineer). The SCADA system supports both water and sewer operations. Design is expected to continue into the second half of 2020 with phase construction anticipated to begin in 2021.

Quarterly Financial Status Report

ALL OTHER FUNDS

Revenues

The table below lists the 2020 revenue budget, end of April actuals and a percentage of budget received. Prior year actuals are presented for comparative purposes. The budget and actual amounts are through the end of April.

As of April 30, 2020

Fund Name	REVENUE				
	Year to Date 4/30/2019	2020 Original Budget	2020 Budget as Amended	Year to Date 4/30/2020	% of Budget
Self Insurance Claim	0	10,000	10,000	-	N/A
Youth Services Endowment	1,541	3,500	3,500	1,236	35.3%
Street	685,323	3,210,098	3,350,619	651,366	19.4%
Contingency	111,199	320,574	320,574	83,072	25.9%
1% for the Arts	-	17,000	31,465	-	N/A
Youth & Family Services	948,761	2,871,835	3,360,088	570,777	17.0%
Bond Redemption (Voted)	-	-	-	-	N/A
Bond Redemption (Non-Voted)	307,750	839,700	839,700	306,950	36.6%
Town Center Parking Facilities	-	-	-	-	0.0%
Capital Improvement	589,423	2,734,712	2,761,392	694,723	25.2%
Technology & Equipment	77,000	322,500	322,500	-	0.0%
Capital Reserve	-	-	-	-	N/A
Equipment Rental	470,721	2,020,628	2,053,545	473,794	23.1%
Computer Equipment	347,592	1,512,766	1,338,243	352,979	26.4%
Firemen's Pension	51,089	94,000	94,000	52,322	55.7%

Street Fund revenues are at 19.4 percent of budget at the end of April reflecting the loss of both Multimodal Transportation state shared revenue and revenues generated by the Mercer Island transportation benefit district as a result of state Initiative 976. An injunction stopped the initiative from taking effect after it was approved by voters in November 2019.

The Washington State Supreme Court issued an order on April 29, 2020 agreeing to hear the case challenging I-976 this spring. If upheld, I-976 will reduce State and local transportation revenue by repealing the authority of City and Transportation Benefit Districts to use vehicle license fees as a revenue source. The City will lose roughly \$410,000 annually.

Youth & Family Services Fund: Total revenues are 17 percent of budget at the end of April, down \$378 thousand from the same period in 2019. The Pandemic caused the Thrift Shop and Luther Burbank Administration Building to close along with most City facilities in Mid-March. The result was an immediate loss in revenue generated by the Thrift Shop.

Capital Improvement Fund revenues are at 25.2 percent of budget at the end of April. The primary revenue source for the Capital Improvement Fund is Real Estate Excise Tax (REET). Total REET revenues through the end of April are \$610,000, or 28.9 percent of budget.

Expenditures

The table below lists the 2020 expenditures budget by Fund, end of April actuals and a percentage of budget spent. Prior year actuals are presented for comparative purposes. The budget and actual amounts are through the end of April. Additional detail of major variances is discussed following the table.

As of April 30, 2020

Fund Name	EXPENDITURE				
	Year to Date 4/30/2019	2020 Original Budget	2020 Budget as Amended	Year to Date 4/30/2020	% of Budget
Self Insurance Claim		10,000	10,000	-	N/A
Youth Services Endowment	-	3,500	3,500	-	0.0%
Street	183,940	3,210,098	3,356,507	570,285	17.0%
Contingency	1,035,704	-	-	-	N/A
1% for the Arts	1,050	15,000	29,465	24,734	83.9%
Youth & Family Services	966,820	2,844,145	3,332,398	1,000,489	30.0%
Bond Redemption (Voted)	-	-	-	-	N/A
Bond Redemption (Non-Voted)	-	839,700	839,700	-	0.0%
Town Center Parking Facilities	53,892	-	358,876	59,878	16.7%
Capital Improvement	401,045	2,549,045	2,575,725	230,186	8.9%
Technology & Equipment	62,276	287,000	287,000	113,662	39.6%
Capital Reserve	-	-	-	-	N/A
Equipment Rental	267,766	1,649,995	1,682,912	518,367	30.8%
Computer Equipment	386,781	1,339,994	1,165,471	482,406	41.4%
Firemen's Pension	26,919	94,000	94,000	33,615	35.8%

The 1% for the Arts Fund is at 83.9 percent of budget at the end of April. This is due to a one-time expenditure to repair and replace the art walls at the Mercer Island Community and Events Center. No further expenditures are anticipated. Staff estimate the Fund will end the year within budget.

Computer Equipment Fund: Total expenditures are 41.4 percent of budget at the end of April. Expenditures in this Fund include the capital replacement of computer hardware and technology infrastructure which often occurs in the first quarter. The operating portion of Fund expenditures are within the 33 percent expected at the end of April.

All other variances are within expected norms through the end of April.

Quarterly Financial Status Report

Two summary listings of the originally adopted 2019-2020 Budget (expenditures only), broken down by year, and amendments adopted by Ordinance through April 30, 2020 are presented below.

2019 Budget Adjustment Summary Expenditures by Fund

Phase 3 General Fund Summary

COVID-19 Response: Budget Balance

Revised June 8, 2020

Estimated General Fund Deficit (05-05-20)	\$ (4,700,000)
Phase 1 Cost Saving Measures	1,150,000
Phase 2 Cost Saving Measures ¹	1,757,000
<i>Staffing Adjustment – Park Maintenance/Capital⁵</i>	<i>(121,400)</i>
Utility Taxes - Q1 adjustment ²	344,668
Current Estimated General Fund Deficit (06-09-20)	\$ (1,569,732)
Phase 3 Cost Saving Measures	
Reduced Transfer to the Equipment Rental Fund	277,200
Departmental One-time Budget Savings	518,900
Municipal Court Staffing Reductions	13,000
Community Planning and Development Staffing Reductions	388,900
Total Estimated Phase 3 Cost Saving Measures	\$ 1,198,000
Projected Post Phase 3 Budget Gap	\$ (371,732)
One-time Expenses associated with Phase 3 Cost Saving Measures	
<i>Unemployment costs³</i>	<i>(133,566)</i>
<i>Accrued benefit cash-outs⁴</i>	<i>(28,011)</i>

¹ Phase 1 and Phase 2 cost saving measures as presented at June 2 Council meeting.

² First quarter receipts for Cable T.V., Garbage, and Franchise Fees posted beginning of May, 2020.

³ Expense captured in the unemployment reserve. Federal reimbursement 50% of costs incurred.

⁴ Expense captured in compensated absences reserve.

⁵ Restoration of the Parks Operation Manager and Natural Resource Specialist positions.

Finance Update

COVID-19 Response: Phase 3 Cost Saving Measures

CITY COUNCIL | AB 5701 | June 9, 2020

Purpose

- ❑ Financial Status Report
- ❑ Phase 3 Cost Saving Measures
- ❑ Questions

Financial Status Report

Status Report – Summary

- ❑ Update includes JAN – APR revenue and expenditure actuals

- ❑ Through April, the City's General Fund:
 - ❑ Collected \$9.3 M (28.8% of annual budget estimate)

 - ❑ Spent \$10.5 M (32.4% of annual budget estimate)

Status Report – Expenditures

- ❑ Savings from measures executed during Pandemic begin in early May
- ❑ Employee cash-outs further delay reduction impacts
- ❑ Cost saving measures are not realized until May

Status Report – Revenues

- Big three revenues are relatively on track

General Fund Revenues (in thousands)	2020 Budget as Amended	Prior Year to Date 4/30/2019	Year to Date 4/30/2020	% of Budget
Property Tax	\$12,717	\$4,579	\$4,149	32.6%
Utility Taxes	\$4,238	\$1,355	\$1,364	32.2%
<i>Sales Tax - General</i>	<i>\$4,349</i>	<i>\$1,420</i>	<i>\$1,482</i>	<i>34.1%</i>
<i>Sales Tax - Criminal Justice</i>	<i>\$750</i>	<i>\$242</i>	<i>\$229</i>	<i>30.5%</i>

Status Report – Sales Tax

General Sales Tax Revenue Business Sector (in thousands)	Year to Date 4/30/2019	Year to Date 4/30/2020	Increase / (Decrease)	% of Total	
				2019	2020
Construction	\$545	\$530	(15)	38.4%	35.8%
Retail & Wholesale Trade	\$418	\$467	\$49	29.4%	31.5%
Admin & Support Services	\$106	\$124	\$18	7.5%	8.4%
Food Services	\$74	\$66	(8)	5.2%	4.4%
Telecommunications	\$40	\$49	\$9	2.8%	3.3%
Finance/Insurance/Real Estate	\$51	\$60	\$9	3.6%	4.1%
Professional, Scientific & Tech	\$53	\$50	(2)	3.7%	3.4%
All Other Sectors	\$133	\$135	\$2	9.4%	9.1%
Total	\$1,420	\$1,482	\$62	100.0%	100.0%

- ❑ January through April booked revenues are based on point of sales December through March.
- ❑ One-month lag between point of sale and receipt from State. Not yet realizing the impacts from Pandemic in Sales Tax.

Status Report – Revenues

- ❑ Three revenues that are under-performing

General Fund Revenues (in thousands)	2020 Budget as Amended	Prior Year to Date 4/30/2019	Year to Date 4/30/2020	% of Budget
License, Permit & Zoning	\$3,769	\$1,099	\$781	20.7%
Municipal Court	\$347	\$103	\$61	17.7%
Parks & Recreation	\$1,593	\$399	\$231	14.5%

Phase 3 Cost Saving Measures

General Fund – 2020 Forecast

Forecasted General Fund Revenue Shortfall

\$(4,700,000)

Approximately 15% of budgeted revenues

Cost Saving Measures as June 2nd

General Fund Budget Amendments	Total
Phase 1 Cost Savings Measures	\$1,150,000
Phase 2 Cost Saving Measures	\$1,757,000
<i>Staffing Adjustment – Park Maintenance/Capital*</i>	(\$121,400)
Total Budget Reduction	\$(2,785,600)

* Staffing adjustment was not included in Exhibit 2 of the Agenda Bill. Both the corresponding Agenda Bill and Exhibit were revised and reposted 6/8/2020.

General Fund – Remaining Shortfall

Forecasted Revenue Shortfall	\$(4,700,000)
<i>Phase 1 and Phase 2 reductions</i>	\$2,785,600
<i>Utility Taxes Q1 adjustment*</i>	<u>\$344,700</u>
Remaining Revenue Shortfall	(\$1,569,700)

Phase 3 – Cost Saving Measures

Item 8.

Staff identified savings of

\$1.2 million

Phase 3 – Equipment Rental Fund

- ❑ Departments pay into Fund for using City vehicles
 - ❑ Maintenance and operation fee – *must maintain*
 - ❑ Vehicle replacement fee – *can defer*
- ❑ Vehicle replacement charge in 2020 is \$330,000
 - ❑ Defer \$277,000 of the 2020 charge
 - ❑ Keep the \$53,000 contribution for Police patrol cars

Phase 3 – Departmental Savings

- Leadership team evaluated 2020 budget in light of the Pandemic

One-time savings (in thousands)	Reduction
ADA Transition Plan delayed to future years	\$250
Liability and property insurance premiums savings in 2020	\$108
Defer 2020 contributions to replace MICEC equipment and furnishings	\$58
Defer 800 MHz radio replacement for public safety	\$25
Police dispatch services through Norcom in 2020	\$78
Total	\$519,000

Phase 3 – Municipal Court

- ❑ Closed mid-March to align with first Stay Home, Stay Healthy order
- ❑ Re-opened April 24, closed May 5 until July 31
- ❑ Staff furloughed May thru July
- ❑ Resulting in \$13,000 savings

Phase 3 – CPD Staffing Reductions

- ❑ 2019 Department revenues were 20% below budget estimates
- ❑ Downward trend continued into Q1 2020
- ❑ Positions eliminated include Represented and Non-represented staff
- ❑ Generate \$389,000 savings through 2020.

Phase 3 – Unemployment Impacts

- ❑ June 2 Council established \$300,000 Unemployment Reserve
- ❑ Phase 3 fully burdened estimate of unemployment is (\$134,000)
 - ❑ Represents maximum amount
 - ❑ Costs are highly unpredictable
- ❑ 50% federal reimbursement thru CARES Act

Phase 3 – Compensated Absences Reserve

Item 8.

- June 2 Council authorized use of up to \$300,000 of the
Compensated Absences Reserve for end-of-employment cash-outs
- Staff estimate (\$28,000) one-time accrued benefit cash-outs

Citywide Furlough Strategy

- ❑ Furloughs were NOT included in Phase 3 reductions.
- ❑ A single day furlough would generate approximately \$25,000 in savings in the General Fund.
- ❑ Given current staffing levels, the City Manager is not recommending pursuing a furlough option at this time.

General Fund – Remaining Shortfall

Item 8.

Post Phase 1 + 2 and Q1 adjustment	(\$1,569,700)
<i>Phase 3 cost saving measures</i>	<u>\$1,198,000</u>
Remaining Revenue Shortfall*	\$(371,700)

**Up from \$250,000 estimate in AB 5701 due to excluding staffing adjustment to reinstate two Park and Recreation positions – Parks Operations Manager position and Natural Resource Specialist – from Phase 2.*

Next Steps

Next Steps

- ❑ Staff is working to close remaining General Fund gap
 - ❑ Thoughts to close the gap?
- ❑ Negotiations with the City's labor partners underway
- ❑ Exploring additional state and federal resources

Next Steps

- ❑ Staff return to Council 6/16

- ❑ Evaluate alternatives related to the Thrift Shop, including
 - ❑ Potential use of the Recycling Center to accept donations

 - ❑ Potential remodel of the Thrift Shop to expand the retail floor area

 - ❑ Potential re-open dates

AGENDA BILL INFORMATION

TITLE:	AB 5713: City Council direction on proposed PIC recommendations to the SCA Board of Directors	<input checked="" type="checkbox"/> Discussion Only
RECOMMENDED ACTION:	Discuss and provide direction.	<input type="checkbox"/> Action Needed: <input type="checkbox"/> Motion <input type="checkbox"/> Ordinance <input type="checkbox"/> Resolution

DEPARTMENT:	City Council		
STAFF:	Benson Wong, Mayor		
COUNCIL LIAISON:	n/a	n/a	n/a
EXHIBITS:	1. Proposed King County Rates and Fees 2. COVID-19 Legislative Priorities		
CITY COUNCIL PRIORITY:	n/a		

AMOUNT OF EXPENDITURE	\$ n/a
AMOUNT BUDGETED	\$ n/a
APPROPRIATION REQUIRED	\$ n/a

SUMMARY

The Public Issues Committee (“PIC”) is a standing committee that reviews and evaluates policy positions and recommends to Sound Cities Association (“SCA”) Board of Directors what, if any, action should be taken on such policy decisions. Mayor Benson Wong serves as the City of Mercer Island representative and Councilmember Dave Rosenbaum serves as the alternate representative.

The next meeting of the PIC will take place on Wednesday, June 10, 2020. The PIC will be discussing proposed King County Rates and Fees (see Exhibit 1) and COVID-19 Legislative Priorities (see Exhibit 2). The PIC recommends the SCA Board of Directors adopt the following policy positions:

- 1) The SCA urges King County and other entities to forego any increases in rates and fees in light of the COVID-19 public health emergency and the resulting economic impacts.
- 2) The SCA adopt the legislative priorities (outlined in Exhibit 2) related to COVID-19 response and relief in advance of a potential special session of the Washington State Legislature in 2020.

RECOMMENDATION

Discuss PIC potential action and provide direction to Mayor Wong.

Item 6:

Proposed King County Rates and Fees

ACTION

SCA Staff Contact

Brian Parry, Policy Director, brian@soundcities.org, (206) 499-4159

Potential Action

To recommend the SCA Board of Directors adopt the following policy position:

The Sound Cities Association (SCA) urges King County and other entities to forego any increases in rates and fees in light of the COVID-19 public health emergency and the resulting economic impacts.

Background

At the May PIC meeting, members discussed proposed sewer rate and solid waste fee increases that could increase costs passed on to cities, local utility providers, and rate payers effective January 1, 2021. Concerns were expressed by numerous PIC members about the impact of increasing fees on residents and city utilities and PIC voted to bring a position statement back to the next meeting urging the county to forego any rate increases in light of the COVID-19 pandemic.

Since the last PIC meeting, the King County Council approved a 4.5% increase to the sewer rate for 2021 and the county is continuing to develop a solid waste fee recommendation that would go into effect on January 1, 2021. Feedback from the May PIC meeting was provided to members of the county council, including that PIC is considering a policy position recommending delaying any increases to rates and fees at this time.

King County Councilmember Dembowski proposed an amendment to the sewer rate proposal that would have delayed the increase until 2022. That amendment failed 3-6, with Councilmembers Dembowski, Dunn, and von Reichbauer voting in favor. The final ordinance setting the rate with the 4.5% increase passed 6-3, with the same three councilmembers voting against. Statements opposing the rate increase were released by [Councilmembers Dunn and von Reichbauer](#) jointly and also by [Councilmember Dembowski individually](#). Members voting in favor of the increase argued that maintaining a flat rate would defer critical maintenance necessary to maintain the regional wastewater system.

The proposed 2021-2022 solid waste tonnage fee is expected to be transmitted to the County Council in early July and must be approved by the end of September in order to be implemented by haulers on January 1, 2021. For 2021, the King County Solid Waste Division (SWD) is considering recommending range of options from no increase in the tonnage fee to an

increase of 8%. For 2022, the department is considering an increase of anywhere from 8% if fees are increased in 2021 to as high as 28% if they are not. The current tonnage fee is \$140.82 per ton. An 8% increase in the tonnage fee is anticipated to cost an additional \$0.64 per month at the curbside for residential customers.

Other potential fees under consideration include a new \$5.00 fee on most garbage and recycling transactions, a new \$30.00 fee for mattress disposal to more accurately reflect SWD costs, and an increase to the yard waste tonnage fee from \$75.00 per ton to \$100.00 per ton.

As a part of its rate development, the Division is analyzing anticipated loss of tonnage revenue due to the COVID-19 crisis and is also potential reductions in expenditures, including savings from delaying opening of the South County Transfer Station or delaying property acquisition for the North East Transfer Station.

Additional background on the sewer rate and solid waste fee can be found in the [May 13, 2020 PIC Packet](#).

As discussed at PIC in May, many SCA cities are facing substantial revenue downturns that will force very difficult service cuts in 2021 and likely beyond. Meanwhile, cities have a critical role to play in keeping communities safe during the COVID-19 emergency and to the future recovery of the state's economy. Foregoing increased rates and fees would offer some relief as local government seeks to protect vital services and limit increased costs to residents when they can least afford it. While SCA member cities recognize that some rate and fee increases may be truly necessary to protect public safety, members have urged the County to consider all alternatives before raising rates during a time of economic crisis.

Next Steps

If approved, the recommended policy position will go before the SCA board at their next meeting on June 17, 2020 for their consideration. To go into effect as of January 2021, the county council must act to set solid waste fees by September 30. Members are also encouraged to reach out directly to members of the county council to provide feedback directly.

Item 7:
COVID-19 Legislative Priorities
ACTION

SCA Staff Contact

Brian Parry, SCA Policy Director, brian@soundcities.org, 206-499-4159

Potential Action

To recommend the SCA Board of Directors adopt the following legislative priorities related to COVID-19 response and relief in advance of a potential special session of the Washington State Legislature in 2020:

As the Legislature considers necessary actions to address the impacts of COVID-19 on our state, SCA asks that priority be given to support for cities and towns in the following areas:

Financial support

- o Maintain critical state shared revenues that provide funding for essential public services.
- o Provide fiscal relief to cities hard hit with costs for emergency response and loss of tax revenue.

Fiscal flexibility

- o Provide flexibility within existing restricted revenues to allow cities to use funds where they are most needed right now.

Regulatory relief

- o Continue the emergency action taken by the Governor to provide flexibility on deadlines for permitting and land use timelines. Cities hard hit by this emergency may still be experiencing staffing shortages and back-logs that will impact their ability to comply with typical statutory deadlines.

City-owned utility support

- o Allow city-owned utilities that have waived late fees and shut-offs and extension of their ability to collect outstanding debt so that they can work with rate payers to extend payment plans without impacting the financial viability of the utility or raising rates on other customers.
- o Provide funding to help offset losses related to forgiving late fees and delinquent accounts for those customers hard-hit by the emergency.

Economic stimulus

- o Investing in public infrastructure projects is one of the best ways to support economic stimulus as infrastructure investments have a positive economic multiplier with the creation of family-wage jobs and support increased economic activity.

Cities also support efforts to help the most vulnerable residents and our small businesses
o Cities support programs to provide emergency rental assistance and emergency housing.
o Cities support programs to provide emergency assistance to small businesses.

Background

Due to the COVID-19 public health emergency and economic impacts, the Governor and members of the Washington State Legislature have suggested a special legislative session may be called as early as June 2020. A recent [report](#) in the Seattle Times highlighted early estimates that show Washington State could lose \$7 billion in projected revenue between now and 2023, which may lead to a round of budget cuts in the summer followed by more substantial budget adjustments when the next regular session begins in January 2021.

In preparation for the potential of a special session, the Association of Washington Cities (AWC) developed [legislative priorities](#) related to COVID-19 response and relief. These priorities ask the state to support cities through a variety of means, including: providing fiscal support; investing in local infrastructure to support economic activity; providing relief from state-mandated regulatory timelines; and, supporting city-owned utilities.

At the May 13 PIC meeting, members discussed the priorities identified by AWC and approved a motion to bring a policy position to the next PIC meeting recommending SCA support the same priorities.

If a special session is called, it is anticipated that action would be taken swiftly. Because of this, it is especially important for cities to communicate with their legislators in advance about the important role cities play in responding to emergencies and to economic recovery. Cities should also communicate with their legislators about the fiscal impact that the COVID-19 crisis has had on their cities.

Next Steps

If recommended by PIC, the legislative priorities will be brought to the SCA Board for final adoption.

Questions may be directed to SCA Policy Director Brian Parry brian@soundcities.org or 206-499-4159.

2020 PLANNING SCHEDULE

Item 10.

Please email the City Manager & City Clerk when an agenda item is added, moved, or removed.

Special Meetings and Study Sessions begin at 6:00 pm. Regular Meetings begin at 7:00 pm. Items are not listed in any particular order. Agenda items & meeting dates are subject to change.

JUNE 9 SPECIAL MEETING					
ABSENCES: Legal Notice 6/3					
ITEM TYPE TIME TOPIC					STAFF
